THE

JEWISH ENCYCLOPEDIA

SAMSON.—Biblical Data: One of the judges of Israel, whose life and acts are recorded in Judges xiii.-xvi. At a period when Israel was under the oppression of the Philistines the angel of the Lord appeared to Manoah, a man of Dan, of the city of Zorah, and to his wife, who was barren, and predicted that they should have a son. In accordance with Nazaritic requirements, she was to abstain from wine and other strong drink, and her promised child was not to have a razor used upon his head. In due time the son was born; he was reared according to the strict provisions of the Nazariteship, and in the camp of Dan the spirit of the Lord began to move him.

The Philistines about and among the Israelites naturally became very familiar with them. So infatuated was Samson with a Philistine woman of Timnah that, overcoming the objections of his parents, he married her. The wedding-feast, like that celebrated in certain parts of the East to-day, was a seven-day banquet, at which various kinds of entertainment were in vogue. Samson, equal to the demands of the occasion, proposes a riddle for his thirty companions. Upon the urgent and tearful implorings of his bride he tells her the solution, and she betrays it to the thirty young men. To meet their demands he slays thirty Ashkelonites, and in anger leaves the house of his bride and returns home. The father of the young woman gives her to Samson's companion, probably his right-hand man; so that when, after some time, Samson returns to Timnah, her father refuses to allow him to see her, and wishes to give him her sister. Samson again displays his wrath, and through the strange plan of turning loose pairs of foxes with firebrands between their tails, he burns the grain of the Philistines. Inquiry as to the cause of this destruction leads the Philistines to burn the house of the Timnite and his daughter, who had stirred up Samson's anger.

Samson then smote the Philistines "hip and thigh," and took refuge in the rock of Etam. An army of them went up and demanded from 3,000 men of Judah the deliverance to them of Samson. With Samson's consent they tied him with two new ropes and were about to hand him over to the Philistines when he snapped the ropes asunder. Picking up the jawbone of an ass, he dashed at the Philistines and slew a full thousand. At the conclusion of Judges xv. it is said that "he judged Israel in the days of the Philistines [' sway] twenty years."

Ch. xvi. records the disgraceful and disastrous end of Samson. His actions at Gaza display his strength and also his fascination for Philistine women. The final and fatal episode, in which Delilah betrays him to his enemies, is similar in its beginnings to the art practised by the Timnitess. Samson's revenge at the feast of Dagon was the end of a life that was full of tragic events. Despite his heroic deeds he does not seem to have rid his people of the oppression of the Philistines; his single-handed combats were successful, but they did not extricate Israel from Philistine tyranny. His death was the severest revenge for the Philistines' cruelty in putting out his eyes.

J. I. M. P.

——**In Rabbinical Literature:** Samson is identified with Bedan (I Sam. xii. 11); he was called "Bedan" because he was descended from the tribe of Dan, "Bedan" being explained as "Ben Dan" (R. H. 25a). On the maternal side, however, he was a descendant of the tribe of Judah; for his mother, whose name was Zelelponit (B. B. 91a) or Hazelelponit (Num. R. x. 13), was a member of that clan (comp. I Chron. iv. 3). The name "Samson" is derived from "shemesh" (= "sun"), so that Samson bore the name of God, who is also "a sun and shield" (Ps. lxxxiv. 12 [A. V. 11]); and as God protected Israel, so did Samson watch over it in his generation, judging the people even as did God. Samson's strength was divinely derived (Soṭah 10a); and he further resembled God in requiring neither aid nor help (Gen. R. xcviii. 18). In the blessings which Jacob pronounced on the tribe of Dan (Gen. xlix. 16–17) he had in mind Samson (Soṭah 9b), whom he regarded even as the Messiah (Gen. R. *l.c.* § 19). Jacob compared him to a serpent (Gen. *ib.*) because, like the serpent, Samson's power lay entirely in his head—that is, in his hair—while he was also revengeful like the serpent; and as the latter kills by its venom even after it is dead, so Samson, in the hour of his death, slew more men than during all his life; and he also lived solitarily like the serpent (Gen. R. *l.c.* §§ 18–19).

Samson's shoulders were sixty ells broad. He was lame in both feet (Soṭah 10a), but when the spirit of God came upon him he could step with one stride from Zoreah to Eshtaol, while the hairs of his head arose and clashed against one another so that they could be heard for a like distance (Lev. R. viii. 2).

His Strength.

He was so strong that he could uplift two mountains and rub them together like two clods of earth (*ib.*; Soṭah 9b), yet his superhuman strength, like Goliath's, brought wo upon its possessor (Eccl. R. i., end). In licentiousness he is compared with Amnon and Zimri, both of whom were punished for their sins (Lev. R. xxiii. 9). Samson's eyes were put out because he had "followed them" too often (Soṭah *l.c.*). When Samson was thirsty (comp. Judges xv. 18–19) God caused a well of water to spring from his teeth (Gen. R. *l.c.* § 18).

In the twenty years during which Samson judged Israel (comp. Judges xv. 20, xvi. 31) he never required the least service from an Israelite (Num. R. ix. 25), and he piously refrained from taking the name of God in vain. As soon, therefore, as he told Delilah that he was a Nazarite of God (comp. Judges xvi. 17) she immediately knew that he had spoken the truth (Soṭah *l.c.*). When he pulled down the temple of Dagon and killed himself and the Philistines (comp. Judges *l.c.* verse 30) the structure fell backward, so that he was not crushed, his family being thus enabled to find his body and to bury it in the tomb of his father (Gen. R. *l.c.* § 19).

Even in the Talmudic period many seem to have denied that Samson was a historic figure; he was apparently regarded as a purely mythological personage. A refutation of this heresy is attempted by the Talmud (B. B. *l.c.*), which gives the name of his mother, and states that he had a sister also, named "Nishyan" or "Nashyan" (variant reading, נשיק; this apparently is the meaning of the passage in question, despite the somewhat unsatisfactory explanation of Rashi).

W. B. J. Z. L.

SAMSON AND THE SAMSON SCHOOL.

See Wolfenbüttel.

SAMSON BEN ABRAHAM OF SENS (RaSHBa or HaRaSH of שאנץ): French tosafist; born about 1150; died at Acre about 1230. His birthplace was probably Falaise, Calvados, where lived his grandfather, the tosafist Samson ben Joseph, called "the Elder." Samson ben Abraham was designated also "the Prince of Sens." He received instruction from Rabbenu Tam (d. 1171) at Troyes and from David ben Kalonymus of Münzenberg while the latter was Tam's pupil, and for ten years attended the school of Rabbi Isaac ben Samuel ha-Zaḳen of Dampierre, after whose death he took charge of the school of Sens. Asheri says of him that after R. Tam and Isaac ben Samuel he exercised the greatest influence upon Talmudical studies in France and in Germany during the thirteenth century. Joseph Colon declares that Isaac ben Samuel, Judah Sir Leon of Paris, and Samson ben Abraham formed the three strong pillars of the northern French school. Samson's tosafot, abridged by Eliezer of Touques, are the principal sources for the interpretation of the Talmud.

Being recognized as a high authority, Samson was frequently consulted upon religious and ritual questions; and most of his decisions were accepted. He did not slavishly submit to tradition, nor did he consider his opinions irrefutable. "If my opinion does not agree with yours, reject it," he once remarked ("Mordekai," on Ḥul. viii. 718). In his love for truth he once revoked a former decision of his own ("Or Zarua'," ii. 175); and with great reserve he decided against the views of R. Tam ("Mordekai," *l.c.* p. 733) and against those of his teacher Isaac ben Samuel (*ib.* Pes. ii. 556). But he showed himself very intolerant toward the Karaites, whom he looked upon as heathens with whom Israelites should neither intermarry nor drink wine.

His Views.

Samson sided with the adversaries of Maimonides in their polemics. With Meïr ben Todros ha-Levi Abulafia he kept up a lively correspondence; through Abraham ben Nathan ha-Yarḥi he sent an answer to the letter which Abulafia had addressed to the rabbis of Lunel and Toledo, and said, "I did not come to refute the great lion after his death." But, like Abulafia, he condemned Maimonides' rationalistic views on bodily resurrection and Talmudic haggadah; he likewise sided with Abulafia in his objection to some halakic views of Maimonides, and reproached the last-named for not having indicated the Talmudic sources in his "Mishneh Torah." But later on they quarreled because Abulafia was offended by some of Samson's remarks. Samson refers to Saadia Gaon, whose works he knew not through Judah Tibbon's Hebrew translation, but probably through extracts made for him by Abraham ben Nathan.

Migrates to Palestine.

In consequence of the persecution of the Jews by Pope Innocent III. (1198–1216), Samson, joining 300 English and French rabbis, emigrated to Palestine about 1211. For some years he lived in Jerusalem, hence he is designated "the Jerusalemite" ("SeMaG," Prohibitions, 65, 111; Precepts, 48). As mentioned above, he died at Acre (Acco), and he was buried at the foot of Mount Carmel.

Besides tosafot, many of which he composed under the direction of his teacher Isaac ben Samuel, Samson wrote a commentary on that part of the Mishnah not treated in the Babylonian Talmud, namely, the orders Zera'im and Ṭohorot with the exception of the tractates Berakot and Niddah. He frequently refers therein to the Palestinian Talmud, to which he devoted more attention than any of his predecessors or contemporaries, and to the older compilations Tosefta, Mekilta, Sifra, and Sifre, and he tries to reconcile the discrepancies between them and the Mishnah. He refers to Nathan ben Jehiel, to Rashi, and other authorities, but never mentions Maimonides' commentary, which he probably did not know (see Tos. Yom-Ṭob on Maksh. v. 10). A revised edition which he prepared was not printed. According to Jacob ben Aksai, Samson wrote also commentaries on Sheḳalim, 'Eduyot, Middot, and Ḳinnim, but none of them is extant. The tosafot of Sens on 'Eduyot, published under the title "'Edut Ne'emanah" (Dessau, 1813), are wrongly attributed to him.

He further wrote a commentary on the Sifra; for this, besides other older works, he utilized the

His Writings.

commentary of Abraham ben David of Posquières (RaBaD), which he quotes under the designation "sages of Lunel," "sages of the Provence," without mentioning the author's name. An inadequate edition of Samson's commentary, the manuscript of which is in the Bodleian Library at Oxford, was published at Warsaw in 1866. As Samson therein explains numerous Pentateuchal passages, it was erroneously supposed that he had written a commentary on the Pentateuch. He wrote also a few liturgical poems, and sometimes used rime in his letters.

Of Samson's father, **Abraham,** Meïr Abulafia speaks as a pious, saintly, and noble man. Samson's brother, Isaac of Dampierre (RIBA or RIẒBA), called also Isaac the Younger to distinguish him from his teacher Isaac the Elder (Isaac ben Samuel), whom he succeeded as principal of the school of Dampierre, is also one of the prominent tosafists. He wrote, too, some liturgical poems and a commentary on the Pentateuch. He died about 1210, and Samson attended his funeral. Both brothers are frequently mentioned in "Or Zarua'," "Mordekai," "Orḥot Ḥayyim," "SeMaG," "Semaḳ," "Sefer ha-Yashar," "Kol Bo," "Sha'are Dura," "Haggahot Maimuniyyot," "Terumat ha-Deshen," and similar works, and by Asher ben Jehiel and Meïr of Rothenburg. In his "Milḥamot Adonai" Abraham ben Maimon refers to Samson's presence in Acre and to his attacks on Maimonides (pp. 16, 17). A son of Samson, **Jacob,** was buried at the foot of Mount Tabor; a grandson, **Solomon,** who lived at Acre about 1260, was known as a great scholar. The statement of Grätz ("Gesch." vii. 61) that Moses of Coucy was a brother-in-law of Samson is refuted by Gross (in "R. E. J." vi. 181, and "Gallia Judaica," p. 555); he was a brother-in-law of Samson of Coucy.

D. S. Man.

SAMSON BEN ELIEZER: German "sofer" (scribe) of the fourteenth century; generally called **Baruk she-Amar,** from the initial words of the blessing which he delighted to repeat, even in boyhood, at the early morning service. He was born in Saxony, but later went with his parents to Prague. Orphaned when eight years old, he was adopted by R. Issachar, a learned scribe, who taught him to write tefillin, mezuzot, and scrolls of the Law. Samson apparently traveled through Austria, Poland, Lusatia, Thuringia, and Bavaria, and finally went to Palestine to study the work of the soferim of the Holy Land, where he found that the majority of the scribes were ignorant of the correct tradition in regard to the form of the letters. He endeavored to correct this evil in his work "Baruk she-Amar" (Shklov, 1804), which contains a treatise by R. Abraham of Sinzheim, a pupil of Meïr of Rothenburg, on the making and writing of tefillin, together with Samson's own notes from the "Halakot Gedolot," "SeMaG," "Terumah," "Roḳeaḥ," and other works. This same edition, which is poorly edited, likewise contains the "Otiyyot de-Rabbi 'Aḳiba" and various cabalistic notes on the form of the letters.

According to Azulai ("Shem ha-Gedolim," ii. 19), the name "Baruk she-Amar" became hereditary in the family; and Joseph Caro in his "Bet Yosef" (Oraḥ Ḥayyim, p. 37) mentions a certain R. Isaac Baruk she-Amar, probably a descendant of Samson.

Bibliography: Zunz, *Z. G.* p. 209; Steinschneider, *Cat. Bodl.* col. 2634.

W. B. M. F.

SAMSON BEN ISAAC OF CHINON: French Talmudist; lived at Chinon between 1260 and 1330. In Talmudic literature he is generally called after his native place, Chinon (Hebr. קינון), and sometimes by the abbreviation MaHaRShaḲ. He was a contemporary of Perez Kohen Gerondi, who, as reported by Isaac ben Sheshet, declared Samson to be the greatest rabbinical authority of his time (Responsa, No. 157).

Samson was the author of the following works: (1) "Sefer Keritut" (Constantinople, 1515), a methodology of the Talmud divided into five parts: (*a*) "Bet Middot," treating of the thirteen rules of R. Ishmael; (*b*) "Bet ha-Miḳdash," on the rules for deductions by analogy and conclusions a fortiori; (*c*) "Netibot 'Olam," containing explanations of the thirty-two rules of R. Eliezer ben Jose ha-Gelili; (*d*) "Yemot 'Olam," giving the names of the Tannaim and Amoraim, and setting forth a method for deciding between the contrary opinions of two doctors; (*e*) "Leshon Limmudim," explanations of certain halakic decisions. The "Sefer Keritut," owing to its easy style and its author's great authority, became a classic. (2) "Ḳontres," a commentary on the Talmudic treatises 'Erubin and 'Abodah Zarah; mentioned in the "Sefer Keritut." (3) "Bi'ur ha-Geṭ" (Vienna MS. No. 48), on the laws concerning divorce.

Samson wrote also responsa, several of which are quoted by Joseph Colon (Responsa, No. 187) and Solomon ben Adret (Responsa, iii., No. 1; iv., No. 152). According to Gross, Samson was the author of the supercommentary on Ibn Ezra's commentary on the Pentateuch found by Judah Mosconi at Perpignan between 1363 and 1375 (Halberstam MS.). As regards the word ממרשילאה (= "of Marseilles"), which appears in the manuscript after the name Samson of Chinon, Gross believes that Samson settled at Marseilles after the banishment of the Jews from France.

Bibliography: Azulai, *Shem ha-Gedolim*, i. 182; Zunz, *Z. G.* p. 44; Luzzatto, *Halikot Ḳedem*, p. 46; Halberstam, in *Jeshurun*, 1866, pp. 167-168; *Magazin*, iii. 47; Renan-Neubauer, *Les Rabbins Français*, p. 461; Gross, *Gallia Judaica*, pp. 581 *et seq.*

W. B. I. Br.

SAMSON BEN JOSEPH OF FALAISE: Tosafist of the twelfth century; grandfather of the tosafists Isaac ben Abraham of Dampierre and Samson of Sens. Jacob Tam, with whom he carried on a scientific correspondence, held him in high esteem.

Samson was the author of tosafot to the Talmudical treatises Shabbat, 'Erubin, Yebamot, and Ḥullin. He wrote also ritual decisions, cited by Joel ha-Levi under the title "Pesaḳim." One of his decisions, permitting a woman still nursing her child to marry again within three months of her divorce, was severely criticized by Jacob Tam ("Sefer ha-Yashar," p. 59d; Tos. Ket. 60b).

Bibliography: Conforte, *Ḳore ha-Dorot*, ed. Berlin, p. 18a; Gross. *Gallia Judaica*, p. 477.

SAMSON BEN SAMSON (called **HaRaSH,** and by anagram **Ha-Sar** [= "the prince" of Coucy]): French tosafist; flourished at the end of the twelfth and in the first half of the thirteenth century. Many of his explanations are found in the tosafot to the Talmud. He is mentioned also as a Biblical commentator. Samson was a descendant of Joseph b. Samuel Bonfils, a nephew of the tosafist Judah of Corbeil, and a brother-in-law of Moses of Coucy, who in "SeMaG" often quotes him. In the glosses of Perez on "SeMaG" (Prohibitory Laws, 111) he is erroneously called השר משנץ; hence Gedaliah ibn Yaḥya ("Shalshelet ha-Ḳabbalah," ed. Venice, p. 55a) and after him Grätz ("Gesch." vii. 61) falsely state that Samson ben Abraham of Sens was a brother-in-law of Moses of Coucy.

Seal of Samson ben Samson.
(In the British Museum.)

Samson was a disciple of Isaac ben Samuel the Elder of Dampierre and one of the prominent rabbis to whom Meïr ben Todros Abulafia addressed his letter of protest against Maimonides. Isaac ben Moses of Vienna, with whom Samson corresponded, was one of his pupils. Many of Samson's ritual decisions are mentioned in the rabbinical works "Or Zarua'," "SeMaG," "Orḥot Ḥayyim," and "Pisḳe Reḳanati."

D. S. Man.

SAMUDA: Old Spanish and Portuguese family, identified for some generations with the communal affairs of the London Jewry. The first member to settle in England was the physician and scientist **Isaac de Sequeyra Samuda.** In 1728 he pronounced a funeral oration over the grave of Haham David Nieto. In the records of Bevis Marks he is described as "Medico do Real Colleges de Londres" and "E. Socia da Real Socièdade."

In the early part of the nineteenth century **David Samuda** founded the firm of David Samuda & Sons, of Leman street, Goodman's Fields, London. In 1789 he was a member of the Board of Deputies. One of his sons, **Jacob Samuda,** was an opulent London broker, and for some years was president of the Mahamad of Bevis Marks.

Jacob Samuda: English civil engineer; born at London Aug. 24, 1811; died Nov. 12, 1844; described on his tombstone, in the Sephardic cemetery, Mile End, London, as "the first Jewish engineer"; elder son of **Abraham Samuda,** an East and West India merchant of London, by his marriage with Joy, daughter of H. d'Aguilar of Enfield Chase, Middlesex. On completing his apprenticeship with John Hague, an engineer, Jacob started business on his own account in partnership with his brother Joseph d'Aguilar; and the firm of Samuda Brothers thereafter advanced steadily in wealth and influence.

Samuda displayed considerable inventive genius, which led to important discoveries. One of these, the atmospheric railway, received at first with considerable opposition, was subsequently adopted as a means of transit by several important companies. The Dublin and Kingstown Railway was the first to recognize its advantages and to utilize them (Aug., 1842). Sir Robert Peel later recommended its adoption to the House of Commons and the Board of Trade. The first English line formed was from Epsom to London; and later the South Devon Railway adopted the principle of the new invention.

Another invention of Samuda's was his improvement in marine engines, a type of which he constructed on a novel pattern possessing many advantages. In 1843 he contracted to build the "Gypsy Queen," an iron boat to be fitted with his improved engine. On the trial trip, which took place on Nov. 12, 1844, Samuda, with six persons who had accompanied him, met his death through an explosion.

Bibliography: *Voice of Jacob*, Nov. 29, 1844.

J. G. L.

Joseph d'Aguilar Samuda: English civil engineer and politician; born at London May 21, 1813; died there April 27, 1885; younger son of Abraham Samuda. He gained his first experience of business in his father's counting-house; but in 1832 he left it to join his elder brother, Jacob Samuda.

Joseph and his brother Jacob established themselves as marine and general engineers and shipbuilders, and their operations were of the most extensive and important character. For the first ten years of the existence of the firm they confined themselves principally to the building of marine engines. Then they engaged in the construction of railway lines on the atmospheric principle. In 1843 they entered the ship-building business, and from that time onward, notwithstanding the tragic death of Jacob in the following year, the firm was uninterruptedly engaged in constructing iron steamships for the navy, merchant marine, and passenger and mail services of England as well as of other countries, besides royal yachts and river-boats. Many of these vessels were built under Samuda's personal superintendence.

In 1860 Samuda helped to establish the Institute of Naval Architects, of which he was the first treasurer and subsequently a vice-president, contributing frequently to its "Transactions." A couple of years later he became a member of the Institution of Civil Engineers, to whose "Proceedings" he likewise contributed. He was the author of "A Treatise on the Adaptation of Atmospheric Pressure to the Purposes of Locomotion on Railways."

Samuda created for himself also an important parliamentary career. He had been a member of the Metropolitan Board of Works from 1860 to 1865, and in the latter year he entered Parliament in the Liberal interest for Tavistock. He sat for that constituency until 1868, when he was returned for the Tower Hamlets, which he continued to represent until 1880. He then lost his seat owing to the support which he gave to Lord Beaconsfield's foreign policy. While in the House he spoke with much authority on all matters connected with his profession. Some of his speeches are described as "treasure-houses of technical and political knowledge." Having, with his family, seceded from the Jewish community, he was interred in Kensal Green Cemetery. He married, in 1837, Louisa, daughter of Samuel Ballin of Holloway.

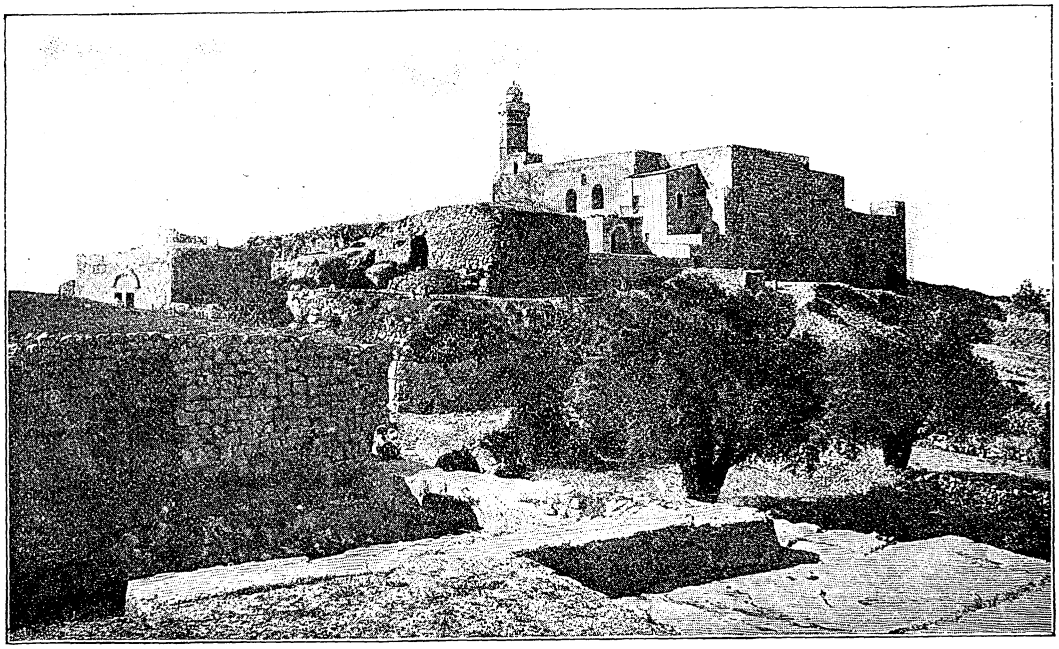
SAMUEL.—Biblical Data : Samuel was the son of Elkanah and Hannah, of Ramathaim-zophim, in the hill-country of Ephraim (I Sam. i. 1). He was born while Eli was judge. Devoted to Yhwh in fulfilment of a vow made by his mother, who had long been childless, he was taken to Shiloh by Hannah as soon as he was weaned, to serve Yhwh during his lifetime (i. 11, 22–23, 28).

The Call of Samuel.

The sons of Eli being sons of Belial, wicked and avaricious, Samuel ministered before Yhwh in their stead, being even as a lad girded with a linen ephod (ii. 12 *et seq.*, 22 *et seq.*). His mother, on her yearly visits, brought him a robe. As he grew up Samuel won ever-increasing favor with Yhwh and with men (ii. 26). How he was called by Yhwh is related as follows: Eli, old and dim of vision, had lain down to sleep, as had Samuel, in the Temple of Yhwh, wherein was the Ark. Then Yhwh called "Samuel!" Answering, "Here am I," Samuel, thinking Eli had summoned him, ran to him explaining that he had come in obedience to his call. Eli, however, sent him back to his couch. Three times in succession Samuel heard the summons and reported to Eli, by whom he was sent back to sleep. This repetition finally aroused Eli's comprehension; he knew that Yhwh was calling the lad. Therefore he advised him to lie down again, and, if called once more, to say, "Speak, for Thy servant heareth." Samuel did as he had been bidden. Yhwh then revealed to him His purpose to exterminate the house of Eli.



Alleged Tomb of Samuel at Mizpah.
(From a photograph by the American colony at Jerusalem.)

Samuel hesitated to inform Eli concerning the vision, but next morning, at Eli's solicitation, Samuel related what he had heard (iii. 1–18). Yhwh was with Samuel, and let none of His words "fall to the ground." All Israel from Dan to Beer-sheba recognized him as appointed to be a prophet of Yhwh; and Samuel continued to receive at Shiloh revelations which he imparted to all Israel (iii. 19–21).

Samuel as Judge.

During the war with the Philistines the Ark was taken by the enemy. After its mere presence among the Philistines had brought suffering upon them, it was returned and taken to Kirjath-jearim. While it was there Samuel spoke to the children of Israel, calling upon them to return to Yhwh and put away strange gods, that they might be delivered out of the hands of the Philistines (vii. 2 *et seq.*). The test came at Mizpah, where, at Samuel's call, all Israel had gathered, under the promise that he would pray to Yhwh for them, and where they fasted, confessed, and were judged by him (vii. 5–6). Before the Philistines attacked, Samuel took a sucking lamb and offered it for a whole burnt offering, calling unto Yhwh for help; and as the Philistines drew up in battle array Yhwh "thundered with a great thunder" upon them, "and they were smitten before

Israel." As a memorial of the victory Samuel set up a stone between Mizpah and Shen, calling it "Eben-ezer" (= "hitherto hath the Lord helped us"). This crushing defeat kept the Philistines in check all the days of Samuel (vii. 7–14).

In his capacity as judge Samuel went each year in circuit to Beth-el, and Gilgal, and Mizpah, but he dwelt at Ramah, where he built an altar (vii. 15 *et seq.*). When he had grown old, and was ready to surrender his duties to his sons, neither Joel, the first-born, nor Abijah, the second, proved worthy; they "turned aside after lucre, and took bribes" (viii. 1–3). This induced the elders to go to Ramah and request Samuel to give them a king, as all the other nations had kings. Samuel was much vexed, but upon praying to Yhwh and receiving the divine direction to yield, he acquiesced, after delivering a powerful address describing the despotism they were calling upon themselves and their descendants; this address, however, did not turn the people from their purpose (viii. 3 *et seq.*). In this crisis Samuel met Saul, who had come to consult him, the seer, concerning some lost asses. Yhwh had already apprised him of Saul's coming, and had ordered him to anoint his visitor king. When Saul inquired of him the way to the seer's house, Samuel revealed his identity to the Benjamite, and bade him go with him to the sacrificial meal at the "high place," to which about thirty persons had been invited. He showed great honor to Saul, who was surprised and unable to reconcile these marks of deference with his own humble origin and station. The next morning Samuel anointed him, giving him "signs" which, having come to pass, would show that God was with him, and directing him to proceed to Gilgal and await his (Samuel's) appearance there (ix., x. 1–9).

Samuel and Saul.

In preparation for the installation of Saul, Samuel called the people together at Mizpah, where the private anointment of Saul was confirmed by his selection by lot (x. 17–24). Samuel is reported also to have taken active part in the coronation of Saul at Gilgal (xi. 12–15). He profited by the opportunity to rehearse before the people his own life and secure their acknowledgment of his probity. After a solemn admonition to the people to be loyal to Yhwh, Samuel, as a sign that the demand for a king was fundamentally wicked, called forth thunder and rain, which so impressed the people that they implored him to intercede with Yhwh for them, "that we die not." Samuel turned the occasion into a solemn lesson as to what the penalties for disobedience would be (xii.).

At Gilgal a break with Saul came because, in the absence of Samuel, the king had offered the burnt offering. Samuel announced then and there that Saul's dynasty was not to be permitted to continue on the throne (xiii. 8–14). Nevertheless, Samuel sent Saul to accomplish the extermination of Amalek (xv.). Again Saul proved refractory, sparing Agag, the Amalekite king, and the flocks, and everything that was valuable. Thereupon the word of Yhwh came unto Samuel, announcing Saul's deposition from the throne. Meeting Saul, Samuel declared his rejection and with his own hand slew Agag (xv.). This led to the final separation of Samuel and Saul (xv. 34–35). Mourning for Saul, Samuel was bidden by Yhwh to go to Jesse, the Beth-lehemite, one of whose sons was chosen to be king instead of Saul (xvi. 4). Fearing lest Saul might detect the intention, Samuel resorted to strategy, pretending to have gone to Beth-lehem in order to sacrifice. At the sacrificial feast, after having passed in review the sons of Jesse, and having found that none of those present was chosen by Yhwh, Samuel commanded that the youngest, David, who was away watching the sheep, should be sent for. As soon as David appeared Yhwh commanded Samuel to anoint him, after which Samuel returned to Ramah (xvi. 5–13).

Samuel and David.

Nothing further is told of Samuel until David's flight to him at Ramah, when he accompanied his fugitive friend to Naioth. There, through Samuel's intervention, Saul's messengers, as did later Saul himself, turned prophets "before Samuel" (xix. 18 *et seq.*). The end of Samuel is told in a very brief note: "And Samuel died, and all Israel gathered themselves together, and lamented him, and buried him in his house at Ramah" (xxv. 1, Hebr.). But after his death, Saul, through the witch of En-dor, called Samuel from his grave, only to hear from him a prediction of his impending doom (xxviii. 3 *et seq.*).

In I Chron. xxvi. 28 Samuel the seer is mentioned as having dedicated gifts to the Sanctuary. He is again represented in I Chron. xi. 3 as having, in Yhwh's name, announced the elevation of David to the throne. He is furthermore credited with having ordained the "porters in the gates" (I Chron. ix. 22).

In the Biblical account Samuel appears as both the last of the Judges and the first of the Prophets, as the founder of the kingdom and as the legitimate offerer of sacrifices at the altars (I Sam. vii. 9 *et seq.*, ix. 22 *et seq.*, x. 8, xi. 15, xvi. 1 *et seq.*). In fact, Chronicles (I Chron. vi. 28) makes him out to be of Levitical descent. According to I Sam. ix. 9, the prophets preceding Samuel were called seers, while it would appear that he was the first to be known as "nabi," or "prophet." He was the man of God (ix. 7–8), and was believed by the people to be able to reveal the whereabouts of lost animals. In his days there were "schools of prophets," or, more properly, "bands of prophets." From the fact that these bands are mentioned in connection with Gibeah (I Sam. x. 5, 10), Jericho (II Kings ii. 5), Ramah (I Sam. xix. 18 *et seq.*), Beth-el (II Kings ii. 3), and Gilgal (II Kings iv. 38)—places focal in the career of Samuel—the conclusion seems well assured that it was Samuel who called them into being. In the Acts of the Apostles (xiii. 20) Samuel occurs as the last of the Judges and the first true prophet in Israel (Acts iii. 24, xiii. 20; Heb. xi. 32), while a gloss in Chronicles (II Chron. xxxv. 18) connects his time with one of the most memorable celebrations of Passover. The Old Testament furnishes no chronological data concerning his life. If Josephus ("Ant." vi. 13, § 5) is to be believed, Samuel had officiated twelve years as judge before Saul's coronation. The year 1095 B.C. is commonly accepted as that of Saul's accession to the throne. E. G. H.

——**In Rabbinical Literature:** Samuel was a Levite (Lev. R. xxii. 6) of the family of Korah (Num. R. xviii. 17), and was also a Nazarite (Naz. 66a). As a child he was extremely delicate (Ḥag. 6a), but highly developed intellectually. Thus, when he was weaned and brought by his mother to Shiloh, he noticed that the priests were most careful that the sacrificial victims should be slain by one of their number. Samuel, however, declared to the priests that even a layman might offer sacrifice, whereupon he was taken before Eli, who asked him the grounds of his statement. Samuel answered: "It is not written that the priest shall slay the victim, but only that he shall bring the blood" (Lev. i. 5; comp. Zeb. 32a). Eli acknowledged the validity of his argument, but declared that Samuel merited the penalty of death for giving legal decisions in the presence of a master; and it was only the entreaty of Samuel's mother which saved the child (Ber. 31b). When God revealed Himself to Samuel for the first time and called his name, he cautiously answered only "Speak" (I Sam. iii. 10) and not, as Eli commanded him, "Speak, O God" (Shab. 113b).

Samuel was very rich. On his annual journeys as judge to various cities (comp. I Sam. vii. 16-17) he was accompanied by his entire household, and would accept hospitality from no one (Ber. 10b; Ned. 38a). While Moses commanded the people to come to him that he might declare the Law to them (comp. Ex. xviii. 14-16), Samuel visited all the cities of the land to spare the people weary journeys to him; and while Samuel was considered equal to Moses and to Aaron (Ber. 31b; Ta'an. 5b), he was favored above Moses in one respect; for the latter was obliged to go to the Tabernacle to receive a revelation from God, whereas God Himself came to Samuel to reveal His will to him (Ex. R. xvi. 4). For ten years Samuel judged Israel; but in the tenth the people asked for a king. Samuel anointed Saul; and when the latter was rejected by God, Samuel grieved bitterly and aged prematurely (Ta'an. 5b). Cruel though he was in hewing Agag to pieces, yet this was a righteous punishment for the Amalekite, who had been equally barbarous to the children of Israel (Lam. R. iii. 43).

Samuel wrote the books of Judges and Ruth, as well as those bearing his own name, although the latter were completed by the seer Gad (B. B. 14b-15a). He died at the age of fifty-two (M. Ḳ. 28a). When he was raised from the dead by the witch of Endor at the request of Saul (comp. I Sam. xxviii. 7-19), he was terrified, for he believed that he was summoned to appear before the divine judgment-seat; he therefore took Moses with him to bear witness that he had observed all the precepts of the Torah (Ḥag. 4b).

W. B. J. Z. L.

Sources of Biography.

——**Critical View:** The outline of the life of Samuel given in the First Book of Samuel is a compilation from different documents and sources of varying degrees of credibility and age, exhibiting many and not always concordant points of view (see Samuel, Books of—Critical View). The name "Shemu'el" is interpreted "asked of Yhwh," and, as Ḳimḥi suggests, represents a contraction of שאול מאל, an opinion which Ewald is inclined to accept ("Lehrbuch der Hebräischen Sprache," p. 275, 3). But it is not tenable. The story of Samuel's birth, indeed, is worked out on the theory of this construction of the name (i. 1 *et seq.*, 17, 20, 27, 28; ii. 20). But even with this etymology the value of the elements would be "priest of El" (Jastrow, in "Jour. Bib. Lit." xix. 92 *et seq.*). Ch. iii. supports the theory that the name implies "heard by El" or "hearer of El." The fact that "alef" and "'ayin" are confounded in this interpretation does not constitute an objection; for assonance and not etymology is the decisive factor in the Biblical name-legends, and of this class are both the first and the second chapter. The first of the two elements represents the Hebrew term "shem" (= "name"); but in this connection it as often means "son." "Shemu'el," or "Samuel," thus signifies "son of God" (see Jastrow, *l.c.*).

The older strata in the story are more trustworthy historically than are the younger. In I Sam. ix. 1-x. 16 Samuel is a seer and priest at one of the high places; he is scarcely known beyond the immediate neighborhood of Ramah. Saul does not seem to have heard of him; it is his "boy" that tells him all about the seer (ix.). But in his capacity as seer and priest, Samuel undoubtedly was the judge, that is, the oracle, who decided the "ordeals" for his tribe and district. In order to apply to him the title of "judge" in the sense it bore in connection with the heroes of former days—the sense of "liberator of the people"—the story of the gathering at Mizpah is introduced (vii. 2 *et seq.*). Indeed, the temptation is strong to suspect that originally the name שאול (Saul) was found as the hero of the victory, for which later that of שמואל (Samuel) was substituted. At all events, the story proceeds on the assumption that Samuel had given earnest thought to his people's plight, and therefore was prepared to hail the sturdy Benjamite as the leader in the struggle with the Philistines (ix. 15, 17, 20 *et seq.*; x. 1 *et seq.*). His hero was to be the champion of Yhwh and of Yhwh's people, the anointed prince ("nagid"), whose call would rouse the scattered tribes from their lethargy and whose leadership would unite the discordant elements into a powerful unit for offense and defense. Favoring Saul even before the people had recognized in him their predestined leader, Samuel soon had cause to regret the choice. Common to both accounts of the rupture (xiii. 8 *et seq.* and xv. 10 *et seq.*) is the disobedience Saul manifested in arrogating to himself Samuel's functions as priest and offerer; the story concerning Agag's exemption from the ban (see Schwally, "Der Heilige Krieg im Alten Israel," p. 30) seems to be the more likely of the two, but in both instances the data show clear traces of having been recast into prophetic-priestly molds.

Probably Shaped Under Influence of Deuteronomy.

In fact, the majority of the reports concerning Samuel reflect the post-Deuteronomic, prophetic conception, and therefore, on the theory that before the erection of the central and permanent sanctuary the "altars" and "high places" were legitimate, no offense is manifested at his having, though not a priest, sacrificed at these places, though precisely for this reason the Book of Chronicles lays stress upon his Levitical descent. In ch. iii. 20 Samuel appears as the prophet of Yhwh, known as such from Dan to Beer-sheba. In ch. xix. 18 *et seq.* Samuel is at the head of prophet bands (differing from ix. 1 *et seq.*, where these roving bands of "shouters" ["nebi'im"] appear to be independent of him). Again, ch. vii., viii., and ix. represent him as the theocratic chief of the nation. Ch. vii. 7 *et seq.* must be held to be pure fiction, unless it is one of the many variants of Saul's victory over the Philistines (comp. xiii. 1 *et seq.*). Nor is there concordance in the conceptions of the rise and nature of the monarchy and the part Samuel played in its founding. In ix.–x. 16 Yhwh legitimatizes the nomination of the king, but in ch. viii. the view of Deut. xvii. 14 *et seq.* predominates. This chapter could not have been written before Hos. x. 9, and the reign of Solomon and some of his successors. The fact is, the monarchy developed without the intervention of Samuel. Such deeds as those performed at Jabesh caused the people to offer Saul the crown at Gilgal (xi. 1 *et seq.*), an act which Samuel, who at first may have welcomed the young leader as chief only, expecting him to remain under his tutelage, was compelled to ratify.

The story of David's elevation (xvi. 1–13) presents itself as an offset to that of Saul's (I Sam. x. 17 *et seq.*), the historical kernel in it being the fact that Samuel, disappointed in Saul, transferred his favor to the rival tribe of Judah, and intrigued to bring about the raising of a counter-king in the young freebooter David. Ch. xv. is a prophetic apotheosis of Samuel, which rings with the accents familiar in the appeals of Amos, and which makes Samuel a worthy forerunner of Elijah. The Levitical genealogy of I Chron. vi. is not historical.

SAMUEL, BOOKS OF.—Biblical Data:

Two books in the second great division of the canon, the "Nebi'im," or Prophets, and, more specifically, in the former of its subdivisions, the "Nebi'im Rishonim," or Earlier Prophets, following upon Joshua and Judges; the third and fourth of the historical writings according to the arrangement of the Masoretic text. Originally the two books of Samuel formed a single book, as did the two books of Kings. In the Septuagint Samuel and Kings were treated as one continuous and complete history of Israel and Judah, and the work was divided into four books under the title Βίβλια Βασιλειῶν ("Books of Kingdoms"). This division was accepted in the Vulgate by Jerome, who changed the name to "Books of Kings." Thence it passed into the editions of the Hebrew Bible published by Daniel Bomberg of Venice in the sixteenth century; and it has since reappeared in every Hebrew printed edition, though the individual books retained the captions they had in the Hebrew manuscripts, viz., "I Samuel" and "II Samuel" for the first two of the four Kings, and "I Kings" and "II Kings" for the last two. But the Masorah continued to be placed after II Samuel for both I and II.

Name and Contents.

The name "Samuel," by which the book, now divided into two, is designated in Hebrew, was construed to imply that Samuel was the author (see below). More likely, the title was chosen because Samuel is the most important of all the personages mentioned in the record, he having a prominent, even dominant, part in most of the events related in book I. The two books comprise, according to the Masoretic note at the end, thirty-four "sedarim" (the mnemonic word is given as ידך); in the printed editions the first book has thirty-one chapters and the second twenty-four, making fifty-five chapters in all. They give the history of Israel from the concluding days of the period of the Judges—Samuel being considered the last of them—through the reigns of the first two kings, Saul and David, and continue the story not up to the latter's death, but merely to his incipient old age, the account of his declining years forming the prelude to the history of Solomon in I Kings.

First Book of Samuel: This book consists of three main sections, to which the following headings may respectively be prefixed: (1) Eli and Samuel, ch. i.–vii.; (2) Samuel and Saul, viii.–xv.; and (3) Saul and David, xvi.–xxxi. In detail the contents are as follows:

(1) Eli and Samuel: *Samuel's Younger Days and the Story of Eli:* Birth of Samuel and his dedication to Yhwh (i.); Hannah's song (ii. 1–10); Samuel's service in the sanctuary (ii. 11–iv. 1).

The Story of the Ark: Loss of the Ark and its dire consequences (iv.); the Ark retained by the Philistines (v.); return of the Ark (vi. 1–18); the Ark at Beth-shemesh and Kirjath-jearim (vi. 19–vii. 1).

Samuel as Judge: The people's sorrow (vii. 2–6); defeat of the Philistines (vii. 7–12); Samuel judges Israel (vii. 12–17).

(2) Samuel and Saul: *Israel Clamors for a King:* The desire of the people (viii. 1–5); Samuel consults Yhwh (viii. 6–9); Samuel admonishes the people (viii. 10–18); their persistence (viii. 19–22).

Saul Anointed as King: Details of Saul's pedigree and character (ix. 1–2); his adventure with his father's asses and his visit to the seer (ix. 3–14); meeting of Samuel and Saul (ix. 15–21); meal set before Saul (ix. 22–24); Saul anointed by Samuel (ix. 25–x. 8); Saul's home-coming (x. 9–16).

Saul's Election to the Kingship: The election by lot (x. 17–25a); dismissal of the people (x. 25a–27a).

Saul Assumes the Kingship.

The Peril of Jabesh-gilead; Saul's Valor and Its Reward—the Crown: Siege of Jabesh-gilead; outrageous conditions of peace (xi. 1–3); messengers for relief at Gibeah; Saul, stirred by the spirit, calls Israel to arms (xi. 4–8); Saul relieves the city (xi. 9–11); his kingship acknowledged and confirmed (xi. 12–15).

Samuel Relinquishes His Judgeship: Samuel's challenge to prove malfeasance in office against himself (xii. 1–6); his pleading with the people in a retrospect of Israel's history (xii. 7–15); he calls down thunder and rain upon the people, who are thereby compelled to request his intercession for them as sinners; he exhorts them to fear Yhwh (xii. 16–25).

War Against the Philistines: Saul begins his reign

(xiii. 1); war breaks out; the people in distress hide for their lives (xiii. 2–7a); Saul's failure; his rejection at Gilgal (xiii. 7b–15); Philistines in possession of the mountains of Ephraim (xiii. 16–18, 23); the people of Israel are unarmed, the Philistines having forbidden work at the smithies (xiii. 19–22); Jonathan's great feat of arms (xiv. 1–15); battle with the Philistines (xiv. 16–24); Saul's curse on the man that should eat, and Jonathan's violation of the prohibition (xiv. 25–30); Saul prevents the people from eating blood (xiv. 31–35); discovery of Jonathan's transgression; his rescue by the people (xiv. 36–45); brief exposition of Saul's wars; names of his sons and daughters; and other details (xiv. 46–52).

War Against the Amalekites; Saul's Rejection: Command to Saul to destroy Amalek (xv. 1–3); the war; Saul disobeys by sparing Agag and the flocks (xv. 4–9); Samuel's censure and menace for this disobedience (xv. 10–23); Saul, repentant, pleads for mercy (xv. 24–31); death of Agag (xv. 32–33); Samuel's complete separation from Saul (xv. 34–35).

(3) Saul and David: *David's Family and Qualifications:* Selection and consecration of David, the son of Jesse, after the rejection of his brothers (xvi. 1–13); David, as a cunning player on the harp, is brought to Saul to drive away the evil spirit from the king (xvi. 14–23); David's valor; his victory over Goliath (xvii. 1–54); David becomes Jonathan's friend and a general of Saul (xvii. 55–xviii. 5).

Saul's Jealousy of David.

David Distrusted by Saul; His Flight: Saul's jealousy; the women's song, "Saul has slain his thousands, and David his ten thousands"; the king hurls his spear at David; the latter is relieved of the duty of attending on Saul; David is loved by all Israel and Judah; Saul attempts to lure David to his death at the hands of the Philistines by the promise of his elder daughter, Merab, in marriage; David weds Michal, the king's younger daughter, in spite of the dangerous conditions Saul imposes for the marriage (xviii. 6–30); Jonathan's intercession leads to a reconciliation between Saul and David; futile attempt by Saul to assassinate David; the latter, aided by a ruse of Michal, flees (xix. 1–17); David with Saul at Ramah; Saul repeatedly attempts to seize him, but is foiled (xix. 18–24); David and Jonathan (xx.); David at Nob with Ahimelech the priest; he eats the SHOWBREAD, feigns madness before Achish (King of Gath), takes refuge in the cave of Adullam, and goes to Mizpah of Moab; he returns to Judah upon the advice of the prophet Gad; Saul's revenge against Ahimelech, who is killed under his orders by Doeg (xxi.–xxii.).

David a Freebooter in Philistia: David and the city of Keilah; Saul threatening to besiege him there, David consults Abiathar's ephod and at the oracle's advice departs (xxiii. 1–13); David's adventures while pursued by Saul in the wilderness of Ziph and in the strongholds of En-gedi (xxiii. 14–xxiv. 23); Samuel's death (xxv. 1a); David in the wilderness of Paran; his dealings with Nabal and Abigail (xxv.); his night visit to Saul's camp (xxvi.); his escape into the land of the Philistines, where he finds protection at the hand of Achish at Gath, receiving later Ziklag as a gift; he dwells in the land a year and four months, raiding his neighbors, while duping the king into the belief of his loyalty to him and in his active hostility to the people of Judah (xxvii.).

Closing Days of Saul's Reign.

Saul's End: War breaks out between Achish and Philistia, and Saul of Israel (xxviii. 1–2); Saul and the witch of En-dor (xxviii. 3–25); Achish, upon the complaint of his chieftains, who distrust David, dismisses him to Ziklag (xxix.); David's expedition against the Amalekites, who, during his absence, had raided Ziklag and set it on fire, taking large booty and carrying off among the women David's wives. Consulting the ephod, David pursues the marauders. Meeting on the way an Egyptian slave abandoned by the Amalekites, David is led by him to where the enemies are feasting. He fights them till sundown, slaying or capturing all save 400, and recovering his own; David's ordinance concerning the division of the spoils; his gifts to the elders of Judah (xxx.); the last battle of Saul; death of his sons Jonathan, Abinadab, and Melchi-shua; Saul, after the refusal of his armor-bearer to kill him, dies by falling upon his own sword; his body and those of his sons are stripped; Saul's head is cut off, to be sent as a trophy into the cities of Philistia; his body is fastened to the wall of Beth-shan, whence it is recovered by the men of Jabesh-gilead, who burn it, together with the remains of his sons, at Jabesh, and later bury the bones under a tamarisk-tree (xxxi.).

Second Book of Samuel: This book likewise readily lends itself to a division into three main parts: (1) David as king (i.–viii.); (2) David and his crown princes (ix.–xx.); and (3) complementary appendixes consisting of various historical glosses (xxi.–xxiv.). The details are as follows:

(1) David as King: *David Learns of Saul's Death:* Arrival of the messenger (i. 1–5); he reports that he had slain Saul at the latter's own request (i. 6–10); David mourns for Saul and Jonathan (i. 11–12); he directs that the messenger, "the son of a stranger, an Amalekite," be surreptitiously killed (i. 13–16).

The Lament ("Ḳinah") of David for Saul and Jonathan: Superscription, with note that the lamentation is written in the Book of Jashar (i. 17–18); the lamentation (i. 19–27).

David in Hebron.

David Reigns in Hebron; War Against Abner, Ish-bosheth's (Esh-baal's) Captain: Upon YHWH's advice, David goes up to Hebron with his two wives, his men, and their households; he is anointed king by the men of Judah (ii. 1–4); he sends a message of approval to the men of Jabesh-gilead for having buried Saul (ii. 5–7); Abner is loyal to Saul's son Ish-bosheth or Esh-baal (ii. 8–11); Abner meets Joab, David's captain, by the pool of Gibeon, where twelve young men on each side engage in a trial by combat, all twenty-four falling; Abner is defeated in the battle which ensues (ii. 12–19); Abner is pursued, but slays Asahel, his pursuer, after vainly imploring him to desist (ii. 20–23); Joab, after parleying with Abner, blows the trumpet as a signal for the pursuit to cease (ii. 24–32).

The Extermination of Saul's House: War between the house of Saul and that of David (iii. 1, 6a); enumeration of David's sons (iii. 2–5); relations between Abner and Ish-bosheth disturbed by suspicions on the latter's part (iii. 7–11); Abner makes treasonable overtures to David, inducing him to demand his wife Michal from Ish-bosheth, who takes her away from her second husband, Paltiel, and sends her to David (iii. 12–16); Abner urges the elders of Israel to go over to David; he himself pays a visit to him and promises to deliver over to him all Israel (iii. 17–21); Abner is treacherously slain by Joab (iii. 22–30); David mourns for Abner; he refuses to eat until sunset, which pleases the people (iii. 31–39); Ish-bosheth is assassinated; and his head is taken to David, who, however, causes the assassins to be killed (iv. 1–3, 5–12; verse 4 is a gloss giving an account of the escape of Mephibosheth, Jonathan's son, when five years old, and of his fall from the arms of a nurse, which resulted in his lameness).

David and Jerusalem: David is made king over all Israel (v. 1–3); his age and length of reign (v. 4, 5); he takes Jerusalem from the Jebusites; comment on David's growing power (v. 6–10); Hiram of Tyre sends materials and workmen and builds David a house (v. 11–12); David increases his harem; names of his sons born in Jerusalem (v. 13–16); war with the Philistines leading to their defeat (v. 17–25).

The Ark Brought to Jerusalem.

Removal of the Ark: The Ark is brought on a new cart out of the house of Abinadab, David and the Israelites playing before it on all sorts of instruments; its arrival at the thrashing-floor of Nachon; Uzzah, to save the Ark from falling when the oxen stumbled, puts forth his hand, for which act he is smitten dead (vi. 1–8); David, afraid to remove the Ark to Jerusalem, carries it aside to the house of Obed-edom, the Gittite, where it remains for three months (vi. 9–12); hearing that Obed-edom has prospered in consequence, David brings the Ark to Jerusalem, offering sacrifices along the way; David dances before the Ark, which causes Michal to despise him; the Ark is set in the midst of a tent, David offering "'olot" and "shelamim" before Yhwh, and the people receiving a share of the sacrificial meal; Michal's censure of David; her reproof and punishment (vi. 13–23).

Plans to Build Temple: Nathan and David; the prophet recalls that no permanent sanctuary has existed during Israel's history, and bids David desist from his plan to build one (vii. 1–12); the prophet promises that David shall have a successor, who will be permitted to carry out his (David's) plans (vii. 13–17); David's prayer of thanks for his own elevation and for the divine promise that his dynasty shall continue to rule (vii. 18–29).

Data Concerning David's Reign: David's wars (viii. 1–6); the spoils of gold and silver vessels dedicated to Yhwh (viii. 7–12); other military records (viii. 13–14); David as a just ruler; details of the administration and the names of his chief officers (viii. 15–18).

(2) **David and His Crown Princes:** *The Story of David and Jonathan's Son:* Ziba, a servant, upon David's inquiry, reveals the existence and place of sojourn of Mephibosheth (ix. 1–5); David sends for him, receives him graciously, assigns him Ziba for a body-servant, restores to him all of Saul's lands, and accords him a place as a daily guest at the royal table (ix. 6–10a); Ziba, his fifteen sons, and twenty retainers serve Mephibosheth and his son Micha (ix. 10b–13).

David and Uriah.

The Expeditions Against Ammon and Syria: The first campaign; the provocation: Ammon's king having died, David sends a deputation to present his condolence to Hanun, the son and successor; his envoys are grossly insulted, and are sent back with one-half of their beards shaved off, and their clothes cut off in the middle, so that they have to wait at Jericho until they obtain fresh garments and their beards are grown (x. 1–5); the first battle: Ammon hires Syrian mercenaries, against whom David sends Joab and an army of mighty men; with fine strategy Joab and his brother Abishai defeat the enemy (x. 6–14); the second battle: Hadarezer leads the Syrians, against whom David in person takes the field, marching to Helam, where he defeats them (x. 15–19); war against Ammon is renewed, but David remains at Jerusalem; he sins with Bath-sheba, wife of Uriah the Hittite, who is with the army (xi. 1–5); to hide his sin David commands Uriah to return home, but is foiled in his designs (xi. 6–13); Uriah delivers to Joab a letter from David containing an order to place Uriah in the forefront of the battle so that he may be killed; this is done, and Uriah falls (xi. 14–17); Joab sends a report to David (xi. 18–25); David takes Bath-sheba into his house, where she gives birth to the first son born unto him while king; Yhwh is displeased (xi. 26, 27); Nathan's parable: "Thou art the man"; Nathan rebukes the king; David confesses (xii. 1–15); the child sickens; David fasts; death of the child; David, to the surprise of his servants, now eats; his explanation (xii. 16–23); Solomon born of Bath-sheba; Nathan gives him the name "Jedidiah" (xii. 24–25); Joab calls upon David to join the army lest all the glory of the victory fall to his (Joab's) name; David captures Rabbah, taking the king's crown for himself, and treating the prisoners most cruelly; end of the war (xii. 26–31).

Amnon and Absalom: Amnon, in love with Tamar, the sister of his half-brother Absalom, upon the counsel of his cousin Jonadab feigns sickness and secures his father's consent for Tamar to nurse him; he outrages her, and sends her off with insults (xiii. 1–19); Absalom, seeing her grief, consoles her, takes her to his house and awaits an opportunity to take revenge (xiii. 20–22); two years later Absalom invites the king and his sons to a sheep-shearing feast in Baal-hazor, in which Amnon, after the king's refusal to attend, takes part; at the bidding of Absalom, Amnon is killed at the table (xiii. 23–29a); the king's sons fleeing, David hears that all have been killed; Jonadab reassures him, revealing to him Absalom's plot; Absalom takes refuge with Talmai, King of Geshur, remaining in exile three years (xiii. 29b–38); the king yearns for Absalom; Joab's ruse in sending for a wise woman from Tekoah, who feigns to be a widow and to having had an experience with her two sons similar to that of the king; extracting a promise from David that the avenger of blood shall destroy no more, she invokes the promise in Absalom's case; she confesses to be in league with Joab (xiii. 39–xiv. 20); Absalom is granted complete immunity; Joab is sent to bring him home; Absalom is bidden to stay in his own house without seeing the king (xiv. 21–24); Absalom's beauty; his sons and daughter (xiv. 25–27); Absalom, after living two years in Jerusalem without seeing the king, in order to force an interview with Joab sets fire to the latter's field; Joab meets Absalom, and at his bidding intercedes in his behalf with David; David pardons Absalom (xiv. 28–33).

David and Absalom.

Absalom's Rebellion: Outbreak of the rebellion at Hebron (xv. 1–12); David has to leave Jerusalem; incidents of the flight; Ittai; Zadok and the Ark; Ahithophel and Hushai; Ziba reveals Mephibosheth's plot against David, and is rewarded; Shimei curses David, who, however, will not have him punished (xv. 13–xvi. 14); Absalom at Jerusalem; Hushai joins him; Ahithophel advises Absalom to seize the harem (in token of his being the ruling sovereign), and asks to be allowed to pursue David; Hushai counsels that Absalom should go out in person at the head of all Israel; Hushai's advice is followed; Hushai sends to Zadok and Abiathar asking them to warn David; Jonathan and Ahimaaz, the messengers, are seen by a lad who betrays them, but they are hidden in a well by a woman, and Absalom can not find them; they warn David, who passes over the Jordan; Ahithophel commits suicide (xvi. 15–xvii. 23); David at Mahanaim; Absalom crosses the Jordan with Amasa as his general; Shobi, Machir, and Barzillai provide beds and food (xvii. 24–29).

The Battle and Absalom's Death: David not allowed to go into battle; he gives orders to deal gently with Absalom; the battle in the forest of Ephraim; Absalom is defeated; he is caught by his hair in the boughs of an oak while his mule passes from under him; Joab, learning of this, takes three darts and thrusts them into Absalom's heart; this ends the pursuit (xviii. 1–16); glosses concerning Absalom's monument and grave (xviii. 17–18); Joab sends the Cushite to the king; Ahimaaz, after having been refused by Joab, is allowed to follow the Cushite, whom he outruns; Ahimaaz informs the king of the victory; David inquires after Absalom, and receives from Ahimaaz an evasive answer; the Cushite arriving, David learns of his son's fate; David's lamentation (xviii. 19–33); the people mourn, the soldiers entering the city as though they had been defeated; Joab forces David to show himself to the people (xix. 1–9); David returns at the solicitation of the people and the priests; Shimei supplicates for pardon; Mephibosheth, whose appearance shows grief, pleads that his servant deceived him; Ziba and he are told to divide the land; Barzillai invited to live at court; he declines, pleading old age, and begging that Chimham may take his place; jealousy between Judah and Israel (xix. 10–44).

Sheba's Uprising and Amasa's Violent Death: Sheba instigates a rebellion on the part of Israel (xx. 1–2); David's return to Jerusalem; treatment of his concubines (xx. 3); Amasa, bidden to call the Judeans together, exceeds the prescribed limit of three days; Abishai given command to pursue Sheba; at the great stone in Gibeon, Amasa meets them; Joab in full equipment salutes him, and thrusts a sword into his bowels, killing him; kindness of a young man to the dying Amasa (xx. 4–13); Sheba besieged in Abel; the wise woman's parley with Joab to save the city; Joab asks that Sheba be delivered up, and the woman promises that his head shall be thrown to Joab over the wall; she induces the people to kill Sheba, and his head is cast out to Joab; the siege is raised (xx. 14–22); repetition of viii. 16–18 (xx. 23–26).

(3) **Complementary Appendixes:** Famine and the extermination of Saul's house (xxi. 1–14); the four giants and their capture (xxi. 15–22); David's song of triumph (xxii.); his last words (xxiii. 1–7); his thirty-three "mighty men" (xxiii. 8–39); census (xxiv. 1–9), plague (xxiv. 10–17), and erection of the altar (xxiv. 18–25).

Complex Documentary Sources.

——**Critical View:** Rabbinical tradition assigns to Samuel the prophet the authorship of ch. i.–xxiv. (his own biography up to his death), while, on the strength of I Chron. xxix. 29, it credits Gad and Nathan with having written the remainder of the book (I and II forming one book in the Jewish canon; B. B. 14b, 15a; see Biblical Data, above). In so far as tradition recognizes that the books of Samuel are not by one author, it accords with the conclusions of the critical schools. It is, however, needless to add that modern scholars reject the theory of the joint authorship of Samuel, Gad, and Nathan. As preserved in the canon, the books of Samuel are clearly not the work of men contemporary with the events chronicled. Behind these documents lie various and conflicting traditions which, in keeping with the method of early Hebrew historiography, the compiler has to a certain extent incorporated in his work without making any attempt to harmonize discrepancies. Thus, in recording how Saul was chosen king, the first book in ch. ix., x. 1–16, xi. 1–11, 15, xiii., and xiv. 1–46 proceeds on the theory that Yhwh had appointed a king over the people in order to liberate them from the yoke of the Philistines, commanding the seer to anoint young Saul, who had come to him while seeking his father's asses (ix. 15 *et seq.*). In the war against the Ammonites, Saul proves himself a hero and is chosen king by the people (xi.), after which he leads them against the Philistines (xiii. *et seq.*). It is for this war that he enlists young David's services (xiv. 52). An altogether different sequence of events and ideas is unfolded in vii. 2 *et seq.*, viii., x. 17–24a, xii., and xv. Samuel the judge is remembered as having finally and conclusively driven off the Philistines. Ungrateful Israel, in order to be like the other peoples, compels Samuel in his old age to yield to their clamor for a king; and Yhwh, though greatly incensed, at last gives His consent (viii., x. 17 *et seq.*). With due solemnity Samuel relinquishes the office which he has administered so faithfully, but reserves for himself the post of censor and counselor, and interceder with Yhwh (xii.). At the first test Saul is discovered to be disobedient and is rejected by Yhwh (xv.).

In the story of David a similar duplication and divergence are easily established. In xvi. 14–23 David is called to Saul's court to dispel the king's evil moods by playing on the harp. He is a young but tried warrior, and is at once appointed armor-bearer to the monarch. In ch. xvii. David is a lad who, up to the time when the story opens, tended his father's flock. He is not inured to war and kills Goliath with a stone from his shepherd's sling. This feat of valor attracts to him the attention of Saul, who has him trained subsequently for a warrior's career. Analysis with reference to both the content and the religious conception thereby disclosed, and also to stylistic and linguistic peculiarities, makes it apparent that the books of Samuel in their present form are a compilation from various written and oral sources, their last editor being post-Deuteronomic.

Oldest Literary Strata.

Undoubtedly, the oldest literary documents are David's elegies (on the death of Saul and Jonathan, II Sam. i. 18 *et seq.*; on Abner, a fragment, II Sam. iii. 33-34). Next in age are those portions which are assigned to the "Jerusalem" cycle of stories. This cycle takes its name from the fact that the scene of the happenings it purports to describe is always Jerusalem. It gives a history of David and his house, and is probably the work of a Judean writing shortly after Solomon (II Sam. v. 3-16, vi. 9-20). To the ninth century, and to a Judean, or perhaps a Benjamite, author, are credited the fragments of Saul's (I Sam. ix. 1-x. 16, xi., xiii., xiv.) and David's histories (I Sam. xvi. 14-23; xviii. 6-11, 20, 27; xx. 1-3, 11, 18-39; xxiii.-xxv.; xxvii.-xxxi.; II Sam. i.-iv.; v. 1, 2, 17-25; xxi. 15-22; xxiii. 8-39).

Story of the Ark.

The story of the Ark (I Sam. iv. 1-vii. 1) displays a character of its own; it interrupts the story of Samuel begun in the preceding chapters; the punishment of Eli and his sons, which, according to ch. iii., might be expected to be the central event, is treated as a mere incident, the whole of Israel being involved in the catastrophe. Moreover, the fate of the Ark does not emphasize the misfortune of Israel nearly as much as it does the triumph of Elohim, and the episode seems to have been written to bring the latter idea into bold relief. In this account the Ark is regarded as a tribal or national palladium, not as a mere case for the tablets of the Decalogue. This part exhibits the coloring of a situation in which a resident of the Northern Kingdom, before the cruder conceptions of the Deity had given way to higher ones, would most likely be interested. For this reason it has been held to be a fragment from a history of sanctuaries of northern origin.

The remaining portions of the book reflect the views of prophetism. The histories of Saul and Samuel are rewritten from a very rigid, prophetic point of view (I Sam. i.-iii.; viii.; x. 17-24; xv. [perhaps]; xvii. 1-xviii. 5 [for the most part], 12-19, 28-30; xix. [most]; xxi. 2-10; xxii.; xxvi.; II Sam. i. 6-10, 13-16). Ch. xv. seems to be planned to connect the older Saul story with this newer prophetic reconstruction. It presupposes the details of the former (xv. 1, 17 [Saul's anointment] refers to x. 1; the phraseology of xv. 19 recalls xiv. 32), but the prophetic reconstruction of this chapter appears not to have been known when the old Saul story was incorporated. Otherwise there would have been no occasion for the elaborate justification of Samuel's right to counsel and command Saul. Still, the point of view is similar to that of the prophetic reconstruction. Samuel is the king's superior. He is not the seer, but the prophet, of the type of Amos and Hosea. The story emphasizes the teaching that obedience is more precious than sacrifice (comp. Jer. vii. 21-26).

Supposed Time of Redaction.

These various components were probably gathered into one compilation shortly before the Exile. The redactor (Rd) traces of whose hand are found mainly in I Sam. ii. 27-36, vii. 2b-16, xii., and II Sam. vii., is held to have been under Deuteronomic influences, and thus to have been antecedent to the redactor whose views reflect those of the Priestly Code and through whose hands all of the historical books passed, though in Samuel there are few indications of his revisions, among them the glosses in I Sam. ii. 22b and the introduction of the Levites in I Sam. vi. 15 and II Sam. xv. 24. Additions in loose connection are noticeable that can not be classified; for instance, I Sam. xix. 18-24 and xx. They break the sequence of the narrative and introduce several contradictions. Ch. xix. 18-24 is an attempt to explain a proverbial idiom ("Saul among the prophets"), and, as such, is a double to I Sam. x. 11. According to ch. xv. 35, Samuel never saw Saul again, but here Saul appears before him. Ch. xx., an account of David's flight, is similar to xix. 1-7. Among such additions, gleaned from popular traditions or merely literary embellishments, are reckoned I Sam. xxi. 11-16 and II Sam. ii. 13-16, viii., xxi.-xxiv. The song of Hannah (I Sam. ii. 1 *et seq.*), the psalm in II Sam. xxii., and David's "last words" (II Sam. xxiii. 1 *et seq.*) are very late. These additions may have been made at various periods, but they antedate the final redaction as a part of the second larger division of the canon.

Historically, the prophetic reconstruction is entitled to the least confidence. So strongly is the "Tendenz" impressed upon the narratives of this group that some recent critics have come to the conclusion that they do not represent an originally independent source, but are due to the literary activity of the Deuteronomic redactor. Being more naively primitive, the Saul and David histories reflect actual occurrences, colored, however, by the desire to exalt the national heroes. The Jerusalem cycle intends to glorify David's dynasty as the legitimate royal family of all Israel.

The Masoretic text is highly corrupt; that underlying the Septuagint version is more nearly correct. The literalism of the Greek has enabled scholars in many instances to reconstruct a text much nearer the original than is the extant Hebrew. Unfortunately, the Greek text of the Septuagint itself requires careful editing. In many passages the Septuagint shows interpolations based on the Masorah, so that it presents duplicate versions, while in others the original independent Greek has been replaced by the translated Hebrew of the Masoretic text. The various Septuagint codices are not of equal value for purposes of textual criticism. The "Codex Vaticanus B" is the most important for the books of

Samuel, while the Alexandrinus itself shows too many emendations of the Greek after the extant Hebrew to be of much aid.

E. G. H.

SAMUEL, MIDRASH TO: Midrash Shemu'el, a haggadic midrash on the books of Samuel, is quoted for the first time by Rashi in his commentary on I Sam. ii. 30. In his "Ha-Pardes" (ed. Constantinople, p. 24b) Rashi again quotes from this midrash (xvii. 1; ed. Buber, p. 48a), saying that it is entitled "'Et la-'Asot la-Adonai"; it probably derived this name from Ps. cxix. 126, with which it begins. The midrash is entitled also "Agadat Shemu'el" (Rashi, in his commentary on Sukkah 53b, *s.v.* "Ahaspa"; Tos. Soṭah 42b, *s.v.* "Me'ah"; *et al.*), and the name "Shoḥer Ṭob" has been erroneously given to it (in the editions of Zolkiev, 1800, and Lemberg, 1808 and 1850); the error is due to the fact that in the Venice edition of 1546 the midrash was printed together with the midrash on the Psalms, the title of the latter, "Shoḥer Ṭob," being taken to refer to both.

The midrash contains haggadic interpretations and homilies on the books of Samuel, each homily being prefaced and introduced by a verse taken from some other book of the Bible. It resembles most of the other haggadic midrashim both in diction and in style; in fact, it is a collection of sentences found in such midrashim and referring to the books of Samuel. The editor arranged the sentences in the sequence of the Scripture passages to which they refer. The midrash, however, does not entirely cover the Biblical books; but as it contains all the passages quoted from it by other authorities, it may be assumed that, with the exceptions mentioned in the following sentence, it never contained any more than it does now and that its present form is that into which it was cast by its compiler. In two places only have passages been added by later copyists: ch. iv. 1 (ed. Buber, p. 27b; comp. note 7) and ch. xxxii. 3 *et seq.* (comp. ed. Buber, notes 9, 17, 19).

The midrash is divided into thirty-two chapters. Ch. i.-xxiv. contain interpretations and homilies on the First, and ch. xxv.-xxxii. on the Second, Book of Samuel. The author has collected these sentences from the Mishnah, Tosefta, Mekilta, Sifre, Yerushalmi, Bereshit Rabbah, Wayiḳra Rabbah, Shir ha-Shirim Rabbah, Ḳohelet Rabbah, Ekah Rabbah, Ruth Rabbah, Midrash Esther, Midrash on the Psalms, Pesiḳta de-Rab Kahana, Pesiḳta Rabbati, and Tanḥuma. Only once (x. 10 [ed. Buber, p. 26a]) does he quote a sentence from Babli ('Er. 64a), which he introduces with the words "Taman amrin" (They say there; comp. Buber, "Einleitung," p. 4a, note 1). This, as well as the fact that all the amoraim mentioned in this midrash were Palestinians, justifies the assumption that its compiler lived in Palestine. His name and the time at which he lived can not be definitely determined. Zunz assigns him to the first half of the eleventh century, although the reasons which he gives for this assumption have been refuted by Buber ("Einleitung," p. 4b).

A manuscript of this midrash is in the Parma Library (Codex De Rossi, No. 563). The first printed edition of the work appeared at Constantinople in 1517 or 1522; the Hebrew date is not fully legible, but it undoubtedly refers to one of these years. It was printed again at Venice in 1546, and subsequently at various places and times. The latest and best edition is that by Solomon Buber, with introduction and notes (Cracow, 1893).

SAMUEL. See SAMAEL.

SAMUEL: Tax-gatherer and treasurer to King Ferdinand IV. of Castile (1295-1312); born in Andalusia. He was hated by the queen mother D. Maria de Molina because, according to Spanish historians who were friendly toward her, he had become involved in court intrigues, and also because he had encouraged the young king in his prodigality and led him to commit thoughtless acts. One day when in Badajoz, where he was preparing to accompany the king to Seville, he was attacked by an assassin and dangerously wounded, but, owing to the careful nursing and treatment which the king procured for him, his life was saved (1305).

SAMUEL (SANWEL) BEN AARON BENJAMIN: Scribe at Worms in the seventeenth century. After the fire of 1689 (Lewysohn, "Nafshot Ẓaddiḳim," p. 73, Frankfort-on-the-Main, 1855) he left Worms and settled in Hamburg. He was the author of "Ḥidah Mezuḳḳaḳah u-Ẓerufah," a rimed riddle on the subject of tobacco (Hamburg, 1693). His "Shir," a poem on the Pentateuch dedicated to the Talmudical students in Worms, bears the acrostic "Samuel of Worms" (זנוויל מוורמיישא; Hamburg, 1692).

SAMUEL BEN ABBA: Palestinian amora of the latter half of the third century. Although a pupil of Johanan, he did not receive ordination (Yer. Bik. 65c). He declined to permit Hela and Jacob to do him honor by rising before him (*ib.*). He appears to have been a pupil also of R. Assi and Ze'era, to whom he addressed several halakic questions (Ḳid. 59b; Yer. M. Ḳ. 82d; Yer. Ḥag. 76a; Yer. Yeb. 2c; Yer. Naz. 52c; 'Er. 9a; Yoma 47a). He is sometimes confounded with the great Samuel (Tan., Bo, 10; Midr. Teh. to Ps. xix. 4).

W. B. S. O.

SAMUEL BEN ABBAHU: Babylonian amora of the fourth century. He engaged in a ritual controversy with R. Aḥai in regard to the use of the Circassian goat as food. Samuel was disposed to permit it to be eaten, but R. Aḥai opposed him. Finally it became necessary to refer the question to Palestine for adjudication; the answer was in favor of Samuel ben Abbahu (Ḥul. 59b).

W. B. S. O.

SAMUEL BEN ABIGDOR: Russian rabbi; born about 1720; died 1793 at Wilna, where his father, who had been rabbi in Pruzhani, Rushany, and Wilkowyszky, spent his last years (see Abigdor ben Samuel). His father-in-law, Judah ben Eliezer, surnamed "Yesod," was probably the most influential citizen of Wilna in his time, and contributed much to Samuel's advancement. The latter was at first engaged in business; and several financial agreements between him and the "ḳahal" (communal council) of Wilna (*c.* 1745) are recorded. In 1750, while still a young man, he was chosen rabbi of the old community of Wilna, but for several years his father-in-law administered the office, which, in those times of rabbinical jurisdiction over all secular Jewish affairs, was one of great responsibility. Later Samuel became rabbi of Smorgony, and there is a record of his having held also (*c.* 1777) the rabbinate of Königsberg (Epstein, "Geburot ha-Ari," p. 29, Wilna, 1870).

In 1777 the ḳahal of Wilna decided to remove Samuel from the rabbinate. The community was divided on the matter, and a quarrel ensued, which was conducted with much bitterness. The Gentile authorities also took sides, Prince Radziwill, the waywode of Wilna, agreeing with the views of the ḳahal, which represented the secular authority of the Jewish community, while Archbishop Masolski took the part of the rabbi. Samuel and many of his partizans removed to the suburb of Antokol, which was under the bishop's jurisdiction, in order to be safe from the persecutions of Radziwill, who ruled the city. Many were subjected to imprisonment or exile; and it may be said that both sides lost in the end. The power of the ḳahal was broken, and under the new Russian dominion it was unable to regain its former status.

Samuel remained rabbi in name only. The office died with him; and in the strict sense of the word Wilna has not since had a rabbi or "ab bet din." Samuel is not known to have left any writings; but he is mentioned in contemporary rabbinical works with the highest respect.

SAMUEL IBN ABUN B. YAḤYA: Arabo-Jewish poet of the eleventh century; great-grandfather of Samuel ibn Nazar and a contemporary of Moses ibn Ezra. A poem of his with the acrostic אבן was edited from the fourth section of the Oran Maḥzor by Luzzatto in "Kerem Ḥemed," iv. 31-32; and an elegy on his death by Moses ibn Ezra was printed *ib.* p. 86.

Bibliography: Fürst, *Bibl. Jud.* iii. 242.

SAMUEL IBN 'ADIYA (Arabic, **Samau'al ibn Jarid ibn 'Adiya'**): Poet and warrior; lived in Arabia in the first half of the sixth century. His mother was of the royal tribe of Ghassan, while his father, according to some, was descended from Aaron, or, according to others, from Kahin, son of Harun and progenitor of the Jewish tribes of Ḳuraiẓa and Naḍir. Samuel owned a castle near Taima (eight hours north of Medina), built by his grandfather 'Adiya and called, from its mixed color, Al-Ablaḳ. It was situated on a high hill and was a halting-place for travelers to and from Syria.

"More Faithful than Samuel."

More than for his poetic talents Samuel ibn 'Adiya is famous for his connection with the warrior-poet and prince Amru al-Ḳais, which won for him the epithet "faithful," and gave rise to the saying, still common among the Arabs, "more faithful than Samuel." This came about in the following manner: Amru al-Ḳais, being abandoned by his followers in his fight with the Banu Asad to avenge the death of his father, and being pursued by Manẓur ibn Ma'assama', wandered about from tribe to tribe seeking protection as well as support in his endeavor to regain his inheritance. When he came to the Banu Fazarah their chief advised him to seek out the Jew Samau'al ibn 'Adiya' in his castle Al-Ablaḳ, saying that although he had seen the emperor of the Greeks and visited the kingdom of Ḥira, he had never found a place better fitted for assuring safety to those in need, nor known a more faithful protector than its owner. Amru al-Ḳais, who was accompanied by his daughter Hind, and his cousin, and had with him five suits of mail besides other weapons, immediately set out for the castle, and on the way he and his guide composed a poem in praise of their prospective host. Samuel received the poet hospitably, erected a tent of skins for Hind, and received the men into his own hall. After they had been there "as long as God willed," Amru al-Ḳais, wishing to secure the assistance of the emperor Justinian, asked Samuel to give him a letter to the Ghassanid prince Ḥarith ibn Abi Shamir, who might further him on his way. The poet then departed, leaving Hind, his cousin, and his armor in Samuel's keeping, and he never came to reclaim them. According to Arabian tradition, while on his homeward journey from Constantinople, he was poisoned by order of Justinian, who had listened to treacherous accusations against him.

Prefers Death of Son to Loss of Honor.

After Amru al-Ḳais had left Al-Ablaḳ, Prince Manẓur—it is not known whether before or after Amru's death—sent Ḥarith to Samuel ordering him to deliver up the articles deposited with him. Samuel refusing to do so, Ḥarith laid siege to the castle. The besiegers met with no success until one day Ḥarith captured Samuel's son, who, according to the story in the "Kitab al-Aghani," was returning from the chase. Ḥarith then called upon the father to choose between giving up the property and witnessing his son's death. Samuel answered that his son had brothers, but that his honor once lost could not be recovered. Ḥarith at once struck off the boy's head before the unhappy father's eyes and then withdrew, perceiving that he could accomplish nothing in the face of such steadfastness. There are a few verses handed down by different Arabian writers in which Samuel ibn 'Adiya refers to this deed.

A description of the castle Al-Ablaḳ is given by the poet A'sha (Yaḳut, i. 96), who confuses it with Solomon's Temple. It is related of this poet that, being captured together with other Arabs, he was taken as a prisoner to the castle at Taima, at that time belonging to Samuel's son Shuraiḥ, without his captor's knowing that he was in the company. Waiting until Shuraiḥ was within hearing, A'sha began to recite a poem extolling the deed of his father, and calling on the son to emulate his example by rescuing him (A'sha). Shuraiḥ procured the poet's release, and allowed him to depart, first presenting him with a swift camel. Shuraiḥ himself, his brother Jarid, and Samuel's grandson Sa'ba were all poets.

His Poems.

Samuel ibn 'Adiya's reputation as a poet rests upon one of the first poems in the collection called the "Ḥamasa." It is full of warlike vigor and courage, and manifests a high ideal of honor. There is nothing in it to distinguish it from the work of any other Arabian poet; and it has been doubted whether Samuel was really its author, as the verse (6), upon which the compiler of the "Ḥamasa" bases his ascription to Samuel, is not wholly convincing. Since, however, old, reliable authorities attribute parts of the poem, at any rate, to him, it is probable that most of it was written by Samuel. Another poem attributed to him has been published in Arabic and Hebrew, with an English translation, by H. Hirschfeld ("J. Q. R." xvii. 431–440).

SAMUEL BEN AMMI: Palestinian amora of the beginning of the fourth century. He is known through his controversies with other scholars. He contended, for instance, that II Chron. xiii. 17 should be interpreted as meaning that King Abijah of Judea allowed the bodies of the fallen Israelites to remain exposed until the faces had become unrecognizable, in order that their widows might be prevented from remarrying (Yer. Yeb. 15c; Gen. R. lxv., lxxiii.; Ruth R. vii.).

SAMUEL BAR ASHER: Martyr; lived at Neuss, Rhenish Prussia, in the eleventh century. According to Salomon ben Simeon, he, with his two sons, was murdered on St. John's Day (June 24), 1096. Samuel and one of his sons were buried on the river-bank, while the body of the other son was hanged to the door of his father's house, exposed to general derision. According to another report, by Eliezer ben Nathan, the body of neither son was buried, but both were smeared with dirt and hanged.

SAMUEL DE CACERES. See Caceres.

SAMUEL BEN DAVID MOSES HA-LEVI OF MESERITZ: Polish Talmudist; born about 1625; died April 24, 1681, at Kleinsteinbach, Bavaria. As a wandering scholar he is found for a time at Meseritz and then at Halberstadt. In 1660 he was rabbi of Bamberg, with his residence at Zeckendorf. His stay here was of short duration, for he made many enemies through his violent temper and the self-assertion which he displayed in his new office; and it was in vain that his relative and subsequent successor warned him that he would endanger his position if he did not heed the views of the German scholars; for he had even dared to set up his own scholarship against the infallibility of MaHaRIL by saying: "Knowledge is free; I will speak openly even before kings; for the philosophers have not idly used the simile of the dwarf who bestrides the shoulders of the giant." In view of these circumstances it is not surprising to learn that Samuel resigned the rabbinate about 1665—whether voluntarily or not is not known.

During the period of enforced idleness that followed he prepared for the press the manuscript of his "Naḥalat Shib'ah" (see below). At length he found a position in the unimportant rabbinate of Kleinsteinbach, where he remained until his death. In spite of his great scholarship and wide reading Samuel still showed himself the child of his time in believing in magic and the black arts as well as in the Messiahship of Shabbethai Ẓebi.

Samuel's chief work, to which he owes his general popularity, appeared in Amsterdam (1667–68) under the title "Naḥalat Shib'ah," being a collection of formulas for all documents and records, interspersed with thorough discussions of questions of civil and matrimonial laws in connection therewith. A second edition of this work, with much supplementary matter, appeared (Frankfort-on-the-Main, 1681) shortly before his death, under the title "Mahadura Batra le-Sefer Naḥalat Shib'ah." After his decease the responsa written by him or addressed to him by others were published by his son Abraham under the title "Naḥalat Shib'ah" (Fürth, 1692). The "Seder Tiḳḳun Shetarot" (Fürth, 1698) is a compilation from the "Naḥalat Shib'ah."

E. C. A. Pe.

SAMUEL, BARON DENIS DE: English financier; born 1782; died in London 1860. He came of a Polish family, and counted among his ancestors several eminent rabbis. Samuel was a native of England; but early in life he established himself in business at Rio de Janeiro, Brazil. There he soon acquired high standing as a merchant, and attained considerable influence at court, enjoying the confidence of some of the highest personages. Through his instrumentality the English were permitted in 1821 to erect a church at Rio, and to engage publicly there in the Protestant worship, which had previously been forbidden. The letter of thanks written to him by the leading Protestants at Rio was read in Parliament in 1848.

After a stay of seventeen years in Brazil, Samuel returned to London, where he married and spent the remainder of his life. He continued to be held in favor at the Brazilian court, as is evidenced by his decoration with the Order of the Rose. He received the title of baron at a later period from the Portuguese government, in recognition of eminent services rendered by him.

SAMUEL (SANWEL) BEN ENOCH: Polish rabbi; flourished in the seventeenth century; born at Lublin. He officiated as dayyan at Jassy and later at Mayence. He was the author of "Dibre Shemu'el," derashot on the Pentateuch; but only that part of it on Genesis, Exodus, and Leviticus (Amsterdam, 1678; Venice, 1702) is now extant.

Bibliography: Benjacob, *Oẓar ha-Sefarim*, p. 107, No. 141; Fürst, *Bibl. Jud.* iii. 244; Steinschneider, *Cat. Bodl.* col. 2413.
D. S. Man.

SAMUEL OF ESCALETA (ESCALETTE; called also **Samuel Sulami):** French Talmudist, poet, and philanthropist of the fourteenth century. Jacob of Provence considers him one of the first poets of Provence. His piety, learning, and generosity also were praised by his contemporaries. At first he lived in Narbonne, and then in Perpignan. He took an active interest in the religious controversies of 1303–6, and announced his adherence to the principles of the liberal party by harboring the unfortunate Levi of Villefranche in his house at Perpignan (Gross, "Gallia Judaica," p. 200). Despite many warnings on the part of Ben Adret, he did not abandon the persecuted Levi. However, he was not the man to remain true to his inner convictions at all costs, and when fate pursued him relentlessly and his daughter died, he believed that these events were consequences of his sins; hence he withdrew his favor and hospitality from Levi. This course of action, which was, in a certain sense, unmanly, seems to have evoked the pity rather than the displeasure of his contemporaries. In any case it did not diminish the esteem in which he was held by all.

The misfortunes that befell Samuel seem to have wrought a great change in his religious attitude. Whereas formerly, despite the piety which his opponents conceded to him, he had not wished to hear of limitations to the study of the liberal sciences, now, broken by his misfortune and hence irresolute in his views, he joined with Ben Adret in forbidding the young to study the sciences and the allegoric interpretation of the Biblical narratives.

Bibliography: Renan-Neubauer, *Les Rabbins Français*, pp. 658, 701; Grätz, *Gesch.* vii. 220, 224; Gross, *Gallia Judaica*, pp. 328, 432.
E. C. A. Pe.

SAMUEL OF EVREUX: French tosafist of the thirteenth century. He is identified by Gross with Samuel ben Shneor (not ben Yom-Ṭob, as given by Zunz in "Z. G." p. 38), whose explanations of Nazir are cited by Solomon ben Adret (Responsa, iii., No. 345), and whose authority is invoked by Jonah Gerondi. Samuel directed a rabbinical school at Château-Thierry, and had for disciples R. Ḥayyim (brother of Asher ben Jehiel of Toledo), R. Perez, and R. Isaac of Corbeil. He carried on a correspondence on scientific subjects with Jehiel of Paris ("Orḥot Ḥayyim," i. 110c) and with Nathaniel the Elder ("Mordekai" on Ḥul. vii., No. 681). Samuel's Talmudic interpretations are often quoted in the Tosafot (Beẓah 14b, 20b, 24b; Ḳid. 27b, 39a; Ned. 90b; 'Ab. Zarah 68a; Tem. 19b). From the fact that the author of the tosafot to Soṭah mentions there the name of Moses of Evreux as being his brother, it is inferred that these tosafot were written by Samuel.

Bibliography: Michael, *Or ha-Ḥayyim*, p. 593, No. 1202; Gross, *Gallia Judaica*, p. 258.
E. C. I. Br.

SAMUEL, HAEEM: Indian communal worker; born at Alibag, near Bombay, in 1830; educated at the Robert Money School in Bombay. Samuel entered the service of the government in 1851, and was promoted to be second assistant to the inspector-general of ordnance at Puna. He was pensioned in 1878. During his period of service he succeeded in inducing the government to issue European rates of batta to the Beni-Israel soldiers.

Samuel founded in 1853 the Bombay Beni-Israel Benevolent Society, and in 1881 the Israelite High School of the Anglo-Jewish Association of London. Of this school he has been the honorary president, secretary, and treasurer for twenty-four years. To supplement the school Samuel opened a prayer-hall in 1888, an act for which he was excommunicated by the three Beni-Israel synagogues of Bombay. He introduced the system of seat-holders and the delivery of sermons in the prayer-hall. Owing to his efforts a building, with a spacious playground, was erected (Nov., 1898) for the school. Samuel published a sketch of the history of the Beni-Israel.

Haeem Samuel.

Samuel's eldest son, **Samuel,** who died in 1884, was editor of the periodical "Israel." In 1882 he, with his eldest uncle, saved the community from the consequences of a blood accusation by explaining to the cazi of the Juma Masjid the restrictions placed by the Mosaic law on the eating of blood. He published a catechism of the Hebrew faith. Samuel's second son, **A. Hyams,** a well-known doctor in Bombay, died of the plague in 1897 at the age of thirty-two. *1865

J. J. Hy.

SAMUEL, HARRY SIMON: English politician; born Aug. 31, 1853; son of Horatio S. Samuel by his marriage with Henrietta Montefiore. He was educated at Eastbourne College and St. John's College, Cambridge (B.A. 1875). Samuel is a freeman of the city of London and a member of the Coopers' Company, and has been a captain in the First Middlesex Volunteer Royal Engineers. In 1892 he contested the Limehouse division of the Tower Hamlets, but was defeated. In 1895 he was elected member of Parliament for Limehouse in the Conservative interest.

J. G. L.

SAMUEL IBN ḤAYYIM: Medieval liturgical poet; the time and place of his birth are unknown. He composed eighty-two liturgical poems, of which the four mentioned last by Zunz in his addenda are intended for the Simḥat Torah festival. Twice the author signs his name in acrostic as **Samuel ha-Ḳaṭan ha-Kohen Berabbi Memeli Sofer.**

Bibliography: Zunz, *S. P.* pp. 593-596, 652-653.

E. C. S. O.

SAMUEL ḤAYYIM OF SALONICA: Maternal grandson of Samuel of Modena; lived in Salonica during the sixteenth century. He wrote "Bene Shemu'el," a collection of novellæ on Ṭur Ḥoshen Mishpaṭ, as well as on Hilkot Yom-Ṭob and Ta'arubot. Sixty-three responsa by him were published at Salonica in 1613 (2 vols.).

Bibliography: Steinschneider, *Cat. Bodl.* col. 2413; Azulai, *Shem ha-Gedolim*, i. 174, ii. 18; Heilprin, *Seder ha-Dorot*, iii. 20a; Conforte, *Ḳore ha-Dorot*, p. 44a.

E. C. S. O.

SAMUEL, HERBERT: English politician; born in London 1870; youngest son of Edwin L. Samuel, and nephew of Sir Samuel Montagu. He was educated at Balliol College, Oxford, where he took first class honors in history and the degree of M.A. in 1897. At Oxford he was president of the Russell Club, and in 1895 he stood unsuccessfully as a candidate for South Oxfordshire in the Liberal interest. In Oct., 1900, he again contested this seat unsuccessfully. In 1902 he was elected as a Liberal for the Cleveland division of the North Riding of Yorkshire.

Samuel is honorary secretary of the Home Counties' Liberal Union, a member of the committee of the Eighty Club, of the governing body of the London School of Economics and Political Science, of the Central Chamber of Agriculture, and of the committee of the Thames Preservation League, and a fellow of the Royal Agricultural Society.

Bibliography: *Jew. Chron.* Sept. 28, 1900; *Jewish Year Book*, 1903.

J. G. L.

SAMUEL B. ḤIYYA: Palestinian amora of the second half of the third century of the common era. None of his halakic or haggadic maxims has been preserved; and he is known only through his quotations of the statements of others. He is twice mentioned in the Babylonian Talmud: in Ḥul. 56b, where he transmits an apothegm of R. Mani, and in B. M. 72b, where he cites an opinion by R. Eleazar. He is apparently identical with Samuel b. Ḥiyya b. Judah, who is frequently mentioned in the Palestinian Talmud as quoting the maxims of R. Ḥanina b. Ḥama. Furthermore, in Gen. R. xlviii. 6 Samuel b. Ḥiyya is named as the authority for the same statement of R. Ḥanina b. Ḥama as is quoted in the name of Samuel b. Ḥiyya b. Judah in Pesiḳ. R. 15 (ed. Friedmann, p. 72a).

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 179a; Frankel, *Mebo ha-Yerushalmi*, p. 125b.

W. B. J. Z. L.

SAMUEL BEN ḤOFNI: Last gaon of Sura; died in 1034. His father was a Talmudic scholar and chief judge ("ab bet din," probably of Fez), one of whose responsa is extant (see Zunz, "Ritus," p. 191; Steinschneider, "Hebr. Bibl." xx. 132), and on whose death Samuel wrote an elegy. Samuel was the father-in-law of Hai ben Sherira Gaon, who is authority for the statement that Samuel, like many of his contemporaries, zealously pursued the study of non-Jewish literature ("Teshubot ha-Ge'onim," ed. Lyck, 1864, No. 99). Beyond these few data, nothing is known of the events of Samuel's life.

His Responsa.

Although, as a rule, geonic literature consists mainly of responsa, Samuel ben Ḥofni composed but few of these (see Rapoport in "Bikkure ha-'Ittim," xi. 90; Fürst in "Orient, Lit." x. 188; Weiss, "Dor," iv. 192, note 2; Müller, "Mafteaḥ," pp. 168 *et seq.*; Harkavy, "Zikron la-Rishonim," etc., iv. 146, 258; Winter and Wünsche, "Die Jüdische Litteratur," pp. 50 *et seq.*; Schechter, "Saadyana," p. 61). This was due to the fact that the Academy of Sura had for a century occupied a less prominent position than that of Pumbedita, and that, especially in the time of Hai ben Sherira, information was preferably sought at the latter institution. A genizah fragment of the Taylor-Schechter collection, containing a letter to Shemariah ben Elhanan written, according to Schechter's opinion, by Samuel ben Ḥofni, and another letter of Samuel's to Kairwan ("J. Q. R." xiv. 308), show the great efforts which at this time the last representative of the Babylonian schools had to make to maintain the ancient seats of learning in Babylonia (Schechter, *l.c.* p. 121). Samuel's responsa, written in Hebrew, Aramaic, and Arabic (those written in the last-named tongue were translated into Hebrew), treat of "tefillin" and "ẓiẓit," the Sabbath and holy days, forbidden and permitted food, women, priests, servants, property rights, and other questions of civil law. They consist chiefly of explanations of the Talmud and include some very short halakic decisions, from which fact it is surmised that they are taken from his Talmud treatise "Sha'are Berakot" (Weiss, *l.c.* p. 193; Steinschneider, "Die Arabische Literatur der Juden," p. 109). With the intellectual independence peculiar to him, he occasionally declares a Talmudic law to be without Biblical foundation; and when an explanation in the Talmud seems inadequate, he adds one of his own which is satisfactory ("Sha'are Ẓedeḳ," i. 305).

Samuel wrote "Madkhal ila 'al-Talmud" (Hebrew title, "Mebo ha-Talmud"), an Arabic introduction to the Talmud which is known only through citations from it made by Abu al-Walid ("Kitab al-Uṣul," ed. Neubauer, p. 166), Joseph ibn 'Aḳnin, and Abraham Zacuto. His treatise concerning the hermeneutic rules in the Talmud is known only by name.

Treatises.

Samuel's systematic treatises on many portions of the Talmudic law surpassed in number those of his predecessors. They were composed in Arabic, although some bore corresponding familiar Hebrew titles. They are: (1) "Aḥkam Shar' al-Ẓiẓit," ten chapters, on rules concerning fringes (Harkavy, "Studien und Mittheilungen," iii. 31, note 77). (2) "Lawazim al-Aḥkam," known from a citation (Harkavy, *l.c.* p. 35, note 93), from the catalogue of a book-dealer of the twelfth century (this catalogue was found among the genizah fragments of Fostat, and was published by E. N. Adler and I. Broydé in "J. Q. R." xiii. 52 *et seq.*), and from fragments recently discovered and published by Schechter (*l.c.* p. 114). (3) "Al-Bulugh wal-Idrak," in six chapters, on the attainment of one's majority (Harkavy, *l.c.* p. 31, note 77). (4) "Fi al-Ṭalaḳ" (appears in the above-mentioned catalogue under the title "Kitab al-Ṭalaḳ"), on divorce. (5) "Naskh al-Shar' wa-Uṣul al-Din wa-Furu'ha" (*i.e.*, "Abrogation of the Law and Foundations of Religion and Its Branches"), cited by Judah ibn Balaam and Moses ibn Ezra (Steinschneider, "Cat. Bodl." cols. 880, 2164; *idem*, "Polemische und Apologetische Litteratur," p. 102; Harkavy, *l.c.* p. 40, notes 112–114). (6) "Fi al-Nafaḳat," concerning taxes (Harkavy, *l.c.* p. 34, note 90). (7) "Al-Shuf'a," twenty chapters, concerning boundary disputes (Harkavy, *l.c.* p. 30, note 60). (8) "Risalah al-Shakiriyyah" (= Hebrew, שכירות, mentioned by Moses ibn Ezra; see Schreiner in "R. E. J." xxii. 69), probably concerning the hiring of persons. (9) "Al-Shara'i'," concerning commandments (see Schechter, *l.c.* p. 43); divided into "gates" or chapters ("she'arim") with separate titles, *e.g.*, "Sha'are Sheḥiṭut"; "Sha'ar shel Bediḳut ha-Basar min ha-Ḥeleb"; "Sha'are Berakot." The last-mentioned part has been edited in Hebrew by I. H. Weiss in "Bet Talmud," ii. 377, and partially translated into German in Winter and Wünsche, "Die Jüdische Litteratur," ii. 49. (10) "Shuruṭ," concerning contracts (see "Œuvres de Saadia," ix., p. xxxviii.). (11) "Ha-Mattanah," concerning gifts (Harkavy, *l.c.* p. 36, notes 97, 98). (12) "Ha-Shuttafut," concerning partnership (Harkavy, *l.c.* note 96: for further references see Steinschneider, "Die Arabische Literatur," pp. 108 *et seq.*).

The above-mentioned catalogue (see "J. Q. R." xiii. 60, 62) contains in addition the following titles of works by Samuel on the same subjects of Talmudic law: (13) "Kitab Aḥkam al-Piḳḳadon," concerning deposits; (14) "Kitab al-Mujawara," concerning neighborhood; (15) "Al-Kitab [sic!] al-Bai'," concerning sales. The catalogue (*l.c.* p. 59, No. 56) ascribes to Samuel ben Ḥofni likewise a commentary on the treatise Yebamot. Moreover, Schechter's genizah fragments contain the beginning of an Arabic commentary by Samuel on a Hebrew "reshut" of Saadia's ("Saadyana," pp. 43, 54, where further writings of his previously unknown are mentioned; see also Poznanski in "Zeit. für Hebr Bibl." vii. 109).

As Bible Exegete.

The most important work of Samuel, however, was in Bible exegesis. As early a writer as Abu al-Walid ("Kitab al-Luma'," p. 15) called him a leading advocate of simple, temperate explanation ("peshaṭ"), and Ibn Ezra, although finding fault with his verbosity, placed him in the front rank of Bible commentators of the geonic period (see Bacher, "Abraham ibn Ezra's Einleitung zu Seinem Pentateuch-Commentar," etc., p. 18). In modern times his significance as a Bible exegete has been given proper appreciation through Harkavy's studies of the manuscripts in the St. Petersburg Library (see Berliner's "Magazin," v. 14 *et seq.*, 57 *et seq.*; Harkavy, *l.c.* i., iii.; Steinschneider, "Hebr. Bibl." xx. 132 *et seq.*).

Translations of the Bible.

Samuel ben Ḥofni wrote, besides, an Arabic translation of the Pentateuch with a commentary, a commentary on some of the Prophets, and perhaps a commentary on Ecclesiastes (see Harkavy, *l.c.* iii. 24, note 59; Poznanski, *l.c.* ii. 55, note 5). M. I. Israelsohn ("Samuelis b. Hofni Trium Sectionum Posteriorum Libri Genesis Versio Arabica cum Commentario," St. Petersburg, 1886) has published a portion of Samuel's Pentateuch translation (Gen. xli.–l.) with commentary. The deficiencies in these edited fragments might be supplied by the citations in Abraham Maimonides' commentary on Genesis and Exodus (Neubauer, "Cat. Bodl. Hebr. MSS." No. 276). The German translation of a specimen of these fragments is given in Winter and Wünsche (*l.c.* ii. 254). The fragments show that Samuel's translation of the Pentateuch was dependent upon, though it was more literal than, that of Saadia, which had been written almost one hundred years earlier. In contrast to Saadia, Samuel gives Hebrew proper names in their original form. Grammatical notes occupy a remarkably small space in his verbose commentary; and his grammatical point of view was that taken by scholars before the time of Ḥayyuj. On the other hand, he gives careful consideration to the chronology of Bible accounts; and in explaining a word he gives all its various meanings besides references to its occurrence elsewhere. His source is the midrashic and Talmudic literature, though he specifically mentions only the Seder 'Olam and the Targum Onḳelos (see Bacher in "R. E. J." xv. 277, xvi. 106 *et seq.*).

Polemical Writings.

Samuel ben Ḥofni is mentioned in connection with Saadia and Muḳammaṣ as a polemical writer (Steinschneider, "Jewish Literature," p. 319); and an anti-Karaite work entitled "'Arayot," on the degrees of relationship, is ascribed to him (Fürst, "Gesch. des Karäert." ii. 153), but whether correctly or incorrectly is not certain (see the above-mentioned catalogue, Nos. 58–59). Cabalists have assigned to him a "Sefer ha-Yashar" (Zunz, "S. P." p. 146), and a request directed to Saadia for his decision on oaths.

Theological Views.

Samuel ben Ḥofni is justly called a rationalist (Schreiner, in "Monatsschrift," 1886, pp. 315 *et seq.*). In religious matters he considered reason higher than tradition (Harkavy, *l.c.* note 34). Holding to a belief in the creation of the world out of nothing, he rejected astrology and everything that reason denies. He deliberately placed himself in opposition to Saadia, who had held fast to the belief that the witch of En-dor had brought Samuel to life again, that the serpent had spoken to Eve, and the ass to Balaam, even though he felt himself compelled to explain the wonders by supplying the intermediary agency of angels. Samuel denied these and similar miracles, and, with an irony reminiscent of Ḥiwi al-Balkhi, he put the question, "Why, if they were able to do so at one time, do serpents not speak at present?"

According to his conception, God changes the natural order of things only when He wishes to verify before all people the words of a prophet ("Teshubot ha-Ge'onim," ed. Lyck, No. 99). This view was opposed by his son-in-law Hai Gaon.

That his contemporaries did not denounce him as holding heretical views shows the enlightened spirit of the time, when the study of the profane sciences was general; and that in later times he was not termed a heretic, although disparaging criticism was not lacking, was due to his position as gaon (see Weiss, *l.c.* iv. 198; Menahem Me'iri, "Bet ha-Beḥirah," in Neubauer, "M. J. C." ii. 225).

SAMUEL, ISAAC: English ḥazzan; born in London March 9, 1833. He was appointed minister of the Bristol congregation in 1860, and became the senior ḥazzan of the Bayswater Synagogue in 1864. He has acted as honorary secretary of the Jews' Deaf and Dumb Home for forty-one years. He was mainly instrumental in effecting the erection of its present building and its subsequent extension. He was appointed teacher of ḥazzanut at Jews' College in 1888. In 1892 the London County Council appointed him Jewish chaplain to the Colney Hatch Asylum, which he had served for many years in an honorary capacity. He is the only Jewish minister in England who has received a stipendiary appointment as Jewish chaplain in a non-sectarian institution.

SAMUEL BEN ISAAC HA-SARDI: Spanish rabbi; flourished in the first half of the thirteenth century. In his youth he attended the school of Rabbi Nathan ben Meïr of Trinquetaille, Provence, and later he returned to Spain, his native country. Conforte ("Ḳore ha-Dorot," p. 20a) derives the name "Sardi" from the city of Sardinia. Zacuto ("Yuḥasin," ed. Filipowski, p. 221a) calls Samuel "Ha-Sefaradi"; so does Heilprin in "Seder ha-Dorot," i. 216b, 292a in the Warsaw edition of 1883, but in iii. 108b of the Warsaw edition of 1882 he designates him "Ha-Sardi."

Samuel was a contemporary of Naḥmanides, whom he consulted on Talmudical questions. Solomon ben Abraham of Montpellier, who in his implacable hatred of philosophy denounced the works of Maimonides and appealed to the Inquisition to burn them, wrote a letter to Samuel in which he speaks highly of his learning and reminds him of their friendly relations in their youth. This letter, one of the many that Solomon addressed to French and Spanish rabbis against Maimonides, was published by S. J. Halberstam in Kobak's "Jeschurun," viii. 98.

Samuel wrote in 1225: "Sefer ha-Terumot" (Salonica, 1596 and 1628; Prague, 1605, with Azariah Pigo's commentary "Giddule Terumah," Venice, 1643), novellæ on the civil laws of the Talmud, divided into "she'arim" (gates) and "peraḳim" (chapters). In the preface the author mentions another work written by him, "Sefer ha-Zikronot," on the arrangement of the tractates and chapters of the Mishnah; but it was not printed, and the manuscript is no longer extant.

D. S. Man.

SAMUEL BEN ISAAC OF UCEDA: Talmudist of Safed in the sixteenth century; descendant of a family of Uceda, which, when banished from Spain, settled at Safed. Samuel was head of the Talmudical school which was conducted in the latter city by the liberality of the wealthy Solomon di Shiraz. On the death of Solomon, Samuel was obliged to become an itinerant preacher. In Constantinople he was befriended by Abraham Algazi, at whose expense he published his last book.

Samuel was the author of the following works: (1) "Midrash Shemu'el" (Venice, 1579), a commentary on the Pirḳe Abot; (2) "Leḥem Dim'ah" (*ib.* 1600), a commentary on Lamentations; (3) "Iggeret Shemu'el" (Constantinople, 1600), a commentary on Ruth, printed together with the text and Rashi.

BIBLIOGRAPHY: Conforte, *Ḳore ha-Dorot*, pp. 42a, 48a; Azulai, *Shem ha-Gedolim*, i. 172; De Rossi, *Dizionario*, p. 254; Steinschneider, *Cat. Bodl.* col. 2493.

W. B. I. Br.

SAMUEL BEN JACOB OF CAPUA: Italian translator; lived, probably at Capua, at the end of the thirteenth century, if Steinschneider's supposition that Samuel was the father of the physician Solomon of Capua (MS. Turin No. 42) be correct. Samuel translated, under the general title "Meha-'Eẓah weha-Teba'im weha-Tena'im," the work "Shel Refu'ot ha-Meshalshelot ha-Peshuṭot weha-Murkabot" ("De Medicamentorum Purgantium Delectu et Castigatione" or "De Consolatione," etc.). The original work, written in Arabic by Mesue the Elder under the title "Iṣlaḥ al-Adwiyah al-Mushilah" (according to "Fihrist," p. 226), or "Fi Tartib Saḳyi al-Adwiyah al-Mushilah" (according to Ibn Abi Usaibi'ah), is divided, in the Latin translation as well as in the Hebrew, into two parts: (1) Canones Generales (מאמר כללי); (2) Simplicia (הפשוטות). Samuel's translation is still extant in manuscript.

G. I. Br.

SAMUEL BEN JACOB IBN JAM‘: Rabbi of a North-African community (קאבם); flourished in the twelfth century. He was on intimate terms with Abraham ibn Ezra, who dedicated to him his "Ḥai ben Meḳiẓ" and mentioned eulogiously three of his sons—Judah, Moses, and Jacob. Under the title "Elef ha-Magen," or, perhaps, "Agur" (the Hebrew equivalent of his Arabic name, "Jam‘"), Samuel wrote a supplement to the "'Aruk" of Nathan ben Jehiel. Excerpts from this supplement, which is still extant in manuscript (Parma MSS. Nos. 140. 180), were published by Solomon Buber in "Grätz Jubelschrift." Samuel is believed to be identical with the author of the same name whose novellæ on Sanhedrin are mentioned by Isaac ben Abba Mari of Marseilles in his "Sefer ha-'Iṭṭur." Two Arabic works, "Risalat al-Burhan fi Tadhkiyat al-Ḥaiwan," containing the laws concerning the slaughtering of animals (Neubauer, "Cat. Bodl. Hebr. MSS." No. 793), and "Kitab al-Zahdah lil-Muta'ammilin fi Yaḳaẓat al-Mutaghaffilin," on ethics, are also credited to him. According to Dukes and other scholars, Samuel was the author also of the grammatical work "Reshit ha-Leḳaḥ," which is found in manuscript in the Vatican and Paris libraries, and which bears the name of Samuel ben Jacob. This, however, is denied by Steinschneider, who believes this grammar to have been written by another Samuel ben Jacob, of a later day.

SAMUEL BEN JEHIEL: Martyr of Cologne in the First Crusade, June 25, 1096. When the Crusaders hunted the Jews of Cologne out of the villages where, under the protection of Archbishop Hermann, they had sought refuge, Samuel, standing in one of the marshes of the village of Wevelinghoven, pronounced a blessing before killing his son, and as the victim answered "Amen" all those looking on intoned the "Shema‘" and threw themselves into the water. After this act of despair Samuel handed the knife to Menahem, the sexton of the synagogue, and caused himself to be killed (see Jew. Encyc. iv. 379, *s.v.* Crusades).

SAMUEL BEN JUDAH: Scholar and head of the Jewish community at Lemberg. He suffered martyrdom in a terrible form outside the city on the 8th of Iyyar (a Sabbath), 1667.

Bibliography: Buber, *Anshe Shem*, p. 211.

E. C. S. O.

SAMUEL BEN JUDAH (Provençal name, **Meles Benjudas**; called also **Borbe-Vaire** = "gray" or "blue beard"): French physician and translator; born at Marseilles 1294. He devoted himself early in life to the study of science, especially philosophy. When he was about eighteen years old he went to Salon, where he studied astronomy under the guidance of Sen Astruc de Noves.

Together with many other Jews, Samuel was detained as a prisoner in 1322 in the Tower of Rotonde at Beaucaire, but subsequently was released. Later he sojourned successively at Murcia (Spain), Tarascon, Aix (Provence), and Montélimar. Samuel made himself known by his translations of scientific works from Arabic into Hebrew, which he began at a very early age. These translations are: (1) "Ha-She'elot ha-Dibriyyot weha-Derushim Asher la-Filusufim," dissertations on some obscure passages of Averroes' commentary on the "Organon," by the Arabic writers Abu al-Ḳasim ben Idris, Abu al-

Ḥajjaj ibn Ṭalmus, Abu al-'Abbas Aḥmad ben Ḳasim, and 'Abd al-Raḥman ben Ṭahir. These dissertations were rendered into Latin from Samuel's Hebrew translation by Abraham de Balmas (first published in 1550). (2) Averroes' middle commentary on the "Nicomachean Ethics" of Aristotle, finished Feb. 9, 1321, at the age of twenty-seven (Oxford MSS. Nos. 1350, 1355, 1424, 1425, 1426; Turin MS. No. clxix.; Florence MS., Laurentiana I., No. lxxxviii. 25; Rome MS., Casanantense I., vi. 11). (3) Averroes' commentary on Plato's "Republic," finished Sept. 3, 1321, in the prison of Beaucaire (Oxford MSS. Nos. 1350, 1355; Munich MS. No. 308; Turin MS. No. 40; Florence MS. No. lxxxviii. 25; Milan MS., Ambrosiana, No. 33, suppl.; Vienna MS. No. cxxix.). (4) Averroes' "Compendium of the Organon," finished Dec. 13, 1329, at Tarascon (Paris MS. No. 956, 4). (5) On the geometrical bodies 30 and 31 of Euclid, as a supplement to the translation of Kalonymus ben Kalonymus, in which these two bodies are missing. (6) Commentary on the "Almagest," parts i.-iii. (Vatican MS. No. 398). (7) Abridgment of the "Almagest" by Abu Mohammed Jabbar ibn Aflaḥ (Paris MSS. Nos. 1014, 1024, 1025, 1036). (8) "Ma'amar Alaksander ha-Firdusi" (*ib.* Nos. 893, 894; Berlin MS. No. 332). (9) On the eclipse of the sun July 3, 1097, and "Iggeret be-'Ammud ha-Shaḥar," on the aurora, both by Abu 'Abd Allah Mohammed ibn Mu'ad of Seville (Paris MS. No. 1036). (10) "Ma'amar bi-Tenu'at ha-Kokabim ha-Ḳayyamim," treatise on the fixed stars by Abu Isḥaḳ al-Zarḳalah (*ib.* No. 1036, 3).

SAMUEL B. JUDAH IBN ABUN. See ABBAS, SAMUEL ABU NAṢR, IBN.

SAMUEL BEN KALONYMUS HE-ḤASID OF SPEYER: Tosafist, liturgical poet, and philosopher of the twelfth century; surnamed also "the Prophet" (Solomon Luria, Responsa, No. 29). He seems to have lived in Spain and in France. He is quoted in the tosafot to Yebamot (61b) and Soṭah (12a), as well as by Samuel b. Meïr (RaSHBaM) in his commentary on "'Arbe Pesaḥim" (Pes. 109a).

Samuel was the author of a commentary on the treatise Tamid, mentioned by Abraham b. David in his commentary thereon, and of a liturgical poem, entitled "Shir ha-Yiḥud," divided into seven parts corresponding to the seven days of the week. This poem is a philosophical hymn on the unity of God, for which Ibn Gabirol's "Keter Malkut" served as the basis. Like the latter, Samuel he-Ḥasid treats of the divine nature from the negative side, that is to say, from the point of view that God is not like man. The Hebrew, if not very poetical, is pure; but foreign words are used for the philosophical terms. The recitation of the poem was forbidden by Solomon Luria; but other rabbis, among whom was Samuel Judah Katzenellenbogen, who wrote a commentary on it, decided to the contrary. On the different opinions concerning the authorship of the "Shir ha-Yiḥud" see Dukes in "Orient, Lit." vii., cols. 483, 484.

J. M. SEL.

SAMUEL BEN KALONYMUS HA-ḤAZZAN (known also as **Samuel Dewlin** [דוולין]): Leader of the congregation at Erfurt in the twelfth and thirteenth centuries. He is sometimes, but erroneously, referred to as **Samuel de Aphota Dicti Dovlin.** He wrote a number of piyyuṭim, including five for Sabbath weddings, one for the Friday evening service, one for the Sabbath of Ḥuḳḳat, one for the Sabbath after Sukkot, and, perhaps, a "Me'orah" for Purim. The last-named, however, is generally credited to Samuel of Magdeburg. On June 16, 1221, Samuel and his wife, Hannah, died as martyrs (Aronius, "Regesten," pp. 183, 413).

BIBLIOGRAPHY: Zunz, *Ritus*, pp. 127, 201; Jacob Weil, *Responsa*, No. 41; Dukes, in *Orient, Lit.* 1844, No. 15, p. 232; Neubauer, *Cat. Bodl. Hebr. MSS.* No. 425; Zunz, *Literaturgesch.* p. 465, note 1, and Supplement, p. 63; Parma De Rossi MS. No. 586; Steinschneider, *Cat. Hamburg*, Nos. 49, 58; Berliner, *Magazin*, No. 13.

J. S. O.

SAMUEL HA-ḲAṬON: Tanna of the second generation; lived in the early part of the second century of the common era. His surname "ha-Ḳaṭon" (= "the younger") is explained by some as an epithet given him on account of his extreme modesty, while others regard it as an allusion to the fact that he was only slightly inferior to the prophet Samuel (Yer. Soṭah 24b). It is also possible, however, that the name was first applied to him posthumously, since he died at an early age.

Samuel was so humble that when, during a conference on the intercalation of a month to make a leap-year, the nasi asked an outsider to withdraw, Samuel, not wishing the intruder to feel humiliated, arose and said that he was the one who had come without invitation (Sanh. 11c). He was, moreover, held in such esteem by his contemporaries that when, in an assembly of sages, a voice was heard proclaiming that one of those present was worthy of the Holy Spirit ("Ruaḥ ha-Ḳodesh"), the entire company considered that Samuel was intended (Yer. Soṭah, *l.c.*).

None of his halakot has been preserved; but some of his haggadic aphorisms are still extant, including the following: When asked to explain Eccl. vii. 15 he said: "The Creator of the world knows and understands that the pious may waver; wherefore God says, 'I will take him away in his righteousness' [this being the meaning of "be-ẓidḳo"], that he may not falter" (Eccl. R. *ad loc.*). The words "and all the upright in heart shall follow it" (Ps. xciv. 15) are interpreted as meaning that the holy may expect their reward only in the future world (Midr. Teh. *ad loc.*).

Samuel was exceedingly pious, and once, when he ordered a fast on account of drought, rain fell on the very morning of the day designated by him for the fast (Ta'an. 25b). According to Brüll, he originated the use of the invocation "Ribbono shel 'Olam" = "Lord of the World," that he might avoid pronouncing the name of God (comp. Shab. 33a, where he employs this periphrasis of the divine name).

Samuel is known especially for the anathema against Judæo-Christians, Minæans, and informers ("birkat ha-minim") which he composed at the request of the patriarch Gamaliel II., and which was incorporated into the daily "Shemoneh 'Esreh" prayer (Ber. 28b-29a). He is known also for the sinister prophecy uttered by him on his death-bed: "Simeon and Ishmael are doomed to destruction; their companions, to death; the people, to pillage; and bitter persecutions shall come upon them" (Soṭah 48b). This prophecy, which many of those present did not understand, was fulfilled in its entirety (comp. Krochmal, "Moreh Nebuke ha-Zeman," p. 62). His favorite maxim, Prov. xxiv. 17, shows his pious and humane character, although some deny that this was his motto (Ab. iv. 19; comp. Rahmer's "Jüdisches Lit.-Blatt," 1892, p. 195), while others ascribe to him the apothegm on the ages of life (Ab. v. 21; Taylor, "Sayings of the Jewish Fathers," p. 23).

J. G. L.

SAMUEL BEN MARTA (מרתא): Palestinian amora of the third century. The word "mishkan," twice occurring in Ex. xxxviii. 21, is explained by him as having reference to the fact that the sanctuary was twice confiscated as a pledge ("mashkon"; *i.e.*, the first and second destructions; see Ex. R. l.). Simeon ben Marta, who is mentioned in Gen. R. ix., seems to be identical with Samuel, the subject of this article.

W. B. S. O.

SAMUEL B. MEÏR (RaSHBaM): French exegete of Ramerupt, near Troyes; born about 1085; died about 1174; grandson of Rashi on his mother's side, and eldest son of the family. He was a pupil of his grandfather, and was at first an adherent of haggadic interpretation, although he subsequently approached more closely to the school of Menahem b. Ḥelbo. He was one of the first realistic exegetes, and is also frequently mentioned as a tosafist. His Biblical commentaries include the following: (1) On the Pentateuch, of which the section from Gen. xviii. to Deut. xxxiii. 3 was first printed, with several other commentaries, under the title "Ha-Rashbam" in the edition of the Hebrew Pentateuch published in Berlin in 1705, while the portion on Gen. i. 1-31 was edited in "Kerem Ḥemed," viii. 44 *et seq.* (2) On Judges and Kings (Perles, in "Monatsschrift," 1877, pp. 363, 367 *et seq.*; Berliner's "Magazin," i. 2-5). (3) On Isaiah, Jeremiah, Ezekiel, and the twelve Minor Prophets. (4-7) On Ezra and Nehemiah (many notes in the existing commentary on these books which is ascribed to Rashi, appear to be by RaSHBaM). (8) On Job, beginning, in De Rossi MS. No. 181, with ch. xi. 27, but extending, in "Cat. Munich," No. 2 (according to Lilienthal), from ch. xxxviii. to the end. (9) On the Five Megillot, of which the portion on Canticles and Ecclesiastes has been published by A. Jellinek (Leipsic, 1855), together with some fragments from the other three Megillot (see, however, Rosin, "R. Samuel ben Meïr," pp. 17-21, Breslau, 1880). (10) On the Psalms, said to have been discovered by Isaac ha-Levi of Satanow in the Berlin Library and published by him in 1793 (reprinted at Vienna, 1816).

One of the earliest writings of Samuel is undoubtedly his commentary on Canticles, which he regards as the representation of a dialogue between God and the Jewish people, and as a description of the condition of Israel in times of misery and of happiness. In his other Biblical commentaries, on the contrary, he opposes all haggadic interpretation. His sources for this commentary were: the Bible, the Masoretic text of which he closely followed, and with which he compared French, German, and Spanish manuscripts; the Targum Onḳelos; the Babylonian Targum to the Prophets; the Jerusalem Targum to the Pentateuch; the Palestinian Targum to the Hagiographa; the Vulgate, in so far as he objected to its renderings; the Mishnah, Mekilta, Sifra, and Sifre; the Baraita of R. Eliezer; Seder 'Olam; Pirḳe Rabbi Eli'ezer; the "Dibre ha-Yamim shel Mosheh" (Jellinek, "B. H." ii. 1-11); Eleazar Ḳalir; Menahem ibn Saruḳ; Dunash ben Labraṭ; Kalonymus of Rome (on Num. xi. 35); and Menahem b. Ḥelbo.

Rashbam explains his aim in Biblical exegesis thus: "Those who love pure reason should always remember that the sages have said a Biblical passage must not be deprived of its original meaning [on Gen. xxxvii. 1]. Yet as a consequence of the opinion expressed by them, that the constant study of the Talmud is one of the most laudable pursuits, commentators have been unable, by reason of such study, to expound individual verses according to their obvious meaning. Even my grandfather Solomon was an adherent of this school; and I had an argument with him on that account, in which he admitted that he would revise his commentaries if he had time to do so." It is subsequently related that Rashbam so thoroughly convinced his grandfather that the latter burned his own works.

Briefly Rashbam may be said to have had the following objects in view in his exegesis: to harmonize his comments with the progress made by the exegesis of his time; to simplify exegesis and investigate the inner meaning of the Scriptural text; to preserve the traditional interpretation when it agrees with the literal sense; to show the connection of disconnected passages of the Bible; and to defend Judaism (תשובת המינין). In regard to form, he advances, adopts, or rejects explanations with a brief and pointed statement of his reasons therefor (see Rosin, *l.c.* pp. 92–98).

The following passage on Gen. xxxiv. 25 may be quoted as an example of the simplicity of Samuel's exegesis: "'They [Simeon and Levi] came upon the city [Shechem].' This certainly means that they came upon the city when it felt itself secure, since the Hebrew word 'beṭaḥ' can be applied only to an object at rest." This explanation is at the same time a criticism of Rashi, who first refers "beṭaḥ" to the inhabitants and not to the city, and then interprets the passage haggadically. Rashbam was himself attacked by Ibn Ezra in "Iggeret Shabbat" because in his interpretation of Gen. i. 5 he tries to prove that the Jewish day, even the Sabbath, begins at dawn and not at evening.

In his comment on Ex. ii. 14 Rashbam shows his mastery in determining the most evident meaning. The names of God are explained as verb-forms, the first one, אהיה, as placing in the mouth of God Himself the declaration of eternal existence, אהיה אשר אהיה, and the second, יהוה, as placing in the mouth of man the same declaration. Equally obvious is the connection he finds between the Feast of Tabernacles and the festival of ingathering (Lev. xxiii. 43), basing it on the sentiment of humility and gratitude; the humble hut being occupied during the most beautiful outdoor festival of the year, and being a reminder at the same time of the ancient tent life. He explains the threefold repetition of the word ציצית in Num. xv. 39 by saying that a notable play on words underlies its third occurrence. The obscure use of אמר in Deut. xxvi. 17, 18, he explains, as no commentator before him had done, by the passages Num. xv. 41 and Ex. xix. 6. On other philosophical explanations, some of which are untenable, comp. Rosin, *l.c.* pp. 104–108.

The most radical of Rashbam's commentaries is that on Ecclesiastes. For instance· (1) He declares that the words "vanity of vanities" were not spoken by the preacher, but were prefixed by the editor who arranged the book in its present form. (2) He draws a distinction between practical wisdom, which is not speculative (Eccl. ii. 3), and theoretical wisdom, which must not be confounded with it. (3) In opposition to all the earlier commentators—unless the comments of this nature were added by a later editor (comp. Rosin, *l.c.* p. 108, note 4)—he explains according to their natural literal meaning all the sentences of the preacher relating to doubts and to pessimism (Eccl. iii. 21, v. 7).

Rashbam's attitude toward science may be considered from two points of view, (1) the theological, and (2) the secular. In regard to theology he clings to the doctrine of the spirituality and omniscience of God (Gen. i. 26; "Kerem Ḥemed," viii. 45), holding that neither the former nor the latter is in any way circumscribed. In his views on angels, prophecy, and the miracles mentioned in the Bible he falls short of the religious philosophers both of his own and of a later epoch. Nor does he rise superior to the superstitions of his time and country, explaining many Biblical passages (*e.g.*, Gen. xxxi. 19; Ex. xxxi. 1) according to the prevailing ideas. He bases the Biblical laws (*e.g.*, Gen. xxxii. 33 [A. V. 32]; Ex. xii. 8, 9, 17; xxv. 31) not only on ethical but also on other grounds. Occasionally he offers to his reader extraneous ideas suggested by some occurrence or train of thought. As regards his secular attainments, he gives evidence of being conversant with Old French (see the Old French philological explanations which he quotes, given in alphabetical order in Rosin, *l.c.* pp. 92–97). He knew Latin also, and could even read the Vulgate (see on Ex. xx. 13, in reference to the translation of "Non occides" = "Thou shalt not kill," and "Ego occidam," Deut. xxxii. 39).

Some correct geographical notes (on Gen. xxxv. 21; Num. xxi. 28; Deut. ii. 3) show that Rashbam was conversant also with the geography of Palestine. In his knowledge of Hebrew grammar and lexicography not only was he the equal of his contemporaries, but he even surpassed Menahem and Dunash in point of general scholarship, although he could not make use of Saadia's works, as he did not know Arabic (this topic is treated in detail in Rosin, *l.c.* pp. 120–144, 145–155).

Among Rashbam's Talmudical works are the following commentaries: (1) On the treatise Baba Batra (iii. 29a to the end). (2) On Pesaḥim (x. 99b to the end). (3) On 'Abodah Zarah, of which only a few passages are quoted in "Temim De'im," ed. Venice, iii. 19b, 20b, 28c. (4) On the treatise Niddah, as appears from the "Or Zarua'" (Berliner's "Magazin," i. 100a). (5) Additions to Alfasi (Ahaba, ed. Amsterdam, i. 136b). (6) Additions to Rashi's commentary (Zunz, "Z. G." p. 32). (7) "Teshubot," in R. Eliezer b. Nathan's "Eben ha-'Ezer," ed. Prague, 143b-146c, and in the "Pardes," ed. Constantinople, fol. 4a (Berliner's "Magazin," 1876, p. 60; "Or Zarua'," i. 79b; "Mordekai" on Ket. viii. 300, fol. 108b, in "Haggahot Maimuniyyot," "Ishot," iii.). (8) On the treatise Abot (Zunz, "Z. G." pp. 124 *et seq.*); also the work "Ba'al ha-Ma'or" (according to Rieti), and the conclusions of the commentaries on the Talmud left incomplete by Rashi.

Rashbam is, however, much weaker than Rashi in his Talmudic commentaries, and he occasionally becomes prolix in attempting detailed explanations, while the simplicity of Rashi is at once evident. As a tosafist Rashbam is quoted in B. Ḳ. 6b, 10a, and in B. M. 96b, while additions of his to the Pirḳe

Abot are found also in the "Migdal 'Oz" of Shem-Ṭob Gaon.

Few details of Rashbam's life are known. He is said to have been so modest that he always walked with downcast eyes; and Mordecai b. Hillel says ('Erubin, end) that he was so absent-minded that once, while traveling, he climbed into a wagon loaded with cattle.

SAMUEL, MOSES: English author; born in London 1795; died at Liverpool 1860. He acquired considerable reputation as a Hebrew scholar and an authority on rabbinical literature. While at Liverpool he published an "Address to the Missionaries of Great Britain," a forcible protest against the attempts of conversionist societies to entice Jews from their faith. He wrote also a pamphlet on the position of Jews in Great Britain, and was one of the editors of a monthly magazine entitled "The Cup of Salvation." Samuel was a zealous advocate of the emancipation of his coreligionists, and a rebuke, entitled "The Jew and the Barrister," he administered to a member of the bar was favorably noticed in several magazines. He translated "The Book of Jasher" and Mendelssohn's "Jerusalem," London, 1838.

Bibliography: *Jew. Chron.* April 27, 1860; Picciotto, *Sketches of Anglo-Jewish History*, pp. 364-365.

SAMUEL BEN MOSES: Russian cabalist; lived at Swislotz, government of Grodno, in the seventeenth and eighteenth centuries. He was the author of "Shem Shemu'el," containing cabalistic interpretations of the Pentateuch and giving cabalistic reasons for the precepts therein. In the preface the author quotes another work of his entitled "Yad Shemu'el," on the Psalms.

SAMUEL B. MOSES PHINEHAS: Polish rabbi; died in Posen Nov. 25, 1806. He was a descendant of R. Joshua (d. 1648), the author of "Maginne Shelomoh," and was related to the Heilprin family. At the age of twenty-three he became rabbi of Bilguria, near Zamoscz, and later held similar positions in Przeworsk and in Tarnopol, where he was living in 1795. In 1801 he succeeded his brother Joseph "ha-Ẓaddiḳ" (son-in-law of R. Ezekiel Landau of Prague) in the rabbinate of Posen, where he remained until his death. He was the author of "Bet Shemuel Aharon," of which the first parts contain responsa, and the last is devoted to sermons on the weekly lessons from the Pentateuch (Novidvor, 1806).

Bibliography: Preface to *Bet Shemuel Aḥaron*; *Monatsschrift*, xiv. 256 *et seq.*; Eisenstadt-Wiener, *Da'at Ḳedoshim*, p. 69, St. Petersburg, 1897-98.

H. R. P. Wi.

SAMUEL HA-NAGID (SAMUEL HA-LEVI BEN JOSEPH IBN NAGDELA): Spanish statesman, grammarian, poet, and Talmudist; born at Cordova 993; died at Granada 1055. His father, who was a native of Merida, gave him a thorough education. Samuel studied rabbinical literature under Enoch, Hebrew language and grammar under the father of Hebrew philology, Judah Ḥayyuj, and Arabic, Latin, and Berber under various non-Jewish masters. In 1013, in consequence of the civil war and the conquest of Cordova by the Berber chieftain Sulaiman, Samuel, like many other Jews, was compelled to emigrate. He settled in the port of Malaga, where he started a small business, at the same time devoting his leisure to Talmudic and literary studies.

Samuel possessed great talent for Arabic calligraphy; and this caused a change in his fortunes. A confidential slave of the vizier Abu al-Ḳasim ibn al-'Arif often employed Samuel to write his letters. Some of these happened to fall into the hands of the vizier, who was so struck by their linguistic and calligraphic skill that he expressed a desire to make the acquaintance of the writer. Samuel was brought to the palace, and was forthwith engaged by the vizier as his private secretary. The former soon discovered in Samuel a highly gifted statesman, and allowed himself to be guided by his secretary's counsels in all the affairs of state. In 1027 the vizier fell ill, and on his death-bed confessed to King Ḥabus, who had expressed his sorrow at losing such an able statesman, that his successful undertakings had been mainly due to his Jewish secretary. Being free from all race prejudices, Ḥabus raised Samuel to the dignity of vizier, and entrusted him with the conduct of his diplomatic and military affairs.

Appointed Vizier.

In his exalted position Samuel remained the same pious and modest scholar, and disarmed his enemies, who could not forgive him his Jewish faith, by his gentleness of manner and his liberality. The following is an illustration of his magnanimity: A fanatical Mohammedan dealer in spices, who lived near the calif's palace, once grossly offended Samuel while accompanying the calif. Incensed at the offense, the calif commanded Samuel to punish the fanatic by cutting out his tongue. Instead of executing this order Samuel made a present to the offender, and thus gained his gratitude. When the calif again noticed the seller of spices he was astonished at the change, and questioned Samuel about it. "I have torn out," answered the vizier, "his angry tongue, and given him instead a kind one."

The year 1037 proved to be the turning-point in Samuel's life. Ḥabus died, and there arose two parties in Granada who respectively rallied round two princes. The majority of the Berber nobles, and some influential Jews—Joseph ibn Migas, Isaac ben Leon, and Nehemiah Ashkofa—sided with the younger son of Ḥabus, while Samuel at the head of a smaller party supported the elder son Badis. The chances were all in favor of the majority, and Samuel ran the risk of losing not only his position, but also his life, when unexpectedly the younger son of Ḥabus abdicated in favor of his elder brother. Badis was then hailed king, and Samuel not only retained his former position, but became practically king of Granada, as the pleasure-seeking Badis paid but little attention to affairs of state.

As Nagid.

Samuel not only employed his power for the benefit of the Jews of Granada, of whom he was the authorized chief ("nagid"), exercising the functions of rabbi, but also strove, in his diplomatic relations, to ameliorate the condition of the Jews in other places. Greatly interested in the propagation of science, he spent enormous sums for copies of books, which he presented to poor students. He corresponded with the leading scholars of his time, especially with Hai Gaon and R. Nissim of Kairwan. Among the recipients of his bounty was Ibn Gabirol, who had been banished from Saragossa. "In Samuel's time," says Moses ibn Ezra in his "Kitab al-Muḥadarah" (comp. Munk, "Notice sur Abu'l Walid," p. 57), "the kingdom of science was raised from its lowliness, and the star of knowledge once more shone forth. God gave unto him a great mind which reached to the spheres and touched the heavens, so that he might love Knowledge and those that pursued her, and that he might glorify Religion and her followers." Samuel found recognition not only among his coreligionists, but also among the Mohammedans, many of whom were his stanch friends and admirers. An Arabic poet, Muntafil, extolled him in verse, and acknowledged that Samuel had made him a secret worshiper of the God who had prescribed the sanctification of the Sabbath. The best proof, however, of Samuel's great popularity is that, notwithstanding the machinations of the Mohammedan fanatics, he remained vizier until his death, and was succeeded in that office by his son Joseph.

His Works.

Of Samuel's writings only a few have been preserved. Besides two responsa, which have been inserted in the "Pe'er ha-Dor" (Amsterdam, 1765), only the "Mebo ha-Talmud" has been published (Constantinople, 1510; frequently reprinted together with the "Halikot 'Olam" of Joshua ha-Levi; and since 1754 together with the Talmud, at the end of the treatise Berakot). The work is divided into two parts: the first containing a list of the bearers of tradition from the members of the Great Assembly down to Enoch, Samuel's teacher; the second, a methodology of the Talmud. It was translated into Latin by Constantin l'Empereur, under the title "Clavis Talmudica, Completas Formulas, Loca Dialectica et Rhetorica Priscorum Judæorum" (Leyden, 1633). Another Talmudic work of Samuel's, entitled "Hilkata Gibbarwa," containing Talmudic decisions, is quoted by Me'iri in his commentary on Abot, by Bezaleel Ashkenazi ("Shiṭṭah Meḳubbeẓet," Ketubot 36b), and by others.

Of the poetical productions of Samuel there have been preserved a part of the "Ben Mishle," containing aphorisms and maxims, some of which have been published in various periodicals (see bibliography below), and fragments of a diwan, still extant in manuscript (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2422, 18). Some verses of his are cited by Moses ibn Ezra, and his poem on the pen is quoted by Judah ibn Tibbon in a letter addressed to his son Samuel. Mention is made also of a poem in seven languages addressed to King Ḥabus. In addition Samuel wrote "Ben Mishle," containing devotional poems, and "Ben Ḳohelet," containing philosophical meditations, both of which are no longer extant. Samuel's poetic compositions are distinguished for their elevation of thought; but they are devoid of elegance of form. It became proverbial to say, "Cold as the snow of Hermon, or as the songs of the Levite Samuel" (Dukes, "Naḥal Ḳedumim," p. 5). The diwan of Samuel ha-Nagid was edited, although not in its entirety, by A. Harkavy in "Studien und Mittheilungen aus der St. Petersburger Kaiserlichen Bibliothek," i. ("Zikron la-Rishonim"), St. Petersburg, 1879.

Among Samuel's works on grammar, which are no longer in existence, mention should be made of the "Sefer ha-'Osher" (Arabic title, "Kitab al-Istighna"), which was divided into twenty-two sections. In this work, as in all of his writings on grammar, Samuel did not go beyond the rules laid down by his master Judah al-Ḥayyuj. Indeed, his respect for the father of Hebrew philology was so great that he waged war against Ibn Janaḥ and wrote and caused others to write the pamphlets known as "Epistles of the Companions" ("Rasa'il al-Rifaḳ"), in which that grammarian was violently attacked for his strictures on Ḥayyuj's writings.

J. I. Br.

SAMUEL BEN NAḤMAN (NAḤMANI):

Palestinian amora; born at the beginning of the third and died at the beginning of the fourth century. He was a pupil of R. Jonathan ben Eleazar (Pes. 24a) and one of the most famous haggadists of his time (Yer. Ber. 12d; Midr. Teh. to Ps. ix. 2). He was a native of Palestine and may have known the patriarch Judah I. (Gen. R. ix.). It appears that he went to Babylon in his youth but soon returned to Palestine (Sanh. 96b). He seems, however, to have gone to Babylon a second time in an official capacity in order to determine the intercalation of the year, which, for political reasons, could not be done in Palestine (Yer. Ber. 2d; Pes. 54b). As an old man he went to the court of Empress Zenobia (267-273) to petition her to pardon an orphaned youth who had committed a grave political crime (Yer. Ter. 46b).

Relations with Diocletian.

In the days of Judah II., Samuel ben Naḥman appears among the most intimate associates of the patriarch, with whom he went (286) to Tiberias at Diocletian's order; later he joined the emperor at Paneas (Yer. Ter. ix., end; Gen. R. lxiii.). In the school Samuel held a position of authority; to him is ascribed the rule that during the heat of the day instruction should be suspended (Lam. R. i. 3, end; Midr. Teh. to Ps. xci. 6). On account of his fame as a haggadist questions were addressed to him by such authorities as the patriarch Judah II. (Gen. R. xii., end), Simeon ben Jehozadak (Gen. R. iii., beginning; Lev. R. xxxi.; Pes. 145b; Midr. Teh. to Ps. civ.; Tan. to Wayaḳhel, beginning; Ex. R. l., beginning), Ammi (Lev. R. xxxi., beginning; Lam. R. i. 13), Ḥanina ben Pappa (Pes. 157a; Midr. Teh. to Ps. lxv.; Lam. R. iii. 45; Yer. Sheb. 35b), and Ḥelbo (B. B. 123a, b).

Among the transmitters of Samuel's sayings were Ḥelbo, the haggadist Levi, Abbahu (Lev. R. xxxv., end; Yer. Ta'an. iii.), and Eleazar ben Pedaṭ (Pes. 159b). Of Samuel's sons two are known by name—Naḥman and Hillel; sayings of both have been preserved (Gen. R. x., xxxii.; Midr. Teh. to Ps. lii.; Yer. Sheb. 36b; Yer. Ḳid. 61c; Eccl. R. i. 4; Midr. Shemu'el xv., on Neh. viii. 17). Samuel ben Naḥman's decisions and sayings concern the study of dogma (Yer. Peah 17a; Meg. 74d; Ḥag. 76d), prayer (Pes. 157a, b; Deut. R. ii.; Yer. Ber. 7a; Gen. R. lxviii.), and Sabbath regulations (Gen. R. xi., end; Pesiḳ. R. 23; Yer. Shab. 15a); the history of Israel and the nations and empires (Pes. 15b, 151b; Lev. R. ii., beginning, xxiv., end, xxix.; Num. R. ii., end; Yer. Sheb. 35b; Yer. 'Ab. Zarah 44b); the ordinances regarding proselytes (Cant. R. vi. 2; Yer. Ber. 5b, c); Scripture ('Ab. Zarah 25a; B. B. 15a; Gen. R. vi., end; Cant. R. i. 1, end), halakic exegesis (Yer. Sheḳ. 45d; Yer. Shab. 9b; Yer. Ḥal. 57b), and Biblical characters and narratives (B. B. 123a; 'Ab. Zarah 25a; Yer. Yeb. 9c; Yer. Ber. 4b; Tosef., Shab. vii., 25; Gen. R. xlii., xlix., lxii., xcviii.; Ex. R. xliii.; Lev. R. xi.; Pes. vi.; Eccl. R. vii. 1; Midr. Shemu'el xxiii.).

His Dirges.

Especially noteworthy is Samuel b. Naḥman's description of the grief of the patriarchs Abraham, Isaac, Jacob, and of Rachel, over the destruction of the Temple (Lam. R., Pref. 24, end). It is written in beautiful Hebrew prose, and is accompanied by dramatic dirges in Aramaic. Then follow the dirges of all the Patriarchs, which they intone when Moses for the second time has communicated to them the sad tidings. Finally, Moses himself chants a lament, addressed partly to the sun and partly to the enemy.

Other utterances of Samuel b. Naḥman's refer to homiletics (Gen. R. xiv., xx., xliii.; B. B. 123b; Ḥul. 91d; Shab. 113b), to God and the world (Gen. R. xxxiii.; Pes. 139a; 'Er. 22a; B. Ḳ. 5a, b), and to eschatology (Gen. R. viii.; Midr. Teh. to Ps. lxxiii., end; Pes. 156b; Midr. Shemu'el xix.; Eccl. R. i. 8).

W. B. S. O.

SAMUEL HA-NAḲDAN: Masorite and grammarian of the twelfth century. A grammatical work of his entitled "Deyaḳut" is extant in the Royal Library at Berlin. It deals with various grammatical points and with the accents. According to Steinschneider, it is valuable as showing the beginnings of grammatical study among the French Jews before the influence of Ḳimḥi or of the Spanish school was felt. The author may be identical with one Samuel le Pointur, mentioned in a tax-roll of 1194 as living in Bristol.

Bibliography: Steinschneider, *Die Handschriften-Verzeichnisse der Königlichen Bibliothek zu Berlin*, p. 100; Jacobs, *Jews of Angevin England*, pp. 162, 421.

T. J.

SAMUEL HA-NASI: Exilarch in Bagdad, probably between 773 and 816. Until recently his existence was known only from a difficult passage in a manuscript, part of which is printed in the "Maẓref la-Ḥokmah." This states that the pious had taken the basis of the liturgy from Aaron ben Samuel ha-Nasi, who had left Babylon. Another manuscript (Bibliothèque Nationale, Paris, No. 174), dating from the fourteenth century, states that the Moses who wrote the liturgical work "Emet Nore'oteka" was a pupil of Aaron ben Samuel ha-Nasi of Babylon. The importance of Aaron in the Chronicle of Ahimaaz ben Paltiel, and his residence in Italy, prove the existence of Samuel ha-Nasi.

J. S. O.

SAMUEL BEN NATHAN: Amora of the early part of the fourth century. He appears mostly as the transmitter of the sayings of Ḥama b. Ḥanina (Shab. 38a, note; Yer. Shab. 5d). On one occasion Ḥama b. Ḥanina transmits a tradition of Samuel concerning his journey to the baths at Gadar in company with his father (Yer. Ter. 41c).

SAMUEL BEN NATHAN: Liturgical poet of the fourteenth century; place of birth and residence unknown. He was the author of three prayers, and is sometimes mentioned in manuscripts by the name of Rabanu (רבנא).

Bibliography: Zunz, *Literaturgesch.* p. 371.

E. C. S. O.

SAMUEL BEN NAṬRONAI: German tosafist of the second half of the twelfth century. He was the pupil and son-in-law of R. Eliezer b. Natan (RABaN), and brother-in-law of R. Joel b. Isaac ha-Levi. He is often cited by his father-in-law in his work "Eben ha-'Ezer" (§§ 27, 28, etc.), and also by Zedekiah b. Abraham in his "Shibbole ha-Leḳeṭ" ("Hilkot Semaḥot," § 23 [ed. Buber, p. 176a]). Some novellæ by him are mentioned in "Haggahot Maimuni" on "Hilkot Ishot," xxiii. 14. By the Poseḳim he is often cited by the name of RaSHBaT (= "R. Samuel b. Naṭronai"; not "Simeon ben Tobias," as some have assumed). Samuel suffered death as a martyr at Neuss in 1197.

Bibliography: Michael, *Or ha-Ḥayyim*, No. 1210.

SAMUEL PHOEBUS BEN NATHAN FEITEL (פיידל): Austrian historiographer; lived in Vienna in the sixteenth and seventeenth centuries. He was the author of "Ṭiṭ ha-Yawen," describing the horrible excesses perpetrated in the Cossacks' Uprising under Bogdan Chmielnicki in the Ukraine and Galicia in the seventeenth century.

The work gives the names of several cities that suffered, also 140 synagogues that were destroyed, and states that 600,070 Jews were supposed to have fallen victims in the uprising. This work was first published in Venice after 1649; a second edition appeared in Cracow in 1892, included in the "Le-Ḳorot ha-Gezerot be-Yisrael" of J. Ḥayyim Gurland.

Bibliography: Steinschneider, *Cat. Bodl.* col. 2472; Benjacob, *Oẓar ha-Sefarim*, p. 208.

SAMUEL BEN REUBEN OF BÉZIERS: French Talmudist; flourished at the beginning of the fourteenth century. He was one of Solomon ben Adret's numerous correspondents during the religious controversy of 1303-6. He addressed a rimed epistle to Adret, in which he took the part of his relative Levi of Villefranche, while excusing himself for having signed the letter sent by the liberal party to the rabbis of Barcelona, a letter the contents of which, as he said, were unknown to him. He agreed with Adret in forbidding the study of the liberal sciences to young students. According to Gross, Samuel was perhaps a son of Reuben ben Ḥayyim of Narbonne, the uncle of Levi of Villefranche.

E. C. A. Pe.

SAMUEL BEN REUBEN OF CHARTRES: French liturgical poet. He wrote a "reshut" in Aramaic which was recited with the Targum of the hafṭarah for the Feast of Weeks, and which consisted of sixty half-lines riming with חא. The reshut is signed "Samuel ha-Ketabi." Gross explains this ambiguous designation as follows: The name of Samuel's native city, Chartres, is very similar to the old French word "charte" (document, charter), which may be translated in Aramaic by "ketab." From this noun Samuel formed the adjective "ketabi," alluding to his native city.

Bibliography: Zunz, *Literaturgesch.* p. 464; Gross, *Gallia Judaica*, p. 605.

SAMUEL, SAMPSON: Solicitor and secretary to the London Board of Deputies; born in 1804; died in London Nov. 10, 1868. He began life on the Stock Exchange, but after some time resigned his membership and entered the legal profession. He became honorary solicitor to several of the leading charities; as solicitor and secretary to the Board of Deputies his advice was sought on many important issues, and he accompanied Sir Moses Montefiore on his mission to Morocco. Samuel was a member of the committee of the Great Synagogue and of nearly all the charitable institutions, in the foundation of many of which he was concerned. He helped to establish the Jews' Infant School, London, and took an active part in its management.

J. G. L.

SAMUEL, SIR SAUL, Bart.: Australian statesman; born in London, England, Nov. 2, 1820; died there Aug. 29, 1900. In 1832 he emigrated with relatives to New South Wales. He entered Sydney College, and afterward engaged in mining and commercial pursuits. In 1839 he made the acquaintance of Sir Henry Parkes, whose colleague he later became in several governments. His public career began in 1846, when he was appointed a magistrate of the territory of New South Wales. In 1854 he won legislative honors, and in 1856 entered the Representative Assembly of New South Wales. In 1859 he joined the ministry; and from that time forward he held office continuously up to his appointment in 1880 to the London agent-generalship of New South Wales. In 1872 he was nominated to a seat in the Legislative Council, in which chamber he represented the government; he was minister for finance and trade in 1859, 1865, 1866, 1868, 1869, and 1870, and postmaster-general from 1872 to 1875, in 1877, and from 1879 to 1880.

Samuel's main work in the colony was of a financial character. As agent-general he expended over £6,000,000 in the purchase of railway plants and war material, and effected large loans totaling £50,000,000. As colonial treasurer he made financial arrangements for separating Queensland from the parent colony of New South Wales. As postmaster-general he negotiated a postal service to Great Britain via San Francisco—an achievement which secured him the C.M.G. (1874). In 1882 he was made K.C.M.G., and in 1886 the Companionship of the Bath was conferred upon him. He was the author of the Government Savings Bank Act, the Navigation Act, and other acts of equal importance.

Samuel was one of the most practical pioneers in the work of Australian federation, and cultivated the interests, not of New South Wales only, but of the whole of Australia. He was also the pioneer of several important industries which have developed in the colony. He represented Sydney at several international exhibitions, and in 1887 was one of the delegates of New South Wales to the Colonial Conference held in London.

Sir Saul Samuel was a member of the council of the Anglo-Jewish Association, and was connected also with other leading communal institutions.

SAMUEL SCHMELKA BEN ḤAYYIM SHAMMASH: Preacher and actuary of the rabbinate of Prague under Ephraim Solomon of Lenczıza in the second half of the sixteenth century. He was the author of the following works: "Perush al ha-Masoret," a supplement to Elijah Levita's Masoretic explanations (Prague, 1610); "Seder Nashim," on the three chief commandments concerning women— "niddah," "ḥallah," and "delikah"—written in Judæo-German (*ib.* 1629); "Ba-Ḥeshbon," a multiplication table (*ib.* n.d.); "Som Sekel," a work on the Masorah (Cracow, after 1629); "Haggahot li-Sheḥiṭot u-Bediḳot," additions to Jacob Weil's rules for slaughtering (Prague, 1668).

Bibliography: Steinschneider, *Cat. Bodl.* cols. 2412, 2413; Zunz, *Z. G.* pp. 297, 298; K. Lieben, *Gal 'Ed*, p. 63 (German part); Benjacob, *Oẓar ha-Sefarim*, pp. 412, 469, 568.

SAMUEL BEN SHNEOR. See Samuel of Evreux.

SAMUEL BEN SIMEON (called also **Samuel Astruc d'Escola**): French scholar; lived in Provence in the fourteenth century. His Hebrew surname was "Kenesi," incorrectly derived from "keneset" (= "school"), the Hebrew translation of "d'Escola," a name frequently found in southern France. He wrote a preface to the astronomical work "Shesh Kenafayim" by Immanuel ben Jacob, which is still in manuscript. Probably he is the Nasi Samuel d'Escola who explained the astronomical tables of Bonet Bon Giorno.

SAMUEL, SIMON: German pathologist; born at Glogau Oct. 5, 1833; died at Königsberg, East Prussia, May 9, 1899. He studied medicine at Berlin and Vienna (M.D. 1855), established himself as a physician in Königsberg in 1856, and became privat-docent in 1864, and assistant professor in 1874.

Among his many works and essays may be mentioned: "Diotrophische Nerven," 1860; "Der Entzündungsprocess," 1873; "Die Entstehung der Eigenwärme und des Fiebers," 1876; "Handbuch der Allgemeinen Pathologie," 1879. With A. Eulenburg he published also "Handbuch der Allgemeinen Therapie und der Therapeutischen Methoden," Leipsic and Vienna, 1899.

S. F. T. H.

SAMUEL BEN SOLOMON OF FALAISE: Tosafist of the twelfth and thirteenth centuries. His French name was Sir Morel, by which he is often designated in rabbinical literature: מוריל, מוריאל שיר מורל. He was a pupil of Judah Sir Leon of Paris and of Isaac ben Abraham of Sens. In 1240 he took part in the renowned controversy instigated by the baptized Jew Nicholas Donin.

Samuel was the author of the following works: (1) tosafot to several Talmudical treatises, among which those to the 'Abodah Zarah were published, together with the text, according to the redaction of his disciple Perez ben Elijah; (2) a commentary, no longer in existence, on the laws concerning Passover composed in verse by Joseph Ṭob 'Elem, quoted by Ḥayyim Or Zarua' ("Or Zarua'," ii. 114); (3) ritual decisions, frequently cited by Meïr of Rothenburg, Mordecai ben Hillel, and other rabbinical authorities of that time.

Bibliography: Loeb, in *R. E. J.* i. 248; Gross, *Gallia Judaica*, pp. 478-479; Berliner's *Magazin*, iv. 179-194; Grätz, *Gesch.* vii. 130; Zunz, *Z. G.* p. 37; Jacobs, *Jews of Angevin England*, pp. 53, 146, 421.

E. C. I. Br.

SAMUEL BEN SOLOMON NASI OF CARCASSONNE: French scholar of the thirteenth century. He was the author of a commentary on the "Moreh Nebukim," which is still extant in manuscript in the Library of the Neophytes at Rome. Gross identifies Samuel Nasi with Samuel Sekili, whom Menahem Me'iri represents as one of the greatest scholars of the thirteenth century, and as being very well versed both in rabbinical literature and in secular science. Samuel Sekili's authority is often invoked in "Orḥot Ḥayyim" and in "Kol Bo."

Bibliography: Gross, *Gallia Judaica*, pp. 433, 615.

SAMUEL B. SOLOMON SEKILI. See Samuel ben Solomon Nasi.

SAMUEL, SYDNEY MONTAGU: English author and communal worker; born in London June 21, 1848; died June, 1884; educated at University College, London. For upward of fifteen years Samuel threw himself into communal work with much zeal and earnestness. In 1878 he became honorary secretary to the Board of Guardians, and wrote its annual reports from 1878 to 1882. He held a similar office in the Jewish Association for the Diffusion of Religious Knowledge, and assisted in establishing the Jewish Working Men's Club. In 1879 he journeyed to the East, and made investigations into the moral and physical condition of the Jews in the Holy Land and in other parts of the Orient. The result was embodied in his "Jewish Life in the East." He contributed also to the general press, and wrote some very graceful verses.

Samuel displayed much activity in theatrical matters, was a ready adapter of plays, and wrote the English libretto of "Piccolino," produced at Her Majesty's Theatre in 1879. A comedy by him entitled "A Quiet Pipe" was produced at the Folly Theatre in 1880. In collaboration, he translated Victor Hugo's "La Lyre et la Harpe" into English verse for a cantata by Saint-Saëns, produced at the Birmingham Musical Festival in 1879.

Samuel was a broker of the city of London, and was engaged in the banking establishment of his relatives, Samuel Montagu & Co. An authority on finance, he contributed to the "Examiner"; and wrote for the "Times" an annual survey of the course of exchange. His health broke down under the strain of his multifarious exertions.

Bibliography: *Times* (London), June 28, 1884; *Jew. Chron.* and *Jew. World*, June 27, 1884.

J. G. L.

SAMUEL BEN URI SHRAGA PHOEBUS: Polish rabbi and Talmudist of Woydyslaw in the second half of the seventeenth century. In his early youth he was a pupil of R. Heshel in Cracow, and on the latter's death he continued his studies under R. Heshel's successor, R. Leib Fischeles, whose daughter he married.

Samuel officiated as rabbi in Shydlow, Poland, whence he was called in Sept., 1691, to the rabbinate of Fürth, Germany. In his new office he displayed great activity, and was the recipient of a good income; nevertheless his new surroundings were distasteful to him. The reason is not known; but it is recorded that he longed for his former rabbinate. In 1694 he received a call to return to Shydlow, which he soon accepted, as appears from his approbation of the work "'Ir Binyamin" (Frankfort-on-the-Oder, 1698), in which he is mentioned as rabbi of the Polish town.

Samuel wrote in Hebrew a clear and comprehensive commentary on the Shulḥan 'Aruk, Eben ha-'Ezer, which appeared in Dyhernfurth in 1689, being the first Hebrew work printed there. Later he thoroughly revised it; and a second edition, with several emendations and additions, appeared at Fürth in 1694. He wrote also several responsa and opinions, one of which is published in "Ḥinnuk Bet Yehudah," No. 131 (Frankfort-on-the Main, 1705).

Bibliography: Ḥayyim N. Dembitzer, *Kelilat Yofi*, i. 81a, b, ii. 58b, Cracow, 1888-93; M. Bodl.* col. 2494.

E. C. J. Z. L.

SAMUEL YARḤINA'AH (generally known as **MAR SAMUEL**): Babylonian amora of the first generation; son of Abba b. Abba; teacher of the Law, judge, physician, and astronomer; born about 165 at Nehardea, in Babylonia; died there about 257. As in the case of many other great men, a number of legendary stories are connected with his birth (comp. "Halakot Gedolot," Giṭṭin, end; Tos. Ḳid. *s.v.* מאי). His father, who subsequently was known only by the designation Abuh di-Shemu'el ("father of Samuel"), was a silk-merchant. R. Judah b. Bathyra ordered a silken garment from him, but refused to take it after Abba had procured it, and when the latter asked him the reason of his refusal, R. Judah answered, "The commission was only a spoken word, and was not sufficient to make the transaction binding." Abba thereupon said, "Is the word of a sage not a better guaranty than his money?" "You are right," said R. Judah; "and because you lay so much stress upon a given word you shall have the good fortune of having a son who shall be like the prophet Samuel, and whose word all Israel will recognize as true." Soon afterward a son was born to Abba, whom he named Samuel (Midr. Shemu'el, x. [ed. Buber, p. 39a]).

His Birth.

Even as a boy Samuel displayed rare ability (Yer. Ket. v. 30a; Yer. Peah viii. 21b). His first teacher was an otherwise unknown, insignificant man, and Samuel, who knew more about a certain legal question than did his teacher, would not submit to ill treatment by him (Ḥul. 107b). Then Samuel's father, who was himself a prominent teacher of the Law, recognized as such even by Rab (Abba Arika; Ket. 51b), undertook to instruct the boy. As he seems to have been unequal to this task he sent him to Nisibis to attend the school of the rabbi who had predicted the boy's birth, that he might there acquire a knowledge of the Law ("Tanya," Hilkot "Abel," ed. Horowitz, p. 137, quoted from Yer.; comp. also Mordecai on M. Ḳ. 889). Samuel seems to have remained only a short time at Nisibis. On his return to Nehardea he studied under Levi b. Sisi, who was in Babylon before the death of Judah ha-Nasi I. (see A. Krochmal in "He-Ḥaluẓ," i. 69), and who exerted a great influence on Samuel's development. Samuel made such rapid progress and became so proficient in his studies that he soon associated as an equal with his teacher (Hoffmann, "Mar Samuel," p. 70).

Apart from the Bible and the traditional Law, which were usually the only subjects of study of the Jewish youth of that time, Samuel was instructed, probably in his early youth, in other sciences. It is likely that he accompanied his father on the latter's journey to Palestine (Yer. B. M. iv. 9c; Yer. Pes. v. 32a); for after his teacher Levi b. Sisi had gone to Palestine there was no one in Babylon with whom he could have studied. According to an account in the Talmud (B. M. 85b), which Rapoport declares to be a later addition ("'Erek Millin," pp. 10, 222), but which may have some basis in fact, Samuel is said to have cured R. Judah ha-Nasi I. of an affection of the eyes. Although Samuel was at that time too young to study directly under R. Judah, he studied under the pupils of the patriarch, especially with Ḥama b. Ḥanina (comp. Hoffmann, *l.c.* pp. 71-73; Fessler, "Mar Samuel, der Bedeutendste Amora," p. 14, note 1).

His Training.

After having acquired a great store of knowledge in Palestine, his studies there including the Mishnah edited by R. Judah ha-Nasi as well as the other collections of traditional lore, Samuel left the Holy Land, probably with his father, and returned to his native city. His reputation as a teacher of the Law having preceded him, many pupils gathered about him. As he was especially well versed in civil law, the exilarch Mar 'Uḳba, who was his pupil, appointed him judge of the court at Nehardea, where he was associated with his friend the learned and clever Karna. This court was regarded at that time as the foremost institution of its kind. In Palestine, as well as in Babylon, Samuel and Ḳarna were called the "judges of the Diaspora" (dayyane Golah; Sanh. 17b). Upon the death of R. Shila, the director of the Academy ("resh sidra") of Nehardea, Mar Samuel was appointed to the office, after it had been refused by Rab, who would not accept any post of honor at Nehardea, Samuel's home (Letter of Sherira Gaon, in Neubauer, "M. J. C." p. 28). The Academy of Nehardea entered upon a brilliant phase of its existence under Samuel's directorate, and, with the academy founded by Rab at Sura, enjoyed a high general reputation.

The Judges of the Exile.

Rab at Sura and Mar Samuel at Nehardea established the intellectual independence of Babylon. Young men taking up the study of the Law there were no longer obliged to go to Palestine, since they had the foremost teachers at home. Babylon now came to be regarded, in a sense, as a second Holy Land. Samuel taught, "As it is forbidden to migrate from Palestine to Babylon, so is it forbidden to migrate from Babylon to other countries" (Ket. 111a). After Rab's death no new director was elected, and Rab's greatest pupil, R. Huna, who became president of the court of Sura, subordinated himself to Mar Samuel in every respect, asking his decision in every difficult religio-legal question (Giṭ. 66b, 89b; comp. Sanh. 17b; Tos. *ib.*, *s.v.* אלא, the phrase "be Rab" referring to R. Huna).

The Academy of Nehardea was now the only one in Babylon, and its director, Samuel, who survived Rab about ten years, was regarded as the highest authority by the Babylonian Jews. Even R. Johanan, the most prominent teacher in Palestine, and who at first looked upon Samuel merely as a colleague, became so convinced of his greatness, after Samuel had sent him a large number of responsa on important ritual laws, that he exclaimed, "I have a teacher in Babylon" (Ḥul. 95b).

Supreme at Nehardea.

As a man, Mar Samuel was distinguished for his modesty, gentleness, and unselfishness, being always ready to subordinate his own interests to those of the community. He said: "A man may never exclude himself from the community, but must seek his welfare in that of society" (Ber. 49b). He demanded seemly behavior from every one, saying that any improper conduct was punishable by law (Ḥag. 5a). One should help one's fellow man at the first signs of approaching difficulties, so as to prevent them, and not wait until he is in actual distress (*ib.*). In his solicitude for helpless orphans he imposed upon every court the task of acting as father to them (Yeb. 67b; Giṭ. 37a, 52b); and he declared that a loan taken from an orphan was not canceled in the Sabbatical year, even if no prosbul had been made out for it (Giṭ. 36b–37a). He stored his grain until prices had risen, in order to sell it to the poor at the low prices of the harvest-time (B. B. 90b). In order to save the people from being cheated he ordered the merchants never to take a profit of more than one-sixth of the cost price (B. M. 40b), and he was ready even to temporarily modify the Law in order to prevent them from selling at a high price goods necessary for the fulfilment of a religious duty (Pes. 30a; Sukkah 34b). In a certain case also he permitted the infraction of a religious prescription in order to keep people from harm (Shab. 42a).

His Halakah.

Mar Samuel was very modest in his associations with others, openly honoring any one from whom he had gained any knowledge (B. M. 33a). He never obstinately insisted on his own opinion, but yielded as soon as he was convinced of being in error ('Er. 90a, b; Ḥul. 76b; Ber. 36a). He was friendly to all men, and declared: "It is forbidden to deceive any man, be he Jew or pagan" (Ḥul. 94a). "Before the throne of the Creator there is no difference between Jews and pagans, since there are many noble and virtuous among the latter" (Yer. R. H. i. 57a). He taught that the dignity of manhood should be respected even in the slave: the slave is given to the master only as a servant, and the master has no right to treat him with condescension or to insult him (Niddah 17a, 47a). Once, when a female slave had been taken away from Samuel and he had unexpectedly recovered her by paying a ransom, he felt obliged to liberate her because he had given up hope of recovering her (Giṭ. 38a).

Mar Samuel seems to have possessed a thorough knowledge of the science of medicine as it was known in his day; this is evident from many of his medical maxims and dietetic rules scattered through the Talmud. He energetically opposed the view then current, even in intelligent circles, that most diseases were due to the evil eye, declaring that the source of all disease must be sought in the noxious influence exercised by the air and the climate upon the human organism (B. M. 107b). He traced many diseases to lack of cleanliness (Shab. 133b), and others to disturbances of the regular mode of living (B. B. 146a). He claimed to possess cures for most diseases (B. M. 113b), and was especially skilful in treating the eye (B. M. 85b); he discovered an eye-salve which was known as the "ḳillurin [κολλύριον] of Mar Samuel," although he himself said that bathing the eyes with cold water in the morning and bathing hands and feet with warm water in the evening were better than all the eye-salves in the world (Shab. 78a, 108b). Samuel discovered also a number of the diseases of animals (Ḥul. 42b). He sometimes drew the figure of a palm-branch as his signature (Yer. Giṭ. ix. 50d), although this was, perhaps, used by physicians generally at that time as a sign of their profession (Rapoport, "'Erek Millin," p. 17).

From the scattered references in the Talmud it is impossible to determine exactly Mar Samuel's proficiency in astronomy; but he knew how to solve many mathematical problems and how to explain many phenomena. He says himself: "Although I am as familiar with the courses of the stars as with the streets of Nehardea, I can not explain the nature or the movements of the comets" (Ber. 58b). Samuel devoted himself especially to that branch of applied astronomy that deals with calendric science, which he taught to his colleagues and pupils. His astronomical studies of the revolutions of the moon enabled him to predict the beginning of the month ("rosh ḥodesh") as it was determined in Palestine, and he claimed to be able to remove the necessity of celebrating double holy days in the Diaspora (R. H. 20b; comp. Rashi *ad loc.*). He also computed a calendar for sixty years, which he subsequently sent to R. Johanan, the head of the Palestinian teachers, as a proof of his knowledge (Ḥul. 95b). He was called "Yarḥina'ah ("yeraḥ" = "month") because of this familiarity with calendric science and this ability to determine independently the beginning of the month (B. M. 85b). According to Krochmal ("He-Ḥaluẓ," i. 76), "Shoḳed," another name given to Samuel, means "astronomer" (Yer. Ket. iv. 28b); but Hoffmann's view that "Shoḳed" (for which Babli has "Shaḳud"; Ket. 43b) means "the watchful, diligent one," is more likely correct. This name is said to have been given to Samuel because, despite his medical and astronomic studies, he devoted himself to the study of the Law.

His Haggadah.

Following the example of his teacher Levi b. Sisi, Mar Samuel collected the traditions handed down to him; his collection of baraitot, called "Tanna debe Shemu'el" in the Talmud (Shab. 54a; 'Er. 79b, 86a, 89b; Pes. 3a, 39a, b; Beẓah 29a; R. H. 29b; Yoma 70a; Meg. 30a; Zeb. 22a), was noted for its correctness and trustworthiness, although it was not held in such high esteem as were the collections of R. Ḥiyya and R. Hoshaiah (Letter of Sherira Gaon, *l.c.* p. 18). Samuel did much to elucidate the Mishnah, both by his textual explanations (Shab. 104b; Pes. 119b; Giṭ. 67b; B. M. 23b; 'Ab. Zarah 8b, 32a; R. H. 18a; Ḳid. 76b) and by his precise paraphrasing of ambiguous expressions and his references to other traditions. He is chiefly important, however, because of his promulgation of new theories and his independent decisions both in ritual and in civil law. However, in the field of ritual law he was not considered as great an authority as his colleague Rab, and practical questions were always decided according to Rab's views as against those of Samuel (Niddah 24b; Bek. 49b). In civil law his authority was the highest in Babylon, and his decisions became law even when contrary to Rab's (*ib.*).

Mar Samuel amplified and expanded earlier legal theories and originated many new legal maxims. He formulated the important principle that the law of the country in which the Jews are living is binding upon them (B. Ḳ. 113b). This principle, which was recognized as valid from a halakic point of view, made it a religious duty for the Jews to obey the laws of the country. Thus, although the Jews had their own civil courts, Mar Samuel thought that the Persian law should be taken into account and that various Jewish regulations should be modified according to it (B. M. 108a; B. B. 55a). On account of his loyalty to the government and his friendship with the Persian king, Shabur I., Samuel was called **Shabur Malka** (B. B. 115b). Fürst ("Orient, Lit." 1847, No. 3, p. 39) and Rapoport (*ib.* p. 196) refer, each differently, the name of **Aryok,** given to Samuel (comp. Shab. 53a; Ḳid. 39a; Men. 38b; Ḥul. 76b), to his close relations with the Neo-Persians and their king. Older commentators explain this name without reference to such relations (Tos. Shab. 53a; Rashi *ad loc.*; comp. Fessler, *l.c.* p. 9, note 1).

Relations with the Persian Court.

It was due to Mar Samuel's influence with the Persian king that the Jews were granted many privileges. On one occasion Samuel even made his love for his own people subsidiary to his loyalty to the Persian king and to his strict view of the duties of a citizen; for when the news came that the Persians, on capturing Mazaca (Cæsarea), in Cappadocia, had killed 12,000 Jews who had obstinately opposed them, Samuel refrained from displaying any sorrow (M. Ḳ. 26a). But he had a great love for his people, and he loyally cherished the memory of the former kingdom of Judah. Once, when one of his contemporaries adorned himself with a crown of olive, Samuel sent him the following message: "The head of a Jew that now wears a crown while Jerusalem lies desolate, deserves to be separated from its trunk" (Yer. Soṭah ix. 24b, c). Samuel expected the restoration of the Jewish state in Palestine to come about in a natural way, through permission given to the Jews by the various governments to return to Palestine and establish an independent state there (Ber. 34b).

Mar Samuel was unfortunate in his family life. He had no sons, and his two daughters were captured by soldiers during the war with the Romans. They were taken to Sepphoris, in Palestine, where they were ransomed by coreligionists, but both died at an early age after having been married successively to a relative (Ket. 23a; Yer. Ket. ii. 26c). The esteem in which Mar Samuel was held appears from the fact that no one thought of attributing his misfortune to any sin committed by him; it was explained rather as being in consequence of some offense committed in Babylon by R. Ḥananya, the nephew of R. Joshua (Yer. Ket. ii. 8; comp. Ket. 23a). After his death Samuel was glorified in legend.

SAMUEL AND YATES: Names of two families which led the congregation of Liverpool, England, in the early part of the nineteenth century. They trace their descent on the one side to one Ralph Samuel, who was born probably at Strelitz, possibly at Kissingen, Nov. 22, 1738, and on the other to Samuel Yates, also of Strelitz, who married Martha Abrahams; the latter's mother was one Martha Haynes (daughter of a Dorsetshire farmer), who eloped and became a Jewess. A brother of Samuel Yates married a sister of Polly Levy, and the latter married Ralph Samuel; the sisters Levy were connected with the chief Ashkenazic family of London that founded the Great Synagogue. Three daughters of Samuel Yates married three sons of Ralph Samuel, and thus constituted a combined family, some of the later members of which adopted the name of Yates. For chart of the Samuel and Yates pedigree see pages 32 and 33.

Two members of the family are in the British Parliament: **Herbert Samuel,** born 1870; educated at Baliol College, Oxford. He was secretary of the Home Counties Liberal Federation from 1895 to 1902. In Parliament he sat for the Cleveland Division of the North Riding of Yorkshire, Nov., 1902. He wrote "Liberalism: Its Principles and Proposals" (London, 1902). **Stuart M. Samuel,** born Oct. 24, 1856; educated at Liverpool Institute and University College School. He is president of the Home for Jewish Incurables, and vice-president of the Jewish Workingmen's Club. He represented Tower Hamlets (Whitechapel Division) in 1900.

J.

SAMUEL ẒARFATI: Court physician to the popes Alexander VI. and Julius II.; died about 1519. The name "Ẓarfati" indicates that Samuel was a native of France, and as he was probably from southern France he is called by Burchard "the Spanish rabbi, physician of the pope" ("Notices et Extraits des Manuscrits," i. 124). At the coronation of Pope Julius II., Samuel presented the petition of the Jews for the continuance of their privileges, making a solemn speech. By a bull of May 14, 1504, Samuel himself was confirmed in the rights previously bestowed upon him by Alexander VI. He was thus appointed court physician of Julius II., granted the privilege of attending Christian patients, freed from the obligation of wearing the Jews' badge, and taken with his entire family under the immediate protection of the pope. On account of his property in France he also obtained letters of protection and safe-conduct from Louis XII. Samuel was an unusually skilful physician, and the pope relied more upon him than upon his Christian physicians. On Aug. 17, 1511, the pope fell seriously ill, and his physicians, with the exception of Samuel, pronounced him dead. Samuel's opinion proved correct, and the pope lived two years longer. There exist certain calendar-tables in Hebrew the author of which is a Samuel Ẓarfati (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2255, 2), but they may belong to the printer Samuel Ẓarfati of Rome, who lived about the middle of the sixteenth century.

SAMUELSON, SIR BERNHARD: English merchant and politician; born at Liverpool Nov. 22, 1820; died May 10, 1905. After serving an apprenticeship in a general merchant's office in Liverpool (1835–41), he was placed in charge of the Continental transactions of Sharp, Stewart & Co., engineers of Manchester (1842–45). He established railway works in Tours, France (1846–48), purchased the Agricultural Implement Works of Banbury (1849), and erected blast-furnaces at Middlesborough (1854), to which he later added collieries and ironstone mines (1872–80). He was a member of Parliament for Banbury in 1859, and from 1865 to 1885, and for North Oxfordshire from 1885 to 1895, and was appointed on the Royal Commission of Technique and Education in 1881, of which he became chairman. He early severed his connection with Judaism.

Bibliography: *Who's Who*, 1905.
J.

SAMUELY, NATHAN: Austrian ghetto poet; born in Stry, Galicia, 1846. At the age of seventeen he published a story in Hebrew entitled "Shewa Shaboses," which he followed by a second, "Sefat Ne'emanim," and two volumes of Hebrew poems, "Kenaf Renanim," the subjects being taken from old Jewish history. A succession of his German productions which appeared later was due to the encouragement of the German poet Moritz Rapoport. In 1886 appeared at Leipsic the first volume of Samuely's "Culturbilder"; the second was published five years afterward. This work consists of stories of Jewish life in Galicia, and has been translated into many modern languages. "Zwischen Licht und Finsterniss," a longer story, was published at Vienna in 1889. The following short stories were published in Berlin: "Aus Dunklen Tagen," "Zwischen Hammer und Ambos," "Eine Traurige Erinnerung" (1896), "Macht für Macht," "Die Rekrutirung." In 1902 appeared "Alt Lemberg," a historical sketch. A story in three volumes, "Nur ein Bischen Wasser," is the most recent of his works.

In the meantime a few Hebrew books by Samuely were published, among them "Min ha-Ḥayyim," in five small volumes (Warsaw), and "Parẓufim" (*ib.*).
S.

SAMUN, JOSEPH ḤAYYIM IBN: Italian Talmudist; lived at Leghorn in the eighteenth and nineteenth centuries. He was the author of "'Edut bi-Yehosef" (Leghorn, 1800), in two volumes, the first containing novellæ on the Talmudical treatise Baba Meẓi'a, and the second a collection of responsa. To the work is appended "Leḳaḥ Ṭob," containing novellæ and responsa by the author's son Shem-Ṭob, rabbi of Leghorn (comp. Steinschneider, "Cat. Bodl." col. 2533; Mortara, "Indice," p. 58).

Isabel Samuel (b. Sept. 21, 1843) = Asser Keyser (b. Feb. 28, 1844)

NOTE.—Marriages marked respectively with * and † are identical.

J.

May 31, 1874, although preliminary meetings had been held two years earlier, and the first service was held at the home of Abraham Morris, North Flores street. Ground was purchased in Travis Park and a synagogue erected. In 1903 a more commodious building was erected on the old site. The following rabbis have served the congregation: B. E. Jacobs, I. Lewinthal, M. P. Jacobson, H. Elkin, and Samuel Marks (the present, 1905, incumbent).

The Hebrew Benevolent Association was organized in 1856, and reorganized in 1866; in 1885 the name of the society was changed to Montefiore Benevolent Association. There is also a Ladies' Hebrew Benevolent Association in active operation. An Orthodox congregation was founded June 1, 1890, with a membership of 43. After it had met for eight years in private houses the present synagogue on Dwyer avenue was erected. Edar Lodge, No. 211, I. O. B. B., was organized June 24, 1874.

San Antonio has been the center of a number of Texo-Mexican conflicts. Moses Albert Levi, as surgeon-general in Sam Houston's army, was present at the storming of the Alamo by the Texans in Dec., 1835. Colonel Johnson's report of the capture of San Antonio, Dec. 5, 1835, says: "Doctors Levi and Pollard deserve my warmest praise for their unremitting attention and assiduity" (H. Cohen, "Settlement of the Jews in Texas," in "Publ. Am. Jew. Hist. Soc." 1894, p. 151; Baker, "Scrap-Book of Texas"). Upon the monument erected in Austin to the memory of the heroes of the Alamo, who perished March 6, 1836, is the name of A. Wolf (W. Corner, "San Antonio," p. 124). Simon Wolf, in "The Jew as Patriot, Soldier, and Citizen" (pp. 384–388), gives the names of Jews who were among the recruits from San Antonio in the Confederate army.

Members of the San Antonio community have been prominent in civil life: Alexander Nordhaus was for seven years justice of the peace; H. Silva Heimann, L. Zork, A. Lewy, and Alexander Michael have been aldermen; John Rosenheimer, county judge; S. C. Eldridge, attorney and counselor at law, member and secretary of the Democratic Executive Committee. Constance Pessels (Ph.D., Johns Hopkins University) holds the chair of English in San Antonio high school. Dr. Burg (M.D., Vienna) is prominent in communal affairs; Nat. M. Washer is president of the Beth-El congregation, and upon President Roosevelt's visit to San Antonio, April 7, 1905, was chosen by the citizens to make a presentation address; and the Oppenheimer brothers and the Halff brothers are prominent as bankers and merchants.

San Antonio has a population of 53,321, of whom 1,300 are Jews.

Bibliography: H. Cohen, *Settlement of the Jews in Texas*, in *Publ. Am. Jew. Hist. Soc.* 1894, pp. 139-156; *American Jewish Year Book*, 5661 (1900-1), pp. 617-618.

A. H. C.

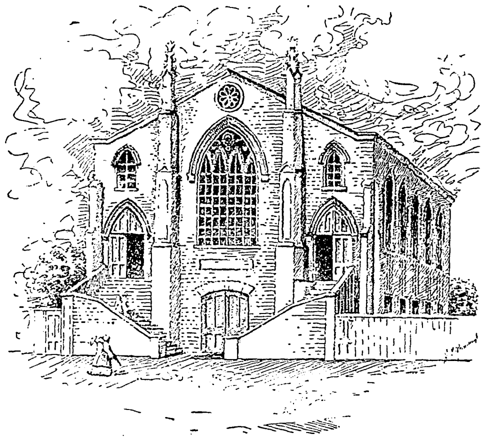
SAN DANIELE DEL FRIULI: Italian town, near Udine. About 1600 two brothers named Luzzatto established themselves here, a descendant of one of whom was Hezekiah, the father of Samuel David Luzzatto. The enactment of 1777 renewed the right of the Jews to live in Venice, though with many obnoxious restrictions. According to a Hebrew document of the time, they were forbidden to live in the villages of the state, because of the quarrels between the native and the foreign Jews at Venice. The community of San Daniele, like many others, was subsequently dissolved, and Hezekiah Luzzatto, who was then sixteen years of age, went with his family to Triest.

S. G. J.

SAN FRANCISCO: Principal city of California; chief commercial city of the Pacific coast. The name of San Francisco was given to the village of Yerba Buena by Washington Bartlett, who, through his mother, a Jewess born at Charleston, S. C., was connected with the leading Portuguese Jewish families of the South ("California Star," Jan. 30, 1847; Hittel, "Hist. of California," ii. 596 *et seq.*). As early as 1836 American settlers appeared on the peninsula. Whether any Jews were among them is not known, though it is probable (see Leidesdorff, William). The descendants of Raphael and Benjamin Fisher state that these brothers were merchants in San Francisco in 1847, and that subsequently they returned to their native city of Kempen, Prussia. The year 1849 saw a considerable number of Jews collected in San Francisco, some of whom entered the Golden Gate on the first Pacific mail-steamer, in February, 1849. The roll of the Society of California Pioneers, however, which contains only names of "forty-niners," mentions but few Jews besides Louis Gloss. The Jews arrived overland from "the States," and by sea from Europe and Australia, and scattered over the entire gold-mining region (see California).

Early Settlers.

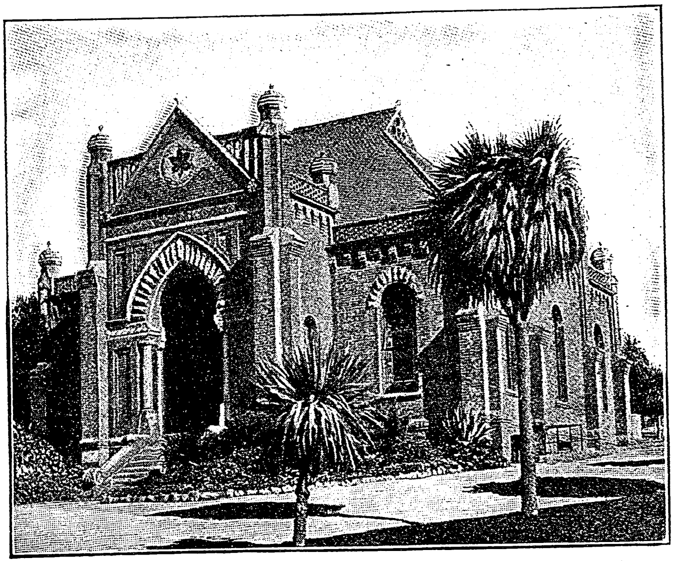
The beginnings of the communal life of the Jews of San Francisco date from the autumn of 1849, though many of the details are obscured in tradition. Among the "forty-niners" were quite a number whose names subsequently became prominent in the judicial, political, and commercial history of the state. Seligmans, Lazards, Wormsers, and Glaziers, now international bankers and financiers, were among them. To these may be added the names of Chief Justice Solomon Heydenfeldt and Judge



The Broadway Synagogue, San Francisco.
(From an old drawing.)

Henry A. Lyons. In the autumn of 1849, toward the approach of the holy season, there were considerably more than one hundred Jews in the new city. About fifty assembled on the Day of Atonement in that year in a room above a store in which gold-dust was weighed ("Occident," vii. 480). The tradition of the Sherith Israel congregation, collected from the statements of its founders, also go back to an Atonement service in 1849, held in a tent, presided over by Hyam Joseph, and led by Joel Noah, a brother of Major Mordecai M. Noah. The organization of the two principal congregations took place about the same time—the summer of 1850—along geographical lines, one representing the German-Bavarian and American elements, the other representing the Polish and English elements, of which latter Israel Solomons was the chief representative. The corner-stone of the new California street synagogue of the Sherith Israel congregation bears the legend, "Organized August, 1850." That the German congregation, subsequently known by the name of Emanu-El, was already enjoying a corporate existence in July or, at the latest, August, 1850, is proved by the contract, dated Sept. 1, 1850, entered into by Emanuel M. Berg, president, "for Congregation Emanu-El," and Loring Bartlett, Jr., in the presence of C. Gilchrist, for the renting of "a certain room" on Bush street, below Montgomery street. The Emanu-El and Sherith Israel congregations probably originated in the two "minyanim" or prayer-services held on Atonement Day, 1849. Only three Jewesses are known to have attended these services.

The Two Congregations.



Mortuary Chapel of the Home of Peace and Hills of Eternity Cemeteries, San Francisco.
(From a photograph.)

Certain Jews early attained distinction in San Francisco. Abraham C. Labatt was an alderman as early as 1851. Joseph Shannon, an English Jew, was county treasurer of San Francisco in the same year. In 1852 the city sent Elkan Heydenfeldt and Isaac Cardoza to the state legislature. During the first decade of the California commonwealth the commercial importance of the Jewish community became sufficient to change the date of "collection day" whenever it fell on the Day of Atonement. Early in 1850 Emanuel Hart presented the community with a lot for a cemetery. When many of the adventurous gold-diggers returned unsuccessful from the fields and other Jews arrived from the East and South without means, August Helbing and Israel Solomons organized the Eureka Benevolent Association and the First Hebrew Benevolent Association, both dating from Sept., 1850. It was not until 1854 that the two congregations were prepared to consecrate their houses of worship, both having been made ready for the autumn holy days of that year. Dr. Julius Eckmann, first rabbi of the Congregation Emanu-El, officiated at the consecration of both the Broadway (Emanu-El) and the Stockton street (Sherith Israel) synagogue.

The organization of the Hebrew Young Men's Literary and Benevolent Association took place in Oct., 1855, under the inspiration of Dr. Eckmann, who in 1854 had organized the first Sabbath-school (Emanu-El). Dr. Eckmann founded also in 1855 the first Jewish journal to appear on the Pacific coast, the "Gleaner." This was followed by the "Voice of Israel" (H. M. Bien, L. L. Dennery), and subsequently by the "Jewish Messenger of the Pacific" (H. M. Bien).

The Independent Order B'nai B'rith was introduced into the city of San Francisco by Lewis Abraham, afterward of Washington, D. C. (1855). The first lodge was named Ophir, No. 21, and was then composed of the leading Hebrews of San Francisco. Grand Lodge No. 5 was organized by Baruch Rothschild in 1863, Jacob Greenebaum of Sacramento being its first president ("Menorah," iii. 407-408). In 1857 the Ḥebra Biḳḳur Ḥolim u-Ḳaddisha was organized "to assist needy and sick brethren with doctor, medicine, attendance, and all necessaries in cases of disease." This society is still in existence. Jews were among the members of the Vigilance Committee and the fire companies (Hittel, *l.c.*).

Introduction of Reform Ritual.

In 1860 the Reform movement reached San Francisco. During the first decade of the existence of the Congregation Emanu-El it had adhered to the minhag in vogue among German congregations, in contradistinction to the Sherith Israel congregation, which worshiped according to the Anglo-Polish minhag. The Emanu-El congregation, however, always remaining in touch with Eastern thought, availed itself of the advent of Dr.

Elkan Cohn (June, 1860; d. March 11, 1889) to institute reforms. At first these were slight and unimportant; they were attended, nevertheless, by considerable friction, which resulted in 1864 in the secession of a large element of the membership and the organization of the Ohabai Shalome congregation, which afterward invited Albert Siegfried Bettelheim to become its rabbi. Despite this defection the Emanu-El congregation continued to flourish, and on March 23, 1866, dedicated a new synagogue on Sutter street. The Sherith Israel congregation, likewise finding its accommodations too limited, erected the Taylor street synagogue, and in 1904 laid the corner-stone of a new building on California street. For many years H. A. Henry and Henry Vidaver filled the rabbinical office in this congregation, the present (1905) rabbi of which is Jacob Nieto.

Interior of the Sutter Street Synagogue, San Francisco.
(From a photograph.)

In 1874 the Pacific Hebrew Orphan Asylum and Home Society was organized, under the presidency of Dr. Elkan Cohn; it supports over 200 orphans and 40 aged. Samuel Wolf Levy has been its president since 1874.

Present Condition.

The Jewish congregations in San Francisco number ten: Emanu-El, Sherith Israel, Beth Israel, and Ohabai Shalome (Reform, or moderate Reform); Sha'are Hesed and Keneseth Israel (Orthodox); and four smaller congregations organized on geographical lines. The benevolent societies are numerous. Besides the Eureka Benevolent and First Hebrew Benevolent societies, the Jewish women of San Francisco have organized two other important societies—the Emanu-El Sisterhood and the Council of Jewish Women. Altogether, there are 69 local Jewish institutions in San Francisco, including the Mount Zion Hospital (organized 1888) and 11 lodges of the I. O. B. B.

There are many Jews among the leading bankers, merchants, and manufacturers of San Francisco. The Nevada National, Anglo-Californian, and London, Paris, and American banks are under Jewish control. Jews furnish a considerable percentage of the student bodies of the two universities, and as a result they are becoming prominent in the legal, journalistic, engineering, and other professions. The growth of the Jewish population has been uniform with the general development of the city. From barely 100 in 1849 it reached 17,500 in 1895; in 1905 it exceeded 20,000. The total population is 440,000.

A. J. V.

SAN JOSÉ. See South and Central America.

SAN MARINO: Ancient republic of central Italy; situated not far from the Adriatic Sea and founded in the fourth century by the Dalmatian Marinus. The first mention of Jews here dates from the second half of the fourteenth century, when the statutes concerning debtors and usurers point with unmistakable clearness to the business transactions of Jews, and when one Emanuele of Rimini lent money in San Marino (1369). In 1442 Count Guidantonio of Montefeltro recommends "to the care of the captains regent the Jews who transact business in San Marino." Mention is made of a Jewish thief (1455), of an alleged or suspected traitor, and of a dispenser of counterfeit coin (1459); also of a banker, Musetto, who furnished the regency with ready cash to meet the expenses entailed by the visit of princely guests to the republic (1462). Several other Jewish names are recorded in official documents of the fifteenth century; and from the beginning of the sixteenth century documents regarding Jews are so numerous as to fully justify the inference that a Jewish community existed in San Marino. Measures and resolutions regarding the Jews and their trades were repeatedly passed by the government in the sixteenth and seventeenth centuries. The Jews were ordered to wear special badges and to submit to certain restrictions; but official protection and consideration were granted to them.

Two letters from the aldermen of San Leo (1537) and San Arcangelo (1546), announcing the conversion to Catholicism of two poor Jews, are found in the archives.

In the seventeenth century Jews often requested the government to assist them in disposing of the pledges deposited at their "banchi," a term of two months being generally assigned for redemption. In later centuries the importance and number of the Jews in San Marino steadily diminished, doubtless in consequence of the institution of public pawnbroking establishments and the general modification of public economics.

SAN MILLÁN DE LA COGOLLA: Locality in Spain, not far from Najera, with a famous convent of great antiquity. Jews were living here as early as at Najera, and they suffered greatly in the civil war between D. Pedro and D. Henry de Trastamara. On Oct. 15, 1369, at the request of the directors of the small aljama of San Millán, whose cause was advocated by "certain Jews who were received at court," Henry II. of Castile ordered that "the Christian men and women and the Moorish men and women" should immediately discharge all their debts to the Jews, "that the last-named might be able to pay their taxes the more promptly." On Sept. 10, 1371, however, the king released the abbot and all the monks of San Millán from whatever debts they had contracted with the Jews since the battle of Najera.

SANBALLAT: One of the chief opponents of Nehemiah when he was building the walls of Jerusalem and carrying out his reforms among the Jews. "Sanballat," according to Sayce (in Hastings, "Dict. Bible," *s.v.*), is connected with the Assyrian "Sinballidh," and means "Sin has vivified." He was called also "the Horonite," and was associated with Tobiah the Ammonite and Geshem the Arabian (Neh. ii. 19, iv. 7). But his home was evidently at Samaria, from whatever "Horon" he may have come.

The first arrival at Jerusalem of Nehemiah and his escort aroused the sleeping enmity of these opponents of the Jews. They were grieved (*ib.* ii. 10) that the welfare of the Jews should be fostered. When Nehemiah actually disclosed his intention of building the walls of Jerusalem they laughed him to scorn (*ib.* ii. 19), and said, "Will ye rebel against the king?" Nehemiah resented their insinuation, and gave them to understand that they had no right in Jerusalem, nor any interest in its affairs. As soon as Sanballat and his associates heard that Nehemiah and the Jews were actually building the walls, they were angry (*ib.* iv. 1–3); and Sanballat addressed the army of Samaria with a contemptuous reference to "these feeble Jews." Tobiah appeased him by saying that a jackal climbing on the wall they were building would break it down. Nehemiah and his builders, the Jews, vigorously hurried the work, while Sanballat and his associates organized their forces to fight against Jerusalem (*ib.* iv. 8). Nehemiah prepared to meet the opposition and continued the work on the walls. Five different times Sanballat and his confederates challenged Nehemiah and the Jews to meet them in battle in the plain of Ono (*ib.* vi. 1–7). Nehemiah was equal to the emergency and attended strictly to his work. Then Sanballat, with Jews in Jerusalem who were his confederates, attempted to entrap Nehemiah in the Temple (*ib.* vi. 10–13); but the scheme failed. These treacherous Jews, however, kept Sanballat and Tobiah informed as to the progress of the work in Jerusalem. Nehemiah's far-sighted policy and his shrewdness kept him out of the hands of these neighbor-foes. In his reforms, so effectively carried out, he discovered that one of the grandsons of the high priest Eliashib had married a daughter of this Sanballat, and was thus son-in-law of the chief enemy of the Jews (*ib.* xiii. 28). The high priest was driven out of Jerusalem on the ground that he had defiled the priesthood.

Josephus ("Ant." xi. 7, § 2) gives a different story, placing Sanballat later on in Persian history, during the reign of Darius Codomannus. His story is probably a traditional account of the origin of the Temple on Mt. Gerizim.

J. I. M. P.

SANCHEZ (SANCHES), ANTONIO RIBEIRO: Russian court physician; born 1699; died in Paris 1783; member of a Marano family of Penamacor, district of Castello Branca, Portugal. Sanchez, with many coreligionists, escaped from the persecutions in Portugal and went to Holland, where he studied medicine at the University of Leyden. There he enjoyed the friendship of his professor, the eminent physician Herman Boerhaave, who formed a very high opinion of Sanchez's ability. When Empress Anna Ivanovna of Russia requested Boerhaave (1731) to send her a learned physician who would be competent to act as her medical adviser, he recommended Sanchez, who entered her service the same year. The empress was so pleased with Sanchez that she appointed him chief physician of the Cadets; and soon after he was elected member of the Imperial Academy of Science. In 1740, after the death of Anna Ivanovna, Sanchez was appointed, by the regent Anna Leopoldovna, physician to the young prince Ivan Antonovich. She had such confidence in him that even from Riga she sent to him for examination the prescriptions of the attending physicians.

At this time Sanchez had a large practise and many influential friends in St. Petersburg. He devoted his leisure hours to study, and accumulated a valuable collection of medical works. When the regency of Anna Leopoldovna ended, in 1741, and many statesmen and courtiers were replaced, Sanchez was retained as physician to the empress Elizabeth Petrovna. He enjoyed her favor, and maintained his reputation as one of the most skilful physicians in Europe. In 1744 Sanchez attended the princess Sophia Augusta, afterward Empress Catherine II., and, according to the statement in her "Memoirs," saved her from a dangerous illness. He was then elevated to the rank of councilor of state.

Three years later Sanchez was suddenly ordered to resign and to leave St. Petersburg. Officially he received his congé on account of illness. In the acceptance of his resignation Elizabeth praises his great skill as a physician and the honesty with which he had discharged his duties. Sanchez's dismissal astonished the court circle, especially as he was known never to have interfered in politics. He hastened to sell his property, and then went to Paris. His library, purchased by the empress, greatly enriched the medical department of the imperial library. The mystery of his dismissal gave Sanchez no rest, and soon after his arrival in Paris he wrote to the president of the Imperial Academy of Science, Count K. G. Razumovski, asking for an explanation. The latter, in turn, wrote to the chancellor Bestyuzhev; and from both letters it appears that the only reason for Sanchez's discharge was the fact that the empress, who hated the Jews, had been told that he professed Judaism.

When Sanchez learned this he resigned himself to the situation, and again devoted himself to the study and practise of medicine. He became very popular in the poorer quarters of Paris; but work among the poor, whom he treated gratuitously, ruined both his health and his finances. Some of the Russian dignitaries, who corresponded with him, considered it their duty to aid him; and Catherine II. was induced to grant him a life pension of 1,000 rubles annually (1762).

Sanchez was the first medical writer to acquaint the physicians of Europe with the medical value of the Russian vapor-baths, through his work "De Cura Variolarum Vaporarii Ope apud Russos" (Russian transl. "O Parnykh Rossiskikh Banyakh," St. Petersburg, 1779). He was the author also of "Sur l'Origine de la Maladie Venerienne" (Lisbon, 1750).

SANCHO (SANDJE or **SHANGI):** Family name of frequent occurrence among Oriental Spanish Jews, and borne by several writers.

Abraham ben Ephraim Sancho: Turkish physician and Hebrew poet; lived at Constantinople in the fifteenth and sixteenth centuries. Sancho composed poems particularly in praise of certain authors; for instance, Solomon Alḳabiẓ's "Shoresh Yishai" (Constantinople, 1566) has at the end a poem by Sancho, and Ḳimḥi's "Miklol" and "Shorashim" also include poems by Sancho in praise of these works. Sancho himself is praised by Bezaleel Ashkenazi (Responsa, No. 14).

E. C. M. SEL.

Eliezer ben Sancho: Turkish rabbinical author; lived at Constantinople in the latter part of the seventeenth century. He was a disciple of Joseph Kassabi, and in collaboration with his brother Jacob wrote several works, which were nearly all destroyed by fire, only one, the "Dat wa-Din," a commentary on the Pentateuch, being preserved.

E. C. M. FR.

Ephraim ben Sancho: Spanish Talmudic scholar and polemist; flourished in Aragon in the twelfth century. Pedro the Great, King of Aragon, invited him to take part in a disputation with a certain Nicholas de Valencia (mentioned by J. R. de Castro in "Bibliotheca Española," i. 266, as one of the troubadours) on the question of the superiority of the Jewish over the Christian religion or vice versa. Ephraim answered very cleverly; and his answer was approved by the king. L. Dukes (in "Orient," xii. 29) identifies Ephraim with Don Santo the poet, referred to by J. R. de Castro (*l.c.* p. 178); but Kayserling and Steinschneider have proved that the identification is faulty.

Ephraim ben Sancho: Portuguese physician; flourished at the end of the fifteenth century. He was court physician to Affonso V., King of Portugal; but the courtiers, out of jealousy, prevailed on the king, through all sorts of calumnies, to dismiss him. He then went to Constantinople, where he was received with great honor by Sultan Maḥmud II., the Great. The latter appointed him his court physician and treated him as one of his household.

SANCTIFICATION OF THE NAME. See Kiddush ha-Shem.

The Six Sanctuaries.

SANCTUARY: A sacred place for divine service. There were six sanctuaries: (1) the Tabernacle in the wilderness, built by Moses in the second year of the Exodus; (2) the Tabernacle at Shiloh, built by Joshua after the conquest of Palestine (Josh. xviii. 1), and which stood 369 years, till the death of Eli the high priest; (3) the Tabernacle at Nob, the city of priests, which stood thirteen years, till the reign of Saul (Seder 'Olam R. xiii.); (4) the Tabernacle at Gibeon (II Chron. i. 3), which stood fifty years, till Solomon finished the building of the Temple (Seder 'Olam R. xi., xiv.; Zeb. 61b); (5) the First Temple, destroyed in 422 B.C.; (6) the Second Temple, built in 352 B.C. and destroyed in the year 68 of the common era.

The Tabernacle, like the Temple, was called the sanctuary because it contained the holy Ark with the tablets of the covenant (Deut. ix. 9, 15), and because only sanctified priests were permitted to enter the inner chambers. The offering of sacrifices was confined to the sanctuary and forbidden elsewhere, especially in the "bamot" = "high places" (I Kings iii. 3; II Chron. xxxiii. 17). The sanctuary could not, however, be used as an asylum for a murderer or other criminal, nor even for a political offender (Ex. xxi. 14; I Kings ii. 30, 31).

The object of the sanctuary was defined by the injunction, "And let them make me a sanctuary; that I may dwell among them" (Ex. xxv. 8). God declared, "And there I will meet with the children of Israel, and the tabernacle shall be sanctified by my glory" (*ib.* xxix. 43). The sacrifices were the medium of communion with God. A central place for the sanctuary served also to unify the political interests of the Israelites and to solidify the twelve tribes into one nation. The subsequent severance of the ten tribes from the political ties of Judah and Benjamin could be effected only by erecting duplicate sanctuaries at Beth-el and Dan (I Kings xii. 26, 27). See Pilgrimage.

The Temple at Jerusalem was known as "Bet 'Olamim" (Everlasting Temple), Solomon describing it as "an house to dwell in, a settled place for thee to abide in for ever" (*ib.* viii. 13). Solomon declared that the sanctuary was really for the convenience of the people in congregating for the worship of God, and was not a dwelling-place for God, whom "the heaven and the heaven of heavens can not contain" (*ib.* verse 27). "Do not I fill heaven and earth? saith the Lord" (Jer. xxiii. 24). The Midrash declares the sanctuary was like a cave which the ocean overflowed and filled with water without affecting its own volume; similarly the glory of the Shekinah, though it filled the Tabernacle, was not thereby diminished (Pesiḳ. v.). The cabalists explain the presence of the Shekinah in the sanctuary by the "mystery of concentration" (= "sod ha-ẓimẓum") or the secret of revelation of God at a certain designated point. "The sanctuary was the pledge of the Holy One to dwell with us and not to abhor or forsake us" (Zohar iii. 114a, referring to Lev. xxvi. 11).

Sanctuary and Shekinah.

The sanctuary below corresponds to the sanctuary above (Ta'an. 5a). The ladder which Jacob saw in a dream reached to the gate of heaven, where the celestial sanctuary was erected opposite the altar that Jacob set up in Beth-el (Gen. R. xlix. 5).

Symbolically the sanctuary represents the universe, and is called "'olam ḳaṭan" (= "little world"). This microcosm teaches that God is the Creator of all matter, and guides His creatures through all destinies (Moses Isserles, "Torat ha-'Olah," i., § 1; and Israel Jaffe, introduction to same, § 15, ed. Prague, 1833). After the destruction of the Temple the synagogue replaced it as the sanctuary for Prayer. See also Asylum; High Place; Shiloh; Tabernacle; Temple.

E. C. J. D. E.

SANDALFON: Name of an angel. It is a Greek formation and synonymous with συνάδελφος (= "cobrother"; see "Orient, Lit." xii. 618; Levy, "Neuhebr. Wörterb." iii. 553a; Krauss, in "Byzantinische Zeitschrift," ii. 533; *idem*, "Lehnwörter," ii. 431), and is not Persian, as Kohut supposes ("Jüdische Angelologie und Dämonologie," p. 43; "Aruch Completum," vi. 83b). Sandalfon is portrayed, not as the brother of God, but as the brother of Meṭaṭron, and these two angels, according to Naphtali Herz ("'Emeḳ ha-Melek," p. 104a) and Jellinek ("Auswahl Kabbalistischer Mystik," p. 5), are "the lads" of Gen. xlviii. 16.

Sandalfon is one of the oldest angel figures of the Merkabah mysticism. A baraita of the beginning of the second century says: "The 'ofan' mentioned in Ezek. i. 16 is called Sandalfon. He is an angel who stands on the earth, and his head reaches up to the 'ḥayyot' [animal-shaped angels]; he is taller than his fellows by the length of a journey of 500 years; he binds crowns for his Creator" (Ḥag. 13b; comp. Pesiḳ. R. 20 [ed. Friedmann, p. 97a]). The angel Hadarniel led Moses in heaven until he reached the fire of Sandalfon; here he remained standing because he feared the fire. Moses himself was afraid at the sight of it, so that God placed Himself before it for his protection. The crowns that Sandalfon binds on God's head are symbols of praise for the different angels" (Pesiḳ. R. *l.c.*).

In the oldest enumeration of the four and the seven archangels (see Raphael) Sandalfon is not included. Moreover, he is nowhere found in non-Jewish sources, a fact which designates him as a figure of the esoteric lore of the Merkabah. As such he became very popular in the post-Talmudic mysticism, in which the mysteries of heavenly halls and of divine throne-chariots that had remained hidden for centuries, came to light and received a written form. His nature remained unchanged. He is the fiercest fire; he keeps his place near God in the seventh hall; he brings the prayers of men before the Deity (Jellinek, "B. H." i. 59; ii. 26, 56; iii. 37; vi. 111; Zohar ii. 58a, 246a; iii. 252b; and elsewhere); and particular powers also are entrusted to him. He is placed over mankind ("Berit Menuḥah," p. 37a, in Bodenschatz, "Kirchliche Verfassung der Heutigen Juden," iii. 160), over the month Adar ("Sefer Raziel," 41b), and over the shofar-blasts on New-Year's Day (Benash, "Amtaḥat Binyamin," p. 30a). His name should be called on for protection in the forest (*ib.* 7a); and it occurs on an amulet against abortion (Grunwald, in "Mittheilungen der Gesellschaft für Jüdische Volkskunde," v. 58). In the piyyuṭim he is somewhat prominent as an angel of prayer, and is treated as such by Solomon ibn Gabirol (Zunz, "S. P." p. 478).

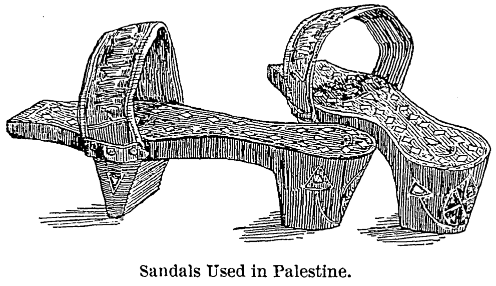
Moses Cordovero ("Hekaloth," ch. xiv.) identifies Sandalfon with the prophet Elijah (see also "Maḥzor Vitry," pp. 324 *et seq.*, and "Yalḳuṭ Ḥadash," ed. Presburg, pp. 66–69).

Bibliography: Besides the works cited in the article, Schwab, *Vocabulaire de l'Angélologie*, p. 201; Eisenmenger, *Entdecktes Judenthum*, ii. 380, 393, 394, 401 *et seq.*, 851.

W. B. L. B.

SANDALS (Hebrew, "na'al"). — **Biblical Data:** In the warm countries of the East shoes are not such an indispensable part of clothing as in the colder northern countries. Still, people do not go barefoot in mountainous Palestine, especially during the damp winter, as frequently as they do in Egypt. The same was probably the case in ancient times. Although on Assyrian monuments warriors are often represented barefoot, passages like Amos ii. 6 and viii. 6 indicate that in the period of which they treat even the poor man generally possessed shoes. This, however, does not exclude the assumption that the poor and common people usually went barefoot, wearing sandals on special occasions only, *e.g.*, in traveling (Ex. xii. 11; Josh. ix. 5). The custom of going barefoot while in mourning, followed even by the nobles, points to the justice of such an assumption (II Sam. xv. 30; Ezek. xxiv. 17, 23).

Sandals probably came into general use, however, in the course of time, as culture became more general. They were at all times the only foot-wear of the Hebrews, being simple soles fastened to the feet by means of straps. Many illustrations of Egyptian as well as of Assyrian sandals are extant. Sandals differed as regards material, being made of leather, woven-work, papyrus, or linen, as well as regards form, consisting of a simple sole which is bent in front or has a heel-piece. All these different kinds of sandals, as well as those worn by the Bedouins today, are adjusted by means of two straps crossing from the back over the instep. A third, narrower strap, fastened in front, passes between the great and second toe and is tied to the instep-straps. Men and women apparently wore the same kind of sandal. In ancient times no shoes were worn in a room (comp. Ex. xii. 11 as an exception), and in the Orient they are still removed before the wearer crosses a threshold. Similarly the sanctuary was always entered barefoot (Ex. iii. 5; Josh. v. 15). On the symbolic action of removing the shoes see Ḥaliẓah.



Sandals Used in Palestine.
(From the Merrill collection, Semitic Museum, Harvard University.)

J. I. Be.

——**In Rabbinical Literature:** Originally the term "sandal" in Talmudic literature designated a sole fastened to the foot either by means of straps or by a piece of leather, usually sewed to its upper part so that the sandal might be put on like a slipper. Sandals were made either with or without heels and generally of thick leather, but sometimes of wood, either uncovered, or covered with leather. When made of uncovered wood the sandal, like a heelless sandal, was unfit for Ḥaliẓah (Yer. Yeb. xii. 1-2; Shulḥan 'Aruk, Eben ha-'Ezer, 169, 21). Wooden sandals had the leathern pieces fastened to them with nails; and such sandals could be put on from either end. Owing to a disaster resulting from the use of nailed sandals on Sabbath, the Rabbis decreed that they should not be worn on that day (Shab. 60a).

There are mentioned in Kelim (xxvi. 1) a "sandal 'amaḳi" (which, according to Maimonides, means "a deep-bottomed sandal," but which, according to Bertinoro, means "a sandal made at a village called 'Amaḳi") and a "sandal of Laodicea." Both kinds were secured by means of draw-strings, like a purse, and therefore were liable to become unclean. The wearer could make them clean again by loosening the strings, without sending them to the sandal-maker. Lime-workers ('Eduy. ii. 8), according to Bertinoro, wore sandals of wood, since lime burned those made of leather. The putting on of a sandal for the first time is considered in Talmudic law as the completing act of its manufacture, and must therefore be avoided on the Sabbath (Yer. Shab. vi. 8a). Sandals were worn in the summer only, while in the winter shoes were used. Accordingly the bed of a Talmudic scholar is characterized as having nothing under it but sandals in the summer and shoes in the winter (B. B. 58a; comp. RaSHBaM *ad loc.*).

In regard to duties of the priesthood, sandals are considered as shoes in that the priests must not wear them when they mount the Dukan for the purpose of blessing the people. This prohibition is one of the nine "taḳḳanot" of Johanan b. Zakkai (Alfasi, "Halakot," Meg. 375b, and R. Nissim *ad loc.*). On Yom Kippur, when the wearing of shoes is prohibited, one may wear wooden sandals not covered with leather (Shulḥan 'Aruk, Oraḥ Ḥayyim, 614, 2). The judge and the teacher used to strike with the sandal: the former, the person who would not obey his judgment; and the latter, his pupils (Sanh. 7b; see, however, Rashi *ad loc.*). There was a common proverb: "Step on the thorns while thou hast thy sandals on thy feet" (Pesiḳ. xi. 99b; Gen. R. xliv.). The term "sandal" designates also a horseshoe (Shab. 59a), the pedestal of an idol (Yeb. 103b; comp. Rashi *ad loc.*), and the piece of wood placed under a short leg of a child's bed to cause the bed to stand firm (Oh. xii. 4). Owing to its shape, the sandal gave its name to the fish (Yer. Niddah iii.

50d) which in English is called "sole" (comp. also Shulḥan 'Aruk, Yoreh De'ah, 305, 22).

SANDEK (SYNDIKUS). See Godfather.

SANDERS, DANIEL: German lexicographer; born in Altstrelitz, Mecklenburg, April 12, 1819; died March 12, 1897. He received his early education in the Jewish school of his native city, under I. Lehfeldt (later a partner of his brother-in-law, Moritz Veit, the founder of the celebrated book-firm in Berlin) and Joseph Zedner (afterward librarian in the British Museum, London). He then attended the gymnasium in Neu-Strelitz, took private lessons in Greek and Latin, and afterward went to the universities of Berlin and Halle, studying classical and modern languages, mathematics, and natural history. In Berlin he made the acquaintance of Moritz Carrière and Heinrich Bernhard Oppenheim, two men of great intellectual capacity, with whom he entered into a close friendship. Having graduated as doctor in 1843, he was appointed principal in the same school in which he had been trained in his native city. He held this position for ten years, until the school, which was a private institution, was closed.

Of his numerous works relative to the lexicography and grammar of the German language the following deserve special mention: "Katechismus der Deutschen Orthographie" (Leipsic, 1856; 4th ed. 1878); "Handwörterbuch der Deutschen Sprache" (*ib.* 1859-65; 5th ed. 1893; this was his chief work, and was inspired by the German dictionary of the brothers Grimm, which he criticized sharply); "Fremdwörterbuch" (*ib.* 1871, 2 vols.; 2d ed. 1891); "Wörterbuch der Deutschen Synonymen" (Hamburg, 1871; 2d ed. 1882); "Deutsche Sprachbriefe" (Berlin, 1878; 11th ed. 1894); "Lehrbuch der Deutschen Sprache für Schulen in 3 Stufen" (8th ed., Berlin, 1888); "Geschichte der Deutschen Sprache und Litteratur" (3d ed., *ib.* 1886); "Abriss der Deutschen Silbenmessung und Verskunst" (*ib.* 1881; 2d ed. 1891); "Leitfaden zur Grundlage der Deutschen Grammatik" (2d ed., Weimar, 1894). Besides he published "Das Volksleben der Neugriechen" (Mannheim, 1844); "Das Hohelied Salomonis" (Leipsic, 1866; new edition, Hamburg, 1888); "Heitere Kinderwelt" (Neu-Strelitz, 1868); "Aus den Besten Lebensstunden: Gedichte" (Stuttgart, 1878); "Aus der Werkstatt eines Wörterbuchschreibers: Plaudereien" (Berlin, 1889); "366 Sprüche" (Leipsic, 1892); and a "Neugriechische Grammatik" (after Vincent and Dickson, *ib.* 1881; 2d ed. 1890), and together with A. R. Rangabé (n.d.) a "Geschichte der Neugriechischen Litteratur" (*ib.* 1884). In 1860 he translated into German the Song of Solomon, which was republished in 1880.

In 1876 Sanders was called to Berlin to assist the Ministry of Instruction in the work of eliminating all foreign terms and expressions from the German language.

SANGER, ADOLPH L.: American lawyer and politician; born at Baton Rouge, La., in 1842; died in New York city Jan. 3, 1894. A graduate of the City College and of the Columbia Law School, New York, in 1864, he had rapid success as a lawyer. In 1870 he was appointed a commissioner of the United States deposit funds, and in 1885 was elected president of the board of aldermen. He served as presidential elector of the state of New York in 1880 and 1884, and was a commissioner of education for three terms beginning with 1886, being made president of the board in 1893. He was the first to suggest Bryant Park, New York, as a site for a public library. A graceful speaker, he delivered addresses at the reception of the Bartholdi statue of "Liberty" and the statue of "The Pilgrim" at Central Park, and spoke also on similar public occasions.

Sanger was active in American Judaism, being one of the leaders of the B'nai B'rith, president of the Board of Delegates of American Israelites, and vice-president for some years of the Union of American Hebrew Congregations.

A. A. S. I.

SANHEDRIN (סנהדרין): Hebrew-Aramaic term originally designating only the assembly at Jerusalem that constituted the highest political magistracy of the country. It was derived from the Greek *συνέδριον*. Josephus uses *συνέδριον* for the first time in connection with the decree of the Roman governor of Syria, Gabinius (57 B.C.), who abolished the constitution and the then existing form of government of Palestine and divided the country into five provinces, at the head of each of which a sanhedrin was placed ("Ant." xiv. 5, § 4). Jerusalem was the seat of one of these. It is improbable, however, that the term "synhedrion" as a designation for the chief magistracy was used for the first time in connection with this decree of Gabinius; indeed, from the use made of it in the Greek translation of the Proverbs, Bacher concludes that it must have been current in the middle of the second century B.C.

The Great Sanhedrin.

In the Talmudic sources the "Great" Sanhedrin at Jerusalem is so called in contradistinction to other bodies designated by that name; and it was generally assumed that this Great Sanhedrin was identical with the Sanhedrin at Jerusalem which is mentioned in the non-Talmudic sources, in the Gospels, and in Josephus. The accounts in the two different sets of sources referring to the Sanhedrin, however, differ materially in their main characteristics. The Great Sanhedrin is designated in the Talmudic sources as "Sanhedrin Gedolah ha-yoshebet be-lishkat ha-gazit" = "the Great Sanhedrin which sits in the hall of hewn stone"

(Sifra, Wayiḳra, ed. Weiss, 19a). The mention of "sanhedrin" without the epithet "gedolah" (Yer. Sanh. i. 19c) seems to presuppose another body than the Great Sanhedrin that met in the hall of hewn stone. For neither Josephus nor the Gospels in speaking of the Sanhedrin report any of its decisions or discussions referring to the priests or to the Temple service, or touching in any way upon the religious law, but they refer to the Sanhedrin exclusively in matters connected with legal procedure, verdicts, and decrees of a political nature; whereas the Sanhedrin in the hall of hewn stone dealt, according to the Talmudic sources, with questions relating to the Temple, the priesthood, the sacrifices, and matters of a kindred nature. Adolf Büchler assumes indeed that there were in Jerusalem two magistracies which were entirely different in character and functions and which officiated side by side at the same time. That to which the Gospels and Josephus refer was the highest political authority, and at the same time the supreme court; this alone was empowered to deal with criminal cases and to impose the sentence of capital punishment. The other, sitting in the hall of hewn stone, was the highest court dealing with the religious law, being in charge also of the religious instruction of the people (Sanh. xi. 2–4).

The Gerusia.

I. The Political Sanhedrin: This body was undoubtedly much older than the term "sanhedrin." Accounts referring to the history of the pre-Maccabean time represent a magistracy at the head of the people, which body was designated Gerusia. In 203 Antiochus the Great wrote a letter to the Jews in which he expressed his satisfaction that they had given him a friendly reception at Jerusalem, and had even come to meet him with the senate (*γερουσία*; "Ant." xii. 3, § 3). Antiochus V. also greeted the gerusia in a letter to the Jewish people. This gerusia, which stood at the head of the people, was the body that was subsequently called "sanhedrin." The date and the manner of its origin can not now be determined. Josephus calls it either *συνέδριον* or *βουλή*, and its members *πρεσβύτεροι* (= "elders," *i.e.*, זקנים) or *βουλευταί* (= "councilors"), whose number was probably the same as that of the members of the Sanhedrin in the hall of hewn stone, namely, seventy or seventy-one. There are no references to indicate whence the Sanhedrin derived its authority or by whom it was elected, unless it be assumed that the convocation of that body by the high priest and at times by the Jewish king, as mentioned in the sources, refers to the manner of its election. This Sanhedrin, which was entirely aristocratic in character, probably assumed its own authority, since it was composed of members of the most influential families of the nobility and priesthood (comp. Sanh. iv. 2, where there is an allusion to the composition of this body). The Pharisees had no great influence in this assembly, although some of its members may have been friendly to them at various times. Though there are no definite references to gradations in rank among the several members, there seems to have been a committee of ten members, *οἱ δέκα πρῶτοι*, who ranked above their colleagues (comp. Schürer, "Gesch." 3d ed., ii. 201–202).

Place of Meeting.

The meetings took place in one of the chambers of the Temple in order that the discussions and decrees might thereby be invested with greater religious authority. According to a passage in the Mekilta (Mishpaṭim, 4 [ed. Weiss, p. 87a]), the Sanhedrin, which was empowered to pass the sentence of capital punishment, sat "in the vicinity of the altar," *i.e.*, in one of the chambers of the inner court of the Temple. It was called "the hall of the *βουλευταί*" because the latter sat there. Subsequently it was called "lishkat parhedrin" = "the hall of the *πρόεδροι*" (Yoma 8b). In this hall there was also a private room for the high priest (Yoma 10a; Tosef., Yoma, i. 2). The *βουλευταί* or the *πρόεδροι* assembled in this private room (comp. Matt. xxvi. 57; Mark xiv. 63) before they met in the hall.

The Sanhedrin did not, however, always retain this place of meeting; for, according to Josephus, the *βουλή* was in the vicinity of the xystus ("B. J." v. 4, § 2), hence beyond the Temple mount, or, according to Schürer (*l.c.* ii. 211), on it, though not within the inner court. In the last years of the Jewish state, therefore, to which the account in Josephus must be referred, the Sanhedrin left its original seat, being compelled to do so perhaps by the Pharisees, who, on gaining the upper hand, would not permit the secular Sanhedrin to sit in the sanctuary. Indeed, while the Sanhedrin still sat in the Temple, it was decreed that a mezuzah was to be placed in the hall of the *πρόεδροι*. This was not required in any of the other apartments of the Temple; and R. Judah b. Ila‘i, who was otherwise thoroughly informed as to the earlier institutions of the Temple, was unable to assign a reason for the decree (Yoma 10a). It may be explained only on the assumption that it was intended to secularize the sittings of this Sanhedrin. It may have been for the same reason that the body was subsequently excluded entirely from the Temple, inasmuch as the latter and its apartments were intended for the cult and matters connected with it, while the discussions and decrees of this Sanhedrin were political and secular in nature.

Functions and Position.

The extant references to the Sanhedrin are not sufficient to give an exact and detailed idea of its functions and of the position which it occupied. It is certain, however, that the extent of its power varied at different times, and that the sphere of its functions was restricted in various ways by the Roman government. One of these restrictions was Gabinius' above-mentioned division of the Jewish territory into five provinces, each with a sanhedrin of its own, whereby the authority and the functions of the Sanhedrin of Jerusalem were materially diminished. Its power was insignificant under Herod and Archelaus. After the death of these rulers its authority again increased, the internal government of the country being largely in its hands. It administered the criminal law, and had independent powers of police, and hence the right to make arrests through its own officers of justice. It was also empowered to judge cases that did not involve the death penalty, only capital cases requiring the confirmation of the procurator.

The high priest, who from the time of Simeon was also the head of the state, officiated as president of the Sanhedrin. He bore the title "nasi" (prince), because the reins of government were actually held by him. Subsequently, when they were transferred to other hands, the high priest retained the title of nasi as president of the Sanhedrin. The powers of the latter official were restricted under the procurators, without whose permission the body could not be convened ("Ant." xx. 9, § 1). This Sanhedrin, since it was a political authority, ceased to exist when the Jewish state perished with the destruction of Jerusalem (70 C.E.).

The Great Bet Din.

II. The Religious Sanhedrin: This body, which met in the hall of hewn stone and was called also "the Great Bet Din" or simply "the Bet Din in the hall of hewn stone" (Tosef., Hor. i. 3; Tosef., Soṭah, ix. 1; Yer. Sanh. i. 19c), was invested with the highest religious authority. According to Talmudic tradition it originated in the Mosaic period, the seventy elders who were associated with Moses in the government of Israel at his request (Num. xi. 4–31) forming together with him the first Sanhedrin (Sanh. i. 6). The institution is said to have existed without interruption from that time onward (comp. Yer. Sanh. i. 18b, where, in a comment on Jer. lii. 24 *et seq.* and II Kings xxv. 18 *et seq.*, it is said that Nebuzar-adan brought the Great Sanhedrin to Riblah before Nebuchadnezzar); but the fact that no passage whatever in the pre-exilic books of the Bible refers to this institution seems to indicate that it was not introduced before the time of the Second Temple. Originally it was probably not a regularly constituted authority, but merely a synod which convened on special occasions for the purpose of deliberating on important questions or of issuing regulations referring to religious life. The first assembly of this nature was that held under Ezra and Nehemiah (Neh. viii.-x.), which was called "the Great Synagogue" ("Keneset ha-Gedolah") in Jewish scholastic tradition. Subsequently, at a date which can not be definitely determined, this occasional assembly was replaced by a standing body. The latter, which was called "Sanhedrin" or "Bet Din," was regarded as the continuation of the synods which had previously been convened only occasionally.

Influence of the Pharisees.

Appointment and Promotion of Members.

It further appears from Ab. i. 2–4 that the Great Bet Din was regarded as a continuation of the Keneset ha-Gedolah; for the so-called "zugot" who were at the head of the Great Bet Din are named after the men of the Great Synagogue, which was regarded as the precursor of the Great Bet Din. This explains why the latter is sometimes called also "synagogue" (כנישתא; Meg. Ta'an., in Neubauer, "M. J. C." ii. 16). Originally the members of this bet din also were priests belonging to prominent families, probably under the presidency of the high priest. The Pharisees, however, held at various times more or less prominent positions in this body, according as they were the victors or the vanquished in their conflict with the Sadducees. When John Hyrcanus toward the end of his reign turned from the Pharisees ("Ant." xvi. 11, § 1), he seems to have effected their dismissal from the Sanhedrin or bet din and to have formed a Sadducean bet din (Sanh. 52b), or a Sadducean Sanhedrin, as it is called in another passage (Meg. Ta'an. *l.c.* p. 17). Under Alexander Jannæus, Simeon b. Sheṭaḥ succeeded in ousting the Sadducean members from the bet din and in reorganizing it so that it was composed only of Pharisees. But the latter lost their prestige in the subsequent quarrel with Alexander, gaining the upper hand again only under his successor, Salome Alexandra, from which time the Great Bet Din was composed exclusively of Pharisees. According to the Mishnah (Sanh. i. 5; Sheb. ii. 2), the bet din, at least during the last years of its existence at Jabneh, where it had been reorganized, consisted of seventy or seventy-one members, according as the president was included in or omitted from the list. Simeon b. 'Azzai (first half of the 2d cent.) says that seventy-two elders ("zeḳenim," *i.e.*, members of the Sanhedrin) were present when R. Eleazar b. Azariah was elected president together with Rabban Gamaliel II. (Zeb. i. 3; Yad. iii. 5, iv. 2); this was one more than the usual number, and included probably, besides the seventy other members, the two presidents, Gamaliel and Eleazar b. Azariah. According to R. Jose b. Ḥalafta, the members of the Great Bet Din were required to possess the following qualifications: scholarship, modesty, and popularity among their fellow men (Tosef., Ḥag. ii. 9; Sanh. 88b). According to an interpretation in Sifre, Num. 92 (ed. Friedmann, p. 25b), they had also to be strong and courageous. Only such were eligible, moreover, as had filled three offices of gradually increasing dignity, namely, those of local judge, and member successively of two magistracies at Jerusalem (Jose b. Ḥalafta, *l.c.*). R. Johanan, a Palestinian amora of the third century, enumerates the qualifications of the members of the Sanhedrin as follows: they must be tall, of imposing appearance, and of advanced age; and they must be learned and must understand foreign languages as well as some of the arts of the necromancer (Sanh. 19a).

The hall of hewn stone ("lishkat ha-gazit") in which the bet din sat was situated on the southern side of the inner court of the Temple (Mid. v. 4). It was used for ritual purposes also, the priests drawing lots there for the daily service of the sacrifices, and also reciting the "Shema'" there (Tamid ii., end, to iii., beginning; iv., end, to v., beginning). The larger part of the hall was on the site of the court of laymen. There were two entrances: one from the court of the priests, which was used by the latter; the other in the Water gate, used by the laity. The Great Bet Din sat daily, except on the Sabbath and on feast-days, between the morning and evening sacrifices (Tosef., Sanh. vii. 1). On the Sabbath and on feast-days, on which there were no meetings in the hall of hewn stone, the members of the bet din assembled in the schoolhouse on the Temple mount (*ib.*). According to the accounts given in the Talmudic sources, the Great Bet Din had the following functions, which it exercised in part as a body and in part through committees of its members: It had supervision over the Temple service, which was required to be conducted in conformity with the

Functions and Authority.

Law and according to Pharisaic interpretation. It decided which priests should perform the Temple service (Mid., end). It supervised especially important ritual acts, as the service on the Day of Atonement (Yoma i. 3). It had in charge the burning of the Red Heifer and the preparation of the water of purification (Tosef., Sanh. iii. 4). When the body of a murdered person was found, members of the Great Bet Din had to take the necessary measurements in order to determine which city, as being the nearest to the place of the murder, was to bring the sacrifice of atonement (Soṭah ix. 1; Tosef., Sanh. iii. 4; comp. Soṭah 44b-45a). It had also to decide as to the harvest tithes (Peah ii. 6). It sat in judgment on women suspected of adultery, and sentenced them to drink the bitter water (Soṭah i. 4; see ORDEAL). It arranged the calendar (R. H. ii. 5 *et seq.*), and provided correct copies of the Torah roll for the king, and probably for the Temple also (Tosef., Sanh. iv. 4; Yer. Sanh. ii. 20c). In general it decided all doubtful questions relating to the religious law (Sanh. 88b) and rendered the final decision in regard to the sentence of the teacher who promulgated opinions contradicting the traditional interpretation of the Law ("zaḳen mamreh"; Sanh. xi. 2-4; see ELDER, REBELLIOUS).

The "Zugot."

Two persons were at the head of the bet din: one, the actual president with the title "nasi"; the other, the second president or vice-president, who bore the title "ab bet din" (father of the court). The existence of these two offices is well authenticated from the time following the Hadrianic persecution. R. Johanan (3d cent.) says that in the college which was regarded as the continuation of the Great Bet Din in the hall of hewn stone R. Nathan officiated as second president ("ab bet din") side by side with R. Simeon b. Gamaliel II., who was president ("nasi"; Hor. 13b). In a mishnah (Ḥag. ii. 2) five pairs of scholars are enumerated who were at the head of the Great Bet Din at the time of the Second Temple; and it is stated that one of each pair was nasi and the other ab bet din. These five pairs of scholars, who collectively are also designated "zugot" (Peah ii. 6), were at the same time the most prominent representatives of the tradition (Ab. i. 1 *et seq.*) and at the head of the Pharisaic school. There is therefore no reason to doubt the statement that from the time the bet din came under Pharisaic influence these Pharisaic teachers stood at its head. The fact that the high priest had formerly been the president of this bet din explains why there were two presidents. Since the high priest was probably frequently prevented from presiding at the meetings, or was perhaps not competent to do so, another officer had to be chosen who should be the actual director of the body. The double office was retained when, with the growing influence of the Pharisees, the nasi of the bet din was a scribe and no longer the high priest. The title "nasi," which the president of the bet din bore, may have originated at the time when the high priest—the real prince and the head of the state—acted as president. The following reason also may have determined the retention of the title, even after the high priest no longer officiated as president: The bet din, which, as shown above, was called also כנישתא (corresponding to the Hebrew עדה), was identified with the Biblical "'edah" (comp. Sifre, Deut. 41 [ed. Friedmann, p. 59b]; Sifra, Wayiḳra, ed. Weiss, 19a, where it is expressly stated that the Great Bet Din in the hall of hewn stone is the 'edah); and, since only a director of the 'edah is called "nasi" in Ex. xvi. 22 and Num. iv. 34, it may have seemed desirable to retain the title "nasi" for the president of the bet din.

Order of Business.

Business at the meetings of the bet din was transacted according to a certain order. Reliable traditions describing the procedure and the balloting have been preserved in the Mishnah; but it is impossible to distinguish between the regulations obtaining in the bet din at the time of the Second Temple and those obtaining in the school of Jabneh, which was regarded as a continuation of the Sanhedrin. The following are some of these regulations: The members of the bet din sat in a semicircle in order that they might see one another (Sanh. iv. 2; Tosef., Sanh. viii. 1). The president sat in the center (Tosef., *l.c.*). Two secretaries recorded the various opinions expressed by the members; according to one tradition there were three secretaries (Sanh. *l.c.*). When a question was raised and a member of the college declared that he was in possession of a tradition according to which the question might be decided, such tradition was decisive. When no member knew of any tradition relating to the question at issue, discussion followed and a ballot was taken (Tosef., Sanh. vii. 1). Three rows of scholars sat in front of the bet din, and filled vacancies in the latter when necessary (Sanh. iv. 4; Tosef., Sanh. viii. 2). This regulation, however, refers only to the school of Jamnia and not to the bet din of the time of the Second Temple; for only such men were appointed to membership in the latter as had previously sat in less important bodies.

After the destruction of the Temple at Jerusalem and the downwall of the Jewish state, the Academy of Jabneh was organized as the supreme religious authority, being therefore regarded as the continuation of the Great Bet Din in the hall of hewn stone. The later Jewish academies under the presidency of the patriarchs of the family of Hillel—hence, down to the end of the fourth century—were also regarded as the continuation of that institution (this is the meaning of the sentence "The bet din of the hall of hewn stone went on ten journeys until it finally settled at Tiberias"; R. H. 31a, b); they accordingly retained its organization, and the president bore the title of nasi, the second president officiating side by side with him as ab bet din.

W. B. J. Z. L.

SANHEDRIN ("Court"): Name of a treatise of the Mishnah, Tosefta, and both Talmudim. It stands fourth in the order Neziḳin in most editions, and is divided into eleven chapters containing seventy-one paragraphs in all. It treats chiefly of courts and their powers, of qualifications for the office of judge, and of legal procedure and criminal law.

Ch. i.: Cases which are brought before a court of three judges (§§ 1-3), before a small sanhedrin of twenty-three members (§ 4), or before the Great Sanhedrin at Jerusalem consisting of seventy-one, or, according to R. Judah, of seventy members (§ 5); origin of the requirement that there should be seventy (or seventy-one) members in the Great Sanhedrin, and twenty-three in the smaller body; minimum number of inhabitants entitling a city to a sanhedrin (§ 6).

Contents Ch. i.-v.

Ch. ii.: Rights of the high priest (§ 1); rights and duties of the king, who may neither judge nor be judged, and may declare war only with the consent of the Great Sanhedrin; his share of the booty; he may not accumulate treasure for himself; he must have a copy of the Torah made for himself; the reverence due him (§§ 2-5).

Ch. iii.: Suits involving money which are decided by arbitrators; cases in which one party may reject the judge selected or the witness cited by the other party; persons debarred from acting either as judges or as witnesses (§§ 1-5); examination of witnesses, each of whom is questioned separately, with a subsequent comparison of their testimony (§ 6); announcement of the verdict by the president of the board; no judge may say to either party: "I wished to acquit thee, but I was overruled by the majority of my colleagues" (§ 7); if he who loses the case later produces written testimony or a witness in his favor, the sentence is reversed (§ 8).

Ch. iv.: Difference in the proceedings and in the number of judges between trials in which money is involved and criminal cases in which the life of the defendant is in jeopardy, the former being conducted before three judges and the latter before a sanhedrin of twenty-three members (§§ 1-2); the sanhedrin sat in a semicircle, so that all the members might see one another, while the clerks recorded the reasons which the judges gave either for acquittal or for condemnation (§ 3); three rows of scholars versed in the Law sat in front of the sanhedrin, one or more of them being called upon at need to fill the bench, in case a quorum of judges was not present (§ 4); address to the witnesses in criminal cases, reminding them of the value of a human life; in this connection it is said that Adam is called the ancestor of the whole human race, in order that no one might superciliously say to his fellow man: "My great grandfather was more important than thine" (§ 5).

Ch. v.: Examination of the witnesses regarding the time, place, and circumstances of the case, and the coherency of the testimony given; consultation and mode of procedure on the part of the judges (§§ 1-5).

Contents Ch. vi.-xi.

Ch. vi.: How the condemned man is led to the place of execution; proclamation of the verdict, so that a reversal may be possible at the last moment if proofs of innocence are produced (§ 1); the condemned man is exhorted to confess his sins that he may atone for them by his death (§ 2); method of stoning to death, and cases in which those who are stoned are hanged after death, and the manner of hanging (§§ 3-4); burial-place of those who have been executed, and the demeanor of their relatives (§§ 5-6).

Ch. vii.: The four methods of capital punishment—stoning, burning, beheading, and strangling—and the manner of each (§§ 1-3); crimes punishable by stoning (§§ 4-11).

Ch. viii.: The circumstances in which a stubborn and rebellious son (comp. Deut. xxi. 18 *et seq.*) is regarded and sentenced as such (§§ 1-4); the stubborn son, like the burglar (comp. Ex. xxii. 1), is treated with severity in order that he may be prevented from committing greater crimes; in this connection the cases are given in which one about to commit a crime may be killed to prevent its commission (§§ 5-7).

Ch. ix.: Criminals who are burned and those who are beheaded; cases in which homicide is not regarded as murder (§§ 1-2); cases in which a mistake is made as to the identity of criminals condemned to death so that it is impossible to tell what punishment each one has deserved (§ 3); cases in which one has committed two different crimes, and so deserves two different forms of capital punishment (§ 4); criminals who are placed in solitary confinement ("kipah"; § 5); cases in which a criminal taken in the act may be killed by any one without being brought before a court (§ 6).

Ch. x.: Those who have no part in the future world; the problem whether the Ten Tribes will return at some future time from the place of their exile (§§ 1-3); the idolatrous city (comp. Deut. xiii. 13 *et seq.*; §§ 4-6).

Ch. xi.: Criminals who are strangled (§ 1); the dissenting teacher ("zaḳen mamreh") and the proceedings against him (§§ 2-4); the false prophet and the one who makes predictions in the name of idols (§§ 5-6). In the Mishnah of the Babylonian Talmud the order of the tenth and eleventh chapters is inverted.

Tosefta and Gemara.

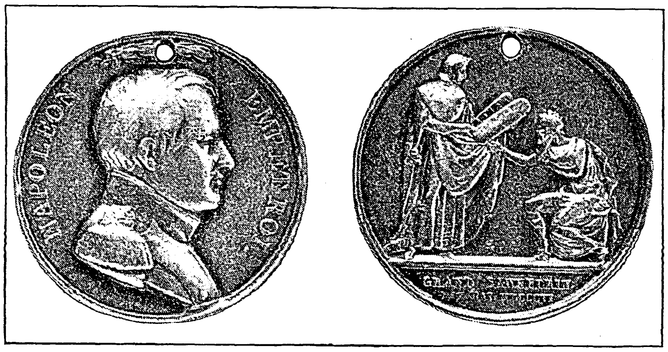
The Tosefta to Sanhedrin is divided into fourteen chapters, and contains many interesting haggadic interpretations and sayings besides the additions and supplements to the Mishnah. Especially noteworthy is the attempt in iv. 5 to explain how the people sinned in asking for a king (I Sam. viii.), and thus to remove the discrepancy between I Sam. xii. 17 and Deut. xvii. 14-20; there is likewise an interesting discussion of the problem whether the script in which the Torah was originally given to the people was changed, and, if so, when the alteration was made (v. 7-8). Other remarkable passages (xi. 6, xiv. 1) state that the laws set forth in Deut. xiii. 13-18 and xxi. 18-21 are valid in theory only, since they never have been and never will be enforced in practise.

The Gemara of both the Talmudim contains a mass of interesting maxims, legends, myths, stories, and haggadic sayings and interpretations in addition to its elucidations of the passages of the Mishnah, the number of haggadot on the tenth (or eleventh) chapter being especially large. Among the interesting passages of the Babylonian Gemara may be noted the disputations with the heretics (38b-39a); the attempts to find the belief in the resurrection of the dead outlined in the Bible, and the polemics against heretics who deny the resurrection (90b–91a, 91b, 92a); the discussion whether the resurrection of the dead described in Ezek. xxxvii. is to be interpreted merely as a figurative prophetic vision or whether it was a real event (92b); and the discussions and computations of the time at which the Messiah will appear, with the events which will attend his coming (97b–99a).

Especially noteworthy in the Palestinian Gemara are the legend of the angel who assumed the form of Solomon and deprived him of his throne (20c); the story of the execution of the eighty sorceresses of Ashkelon on one day by Simeon b. Sheṭaḥ (23d); and the account of the unfortunate and undeserved death of Simeon b. Sheṭaḥ's son (23b).

W. B. J. Z. L.

SANHEDRIN, FRENCH: Jewish high court convened by Napoleon I. to give legal sanction to the principles expressed by the Assembly of Notables in answer to the twelve questions submitted to it by the government (see Jew. Encyc. v. 468, *s.v.* France). These questions were:



Medal Struck in Commemoration of the Sanhedrin Convened by Napoleon, 1807.

(In the possession of Prof. John Bach McMaster, Philadelphia, Pa.)

1. Is it lawful for Jews to have more than one wife?
2. Is divorce allowed by the Jewish religion? Is divorce valid, although pronounced not by courts of justice but by virtue of laws in contradiction to the French code?
3. May a Jewess marry a Christian, or a Jew a Christian woman? or does Jewish law order that the Jews should only intermarry among themselves?
4. In the eyes of Jews are Frenchmen not of the Jewish religion considered as brethren or as strangers?
5. What conduct does Jewish law prescribe toward Frenchmen not of the Jewish religion?
6. Do the Jews born in France, and treated by the law as French citizens, acknowledge France as their country? Are they bound to defend it? Are they bound to obey the laws and follow the directions of the civil code?
7. Who elects the rabbis?
8. What kind of police jurisdiction do the rabbis exercise over the Jews? What judicial power do they exercise over them?
9. Are the police jurisdiction of the rabbis and the forms of the election regulated by Jewish law, or are they only sanctioned by custom?
10. Are there professions from which the Jews are excluded by their law?
11. Does Jewish law forbid the Jews to take usury from their brethren?
12. Does it forbid, or does it allow, usury in dealings with strangers?

Constitution of the French Sanhedrin.

At one of the meetings of the Notables, Commissioner Comte Louis Matthieu Molé expressed the satisfaction of the emperor with their answers, and announced that the emperor, requiring a pledge of strict adherence to these principles, had resolved to call together a great sanhedrin which should convert the answers into decisions and make them the basis of the future status of the Jews, create a new organization, and condemn all false interpretations of their religious laws. In order that this sanhedrin, reviving the old Sanhedrin of Jerusalem, might be vested with the same sacred character as that time-honored institution, it was to be constituted on a similar pattern: it was to be composed of seventy-one members—two-thirds of them rabbis and one-third laymen. The Assembly of Notables, which was to continue its sessions, was to elect the members of the sanhedrin, and notify the several communities of Europe of its meeting, "that they may send deputies worthy of communicating with you and able to give to the government additional information." The Assembly of Notables was to appoint also a committee of nine, whose duty it would be to prepare the work of the sanhedrin and devise a plan for the future organization of the Jews in France and Italy (see Jew. Encyc. iv. 232, *s.v.* Consistory).

On Oct. 6, 1806, the Assembly of Notables issued a proclamation to all the Jewish communities of Europe, inviting them to send delegates to the sanhedrin, to convene on Oct. 20. This proclamation, written in Hebrew, French, German, and Italian, speaks in extravagant terms of the importance of this revived institution and of the greatness of its imperial protector. While the action of Napoleon aroused in many Jews of Germany the hope that, influenced by it, their governments also would grant them the rights of citizenship, others looked upon it as a political contrivance. When in the war against Prussia (1806–7) the emperor invaded Poland and the Jews rendered great services to his army, he remarked, laughing, "The sanhedrin is at least useful to me." David Friedländer and his friends in Berlin described it as a spectacle that Napoleon offered to the Parisians.

Opening Session.

The opening of the sanhedrin was delayed until Feb. 9, 1807, four days after the adjournment of the Assembly of Notables. Its seventy-one members included the rabbis sitting in the Assembly, to whom were added twenty-nine other rabbis and twenty-five laymen. Its presiding officers, appointed by the minister of the interior, were: David Sinzheim, rabbi of Strasburg (president); Joshua Benzion Segre, rabbi, and member of the municipal council of Vercelli (first vice-president); Abraham de Cologna, rabbi of Mantua (second vice-president). After a solemn religious service in the synagogue, the members assembled in the Hôtel de Ville, in a hall specially prepared for them. Following

TITLE-PAGES FROM THE PRAYERS RECITED AT THE MEETING OF THE SANHEDRIN CONVENED BY NAPOLEON, PARIS, 1807.
(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

the ancient custom, they took their seats in a semicircle, according to age, on both sides of the presiding officers, the laymen behind the rabbis. They were attired in black garments, with silk capes and three-cornered hats. The sittings were public, and many visitors were present. The first meeting was opened with a Hebrew prayer written by David Sinzheim; after the address of the president and of Furtado, chairman of the Assembly of Notables, it was adjourned. At the second sitting, Feb. 12, 1807, deputies Asser, Lemon, and Litwack, of the newly constituted Amsterdam Reform congregation Adat Jeshurun, addressed the sanhedrin, Litwack in Hebrew, the others in French, expressing their entire approval of the Assembly and promising their hearty support. But the deputies were greatly disappointed when the president, after having answered them in Hebrew, invited them to be silent listeners instead of taking part in the debates as the proclamation of the Notables had caused them to expect. Addresses from congregations in France, Italy, and the Rhenish Confederation, especially from Neuwied and Dresden, were also presented.

In the sittings of Feb. 16, 19, 23, 26, and March 2, the sanhedrin voted without discussion on the replies of the Assembly of Notables, and passed them as laws. At the eighth meeting, on March 9, Hildesheimer, deputy from Frankfort-on-the-Main, and Asser of Amsterdam delivered addresses, to which the president responded in Hebrew expressing great hopes for the future. After having received the thanks of the members, he closed the sanhedrin. The Notables convened again on March 25, prepared an official report, and presented it on April 6, 1807; then the imperial commissioners declared the dissolution of the Assembly of Notables.

Its Decisions.

The decisions of the sanhedrin, formulated in nine articles and drawn up in French and Hebrew, were as follows: (1) that, in conformity with the decree of R. Gershom, polygamy is forbidden to the Israelites; (2) that divorce by the Jewish law is valid only after previous decision of the civil authorities; (3) that the religious act of marriage must be preceded by a civil contract; (4) that marriages contracted between Israelites and Christians are binding, although they can not be celebrated with religious forms; (5) that every Israelite is religiously bound to consider his non-Jewish fellow citizens as brothers, and to aid, protect, and love them as though they were coreligionists; (6) that the Israelite is required to consider the land of his birth or adoption as his fatherland, and shall love and defend it when called upon; (7) that Judaism does not forbid any kind of handicraft or occupation; (8) that it is commendable for Israelites to engage in agriculture, manual labor, and the arts, as their ancestors in Palestine were wont to do; (9) that, finally, Israelites are forbidden to exact usury from Jew or Christian.

In the introduction to these resolutions the sanhedrin declared that, by virtue of the right conferred upon it by ancient custom and law, it constituted, like the ancient Sanhedrin, a legal assembly vested with the power of passing ordinances in order to promote the welfare of Israel and inculcate obedience to the laws of the state. These resolutions formed the basis of all subsequent laws and regulations of the French government in regard to the religious affairs of the Jews, although Napoleon, in spite of the declarations, issued a decree on March 17, 1808, restricting the Jews' legal rights. The plan of organization prepared by the committee of nine, having for its object the creation of consistories, was not submitted to the sanhedrin, but was promulgated by Napoleon's decree of March 17, 1808.

SANTA MARIA. See Paul de Burgos.

SANTANGEL (SANCTO ANGELOS), LUIS (AZARIAS) DE: 1. Marano and learned jurist of Calatayud, Spain; died before 1459. He was converted by the sermons of Vicente Ferrer, and was made magistrate ("zalmedina") of the capital of Aragon. The name **Luis de Santangel** was borne also by the following:

2. Grandson of No. 1. He was fiscal agent in Aragon, and in 1473 represented the knights and noblemen in the assembly of the Aragonese estates.

3. Head of a mercantile house in Valencia; died in 1476. He maintained uninterruptedly business relations with King John of Aragon, and was farmer of the royal salt-pits at De la Mata, near Valencia, for which he made an annual payment of 21,100 sueldos, in accordance with an agreement dated July 9, 1472. He farmed also the customs duties and the taxes in the royal domains.

4. Grandson of No. 1; merchant of Saragossa. He joined the conspiracy of the Maranos against the inquisitor Pedro Arbues, and was publicly burned at the stake Aug. 18, 1487, at Saragossa.

5. Son of No. 3. After his father's death (1476) he succeeded him as farmer of the royal taxes, and was subsequently promoted to the rank of royal counselor. He appeared as an adherent of Judaism in the sanbenito at the auto da fé in Saragossa July 17, 1491. Ferdinand of Aragon, whose favorite he was, valued him highly for his faithfulness, honesty, and ability, and appointed him "escribano de racion," that is, chancellor of the royal house of Aragon.

Santangel took an important part in the discovery of America. After negotiations between Columbus and the Spanish king and queen had been broken off, he succeeded in winning over Queen Isabella, and, from purely patriotic motives, himself lent the necessary money, 17,000 ducats (5,000,000 maravedis), without interest. It was Santangel that received Columbus' first detailed report of his voyage and discoveries (see America, The Discovery of).

Ferdinand throughout his life continued to cherish friendly feelings for his beloved counselor. When Santangel's daughter married D. Angel de Villanueva, a grandson of Moses Patagon of Calatayud (1493), the king, in recognition of the faith-

fulness of her father, presented her with the sum of 30,000 sueldos. But the highest reward for the many memorable services rendered by Santangel to the king and to Spain was the royal exemption of Santangel's children and grandchildren from liability to the charge of apostasy, the officers of the Inquisition in Valencia and other places being strictly forbidden to molest them in any manner on account of their religious belief.

SANTAREM: City of Portugal. Even before its conquest by the Portuguese in 1140, it possessed a Jewry, situated near the Church of S. Ildefonso. It is now more than two centuries since this ceased to exist. The synagogue of Santarem was the oldest in all Portugal, and the city was the seat of the district rabbi, appointed by the chief rabbi for the province of Estremadura. In the "foro" or letter of freedom granted by Affonso Henriques to the city it was decided that when a Christian wished to pay a Jew a debt, the transaction was to take place in the presence of both Jews and Christians or through the agency of some one of prominence and established reputation. In a litigation between a Jew and a Christian or vice versa, only the Christian's testimony was believed. When the daughter of Queen Isabella of Castile, the bride of the only son of John II., entered Santarem in Nov., 1490, the Jews there, according to precedent, met her with their Torah scrolls, and made her the customary presents of cows, sheep, fowl, etc.

After the expulsion of the Jews from Portugal, many secret Jews lived in Santarem. The earthquake on Jan. 26, 1531, which caused great destruction in Santarem, was ascribed by the fanatic monks to the fact that the city tolerated these secret Jews within its walls. Thereupon the people fell upon the innocent Maranos, among whom was the famous physician Amatus Lusitanus, and drove them from their houses. Against these acts of fanaticism the noble Bishop Fernando Coutinho and the dramatist Gil Vicente especially protested loudly. See Gil Vicente.

SANTOB (SHEM-ṬOB) DE CARRION: Spanish poet; born toward the end of the thirteenth century at Carrion de los Condes, a town in Castile, whence his cognomen. He lived in the reigns of Alfonso XI. and his son and successor Pedro, with both of whom he was in high favor. The "Doctrina Christiana" and "Danza General en Que Entram Todos los Estados de Gente," contained in the same manuscript with a collection of his poems, have long been falsely ascribed to him.

Santob wrote "Consejos y Documentos del Rabbi Don Santo al Rey D. Pedro" or "Proverbios Morales," of which two manuscripts are in existence, one in the Escorial and the other in the National Library, Madrid. The proverbs as found in the two manuscripts are alike in content, but differ in wording; the latter consisting of 627, the former of 686, "coplas." The manuscript of the National Library was copied by Ticknor in his "History of Spanish Literature" (iii. 422–436, London, 1855). The Escorial manuscript was published for the first time, with a collation of the Madrid text and under the title "Proverbios Morales del Rabbi Don Sem Tob," in "Biblioteca de Autores Españoles" (lviii. 331–372, Madrid, 1864). Several verses have been translated into German by Kayserling in his "Sephardim" and by J. Fastenrath in his "Immortellen aus Toledo" (Leipsic, 1869). The "Consejos" or "Proverbios Morales," the composition of which the author began under King Alfonso, and which he afterward combined and dedicated to King Pedro (1357–60), begin as follows:

"Sennor Rey, noble, alto,
Oy este sermon
Que vyene desyr Santob
Judio de Carrion."

Though without much coherence, the works of Santob are remarkable for the epigrammatic precision and vivacity of their style. The author based some of his apothegms on his own views on life, and others he took from the Proverbs of Solomon, Ecclesiastes, Pirḳe Abot, the Talmud, and from the works of the Spanish-Moorish period, *e.g.*, Ibn Gabirol's "Mibḥar ha-Peninim."

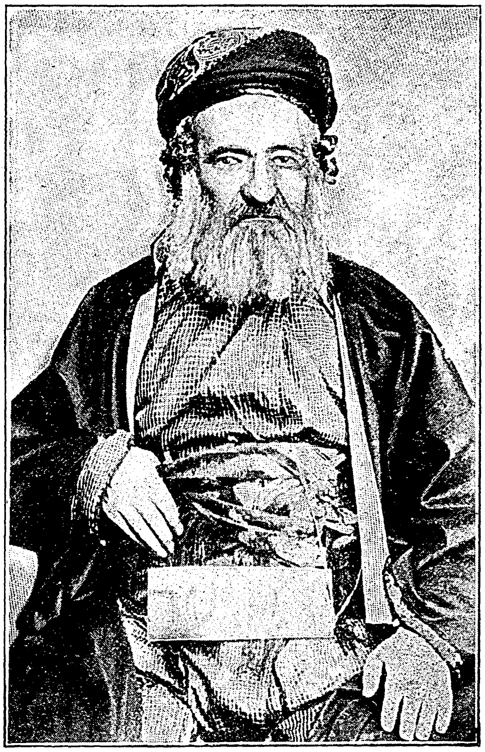
SANUA, JAMES (called also **Abu Naddara** = "he of the spectacles" ["naẓẓarah"]): Egyptian publicist; born at Cairo April, 1839. He studied in Egypt and in Italy, and at the age of sixteen commenced to contribute articles to Arabic, French, Italian, and English newspapers. In 1863 he became professor at the Ecole Polytechnique and examiner of schools under the Egyptian government. In 1870 he introduced the modern Arabic theater into Egypt. He wrote no less than thirty-two pieces, and translated many others from European languages. In 1872 he founded the two societies Les Amis de la Science and Le Cercle des Progressistes. In 1877 he established "Le Journal d'Abou Naddara," in which he foretold the English invasion of Egypt.

On account of his opposition to the government Sanua was exiled in 1878. He then settled in Paris, from which city he has continued to publish his violently anti-English journal as the organ of the so-called Egyptian National party. In 1889 Sanua gave a series of lectures in Spain, Portugal, and northwest Africa. In 1890 he founded the monthly "Al-Tawaddud," and in 1899 the monthly "Al-Munṣif." These three papers are published partly in Arabic and partly in English and French, with occasional Persian and Turkish. He has written also much poetry both in Arabic and in French. Among his other publications may be cited: "L'Egypte Satirique," Paris, 1886; "Souhaits d'Orient," 1892; "Abou Naddara à Stamboul," 1892; and "Paris et Ses Expositions," 1899.

Sanua has visited the sultan several times, receiving from him numerous decorations. In 1900 the Shah of Persia conferred upon him the title "Sha'ir al-Mulk" (Poet of the Empire).

s. G.

SAPHIR, JACOB (known also as **Eben Sappir**): Rabbi and traveler of Rumanian descent; born in 1822 at Oshmiany, government of Wilna; died in Jerusalem 1886. While still a boy he went to Palestine with his parents, who settled at Safed; and at their death (in 1836) he removed to Jerusalem. In 1848 he was commissioned by the Jewish community of the latter city to travel through the southern countries to collect alms for the poor of Jerusalem. In 1854 he undertook a second tour, visiting Yemen, British India, Egypt, and Australia. The result of this journey was his "Eben Sappir" (vol. i., Lyck, 1866; vol. ii., Mayence, 1874), in which work he gave the history, and a vivid though uncritical description of the condition, of the Jews in the above-mentioned countries.



Jacob Saphir.

Saphir published also "Iggeret Teman" (Wilna, 1868), a work on the appearance in Yemen of the pseudo-Messiah Judah ben Shalom.

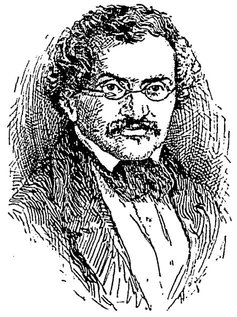
SAPHIR, MORITZ GOTTLIEB: Hungarian humorist; born at Lovas-Berény Feb. 8, 1795; died at Baden, near Vienna, Sept. 5, 1858. In 1806 he went to Prague to study the Talmud; but, feeling a deeper interest in German literature, he settled in Pesth in 1814, where he learned likewise French, English, and Italian. The reception given to "Papilloten," his first work (Pesth, 1821), encouraged him to go to Vienna, where he became a contributor to literary periodicals. After traveling through southern Germany in 1824, he settled in Berlin, where he edited both the "Berliner Schnellpost für Literatur, Theater und Geselligkeit" (1826-29) and the "Berliner Courier" (1827-29), gaining the favor of the general public by his clever plays on words, a style then new in literature. His success made him many enemies, including Fouqué, Förster, Cosmar, and Diez, who attacked him in a pamphlet entitled "Saphir in Berlin." This was answered by his own "Der Getödtete aber Dennoch Lebende Saphir," which passed through four large editions within a week. The quarrel, however, induced him to go to Munich in 1829, where he founded the "Bazar für München" (1830-33) and the "Deutsche Horizont" (1831-33).



Moritz G. Saphir.

Saphir was expelled from Bavaria in 1832 on account of his incessant attacks upon the directors of the theater, and went to Paris, but the king soon permitted him to return to Munich. He then assumed the editorship of the "Bayrische Beobachter" and was appointed "Hoftheaterintendanturrath." In 1835 he went to Vienna, where he became Bäuerle's associate editor on the "Theaterzeitung," issuing "Der Humorist," a periodical of his own, in 1836.

The following is a list of Saphir's works: "Conditorei des Jocus" (Leipsic, 1825); "Gesammelte Schriften" (4 parts, Stuttgart, 1830); "Neueste Schriften" (3 parts, Munich, 1830); "Humoristische Damenbibliothek" (6 vols., Vienna, 1831-41); "Humoristische Abende" (Augsburg, 1832); "Humoristische Glasperlen" (Munich, 1833); "Dumme Briefe" (2 parts, *ib.* 1834); "Carnevals und Masken-Almanach" (*ib.* 1834); and "Das Fliegende Album für Ernst, Scherz, Humor und Lebensfrohe Laune" (2 vols., Leipsic, 1846; 5th ed. 1875). His collected works have been published in 12 volumes (Brünn, 1884), and in an enlarged edition in 26 volumes (*ib.* 1890).

In 1832 Saphir embraced the Protestant faith.

SAPHIR, SIGMUND: Hungarian journalist; born in Hungary 1806 (according to some, 1801); died at Pesth Oct. 17, 1866. He edited several German papers in that city, among them the "Pesther Tageblatt" (1839-45), to which his uncle, the humorist, Moritz G. SAPHIR, contributed. It had occasionally articles of Jewish interest; for instance, Max Letteris' "Das Tragische Ende eines Dichters," containing the legend of Judah ha-Levi's death. Saphir further edited the "Pesther Sonntagszeitung," no complete sets of which are known to exist. On Jan. 3, 1864, a number appeared which was announced as beginning the seventh year of publication after an interruption. The paper often contained humorous sketches from Jewish life. He further edited, in conjunction with Count Majláth, a poetical year-book entitled "Iris" (1840–41), which was subsequently continued for five years by Count Majláth alone, one of its contributors being Ludwig August Frankl, who wrote for it "A Night in the Ghetto of Rome."

S. S. KR.

SAPPHIRE (Hebrew, ספיר): A highly prized sky-blue precious stone, frequently mentioned in the Old Testament and Apocrypha (Ex. xxiv. 10, xxviii. 18, xxxix. 11; Job xxviii. 6, 16; Cant. v. 14; Lam. iv. 7; Isa. liv. 11; Ezek. i. 26, x. 1, xxviii. 13; Tobit xiii. 20). It is doubtful whether Job xxviii. 6 is correctly translated "it hath dust of gold." The ancients, in any case, did not mean by "sapphire" the stone which is now known under that name, but the so-called lapis lazuli, in which are interspersed many pyrites that glitter like gold against the blue background. The sapphire was highly prized by the Babylonians and Egyptians also. It was found in the mines of Upper Egypt (comp. Job *l.c.*). In the Old Testament the sapphire is enumerated among the stones on the breastplate of the high priest (Ex. xxviii. 18, xxxix. 11). In the prophetic description of the New Jerusalem sapphire is mentioned as forming the foundations of the city (Isa. liv. 11), also as the material of which the gates are to be built (Tobit xiii. 20).

It is difficult to say with what meaning the sapphire is used figuratively in the description of the human body in Cant. v. 14 and Lam. iv. 7: the allusions have been referred both to the blue veins and to blue garments; but both passages cited may be corrupt. In the description of the theophany in Exodus and Ezekiel the foundation on which God's throne rests—the dark-blue firmament with its golden stars—is compared to a floor inlaid with sapphires (Ex. xxiv. 10; Ezek. i. 26, x. 7).

J. I. BE.

SAR SHALOM BEN BOAZ: Gaon of Sura, where he died about 859 or 864, having held the gaonate for ten years. He succeeded Kohen Ẓedeḳ I., and was in turn succeeded by Naṭronai b. Hilai. He left more than 100 responsa, a great many of which are to be found in the collection "Sha'are Ẓedeḳ" (Salonica, 1792), forty-seven in "Teshubot Ge'onim Ḳadmonim" (Nos. 13–60, Berlin, 1848), twenty-seven in "Sefer Sha'are Teshubah," and some in "Toratan shel Rishonim" (Frankfort-on-the-Main, 1881). His responsa show clearly that Sar Shalom was very tolerant toward non-Jews, mild toward his subordinates, and liberal in the enforcement of the laws. He was consulted by chiefs of communities of distant countries, whom, instead of commanding, as it was in his power to do, he answered in a friendly manner, explaining the difference between the customs of his school and those of Pumbedita, and leaving the choice to them. In his responsa he endeavored to give the reasons for his decisions, often declaring that if the consultants were present he would be better able, by discussing the various questions, to elucidate them.

He warned the people not to establish institutions which they probably would be unable to observe. In cases where a community had bound itself by a vow to a statute which it found itself unable to fulfil, he allowed it to break such vow ("Toratan shel Rishonim," i. 47). His tolerance is shown by the fact that he particularly prohibited the robbing of a non-Jew, even when there was no "ḥillul ha-Shem" (profanation of the name of God; "Sha'are Ẓedeḳ," part iv., gate 1, No. 7). But although of a mild disposition, he insisted upon punishing severely the man who struck another man, or who ill-treated his wife, and the woman who was rebellious toward her husband (*ib.* part i., gate 6, Nos. 3–5); and he was very severe with regard to usury, placing many difficulties in the way of money-lenders (*ib.* part iv., gate 2, Nos. 3–4).

It may be pointed out that when consulted as to the custom obtaining in certain places of washing the hands and then sitting on the ground seven times when returning from a funeral, he answered that the practise was followed only by the relatives of the deceased, and that the purpose of sitting on the ground was to drive away thereby the demons who accompany a man when returning from the funeral of a relative (*ib.* part iii., gate 4, No. 20). Thus it seems that he either believed in demons himself, or, at least, did not oppose the popular belief in them.

Sar Shalom manifested a tendency to interpret the Bible cabalistically. He particularly tried to explain the numbers symbolically; thus he declared that the candlestick, consisting of twenty-five parts (comp. Ex. xxv. 31–37), symbolizes the twenty-five generations from Adam to Moses; the ten curtains covering the Tabernacle (*ib.* xxvi. 1 *et seq.*), the ten commandments or Decalogue; and the thirty cubits' length of the upper curtains, the thirty generations from Isaac, who was the first circumcised on the eighth day, to Zedekiah, in whose days the Temple was destroyed. In explaining the expression "the ark of the covenant" (Josh. iii. 11) he identifies the Ark with the angel ("Teshubot Ge'onim Ḳadmonim," No. 15).

W. B. M. SEL.

SARAGOSSA (Spanish, **Zaragoza**; the Roman **Cæsaraugusta**; Hebrew, סרקוסטה): Capital of the former kingdom of Aragon. The city is situated on the Ebro, which is crossed by a long stone bridge constructed with the municipal fees received from the miḳweh during the two years beginning May 1, 1266. Jews resided in Saragossa at a very early time. By the tenth century they had formed a flourishing congregation, while the civil wars which raged under Sulaiman (1012) caused several Jewish scholars, including Ibn Janaḥ, Solomon ibn Gabirol, and Moses ibn Gikatilla, to go to Saragossa, where they were welcomed with hospitality. Like Samuel ibn Nagdela in Granada, Jekuthiel ibn Ḥasan then occupied a high position under King Yaḥya ibn al-Mundhir, whom he served until he was killed at the same time as his sovereign. After several bloody struggles and vain attempts on the part of the kings of Aragon to take the city, it surrendered to them on Dec. 18, 1118. Alfonso I., "el Batallador," the conqueror of Saragossa, imitated the example of King Alfonso VI. of Castile, and granted several privileges to the Jews, who had enjoyed under the califs equal rights with the Saracens.

Under the Spaniards.

James I. declared all the Jews of his empire to be his property, and placed them under the jurisdiction of a "bayle general." Among those who held this office was Judah or Jehudano de Cavallería, the richest and most respected Jew of Aragon, who was head bailiff of Saragossa, and even of the entire kingdom, for several decades. He was frequently consulted by the king, James I., in affairs of state, and in 1263 by the king's orders he equipped a fleet. The treasurers Abraym (Abraham) and Bondia (Yom-Ṭob) likewise lived in Saragossa, although no details are known regarding them.

In this city, as in all the towns of Spain, the Jews lived in a Juderia, which was surrounded by walls and provided with gates. The quarter was very large, bordering on the Coso, and extending from the Church of S. Gil to the Plaza de Magdalena, along the Calle de la Veronica, which is now called Barrionuevo. It thus included the following streets, which were mostly named according to the trades pursued by their inhabitants: La Cuchilleria (Cutlers' street), La Pelliceria (Tawers' street), Plateria (Goldsmiths' street), Teneria (Tanners' street), Freneria (Saddlers' street), Borzaria, and others, while, in accordance with a decree of Alfonso III., dated Nov. 5, 1288, Jewish cloth-dealers were permitted to sell their wares in the Picatoria, as far as the Corrigeria (Strap-Makers' street). The Juderia remained closed on Holy Thursday and on Good Friday; and, according to a resolution of the city council, passed April 14, 1442, the Jews were obliged to make an annual payment of 200 sueldos to the porter for opening and closing the gates (Act. de Ayuntamiento de Zaragoza de 1442; comp. "R. E. J." xxviii. 117).

The aljama in Saragossa was very rich and populous; but the estimate of 5,000 families, even for the most flourishing period, is too high (Brüll's "Jahrb." vi. 38). The Jews of the city carried on an active trade in their own manufactures as well as in cloth, silk, leather, cotton, flax, and other articles. James I. accorded them the privilege of manufacturing colored cloths; and in 1323 James II. conferred upon them the right to dye cotton, silk, and linen.

Jewish Gilds.

They pursued a great variety of trades; among them were, as may be inferred from the street-names mentioned above, goldsmiths and cutlers, tawers and tanners, strap-makers and saddlers, who, in accordance with the strongly marked Aragonese custom, had gilds of their own, like the Christians. The fraternity ("confradia") of the shoemakers—who were then, as now, very numerous, the city having long been famous for its leather-factories—resolved by a statute, confirmed May 6, 1336, by King Pedro III., that every member, under penalty of one dinero to be paid into the society treasury (Almosina = צדקה), should attend wedding and circumcision celebrations arranged by any of its members, visit on each Sabbath any member who had fallen sick, and, in case of death, go to his house, escort the body to the grave, and assemble in the house for prayer during the days of mourning. Each needy member who fell ill received two dineros daily from the treasury of the fraternity ("Coleccion de Documentos Inéditos de la Corona de Aragon," xl. 131 *et seq.*; "Allg. Zeit. des Jud." lvi. 438). To encourage industry, the Jews were permitted, about 1330, to keep stores outside the Juderia; but this privilege was soon revoked.

The taxes imposed upon the Saragossa Jews were very oppressive: besides the "cena," or so-called "Jews' tax," and the city assessments, they were obliged to pay to the king 3,000 sueldos yearly ("Col. de Documentos," ix. l. 185 *et seq.*), and to this sum were added extraordinary subsidies. In 1289 the Jews were compelled to advance James II. 12,000 sueldos for his campaign against Sicily, although until this sum was repaid they were to be exempt from all state taxes. When, in 1332, the aljama had become so reduced that it was unable to pay even the taxes, the subsidies were temporarily remitted (Jacobs, "Sources," Nos. 1011, 1059, 1163, 1176; Rios, "Hist." ii. 159). The officials of the aljama, the rabbis, administrators, and assessors, were nominated (or confirmed) and protected by the king. Whenever he came to Saragossa and visited the Juderia, the aljama, or rather its rabbis and assistant rabbis, went to meet him in festive procession, bearing richly decorated Torah scrolls. It is related that once the aljama secretly resolved to render the customary homage, but with empty Torah cases. In 1420 this was reported to the king, Alfonso V., by a Jew who had been baptized, although he had been employed at the royal court even before conversion. Alfonso determined to punish the aljama for the deception. His design was frustrated, however, by a pious servant of the synagogue who hurriedly placed scrolls of the Law in all the cases. When the king, together with the informer and an armed retinue, visited the Juderia on the 17th of Shebaṭ, which was the following day, and the aljama came to meet him with the scrolls of the Law, he expressed a wish to see the Torah. To his surprise, all the scrolls were shown to him, whereupon the Jews were graciously dismissed, and the informer was executed as a calumniator. The 17th of Shebaṭ was thenceforth celebrated annually in Saragossa after the manner of the Purim festival (Brüll's "Jahrb." vi. 38 *et seq.*).

The Synagogues.

The community owned several synagogues, although there is no evidence to support the statement that there were exactly twelve. The Great Synagogue, a magnificent structure situated near the Coso, consisted of three naves, the central one being higher than the other two, while the roof, supported by three columns, was ornamented with many gilded carvings. At the entrance was a large gate with six small doors on each side. In the interior of the building the walls were decorated with verses of the Psalms in large red and blue Hebrew letters ("Boletin Acad. Hist." xviii. 83 *et seq.*), and the Ark was a splendid piece of mosaic. The remaining synagogues were smaller in size. Whenever a member of the community was about to sell or give away a piece of property, it was customary to announce the fact in three synagogues on four successive Sabbaths, and to give notice that all claims upon the property must be presented within four weeks (Isaac b. Sheshet, Responsa, No. 388).

Frequent Intermarriages.

The community of Saragossa had not a good moral or religious reputation; and its licentiousness was censured by the grammarian Ibn Janaḥ and by the pessimistic poet Solomon ibn Gabirol as early as the eleventh century. Two centuries later the Jews of the city were much more severely condemned for godlessness, ignorance, sensuality, and immorality by the satirist Solomon Bonfed, a deposed rabbi of Saragossa ("Catalogue of the Michael Library," pp. 363 *et seq.*, Hamburg, 1848). It is at least clear that this Jewish community formed a sharp contrast to that of Toledo. As early as the thirteenth century, according to the complaints of Baḥya b. Asher, a native of Saragossa, the most important religious commands were slightly regarded, and despite the existence of a Jewish school and a society of Talmudic scholars (Confradia de Estudios de los Judios; Jacobs, "Sources," No. 1177), the study of the Talmud was not pursued assiduously. The rich Jews of the city strove for the friendship of the Christians, married Christian women, and accepted Christian husbands for their daughters. In the controversy over the writings of Maimonides, the congregation of Saragossa and their leader, Don Baḥya ben Moses, physician in ordinary to King James I., were foremost among his defenders. The tendency of Saragossa was liberal; and its congregation was probably the only one in Spain in which the scroll of Esther was read to the women at Purim in Spanish, instead of in Hebrew—a fact which roused the indignation of Isaac b. Sheshet, a rabbi of the town, and of his teacher Nissim (Isaac b. Sheshet, *l.c.* Nos. 389, 390).

The aljama in Saragossa had several famous rabbis and preachers, among them, according to a generally accepted but unsupported view, Baḥya b. Joseph, author of the "Ḥobot ha-Lebabot," and the equally noted preacher Baḥya ben Asher, who wrote, two hundred years later, a valuable commentary on the Pentateuch. A highly respected rabbi was Azariah ibn Jacob (1313–28), described as "Excelentissimo de la Juderia de Zaragoza." Like Solomon ibn Jacob (1297–1301)—his brother, if not his father—he was a physician, and, like him also, enjoyed special privileges from the king, having an assistant by royal permission ("Arch. de la Corona de Aragon," reg. 477, fol. 147; 860, fol. 60). Aaron b. Joseph ha-Levi was a rabbi in Saragossa at the same time as Azariah. In the last third of the fourteenth century the office was held by the easy-going and indulgent Joseph b. David, as well as by Isaac ben Sheshet and the celebrated Ḥasdai Crescas. Rabbi Zerahiah ha-Levi, with the learned Vidal Benveniste and R. Mattathias ha-Yiẓhari, represented the congregation at the disputation in Tortosa. Jewish physicians were numerous in Saragossa, where several members of the Benveniste family lived. Nathaniel ibn Almoli was a resident of the city at the same time as the Solomon ibn Jacob mentioned above; and a few decades later Samuel Alazar, physician in ordinary to the king ("fisico de su magestad"), was especially favored, as were other members of his family ("Arch. de la Corona de Aragon," reg. 860, fol. 20; 861, fol. 213; 863, fol. 205), to which belonged Don Ezra of Saragossa, a personal acquaintance of Isaac b. Sheshet (Isaac b. Sheshet, *l.c.* Nos. 215, 388).

Massacre of 1391.

The year 1391 marks a crisis in the history of the community of Saragossa as well as in the fortunes of the Spanish Jews in general, and the congregation soon sank into comparative insignificance in size and importance. In consequence of the persecutions and subsequently of the sermons of Vicente Ferrer its richest members renounced Judaism. Then came the plague, which raged in 1429, 1448, and the following years, and carried off many Jews. Saragossa was filled with Maranos, who were the richest inhabitants of the town, owning the most beautiful houses at the "Mercado" (the market-place), holding the highest offices, and occupying the most important positions. They were the bitterest opponents of the introduction of the Inquisition; and hundreds of them fell as victims of the tribunal during the first years of its activity. On June 30, 1486, Juan de Esperandeu, who owned houses and large tanneries on the Coso, together with Manuel de Almazan and other coreligionists of Saragossa, was publicly burned at the stake. On the first visit of the king and queen to the capital of Aragon, which took place a few weeks later, the aljama of the city presented them with twelve cows decorated with rich ornaments, an equal number of wethers, a silver table-service (carried by twelve Jews), and two silver dishes, one bearing a precious goblet and the other a goblet filled with castellanos, each castellano having the value of 480 maravedis.

The decree of banishment was scarcely promulgated when the city council of Saragossa pressed a claim for 4,000 sueldos against the aljama. The Jews sold their looms, their manufactures, and other goods at a great loss, and left the town. The main street of the Juderia was given the name "Barrionuevo" some weeks later, while the Great Synagogue served for a time as a warehouse, until the Jesuits enlarged it in 1560, and dedicated it as a church. It was torn down, however, fifteen years later, and on its site was erected a church which is still standing and is the largest in Saragossa.

G. M. K.

SARAGOSSI, JOSEPH: Talmudist and cabalist of the fifteenth and sixteenth centuries. On being banished from Spain in 1492 he went successively to Sicily, Beirut, and Sidon. He resided in Sidon for some time, and finally settled at Safed, where he assumed the position of rabbi. Possessed of a mild character, and esteeming above all else peace and harmony, Saragossi gained the love not only of his flock, but even of the Mohammedan inhabitants of Safed, toward whom he displayed a spirit of conciliation and great tolerance. At one time Saragossi was on the point of leaving Safed, when he was prevailed upon by the inhabitants to remain, they promising him an annual salary of 50 ducats, two-thirds of which sum was furnished by the Mohammedan governor of the city. Combining Talmudic with cabalistic knowledge, Saragossi contributed largely to the development of those branches of Jewish learning in Safed. His lectures on the Cabala were attended by David ibn Abu Zimra.

SARAH (SARAI).—Biblical Data: Wife of Abraham, who for a long period remained childless (Gen. xi. 29-30). She accompanied her husband from Haran to Canaan (*ib.* xii. 5). Driven by famine to take refuge in Egypt, Abraham, fearing that her beauty would put his life in danger if their true relations became known, proposed that she pass as his sister. As he had apprehended, she was actually taken by Pharaoh, to whom her personal charms had been highly praised (*ib.* xii. 10 *et seq.*), while Abraham was richly dowered by the monarch on her account. But, visited by troubles, Pharaoh began to suspect the truth; and, censuring Abraham, he bade him take his wife and depart.

Sarai being still childless, she induced her husband to take her Egyptian handmaid Hagar for a concubine, that through her she might be "built up." Hagar, feeling herself quick with child, despised her mistress, whereupon Sarai bitterly upbraided her husband. Wishing not to be involved in the quarrel, Abraham told her to do with her handmaid as she deemed best, and Hagar was soon compelled to flee by the harsh treatment accorded her; but an angel, announcing that her seed would be numerous, urged her to return to Sarah (*ib.* xvi.). After Hagar had borne Ishmael, God told Abraham, whose name hitherto had been Abram, to change Sarai's name to "Sarah," announcing that she would bear him a son. Incredulous on account of Sarah's age (she was ninety), Abraham burst into laughter, wherefor the son was to be called "Isaac" (*ib.* xvii.). Sarah overheard that she was to give birth to a son when, at a subsequent visit of the three messengers on their way to Sodom, the promise was renewed; she, too, was incredulous, and laughed inwardly, but when interrogated denied that she had laughed (*ib.* xviii.).

Abraham next removed to Gerar, where Sarah had an experience with Abimelech similar to the one she had had in Egypt. Abimelech, however, was warned in a dream. Reproved for the wrong done, Abraham justified his and Sarah's statement by the explanation that Sarah was the daughter of his father but not of his mother (*ib.* xx. 1-12). After this, Sarah bore a son, Isaac, which aroused her to say, "God hath made me to laugh, so that all that hear will laugh with me" (*ib.* xxi. 1-7). The fact that now she had a son of her own augmented her displeasure with Hagar and Ishmael; and Abraham, at her solicitation, sent both away after God had quieted his scruples (*ib.* xxi. 10 *et seq.*). Sarah's death is very briefly recorded as having taken place in Kirjath-arba, or Hebron, when she had attained the age of 127 years. She was buried by Abraham in the cave of Machpelah (*ib.* xxiii., xxv. 10, xlix. 31). No other reference to Sarah is found in the Hebrew canon, except in Isa. li. 2, where the prophet appeals to his hearers to "look unto Abraham your father, and unto Sarah that bare you."

E. G. H.

Named Iscah.

——In Rabbinical Literature: Sarah was the niece of Abraham, being the daughter of his brother Haran. She was called also "Iscah" (Gen. xi. 29), because her beauty attracted general attention and admiration (Meg. 14a). She was so beautiful that all other persons seemed apes in comparison (B. B. 58a). Even the hardships of her journey with Abraham did not affect her beauty (Gen. R. xi. 4). According to another explanation, she was called Iscah because she had prophetic vision (Meg. *l.c.*). She was superior to Abraham in the gift of prophecy (Ex. R. i. 1). She was the "crown" of her husband; and he obeyed her words because he recognized this superiority on her part (Gen. R. xlvii. 1). She was the only woman whom God deemed worthy to be addressed by Him directly, all the other prophetesses receiving their revelations through angels (*ib.* xlv. 14). On their journeys Abraham converted the men, and Sarah the women (*ib.* xxxix. 21). She was called originally "Sarai," *i.e.*, "my princess," because she was the princess of her house and of her tribe; later she was called "Sarah" = "princess," because she was recognized generally as such (Ber. 13a; Gen. R. xlvii. 1).

On the journey to Egypt, Abraham hid his wife in a chest in order that no one might see her. At the frontier the chest had to pass through the hands of certain officials, who insisted on examining its contents in order to determine the amount of duty payable. When it was opened a bright light proceeded from Sarah's beauty. Every one of the officials wished to secure possession of her, each offering a higher sum than his rival (Gen. R. xl. 6; "Sefer ha-Yashar," section "Lek Leka"). When brought before Pharaoh, Sarah said that Abraham was her brother, and the king thereupon bestowed upon the latter many presents and marks of distinction ("Sefer ha-Yashar," *l.c.*). As a token of his love for Sarah the king deeded his entire property to her, and gave her the land of Goshen as her hereditary possession: for this reason the Israelites subsequently lived in that land (Pirḳe R. El. xxxvi.). He gave her also his own daughter Hagar as slave (*ib.*).

In Pharaoh's Harem.

Sarah prayed to God to deliver her from the king, and He thereupon sent an angel, who struck Pharaoh whenever he attempted to touch her. Pharaoh was so astonished at these blows that he spoke kindly to Sarah, who confessed that she was Abraham's wife. The king then ceased to annoy her ("Sefer ha-Yashar," *l.c.*). According to another version, Pharaoh persisted in annoying her after she had told him that she was a married woman; thereupon the angel struck him so violently that he became ill, and was thereby prevented from continuing to trouble her (Gen. R. xli. 2). According to one tradition it was when Pharaoh saw these miracles wrought in Sarah's behalf that he gave her his daughter Hagar as slave, saying: "It is better that my daughter should be a slave in the house of such a woman than mistress in another house"; Abimelech acted likewise (Gen. R. xlv. 2). Sarah treated Hagar well, and induced women who came to visit her to visit Hagar also. Hagar, when pregnant by Abraham, began to act superciliously toward Sarah, provoking the latter to treat her harshly, to impose heavy work upon her, and even to strike her (*ib.* xlv. 9).

Relations with Hagar.

Sarah was originally destined, like Abraham, to reach the age of 175 years, but forty-eight years of this span of life were taken away from her because she complained of Abraham, blaming him as though the cause that Hagar no longer respected her (R. H. 16b; Gen. R. xlv. 7). Sarah was sterile; but a miracle was vouchsafed to her (Gen. R. xlvii. 3) after her name was changed from "Sarai" to "Sarah" (R. H. 16b). When her youth had been restored and she had given birth to Isaac, the people would not believe in the miracle, saying that the patriarch and his wife had adopted a foundling and pretended that it was their own son. Abraham thereupon invited all the notabilities to a banquet on the day when Isaac was to be weaned. Sarah invited the women also, who brought their infants with them; and on this occasion she gave suck to all the strange children, thus convincing the guests of the miracle (B. M. 87a; comp. Gen. R. liii. 13). Sarah's behavior toward Ishmael, whom she drove away from his father's roof, is justified on the ground that she saw him commit the three greatest sins, namely, idolatry, unchastity, and murder (*ib.* liii. 15).

Died at Thought of the Sacrifice of Isaac.

Legends connect Sarah's death with the sacrifice of Isaac (*ib.* lviii. 5), there being two versions of the story. According to one, Samael came to her and said: "Your old husband seized the boy and sacrificed him. The boy wailed and wept; but he could not escape from his father." Sarah began to cry bitterly, and ultimately died of her grief (Pirḳe R. El. xxxii.). According to the other legend, Satan, disguised as an old man, came to Sarah and told her that Isaac had been sacrificed. She, believing it to be true, cried bitterly, but soon comforted herself with the thought that the sacrifice had been offered at the command of God. She started from Beer-sheba to Hebron, asking every one she met if he knew in which direction Abraham had gone. Then Satan came again in human shape and told her that it was not true that Isaac had been sacrificed, but that he was living and would soon return with his father. Sarah, on hearing this, died of joy at Hebron. Abraham and Isaac returned to their home at Beer-sheba, and, not finding Sarah there, went to Hebron, where they discovered her dead ("Sefer ha-Yashar," section "Wayera"). During Sarah's lifetime her house was always hospitably open, the dough was miraculously increased, a light burned from Friday evening to Friday evening, and a pillar of cloud rested upon the entrance to her tent (Gen. R. lx. 15).

W. B. J. Z. L.

——**Critical View:** The two forms of the name, "Sarah" and "Sarai," are identical in meaning; it is difficult to understand the reason for the change. "Sarai" is probably the more archaic form of "Sarah," though the termination "ai" is unusual in the feminine. The writer of Gen. xvii. 15 must have considered the "ah" of "Sarah" as implying in some way "yahu" or "yah" (the "YHWH" element). Accordingly, the change would be similar to that of "Joshua" to "Jehoshua." Perhaps it was the intention to read the name "Sarayahu," the "hu" being added to "Sarai." In that case the meaning "princess" now given to "Sarah" must be abandoned. The element "sarah" is identical with a part of the name "Israel," and "Sarah" and "Sarai" are appropriate names for Israel's mother (Isa. li. 2; comp. Robertson Smith, "Kinship and Marriage," p. 30; for the forms see Olshausen, "Lehrbuch der Hebräischen Sprache," § 110; Nöldeke, in "Z. D. M. G." 1886, p. 183; 1888, p. 484; König, "Historisch-Kritisches Lehrgebäude," II. i. 427). The name "Sa-ra-a" is reported to occur in Babylonian tablets (Cheyne and Black, "Encyc. Bibl." iv. 4285, note 3).

Repetitions in the Narrative.

The story of Sarah's life, brief and incomplete as it is, presents nevertheless curious repetitions, *e.g.*, the incident with Pharaoh and a similar incident with Abimelech (Gen. xii. 10 *et seq.* and xx. 1 *et seq.*). Marriages with half-sisters were, in primitive matriarchy, regarded as anything but incestuous. From the point of view of the history of culture these episodes are very instructive. But it is not very probable that Abraham would have run the risk twice. Moreover, a similar incident is reported in regard to Isaac and Rebecca (*ib.* xxvi. 6–11). This recurrence indicates that none of the accounts is to be accepted as historical; all three are variations of a theme common to the popular oral histories of the Patriarchs. That women were married in the way here supposed is not to be doubted. The purpose of the story is to extol the heroines as most beautiful and show that the Patriarchs were under the special protection of the Deity. The promise of Isaac and the explanation of the name are given in duplicate. First, Abraham is the recipient of the promise, and he laughs (*ib.* xvii. 15–21). In the second narrative (*ib.* xviii.) Abraham again is given the promise, but Sarah laughs. Finally, the name receives a third justification in Sarah's exclamation at his birth (*ib.* xxi. 6).

According to Pentateuchal analysis, the references to Sarah in Genesis are divided among the various strata as follows:

Gen. xi. 29 belongs to J (Jahvist); xii. 5, 10-20 to J; xvi. to J (except 1a, 3, 15, 16); xvii. 15-21 to P (Priestly Code); xviii. to J; xx. to E (Elohist); xxi. 1a, 2a to J; xxi. 6, 7 to E; the remainder to P.

Concerning the kernel of historical fact underlying the patriarchal cycle in Genesis, and thus also the detached glosses concerning Sarai = Sarah, there is no unanimity of opinion among scholars. Their

Views as to Historical Character.

various views may be summarized as follows: (1) The Patriarchs, including Abraham, so likewise his wives, were historical individuals reports of whose adventures and deeds have come down through long and differing channels of oral tradition. According to the theory which they variously assumed to be worked out in the history of Israel, historiographers whose writings are incorporated in the Pentateuch selected from this mass of discordant material what suited their purpose, and reconstructed even this in accordance with their plans. This accounts for the duplications and discrepancies. According to Baethgen ("Beiträge zur Semitischen Religionsgesch." p. 157), "Sarah" is a simple appellative representing a historical character, whose life is given in fragments and with free embellishments.

(2) The patriarchal cycle represents older Canaanite, pre-Israelitish material, adopted and adapted by Israel. As such, the stories disclose views concerning the relations of septs and clans, as well as concerning political and geographical conditions. Genealogies such as those evolved in the patriarchal story are never of individuals. Tribal antipathies and sympathies, and political and racial interdependence and kinship, are expressed by them; but frequently, in order to complete a system, an individual ancestor or eponym is invented. While some of the names that occur are clearly those of clans, or of localities, Abraham = Abiram is not. It seems to be an appellative; but it is connected with Hebron, an old center. Sarai = Sarah, on the other hand, is the name of a clan—Israel. As Jacob became Israel in another cycle (with Beth-el), so here Abraham (Hebron) is connected with Israel. This is the meaning of the marriage of Abraham with Sarah, as similar ethnic or historical data underlie the story of his dealings with Hagar and Keturah.

(3) These Patriarchs are regarded by most members of the critical school as the outcome of culture-evolution. That matriarchy once prevailed, that blood-relationship was traced only through the mother, that marriage by capture or purchase was the rule, form probably the historical kernel involved in the repeated narratives of Sarai's marital adventures with men other than Abraham. On the other hand, her dealings with Hagar illustrate the conditions obtaining in the polygamous households of the sheiks of the time and country. The persons are free inventions; the conditions are not.

(4) Originally, Canaanite local eponyms connected with Israel; the Patriarchs were later ranged and ranked systematically, so as to establish an exclusive descent for Israel and disclose its distinction as the people of Yhwh. In this scheme Abraham becomes the "great ancestor" (Abram), or "the ancestor of many nations." Through his wife Sarah he begets the Isaac-Jacob tribes, or Israel (= Sarah); and through his concubine Hagar he begets Ishmael, who therefore is marked as lesser in her degree of purity.

(5) The development of religion is typified in these ancestral figures. Abraham and Sarah represent a sort of elementary monotheism, a religion standing midway between pure Mosaism and the Canaanite cults. This is the view of Dillmann, Ewald, and Kittel.

(6) Abraham and Sarah are free inventions of unconscious popular poetry, untrammeled by considerations of genealogical data or tribal or religious motives. Wellhausen is the main exponent of this view ("Prolegomena zur Gesch. Israels," pp. 337 *et seq.*).

(7) The mythological theory makes Sarai identical with Ishtar. She and Abraham are said to be lunar deities, or adaptations of the Babylonian Adonis-Tammuz (Abraham) and Ishtar (Sarai) myths (the descent of Ishtar). Winckler (in his "Gesch. Israel's" and other writings) and Stucken ("Astralmythen") advance this view.

Eponym Theory.

The most likely of all these views is the one that makes Sarai an eponym for Israel. Her marriage with Abraham represents the union of the Israel group with some clan or clans settled around Hebron. Ed. Meyer (in Stade's "Zeitschrift," 1886) is inclined to regard even Abraham as the name and eponym of a clan or sept, and refers to Abi-ezer (Judges vi. 34). Cheyne, of course (in Cheyne and Black, "Encyc. Bibl." *s.v.* "Sarah"), makes Abraham a Jerahmeelite, whose marriage with Sarah expresses the amalgamation of Israel with the descendants of Jerahmeel.

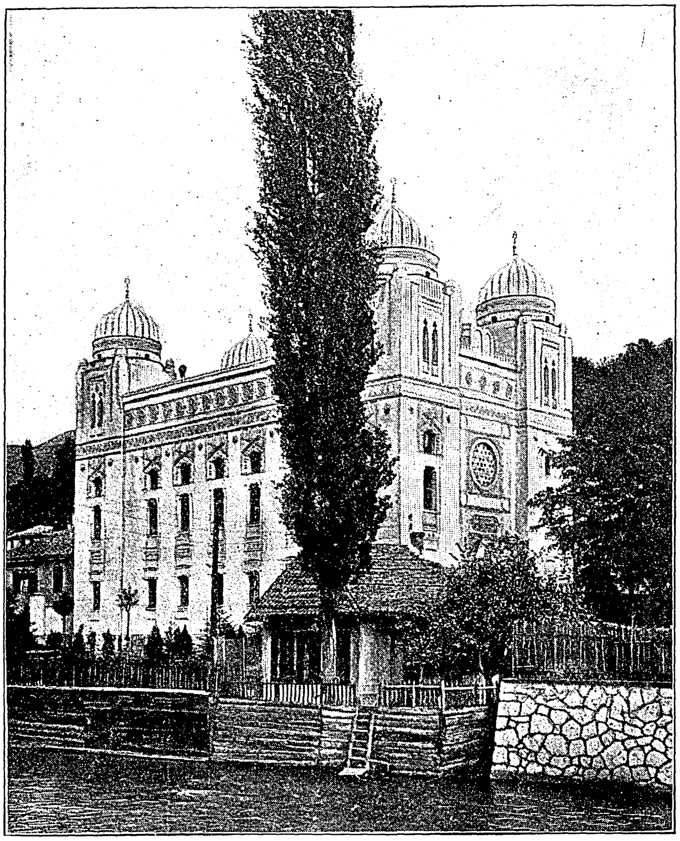
E. G. H.

——**In Arabic Literature:** Sarah, the wife of Abraham, was, according to some accounts, the sister of Lot and the daughter of Aran, Abraham's paternal uncle. According to others, she was the daughter of the King of Haran, and her mother was daughter of Kutba, King of Babylon. Sarah was the most beautiful woman of her time and possessed a perfect figure. She resembled Eve, to whom God gave two-thirds of all beauty; indeed, she was so beautiful that Abraham transported her in a chest. When, on entering Egypt, Abraham was obliged to give a tithe of all his goods, he at first refused to open the chest in which Sarah was, and when he was finally forced to do so, the official ran and told the king. Questioned by the latter regarding Sarah, Abraham replied that she was his sister, having instructed her to say the same. When, on that supposition, the king wished to marry her and reached out to take her, Sarah prayed God to wither his hand; and when the king promised not to touch her, she prayed God to restore it. Forgetful of his promise, the king reached toward her once more, and his hand was again withered. This was repeated three times. Abraham was a witness of this interview, God causing the walls of the house to become transparent for the purpose. Finally the king restored Sarah to Abraham and loaded her with presents. He insisted on her choosing for herself one of his slave girls, and she selected Hagar, for whom she had conceived a liking.

Her Beauty.

Afterward Sarah gave Hagar to Abraham; and when Ishmael was born she became so jealous that she could no longer live with Hagar. On one occasion she swore that she would not rest satisfied until her hands had been dipped in Hagar's blood, whereupon Abraham immediately pierced Hagar's ears so that the blood might be on Sarah's hands. Such was the origin of the wearing of earrings. Abraham then took Hagar and Ishmael away. In after years, when he went to visit Ishmael, Sarah was still so jealous that she exacted a promise from Abraham that he would not alight from his horse.



The Synagogue at Sarajevo.
(From a photograph.

Sarah is not directly mentioned in the Koran; but she is referred to in sura xi. 74, where she is spoken of as standing by when Abraham receives the visit of the angels. Sarah was seventy years old when she conceived Isaac (according to Ṭabari; Baiḍawi says she was ninety or ninety-nine). She lived to the age of 130. She is said to have been the mother of Jacob and Esau also, although some say that they were sons of Abraham by another wife. As long as Sarah lived Abraham had no other wife, but after her death he married Keturah. Sarah was buried in the land of Canaan in a cave bought by Abraham, where, later, he also was interred.

SARAH COPIA SHULAM. See Sullam, Sara Copia.

SARAJEVO (Turkish, **Bosna-Serai**): Capital of Bosnia. For the history of its Jewish community till 1850 see Bosnia.

About 1850 Omar Pasha (Michael Lattas) granted the Jews of Sarajevo the right to settle in any part of the city. Down to 1878, when Austria-Hungary took possession of Bosnia, the Jews living at Sarajevo, as well as throughout Bosnia and Herzegovina, were all Sephardim (called "Spanioles"). After that year there was formed in the city an Ashkenazic congregation which has been recruited mainly from Jews who emigrated from Austria-Hungary after the occupation of Bosnia by that country. Many of the Ashkenazim are highly educated, and occupy leading positions, especially as lawyers and physicians, and have been appointed to offices under the government. The congregation, which is continually increasing, has a handsome synagogue in the Moorish style, which was dedicated Sept. 30, 1902. Its institutions include a ḥebra ḳaddisha, Talmud Torah, women's society, etc. Its rabbi, Samuel Wessel, was called to the office in 1898.

The Sephardic Jews are somewhat more numerous, and, like all the Spanioles in the East, are generally Orthodox. Of the prominent rabbis of Sarajevo the following may be mentioned: Ḥakam Ẓebi (17th cent.), David and his son Isaac Pardo, Moses Danon (to whose grave at Stolar the Sephardim still make pilgrimages) and his brother Benjamin Danon (all in the eighteenth century), Moses Perera, Simon Chason, Moses Levi, Abraham Salom, Judah Finzi, and his successor Ḥakam Abraham Abinuna (d. 1902). The two congregations now maintain friendly intercourse, and their members intermarry, whereas in former times the Sephardim held aloof to a certain extent from their Ashkenazic brethren, looking down upon them as an inferior class. The relations between Jews and non-Jews also are exceptionally cordial.

In 1895 the Jews of Sarajevo numbered 4,060 in a total population of 41,543.

SARASOHN, KASRIEL H.: American journalist; born in Paiser, Russian Poland, 1835; died at New York city Jan. 12, 1905. He studied at home and prepared himself for the rabbinate; but in 1866 he abandoned this intention and emigrated to the United States. In 1874 he founded in New York city, where he had settled, the "Jewish Weekly" and the "Jewish Gazette," and in 1886 the "Jewish Daily News." When he began the publication of his journals there existed no other Jewish paper printed in Hebrew in the United States, and he had great difficulty in obtaining the necessary type.

In 1882 Sarasohn founded the Hebrew Sheltering House, now known as the Hebrew Shelter House and Home for the Aged. In 1901 he visited Palestine, and on his return was elected president of the committee for the collection of funds for the support of poor Hebrews in Palestine. He was also chairman of the committee for the Kishinef sufferers.

SARATOF: Russian city, in the government of the same name; situated on the right bank of the Volga. The city is chiefly memorable for the "Saratof affair," which began in 1853. The direct cause of it was the murder of two Christian boys about the time of Passover. A few years earlier, in 1844, Skripitzyn, who was entrusted with the management of Jewish affairs in Russia, wrote a paper entitled "Information About the Killing of Christians by Jews for the Purpose of Obtaining Their Blood." A limited number of copies was printed and distributed among the members of the royal family, ministers, heads of departments, and members of the Senate. Although this paper was proved afterward to be a plagiarism of a treatise published in 1740 by a demented priest, Gaudent, still the theory expounded in it found many ardent believers among administrative and judicial circles, so much so that, as late as 1878, it was published in the "Grazhdanin." No wonder, then, that the Jews were immediately accused of this double murder. A certain Yushkewitzer, his wife, their son Theodor Yurlov, a soldier, and a barber named Shlifermann were put under arrest. The chief witnesses against them were Olympiada Gorokhova (a woman of bad character and a paramour of Yurlov) and Bogdanov, a soldier. When first put on the witness-stand the woman flatly denied all knowledge of the case, but afterward changed her mind and related the following story: In July, 1853, she (Olympiada) went, toward evening, to the market-place, where she met Ita Neḥamah Yushkewitzer, whom she accompanied home. There the conversation turned upon the burning question of the day, the murder of the two Christian boys.

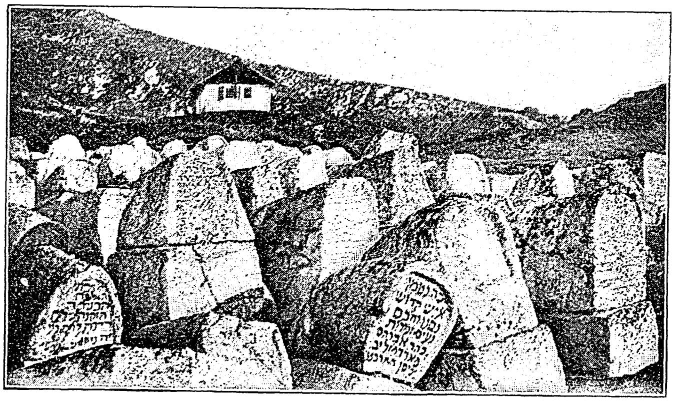
So-Called Confession.

After much urging, Ita Neḥamah admitted that the Jews had killed the boys. She gave an account of the crime: The boys were first kept in a semistarved condition for many weeks, and, in spite of their tears and appeals, were brought to the synagogue, where they were stabbed, suspended by their feet from the ceiling, circumcised, and again stabbed in many places. Upon Olympiada's asking what was done with the blood, Ita Neḥamah said that "it had been collected in a large vase, dried, made into powder, and sent to Jitomir, where it was purchased by some wealthy

Jews; and that for this the barber Schliffermann received 4,000,000 rubles and her husband Yankel 2,000,000." Olympiada also declared on the stand that her lover Yurlov, upon hearing that his father had been arrested, threw up his hands, exclaiming, "We are all lost!" and begged her to save him. The woman's testimony was full of contradictions; at one time she asserted that she understood Yiddish well, though the fact was that she had no knowledge of it.

The soldier Bogdanov testified that while sitting one day in the armory he overheard a conversation between two Jewish soldiers, Chader and Levin; they were discussing the necessity of liberating their coreligionist Berlinsky, who was under arrest for complicity in the murder of the two boys, and Levin said, "We must not make anything public!" Bogdanov further testified that another Jewish soldier joined them and exclaimed, in Russian, "No! we must not confess anything, though they should dismember us!" When he, Bogdanov, made his presence known to the Jewish soldiers they gave him half a ruble and bade him not to tell anything of what he had heard.

A special committee was sent from St. Petersburg to investigate this case, and though the prosecuting attorney, Durnovo, and his associates made every effort to convict the Jews nothing could be proved, the testimony offered being entirely untrustworthy. However, many Jewish families were ruined, and the effect upon the Jews living in that part of the country was highly injurious, so much so that the government was forced to appoint a commission of scholars to settle once for all the question whether the Jews used Christian blood for religious purposes.



The Old Jewish Cemetery at Sarajevo.

(From a photograph.)

Saratof has a population of 137,109, of whom 570 are Jews.

SARAVAL: Family of scholars, of whom the following deserve special mention:

Abraham b. Judah Löb Saraval: Flourished in the sixteenth century. He was the author of a commentary on the "Ma'amadot." The second edition of his commentary is dated 1617, but the place of publication is not known.

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 709; Roest, *Cat. Rosenthal. Bibl.* i. 29; Benjacob, *Oẓar ha-Sefarim*, p. 351; Mortara, *Indice*, p. 59.

Jacob ben Löb Saraval: Lived at Cologne; died there 1608 or 1614. He is mentioned in the responsa of Jacob Alpron, "Naḥalat Ya'akob." An epitaph in A. Berliner's "Luḥot Abanim" refers, perhaps, to him (Mortara, "Indice," p. 59).

Jacob Raphael b. Simḥah Saraval: Rabbi at Venice; born about 1708; died at Venice April, 1782. He published an answer to a treatise by the lawyer Benedetti of Ferrara on the religion and the oath of the Jews. Among his poems should be mentioned a "kinah" on the death of sixty-five Jews who perished together in an accident. Shortly before his death he was preparing a treatise on the etymology of the names of the "terafim." A letter by him on the Masorah appears in Kennicott's "Dissertatio Generalis" (Brunswick, 1783). His "Dissertazione sull' Ecclesiaste" was contained in Joseph Almanzi's library, now in the British Museum.

BIBLIOGRAPHY: De Rossi, *Dizionario*; Steinschneider, *Hebr. Bibl.* vi. 89; Zunz, *Z. G.* p. 240; Mortara, *Indice*, p. 59.

Judah Löb Saraval: Rabbi at Venice; died May 17, 1617. He is quoted in the ritual work "Mashbit Milḥamot," in connection with a question in regard to the ritual bath. He is mentioned also by Joseph di Trani (Responsa, i. 147). Saraval translated into Hebrew Saadia's commentary on Canticles (Venice, 1777). His tombstone was found in the cemetery of Padua by Filosseno Luzzatto; the epitaph was published by Nepi-Ghirondi ("Toledot Gedole Yisrael," pp. 218–219).

BIBLIOGRAPHY: Steinschneider. *Cat. Bodl.* col. 1371; Azulai, *Shem ha-Gedolim*, i. 59; Zunz, in Liebermann, *Volkskalender*, 1853, p. 72; Mortara, *Indice*, p. 59.

Leon Vita Saraval: Bibliophile; born at Triest in 1771; died Jan. 26, 1851. He was the author of "Discorsi Pronunciati all' Apertura degli Studii della Communità Israelita di Trieste" (Triest, 1811). His son M. Saraval catalogued his father's library between 1851 and 1853, publishing the catalogue at Triest in 1853. The entire library was purchased for the Breslau seminary (1853).

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 2500; *Serapeum*, 1853, pp. 280–284, 294–298; 1854, pp. 187–188; Mortara, *Indice*, p. 59; Zunz, *Z. G.* pp. 243, 568.

Nehemiah b. Judah Löb Saraval: Venetian scholar; died in Venice in 1649. He wrote an approbation to Joseph Solomon Delmedigo's "Elim" (Amsterdam, 1629). He is mentioned in the following responsa collections: Raphael Meldola, "Mayim Rabbim," i. 11; Samuel Aboab, "Debar Shemu'el," No. 19 (Fürst, "Bibl. Jud." iii. 245; Mortara, "Indice," p. 59).

Solomon Ḥai b. Nehemiah Saraval: Scholar of the seventeenth century; lived at Venice. He is mentioned in the responsa of Samuel Aboab ("Debar Shemu'el," p. 375) and in "Piske Rikanati ha-Aḥaronim," p. 24. He was still living in 1674 (Mortara, "Indice," p. 59).

s. S. O.

SARDINIA: An island in the Mediterranean, about 140 miles from the west coast of Italy, between 8° 4′ and 9° 49′ E. long., and between 38° 55′ and 41° 16′ N. lat. The settlement of Jews in various parts of the island goes as far back as the year 19 of the common era. During the reign of the emperor Tiberius 4,000 Jewish youths were banished from Rome to Sardinia as a penalty for the misdeeds of four Jewish swindlers. Pretending to be collectors for the treasury of the Temple at Jerusalem, the culprits had received enormous sums in money and jewels from Fulvia (wife of the Roman senator Saturninus), who was a sympathizer of Judaism (Josephus, "Ant." xviii. 3, § 5; comp. also Tacitus, "Annales," ii. 85, and Suetonius, "Tiberius," 36). During the early centuries the fate of the Jews in Sardinia resembled that of their brethren in other Roman provinces: so long as pagans ruled the empire the Jews possessed full rights of citizenship, but as Christianity became the dominant power these rights were curtailed.

Under the Romans.

From the middle of the fifth to the middle of the seventh century Sardinia was governed first by the Vandals and then by the Goths, and the condition of the Jews there was on the whole favorable. There were communities in **Oristano, Lula, Gallura, Nora, Sinai** (probably founded by Jews), **Canahim, Sulcis, Tharros, Alghero, Colmedia,** and **Cagliari,** the capital of Sardinia. An incident which greatly disturbed the Jews occurred in the last-named place toward the end of the sixth century. A converted Jew named Peter placed images of saints in the synagogue on Easter Monday. The Jews lodged a complaint with Pope Gregory the Great, who ordered Bishop Januarius of Cagliari to have the images at once removed ("Epistola," v.).

Of the period extending from the time of the establishment of a native government in Sardinia (665) to that of the annexation of the island to Aragon (1325), only a few incidents in the life of the Jewish communities are known. The Sardinian historian of the eighth century, Antonio di Tharros, and Delotone, the compiler of the poems of the Sardinian king Gialeto, mention two Jewish scholars of Cagliari, Abraham and Canaim, who deciphered the Phenician inscriptions collected by Gialeto and the Greek and Phenician inscriptions found in the palace of Masu. The Sardinian chronicler Severino relates that the synagogue of Cagliari, which was situated in the quarter called Aliama, was in 790 destroyed by a fire generally attributed to the malevolence of some fanatical Christians (De Castro, "Bibliotheca," p. 75). During the administration of the province of Arborea by Onroco there often occurred at Oristano bloody conflicts between Jews and Christians, and in order to put an end to these struggles the Jews were ordered to leave the province within two months. On their expulsion from Arborea they settled in the cities of Lugodoro, especially in Lula and Gallura. Traces of their long sojourn in Arborea were still found in the city of Tharros in 1183 by the Mohammedan traveler Mohammed Abu Jabbar.

During the first century of the Spanish domination the Jews of Sardinia enjoyed prosperity. The Aragonian king granted them many privileges, and their numbers were greatly augmented by the arrival of new settlers from Barcelona, Majorca, and other places. Especially favored were the Jews of Alghero, for whom King Alfonso and his successors showed marked friendliness by exempting them from the payment of customs duties and by urging the governors to protect their business interests. On their part the Jews of Alghero often showed their loyalty to the Aragonian kings. In 1370 they contracted many debts in order to supply King Pedro with money and provisions for his armies, and in token of his gratitude the latter forbade their creditors to claim repayment within two years. In the early years of the fifteenth century the community of Alghero subscribed the sum of 1,600 ducats for the exploitation of the royal mines of Iglesias. A Jew named Vidal de Santa Pau gave 600 Alfonsine livres in 1423 for the restoration of the walls of Alghero; in 1459 Zare di Carcassona presented 622 livres for the same purpose. The Jews of Alghero were mostly engaged in trade, but there were also many scholars and physicians among them, the best known being: Isaac Eymies, who was pensioned by the governor of Lugodoro and by the city of Alghero, and who was called in 1406 to the post of city physician of Cagliari; Ḥayyim of Hipre, author of a work on the medicinal plants of Sardinia; and Solomon Averonques, renowned for his surgical operations. The Jews of Alghero were not excluded from official positions. Mention is made of a Jew named Moses Sofer who occupied in 1467 the position of tax-collector. Another, named Moses di Carcassona, was appointed by the vice-king Carroz in 1467 as the general sheriff's officer of the court of Alghero. In 1482 the same Moses obtained for the sum of 2,250 livres the farming of the taxes of the departments Gociano, Porte Ocier Reale, Mondrolisai, and Oristano for a period of three years. Together with his brother Nino Carcassona, Moses lent large sums for the equipment of the navy and of the armies which had been led by the vice-king Ximene Perez to the city of Oristano.

Under the Spaniards.

Community of Alghero.

It seems that before the Spanish domination Alghero contained but few Jews, who had neither a synagogue nor a separate cemetery. It was only at the end of the fourteenth century that these institutions were founded. In 1381 Vitali Alabi bought from Giacomo Bassach and his wife their house, situated in the street leading to the castle, which he wished to use for a synagogue. Two years later Francisco Giovanni of Santa Colombia, governor of Sassaro and Lugodoro, and later vice-king of Sardinia, permitted the physician Solomon Averonques to buy any place he might choose for a cemetery. In 1438 the community of Alghero was permitted by the municipality to enlarge the synagogue. The enlargement was completed in 1454, and on this occasion the administrators of the community, Samuel Carcassona and Jacob Cohen, petitioned the government to allow them to put the coat of arms of the king on the edifice. In 1455 a petition was addressed to the municipality by the Jewish administrators Terocio, Buria, and Giacoble Nathan to allow them to enlarge the Jewish cemetery. Like all the communities of Sardinia, that of Alghero was administered by elected directors or secretaries, who possessed judicial power in all litigations between Jews, and even between Jews and Christians when sums not exceeding five livres were involved.

Persecution and Expulsion.

However, while the Jews of Alghero were, for unknown reasons, the object of the solicitude of the government and enjoyed a high degree of prosperity until the very year of their banishment, those of Cagliari and other communities were after 1430 treated in the harshest manner. They were compelled to live in special quarters and to wear special kinds of caps, and were not allowed to wear jewels or to put on shoes of any other color than black. Jewish traders were forbidden, under the penalty of losing their goods, to transact business on Christian feast-days. A Jew who employed a Christian was subject to a fine of twenty livres. Foreign Jews were forbidden, under the penalty of death, to settle in Sardinia without the permission of the vice-king or the archbishop. A decree issued in 1481 fixed the penalties for an offense against Christianity and for the employment of Christian servants. For the former crime the Jew was to have his hands cut off; for the latter he was to receive 200 stripes and to pay a fine of 200 ducats, and the servant was to receive an equal number of lashes. In 1485 the Jews were declared royal property and were subjected to the special jurisdiction of the royal attorney. At the same time they were forbidden to export any of their belongings from the island. The decree containing these measures was communicated by the vice-king Ximene Perez to the leaders of the Jewish community of Cagliari, Abraham Mili, Emanuel Mili, Samuel Bondra, Isaac Sallom, Isaac Aleva, Leon Miro, and others. The banishment of the Jews from Spain was closely followed by that of the Jews of Sardinia.

J. I. Br.

SARDIS: Ancient city of Asia Minor and capital of Lydia; situated on the Pactolus at the northern base of Mount Tmolus, about sixty miles from Smyrna. The town is first mentioned by Æschylus ("Persæ," ed. Kirchhoff, line 47), and may be the "Sparda" of the Old Persian inscriptions of Darius Hystaspes (Behistun, i. 15; Persepolis, e, 12; Naḳshi Rustam, a, 28). It had an eventful history, and after the establishment of the Roman province of Asia in 133 B.C. it became the capital of a "conventus" or district.

The date and early history of the Jewish community of Sardis are unknown, although it is clear that by the second half of the first century B.C. it had become an influential one; for in a decree of the proquestor and propretor Lucius Antonius, dating from 50-49 and preserved by Josephus ("Ant." xiv. 10, § 17), the Jews are described as having "an assembly of their own, according to the laws of their forefathers, and this from the beginning, as also a place of their own, wherein they determined their suits and controversies with one another." In obedience to an order of Antonius that the Jews, as Roman citizens, should be confirmed in their rights and privileges, the Sardians passed a decree (*ib.* § 24) that the community should enjoy freedom of worship, while special measures were taken to import food which should be ritually clean. A few years later, in the early part of the reign of Augustus, the proconsul Caius Norbanus Flaccus, at the express command of the emperor, renewed the religious privileges of the Jews of Sardis and permitted them to send money to Jerusalem (*ib.* xvi. 6, § 6).

The single allusion to Sardis in Rev. iii. 1-4 adds no information concerning its Jewish community, nor does the Talmud throw any light on the history of the Jews in the city, although Sardis may be meant by "Asia" in a few passages (Sifre, Balaḳ, ed. Friedmann, p. 47b; 'Ab. Zarah 30a; B. M. 84a). Its site is now occupied by the ruined village of Sart.

E. G. H. L. H. G.

SARGENES (called also **Kittel**): A white linen garment which resembles a surplice and consists of a long, loose gown with flowing sleeves and with a collar laced in front, a girdle of the same material, and a skullcap to match. The name is derived from "sarge" (= "serge"), a woolen stuff (comp. "sericum," silk, and see Rashi, *s.v.* שרוק, Shab. 77b). R. Jeremiah in his last testament directed that he should be buried in a white garment with borders (חיוורן חפיתין), in which it was his custom to attire himself when alive (Yer. Kil. ix. 3). Brides, bridegrooms, and marriageable girls were dressed in white (Shab. 114a; Ta'an. 26b). A white robe was generally considered a garment of joy. Being confident of God's willingness to forgive on Rosh ha-Shanah, the day of judgment, the worshipers were dressed in white (Yer. R. H. i. 1). On the Day of Atonement the white dress is symbolical of the angelic purity to be attained when the worshiper shall be finally absolved and pardoned. The sargenes as a shroud is first mentioned by R. Eleazar of Worms in his "Ha-Roḳeaḥ" and by R. Meïr of Rothenburg in his "Haggahot," and it is still so used by all Orthodox Jews throughout the world. It is mentioned by Maimonides in his "Yad" (Shabbat, xxx. 2) as a reminder of death.

R. Yom-Ṭob Lipmann Heller (1579-1654) in his "Leḥem Ḥamudot" on Asheri, "Halakot Ḳeṭannot" ("Ẓiẓit," No. 25, end) refers to the relics of the martyr Solomon Molko, brought from Regensburg to the Phinehas Synagogue, Prague, as consisting of "an Arba' Kanfot of yellow silk with yellow silk fringes, two flags, and a sargenes called kittel" (סרגינוס שקורין קיטל; "sargenes" is the term that was used in western Germany, "kittel" in eastern

Germany; the garment is now known in eastern Europe by the latter name, the former being almost forgotten). During the fifteenth century brides dressed themselves in the sargenes before the veil was thrown over the face prior to the nuptial ceremony. The kittel is now worn by the host at the Seder ceremony on Passover eve, as a symbol of freedom; by members of the community on Yom Kippur; and by the ḥazzan at the musaf service of Shemini 'Aẓeret and at musaf of the first day of Passover. See Costume; Geshem.

K. J. D. E.

SARGON: King of Assyria; died 705 B.C. He is mentioned in the Bible only in Isa. xx. 1; and his name is preserved by no classic writer. All modern knowledge of him dates, therefore, from the discovery of his palace at Khorsabad, twelve miles northeast of Nineveh, by Botta in 1843. This palace was a part of the city of Dur-Sharrukin, which Sargon built as a new capital for himself. It was lined with bas-reliefs presenting an illustrated account of his reign; and under the foundations of the city gates also chronicles on clay were found. From these and the chronological data of the Assyrian kingdom, an account of Sargon's reign, which extended from 722 to 705, can be reconstructed.

Sargon succeeded Shalmaneser IV. Whether he was of royal blood or not is a matter of dispute. Neither he nor his son Sennacherib claimed royal descent; but his grandson Esar-haddon claimed the king Bel-bani as a remote ancestor of Sargon (comp. "Journal of the American Oriental Society," Proceedings, May, 1891, p. cxxxii.). The fact that Sargon ascended the throne in the same month that Shalmaneser died indicates that he was looked upon as the natural successor of the latter. Before his accession he was general of the armies of Assyria. The name "Sargon" was probably assumed on his accession, in imitation of the famous Sargon of Agade.

When Shalmaneser died the Assyrian armies were besieging Samaria. In the first year of Sargon's reign Samaria fell; and at his command more than 27,000 of the inhabitants were deported, Babylonians and Syrians being brought to take their places. Under Merodach-baladan Babylon revolted, and was not reconquered until 709. In 720 Sargon sent an army into Palestine; and at Raphia he defeated Egypt and her allies. This gave him the mastery of the west. Between 719 and 708 he undertook many campaigns against and finally subdued Urartu in Armenia—a kingdom which had given his ancestors much trouble. During the same period he made several campaigns against the Moschi and Tabal in the Taurus Mountains. In 711 he sent his "Tartan" into Palestine to put down a coalition headed by Ashdod; it is this expedition which Isaiah mentions. In 709 he completed the conquest of Babylon, and was crowned king of that country, and in 708 his new capital and palace at Dur-Sharrukin were completed. In 705 he died a violent death; but the text which relates the event is so broken that the nature of the violence is unknown. He was surpassed in ability by Tiglath-pileser III., but was one of Assyria's greatest kings.

J. G. A. B.

SARGON, MICHAEL: Indian convert to Christianity; born in Cochin 1795; died about 1855. He was converted in 1818 by T. Jarrett of Madras, and became the first missionary in India of the London Society for Promoting Christianity Among the Jews. In 1820 Sargon visited his parents at Cochin, who received him kindly; and for a time the Cochin Jews seemed to have no objection to discussing with him his new faith. This reception appeared to promise well for a conversionist propaganda in India; and a local committee of the London society was formed in Madras with Sargon as the representative missionary. Madras became the center of the society's work in Asia. By 1822 Sargon had 116 Jewish children under his charge at Cochin; but in 1824 he was transferred to Bombay, where he opened under the auspices of the London society a school exclusively for Jews, obtaining forty pupils. The result of his labors in Cochin was the baptism of one Jew and of two Jewesses in 1828; and shortly afterward the activity of the London society ceased in India.

Sargon and his brother **Abraham,** however, continued their educational activity in Bombay, where for nearly thirty years they taught the Jewish children the tenets of Judaism without any attempt to convert them. While Sargon is regarded by the London society as one of its pioneer workers, the Beni-Israel of Bombay consider him one of the agents in the revival of religious feeling among them.

J.

SARKO (ZARḲO, ZARIḲ), JOSEPH BEN JUDAH: Italian grammarian and Hebrew poet of the first half of the fifteenth century. According to Carmoly ("Histoire des Médecins Juifs," p. 129), he was a native of Naples and one of the teachers of Judah Messer Leon. He was the author of "Rab Pe'alim," an analytic Hebrew grammar divided into several sections. He states in the preface that he terminated this work on the first day of Elul, 1429. The part which deals with numbers ("Sefer ha-Misparim") is printed at the end of August Justinian's edition of Ruth and Lamentations (Paris, 1520). Sarko's Hebrew verses, which follow the preface, were published by Dukes in "Orient, Lit." viii. 441. According to the latter (*ib.* x. 452), Sarko was the author also of "Ba'al ha-Lashon," a Hebrew dictionary, in which he often quotes his "Rab Pe'alim." Zunz, however, says ("Z. G." p. 113) that the author of the "Ba'al ha-Lashon" was a certain Joseph b. Jozadak. Parma De Rossi MS. No. 939, 2 contains verses by various poets, among others Joseph Sarko; but this may be a grandson of the author of "Rab Pe'alim" who lived about a century later (comp. Zunz in "Kerem Ḥemed," vii. 120). It is probably with this later Sarko that Ibn Yaḥya ("Shalshelet ha-Ḳabbalah," p. 63b) confused the author of the "Rab Pe'alim" when he says that he was a contemporary of Elijah Levita.

SARMAD, MOHAMMED SA'ID: Persian poet of Jewish birth; flourished in the first half of the seventeenth century. He was born at Kashan of a rabbinical family, but later embraced Mohammedanism, and went to India as a merchant. In the city of Tatta, Karachi, he became infatuated with a young Hindu named Abhichand, whom he converted to a mixture of Judaism and Mohammedanism. In 1647 Sarmad was in Haidarabad, not far from Tatta, and there meeting Moshan Fani, the author of the "Dabistan-i Madhahib," or "School of Sects," he gave him the material for a meager chapter on the Jews. According to Moshan Fani, Sarmad held that man's life and death are a day and a night succeeding each other indefinitely at regular intervals of one hundred and twenty years each, and that at death the body passes partly into minerals and partly into vegetables, animals, and the like. This doctrine shows Hindu influence, while his view that allusions to Mohammed exist in the Old Testament bears the impress of Islamitic teaching. During the rule of Shah Jehan, Sarmad was unmolested; but Aurungzebe soon after his accession to the throne in 1658 charged him with heresy and caused him to be put to death.

Sarmad was a poet of considerable ability; and several of his quatrains are still preserved. He is chiefly noteworthy, however, for having edited, together with Moshan Fani, a portion of Abhichand's Persian translation of the Pentateuch. This version, cited in the "Dabistan" as far as Gen. vi. 8, differs materially from the earlier Judæo-Persian translations by Jacob TAWUS and others (see JEW. ENCYC. iii. 190, vii. 317).

SARMENTO, JACOB DE CASTRO. See CASTRO SARMENTO.

SARPHATI, SAMUEL: Dutch physician and economist; born at Amsterdam Jan. 31, 1813; died there June 23, 1866. After finishing his medical studies at Leyden (M.D. 1838) he established himself as a physician in Amsterdam. He founded a society for the cultivation of land fertilized by the town sewage (Maatschappij van Landbouw en Landontginning); and on his initiative the first school of commerce was established, before the state had organized this branch of secondary instruction.

After a journey to London in 1852 Sarphati founded a society for the erection of a palace for exhibitions of natural industries, and to disseminate his plan published the periodical "De Volksvlijt." In 1864 the Palys voor Volksvlijt was dedicated on a spot then on the outskirts of the town, but now the center of a new Amsterdam, with a Sarphati Straat, a Sarphatikade, and a Sarphati Park in which his monument has been erected. The first houses of this new city were built by him. To provide people with cheap bread he founded the Maatschappij voor Meel-en-Broodfabrieken; and on his initiative the Amstel Hotel was built (March 26, 1866) in the street later named after him.

Sarphati was a member of the Provinciale Staten, officer of the Eikenkroon, and a member of the Order of the Netherlands Lion.

S. E. SL.

SARSINO (SARCINO), JACOB B. JOSEPH: Italian rabbi of the seventeenth century; pupil of R. Ẓebi Hirsch b. Isaac in Cracow. He was rabbi in Venice, and labored as such together with Leon of Modena. He corrected several books which were printed in Venice, and supplied them with notes; and he printed the "Haggahot" of his teacher Ẓebi Hirsch on Jacob Weil's "Sheḥitot u-Bediḳot," to which he added his own notes. Sarsino published "Seder ha-Niḳḳur" (Venice, 1692), containing rules and regulations for porging; but this is said to be only an extract from a work of his teacher.

SÄRTELES, MOSES BEN ISSACHAR HA-LEVI. See MOSES SAERTELES BEN ISSACHAR HA-LEVI.

SARUG (SARUḲ), ISRAEL (called also **Ashkenazi**): Cabalist of the sixteenth century. A pupil of Isaac Luria, he devoted himself at the death of his master to the propagation of the latter's cabalistic system, for which he gained many adherents in various parts of Italy. Among these the most prominent were Menahem Azariah da Fano, whom he persuaded to spend large sums of money in the acquisition of Luria's manuscripts, and Aaron Berechiah of Modena, author of the "Ma'abar Yabboḳ" ("Ma'abar Yabboḳ, Ḳorban Ta'anit," i.). Sarug lectured also in various places in Germany and in Amsterdam. In the latter city one of his disciples was Abraham de Herrera.

Sarug was the author of: a cabalistic essay entitled "Ḳabbalah," published in the "Maẓref la-Ḥokmah" of Joseph Delmedigo (Basel, 1629); "Hanhagot Yosher," or "Tiḳḳun Ḳeri," or "Ḳeri Miḳra" (Salonica, 1752), hodegetics to asceticism; and "Ḳonṭres Ne'im Zemirot Yisrael," a cabalistic commentary on three of Luria's piyyuṭim for Sabbath.

SASON, AARON BEN JOSEPH: Rabbi of Salonica in the sixteenth and seventeenth centuries; died shortly before 1626. He was a pupil of Mordecai Matalon, and in his turn was the teacher of Ḥayyim Shabbethai. He was the author of various works both rabbinic and cabalistic, most of which were burned in the fire at Constantinople in 1606. Some of his responsa were published by his son Joseph Sason under the title "Torat Emet" (Venice, 1626). His text of agreements ("haskamot") for renting houses and other property is to be found in Abraham ha-Levi's "Ginnat Weradim" (part relative to the Ṭur Ḥoshen Mishpaṭ, No. 6). Shabbethai Bass ("Sifte Yeshenim," p. 80, No. 201) mentions a work of Sason's entitled "Sefat Emet" (n.p., n.d.), consisting of novellæ on the Tosafot to the Talmud. Both De Rossi ("Dizionario," ii. 123) and Wolf ("Bibl. Hebr." i., No. 184) confuse this work with that of Moses Ḥagiz, declaring that it was republished at Amsterdam in 1706.

SASON, ABRAHAM: Italian cabalist; flourished in Venice at the beginning of the seventeenth century. He was the author of the following works: "Ḳol Mebasser" (Venice, 1605), a commentary on Daniel; "Ḳol Sason," on the arrival of the Messiah, printed together with the preceding work; and "Appiryon Shelomoh" (*ib.* 1609), essays on Cabala and mysticism.

K. I. Br.

SASON, JACOB BEN ISRAEL: Palestinian Talmudist; flourished at Safed at the end of the seventeenth century; a pupil of Isaac Alfandari. He was the author of "Bene Ya'aḳob" (Constantinople, 1714), consisting of a commentary on a part of Isaac b. Abba Mari's "Sefer ha-'Iṭṭur," and fourteen responsa and novellæ on Maimonides' "Yad" and on Jacob b. Asher's four Ṭurim. Owing to Sason's premature death (at the age of thirty-one), this work was left unfinished.

SASON, JOSEPH BEN JACOB: Editor and, perhaps, author; lived in the sixteenth century. He edited the "Maḥazor Sefardi" (Venice, 1584); and a Jewish calendar for the period 1585–1639 was printed the same year at Sason's expense. The author of "Shemen Sason," Joseph Sason, may be identical with the subject of this article. This work is a treatise on the Masorah, in which are quoted the ancient works thereon, *e.g.*, the "Shte Aḥyot." It is cited in Lonsano's "Or Torah" and Norzi's "Minḥat Shai" (comp. Dukes, "Ḳonṭres ha-Masoret," p. 24, Tübingen, 1846).

Bibliography: Fürst, *Bibl. Jud.* iii. 250; Steinschneider and Cassel, *Jüdische Typographie*, in Ersch and Gruber, *Encyc.* section ii., part 28, p. 58, note 12.

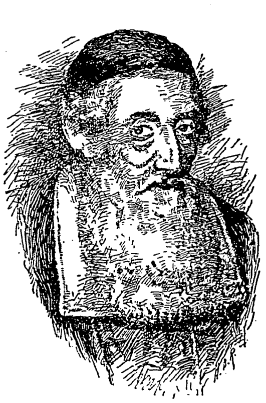
SASPORTAS: Spanish family of rabbis and scholars, the earliest known members of which lived at Oran, Algeria, at the end of the sixteenth century. The name seems to indicate that the family originally came from a place called Seisportas (= "six gates"; comp. Jacob Sasportas, "Ohel Ya'aḳob," Nos. 21, 63). Later it was mispronounced "Sasportas," "Saportas," "Saporta," and "Sforta"; and Jacob Sasportas himself gives his name in an acrostic as שפורטא. A Saporta family lived later in Montpellier, France. The Sasportas family, with the Cansinos at Oran, then a Spanish colony, remained loyal to the Spanish kings, who were at war with the Moors. Members of both families competed for the office of government interpreter (see Jacob b. Aaron Sasportas). It may be added that **Aaron Sasportas,** the earliest known member of this family, was a descendant in the tenth generation of Naḥmanides (Jacob Sasportas, *l.c.* No. 24). The more prominent members are the following:

Isaac ben Jacob Sasportas: Rabbi of the Portuguese community at Amsterdam in the beginning of the eighteenth century. He left in manuscript a collection of rabbinical decisions, poems, sermons, and letters in Spanish, Portuguese, and Hebrew, besides a Spanish translation of two responsa written in Hebrew in 1720 (comp. Steinschneider, "Hebr. Bibl." xi. 41).

Jacob ben Aaron Sasportas: Rabbi, cabalist, and anti-Shabbethaian; born at Oran 1610; died at Amsterdam April 15, 1698; father of Isaac b. Jacob Sasportas. He became rabbi successively of Tlemçen (at the age of twenty-four), Morocco, Fez, and Sali. About 1646 he was imprisoned by the Moorish king, but succeeded in escaping with his family to Amsterdam (*c.* 1653). He stayed there till the disorders in Africa ceased, when he was called back by the King of Morocco and sent on a special mission to the Spanish court (*c.* 1659) to ask for aid against the rebels. On his return he was invited to the rabbinate of the Portuguese community of London (1664). According to David Franco Mendes (in "Ha-Meassef," 1788, p. 169), Jacob had accompanied Manasseh b. Israel to London in 1655. Owing to the outbreak of the plague in London in 1665, Jacob went to Hamburg, where he officiated as rabbi till 1673. In that year he was called to Amsterdam and appointed head of the yeshibah Keter Torah, founded by the brothers Pinto. Two years later he became dayyan and head of the yeshibah at Leghorn, and in 1680 he returned to Amsterdam, where he was appointed head of the yeshibah 'Eẓ Ḥayyim. After the death of Isaac Aboab (1693) he was appointed rabbi of the Portuguese community, which office he held till his death.



Haham Jacob Sasportas.

A Virulent Anti-Shabbethaian.

Jacob was one of the most violent antagonists of the Shabbethaian movement; he wrote many letters to various communities in Europe, Asia, and Africa, exhorting them to unmask the impostors and to warn the people against them. He wrote: "Toledot Ya'aḳob" (Amsterdam, 1652), an index of Biblical passages found in the haggadah of the Jerusalem Talmud, similar to Aaron Pesaro's "Toledot Aharon," which relates to the Babylonian Talmud only; "Ohel Ya'aḳob" (*ib.*

1737), responsa, edited and prefaced by his son Abraham Sasportas; "Ẓiẓat Nobel Ẓebi" (*ib.* 1737), polemical correspondence against Shabbethai Ẓebi and his followers, also edited by his son. The last-named work was afterward abridged by Jacob Emden under the title "Ḳiẓẓur Ẓiẓat Nobel Ẓebi" (Altona, n.d.). Jacob edited the "Hekal ha-Ḳodesh" of Moses b. Maimun Albas, to which he added an introduction and supplied notes (Amsterdam, 1653). Grätz ("Gesch." x., note 2) identifies Jacob Sasportas with Jaho Saportas, who competed with the Cansinos for the office of interpreter at the Spanish court (Jacob Cansino's preface to Moses Almosnino's "Extremos y Grandezas de Constantinople," Madrid, 1638).

J. M. Sel.

Solomon Sasportas: Rabbi at Nice from 1690; died there Oct. 2, 1724; son of Isaac Sasportas and grandson of Jacob Sasportas. Like his father, Solomon engaged in cabalistic studies. His work "Shesh She'arim, Zeker Rab. Memoria de los 613 Preceptos de la Ley, y Siete de Sabios. Traducido del Hebraico," in Spanish and Hebrew, was printed by Solomon Adhan of Tafilet (Amsterdam, 1727).

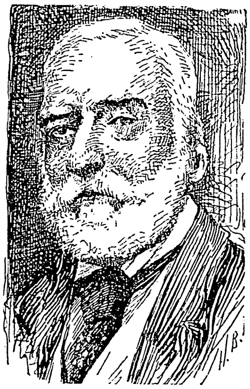
Pedigree of the Sassoon Family.

Sir Albert Abdallah David Sassoon, Bart.: Anglo-Indian merchant; head of the house of David Sassoon & Co., "the Rothschilds of the East"; born at Bagdad 1817; died at Brighton, England, Oct. 24, 1896; eldest son of David Sassoon. Sassoon received a European education; and on the death of his father, in 1864, he succeeded to the leadership of the great banking and mercantile firm of David Sassoon & Co. The history of the development of Bombay and its benevolent institutions is inseparably associated with his name. The Sassoon Dock, constructed by his firm, was the first instance of a wet dock built in western India; and it stimulated the Bombay government to promote the construction of the large Prince's Dock. The Sassoon manufactories of silk and cotton goods at Bombay furnished employment for a large amount of native labor; and the Sassoons were also the managers of the Port Canning Company, with estates lying at the mouth of the River Mullah, in Bengal.



Sir Albert Sassoon.

Sassoon made many donations to Bombay, his benevolence lying mainly in the promotion of education among every class and creed. He contributed largely toward the Elphinstone High School of Bombay, and founded scholarships at the university and the art school of that city. In his own community he maintained the David Sassoon Benevolent Institution, a school affording instruction to many hundreds of Jewish children. He was a vice-president of the Anglo-Jewish Association, and in Bagdad erected the school of the Alliance Israélite Universelle, presenting it to the community free of all encumbrances.

In 1867 Sassoon was appointed a companion of the Star of India, and a year later he became a member of the Bombay legislative council, a position which he continued to hold for some years. It was mainly through his contributions that a colossal statue of Edward, then Prince of Wales, was erected in Bombay. In 1872 he received the honor of knighthood; and in November of the following year the freecorporation of London conferred upon him the freedom of the city, he being the first Anglo-Indian to receive it. The shah, whom he entertained at the Empire Theatre, London, in 1889, conferred on him the Order of the Lion and the Sun; and in 1890 Queen Victoria advanced him to the dignity of a baronet.

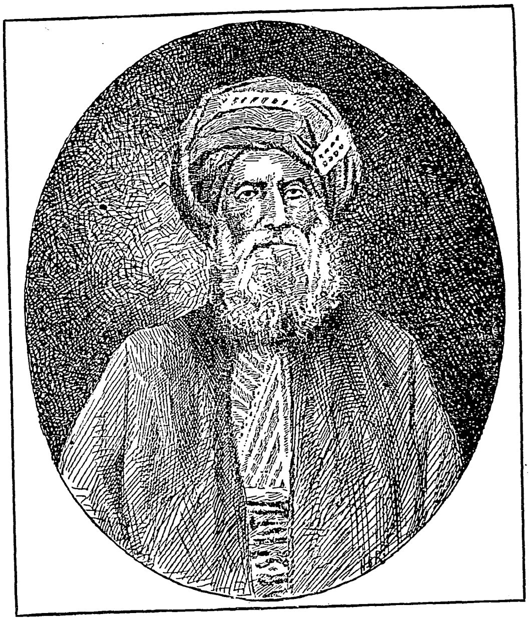
J. G. L.

David Sassoon: Indian merchant and banker; born at Bagdad Oct., 1792; died at Bombay Nov. 7, 1864. He had a fair knowledge of Hebrew, Arabic, Persian, Turkish, and Hindustani, but not of English. His father, who was a wealthy Mesopotamian merchant, and who was for many years state treasurer to the Turkish governor of Bagdad, was known as "Nasi [= "Prince"] of the Captivity." David Sassoon was employed in a banking-house at Bagdad till 1822. After the plague he left Bagdad for Bassora, proceeding thence to Bushire. In 1832 an important commercial engagement caused him to visit Bombay, to which city he subsequently removed with his family. Here he established the house of David Sassoon & Co., with branches at Calcutta, Shanghai, Canton, and Hongkong; and his business, which included a monopoly of the opium-trade, extended as far as Yokohama, Nagasaki, and other cities in Japan. Sassoon attributed his great success to the employment of his sons as his agents and to his strict observance of the law of tithe.



David Sassoon.

Owing to his benefactions Sassoon's name was familiar to all the Jews of Turkey, China, Japan, Persia, and India. In Bombay he built and munificently endowed a splendid synagogue and established a Talmud Torah school; and at Puna, his summer residence, he built another handsome synagogue. He subscribed liberally to the Sailors' Homes in Bombay and Hongkong, to the famine fund, to the fund for the widows and orphans of those killed during the Indian Mutiny of 1857, and to the Lancashire relief fund. He supported an institution for teaching English, Arabic, and Hebrew (closed 1901); and shortly before his death he set apart a large sum for the erection of a Mechanics' Institution at Bombay, which is called by his name. One of the most important of his public institutions is the Sassoon Reformatory and Industrial Institution for Juvenile Offenders. Sassoon built and endowed the Infirm Asylum at Puna; and another charitable institution erected by him was the General Hospital at Puna, founded in 1863, for all castes and creeds. In appreciation of Sassoon's philanthropic labors the citizens of Bombay placed a marble bust of him in the Victoria and Albert Museum, to which he had presented an illuminated clock-tower. His last public act was the erection of a statue in memory of Albert, prince consort.

On Dec. 13, 1864, under the presidency of the governor, a special meeting for the purpose of voting a memorial to Sassoon was held in the Bombay Town Hall; and as a result a statue was placed in the Sassoon Mechanics' Institution of that city.

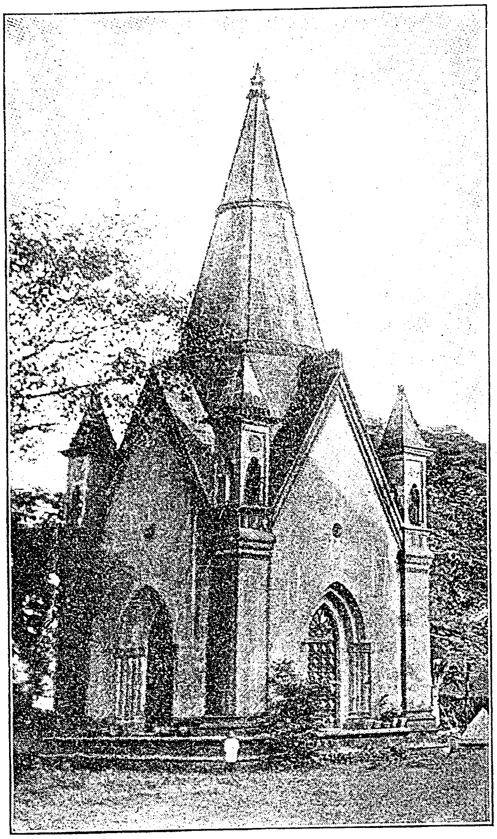
J. J. Hy.

David Sassoon Sassoon: Indian merchant; born at Bombay 1832; died at London 1867. At an early age he was sent to Bagdad, where he was initiated into Biblical and Talmudic lore. Thence he proceeded to Shanghai, where he conducted the mercantile operations of the China branch of the firm of David Sassoon, Sons & Co. He went to London in 1858, and soon occupied a prominent position among the principal merchants of that city, being elected director of a number of important companies. He spoke several Oriental languages with great fluency.

Sassoon was president of a committee which had for its object the organization of an expedition to the Jews in China, Abyssinia, and the East; and was a member of the council of Jews' College and of the committee of the Jews' Free School, which two institutions he munificently endowed. He was also a warden of the Spanish and Portuguese synagogue. For several years he acted as examiner in Hebrew to the Jews' Free School.

Bibliography: *Jew. Chron.* July 19, 1867.

Sir Edward Albert Sassoon, Bart.: Eldest surviving son of Sir Albert Sassoon and of Hannah, daughter of Meyer Moise (Moses) of Bombay; born in that city June 20, 1856; succeeded to the baronetcy in 1896 on the death of Sir Albert Sassoon. He is a graduate of London University, a major in the Duke of Cambridge's Hussars Yeomanry, and a deputy lieutenant. In March, 1899, he was elected member of Parliament for Hythe in the Unionist interest. In Feb., 1902, on the resignation of Sir Joseph Sebag Montefiore, Sir Edward was elected president of the London Spanish and Portuguese Congregation; and he is a vice-president of Jews' College and of the Anglo-Jewish Association.



Tomb of David Sassoon, Puna, India.
(From a photograph.)

In 1887 he married Aline Caroline, daughter of Baron Gustave de Rothschild.

Bibliography: *Jew. Chron.* March 3, 1899, and Feb. 9, 1900; Harris, *Jewish Year Book*, 1901; *Who's Who*, 1905.

J. G. L.

Elias David Sassoon: Indian merchant and banker; born in 1819; died at Colombo 1880. He was the first of David Sassoon's sons to go to China (in 1844) to open a branch there. After his return he conducted his father's business in Bombay with great skill and energy, and avoided becoming involved in the crisis of the share mania. He left his father's firm in 1867, and opened branches in Hongkong and Shanghai. Sassoon contributed to the erection of the Maternity Hospital at Puna, and to the David Sassoon Infirm Asylum in the same city. He also built a synagogue in Hongkong.

Jacob Elias Sassoon: Indian mill-owner, merchant, and banker; born 1848. He succeeded his father in business. He built a synagogue and opened a Hebrew and English school for Jewish children in the Fort, Bombay. Sassoon is one of the proprietors of the E. D. Sassoon Mills, the Alexandra Mills, the E. D. Sassoon Dye Works, and is the owner of the Jacob Sassoon Mills, one of the largest establishments of the kind in India. In 1900 he built a house in Colaba, Bombay, to be utilized for the use of the poor of his community. There are branches of his business house at Calcutta, Hongkong, Shanghai, Kobé, London, and Manchester.

J. J. Hy.

Solomon David Sassoon: Indian merchant and banker; born at Bombay 1841; died there March 18, 1894. He went to China as an assistant in his father's business house, and afterward became the head of the firm of David Sassoon & Co., remaining in charge of it until his death. Sassoon was director of the Bank of Bombay and one of the port trustees, and was twice nominated in the time of Sir James Fergusson as an additional member, for making laws and regulations, of the council of the governor of Bombay. He was chairman of the Sassoon Spinning and Weaving Co., of the Sassoon and Alliance Silk Co., of the Port Canning and Land Improvement Co., of the Oriental Life Assurance Co., and of several other joint-stock associations. He was also president of the Bombay branch of the Anglo-Jewish Association from 1894.

J. G. L.

SATAN: Term used in the Bible with the general connotation of "adversary," being applied (1) to an enemy in war (I Kings v. 18 [A. V. 4]; xi. 14, 23, 25), from which use is developed the concept of a traitor in battle (I Sam. xxix. 4); (2) to an accuser before the judgment-seat (Ps. cix. 6); and (3) to any opponent (II Sam. xix. 23 [A. V. 22]). The word is likewise used to denote an antagonist who puts obstacles in the way, as in Num. xxii. 32, where the angel of God is described as opposing Balaam in the guise of a satan or adversary; so that the concept of Satan as a distinct being was not then known. Such a view is found, however, in the prologue to the Book of Job, where Satan appears, together with other celestial beings or "sons of God," before the Deity, replying to the inquiry of God as to whence he had come, with the words: "From going to and fro in the earth, and from walking up and down in it" (Job i. 7). Both question and answer, as well as the dialogue which follows, characterize Satan as that member of the divine council who watches over human activity, but with the evil purpose of searching out men's sins and appearing as their accuser. He is, therefore, the celestial prosecutor, who sees only iniquity; for he persists in his evil opinion of Job even after the man of Uz has passed successfully through his first trial by surrendering to the will of God, whereupon Satan demands another test through physical suffering (*ib.* ii. 3-5).

In the Bible.

Yet it is also evident from the prologue that Satan has no power of independent action, but requires the permission of God, which he may not transgress.

He can not be regarded, therefore, as an opponent of the Deity; and the doctrine of monotheism is disturbed by his existence no more than by the presence of other beings before the face of God. This view is also retained in Zech. iii. 1–2, where Satan is described as the adversary of the high priest Joshua, and of the people of God whose representative the hierarch is; and he there opposes the "angel of the Lord," who bids him be silent in the name of God. In both of these passages Satan is a mere accuser who acts only according to the permission of the Deity; but in I Chron. xxi. 1 he appears as one who is able to provoke David to destroy Israel. The Chronicler (third century B.C.) regards Satan as an independent agent, a view which is the more striking since the source whence he drew his account (II Sam. xxiv. 1) speaks of God Himself as the one who moved David against the children of Israel. Since the older conception refers all events, whether good or bad, to God alone (I Sam. xvi. 14; I Kings xxii. 22; Isa. xlv. 7; etc.), it is possible that the Chronicler, and perhaps even Zechariah, were influenced by Zoroastrianism, even though in the case of the prophet Jewish monism strongly opposed Iranian dualism (Stave, "Einfluss des Parsismus auf das Judenthum," pp. 253 *et seq.*). An immediate influence of the Babylonian concept of the "accuser, persecutor, and oppressor" (Schrader, "K. A. T." 3d ed., p. 463) is impossible, since traces of such an influence, if it had existed, would have appeared in the earlier portions of the Bible.

In the Apocrypha.

The evolution of the theory of Satan keeps pace with the development of Jewish angelology and demonology. In Wisdom ii. 24 he is represented, with reference to Gen. iii., as the author of all evil, who brought death into the world; he is apparently mentioned also in Ecclus. (Sirach) xxi. 27, and the fact that his name does not occur in Daniel is doubtless due merely to chance. Satan was the seducer and the paramour of Eve, and was hurled from heaven together with other angels because of his iniquity (Slavonic Book of Enoch, xxix. 4 *et seq.*). Since that time he has been called "Satan," although previously he had been termed "Satanel" (*ib.* xxxi. 3 *et seq.*). The doctrine of the fall of Satan, as well as of the fall of the angels, is found also in Babylonia (Schrader, *l.c.* p. 464), and is mentioned several times in the New Testament. Satan rules over an entire host of angels (Martyrdom of Isaiah, ii. 2; Vita Adæ et Evæ, xvi.). Mastema, who induced God to test Abraham through the sacrifice of Isaac, is identical with Satan in both name and nature (Book of Jubilees, xvii. 18), and the Asmodeus of the Book of Tobit is likewise to be identified with him, especially in view of his licentiousness. As the lord of satans he not infrequently bears the special name Samael. It is difficult to identify Satan in any other passages of the Apocrypha, since the originals in which his name occurred have been lost, and the translations employ various equivalents. An "argumentum a silentio" can not, therefore, be adduced as proof that concepts of Satan were not wide-spread; but it must rather be assumed that reference to him and his realm is implied in the mention of evil spirits of every sort (comp. Demonology, and Kautzsch, "Apokryphen," Index).

In the New Testament.

The high development of the demonology of the New Testament presupposes a long period of evolution. In the Gospels the beliefs of the lower orders of society find expression, and Satan and his kingdom are regarded as encompassing the entire world, and are factors in all the events of daily life. In strict accordance with his manifold activity he bears many names, being called "Satan" (Matt. iv. 10; Mark i. 30, iv. 15; Luke x. 18 *et passim*), "devil" (Matt. iv. 1 *et passim*), "adversary" (I Peter v. 8, ἀντίδικος; I Tim. v. 14, ἀντικείμενος), "enemy" (Matt. xiii. 39), "accuser" (Rev. xii. 10), "old serpent" (*ib.* xx. 2), "great dragon" (*ib.* xii. 9), Beelzebub (Matt. x. 25, xii. 24, *et passim*), and Belial (comp. Samael). The fall of Satan is mentioned in Luke x. 18, John xii. 31, II Cor. vi. 16, and Rev. xii. 9. He is the author of all evil (Luke x. 19 *et passim*; Acts v. 3; II Cor. xi. 3; Ephes. ii. 2), who beguiled Eve (II Cor. xi. 3; Rev. xii. 9), and who brought death into the world (Heb. ii. 13), being ever the tempter (I Cor. vii. 5; I Thess. iii. 5; I Peter v. 8), even as he tempted Jesus (Matt. iv.). The belief in the devil as here developed dominated subsequent periods, and influenced indirectly the Jews themselves; nor has it been entirely discarded to-day.

Satan and his host are mentioned comparatively seldom in the Talmud and Midrash, although the material on this subject is not without importance. In the older or tannaitic literature the name of Satan is met with but rarely. Thus in Ab. iv. 11 sin itself, and not Satan, is the accuser, the term κατήγωρ becoming a standing epithet of Satan in the New Testament, and being applied to him by the later Talmudic teachers also. In Tosef., Shab. xvii. (xviii.) 3 it is stated that the angels of Satan accompany the blasphemer on his way, according to Ps. cxv. 6, while a comparison of Gen. R. xxxviii. 7 with Sifre, Num. xxv. 1 shows how reference to Satan was introduced by the Amoraim into tannaitic sayings (Bacher, "Ag. Pal. Amor." ii. 254); and in like manner "Satan" is substituted for "angel" in Ned. 32a.

The Angelology of the Talmud, moreover, proves that, according to the older view (until about 200 C.E.), punishment was inflicted by angels and not by Satan. In the course of time, however, official Judaism, beginning perhaps with Johanan (d. 279), absorbed the popular concepts of Satan, which doubtless forced their way gradually from the lower classes to the most cultured. The later a midrashic collection the more frequent is the mention therein of Satan and his hosts. The Palestinian Talmud, completed about 400, is more reticent in this regard; and this is the more noteworthy since its provenience is the same as that of the New Testament.

In Talmud and Midrash.

Samael, the lord of the satans, was a mighty prince of angels in heaven (Gen. R. xix.). Satan came into the world with woman, *i.e.*, with Eve (Yalk., Gen. i. 23); so that he was created and is not eternal. Like all celestial beings, he flies through the air (Gen. R. xix.), and can assume any form, as of a bird (Sanh. 107a), a stag (*ib.* 95a), a woman (Ḳid. 81a), a beggar (*ib.*), or a young man (Tan., Wayera, end); he is said to skip (Pes. 112b; Meg. 11b), in allusion to his appearance in the form of a goat (comp. the goat-demons of the Bible), and it was as such that he was addressed with the words "an arrow between thine eyes" by one who wished to express contempt for him (Ḳid. 30a, 81a, *et passim*).

He is the incarnation of all evil, and his thoughts and activities are devoted to the destruction of man; so that Satan, the impulse to evil ("yeẓer ha-ra'"), and the angel of death are one and the same personality. He descends from heaven and leads astray, then ascends and brings accusations against mankind. Receiving the divine commission, he takes away the soul, or, in other words, he slays (B. B. 16a). He seizes upon even a single word which may be prejudicial to man; so that "one should not open his mouth unto evil," *i.e.*, "unto Satan" (Ber. 19a). In times of danger likewise he brings his accusations (Yer. Shab. 5b *et passim*). While he has power over all the works of man (Ber. 46b), he can not prevail at the same time against two individuals of different nationality; so that Samuel, a noted astronomer and teacher of the Law (d. at Nehardea 247), would start on a journey only when a Gentile traveled with him (Shab. 32a).

Satan's knowledge is circumscribed; for when the shofar is blown on New-Year's Day he is "confounded" (R. H. 16b; Yer. Targ. to Num. x. 10). On the Day of Atonement his power vanishes; for the numerical value of the letters of his name (השטן) is only 364, one day being thus exempt from his influence (Yoma 20a). Moses banished him by means of the Divine Name (Grünhut, "Sefer ha-Liḳḳuṭim," v. 169). If Satan does not attain his purpose, as was the case in his temptation of Job, he feels great sorrow (B. B. 16a); and it was a terrible blow to him, as the representative of moral evil, that the Torah, the incarnation of moral good, should be given to Israel. He endeavored to overthrow it, and finally led the people to make the golden calf (Shab. 89a; Yer. Targ. to Ex. xxxii. 1), while the two tables of the Law were bestowed on Moses of necessity without Satan's knowledge (Sanh. 26b).

His Functions.

The chief functions of Satan are, as already noted, those of temptation, accusation, and punishment. He was an active agent in the fall of man (Pirḳe R. El. xiii., beginning), and was the father of Cain (*ib.* xxi.), while he was also instrumental in the offering of Isaac (Tan., Wayera, 22 [ed. Stettin, p. 39a]), in the release of the animal destined by Esau for his father (Tan., Toledot, 11), in the theophany at Sinai, in the death of Moses (Deut. R. xiii. 9), in David's sin with Bath-sheba (Sanh. 95a), and in the death of Queen Vashti (Meg. 11a). The decree to destroy all the Jews, which Haman obtained, was written on parchment brought by Satan (Esther R. iii. 9). When Alexander the Great reproached the Jewish sages with their rebellion, they made the plea that Satan had been too mighty for them (Tamid 32a). He appeared as a tempter to Akiba and Mattithiah b. Ḥeresh (Ḳid. 81a; Midr. Abkir, ed. Buber, p. 11). He sowed discord between two men, and when Meïr reconciled them, he departed, crying, "Alas, Meïr has driven me from home!" (Giṭ. 52a; comp. 'Er. 26a) —*i.e.*, Satan is the angel of strife (see also Yoma 67b; Shab. 104a; Yeb. 16a). If any one brings a beautiful captive home, he brings Satan into his house, and his son will be destroyed (Sifre, Deut. 218); for Satan kindles the evil impulse ("yeẓer ha-ra'") to impurity (Ex. R. xx.). Where one makes his home Satan leaps about; where merriment rules, or wheresoever there is eating or drinking, he brings his accusations (Gen. R. xxxviii. 7); and when there is a chance that prosperity may be enjoyed in this world or in the next he likewise rises up as an accuser. Even Jacob was forced to prove to Satan that he had borne much suffering in this world (Gen. R. lxxxiv., in Weber, "System der Altsynagogalen Palästinischen Theologie," p. 323); and when Satan reveals the sins of Israel to God others plead the alms which Israel has given (Ex. R. xxxi.). In the hour of birth, and thus in the hour of peril, he brings his accusation against the mother (Eccl. R. iii. 2). The serpent of Gen. iii. is identified with Satan (see Weber, *l.c.* pp. 218 *et seq.*; comp. ADAM; EVE; SERPENT).

As the incarnation of evil Satan is the arch-enemy of the Messiah: he is Antichrist. The light which was created before the world was hidden by God beneath His throne; and to the question of Satan in regard to it God answered, "This light is kept for him who shall bring thee to shame." At his request God showed Satan the Messiah; "and when he saw him he trembled, fell upon his face, and cried: 'Verily this is the Messiah who shall hurl me and all the princes of the angels of the peoples down even unto hell'" (Pesiḳ. R. iii. 6 [ed. Friedmann, p. 161b]; further details are given in Bousset, "Der Antichrist").

In the Cabala.

While the Pirḳe R. Eli'ezer, and the mystic midrashim edited by Jellinek in his "Bet ha-Midrash," belong historically to the post-Talmudic period, they do not fall under this category so far as their content is concerned. Here belong, strictly speaking, only the Zohar and other esoteric works comprised under the name "Cabala." The basal elements remain the same; but under the influence of medieval demonology a wider scope is ascribed to the activity of Satan and his host, daily life falling within the range of his power. The miscreants of the Bible, such as Amalek, Goliath, and Haman, are identified with him; and his hosts receive new names, among them "Ḳelippa" (husk, rind, peeling, scale). Antichristian polemics also complicate the problem (see the rich collection of material in Eisenmenger, "Entdecktes Judenthum," i. 812 *et seq.*).

Satan was mentioned in the liturgy at an early period, as in the daily morning prayer and in the Blessing of the New Moon; and his name has naturally occurred in amulets and incantations down to the present day. Terms and phrases referring to Satan which are met with in Judæo-German must be regarded as reminiscences of the ancient popular belief in him.

J. L. B.

SATANOW, ISAAC HA-LEVI: Scholar and poet; born at Satanow, Poland, 1733; died in Berlin, Germany, Dec. 25, 1805. In early manhood he left his native country and went to the Prussian capital in search of learning. There he became the protégé of Isaac Daniel and David Friedländer, who procured for him employment as a teacher in some prominent families.

Satanow represents a peculiar type. Like Byron, he was, both physically and mentally, a conglomeration of contrasts. He dressed in the garb of the Polish Jew of the period, yet was a thorough German in his actions and habits. Though Orthodox in his beliefs, he nevertheless favored Reform in practise. He was one of the greatest authorities on Jewish tradition and lore, yet he was one of the most free-thinking of philosophers. He was a shrewd physicist and an inspired poet; a realist and an idealist. While writing his "Mishle Asaf," a work in which the noblest thoughts are expressed in the choicest diction, he did not disdain at the same time to write a treatise on how to drill holes through three hundred pearls in one day and how to mix successfully different kinds of liquors. Even in the most earnest and solemn of his writings there can always be detected an undercurrent of the most playful humor.

In his "Mishle Asaf" he so blended the quaintly antique style of the Bible with modern fine writing that the critics of his time were at a loss how to characterize the work. Some were inclined to revere it as a relic of antiquity, while others attacked the author as a literary charlatan who desired to palm off his own work as a production of the ancient writers. Rabbi Joseph of Frankfort gives a very clever criticism of his work. He says: "I do not really know to whom to ascribe these sayings [of the "Mishle Asaf"]; it may be the publisher himself has composed them; for I know him to be a plagiarist. He, however, differs from the rest of that class in this respect, that they plagiarize the works of others and pass them for their own, while he plagiarizes his own works and passes them for those of others."

Satanow as a poet belongs to two distinctly different schools. In his earlier works he followed the theory of the old school, which considered plays on words, great flourish of diction, and variegated expressions as the essential requirements of good poetry; but in his later works he used the simple, forcible style of the Biblical writers, and he may be justly styled "the restorer of Biblical poetry." It is sufficient to compare his "Eder ha-Yeḳar" and "Sefer ha-Ḥizzayon" with his "Mishle Asaf" to see at a glance the difference in style.

Among Satanow's most important works are the following: (1) "Sifte Renanot," a brief exposition of Hebrew grammar (Berlin, 1773). (2) "Sefer ha-Ḥizzayon" (*ib.* 1775 [?]), in eight parts: part i., a treatise on criticism and knowledge; ii., on poetry; iii., a collection of proverbs; iv., treatises on different scientific topics: a discussion about the visual and auditory senses, from which he makes a digression, and discusses the inhabitants of the moon; v., discussions on esthetic problems, as love, friendship, justice, etc.; vi., a picturesque description of the universe; viii., discussions on various topics. The whole work is written in a highly ornate style; it does not bear the author's name; but a few hints in some of the poems leave no doubt as to who he was. (3) "Imre Binah" (*ib.* 1784). (4) "Seliḥot," a newly arranged edition (*ib.* 1785). (5) "Sefer ha-Shorashim," in three parts, a treatise on Hebrew roots (*ib.* 1787). (6) "Mishle Asaf," a collection of gnomes, modeled after the Book of Proverbs (*ib.* 1788–91). (7) "Moreh Nebukim," text together with commentary (*ib.* 1791–96). (8) "Zemirot Asaf," with the commentary of Samuel ben Meïr (*ib.* 1793). This was the first attempt of the Slavonic school to build up a national lyric poetry, although the psalms have the form rather of philosophic reflections than of lyric expression. No references to national history or national lore, and no expressions of patriotism, are to be found in them. They form a simple doxology, and reflect a rational view of nature as opposed to mysticism. (9) "Pirḳe Shirah," on the natural sciences.

H. R. J. Go.

SATIRE: Ironical and veiled attack, mostly in verse. Among the Hebrews satire made its appearance with the advent of the usurper. The tradition runs that when Abimelech, the son of a maid-servant, treacherously slew all his brothers except Jotham, and usurped the leadership of the men of Shechem, Jotham, his youngest brother, hurled at him from the top of Mount Gerizim the famous satiric fable of the trees that went forth to anoint a king over themselves and chose the bramble (Judges ix. 7–15; see FABLE). Again, when David wronged his faithful servant Uriah the prophet Nathan brought him to repentance with the parable of the rich man who feasted his guest on the poor man's lamb (II Sam. xii. 1–13). Isaiah's oration at the death of the King of Babylon (Isa. xiv. 4–23) is one of the strongest satires in all literature. Many more examples could be cited from the Bible, but those mentioned are sufficient to warrant the statement that the beginning of the development of satire among the Hebrews dates from the earliest period in their history.

Biblical Examples.

The satire of Ben Sira is sententious in form and refers to all phases of the social life of his day. The frailty of women, the fickleness of friends, the arrogance of the rich—these and many other topics are discussed in the style of the Proverbs, with here and there a suggestion of fable and parable. In the Talmud and Midrash examples of satire abound in the form of puns, parables, and epigrams. The ancient Rabbis had a keen sense for the satirical, and often employed it in their disputes with the Sadducees and the neophytes. The tyranny of the Cæsars and the profligacy of Rome were other topics for the satirists though in these instances they found it prudent to veil their expressions and speak in metaphors. As an example of their powers of satire the following may be cited:

> "There was a widow who lived with her two daughters and possessed only one field. When she began to plow the field, Moses said to her, 'Thou shalt not plow with ox and ass together.' When she began to sow, he admonished her not to sow the field with two kinds of seed. She began to reap and pile up the stacks; then he told her to leave 'gleanings' [לקט], 'the poor man's sheaf' [שכחה], and the 'corner' [פאה]. When the harvesting season came, he said to her, 'Yield up the priest's share and the first and second tithes.' She submitted, and gave what he demanded. Then she sold the field and bought two young sheep to use their wool and profit from their offspring. But as soon as the sheep gave birth to their young, Aaron came and said, 'Give me the first-born, for so the Lord hath ordained.' Again she submitted, and gave him the young. When the time of shearing came, he said to her, 'Give me the first shearing.' Then she said, 'I no more have strength to endure this man; I shall slaughter these animals and use their meat.' But when she had slaughtered them, he said to her, 'Give me the shoulder, the two cheeks, and the maw.' Then she said, 'Even after slaughtering these animals I have not escaped this man; let them, then, be consecrated.' 'In that case,' replied he, 'they belong altogether to me; for the Lord hath said, "Everything consecrated in Israel shall be thine"' [Num. xviii. 14]. So he took the sheep, and went his way, and left the widow and her two daughters weeping" (Yalḳuṭ Shim‘oni, Ḳoraḥ).

This satire was undoubtedly directed against the corrupt officials who robbed and oppressed the poor people on religious pretexts, though the satirist puts his criticism in the mouth of Korah in order to save himself from the animosity of those he attacked.

Medieval Satire.

The rise of Karaism in the middle of the eighth century brought a great deal of satire and polemics into Jewish literature. One of the best known of Saadia's polemical remarks is in regard to the two Karaites Anan and Saul: "As Anan has consumed and vanished away, so shall Saul go down and shall come up no more"—a parody of Job vii. 9. On the other hand, some of the poems of Moses Dar‘i (Pinsker, "Liḳḳuṭe Ḳadmoniyyot," pp. 73-74) are fair specimens of Karaitic satire against Rabbinism.

The influence of Arabic culture on Jewish life and literature, which grew stronger and stronger during the succeeding centuries, was propitious to the growth of satire. A mere difference of opinion in linguistics was sufficient to call forth a scathing poem by Dunash ben Labraṭ against Menahem ben Saruḳ (10th cent.). In the eleventh century Ibn Gabirol indulged in occasional satires against those who ill-treated him, as is seen in his wine-song; and Samuel ibn Nagrela wrote satirical maxims in imitation of Proverbs and Ecclesiastes. Early in the twelfth century Abraham ibn Ezra penned his epigrams on poverty and the arrogance of the rich, and wrote his satire on card-players. Later in the same century Joseph Zabara wrote a satire on the medical fraternity of his day, entitled "The Physicians' Aphorisms" (מאמרי הרופאים), and two satires on women—"A Widow's Vow" (נדר אלמנה) and "Contentions of a Wife" (מדיני אשה). The thirteenth century can boast of two great satirists, Judah ben Isaac ibn Shabbethai and Judah Al-Ḥarizi. The former is known for his "Gift of Judah" (מנחת יהודה), which is both a satire on the woman-hater and a reproach to those who marry in haste. Ibn Shabbethai wrote also "The Conflict Between Wisdom and Wealth" (מלחמת החכמה והעושר), and a polemic against his personal enemies entitled "The Writ of Excommunication" (דברי האלה והנדוי), which is still in manuscript. Of the two, however, Al-Ḥarizi is by far the greater satirist.

Al-Ḥarizi.

His extensive travels brought the whole panorama of Jewish life under his observation and enabled him, in his itineraries, to criticize the follies and foibles of his contemporaries. His great skill lies in drawing a vivid picture in few words. His art suggests that of caricature. His satires, known by the collective title "Taḥkemoni," are varied and numerous. Some are on women ("Taḥkemoni," ch. vi.), some on avarice (ch. xii.), some on religious superstitions (ch. x.), and some on the ignorance of religious officials (ch. xxiv.), while the quack doctor likewise receives a flagellation (ch. xxx., xlviii.).

Immanuel of Rome.

In the fourteenth century the art of satire, like Jewish culture in general, is found fully developed in Provence and in Italy. Immanuel of Rome and Kalonymus ben Kalonymus of Provence, contemporaries and friends, enriched Hebrew literature with their satires and at the same time gave a vivid picture of the manners of their time. Immanuel shows the influence of Italian culture, while Kalonymus is more under the spell of Arabic learning. Immanuel, much in the style of the troubadours, takes love for his topic and indulges in pleasantries about women. The twenty-eighth chapter of his "Maḥberot" is the only one in which his satire embraces all phases of the social life of his day. Kalonymus, on the other hand, is of a more serious turn of mind. In his "Treatise of Purim" (מסכת פורים), it is true, he criticizes only the scum of society—the beggar, the miser, the drunkard, and the glutton; but in his "Touchstone" (אבן בחן) he satirizes the whole social framework. The desecration of the holy days, the hypocrisy of the professed religious man, the arrogance of those who pride themselves on their pedigree, the young and immature who hasten to write books without the necessary preparation, the dry-as-dust grammarians who wrangle over a dot, the rimesters who claim poetic genius—these and similar subjects engage his attention. Of course, the quack physician and women receive a good share of his lashing satire. Femininity affords occasion for a rare bit of irony, in which he pretends to show how enviable is a woman's lot in life and how burdensome a man's. He concludes this passage with the following prayer, which is rimed in the original:

> "Heavenly Father, Thou who rescued our forefathers from fire and water, . . . changed the staff into a serpent in the presence of thousands, and turned the clean hand white with leprosy; who made the Red Sea as dry land and the bottom of the Jordan as firm ground, . . . O that Thou wouldst change me into a woman. . . . But wherefore do I cry and complain, since Thou hast decreed so and hast inflicted on me a blemish which can not be removed. To yearn for the impossible is harmful, and empty consolation is of no avail. Let me, then, bear my misfortune till my dying day. And since I have learned that one must offer thanksgiving for evil as for good, I will pronounce my benediction in a low voice and with faltering lips: Blessed art Thou, O Lord, that Thou hast not made me a woman" (אבן בחן, pp. 17-18, Lemberg, 1865).

During the latter part of the same century two satires were written against Christianity; one is known only to students, the other is the most widely known polemic of its kind. The "Haggadah" of Jonah Rapa (*c.* 1380), still in manuscript, is a vehement denunciation of the licentiousness indulged in by Gentiles during the carnival. The letter of Profiat Duran to his former friend David Bonet Bongoron, entitled "Be Not Like Thy Fathers" (אל תהי כאבותיך), was already widely circulated in his own day. In an ironical style rarely excelled, the author, who returned to Judaism after a forced conversion, refutes and derides the dogmas of Christianity. The ironical refrain, "Be not like thy fathers," led many of the clergy to consider the epistle as friendly to Christianity.

In the fifteenth century the art of satire was not so assiduously cultivated, and those who indulged in it limited themselves almost to one subject—woman. These were David ben Judah Messer Leon, author of "Praise of Women" (שבח הנשים); Abraham of Serteano, author of "Enemy of Women" (שנא הנשים); Abigdor of Fano, author of "The Helper of Women" (עוזר נשים); and Elijah Ḥayyim ben Benjamin of Genazzano, author of מליצות. The last-named wrote also a satire against Christianity in the style and metrical form of the hymn "Yigdal." The sixteenth century also had but few satirists, who contributed only to the literature on women: Judah ben Isaac Sommo, author of "The Shield of Women" (מגן נשים), and Jacob Fano, author of "Armor of the Strong" (שלטי הגבורים).

Satires on Woman.

The seventeenth and the greater part of the eighteenth century were even less productive of satire than the sixteenth. Jacob Francis (17th cent.), however, wrote a scathing satire on the so-called cabalists who dabbled in mysticism and attempted to study the Zohar though unable to understand simple passages in the Bible (see Brody, "Meteḳ Sefatayim," pp. 72-73, Cracow, 1892). During the closing years of the eighteenth century the art of satire began to revive, and almost all social, religious, and political questions engage the attention of the modern satirist. One of the earliest satires of the modern period is the work of Zachariah Pugliese (*c.* 1795), on the money-lenders of his day; he called it "The Laws of Creditor and Debtor" (הלכות מלוה ולוה). This, however, is still in manuscript. Another early satire, only recently published, is the זהר חדש לפורים of Tobias Feder, which is an attack on Ḥasidism. Like these two, many of the satires of the nineteenth century are parodies, and as such have already been discussed in the article Parody.

Revival of Satire.

The satirist par excellence of the first half of the nineteenth century was unquestionably Isaac Erter, author of five satires, published, with other matter, under the collective title of "The Seer of the House of Israel" (הצופה לבית ישראל; Vienna, 1858). In finish of style and beauty of language these satires have seldom been equaled, while the influence they exerted on the author's generation can not be overestimated. In the first satire, "Weighing Balances" (מאזני משקל; 1823), the author shows that he had not yet discovered his own powers; his criticism of life is still superficial, and the problems he grapples with are of minor importance. In "Ḥasidism and Enlightenment" (חסידות וחכמה), published eleven years later, he describes the mental struggle he underwent in freeing himself from the bondage of Ḥasidism. But it is in three later compositions that he stands out preeminently as a satirist of the manners, morals, and customs of his time. "The Complaint of Sani, Sansani, and Smengaloph" (תלונת סני סנסני וסמנגלוף), the supposed guardian angels of young babes, is a withering satire on the popular superstition of demons and angels. Still stronger is the satire תשליך, in which all the weaknesses of the age are ruthlessly laid bare. Among certain classes of Jews it is still customary to go on the first day of Rosh ha-Shanah to a river and shake their garments while reciting the verse, "Thou wilt cast all their sins into the depths of the sea" (Micah vii. 19). On one such occasion, the satirist says, he met Satan and his host busily engaged in throwing nets into the river to gather the sins of Israel, freshly fallen from their garments; and at the satirist's request Satan disclosed to him all the corruption and wickedness of the age. In the last and strongest satire, called "Metamorphosis" (גלגול נפש), published in 1845, Erter sketches, among other characters, those of the Ḥasid, the tax-collector, and the Ḥasidic rabbi, in a manner inimitable and with a power unexcelled. His humor has not unjustly been compared to Heine's by one historian (Grätz, "Gesch." 2d ed., xi. 447) and to that of Lucian by another writer (Rubin, "Tehillat ha-Kesilim," p. 85).

Erter's Satires.

The next satirist of the Galician school is Joseph Perl of Tarnopol, whose satire on Ḥasidism in the form of a parody has been treated in the article Parody. In his second satire, "The Searcher of the Righteous" (בחן צדיק; Prague, 1838), he gives a picture of the manners and morals of the Polish Jews a century ago. His satire is not as rich as that of Erter, but it is more direct in its expression and larger in scope, and is colored here and there with intense pathos. After the middle of the nineteenth century the great satirists are found in Russia, and, naturally, it is the life of the Russian Jews that is reflected in their writings. Judah Löb Gordon, poet, feuilletonist, journalist, and fabulist, was at his best as a satirist, and as such he holds a prominent position in Jewish literature. In mastery of style and resourcefulness of language he has not his equal among modern poets, while his irony and sarcasm are of the keenest. Three of his poems, "In the Moon at Night" (בירח בלילה), "The Tip on the Letter Yod" (קוצו של יוד), and "The Two Josephs ben Simeon," may be mentioned here as the most powerful of his satires. In them he attacks many of the time-honored institutions of the Russian Jewry and depicts, with remarkable mastery of color and effect, the unhappy lot of the Jewish woman of his time and country, the corruption of public officials, and the struggle of the young generation for modern culture and enlightenment.

Another contemporary satirist of no mean ability was Moses Löb Lilienblum. In his "Assembly of the Dead" (קהל רפאים; Odessa, 1870) he depicted sixteen different types of the Russian Jewry, some

Recent Satires.

of which have not yet disappeared. The strongest of these satires are those on the pilpulist and the preacher. The former gives a parody of the casuistic reasoning known as "pilpul," and the latter an enumeration of many of the superstitious customs that are regarded by some as religious duties. There are other satirists and satires that can only be mentioned here. Dolitzky's "Eclipse of the Two Luminaries" (לקוי שני המארות; Vienna, 1879), though the product of his youth, is a very powerful satire on Ḥasidic rabbis, and Kaminer's works are noted not only for their strong irony, but for the cleverness with which they imitate the style of the liturgy. Mordecai David Brandstädter also held up to derision the shortcomings of the fanatic Ḥasidim.

J. I. D.

SATRAP (A. V. "prince," "lieutenant"): Ruler of a province in the governmental system of ancient Persia. The Old Persian form of the word, "khshathrapavan" (protector of the kingdom), occurs twice in the inscriptions of Darius Hystaspes at Behistun (iii. 14, 55) with reference to the rulers of Bactria and Arachosia; and this is corrupted into the Biblical אחשדרפניא. The office was created by Darius, who selected the satraps from the Persians only, and frequently from those of royal blood. They originally numbered twenty; and their primary duty was to regulate the taxes of the provinces which they governed and to send to the king the revenues collected therein, although they were likewise required to levy troops.

The late and distorted references to satraps in Ezra, Esther, and Daniel are of little historical value. Ezra viii. 36 states that the decree of Artaxerxes for rebuilding the Temple was delivered to them—a statement obviously absurd, since only one could, under any circumstances, be concerned with Palestine. In like manner, in Esth. iii. 12, R. V. (comp. *ib.* ix. 3), Haman issues orders in the name of Ahasuerus "unto the king's satraps, and to the governors that were over every province, and to the princes of every people." These provinces, which extended "from India unto Ethiopia" (comp. the mention of "Hindu" [India] and "Mudraya" [Egypt] in the Old Persian inscriptions of Darius, Persepolis e 11, 17–18; Naḳs-i Rustam a 25, 27), were in all 127 (Esth. i. 1, viii. 9, xiii. 1, xvi. 1; Dan. vi. 1; I Esd. iii. 2; Josephus, "Ant." xi. 6, §§ 6, 12), a number which at once shows the lack of historical accuracy in these accounts (comp. the conflicting and valueless statements of Josephus, who says, "Ant." x. 11, § 4, that Darius founded 360 satrapies, but in another passage, *ib.* xi. 3, § 2, only 127). In Dan. iii. 2, R. V. (comp. *ib.* iii. 27, vi. 7), the satraps of Nebuchadnezzar (!) are mentioned together with "the deputies, and the governors, the judges [or chief soothsayers], the treasurers, the counselors, the sheriffs [or lawyers], and all the rulers of the provinces." Over the satraps, according to the account in Daniel, were set three "presidents" as supervisors (Dan. vi. 2–4, 6, 7), evidently a reminiscence of some such system of mutual control as that described in Xenophon's "Cyropedia," viii. 6, § 16.

E. G. H. L. H. G.

SATYR: Rendering by the English versions of the Hebrew "se'irim" in Isa. xiii. 21, xxxiv. 14 (R. V., margin, "he-goats"; American R. V., "wild goats"), while in Lev. xvii. 7 and II Chron. xi. 15 the Authorized Version renders the word by "devil," the Revised Version by "he-goat," and the Revised Version, margin, by "satyr." The old versions use for it a word denoting a demon, false god, or a hairy being. It is certain that a natural animal is not intended in these passages. Thus in Isaiah the se'irim are mentioned together with Lilith and animals of the desert and desolate places, and are described as "dancing" and "calling to one another"; in the other passages they are referred to as objects of worship. Possibly the versions reflect the ancient conception of the se'irim as hairy and perhaps goat-shaped beings. The association of monstrous beings with ruins and desert places is still a prevalent element in the folk-lore of Arabia and Syria; and the Arabian jinn also are represented as having monstrous hairy forms.

In Ḳid. 72a the Ishmaelites are compared to the se'irim of unclean places, *i.e.*, the spirits ("shedim") which inhabit retreats. Of other monstrous, half-human and half-animal beings referred to in the Talmud may be mentioned here the "adne [or "abne"] sadeh" (Kil. viii. 5, and Maimonides *ad loc.*), and the "yiddoa'" (Sanh. 65b), explained as a being with human shape and attached to the earth by its umbilical cord (comp. Bertinoro on Sanh. vii. 7).

J. I. M. C.

SAUL.—Biblical Data: The first king of all Israel. He was the son of Kish, "a Benjamite, a mighty man of valor" (I Sam. ix. 1). For many years Israel had been ruled by judges, and had suffered many and severe sorrows at the hands of her hostile and ambitious neighbors. In the time of Saul's youth, Samuel was the active judge of Israel. The Philistines were the perpetual harassers of Israel's borders, and were threatening the very life of the tribes. Samuel's intervention had done something to relieve the distress (*ib.* vii. 1-11); but the people of Israel were ambitious for a military leader, such as they saw among their neighbors. They made a formal appeal to Samuel for a king; and at the command of Yhwh their request was to be granted.

The method of the selection of this new monarch is given in two different records. In the first (*ib.* ix.) Saul with his attendant, after searching far and in vain for the lost asses of his father, resorted to the well-known "man of God," who happened at this time to be conducting a sacrifice and feast in the land of Zuph (*ib.* ix. 5). The outcome of this visit was that Samuel, according to the command of YHWH, anointed Saul to be a prince over the inheritance of Israel (*ib.* x. 1). In confirmation of this appointment, Saul saw several signs which Samuel had foretold him. Saul then modestly retired to the family inheritance, probably at Gibeah.

Another, and a public, selection of Saul as king took place in a general assembly of Israel at Mizpah. Saul, as if avoiding the prominence which his private anointing would certainly bring him, hid himself among the baggage; but the lot fell to him, and he was found and enthusiastically proclaimed, the people shouting "God save the king!" Samuel also prepared the charter of the kingdom to be established and wrote it in a book. Saul, however, in his modesty again retired to Gibeah, not without having aroused jealousy on the part of some base opponents (*ib.* x. 19 *et seq.*).

Rescues Jabesh-gilead.

Saul probably could not as yet safely assume the rule over Israel; but the desperate straits into which the people of Jabesh-gilead had fallen before Nahash the Ammonite soon furnished him with his opportunity. Nahash, willing to acquire as great power and fame as possible, gave the besieged Israelites time to appeal to the west-Jordanic tribes. Doubtless aware that Saul had been crowned king, the people of Jabesh came to Gibeah just as the king was coming in from his daily toil. Saul responded to the appeal, summoned and threatened all Israel, and by a forced march completely rescued the besieged Jabeshites. This victory assured Saul of his place at the head of the nation; and he was formally inaugurated king of Israel.

Saul was now responsible for the administration of a central regal government of Israel. The first menace to his supremacy was the power of the Philistines. They had established a garrison at Geba (*ib.* xiii. 3) to protect their interests and to keep in subjection the restless Israelites. Saul had 2,000 men at Michmash and Jonathan 1,000 at Gibeah in Benjamin. The latter valiantly attacked and routed the Geba garrison; and this so roused the ire of the Philistines that they collected a great army of infantry, cavalry, and chariotry (*ib.* verse 5). This large body of troops forced itself up through the heart of the country to cut off any cooperation between the northern and southern tribes. In desperation the Hebrews fled in every direction, hiding themselves in caves, thickets, rocks, coverts, and cisterns. Saul withdrew with his meager 600 to Gilgal, until the arrival of Samuel, who severely rebuked him for attempting by himself to offer sacrifice to YHWH. Firmly entrenched in their mountain fastnesses, the Israelites looked down upon the hosts of Philistines encamped in the valleys. To secure food and intimidate any possible recruits, the Philistines sent out foraging parties in three directions. The supposed security of the Philistines doubtless led them to be somewhat careless in discipline. At any rate Jonathan's valor surprised them; they were pursued; and the whole mass of Israelites completely routed their enemies, and for a time shook off their galling yoke. The close of this campaign witnesses the remarkable rescue of Jonathan from death, which Saul's hasty oath would have demanded (*ib.* ch. xiv.).

His Campaigns.

This was only one of the many military campaigns in which Saul was engaged. He fought against Moab, Ammon, Edom, the kings of Zobah, and the Amalekites. It was in the exterminating war against this last people that Saul sees his end as king. Though commanded to destroy them wholly, he saved Agag, their king, and the best of the flocks. Now Samuel for the second time (*ib.* xiii. 14, xv. 26) tells Saul of the certain downfall of his house as rulers over Israel. This rebellion on the part of Saul serves as a fitting introduction to the story of David's life. Samuel finds this successor to Saul, and formally anoints him at Beth-lehem.

Saul has not yet finished with the Philistines. He has driven them from the hills, and is now fighting them on their own ground. His great success at Socoh (A. V. "Shocoh") was due to the valor of David against Goliath. As Saul returns to his court the people give David the greater ovation, and thus slight the king, who now makes him an officer in his army. Later events show that this was a design on Saul's part to secure the death of his rival. By means of the army, of David's wife (Michal, daughter of the king), of ambushes, and of his own javelin, Saul tries to kill David, who flees to Ramah from the king's rage, only to be followed. Thence he goes to Nob, and to Gath in Philistia. Only by feigning madness does he escape. After collecting a band of sympathizers, David flees like a bird of the mountains, from one place to another, from the rage of Saul. At En-gedi he has the king in his power, but mercifully spares him. At Ziph, later on, he again spares the king when he might have slain him. David, however, can not trust Saul, and so goes to Philistia and takes up his residence in Ziklag.

Death of Saul.

Saul returns to his court; and the Philistines become still more aggressive. David's friendliness perhaps encourages them to strike a still harder blow at Israelitish power. To prevent Saul from enlisting the northern tribes they despatch a great army to Aphek in the valley of Jezreel. Saul musters all his forces, but before engaging the enemy, he, in desperation for some prophecy of the outcome, consults a witch of En-dor. With downcast heart at her reply, he returns to the scene of conflict. Broken in spirit, the Israelites are routed, pursued, and slain. Saul falls on his own sword on Mt. Gilboa; and the Philistines are victors.

Saul was beheaded; his body, with those of his sons, was fastened to the wall of Beth-shan, and his armor was hung up in the house of Ashtaroth. When the inhabitants of Jabesh-gilead, the scene of Saul's first victory, heard of the deed of the Philistines, they sent valiant men who marched all night, took the bodies from Beth-shan, brought them to Jabesh, burned them there, buried the ashes, and fasted seven days.

Saul's reign of, possibly, twenty years was a failure, except that he succeeded in part in unifying Israel and in bringing to the front so valiant and capable a man as David.

J. I. M. P.

——**In Rabbinical Literature:** Two opposing views of Saul are found in rabbinical literature. One is based on the usual opinion that punishment is a proof of guilt, and therefore seeks to rob Saul of the halo which surrounds him. The passage I Sam. ix. 2, "a choice young man, and a goodly," is accordingly interpreted as meaning that Saul was not good in every respect, but "goodly" only with respect to his personal appearance (Num. R. ix. 28). According to this view, Saul is only a "weak branch" (Gen. R. xxv. 3), owing his kingship in no wise to his own merits, but rather to his grandfather, who had been accustomed to light the streets for those who went to the bet ha-midrash and had received as his reward the promise that one of his grandsons should sit upon the throne (Lev. R. ix. 2).

His Comeliness.

The second view of Saul makes him appear in the most favorable light as man, as hero, and as king. It was on account of his modesty that he did not reveal the fact that he had been anointed king (I Sam. x. 16; Meg. 13b); and he was extraordinarily upright as well as perfectly just. Nor was there any one more pious than he (M. Ḳ. 16b; Ex. R. xxx. 12); for when he ascended the throne he was as pure as a child, and had never committed sin (Yoma 22b). He was marvelously handsome; and the maidens who told him concerning Samuel (comp. I Sam. ix. 11–13) talked so long with him that they might observe his beauty the more (Ber. 48b). In war he was able to march 120 miles without rest. When he received the command to smite Amalek (I Sam. xv. 3), Saul said: "For one found slain the Torah requires a sin-offering [Deut. xxi. 1–9]; and here so many shall be slain. If the old have sinned, why should the young suffer; and if men have been guilty, why should the cattle be destroyed?" It was this mildness that cost him his crown (Yoma 22b; Num. R. i. 10)—the fact that he was merciful even to his enemies, being indulgent to rebels themselves, and frequently waiving the homage due to him. But if his mercy toward a foe was a sin, it was his only one; and it was his misfortune that it was reckoned against him, while David, although he had committed much iniquity, was so favored that it was not remembered to his injury (Yoma 22b; M. Ḳ. 16b, and Rashi *ad loc.*). In many other respects Saul was far superior to David, *e.g.*, in having only one concubine, while David had many wives and concubines. Saul expended his own substance for the war, and although he knew that he and his sons would fall in battle, he nevertheless went boldly forward, while David heeded the wish of his soldiers not to go to war in person (II Sam. xxi. 17; Lev. R. xxvi. 7; Yalḳ., Sam. 138).

His Character.

Saul ate his food with due regard for the rules of ceremonial purity prescribed for the sacrifice (Yalḳ., *l.c.*), and taught the people how they should slay cattle (comp. I Sam. xiv. 34). As a reward for this, God Himself gave him a sword on the day of battle, since no other sword suitable for him was found (*ib.* xiii. 22). Saul's attitude toward David finds its excuse in the fact that his courtiers were all talebearers, and slandered David to him (Deut. R. v. 10); and in like manner he was incited by Doeg against the priests of Nob (I Sam. xxii. 16–19; Yalḳ., Sam. 131). This act was forgiven him, however, and a heavenly voice ("bat ḳol") was heard, proclaiming: "Saul is the chosen one of God" (Ber. 12b). His anger at the Gibeonites (II Sam. xxi. 2) was not personal hatred, but was induced by zeal for the welfare of Israel (Num. R. viii. 4). The fact that he married his daughter Michal, the wife of David, to Phalti, the son of Laish (I Sam. xxv. 44), finds its explanation in his (Saul's) view that her betrothal to David had been gained by false pretenses and was therefore invalid (Sanh. 19b). During the lifetime of Saul there was no idolatry in Israel. The famine in the reign of David (comp. II Sam. xxi. 1) was to punish the people because they had not accorded Saul the proper honors at his burial (Num. R. viii. 4). In the other world Saul dwells with Samuel, which is a proof that all has been forgiven him ('Er. 53b).

S. J. Z. L.

——**Critical View:** The history of Saul's life and career is often embarrassingly confusing until the sources are critically analyzed. The matter as presented in I Samuel contains traces of more than one narrative. It is found, for example (viii. 4 *et seq.*), that the people ask for a king in spite of the protest of Samuel and the apparent disappointment of Yhwh; and yet Saul is to be anointed to save Israel out of the hands of the Philistines because its cry went up to Yhwh (ix. 16). Samuel selects and anoints Saul by the direct command of Yhwh (x. 1); but in his farewell address he charges the people with the rejection of Him because they asked for a king (xii. 12). Samuel anoints Saul strictly in private (x. 1), but in another account the people select him by lot in a great national assembly at Mizpah (x. 20 *et seq.*).

Sources.

Saul's consecration and selection do not seat him on the throne, however; for he goes to his house in Gibeah, where he engages in the peaceable pursuits of agriculture. Even when the inhabitants of Jabesh-gilead appeal to the west-Jordanic tribes for assistance, they do not seem to know that a king has been anointed over them. Saul apparently learns simply by accident the reason of the commotion caused by the messengers from Jabesh-gilead. When he takes the lead of the western tribes his appeal to the nation is made as if he were not a king but an associate with Samuel, whose authority will be instantly recognized. Again, Samuel in his final address to the people (xii. 12) states that the reason why the people asked for a king was the campaign against them of Nahash the Ammonite. On the overthrow of the invader, Saul is publicly proclaimed king before Yhwh in Gilgal. The order of the narrative that recites these facts seems to point to a combination of at least two different documents, though such a theory does not solve all the difficulties.

Budde maintains that a combination was made of two independent narratives, particularly as regards the choice of Saul as king and the characters of Samuel and Saul. The first or older document is contained in ix. 1–x. 16, x. 27b (Septuagint), and xi. 1-11, 14, 15, where Samuel calls the people together at Gilgal and Saul, because of his actual success in defeating the Ammonites, is formally made king over all Israel. This narrative is continued directly in ch. xiii. and xiv., which describe somewhat in detail Saul's activity against Israel's oppressors, the Philistines. The second or later document is found in ch. viii., where the people ask for a king; in x. 17–27a, where Saul is chosen by lot at Mizpah; and in ch. xii., which consists of Samuel's farewell address to the people.

Budde's Views.

The older document, as outlined by Budde, presents a consistent story of Saul's coronation and his clash with the Philistines. Samuel the seer was present in a certain unnamed city to celebrate a feast. Saul, who had been unsuccessful in the search for his father's lost asses, appealed to the seer for information. Yhwh had revealed to Samuel on the previous day that He would send to him a man out of the land of Benjamin, and that he (the seer) should "anoint him to be prince" over His people Israel; "and he shall save my people out of the hand of the Philistines" (ix. 16). At the feast Samuel honors Saul, detains him overnight, and privately anoints him the next morning, averring that it is Yhwh who has commanded him to do so. Samuel then points out the signs that he shall see, the change that he shall experience, and admonishes him: "do as occasion shall serve thee; for God is with thee" (x. 7). When Jabesh-gilead was besieged about a month later, according to the Septuagint (x. 27b), Saul had the "occasion" to demonstrate his ability. Summoning all the tribes of Israel, he successfully marshaled his forces, and routed the besiegers and invaders. Returning to Gilgal, he was confirmed king in accordance with Samuel's consecration of him at the gate of the unnamed town.

Interpolations in Ch. xiii. and xiv.

The real purpose of Saul's coronation (ix. 16) is fulfilled in ch. xiii. 1–7a and 15b–xiv. 46, where he and Jonathan, his son, with their troops completely overthrow and drive out the Philistine oppressors. These chapters have been worked over, and now contain several interpolations that interfere with the smooth flow of the narrative. Ch. xiii. 7b–15a belongs rather to the rejection of Saul in ch. xv., and glances back to x. 8. Ch. xiii. 18 should be followed immediately by xiv. 1, as xiii. 19–23 is a very corrupt text and deals with an issue aside from the main line of the narrative. Ch. xiv. 47–52 is supplementary to the preceding narrative, and is not connected with the theme in question.

In the later narrative (viii., x. 17–27a, xii.) Samuel is a judge, who has established his sons as judges in various cities of the land. After repeated requests of the people, in which are embodied protests against the conduct of these sons, Yhwh finally agrees to allow Israel to have a king like the other nations. Samuel is commanded to choose such a king, and then dismisses the people. It must be noted that mention is made here not of foreign oppression, but of the manifest malfeasance of Samuel's sons, as the basic reason for the request and the final concession of Yhwh. The people are then called together in assembly (x. 17–27a); and a king is chosen by lot. The note in xi. 14 regarding the renewal of the kingdom is thought to be merely a harmonizing statement of the editor. Samuel's address (xii.) reviews the situation, and cites as another reason for the people's request the Ammonite campaign (*ib.* verse 12); but at the same time it condemns them for the request (*ib.* verses 17, 19).

Ch. xv. does not properly belong to either of the two narratives already treated. It seems to occupy a kind of intermediate position, placed, as it is, after the formal close of Saul's reign, and before the introduction of David's life. It is a prophecy of the fall of Saul's house, and paves the way for the beginning and continuation of the kingdom through the house of David.

Ch. xvi.–xviii. Contain Two Documents.

Ch. xvi.–xviii. contain two documents descriptive of David's introduction to Saul. In the first, Samuel goes to Beth-lehem to offer sacrifices and anoint the future king of Israel. After he has passed, by Yhwh's order, upon all the sons of Jesse that are present, the youngest one, David, who, caring for his sheep, is absent from the sacrifice, is called in and formally anointed (xvi. 1–13). After this act "the Spirit of Yhwh came mightily upon" him "from that day forward." The character of David as a shepherd boy is developed in xvii. 1–xviii. 5, where David chances to visit his brothers during a battle with the Philistines, and with a shepherd's sling slays Goliath, and wins the encomiums of the people of Israel. The second account (xvi. 14–23) introduces David as a skilful musician, "a mighty man of valor, and a man of war, and prudent in speech" (*ib.* verse 18). Saul is so impressed by him that he makes him his armor-bearer and holds him in high esteem. If the accounts are not separate in origin, it is not clear how Saul could have asked the question attributed to him in xvii. 55–58. Subsequent references (xix. 5; xxi. 9, etc.) to David's victory over Goliath show how this event was woven in with the traditions of his early life.

The Septuagint, however, almost harmonizes the differences between xvi. 14–23 and xvii. 1–xviii. 5 by the omission from the latter of verses 12–31, 41, 50, 55–xviii. 5. In xviii. 6–30, which is a continuation in thought of xvi. 14–23, there are also several variations in the Septuagint, each clearly showing the increasing enmity toward David on the part of Saul.

Duplication in Ch. xix.–xxxi.

There is a variety of opinion in the analysis of the matter contained in xix.–xxxi. One of the most striking and critical features of the whole narrative of this section, however, is the duplication of the account of David's merciful treatment of Saul when the pursued had the pursuer in his hands. It is maintained that the record of David's hiding in the cave and his treatment of Saul, in xxiv., and that of David's elusion and final potential capture of Saul within the camp of his army, are two versions of one and the same story. The framework of one is the framework of the other. The points of agreement and the character are just what would be expected had each been built on the same original event.

Saul's despair in the face of the Philistine army led him to consult the witch of En-dor as to the probable result of the battle about to be fought. H. P. Smith ("Old Testament History," p. 126) holds that ch. xxviii. is only the dramatic embodiment of an idea; and that was the popular idea concerning intercourse with the dead. It is asserted that there are two accounts of Saul's death. In one it is stated that he was defeated, his sons were slain, and he himself was wounded. To escape the ignominy of falling alive into the hands of the enemy he urged his armor-bearer to slay him. Upon the attendant's refusal to do so, he fell upon his own sword. According to the other account an Amalekite slew him. These two records are doubtless built upon the fact that Saul and his sons died on the field of battle fighting for the liberty of their people.

J. I. M. P.

SAUL: Karaite leader; son and successor of Anan ben David; died about 780. He is styled by the later Karaites "nasi" (prince) and "rosh ha-golah" (exilarch). Saul's activity was comparatively unimportant. He is mentioned by Solomon b. Jeroham in his commentary on the Decalogue as having also written a commentary thereon. He is particularly quoted for his opinion with regard to the sixth commandment; namely, that adultery includes connection with any woman not one's own wife or concubine, and is not confined, as in rabbinical law, to connection with another man's wife.

Saul was one of the followers of Gnai Baruch, who is supposed as head of Ezra's bet din to have ordained the reading of the Law on Sabbaths and holy days, beginning in the month of Tishri and terminating with the end of the year.

Bibliography: Fürst, *Gesch. des Karäert.* i. 61; Pinsker, *Liḳḳuṭe Ḳadmoniyyot*, p. 44 (Supplement), pp. 53, 106, 186.

J. M. Sel.

SAUL, ABBA: Tanna of the third generation. In Ab. R. N. xxix. mention is made of an Abba Saul b. Nanos whom Lewy ("Ueber Einige Fragmente aus der Mischnah des Abba Saul," in "Berichte über die Hochschule für die Wissenschaft des Judenthums in Berlin," 1876) regards as identical with the Abba Saul of this article. The Abba Saul bar Nash mentioned in Niddah 25b is probably likewise identical with him. As Abba Saul explicitly refers, in Tosef., Sanh. xii., to an opinion of R. Akiba's, and, in Tosef., Kil. iv. and Oh. vi., to disagreements between the latter and Ben 'Azzai, as well as between Akiba and the ḥakamim, it may be concluded that he was a pupil of R. Akiba and that he lived in the middle of the second century C.E. The reference to "bet Rabbi" in Pes. 34a, where Abba Saul is said to have prepared the bread according to Levitical rules of purity in "Rabbi's" house, must be construed as referring to the house of the patriarch R. Simeon b. Gamaliel II., not to that of R. Judah ha-Nasi I. (comp. Lewy, *l.c.* p. 21, and note 42).

The "Abba" in "Abba Saul" is titular only, and is not a part of this tanna's name. Nor does he appear to have held the title of rabbi. Abba Saul was tall of stature, and his business is said to have been that of burying the dead (Niddah 24b). Some of the haggadic sayings of Abba Saul that have been preserved throw light on his inner life and his lofty character. He explains the word אנוהו in Ex. xv. 2 as though it were composed of אני and והוא, and interprets it as meaning that man must endeavor to imitate God and, like Him, show charity and benevolence (Mek., Beshallaḥ, Shirah, ii. [ed. Weiss, p. 44a]). To Lev. xix. 2 ("Ye shall be holy: for I the Lord your God am holy") he cites the parallel, "The king's companions must do according to the king's will" (Sifra, Ḳedoshim, i. [ed. Weiss, p. 86c]). "Discord in the school causes general corruption" (Derek Ereẓ Zuṭa ix.), and "Morality is greater than learning" (Sem. xi.) are others of his sayings.

Abba Saul devoted himself assiduously to the study of the mode of worship in the Temple (comp. Z. Frankel, "Darke ha-Mishnah," pp. 177 *et seq.*; Pes. 13b, 86b; Beẓah 29b; Yoma 19b; Niddah 61a, 71b). He also made a collection of mishnayot which in many respects differed from others; this collection has partly been preserved in the present Mishnah, whose redactor, Judah ha-Nasi, occasionally made use of some passages in it which were at variance with other mishnaic compilations.

W. B. J. Z. L.

SAUL ABBA B. BAṬNIT: Tanna of the second and first centuries B.C. According to Derenbourg, his mother was a Batanian proselyte, whence he derived his name "ben Baṭnit"; it appears from Ned. 23a, however, that "Baṭnit" is a masculine proper name. Saul Abba was engaged in commerce with R. Eleazar b. Zadok, together with whom he issued a regulation referring to the Sabbath law (Shab. xxiv. 5). It is said of him that he filled his liquid measures with wine on the eve of the feast-days in order to be able to give it to the children on those days (Beẓah iii. 8). He is the transmitter, or perhaps the author (comp. Bacher, "Ag. Tan." i. 46, note 2), of a sentence referring to the outrages and misdemeanors committed by some of the priestly families (Pes. 57a).

D. S. MAN.

SAUL OF TARSUS (known as **Paul, the Apostle of the Heathen**): The actual founder of the Christian Church as opposed to Judaism; born before 10 C.E.; died after 63. The records containing the views and opinions of the opponents of Paul and Paulinism are no longer in existence; and the history of the early Church has been colored by the writers of the second century, who were anxious to suppress or smooth over the controversies of the preceding period, as is shown in the Acts of the Apostles and also by the fact that the Epistles ascribed to Paul, as has been proved by modern critics, are partly spurious (Galatians, Ephesians, I and II Timothy, Titus, and others) and partly interpolated.

Not a Hebrew Scholar; a Hellenist.

Saul (whose Roman cognomen was Paul; see Acts xiii. 9) was born of Jewish parents in the first decade of the common era at Tarsus in Cilicia (Acts ix. 11, xxi. 39, xxii. 3). The claim in Rom. xi. 1 and Phil. iii. 5 that he was of the tribe of Benjamin, suggested by the similarity of his name with that of the first Israelitish king, is, if the passages are genuine, a false one, no tribal lists or pedigrees of this kind having been in existence at that time (see Eusebius, "Hist. Eccl." i. 7, 5; Pes. 62b; M. Sachs, "Beiträge zur Sprach- und Alterthumsforschung," 1852, ii. 157). Nor is there any indication in Paul's writings or arguments that he had received the rabbinical training ascribed to him by Christian writers, ancient and modern; least of all could he have acted or written as he did had he been, as is alleged (Acts xxii. 3), the disciple of Gamaliel I., the mild Hillelite. His quotations from Scripture, which are all taken, directly or from memory, from the Greek version, betray no familiarity with the original Hebrew text. The Hellenistic literature, such as the Book of Wisdom and other Apocrypha, as well as Philo (see Hausrath, "Neutestamentliche Zeitgeschichte," ii. 18–27; Siegfried, "Philo von Alexandria," 1875, pp. 304–310; Jowett, "Commentary on the Thessalonians and Galatians," i. 363–417), was the sole source for his eschatological and theological system. Notwithstanding the emphatic statement, in Phil. iii. 5, that he was "a Hebrew of the Hebrews"—a rather unusual term, which seems to refer to his nationalistic training and conduct (comp. Acts xxi. 40, xxii. 2), since his Jewish birth is stated in the preceding words "of the stock of Israel"—he was, if any of the Epistles that bear his name are really his, entirely a Hellenist in thought and sentiment. As such he was imbued with the notion that "the whole creation groaneth" for liberation from "the prison-house of the body," from this earthly existence, which, because of its pollution by sin and death, is intrinsically evil (Gal. i. 4; Rom. v. 12, vii. 23–24, viii. 22; I Cor. vii. 31; II Cor. v. 2, 4; comp. Philo, "De Allegoriis Legum," iii. 75; *idem*, "De Vita Mosis," iii. 17; *idem*, "De Ebrietate," § 26; and Wisdom ii. 24). As a Hellenist, also, he distinguished between an earthly and a heavenly Adam (I Cor. xv. 45–49; comp. Philo, "De Allegoriis Legum," i. 12), and, accordingly, between the lower psychic life and the higher spiritual life attained only by asceticism (Rom. xii. 1; I Cor. vii. 1–31, ix. 27, xv. 50; comp. Philo, "De Profugis," § 17; and elsewhere). His whole state of mind shows the influence of the theosophic or Gnostic lore of Alexandria, especially the Hermes literature recently brought to light by Reizenstein in his important work "Poimandres," 1904 (see Index, *s.v.* "Paulus," "Briefe des Paulus," and "Philo"); hence his strange belief in supernatural powers (Reizenstein, *l.c.* pp. 77, 287), in fatalism, in "speaking in tongues" (I Cor. xii.–xiv.; comp. Reizenstein, *l.c.* p. 58; Dieterich, "Abraxas," pp. 5 *et seq.*; Weinel, "Die Wirkungen des Geistes und der Geister," 1899, pp. 72 *et seq.*; I Cor. xv. 8; II Cor. xii. 1–6; Eph. iii. 3), and in mysteries or sacraments (Rom. xvi. 25; Col. i. 26, ii. 2, iv. 3; Eph. i. 9, iii. 4, vi. 19)—a term borrowed solely from heathen rites.

His Epilepsy.

There is throughout Paul's writings an irrational or pathological element which could not but repel the disciples of the Rabbis. Possibly his pessimistic mood was the result of his physical condition; for he suffered from an illness which affected both body and mind. He speaks of it as "a thorn in the flesh," and as a heavy stroke by "a messenger of Satan" (II Cor. xii. 7), which often caused him to realize his utter helplessness, and made him an object of pity and horror (Gal. iv. 13). It was, as Krenkel ("Beiträge zur Aufhellung der Geschichte und Briefe des Apostels Paulus," 1890, pp. 47–125) has convincingly shown, epilepsy, called by the Greeks "the holy disease," which frequently put him into a state of ecstasy, a frame of mind that may have greatly impressed some of his Gentile hearers, but could not but frighten away and estrange from him the Jew, whose God is above all the God of reason (comp. II Cor. v. 13; x. 10; xi. 1, 16; xii. 6). The conception of a new faith, half pagan and half Jewish, such as Paul preached, and susceptibility to its influences, were altogether foreign to the nature of Jewish life and thought. For Judaism, religion is the hallowing of this life by the fulfilment of its manifold duties (see JUDAISM): Paul shrank from life as the domain of Satan and all his hosts of evil; he longed for redemption by the deadening of all desires for life, and strove for another world which he saw in his ecstatic visions. The following description of Paul is preserved in "Acta Pauli et Theclæ," an apocryphal book which has been proved to be older and in some respects of greater historic value than the canonical Acts of the Apostles (see Conybeare, "Apollonius' Apology and Acts, and Other Monuments of Early Christianity," pp. 49–88, London, 1894):

> "A man of moderate stature, with crisp [scanty] hair, crooked legs, blue eyes, large knit brows, and long nose, at times looking like a man, at times like an angel, Paul came forward and preached to the men of Iconium: 'Blessed are they that keep themselves chaste [unmarried]; for they shall be called the temple of God. Blessed are they that mortify their bodies and souls; for unto them speaketh God. Blessed are they that despise the world; for they shall be pleasing to God. Blessed be the souls and bodies of virgins; for they shall receive the reward of their chastity.'"

It was by such preaching that "he ensnared the souls of young men and maidens, enjoining them to remain single"(Conybeare, *l.c.* pp. 62, 63, 67; comp. *ib.* pp. 24-25; Gal. iii. 38; I Cor. vii. 34-36; Matt. xix. 12; Clement of Rome, Epistle ii. § 12).

Anti-Jewish Attitude.

Whatever the physiological or psychological analysis of Paul's temperament may be, his conception of life was not Jewish. Nor can his unparalleled animosity and hostility to Judaism as voiced in the Epistles be accounted for except upon the assumption that, while born a Jew, he was never in sympathy or in touch with the doctrines of the rabbinical schools. For even his Jewish teachings came to him through Hellenistic channels, as is indicated by the great emphasis laid upon "the day of the divine wrath" (Rom. i. 18; ii. 5, 8; iii. 5; iv. 15; v. 9; ix. 22; xii. 19; I Thess. i. 10; Col. iii. 6; comp. Sibyllines, iii. 309 *et seq.*, 332; iv. 159, 161 *et seq.*; and elsewhere), as well as by his ethical monitions, which are rather inconsistently taken over from Jewish codes of law for proselytes, the Didache and Didascalia. It is quite natural, then, that not only the Jews (Acts xxi. 21), but also the Judæo-Christians, regarded Paul as an "apostate from the Law" (see Eusebius, *l.c.* iii. 27; Irenæus, "Adversus Hæreses," i. 26, 2; Origen, "Contra Celsum," v. 65; Clement of Rome, "Recognitiones," i. 70, 73).

His Personality.

To judge from those Epistles that have all the traits of genuineness and give a true insight into his nature, Paul was of a fiery temper, impulsive and impassioned in the extreme, of ever-changing moods, now exulting in boundless joy and now sorely depressed and gloomy. Effusive and excessive alike in his love and in his hatred, in his blessing and in his cursing, he possessed a marvelous power over men; and he had unbounded confidence in himself. He speaks or writes as a man who is conscious of a great providential mission, as the servant and herald of a high and unique cause. The philosopher and the Jew will greatly differ from him with regard to every argument and view of his; but both will admit that he is a mighty battler for truth, and that his view of life, of man, and of God is a profoundly serious one. The entire conception of religion has certainly been deepened by him, because his mental grasp was wide and comprehensive, and his thinking bold, aggressive, searching, and at the same time systematic. Indeed, he molded the thought and the belief of all Christendom.

Jewish Proselytism and Paul.

Before the authenticity of the story of the so-called conversion of Paul is investigated, it seems proper to consider from the Jewish point of view this question: Why did Paul find it necessary to create a new system of faith for the admission of the Gentiles, in view of the fact that the Synagogue had well-nigh two centuries before opened its door to them and, with the help of the Hellenistic literature, had made a successful propaganda, as even the Gospels testify? (Matt. xxiii. 15; see Schürer, "Gesch." 3d ed., iii. 102–135, 420–483; J. Bernays, "Gesammelte Abhandlungen," 1885, i. 192–282, ii. 71–80; Bertholet, "Die Stellung der Israeliten und Juden zu den Fremden," 1896, pp. 257–302.) Bertholet (*l.c.* pp. 303–334; but see Schürer, *l.c.* i. 126) and others, in order that they may reserve the claim of universality for Christianity, deny the existence of uncircumcised proselytes in Judaism, and misconstrue plain Talmudic and other statements referring to God-fearing Gentiles (Bertholet, *l.c.* pp. 338–339); whereas the very doctrine of Paul concerning the universal faith of Abraham (Rom. iv. 3–18) rests upon the traditional interpretation of Gen. xii. 3 (see Kuenen, "Prophets and Prophecy in Israel," pp. 379, 457) and upon the traditional view which made Abraham the prototype of a missionary bringing the heathen world under the wings of the Shekinah (Gen. R. xxxix., with reference to Gen. xii. 5; see Abraham; Judaism; Proselyte). As a matter of fact, only the Jewish propaganda work along the Mediterranean Sea made it possible for Paul and his associates to establish Christianity among the Gentiles, as is expressly recorded in the Acts (x. 2; xiii. 16, 26, 43, 50; xvi. 14; xvii. 4, 17; xviii. 7); and it is exactly from such synagogue manuals for proselytes as the Didache and the Didascalia that the ethical teachings in the Epistles of Paul and of Peter were derived (see Seeberg, "Der Katechismus der Urchristenheit," 1903, pp. 1–44).

The answer is supplied by the fact that Jewish proselytism had the Jewish nation as its basis, as the names "ger" and "ger toshab" for "proselyte" indicate. The proselyte on whom the Abrahamic rite was not performed remained an outsider. It was, therefore, highly important for Paul that those who became converted to the Church should rank equally with its other members and that every mark of distinction between Jew and Gentile should be wiped out in the new state of existence in which the Christians lived in anticipation. The predominating point of view of the Synagogue was the political and social one; that of the Church, the eschatological one. May such as do not bear the seal of Abraham's covenant upon their flesh or do not fulfil the whole Law be admitted into the congregation of the saints waiting for the world of resurrection? This was the question at issue between the disciples of Jesus and those of Paul; the former adhering to the view of the Essenes, which was also that of Jesus; the latter taking an independent position that started not from the Jewish but from the non-Jewish standpoint. Paul fashioned a Christ of his own, a church of his own, and a system of belief of his own; and because there were many mythological and Gnostic elements in his theology which appealed more to the non-Jew than to the Jew, he won the heathen world to his belief.

Paul's Christ.

In the foreground of all of Paul's teaching stands his peculiar vision of Christ, to which he constantly refers as his only claim and title to apostleship (I Cor. ix. 1, xv. 8; II Cor. xii. 1–7; Phil. iii. 9; Gal. i. 1, 12, 16, on which see below). The other apostles saw Jesus in the flesh; Paul saw him when, in a state of entrancement, he was carried into paradise to the third heaven, where he heard "unspeakable words, which it is not lawful for a man to utter" (II Cor. xii. 2–4). Evidently this picture of Christ must have occupied a prominent place in his mind before, just as Meṭaṭron (Mithra) and Akteriel did in the minds of Jewish mystics (see Angelology; Merkabah). To him the Messiah was the son of God in a metaphysical sense, "the image of God" (II Cor. iv. 4; Col. i. 15), "the heavenly Adam" (I Cor. xv. 49; similar to the Philonic or cabalistic Adam Ḳadmon), the mediator between God and the world (I Cor. viii. 6), "the first-born of all creation, for by him were all things created" (Col. i. 15–17), identical also with the Holy Spirit manifested in Israel's history (I Cor. x. 4; II Cor. iii. 17; comp. Wisdom x. 1.-xii. 1; Philo, "De Eo Quod Deterius Potiori Insidiari Soleat," § 30; see also Jew. Encyc. x. 183b, *s.v.* Preexistence of the Messiah).

It is, however, chiefly as "the king of glory" (I Cor. ii. 8), as ruler of the powers of light and life eternal, that Christ is to manifest his cosmic power. He has to annihilate Satan or Belial, the ruler of this world of darkness and death, with all his hosts of evil, physical and moral (I Cor. xv. 24–26). Paul's "gnosis" (I Cor. viii. 1, 7; II Cor. ii. 14; I Tim. vi. 20) is a revival of Persian dualism, which makes of all existence, whether physical, mental, or spiritual, a battle between light and darkness (I Thess. v. 4–5; Eph. v. 8–13; Col. i. 13), between flesh and spirit (I Cor. xv. 48; Rom. viii. 6–9), between corruption and life everlasting (I Cor. xv. 50, 53). The object of the Church is to obtain for its members the spirit, the glory, and the life of Christ, its "head," and to liberate them from the servitude of and allegiance to the flesh and the powers of earth. In order to become participants in the salvation that had come and the resurrection that was nigh, the saints were to cast off the works of darkness and to put on the armor of light, the breastplate of love, and the helmet of hope (Rom. xiii. 12; II Cor. x. 4; Eph. vi. 11; I Thess. v. 8; comp. Wisdom v. 17–18; Isa. lix. 17; "the weapons of light of the people of Israel," Pesiḳ. R. 33 [ed. Buber, p. 154]; Targ. Yer. to Ex. xxxiii. 4; "the men of the shields" ["ba'ale teresin"], a name for high-ranking Gnostics, Ber. 27b; also "the vestiture of light" in Mandæan lore, "Jahrbuch für Protestantische Theologie," xviii. 575–576).

The Crucified Messiah.

How then can this world of perdition and evil, of sin and death, be overcome, and the true life be attained instead? This question, which, according to a Talmudic legend (Tamid 32a), Alexander the Great put to the wise men of the South, was apparently the one uppermost also in the mind of Paul (see Kabisch, "Die Eschatologie des Paulus," 1893); and in the form of a vision of the crucified Christ the answer came to him to "die in order to live." This vision, seen in his ecstatic state, was to him more than a mere reality: it was the pledge ("'erabon" of the resurrection and the life of which he was in quest. Having seen "the first-born of the resurrection" (I Cor. xv. 20–24; the Messiah is called "the first-born" also in Midr. Teh. to Ps. lxxxix. 28, and in Ex. R. xix. 7), he felt certain of the new life which all "the sons of light" were to share. No sooner had the idea taken hold of him that the world of resurrection, or "the kingdom of God," had come, or would come with the speedy reappearance of the Messiah, than he would invest with higher powers "the elect ones" who were to participate in that life of the spirit. There can be no sin or sensual passion in a world in which the spirit rules. Nor is there need of any law in a realm where men live as angels (comp. "The dead is free from all obligations of the Law," Shab. 30a, 151b; Niddah 61b). To bring back the state of paradise and to undo the sin of Adam, the work of the serpent, which brought death into the world—this seems to have been the dream of Paul. The baptism of the Church, to which sinners and saints, women and men, Jews and Gentiles, were alike invited, suggested to him the putting off of the earthly Adam and the putting on of the heavenly Adam (Rom. vi.). He was certain that by the very power of their faith, which performed all the wonders of the spirit in the Church (I Cor. xii., xv.), would the believers in Christ at the time of his reappearance be also miraculously lifted to the clouds and transformed into spiritual bodies for the life of the resurrection (I Thess. iv.; I Cor. xv.; Rom. viii.). These are the elements of Paul's theology—a system of belief which endeavored to unite all men, but at the expense of sound reason and common sense.

Paul's Conversion.

There is possibly a historical kernel to the story related in the Acts (vii. 58–ix. 1–31, xxii. 3–21, xxvi. 10–19), that, while on the road to Damascus, commissioned with the task of exterminating the Christian movement antagonistic to the Temple and the Law (*ib.* vi. 13), Paul had a vision in which Jesus appeared to him, saying, "Saul, Saul, why persecutest thou me?" (comp. I Sam. xxvi. 18); that in consequence of this vision he became, with the aid of Ananais, one of the Christian seers, "a chosen vessel unto me [Christ], to bear my name before the Gentiles." According to the Acts (vii. 58; ix. 2; xxii. 5; xxv. 1, 10–12), Paul was a young man charged by the Sanhedrin of Jerusalem with the execution of Stephen and the seizure of the disciples of Jesus. The statement, however (*ib.* xxii. 8–9), that, being a zealous observer of the law of the Fathers, "he persecuted the Church unto death," could have been made only at a time when it was no longer known what a wide difference existed between the Sadducean high priests and elders, who had a vital interest in quelling the Christian movement, and the Pharisees, who had no reason for condemning to death either Jesus or Stephen. In fact, it is derived from the Epistle to the Galatians (i. 13-14), the spuriousness of which has been shown by Bruno Baur, Steck, and most convincingly by Friedrich Maehliss ("Die Unechtheit des Galaterbriefs," 1891). The same is the case with Phil. iii. 5. Acts xxii. 17-18 speaks of another vision which Paul had while in the Temple, in which Jesus told him to depart from Jerusalem and go with his gospel to the Gentiles. Evidently Paul entertained long before his vision those notions of the Son of God which he afterward expressed; but the identification of his Gnostic Christ with the crucified Jesus of the church he had formerly antagonized was possibly the result of a mental paroxysm experienced in the form of visions.

Barnabas and Other Hellenists.

Whether the Hellenists in Jerusalem, at the head of whom stood Stephen, Philip, and others named in Acts vii. 1-5, exerted an influence upon Paul, can not be ascertained: that Barnabas, who was a native of Cyprus, did, may be assumed with certainty. He was Paul's older companion, apparently of a more imposing stature (Acts xiv. 12); and, according to *ib.* ix. 27, he introduced Paul to the apostles and induced him (xi. 25) to cooperate with him in the church of Antioch. The two traveled together as collectors of charity for the poor of the Jerusalem church (*ib.* xi. 30, xv. 2; see APOSTLE), and as preachers of the gospel (*ib.* xiii. 3, 7, 13, 14, 43, 46, 50; xiv. 14, 20; xv. 2, 12, 22, 35), Paul soon becoming the more powerful preacher. Finally, on account of dissensions, probably of a far more serious nature than stated either in Acts xv. 36-39 or Gal. ii. 13, they separated. That both Paul and Barnabas held views different from those of the other apostles may be learned from I Cor. ix. 6. Paul's relation to APOLLOS also was apparently that of a younger colaborer to an older and more learned one (I Cor. i. 10, iii. 5-23, xvi. 12).

His Missionary Travels.

According to Acts xiii., xiv., xvii.-xviii. (see JEW. ENCYC. ix. 252-254, *s.v.* NEW TESTAMENT), Paul began working along the traditional Jewish line of proselytizing in the various synagogues where the proselytes of the gate and the Jews met; and only because he failed to win the Jews to his views, encountering strong opposition and persecution from them, did he turn to the Gentile world after he had agreed at a convention with the apostles at Jerusalem to admit the Gentiles into the Church only as proselytes of the gate, that is, after their acceptance of the Noachian laws (Acts xv. 1-31). This presentation of Paul's work is, however, incompatible with the attitude toward the Jews and the Law taken by him in the Epistles. Nor can any historical value be attached to the statement in Gal. ii. 1-10 that, by an agreement with the seeming pillars of the Church, the work was divided between Peter and Paul, the "gospel of circumcision" being committed to the one, and the "gospel of uncircumcision" to the other; as the bitter and often ferocious attacks against both the Jews and the apostles of the Judæo-Christian Church (in Phil. iii. 2 he calls them "dogs") would then have been uncalled for and unpardonable. In reality Paul had little more than the name of apostle in common with the actual disciples of Jesus. His field of work was chiefly, if not exclusively, among the Gentiles; he looked for a virgin soil wherein to sow the seeds of the gospel; and he succeeded in establishing throughout Greece, Macedonia, and Asia Minor churches in which there were "neither Jews nor Gentiles," but Christians who addressed each other as "brethren" or "saints." Regarding his great missionary journeys as described in the Acts after older documents, see JEW. ENCYC. *l.c.* pp. 252-254. As to the chronology, much reliance can not be placed either on Gal. i. 17-ii. 3 or on the Acts with its contradictory statements.

From II Cor. xi. 24-32 (comp. *ib.* vi. 4; I Cor. iv. 11) it may be learned that his missionary work was beset with uncommon hardships. He labored hard day and night as a tent-maker for a livelihood (Acts xviii. 3; I Thess. ii. 9; II Thess. iii. 8; I Cor. iv. 12, ix. 6-18). He says (II Cor. ix.) that more frequently than any other apostle he was imprisoned, punished with stripes, and in peril of death on land and sea; five times he received the thirty-nine stripes in the synagogue, obviously for some public transgression of the Law (Deut. xxv. 3); three times was he beaten with rods, probably by the city magistrates (comp. Acts xvi. 22); once he was stoned by the people; and thrice he suffered shipwreck, being in the water a night and a day. In Damascus he was imprisoned by King Aretas at the instigation, not of the Jews, as is stated by modern historians, but of the Jerusalem authorities; and he escaped through being let down in a basket from a window (II Cor. xi. 24-32; comp. Acts xxvii. 41). He was besides this constantly troubled with his disease, which often made him "groan" for deliverance (I Thess. ii. 2, 19-iii. 1; II Cor. i. 8-10, iv. 7-v. 5, xii. 7; Gal. iv. 14).

In Greece.

Corinth and Ephesus, the two great centers of commerce, with their strangely mixed and turbulent as well as immoral population, offered to Paul a large field for his missionary work; and, because the Jews there were few and had little influence, he had free scope and ample opportunity to build up a church according to his plans. He was greatly aided therein by the Roman protection which he enjoyed (Acts xviii. 12-17, xix. 35-40). Yet as long as the church at Jerusalem was in his way he found little comfort and satisfaction in his achievements, though he proudly recounted the successes which marked his journeys throughout the lands. It was to Rome that his efforts gravitated. Not Athens, whose wisdom he decried as "folly" (I Cor. i. 17-24), but Rome's imperial city, whose administrative system he had learned to admire, attracted and fascinated his mind by its world-wide horizon and power. Consciously or unconsciously, he worked for a church with its world-center in Rome instead of in Jerusalem. A prisoner in the years 61-63 (Phil. i. 7, 16), and probably also a martyr at Rome, he laid the foundation of the world-dominion of pagan Christianity. (For further biographical details, which form the subject of much dispute among Christians, but are of no special interest for Jewish readers, see the article "Paul" in Hauck, "Real-Encyc.," in Hastings, "Dict. Bible," and similar works.)

Paul's Church versus the Synagogue.

In order to understand fully the organization and scope of the Church as mapped out by Paul in his Epistles, a comparison thereof with the organization and the work of the Synagogue, including the Essene community, seems quite proper. Each Jewish community when organized as a congregation possessed in, or together with, its synagogue an institution (1) for common worship, (2) for the instruction of young and old in the Torah, and (3) for systematic charity and benevolence. This threefold work was as a rule placed in charge of men of high social standing, prominent both in learning and in piety. The degree of knowledge and of scrupulousness in the observance of the Torah determined the rank of the members of the Synagogue. Among the members of the Essene brotherhood every-day life with its common meals came under special rules of sanctity, as did their prayers and their charities as well as their visits to the sick, the Holy Spirit being especially invoked by them as a divine factor, preparing them also for the Messianic kingdom of which they lived in expectation (see Essenes). The Christian Church, in adopting the name and form of the Essene Church (Ἐκκλησία; see Congregation), lent to both the bath (see Baptism) and the communion meals (see Agape) a new character. Paul, the Hellenist, however, knowingly or unknowingly, seems to have taken the heathen cult associations as his pattern while introducing new features into the Church (see Anrich, "Das Antike Mysterienwesen in Seinem Einfluss auf das Christenthum," 1894; Wobbermin, "Religionsgeschichtliche Studien zur Frage der Beeinflussung des Urchristenthums Durch das Antike Mysterienwesen," 1896, p. 153; Hatch, "Influence of Greek Ideas and Usages upon the Christian Church," 1890, pp. 281-296; Cumont, "Die Mysterien des Mithra, Deutsch von Gehrich," 1903, pp. 101, 118-119; Anz, "Ursprung des Gnosticismus," 1897, pp. 98-107; Reizenstein and Kabisch, *l.c.*). To him baptism is no longer a symbolic rite suggestive of purification or regeneration, as in Jewish and Judæo-Christian circles (see Baptism), but a mystic rite by which the person that enters the water and emerges again undergoes an actual transformation, dying with Christ to the world of flesh and sin, and rising with him to the world of the spirit, the new life of the resurrection (Rom. vi. 1-10).

Influence of the Greek Mysteries.

Still more is the partaking of the bread and the wine of the communion meal, the so-called "Lord's Supper," rendered the means of a mystic union with Christ, "a participation in his blood and body," exactly as was the Mithraic meal a real participation in the blood and body of Mithra (see Cumont, *l.c.*). To Paul, the Holy Spirit itself is not an ethical but a magic power that works sanctification and salvation. It is a mystic substance permeating the Church as a dynamic force, rendering all the members saints, and pouring forth its graces in the various gifts, such as those of prophesying, speaking in tongues, and interpreting voices, and others displayed in teaching and in the administration of charity and similar Church functions (Rom. xii. 4-8; I Cor. xii., xiv.; see Kabisch, *l.c.* pp. 261-281). The Church forms "the body of Christ" not in a figurative sense, but through the same mystic actuality as that by which the participants of heathen cults become, through their mysteries or sacraments, parts of their deities. Such is the expressed view of Paul when he contrasts the "table of Christ" with the "table of the demons" (I Cor. x. 20-21). While Paul borrows from the Jewish propaganda literature, especially the Sibyllines, the idea of the divine wrath striking especially those that commit the capital sins of idolatry and incest (fornication) and acts of violence or fraudulence (Rom. i. 18-32; I Thess. iv. 5), and while he accordingly wishes the heathen to turn from their idols to God, with desire of being saved by His son (I Thess. i. 9-10), his Church has by no means the moral perfection of the human race for its aim and end, as has Judaism. Salvation alone, that is, redemption from a world of perdition and sin, the attainment of a life of incorruption, is the object; yet this is the privilege only of those chosen and predestined "to be conformed to the image of His [God's] son" (Rom. viii. 28-30). It is accordingly not personal merit nor the greater moral effort that secures salvation, but some arbitrary act of divine grace which justifies one class of men and condemns the other (*ib.* ix.). It is not righteousness, nor even faith—in the Jewish sense of perfect trust in the all-loving and all-forgiving God and Father—which leads to salvation, but faith in the atoning power of Christ's death, which in some mystic or judicial manner justifies the undeserving (Rom. iii. 22, iv., v.; comp. Faith; for the mystic conception of faith, πίστις, in Hellenism alongside of gnosis, see Reizenstein, *l.c.* pp. 158-159).

The Mystery of the Cross.

Heathen as is the conception of a church securing a mystic union with the Deity by means of sacramental rites, equally pagan is Paul's conception of the crucifixion of Jesus. While he accepts the Judæo-Christian view of the atoning power of the death of Jesus as the suffering Messiah (Rom. iii. 25, viii. 3), the crucifixion of Jesus as the son of God assumes for him at the very beginning the character of a mystery revealed to him, "a stumbling-block to the Jews and folly to the Greeks" (I Cor. i. 23-ii. 2, ii. 7-10). It is to him a cosmic act by which God becomes reconciled to Himself. God sent "his own son in the likeness of sinful flesh" in order to have His wrath appeased by his death. "He spared not his own Son, but delivered him up," so that by his blood all men might be saved (Rom. v. 8; viii. 3, 32). To a Jewish mind trained by rabbinical acumen this is not pure monotheistic, but mythological, thinking. Paul's "Son of God" is, far more than the Logos of Philo, an infringement of the absolute unity of God. While the predicate "God" applied to him in Titus ii. 13 may be put to the account of Paul's school rather than to his own, throughout all the Epistles a share in the divinity is ascribed to Jesus in such a manner as to detract from the glory of God. He is, or is expected to be, called upon as "the Lord" (I Cor. i. 2; Rom. x. 13; Phil. ii. 10–11). Only the pagan idea of the "man-God" or "the second God," the world's artificer, and "son of God" (in Plato, in the Hermes-Tot literature as shown by Reizenstein, *l.c.*), or the idea of a king of light descending to Hades, as in the Mandæan-Babylonian literature (Brandt, "Die Mandäische Religion," 1889, pp. 151–156), could have suggested to Paul the conception of a God who surrenders the riches of divinity and descends to the poverty of earthly life in order to become a savior of the human race (I Cor. xv. 28, with ref. to Ps. viii. 6–7; Phil. ii. 6–10). Only from Alexandrian Gnosticism, or, as Reizenstein (*l.c.* pp. 25–26; comp. pp. 278, 285) convincingly shows, only from pagan pantheism, could he have derived the idea of the "pleroma," "the fulness" of the Godhead dwelling in Christ as the head of all principality and power, as him who is before all things and in whom all things consist (Col. i. 15–19, ii. 9).

Paul's Opposition to the Law.

Paul's attitude toward the Law was by no means hostile from the beginning or on principle, as the interpolated Epistle to the Romans and the spurious one to the Galatians represent it. Neither is it the legalistic (nomistic) character of Pharisaic Judaism which he militates against, as Jesus in the Gospels is represented as doing; nor was he prompted by the desire to discriminate between the ceremonial and the moral laws in order to accentuate the spiritual side of religion. Still less was he prompted by that allegorizing method of which Philo ("De Migratione Abrahami," § 16) speaks as having led many to the disregard of certain ceremonial laws, such as circumcision (M. Friedländer, "Zur Entstehungsgeschichte des Christenthums," pp. 149, 163, Vienna, 1894). All such interpretations fail to account for Paul's denunciation of all law, moral as well as ceremonial, as an intrinsic evil (Hausrath, "Neutestamentliche Zeitgeschichte," 2d ed., iii. 14). According to his arguments (Rom. iii. 20, iv. 15, vii.–viii.), it is the Law that begets sin and works wrath, because without the Law there is no transgression. "I had not known lust, except the Law had said, Thou shalt not covet" (*ib.* vii. 7). He has no faith in the moral power of man: "I know that in me (that is, in my flesh) dwelleth no good thing" (*ib.* vii. 18). What he is aiming at is that state in which the sinfulness of the flesh is entirely overcome by the spirit of Christ who is "the end of the Law" (*ib.* x. 4), because he is the beginning of the resurrection. For Paul, to be a member of the Church meant to be above the Law, and to serve in the newness of the spirit under a higher law (*ib.* vii. 4–6, 25). For in Christ, that is, by the acceptance of the belief that with him the world of resurrection has begun, man has become "a new creature: the old things are passed away . . . all things have become new" (II Cor. v. 17). For Paul, the world is doomed: it is flesh beset by sin and altogether of the evil one; hence home, family life, worldly wisdom, all earthly enjoyment are of no account, as they belong to a world which passes away (I Cor. vii. 31). Having at first only the heathen in view, Paul claims the members of the Church for Christ; hence their bodies must be consecrated to him and not given to fornication (*ib.* vi. 15). In fact, they ought to live in celibacy; and only on account of Satan's temptation to lust are they allowed to marry (*ib.* vi. 18–vii. 8). As regards eating and drinking, especially of offerings to idols, which were prohibited to the proselyte of the gate by the early Christians as well as by the Jews (comp. Acts xv. 29), Paul takes the singular position that the Gnostics, those who possess the higher knowledge ("gnosis"; I Cor. viii. 1, xiii. 2, xiv. 6; II Cor. iv. 6; comp. Reizenstein, *l.c.* p. 158), are "the strong ones" who care not for clean and unclean things and similar ritualistic distinctions (Rom. xiv. 1–23; I Cor. viii. 1–13). Only those that are "weak in faith" do care; and their scruples should be heeded by the others. The Gnostic principle enunciated by Porphyrius ("De Abstinentia," i. 42), "Food that enters the body can as little defile free man as any impurity cast into the sea can contaminate the ocean, the deep fountain of purity" (comp. Matt. xv. 11), has in Paul's system an eschatological character: "The kingdom of God is not eating and drinking, but righteousness and peace and joy in the Holy Ghost" (Rom. xiv. 17; comp. Ber. 17a; Jew. Encyc. v. 218, *s.v.* Eschatology). As he stated in I Cor. ix. 20–22: "And unto the Jews I became as a Jew, that I might gain the Jews; to them that are under the law, as under the law, that I might gain them that are under the law; to them that are without law, as without law (being not without law to God, but under the law to Christ), that I might gain them that are without law. To the weak became I as weak, that I might gain the weak: I am made all things to all men, that I might by all means save some."

The original attitude of Paul to the Law was accordingly not that of opposition as represented in Romans and especially in Galatians, but that of a claimed transcendency. He desired "the strong ones" to do without the Law as "schoolmaster" (Gal. iii. 24). The Law made men servants: Christ rendered them "sons of God." That is, their nature was transformed into an angelic, if not altogether divine, one (Rom. viii. 14–29; I Cor. vi. 1–3).

Law for the Proselyte.

Only in admitting the heathen into his church did he follow the traditional Jewish practise of emphasizing at the initiation of proselytes "the law of God," consisting in "Love thy neighbor as thyself," taken from Lev. xix. 18 (Rom. xiii. 8–10 contains no allusion to Jesus' teaching). Also in the mode of preparing the proselyte—by specifying to him the mandatory and prohibitive commandments in the form of a catalogue of virtues or duties and a catalogue of sins, making him promise to practise the former, and, in the form of a "widdui" (confession of sins), to avoid the latter—Paul and his school followed, in common with all the other apostles, the traditional custom, as may be learned from I Thess. iv. 1–10; Col. iii. 5–14; Rom. i. 29 (comp. J. Rendel Harris, "The Teaching of the Apostles," 1887, pp. 82–84; Gal. v. 13–23, copied from Rom. *l.c.*; so also Eph. ii.–vi.; I Peter ii.–iii.; I John iii.–iv.; Heb. xiii.; see Seeberg, "Der Katechismus der Urchristenheit," 1903, pp. 9–22, and Didache). A comparison of the "Didascalia" with Paul's various admonitions in the Epistles likewise shows how much he was indebted to Essene teachings (see Jew. Encyc. iv. 588-590, *s.v.* Didascalia, where it is shown in a number of instances that the priority rests with the Jewish "Didascalia" and not, as is generally believed, with Paul). Also "turning from darkness to light" (I Thess. v. 4-9; Rom. xiii. 12; Eph. v. 7-11; and elsewhere) is an expression borrowed from Jewish usage in regard to proselytes who "come over from the falsehood of idolatry to the truth of monotheism" (see Philo, "De Monarchia," i. 7; *idem*, "De Pœnitentia," §§ 1-2; comp. "Epistle of Barnabas," xix. 1-xx. 1). It is rather difficult to reconcile these moral injunctions with the Pauline notion that, since law begets sin, there should be no law ruling the members of the Church. It appears, however, that Paul used frequently the Gnostic term τέλειος = "perfect," "mature" (I Thess. v. 4, 10; Phil. iii. 12, 15; I Cor. ii. 6, xiii. 12 *et seq.*, xiv. 20; Eph. iv. 13; Col. i. 28). This term, taken from Grecian mysteries (see Lightfoot, "Epistles to the Colossians," *ad loc.*), and used also in Wisdom iv. 13, ix. 6, suggested an asceticism which in some circles of saints led to the unsexing of man for the sake of fleeing from lust (Wisdom iii. 13-14; Philo, "De Eo Quod Deterius Potiori Insidiatur," § 48; Matt. xix. 12; see Conybeare, *l.c.* p. 24). For Paul, then, the Christian's aim was to be mature and ready for the day when all would be "caught up in the clouds to meet the Lord in the air" and be with Him forever (I Thess. iv. 16-17). To be with Christ, "in whom dwelleth all the fulness of the Godhead," is to become so "complete" as to be above the rule of heavenly bodies, above the "tradition of men," above statutes regarding circumcision, meat and drink, holy days, new moon, and Sabbath, all of which are but "a shadow of the things to come"; it is to be dead to the world and all things of the earth, to mortify the members of the flesh, to "put off the old man" with his deeds and passions, and put on the new man who is ever renewed for the highest knowledge of God (gnosis), so that there is "neither Greek nor Jew, circumcision nor uncircumcision, barbarian, Scythian, bond nor free, but Christ is all and in all" (Col. ii. 9-iii. 11; comp. I Cor. v. 7: "Purge out therefore the old leaven, that ye may be a new lump").

Conflict with Judaism and the Law.

Far then from making antagonism to the Law the starting-point of his apostolic activity, as under the influence of the Epistle to the Romans is assumed by almost all Christian theologians, except the so-called Dutch school of critics (see Cheyne and Black, "Encyc. Bibl." *s.v.* "Paul and Romans, Epistle to the"), there is intrinsic evidence that Paul's hostile attitude to both the Law and the Jews was the result of his conflicts with the latter and with the other apostles. There is no bitter hostility or antagonism to the Law noticeable in I Thessalonians (ii. 14b-16 is a late interpolation referring to the destruction of the Temple), Colossians, I Corinthians (xv. 56 is obviously interpolated), or II Corinthians (where iii. 6-iv. 4, on closer analysis, also proves to be a late addition disturbing the context); and so little opposition to the Law does Paul show in those epistles first addressed to the Gentiles, that in I Cor. xiv. 21 he quotes as the "law"—that is, Torah in the sense of Revelation—a passage from Isa. xxviii. 11; whereas he avoids the term "law" (νόμος) elsewhere, declaring all statutes to be worthless human teaching (Col. ii. 22).

Antinomianism and Jew-Hatred.

His antinomian theology is chiefly set forth in the Epistle to the Romans, many parts of which, however, are the product of the second-century Church with its fierce hatred of the Jew, *e.g.*, such passages as ii. 21-24, charging the Jews with theft, adultery, sacrilege, and blasphemy, or ix. 22 and xi. 28 (comp. iii. 2). The underlying motive of Paul—the tearing down of the partition-wall between Jew and Gentile—is best expressed in Eph. ii. 14-22, where it is declared that the latter are no longer "gerim" and "toshabim" (A. V. "strangers" and "foreigners"), but "fellow citizens with the saints" of the Church and fully equal members "of the household of God." In order to accomplish his purpose, he argues that just as little as the heathen escapes the wrath of God, owing to the horrible sins he is urged to commit by his clinging to his idols, so little can the Jew escape by his Law, because "the law worketh sin and wrath" (Rom. iv. 15). Instead, indeed, of removing the germ of death brought into the world by Adam, the Law was given only to increase sin and to make all the greater the need of divine mercy which was to come through Christ, the new Adam (*ib.* v. 15-20). By further twisting the Biblical words taken from Gen. xv. 6, which he interprets as signifying that Abraham's faith became a saving power to him, and from Gen. xvii. 5, which he takes as signifying that Abraham was to be the father of the Gentiles instead of nations, he argues that the saving grace of God lies in faith (that is, blind belief) and not in the works of the Law. And so he declares faith in Jesus' atoning death to be the means of justification and salvation, and not the Law, which demands servitude, whereas the spirit of Christ makes men children of God (Rom. iv.-viii.). The Pauline Jew-hatred was ever more intensified (see *ib.* ix.-xi., and comp. ix. 31)—which is clear evidence of a later origin—and culminates in Gal. iii., where, besides the repetition of the argument from Gen. xv. 6 and xvii. 5, the Law is declared, with reference to Deut. xxviii. 26 and Hab. ii. 4 (comp. Rom. i. 17), to be a curse from which the crucified Christ—himself "a curse" according to the Law (Deut. xxi. 23; probably an argument taken up from controversies with the Jews)—was to redeem the believer. Another sophistic argument against the Law, furnished in Gal. iii. 19-24, and often repeated in the second century (Heb. ii. 2; Acts vii. 38, 53; Aristides, "Apologia," xiv. 4), is that the Law was received by Moses as mediator from the angels—a quaint notion based upon Deut. xxxiii. 2, LXX.; comp. Josephus, "Ant." xv. 5, § 3—and that it is not the law of God, which is a life-giving law of righteousness. Furthermore the laws of the Jews and the idolatrous practises of the heathen are placed equally low as mere servitude of "the weak and beggarly elements" (= "planets"; Gal. iv. 8-11), whereas those that have put on Christ by baptism have risen above all distinctions of race, of class, and of sex, and have become children of God and heirs of Abraham (*ib.* iii. 26–29; what is meant by the words "There shall be neither male nor female" in verse 28 may be learned from Gal. v. 12, where eunuchism is advised; see B. Weiss's note *ad loc.*).

The Old Testament and the New.

The Pauline school writing under Paul's name, but scarcely Paul himself, worked out the theory, based upon Jer. xxxi. 30–31, that the Church of Christ represents the new covenant (see Covenant; New Testament) in place of the old (Rom. xi. 27; Gal. iv. 24; Heb. viii. 6–13, ix. 15–x. 17; and, following these passages, I Cor. xi. 23–28). Similarly the interpolator of II Cor. iii. 6–iv. 4, in connection with *ib.* iii. 3, contrasts the Old Testament with the New: the former by the letter of the Law offering but damnation and death because "the veil of Moses" is upon it, preventing God's glory from being seen; the latter being the life-giving spirit offering righteousness, that is, justification, and the light of the knowledge (gnosis) of the glory of God as reflected in the face of Jesus Christ. It is superfluous to state that this Gnostic conception of the spirit has nothing to do with the sound religious principle often quoted from I Cor. iii. 6: "The letter killeth, but the spirit giveth life." The privilege of seeing God's glory as Moses did face to face through a bright mirror held out in I Cor. xiii. 12 (comp. Suk. 45b; Lev. R. i. 14) to the saints in the future is claimed in II Cor. iii. 18 and iv. 4 as a power in the actual possession of the Christian believer. The highest hope of man is regarded as realized by the writer, who looks forward to the heavenly habitation as a release from the earthly tabernacle (II Cor. v. 1–8).

Spurious Writings Ascribed to Paul.

This unhealthy view of life maintained by Paul and his immediate followers was, however, changed by the Church the moment her organization extended over the world. Some epistles were written in the name of Paul with the view of establishing more friendly relations to society and government than Paul and the early Christians had maintained. While Paul warns his church-members not to bring matters of dispute before "the unjust," by which term he means the Gentiles (I Cor. vi. 1; comp. Jew. Encyc. iv. 590), these very heathen powers of Rome are elsewhere praised as the ministers of God and His avengers of wrong (Rom. xiii. 1–7); and while in I Cor. xi. 5 women are permitted to prophesy and to pray aloud in the church provided they have their heads covered, a later chapter, obviously interpolated, states, "Let your women keep silence in the churches" (*ib.* xiv. 34). So celibacy (*ib.* vii. 1–8) is declared to be the preferable state, and marriage is allowed only for the sake of preventing fornication (Eph. v. 21–33), while, on the other hand, elsewhere marriage is enjoined and declared to be a mystery or sacrament symbolizing the relation of the Church as the bride to Christ as the bridegroom (see Bride).

A still greater change in the attitude toward the Law may be noticed in the so-called pastoral epistles. Here the Law is declared to be good as a preventive of wrong-doing (I Tim. i. 8–10), marriage is enjoined, and woman's salvation is declared to consist only in the performance of her maternal duty (*ib.* ii. 12, 15), while asceticism and celibacy are condemned (*ib.* iv. 3). So all social relations are regulated in a worldly spirit, and are no longer treated, as in Paul's genuine epistles, in the spirit of otherworldliness (*ib.* ii.–vi.; II Tim. ii. 4–6; Titus ii.–iii.; comp. Didascalia). Whether in collecting alms for the poor of the church on Sundays (I Cor. xvi. 2) Paul instituted a custom or simply followed one of the early Christians is not clear; from the "We" source in Acts xx. 7 it appears, however, that the church-members used to assemble for their communion meal in memory of the risen Christ, the Lord's Supper, on the first day of the week—probably because they held the light created on that day to symbolize the light of the Savior that had risen for them (see the literature in Schürer, "Die Siebentägige Woche," in "Zeitschrift für Neutestamentliche Wissenschaft," 1905, pp. 1–2). Little value can be attached to the story in Acts xviii. 18 that Paul brought a Nazarite sacrifice in the Temple, since for him the blood of Christ was the only sacrifice to be recognized. Only at a later time, when Pauline and Judean Christianity were merged, was account again taken, contrary to the Pauline system, of the Mosaic law regarding sacrifice and the priesthood; and so the Epistle to the Hebrews was written with the view of representing Jesus as "the high priest after the order of Melchizedek" who atoned for the sins of the world by his own blood (Heb. iv. 14–v. 10, vii.–xiii.). However, the name of Paul, connected with the epistle by Church tradition, was not attached to it in writing, as was the case with the other epistles.

Paul and Paulinism.

How far, after a careful analysis discriminating between what is genuine in Paul's writings and what is spurious and interpolated, he may yet be regarded as "the great religious genius" or the "great organizer" of the Christian Church, can not be a matter for discussion here. Still the credit belongs to him of having brought the teachings of the monotheistic truth and the ethics of Judaism, however mixed up with heathen Gnosticism and asceticism, home to the pagan world in a form which appealed most forcibly to an age eager for a God in human shape and for some means of atonement in the midst of a general consciousness of sin and moral corruption. Different from Simon Magus, his contemporary, with whom he was at times maliciously identified by his opponents, and in whose Gnostic system sensuousness and profanity predominated, Paul with his austerity made Jewish holiness his watchword; and he aimed after all, like any other Jew, at the establishment of the kingdom of God, to whom also his Christ subordinated himself, delivering up the kingdom to the Father when his task of redemption was complete, in order that God might be all in all (I Cor. xv. 28). He was an instrument in the hand of Divine Providence to win the heathen nations for Israel's God of righteousness.

On the other hand, he construed a system of faith

His System of Faith.

which was at the very outset most radically in conflict with the spirit of Judaism: (1) He substituted for the natural, childlike faith of man in God as the ever-present Helper in all trouble, such as the Old Testament represents it everywhere, a blind, artificial faith prescribed and imposed from without and which is accounted as a meritorious act. (2) He robbed human life of its healthy impulses, the human soul of its faith in its own regenerating powers, of its belief in its own self and in its inherent tendencies to goodness, by declaring SIN to be, from the days of Adam, the all-conquering power of evil ingrained in the flesh, working everlasting doom; the deadly exhalation of Satan, the prince of this world, from whose grasp only Jesus, the resurrected Christ, the prince of the other world, was able to save man. (3) In endeavoring to liberate man from the yoke of the Law, he was led to substitute for the views and hopes maintained by the apocalyptic writers the Christian dogma with its terrors of damnation and hell for the unbeliever, holding out no hope whatsoever for those who would not accept his Christ as savior, and finding the human race divided between the saved and the lost (Rom. ii. 12; I Cor. i. 18; II Cor. ii. 15, iv. 3; II Thess. ii. 10). (4) In declaring the Law to be the begetter of sin and damnation and in putting grace or faith in its place, he ignored the great truth that duty, the divine "command," alone renders life holy; that upon the law of righteousness all ethics, individual or social, rest. (5) In condemning, furthermore, all human wisdom, reason, and common sense as "folly," and in appealing only to faith and vision, he opened wide the door to all kinds of mysticism and superstition. (6) Moreover, in place of the love greatly extolled in the panegyric in I Cor. xiii.—a chapter which strangely interrupts the connection between ch. xii. and xiv.—Paul instilled into the Church, by his words of condemnation of the Jews as "vessels of wrath fitted for destruction" (Rom. ix. 22; II Cor. iii. 9, iv. 3), the venom of hatred which rendered the earth unbearable for God's priest-people. Probably Paul is not responsible for these outbursts of fanaticism; but Paulinism is. It finally led to that systematic defamation and profanation of the Old Testament and its God by Marcion and his followers which ended in a Gnosticism so depraved and so shocking as to bring about a reaction in the Church in favor of the Old Testament against the Pauline antinomianism. Protestantism revived Pauline views and notions; and with these a biased opinion of Judaism and its Law took possession of Christian writers, and prevails even to the present (comp., *e.g.*, Weber, "Jüdische Theologie," 1897, where Judaism is presented throughout simply as "Nomismus"; Schürer's description of the life of the Jew "under the law" in his "Gesch." 3d ed., ii. 464–496; Bousset, "Religion des Judenthums in Neu-Testamentlichen Zeitalter," 1903, p. 107; and the more popular works by Harnack and others; and see also Schechter in "J. Q. R." iii. 754–766; Abrahams, "Prof. Schürer on Life Under the Jewish Law," *ib.* xi. 626; and Schreiner, "Die Jüngsten Urtheile über das Judenthum," 1902, pp. 26–34).

For other Pauline doctrines see ATONEMENT; BODY IN JEWISH THEOLOGY; FAITH; SIN, ORIGINAL.

SAUL WAHL. See WAHL, SAUL.

SAULCY, LOUIS FÉLICIEN JOSEPH CAIGNART DE: Christian archeologist and numismatist; born at Lille March 19, 1807; died in Paris Nov. 5, 1880. He first adopted a military career, and in this way became custos of the Museum of Artillery, Paris, in 1842. He then made a voyage to Palestine, paying particular attention to the country around the Dead Sea. On his return he claimed to have discovered the ruins of Sodom and Gomorrah, and presented to the Louvre a sarcophagus which he insisted was that of King David. Among his many works, those of Jewish interest (all published in Paris) are: "Voyage Autour de la Mer Morte," 1854; "Recherches sur la Numismatique Judaïque," 1854; "Dictionnaire des Antiquités Bibliques," 1857; "Histoire de l'Art Judaïque," 1858; "Voyage en Terre Sainte," 1865; "Histoire d'Hérode, Roi des Juifs," 1867; "Numismatique de la Terre Sainte," 1873 (the standard work on the subject previous to Madden's); "Sept Siècles de l'Histoire Judaïque," 1874.

SAVANNAH: Important commercial city of Chatham county, Georgia; situated on the Savannah River. It was founded in 1733 by Gen. James Oglethorpe, and received its charter about half a century later (1789). It constituted the central point of the colony of Georgia, intended as a refuge for all persons fleeing from religious persecutions; and the spirit of its founder is best expressed in the words of Francis Moore ("A Voyage to Georgia," p. 15, London, 1744), who says that Oglethorpe "shew'd no Discountenance to any for being of different Persuasions in Religion." On the arrival of the first Hebrew settlers (1733) the trustees of the colony informed General Oglethorpe that they did not purpose "to make a Jews' colony of Georgia . . . and that they hoped they [the Jews] would meet with no encouragement." The general ignored the suggestions of the trustees, and called their attention to the good offices of Dr. Nuñez, who was one of the first Hebrew arrivals in Savannah.

The Jews of Savannah prospered both materially and religiously, and led a peaceful existence until the outbreak of the American Revolution, when they became scattered, several of them enlisting in the Revolutionary army. On the ratification of the treaty between Great Britain and the United States they began, however, to return to Savannah, and shortly afterward were again prominently identified with the commercial and industrial growth of the city. When the independence of the United States was declared, and Washington was elected president, the Jews of Savannah extended their congratulations to the chief magistrate in a letter signed by Levy Sheftall, the president of the Mickwa Israel congregation; the letter was suitably acknowledged.

Since the declaration of the independence of the United States the Jewish community of Savannah has enjoyed an almost uninterrupted era of tranquillity. An exodus of Jews which took place between 1797 and 1820 was soon offset by the arrival of new settlers; and the history of the growth of the Mickwa Israel congregation (see Georgia), which was founded shortly after the arrival of the first Jewish settlers, gives ample evidence of the prosperity of the Savannah community.

Among the ministers who have served the Mickwa Israel congregation special mention should be made of Dr. Jacob de la Motta and the Rev. I. P. Mendes. The latter, who was appointed to the rabbinate in 1877, had officiated for four years previously as rabbi of the Portuguese congregation in Richmond, Va. He was born in Kingston, Jamaica, Jan. 13, 1853; studied at Northwick College, London; and received the degrees of M.A. (1892) and D.D. (1899) from the University of Georgia, being the only Jew in the state of Georgia on whom the university bestowed an honorary degree. He published "Pure Words," a collection of prayers; "First Lessons in Hebrew," dedicated to the Council of Jewish Women; a booklet of "Children's Services" for use in his own congregation; and a collection of special prayers for Sabbath services and Sunday-school. He died at Savannah June 28, 1904.

In addition to Congregation Mickwa Israel, Savannah now (1905) has the congregations B'nai B'rith Jacob and Agudas Achim (incorporated 1904), besides the following communal organizations: Daughters of Israel, founded 1891; Chevra Gemiluth Chesed, 1887; Hebrew Benevolent Society, 1851; Ladies' Hebrew Benevolent Society, 1853; Mickwa Israel Temple Gild, 1894; Orphan Aid Society, 1880; and a Young Men's Hebrew Association, 1874.

At present the Jews of Savannah number between 2,800 and 3,000 in a total population of 54,244.

SAVIOR. See Messiah.

A Refuge from France.

SAVOY: Ancient independent duchy; part of the kingdom of Sardinia from 1720; ceded to France in 1860; and now (1905) forming the departments of Savoie and Haute-Savoie. When in 1182 the Jews were expelled from France by Philip Augustus, many of them sought refuge in Savoy, especially in the cities of Chambéry, Yenne, Seissel, Aiguebelle, Chillon, Chatel, and Montmélian (comp. Joseph ha-Kohen, "'Emeḳ ha-Baka," p. 71); and a new contingent of settlers arrived after the second French expulsion in 1306. Toward the end of the thirteenth century Amadeus V. granted the Jews of his dominions many privileges; these were renewed Nov. 17, 1323, by Edward, who accorded special favors to Vivant de Vesos, to Magister Agin, Vivant's son-in-law, and to Harasson de Bianna. In 1331 Aymon the Peaceful reduced the yearly taxes of the Jews of Savoy from 2,000 gold florins to 1,200.

Savoy was especially prominent in the tragedy of the Black Death in 1348. Chambéry, its capital, was alleged by the accusers of the Jews to have been the place where the poison for the wells, the supposed origin of the plague, was prepared by Rabbi Peyret and a rich Jew named Aboget. In consequence of this accusation Jews were massacred at Chambéry, Chillon, Chatel, Yenne, Saint-Genis, Aiguebelle, and Montmélian. In the last-mentioned town the Jews were imprisoned, and while they were awaiting judgment the populace invaded the prison and massacred them, with the exception of eleven persons who were later burned alive in an old barn filled with inflammable materials. A document relating to that persecution has preserved the names of the victims of Aiguebelle. These were: Beneyton, Saul, the Jewess Joyon, Lyonetus, Soninus, Vimandus, Bonnsuper, Samuel, Mouxa, Beneyton, Coen, Helist, Jacob and his son Bonionus, Parvus Samuel, Abraham, Benyon, Sansoninus, Samuel, and Magister Benedictus. However, the persecution was soon forgotten, and the Jews of Savoy resumed their occupations, which consisted chiefly in money-lending and trading in jewelry. Their success in the former is evidenced by the fact that the dukes themselves were very often their debtors. In 1366 the wife of Amadeus VI. pawned her jewels to two Jews; and in 1379 the treasurer of Savoy was charged to pay to the Jews Agino Ruffo and Samuel of Aubonne 200 gold florins for a crown the queen had bought from them. In 1388 the plate of Amadeus VII. was deposited with a Jew named Aaron as security for the sum of 800 gold florins.

Hebrew Books Examined.

A new persecution occurred in 1394 at the instigation of Vicente Ferrer (Joseph ha-Kohen, *l.c.* p. 75). In 1417 the Jews of Savoy were charged with possessing books which contained blasphemies against Christianity; and two converted Jewish physicians, Guillaum Saffon and Pierre of Macon, were commissioned to examine all books written in Hebrew. A similar charge was brought in 1430, and the Hebrew books were again examined, the examiner being a converted Jewish physician named Ayme, who ordered them to be burned. From the year 1429 the condition of the Savoy Jews grew more and more precarious. In that year Amadeus VIII. expelled the Jews from Châtillon-les-Dombes. A year later he annulled all the privileges that had been granted to the Jews by his predecessors. He confined the Jewish inhabitants to special quarters, in which they were locked during the night and during Holy Week, and he ordered them to wear on the left shoulder a cloth badge in the shape of a wheel, half white and half red, four fingers in width. He also renewed the old prohibition against keeping Christian servants, and forbade the buying of sacred vessels or any merchandise without the presence of witnesses or of a notary. At the instigation of a converted Jewish physician named Louis, of Nice or Provence, who had been charged by his godfather, Duke Louis, to make an inventory of the Jewish books of Chambéry, a persecution broke out in 1466. This persecution is, according to Gershon, identical with that reported by Solomon ibn Verga ("Shebeṭ Yehudah," No. 11) to have taken place in 1490. Toward the end of the fifteenth century, following upon the general banishment from Spain in 1492, the Jews were ordered to leave Savoy. It seems, however, that a small community remained in Chambéry, which, according to Victor de Saint-Genis ("Histoire de Savoie," i. 455), still existed in 1714.

Rabbis and Scholars.

Of the prominent men connected with Savoy may be mentioned the following: R. Aaron of Chambéry, commentator on the Pentateuch; R. Jacob Levi of Chambéry; R. Solomon Colon, father of Joseph Colon; and Gershon Soncino, who, in his preface to the Hebrew grammar of David Ḳimḥi, says that he collected in Chambéry the "Tosafot Ṭuk" (see Eliezer of Touques). Numerous Jewish physicians lived in Savoy, the most prominent among them being: Samson, physician to Amadeus V.; Palmieri, body-physician of Amadeus VI. and physician of the city of Chambéry; Helias of Evian, invited in 1418 to attend the daughters of the Count of Savoy; Isaac of Annecy; Jacob of Chambéry, physician to Bonne de Berri, mother of Amadeus VIII.; Solomon, physician to Amadeus VIII.; and Jacob of Cramonoz, physician to the regent Yolande.

J. I. Br.

SAX, JULIUS: Electrical engineer; born at Sugarre, Russia, 1824; died in London Aug., 1890. He emigrated to England in 1851, and started a business for the manufacture of scientific instruments, being employed by the master of the royal mint to construct automatic and other balances for use in that establishment. At the international exhibition held in London in 1862 he displayed bullion and chemical balances which obtained a prize medal, and which were purchased by the governor of Hongkong for the mint. The following years saw the production of a succession of mechanical inventions. In 1862 Sax took out patents for a metallic fire-alarm button; in 1869 he patented a form of magnetic A B C telegraph; in 1870, an improved mechanical recorder; in 1872, an electric billiard-marker; in 1881, an electromagnetic telephone, and an automatic system of electric call-bells for fire-stations; and later a system of cell-calls for police stations, prisons, etc. (adopted by the commissioners of the metropolitan police), an electric apparatus for checking cash receipts, etc. He made several improvements in electric bells and appliances for various purposes, and was awarded eight prize medals for excellence of manufacture.

Sax was overseer of the Western Synagogue, St. Alban's place, and was a liberal supporter of Jewish charities in London.

J. G. L.

SAXE-ALTENBURG, -COBURG-GOTHA, -MEININGEN, -WEIMAR. See Saxon Duchies.

SAXON DUCHIES: The four Saxon duchies are those of Saxe-Altenburg, Saxe-Coburg-Gotha, Saxe-Meiningen, and Saxe-Weimar.

Saxe-Altenburg: Duchy in Thuringia; an independent division of the German empire. It has a total population of 194,914, of whom only 40 are Jews.

Saxe-Coburg-Gotha: Duchy in Thuringia; an independent division of the German empire. It has a total population of 229,550, of whom 580 are Jews, Coburg having 200 and Gotha 350.

Saxe-Meiningen: Duchy in Thuringia; an independent division of the German empire. Jews are mentioned in connection with Saxe-Meiningen as early as the first half of the fourteenth century. On Good Friday, April 10, 1349, a Christian girl proclaimed in a church that, on passing the synagogue at the northern city gate, she had heard the Jews agreeing to attack and plunder the Christians during the Easter festival. Some of the Jews were thrown into prison; and at the order of Bishop Albert of Würzburg they and their wives and children were burned at the stake on July 17 following. After the expulsion of the Jews the synagogue remained closed for twenty-two years, when it was transformed into the Chapel of St. Mary Magdalene. A Jew named Gutkind of Hildburghausen had business relations with the counts of Henneberg. In 1348 the Jews were expelled from Sangershausen; and they are not again mentioned there until 1431, when the town was destroyed by fire. A "Judengasse," later called "Jakobstrasse," existed in the town until 1858. In 1904 the Jewish population of Saxe-Meiningen numbered 1,487, the total general population being 250,731. The town of Meiningen has 433 Jews, who maintain a relief society for indigent travelers, a ḥebra ḳaddisha, and a women's society. Hildburghausen has 90 Jews, and Walldorf-on-the-Werra has 72. L. Fränkel is the present (1905) "Landesrabbiner."

Saxe-Weimar: Duchy in Thuringia; independent division of the German empire. On June 30, 1823, an edict was issued abolishing the Leibzoll in the duchy, but declaring that the Jews should, nevertheless, be afforded protection. The edict required them to keep lists of births, marriages, and deaths, and to assume family names; rabbis excepted, Jews not belonging to the duchy were not to be admitted; those already settled there were allowed to engage in all occupations except those of brewing, butchering, baking, and innkeeping; the "Jews' oath" appears to have been modified, but not abolished. In 1833 a new edict was issued which provided that the German language should be used for all prayers, prohibited the recitation of "Kol Nidre," and required a prayer for the grand duke to be offered at every divine service.

The duchy has a total population of 362,873, including 1,290 Jews. Eisenach has 422 Jews; Geisa, 131; and Weimar, 90. The present "Landesrabbiner" is Dr. Salzer of Lengefeld.

J. S. O.

SAXONY: Kingdom of the German empire. Jews are reported to have appeared in Saxony before the year 1000, in the train of the Lombards, settling principally in the cities of Merseburg, Naumburg, Torgau, and Meissen (B. Lindau, "Gesch. der Residenzstadt Dresden"). Emperor Otto II. (973–983) is said to have conferred various privileges upon them. Gunzelin, the brother of the margrave Eckard I., was deposed from the margravate of Meissen in 1009 by Emperor Henry II., because, among other things, he was accused of having sold Christian serfs to the Jews of that principality. In the twelfth century there was a "Jews' village" in the vicinity of the towns of Magdeburg, Aschersdorf, and Quedlinburg. The relations between the Jews and the Christians were amicable down to the thirteenth century; hatred toward the former first became manifest during the Crusades, though the persecutions at Halle in 1205, Gotha in 1212, Magdeburg in 1213, and Erfurt in 1215 were due chiefly to the desire of the Christians to get rid of their debts to the Jews. The persecutions were then continued with greater bitterness by Archbishop Rupert.

The "Sachsenspiegel."

Shortly after the introduction of the "Sachsenspiegel" the Jews were deprived of all their privileges; their property was seized by the Christians, and they were compelled to engage in commerce and usury under such humiliating conditions that Duke Henry felt obliged to issue a "Jews' decree," in 1265, for the regulation of their status. This decree comprised fifteen sections, dealing chiefly with the legal status of the Jews, but designing also to afford them special protection, in addition to the privileges which the emperor accorded them as his chamber servants. Of these sections the following may be noted: (1) A Jew bringing an action against a Christian must produce as witnesses two Christians and one Jew, men of good repute. (2) A Christian bringing an action against a Jew must produce as witnesses two Jews and one Christian. (3) Any pledge may be taken without a witness. (4) A Jew who denies having received a pledge, and is subsequently found with it in his possession, is forced to surrender it, but is not punished. (5) Bail for a Jew is fixed at one gold mark for the imperial court, one gold mark for the margrave, one silver mark for the margrave's chamberlain, and one pound of pepper for each of the lower judges.

The Jewish community of Meissen was entirely outside the city walls, and the so-called "Jüdenthor" of Meissen derived its name from the Jewish suburb. At Freiberg, similarly, the Jüdenberg was outside the city. In the second half of the thirteenth century the condition of the Jews seems to have been more favorable, for in documents dated 1286, 1287, 1296, and 1327 they are referred to as landowners, farmers, and gardeners. In the fourteenth century Emperor Ludwig IV. of Bavaria transferred the protection of the Jews of part of Saxony to Margrave Frederick the Grave (1324–47), as at that time the Jews were again being persecuted (1328, 1330). They fared still worse in the second half of this century, when the Black Death swept over Germany. The extermination of the Jews of Meissen began in 1349. The persecutions took place chiefly at Nordhausen, Eisenach, and Dresden; only the Jews at Döbeln, Zschaits, Doschitz, and Freiberg were temporarily protected. The oppression continued under the succeeding margrave, Frederick the Severe, when the Jews of Bautzen and Zittau were the chief sufferers. The Jews of Görlitz were expelled by Duke John, after they had been cast into dungeons, their houses confiscated, and their synagogue razed. These conditions were somewhat ameliorated in the fifteenth century, under Duke Frederick the Warlike, who issued at Weissenfels a decree in which he granted absolute protection and self-government to the Jews of Saxony. The Jews were persecuted again during the Hussite wars, on the accusation of having taken part in that uprising, and in 1433 they were expelled from Meissen and Thuringia by Frederick the Mild (1428-64).

During the Hussite Wars.

During the period of the Reformation they fared still worse. The elector Maurice of Saxony (1521–1553) expelled them from Zwickau, where they had been gladly received in 1308 by Frederick the Joyous; and a year later, in 1543, they were expelled from Plauen. The police regulation of John Frederick the Younger from the year 1556 decreed the body-tax, the interdiction against the stay of foreign Jews on Saxon soil longer than one night, and the prohibition of trade and traffic. Still more severe were the regulations issued by Elector August, who forbade foreign Jews to remain on Saxon soil even one night, on pain of having one-half the property found in their possession confiscated. These regulations remained in force for fully a century, until Oct. 2, 1682, when John George III. of Saxony issued a new decree, in which the onerous regulations relating to Jews passing through the country were somewhat modified, since those regulations were found to be detrimental to the yearly fairs at Leipsic. The condition of the Jews continued to improve under Frederick August the Strong, who was favorably disposed toward them on account of his court Jew Behrend Lehmann; he granted letters of protection to several Jewish families, with permission to settle at Dresden and Leipsic. They were also permitted to maintain prayer-houses. August II. revived (April 4, 1733) the decrees of the sixteenth and seventeenth centuries, ordering in addition that the body-tax be paid thenceforth by all Jews, regardless of sex or age, though Elijah Behrend succeeded in securing the exemption of children under ten years of age. Behrend furthermore obtained permission for all Bohemian, Moravian, and Hungarian Jews to travel on any road through Saxony and secured the repeal of the edict forbidding them to remain in any place longer than one day.

Elector August III.

The foundation of Jewish communal life is due to the elector August III., who issued decrees in 1772 and 1773 ordering every Jewish family settled in Saxony to report three times in every month the exact condition of the household. He introduced the so-called "personal tax," on payment of which every Jew living in Saxony was free to go to any city for the purpose of trading there. About the beginning of the nineteenth century the condition of the Jews began to improve. On June 7, 1815, they were even permitted to give a solemn reception to the returning King Frederick August the Just. But civic equality and rights of citizenship were granted to them later in Saxony than elsewhere. After Bernhard Beer, Wilhelm T. Krug, and Moses Pinner had advocated the granting of such rights, on Oct. 3, 1834, King John of Saxony authorized the Jews to engage in all trades and industries; and on Dec. 20, following, affairs of Jewish culture and instruction were placed under the Ministry of Education. In 1836 the state granted the Jews a yearly contribution of 600 marks, and a year later, on May 18, 1837, they were empowered to organize themselves into communities with chapels of their own, and were granted citizenship, with the exception of municipal and political rights. The community of Dresden finally succeeded in obtaining full civic equality on Dec. 3, 1868, though the "Jews' oath" was not abrogated until Feb. 20, 1879.

According to the census of 1904, the Jewish population of Saxony was as follows: Annaberg, 105 persons; Bautzen, 54; Blasewitz, 21; Chemnitz, 1,150; Döbeln, 23; Dresden, 3,059; Freiberg, 56; Leipsic, 7,000; Lobau, 31; Löbtau, 38; Meissen, 32; Merane, 32; Mitweida, 41; Micksen, 20; Pirna, 24; Plauen, 250; Veilchenbach, 36; Wurzen, 39; Zittau, 135; Zwickau, 50. The total population of Saxony is 4,202.216.

J. S. O.

SAYCE, ARCHIBALD HENRY: English archeologist; born at Shirehampton Sept. 25, 1846; educated at Grosvenor College, Bath, and Queen's College, Oxford, becoming fellow in the latter in 1869 and tutor in 1870. He was deputy professor of comparative philology at Oxford from 1876 to 1890, and a member of the Old Testament Revision Company from 1874 to 1884. He is the author of many works on Assyriology, and has attempted the deciphering of the Hittite inscriptions as well as those of Lake Van. He assisted Professor Cheyne in compiling the notes for the "Queen's Printers' Bible" (1881), and wrote an introduction to the books of Ezra, Nehemiah, and Esther (1885).

Sayce has devoted considerable attention to Biblical anthropology, on which subject he has written "The Races of the Old Testament" (1891). While accepting some of the results of recent criticism (as to the date of the Book of Daniel, for example), he has written a series of books adducing the evidence of the El-Amarna tablets and other inscriptions in support of the authenticity of the early Old Testament narratives. His works on this subject include: "Fresh Light from the Ancient Monuments" (2d ed., London, 1884); "The Higher Criticism and the Verdict of the Monuments" (*ib.* 1894); "Patriarchal Palestine" (*ib.* 1895); "The Egypt of the Hebrews and Herodotus" (*ib.* 1895); "Early History of the Hebrews" (*ib.* 1897); "Early Israel and the Surrounding Nations" (*ib.* 1899). He has written also "The Life and Times of Isaiah" (*ib.* 1889), and has edited Genesis for the "Temple Bible."

For reasons of health Sayce is compelled to pass each winter in Egypt; and during his stay there he became acquainted with the treasures of the Cairo genizah, which he was the first to utilize, purchasing a large number of fragments from that source for the Bodleian Library, Oxford.

J.

SCALA NOVA (Turkish, **Kuch Adassi**): Important city of Anatolia opposite the island of Samos; seaport of Ephesus. The oldest epitaph in the Jewish cemetery is dated 1682; but the town evidently had Jewish inhabitants in the thirteenth century, for in 1307 a number of Jews removed from Scala Nova to Smyrna, a similar event occurring in 1500. At the time of the expulsion from Spain 250 Jewish families went to Scala Nova; and a number of the local family names are still Spanish. In 1720 the plague reduced the number of families to sixty ("Meserit," v., No. 39); and Tournefort, who visited the city in 1702, found there only ten families and a synagogue ("Voyage au Levant," ii. 525, Paris, 1717). In 1800, when an epidemic of cholera caused many Jews to emigrate, there were 200 families in Scala Nova, and in 1865, when a second epidemic visited the city, there were still sixty-five families there. In 1816 Moses Esforbes was the chief of customs for the town, while Isaac Abouaf was city physician for several years, and Moses Faraji and Moses Azoubel were municipal pharmacists.

At present (1905) the Jewish population consists of thirty-three families, some of them immigrants from the Morea after the Greek Revolution of 1821. The majority are real-estate owners and have some vines; but the only mechanics are tinsmiths.

The synagogue, erected by Isaac Cohen in 1772, was rebuilt by Joseph Levy in 1900. The community likewise possesses a Talmud Torah, directed by a rabbi who officiates also as shoḥeṭ and ḥazzan. The gabel is enforced. A false charge of ritual murder was brought against the Jews about the middle of the nineteenth century; and a certain amount of anti-Semitism is generally manifested at Easter.

SCHAFFER, SCHEPSEL (שבתי): American rabbi; born May 4, 1862, at Bausk, Courland, Russia; descendant of Mordecai Jaffe, author of the "Lebush." He was educated at the gymnasium of Libau, Courland, at the University of Berlin (Ph.D.), and at the Rabbinical Seminary, Berlin. Since Jan. 1, 1893, Schaffer has been rabbi of Shearith Israel congregation of Baltimore, Md. He is president of the Baltimore Zion Association (since 1895) and honorary vice-president of the American Federation of Zionists, and he was twice a delegate to the Zionist Congress at Basel. Schaffer is the author of "Das

Recht und Seine Stellung zur Moral nach Talmudischer Sitten- und Rechtslehre," Frankfort-on-the-Main, 1889.

A. I. G. D.

SCHAIKEWITZ, NAHUM MEÏR (SHOMER): Russian Judæo-German novelist and playwright; born at Nesvizh, government of Minsk, Dec. 18, 1849. Schaikewitz distinguished himself as a clever story-teller even as a boy. His first literary efforts took the form of short stories in Hebrew for "Ha-Meliẓ"; in this way he became acquainted with such writers of Hebrew as Ẓebi Hirsch Scherschewski, Dobsevage, and others. Later he became business manager in Wilna, and spent some time in traveling. While in Bucharest he came under the influence of the Jewish theater and resolved to become a dramatic author. He then settled in Odessa, where he became theatrical manager and playwright. His play "Der Rewizor" (Odessa, 1883), an adaptation from Gogol's "Revizor," proved very successful and showed Schaikewitz's talent as a writer. After the Jewish theater was closed in Russia, Schaikewitz went to New York (1888), where he edited "Der Menschenfreund" and "Der Jüdischer Puck," two Judæo-German weeklies.

Schaikewitz is the author of several Hebrew novels, all representing Jewish life in Russian towns. Among these were: "Mumar le-Hak'is" (Warsaw, 1879); "Kewiyah Taḥat Kewiyah" and "Ṭa'ut Goi" (*ib.* 1880); and "Ha-Niddaḥat" (vols. i. and ii., Wilna, 1886; vol. iii., Warsaw, 1887). He wrote also "Ḳayin" (*ib.* 1887), a novel on Jewish life in Portugal. But Schaikewitz is especially known as a writer of Judæo-German, taking as a model, and finally excelling, Isaac Meïr Dick. He has written over two hundred novels in Judæo-German, partly historical and partly reflecting Jewish life in the small towns and villages of Russia in the middle of the nineteenth century. As his language is simple, just as spoken by the Jewish masses in Lithuania, his novels had the effect of greatly decreasing the fanaticism which prevailed in the small rural and urban communities. Among his more popular novels are "Der Ḳaṭorzhniḳ," "Der Blutiger Adieu," and "Der Frumer Merder." Many of his historical novels appeared in the Judæo-German dailies.

Over thirty of Schaikewitz's plays have been produced, first in Russia, then in New York, among them being one entitled "Tisza-Eslar," on the subject of the blood accusation brought in the Hungarian town of that name. He was the subject of violent attacks by S. Rabinovitz, who directed against him his "Shomer's Mishpaṭ" (Berdychev, 1888), reproaching him for his literary deficiencies. Schaikewitz successfully defended himself in a pamphlet entitled "Yehi Or" (New York, 1898), showing that his literary problem was to satisfy every plane of intelligence, from the householder to the servant-girl who could not understand the works of the later Judæo-German writers.

S. M. SEL.

SCHAPIRA, HERMANN: Russian mathematician; born in 1840 at Erswilken, near Tauroggen, a small town in Lithuania; died at Cologne May 8, 1898. Educated for the rabbinate, he had been appointed to a rabbinical position at the age of twenty-four, when he decided to devote the rest of his life to the cultivation of the secular sciences. He went, accordingly, first to Odessa and later (1868) to Berlin, where he studied for three years in the Gewerbeakademie. Returning to Odessa, he became a merchant, but in 1878 he again took up his scientific studies, and for the next four years busied himself at Heidelberg, especially with mathematics and physics. In 1883, after obtaining the degree of Ph.D., he established himself as privat-docent in mathematics at the University of Heidelberg, becoming assistant professor in 1887.

Schapira remained a lifelong student of Hebrew literature, which he enriched by an edition, from a Munich manuscript, of the "Mishnat ha-Middot" (1880), and by his contributions to the Hebrew periodicals "Ha-Meliẓ," "Ha-Ẓefirah," and "Mi-Mizraḥ umi-Ma'arab." He was an ardent Zionist, adhering from the very start to the Basel program; and it was during a Zionist lecture tour that he contracted pneumonia at Cologne. Schapira's contributions to mathematics were published in various mathematical journals.

H. R. S.

SCHAPIRO, HEINRICH: Russian physician; born at Grodno 1853; died at St. Petersburg Feb. 14, 1901. After leaving the gymnasium at Grodno he studied in the St. Petersburg medical academy (1871-76). During the Turko-Russian war Schapiro served as a military surgeon, and after the war was assigned to duty in the military clinic of the medical academy. Then followed a long military service in St. Petersburg and Odessa, until he was appointed privat-docent of medicine in the imperial clinical institution for physicians (1895). In 1896 he was advanced to the position of senior assistant, and in 1897 was appointed to a professorship.

Besides several treatises in Russian and German medical journals, and some articles in the Russian medical encyclopedia, Schapiro completed a work entitled "Lehrbuch der Allgemeinen Therapie," commenced by Professor Eichwald, who before his death entrusted Schapiro, his favorite pupil, with its completion. He also translated into Russian several German medical handbooks.

H. R. F. C.

SCHAPIRO, MOSES B. PHINEHAS: Russian rabbi and printer; born probably in Koretz, Volhynia, about 1758; died in Slavuta 1838. He was the son of the Ḥasidic rabbi Phinehas of Koretz, and was rabbi of Slavuta in 1808, when he began to publish a new edition of the Talmud (1808-13). This edition was much superior to former ones, and was sold so quickly that the printers at Ḳopys thought the injunction of the rabbis, that the Talmud should not be reprinted in Russia for twenty-five years, no longer binding, and began their edition (1816–28); this was much inferior, however, and proved financially a failure. Schapiro then undertook the publication of another edition (1817–22), which also sold better than had been expected. In 1836 the Romms of Wilna considered themselves free to begin work upon an edition, and found that great rabbis like Akiba Eger of Posen and Moses Sofer of Presburg, and most of the prominent rabbis of Lithuania, regarded a later injunction against publishing a new edition for twenty-five years, granted in favor of Moses Schapiro, as void. They held that, on the contrary, Moses Schapiro himself had no right to publish a new edition until the Romms had sold theirs or a quarter of a century had elapsed. Moses, however, found other rabbinical authorities who sided with him against the Romms; these included the Orensteins and many other Polish and Galician rabbis, and practically all the rabbis of the Ḥasidim. A quarrel ensued, which was waged with unusual bitterness on both sides, a movement to settle it by arbitration being rejected.

Moses, or rather his sons Phinehas and Samuel Abraham, began the publication of a third edition of the Talmud, but had not gone further than the tractate "Pesaḥim" when they were arrested on the charge of having murdered a Jewish bookbinder who had committed suicide in their establishment. Their enemies succeeded in influencing the authorities against them because as printers they scrupulously abstained from publishing "haskalah" literature. After a hasty and unfair trial they were condemned to run the gantlet and to be transported to Siberia. The elder brother, Phinehas, succumbed to the terrible ordeal, and the father, then an octogenarian, died of a broken heart soon afterward. The printing-house was closed, though it was reopened about a quarter of a century later by Ḥanina Lipa and Joshua Heschel Schapiro, grandsons of Moses who had settled in Jitomir. Samuel Abraham, who survived the scourging and was ultimately liberated, died in 1863.

SCHARF, MORITZ. See TISZA-ESZLÁR.

SCHATZ, BORIS: Russian sculptor; born in 1866, in the government of Kovno. He was the son of a poor schoolmaster ("melammed"). He studied first at the Wilna School of Design, then at the Academy of Fine Arts in Warsaw, and finally at Paris, where he was a pupil of Antokolski (1890–1896). He has resided at Sofia since 1896, and has made a special study of Jewish subjects, particularly of the oppressed Jew of the ghetto. Among his subjects may be mentioned: "Rabbi Blessing a Child"; "Prayer of Habdalah"; "Saturday Evening"; "The Shadḥan." Schatz has also found subjects of larger scope in the past history of Israel. In 1892, at the Paris Salon, he exhibited a piece entitled "The Mother of Moses," an extremely fine group, in spite of some technical defects. In 1896 he produced his masterpiece, "Mattathias Maccabee."

Schatz has also represented many types of Bulgarians, among whom he lives. Of these may be mentioned: "A Bulgarian Piper"; "A Tzigane Wood-Cutter Leaning on His Ax"; "A Sephardic Jew and Jewess of Sofia"; etc. He has executed reliefs of several celebrated personages, such as Antokolski, Rubinstein, Pasteur, and Dr. T. Herzl, and he has also done some decorative work. He was the only Bulgarian sculptor who exhibited at the St. Louis Exposition of 1904, his subject being the struggle of Christianity with Islam in the Balkan Peninsula up to the War of Independence (1876). Particular mention may be made of a "Bulgarian Insurgent Pursued by a Bashi-Bazouk." The Exposition Committee of St. Louis awarded Schatz the silver medal.

H. R. M. FR.

SCHECHTER, SOLOMON: President of the faculty of the Jewish Theological Seminary of America; formerly reader in rabbinics at Cambridge University; born in Rumania in 1847. His youth was devoted exclusively to the study of rabbinical literature. He then went to Vienna, where he studied Jewish theology in the bet ha-midrash under Weiss and Friedmann, and attended lectures on philosophy and other secular branches of learning in the University of Vienna. After receiving his rabbinical diploma from Weiss, he continued his secular and theological studies in the University of Berlin, and attended Talmudical lectures by Dr. Israel Lewy. In 1882 Schechter went to England as tutor in rabbinics to Claude G. Montefiore. In 1885 he published his first essay, "The Study of the Talmud," in the "Westminster Review." In 1887 appeared his edition of "Abot de-Rabbi Natan," and he then wrote various essays and lectures in the "Jewish Chronicle," "Jewish Quarterly Review," "Revue des Etudes Juives," and "Monatsschrift." Some of these lectures and essays were afterward collected and published under the title "Studies in Judaism" (1896). In 1890 Schechter was elected lecturer in Talmud at the University of Cambridge, and in 1891 the degree of M.A. ("honoris causa") was conferred upon him.

In 1892 Schechter was elected reader in rabbinics, and in the following year he obtained the Worth studentship for the purpose of going to Italy to examine the Hebrew manuscripts in the great Italian libraries. The "Agadath Shir Hashirim," and other publications in the "Jewish Quarterly Review," as well as an article in the Kohut Memorial Volume, are partly the result of these Italian researches, an exhaustive report on which was presented by him to the vice-chancellor of Cambridge University. In 1894 he delivered a series of theological lectures in University Hall, London; in 1895 he was appointed the first Gratz lecturer in Philadelphia. A series of his lectures were afterward published in "J. Q. R." as "Some Aspects of Rabbinic Theology." On May 13, 1896, Schechter discovered the first leaf of the original Hebrew of Ecclesiasticus; and in Dec., 1896, he was sent to Egypt and Palestine to continue his investigations. He returned from Cairo laden with treasures, which became the subjects of various articles and monographs. The collection was presented by him and Dr. Taylor to the Cambridge University Library, and is known as the Taylor-Schechter collection. These two scholars published in collaboration "The Wisdom of Ben Sira," Cambridge, 1899.

While Schechter was engaged in the preparation of the large fragments of Ecclesiasticus discovered by him in the Cairo genizah, the University of Cambridge conferred upon him the degree of Litt.D. (Feb., 1898). In 1898 he was appointed external examiner in Victoria University, Manchester, England; in 1899, professor of Hebrew at University College, London; in 1900, curator of the Oriental Department of Cambridge University Library, England. He was also a member of the Board of Oriental Studies and the Board of Theological Studies, London University, England.

In Dec., 1901, Schechter accepted the presidency of the faculty of the Jewish Theological Seminary of America. After his arrival in New York he acted as editor of the Talmudic department of THE JEWISH ENCYCLOPEDIA. In 1902 he published the "Midrash Hag-Gadol," from a Yemen manuscript, and the "Saadyana," from manuscripts discovered in the Cairo genizah. He contributed the article "Talmud" to Hastings' "Dictionary of the Bible" and a number of papers to various journals. In 1904 he was appointed an honorary member of the senate of New York University and a director of the Educational Alliance. In 1905 Schechter was invited to deliver at Harvard University a course of lectures in Jewish theology.

SCHEFFTEL, SIMON BARUCH: German Hebraist; born June 14, 1813, at Breslau; died March 9, 1885. In 1848 he settled as a merchant at Posen. After his retirement from business, in 1871, he prepared a large Hebrew commentary on the Targum Onḳelos, which was published posthumously by his son-in-law Joseph Perles, under the title "Bi'ure Onḳelos" (Munich, 1888). This commentary, which contains many valuable critical and exegetical notes, is one of the most important reference works on the Targum Onḳelos.

SCHEID, ELIE: French communal worker and writer; born at Hagenau, Alsace, Oct. 24, 1841. After he had graduated from college, the impairment of his voice compelled him to give up his plan of preparing himself for a rabbinical career, and he found employment in a commercial house.

Owing to his unpleasant recollections of the manner in which the funerals of his parents had been conducted by the old ḥebra ḳaddisha, Scheid in 1863 established the Ḥebra 'Am Segullah, of which he was the first secretary, and later became president. This institution was founded on principles more in accord with the requirements of the time; and it was imitated by all the other Jewish societies of the kind in Alsace.

In 1870, during the Franco-Prussian war, Scheid for the first time entered public life. After the battle of Fröschweiler he served as secretary to the committee which had charge of the wounded and of furnishing supplies for the invading army. When the war was over he was elected member of the city board of Hagenau, and became its secretary, as well as administrator of the public savings-bank and president of the Jewish congregation.

A local incident caused Scheid to make researches in the public library of Hagenau, and later he published (in "L'Univers Israélite") a documentary history of the Jewish cemetery of the city. This was followed by "Histoire des Juifs de Haguenau" (in "R. E. J." 1879–80, and printed separately 1885), and by a pamphlet, "Historique de la Société Guemilath-Chasadim de Haguenau" (1882). His greater work, "Histoire des Juifs d'Alsace," appeared at Paris in 1887, one of its chapters, "Histoire de Rabbi Joselmann," being printed as a separate pamphlet (*ib.* 1886).

In 1883 Baron Edmond de Rothschild called Scheid to Paris to reorganize the Comité de Bienfaisance; and when, in September of that year, Rothschild began the work of colonization in Palestine, he appointed Scheid inspector. The latter thereupon went to Palestine and devoted nearly six months to the task of organization. During the sixteen years he occupied the post of inspector he devoted all his time and energy to his duties, annually visiting the colonies and supervising the work of the settlers. He retired Dec. 31, 1899, on a pension from Baron Rothschild, the total number of his journeys to Palestine having been twenty-two.

S. S. MAN.

SCHEINDLINGER, SAMUEL B. ABRAHAM (SALER): Polish rabbi; died in Lemberg Aug. 7, 1796. He was probably a native of Dobromil, and was at first rabbi in Sale and afterward preacher and rosh bet din in Lemberg, where he remained until his death. Scheindlinger was the author of "Shem mi-Shemu'el" (Lemberg, 1817), the first part of which contains sermons in the order of the Pentateuch and the second part novellæ on Talmudical subjects. Samuel had three sons, **Nathan Hecht** of Yaroslav, **Judah Idel,** and **Abraham Abele.**

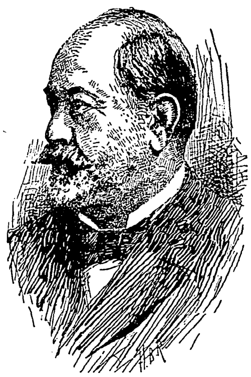
SCHENK, LEOPOLD: Austrian embryologist; born at Urmény, Comitat Neutra, Hungary, Aug. 23, 1840; died at Schwanberg, Styria, Aug. 18, 1902. Having studied at the University of Vienna (M.D. 1865), he was for the following eight years assistant at the physiological institute of his alma mater, receiving the "venia legendi" in 1868. In 1873 he became professor of embryology at the University of Vienna.

Schenk holds an important position in the medical world on account of his numerous contributions to embryology. Through one of them, "Einfluss auf das Geschlechtsverhältniss des Menschen und der

Thiere" (Vienna and Magdeburg, 1898; American translation, "The Determination of Sex," Akron, O., 1898), his name became a household word throughout the civilized world. Having been an embryologist for over thirty years, he had made careful studies of the generative process, and came to the conclusion that the sex of a child depends on the kind of nourishment partaken of by the mother. This theory was severely criticized by his own faculty and by such men as Virchow, Gusserow, Winkel, Pflüger, Roux, Munk, and Born; and he was finally forced to resign his chair (1900). Schenk, however, clung to his theory and claimed further that the foundation for special capacities of the child can be laid in the embryo through special nutrition given to the mother; and that by avoiding certain conditions and by feeding on certain foods the mother can save the future child from the life of a degenerate. His three cardinal conclusions were, therefore, that it was possible (1) to determine the future sex of the child; (2) to determine its future profession; and (3) to beget only normal offspring. Further elaborations of his theory were prevented by his early death.



Leopold Schenk.

Of Schenk's other writings the following may be mentioned: "Lehrbuch der Vergleichenden Embryologie der Wirbelthiere," Vienna, 1874; "Lehrbuch der Histologie des Menschen," *ib.* 1885 (2d ed. 1892); "Lehrbuch der Bacteriologie," *ib.* 1894; "Lehrbuch der Embryologie," *ib.* 1896.

It was through Schenk's influence that there was added to the medical faculty of the Vienna University a department for embryology, in which subject he became the founder of a school.

S. F. T. H.

SCHERSCHEWSKI, BENJAMIN: Russian physician; born in Brest-Litovsk 1857. He studied medicine at the University of Warsaw, from which he graduated in 1883. In 1885 he went to Palestine and settled in Jerusalem; two years later he went to Vienna, where he took a special course in medicine. After another short stay in Jerusalem he settled as a practising physician in Odessa, where he still (1905) resides. He is the author of "Mishnat 'Olam Ḳaṭon," of which the first part is a treatise on anatomy, and the second on chemistry; the work has been corrected and annotated by Jehiel Michael Pines (Jerusalem, 1886).

Bibliography: Sokolow, *Sefer Zikkaron*, p. 116, Warsaw, 1890.

H. R. P. Wi.

SCHERSCHEWSKI, JUDAH JÜDEL BEN BENJAMIN: Lithuanian Talmudist and Hebraist; born in 1804; died at Kovno Sept. 20, 1866. After having studied Talmud and rabbinics under Jacob Meïr Yalovker, Scherschewski was employed in one of the business establishments in Wilna, where, in his spare hours, he occupied himself reading rabbinical works and studying the literature of the haskalah movement. In 1852 he was appointed teacher of Talmud and rabbinics in the rabbinical seminary of Wilna, which position he held until his death.

Scherschewski was the author of "'Oz Melek" (Wilna, 1857), a sermon and a hymn on the occasion of the coronation of Alexander II. His "Kur la-Zahab" is in two parts; the first part (*ib.* 1858) is a commentary on 109 difficult haggadic passages of both Talmuds, preceded by a long introduction treating of the Haggadah in general; the second part (*ib.* 1866) contains an essay on the religious dogmas and views of the ancient Talmudists and a commentary on 138 haggadic passages. Several sermons of Scherschewski's are to be found in the "Ḳobeẓ Derushim," a collection of sermons preached by the teachers of the Wilna rabbinical seminary and published at the expense of the Russian government (*ib.* 1864). He was a constant contributor to "Ha-Karmel" during the closing years of his life, and contributed many articles to various other Hebrew periodicals also.

Bibliography: Fuenn, *Keneset Yisrael*, p. 422; Fürst, *Bibl. Jud.* iii. 268; Joshua Heschel Kalman, in *Ha-Maggid*, x., No. 40; Zeitlin, *Bibl. Post-Mendels.* p. 341.

W. B. M. Sel.

SCHERSCHEWSKI, ẒEBI HIRSCH HA-KOHEN: Russian Hebrew writer; born at Pinsk in 1840. While still a boy he studied Hebrew grammar and archeology without a teacher. After serving as secretary of the Jewish community of Pinsk, he went to the Crimea, where, at Melitopol, he entered the service of a merchant named Seidener. Later he became assistant editor of Zederbaum's "Ha-Meliẓ." During the Russo-Turkish war he followed the Russian army as a sutler; and after a second short stay with his former employer, Seidener, he settled in 1883 at Rostov-on-the-Don, where he opened a bookstore.

In addition to numerous contributions to current Hebrew journals, Scherschewski wrote "Boser Abot" (Odessa, 1877), a satirical poem on the neglect of the education of Jewish children in Russia, and "'Iyyun Sifrut" (Wilna, 1881), on the development of Jewish literature and its significance as a cultural element for raising the Jews to a higher moral standing. His notes to the Midrash Shoḥer Ṭob are printed in Padua's Warsaw edition of that midrash, and his rimed parodies are to be found in "Keneset Yisrael" (i. 408 *et seq.*, ii. 2–6).

Bibliography: Sokolow, *Sefer Zikkaron*, pp. 114–115; Zeitlin, *Bibl. Post-Mendels.* p. 341.

SCHEUER, JACOB MOSES DAVID (TEBELE) B. MICHAEL: German Talmudist; born in the beginning of the eighteenth century at Frankfort-on-the-Main; died 1782 at Mayence. Scheuer came of one of the old Frankfort families which adopted as family names those by which the houses they owned were known. Scheuer, who was one of the foremost pupils of Jacob Cohen, rabbi of Frankfort, was appointed dayyan in that city when Jacob Joshua b. Ẓebi Hirsch, the author of "Pene Yehoshua'," filled the rabbinate. At an advanced age, in 1759, Scheuer was called as rabbi to Bamberg, to succeed his father-in-law, Nathan Utiz.

In virtue of the universal respect which he had gained Scheuer succeeded, as arbitrator between the Jews of the chapter and the gentry, in bringing about the ceremonial agreement ("Ceremonien-Recess") of 1760, which put an end to protracted disputes. His beneficent activity was marred, however, by the continuous attacks of a baptized Jew, who traduced him before the prince-bishop, making it impossible for him to remain at Bamberg. Hence he was probably glad to accept in 1767 a call to the district rabbinate of Mayence, where he remained till his death.

SCHEY, PHILIPP, BARON VON KOROMLA: Hungarian merchant and philanthropist; born at Güns (Köszeg) Sept. 20, 1798; died at Baden, near Vienna, June 28, 1881. He was the first Jew in Hungary to be made an Austrian noble. In his patent of nobility, granted May 13, 1859, by King Francis Joseph I., his services to the imperial dynasty during the revolution in 1848 and 1849 are specially mentioned. Reference is made also to the great benevolence exercised by him "toward suffering humanity, regardless of creed."

Bibliography: Reich, *Beth-El*, i. 177.
S. L. V.

SCHICK, ABRAHAM BEN ARYEH LÖB: Lithuanian Talmudist and author of the nineteenth century; a native of Slonim, government of Grodno. Schick occupied himself especially with midrashic, or haggadic, literature. In this field he published: "Zera' Abraham" (Wilna-Grodno, 1833), a commentary on Midrash Mishle; "Me'ore ha-Esh" (Grodno, 1834), the "Tanna debe Eliyahu" edited with a commentary and a long introduction; "Maḥazeh ha-Shir" (Warsaw, 1840), a commentary on Canticles; "Eshed ha-Neḥalim" (Wilna, 1843), a commentary on the Midrash Rabbot, with an introduction; "'En Abraham" (Königsberg, 1848), a commentary on Ibn Ḥabib's "'En Ya'aḳob," referring also to Rashi and to Samuel Edels' "Ḥiddushe Agadot." Schick edited the Genesis and Exodus parts of Jacob Dubno's "Ohel Ya'aḳob" (Johannisberg, 1859).

SCHICK, BARUCH B. JACOB. See Baruch b. Jacob (Shklover).

SCHICK, ELIJAH BEN BENJAMIN: Lithuanian rabbi and preacher; born at Vasilishok, government of Wilna, in 1809; died at Kobrin, government of Kovno, Sept. 2, 1876. He was a pupil of Benjamin, chief rabbi of Grodno. As rabbi he officiated in various towns, including Diretchin, Lida, Novie Zhagory, and Kobrin; and on the holy days of Rosh ha-Shanah and Yom Kippur he acted as cantor. He was one of the preachers whose sermons always attracted large audiences. Schick was the author of "'En Eliyahu," a commentary on Jacob Ḥabib's "'En Ya'aḳob," published with the Wilna edition of that work.

SCHIFF: Family of Frankfort-on-the-Main, Germany. The earliest known member, Jacob Kohen Ẓedeḳ Schiff, who is mentioned on the tombstone of his son, Uri Phoebus, as having discharged the function of dayyan at Frankfort-on-the-Main, must have been born about 1370, the earliest date to which any contemporary Jewish family can be definitely traced. Uri Phoebus Schiff attained a great age, as his tombstone mentions, and died 1481; he must, therefore, have been born about 1400. The name occurs on one of the signs of the Judengasse as early as 1613: in Middle High German the word "schiff" means a vial and may have been used as the sign of an apothecary or physician. The next member of the family mentioned is Meïr Kohen Ẓedeḳ Schiff, referred to as parnas of the community, who died in 1626. The family has intermarried with the Adlers, Oppenheims, Wertheimers, Günzburgs, Geigers, Glogaus, Mannheims, and Hanaus, and one member married a cousin of Zunz. A step-grandfather of Heine was named Schiff, though of a branch of the family settled at Hamburg. Among the rabbinical authors included in the family are Meïr ben Jacob Schiff, known as Maharam Schiff (d. 1644); David Schiff, editor of the "Ẓemaḥ Dawid"; and Tebele Schiff, chief rabbi of the Great Synagogue, London (1765–92), and author of "Leshon Zahab." The most distinguished recent member is Jacob Henry Schiff, banker and philanthropist, of New York.

A pedigree of the family appears on page 97, the feminine names being given in italics.

J.

Jacob Henry Schiff: American financier and philanthropist; born Jan. 10, 1847, at Frankfort-on-the-Main. He was educated in the public schools of Frankfort, and adopted the vocation of his father, Moses Schiff, one of the brokers of the Rothschilds in that city. In 1865 he emigrated to the United States, and was employed for a time by the firm of Frank & Gans, brokers, New York. In 1867 he formed the brokerage firm of Budge, Schiff & Co., which was dissolved in 1873. He then went to Europe, where he made connections with some of the chief German banking-houses. Returning to the United States, he became on Jan. 1, 1875, a member of the banking firm of Kuhn, Loeb & Co., New York, of which he was soon practically the head.

Joins Kuhn, Loeb & Co.

Owing to his connection with the German money market, Schiff was able to attract much German capital to American enterprise, more particularly in the field of railway finance. His firm, under his direction, became the financial reconstructors of the Union Pacific Railroad about 1897; and in 1901 it engaged in a struggle with the Great Northern Railway Company for the possession of the Northern Pacific Railway; this resulted in a panic on the stock exchange (May 9, 1901), in which the firm of

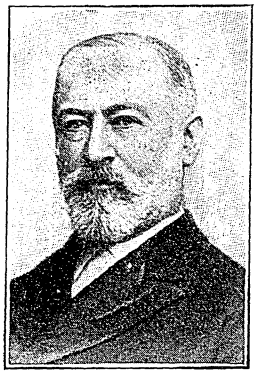
SCHIFF PEDIGREE.

Kuhn, Loeb & Co. held the situation at its mercy. Schiff's moderation and wise action on this occasion prevented disaster, and caused his firm to become one of the leading influences in the railway financial world, controlling more than 22,000 miles of railways and $1,321,000,000 stock. To him was largely due the establishment of the régime of "community of interests" among the chief railway combinations to replace ruinous competition, which principle led also to the formation of the Northern Securities Company. Schiff's firm was chosen to float the large stock issues not only of the Union Pacific and allied companies, but also of the Pennsylvania Railroad, the Baltimore and Ohio, the Norfolk and Western, and the Missouri Pacific railway companies, the Western Union Telegraph Company, and many others. It subscribed for and floated the three large Japanese war loans in 1904 and 1905, in recognition of which the Mikado conferred upon Schiff the Second Order of the Sacred Treasure of Japan. He was also received in private audience in 1904 by King Edward VII. of England.



Jacob H. Schiff.

Schiff is connected with many industrial and commercial activities. He is a director of the Union Pacific, the Baltimore and Ohio, the Chicago, Burlington and Quincy railway companies; of the Western Union Telegraph Company; of the Equitable Life Assurance Society; of the National Bank of Commerce and the National City Bank, the Morton Trust Company, the Columbia Bank, the Fifth Avenue Trust Company of New York; and of various other trust companies in New York as well as in Philadelphia.

Philanthropic Activity.

Schiff has especially devoted himself to philanthropic activity, both general and Jewish, on the most approved modern methods. Besides making benefactions in his native city he was one of the founders and has been ever since president of the Montefiore Home, New York, and is one of the two persons connected with all the twelve larger Jewish charities of that city. In New York also he has presented a fountain to Seward Park, has given a house in Henry street to the Nurses' Settlement, has helped to establish social settlements on the East Side, and has provided a building for the Young Men's Hebrew Association. He has also been a trustee of the Baron de Hirsch Fund from its inception, as well as of the Woodbine Land and Improvement Company.

All the municipal reform movements in New York likewise have been supported by Schiff; he served on the Committee of Seventy (1898), the Committee of Fifteen (1902), and the Committee of Nine (1905); and he has recently founded at Columbia University a chair in social economics. His interest in education and learning has found expression in the establishment of scholarships at Columbia for economic science, and in the presentation of a fund and building for Semitic studies at Harvard (see SEMITIC MUSEUM). He is chairman of the east-Asiatic section of the Museum of Natural History, New York, which has sent out many expeditions for the study of Eastern conditions and history. He has made many donations to the Metropolitan Museum of Art in that city and to other museums, as well as to the Zoological Gardens in Bronx Park, of which he is a trustee.

Schiff has been connected with the Reform wing of Jewish religious activities, and is a trustee of Temple Beth-El, New York. Nevertheless, he has taken great interest in the expansion of the Jewish Theological Seminary of America, to the sustentation fund of which he has contributed largely, and to which he has donated a special building. He has also presented to the New York Public Library a large number of works dealing with Jewish literature, so that it now possesses the largest collection of modern Judaica in the New World.

Schiff is the author of the "Report on the Currency of the Finance Committee of the New York Chamber of Commerce," 1903.

A. J.

Meïr b. Jacob Schiff (called also **Maharam Schiff**): German rabbi and scholar; born at Frankfort-on-the-Main 1608; died about 1644 at Prague. His father, Jacob Schiff, was director of the yeshibah at Frankfort until his death. At the age of seventeen Meïr was called to the rabbinate of Fulda, where he had charge also of a number of pupils. There he composed, between 1627 and 1636, his commentaries, which covered the entire Talmud; but only those on Beẓah, Ketubot, Giṭṭin, Baba Meẓi'a, and Ḥullin, together with fragments on Shabbat, Megillah, Baba Ḳamma, Baba Batra, Sanhedrin, and Zebaḥim, have been preserved.

Averse to the Pilpul.

Schiff, being averse to pilpul, attacked not only contemporaries, like Solomon Luria (Ket. 94), Meïr of Lublin (B. M. 61), and Samuel Edels (B. M. 50), but even Rashi (Ket. 42), Isaac b. Sheshet (B. M. 48), and Mordecai (B. M. 4). He enters at once upon the discussion of his subjects, which he treats in detail though without digression; nor does he attempt to derive his proofs from remote Talmudic passages. His explanations are often obscure on account of their extreme brevity, many sentences being incomplete. This was due to pressure of other demands on his time, since he was actively interested in the affairs of his community. He did not write his commentaries in note-books, but on loose leaves of paper. He refers only to one of the different kinds of pilpul current in his time, namely, the so-called "Norburger."

Apart from his halakic commentaries, Schiff composed also sermons on the Pentateuch. In these he appears as an opponent of simple exegesis. He says, for instance, that Jacob must have been famil-

TITLE-PAGE FROM MEÏR SCHIFF'S "ḤIDDUSHE HALAKOT," HOMBURG-VOR-DER-HÖHE, 1737.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

iar with the explanation of Gen. xxv. 33 given by Rashi (B. Ḳ., end). Of the sermons only a fragment on Deut. iv. has been preserved. A mnemonic index to the Bible and the Talmud by him is also extant. In 1636 he removed to Schmalkalden; he was called to the rabbinate of Prague shortly before his death.

On his death-bed Schiff is said to have called his daughter Henlah and told her to keep all his works in a box until one of his younger relatives should be able to study and publish them. Henlah sent the box containing the works to a strange house, where they became moth-eaten, and some of them were stolen; so that her son, Michael Stein, came into possession of only a remnant of them, which he finally published, probably in 1737, at Homburg-vor-der-Höhe under the title "Ḥiddushe Halakot." A second edition appeared there in 1757; and both were full of misprints. The first revised edition was published by Mordecai Markus of Polozk in 1810. It has been the model for Talmudic study, and a copy is often given as a prize to students who have distinguished themselves in the study of HIDDUSHIM.

Most of Schiff's notes on the four Ṭurim, as well as his cabalistic works and Talmudic decisions, were destroyed during the conflagration at Frankfort-on-the-Main in 1711.

J. S. O.

Moriz Schiff: German biologist; born at Frankfort-on-the-Main 1823; died at Geneva Oct. 6, 1896. He was educated at the gymnasium and the Senckenbergsche Institut of his native town and at the universities of Heidelberg, Berlin, and Göttingen (M.D. 1844). In Heidelberg he studied under the anatomist Tiedemann, whose lectures had a great influence upon him and who led him to take up the study of biology. After a short postgraduate course in Paris he returned to Frankfort, where he was appointed chief of the ornithological department of the zoological museum.

Schiff took an active part in the Baden revolution of 1849, being surgeon to the rebel army under the son of his former teacher, Tiedemann. After the capitulation of Rastatt he went to Göttingen, where he sought admittance to the medical faculty of the university as privat-docent; but the Hanoverian government refused to appoint him on the ground that his liberal views were "dangerous to students." He then went to Switzerland, where he was appointed professor of comparative anatomy at the University of Bern, which position he held from 1854 to 1863. In the latter year he was called to Florence as professor of physiology at the Istituto di Studii Superiori. He remained there till 1876, when he was made professor of physiology at the University of Geneva, which chair he continued to occupy till his death.

Schiff was one of the leading biologists of the nineteenth century, although in later years he devoted his attention almost entirely to physiology, especially the physiology of the construction and changes of the nerves. He contributed numerous monographs to the scientific journals, and from 1862 was one of the editors of the "Schweizerische Zeitschrift für Heilkunde." He was, besides, a collaborator on Prince Lucien Bonaparte's "Conspectus Avium," in which he described the fauna of South America.

Of his works may be mentioned: "Untersuchungen zur Physiologie des Nervensystems mit Berücksichtigung der Pathologie," Frankfort-on-the-Main, 1855; "Muskel- und Nerven-Physiologie," Lahr, 1858–59; "Untersuchungen über die Zuckerbildung in der Leber und den Einfluss des Nervensystems auf die Erzeugung der Diabetes," Würzburg, 1859; "Sul Systema Nervoso Encefalico," Florence, 1865 (2d ed. 1873); "Leçons sur la Physiologie de la Digestion," Berlin, 1868; "Sulla Misura della Sensazione," Florence, 1869; "De l'Inflammation et de la Circulation," Paris, 1873; "La Pupille Comme Esthesiomètre," *ib.* 1875.

S. F. T. H.

Robert Schiff: German chemist; born at Frankfort-on-the-Main July 25, 1854. He received his education at his native city and Florence, and then at the universities of Heidelberg and Zurich, graduating as Ph.D. in 1876, when he became assistant to Professor Canizaro in Rome. In 1878 he received the "venia legendi" at the University of Rome, and in 1879 was appointed professor of chemistry in the University of Modena. In 1892 he was called to a similar chair in the University of Pisa, which he still holds (1905).

Schiff has published essays in the "Gazetta Chimica Italiana," in "Berichte der Deutschen Chemischen Gesellschaft," in Liebig's "Annalen der Chemie," in "Accademia dei Lincei," and in "Zeitschrift für Physikalische Chemie."

S. F. T. H.

Tebele (David) Schiff: Chief rabbi of the Great Synagogue, London; born in Frankfort-on-the-Main; died in London 1792; son of R. Solomon Schiff. He was educated in the schools of Rabbis Jacob Poper and Jacob Joshua Falk, and for some time he taught at the yeshibah of R. Löb Sinzheim in Worms. Returning to his native city, he and his friend R. Nathan Maas became assistants to the chief rabbi, Abraham Lissa.

The fame of Schiff's Talmudical learning reached London, and he was appointed chief rabbi there in 1765. One of his first duties was the consecration in 1767 of the synagogue in Duke's place, which had just then been rebuilt and enlarged. Schiff was a preacher of considerable power; and several of his sermons have been preserved, especially one which he preached at the thanksgiving service on the occasion of the recovery of George III. Letters also are extant addressed to him by Lord George Gordon, entreating to be received into the synagogue, which request the rabbi refused to grant.

BIBLIOGRAPHY: H. Adler, *The Chief Rabbis of England*, in *Papers of the Anglo-Jewish Historical Exhibition*, 1887.

J. G. L.

SCHIFF, EMIL: Austrian journalist; born in Raudnitz, Bohemia, May 30, 1849; died in Berlin Jan. 23, 1899. Schiff was the son of a petty merchant, and became a pupil at the Jewish public school in his native town and at the German gymnasium in Leitmeritz. Subsequently he studied law at Vienna University. In 1871 he became a political writer on the Vienna "Deutsche Zeitung," in which position he was one of the first journalists to champion Dr. Schliemann, the genuineness of whose discoveries was not at that time generally accepted.

In 1874 Schiff transferred his services to the Berlin "Spener'schen Zeitung." He was the Berlin correspondent of the Vienna "Neue Freie Presse" from 1874 to 1899. From 1878 to 1880 he studied higher mathematics, especially differential and integral calculus and analytic mechanics, at Berlin University, and in 1894 he graduated in medicine, although he never became a practising physician.

Schiff was a friend of Ludwig Bamberger and of Eduard Lasker. Widely as he studied, he was no aimless accumulator of knowledge. His varied learning and his insistence on truth he applied practically in journalism, a course which made him notable in his profession. The last years of his life were troubled by ill health. On his death Rudolf Virchow read a memorial address before the Berlin Medical Society.

Schiff wrote chiefly feuilletons for the "Neue Freie Presse" and essays for "Die Deutsche Rundschau" and "Die Nation," as well as leading articles, dramatic critiques, parliamentary letters, and despatches. His "Pierre Jean Georges Cabanis, der Arzt und Philosoph" appeared at Berlin in 1886.

S. N. D.

SCHIFF, JOSEF: Austrian stenographer; born Feb. 25, 1848, at Ragendorf, Hungary. In 1874 he was appointed teacher of stenography at the Vienna Academy of Agriculture, and in 1898 lecturer on Gabelsberg's system of stenography at the University of Vienna. In 1883 he founded the Centralverein für Gabelsberger'sche Geschäftsstenographie, and subsequently received the title of professor from the Emperor of Austria.

The following are Schiff's principal publications: "Der Theoretisch-Praktische Lehrgang der Stenographie nach Gabelsberger's System"; "Das Stenographische Uebungsbuch für Mittelschulen"; "Ein Lesebuch für Handelsschulen"; "Der Geschäftsstenograph" (approved, together with the preceding three works, by the Austrian Ministry of Instruction); "Das Stenographische Wörterbuch mit Wiener und Dresdner Schreibweisen"; "Das Stenographische Taschenwörterbuch mit Fachkürzungen"; "Das Diktierbuch für Stenographen Aller Deutschen Systeme"; "Das Stenographische Lesekabinet."

S.

SCHIFFER, FEIWEL (PHOEBUS): Russian Hebraist and poet; born in Lasezow, government of Lublin, about 1810; died after 1866. He lived successively in Josefov, Brody, Szebrszyn, and Warsaw, and was one of the best-known of the early Maskilim of Russian Poland. He wrote: "Ḥazerot ha-Shir," an epic poem on the life of the patriarch Jacob (Warsaw, 1840); "Maṭṭa' Leshem," a treatise on agriculture and life in the country (*ib.* 1843); "Debar Geburot," a biography of Prince Paskewitsch (*ib.* 1845); "Toledot Napoleon," in two parts (*ib.* 1849 and 1857); "Mahlekim 'im Anashim," a translation of Knigge's "Umgang mit Menschen" (*ib.* 1866).

BIBLIOGRAPHY: *Ḥazerot ha-Shir*, Preface; Zeitlin, *Bibl. Post-Mendels.* p. 344.

H. R. P. Wi.

SCHIFFERS, EMANUEL: Russian chess master; born of German parents at St. Petersburg May 4, 1850; died there Dec. 12, 1904. He was educated at the gymnasium of his native city, studying in the classical, physical, and mathematical faculties. In 1871 he became a private tutor.

Schiffers began to play chess when about fifteen, and within five years had made such progress that he defeated Tochoumoff and others of equal standing. He continued to advance until he became the leading player in Russia. In 1873 he first played with Tchigorin, to whom he then gave the odds of a knight. During the following seven years the pupil came to play a stronger game than his teacher, and in 1880 Schiffers lost the championship of Russia to Tchigorin. He has won matches against Alapin, Chardin, and Mitropolsky; and at the International Tournament held at Hastings, England, in 1895, at which twenty-two masters competed, Schiffers gained sixth prize.

S. A. P.

SCHILL, SOLOMON: Hungarian philologist; born Oct. 14, 1849, in Budapest. He studied at Raab, Budapest, and Vienna; obtained his diploma as a teacher; and was appointed, in 1874, professor at the gymnasium at Arad. In 1878 he became professor of Latin and Greek in the rabbinical seminary at Budapest, which position he still (1905) holds.

Schill is the author of the following works, all written in Hungarian: a Greek grammar (3 editions), Greek exercises (3 editions), a work on Greek antiquities and the history of Greek art (3 editions), and a history of Greek literature. He has translated into Hungarian Philo's account of the delegation sent to Caligula (published by the Jewish Literary Society of Hungary), and, for the Ungarisch-Israelitischer Landeslehrerverein, the books of Genesis, Exodus, and Deuteronomy, and the Siddur.

S. L. V.

SCHILLER, ARMAND: French journalist; born at Saint-Mandé (Seine) Aug. 7, 1857. He studied at the Lycée Condorcet, and, after receiving his dipoma as "licencié en droit" from the faculty of Paris, entered his father's printing establishment. At the same time he contributed to various papers, especially to the legal journal "L'Audience." In 1879 he was chosen general secretary of the editorial board of "Le Temps," one of the leading evening papers of Paris.

Schiller is the principal founder of "Le Petit Temps," which consists of extras issued hourly after the appearance of "Le Temps." He is a professor, also member of the executive committee, of the Ecole du Journalisme, and one of the founders and the president of the Association des Secrétaires de Rédaction des Journaux et de Revues Français. In 1897 he was elected syndic of the Association Professionelle des Journalistes Républicains Français.

Schiller was made a chevalier of the Legion of Honor in 1892.

S. E. A.

SCHILLER-SZINESSY, SOLOMON MAYER: Reader in rabbinic at Cambridge University; born at Alt-Ofen, Hungary, 1820; died at Cambridge March 11, 1890. After a distinguished academic career he graduated as doctor of philosophy from the University of Jena, being subsequently ordained as a rabbi. He was next appointed assistant professor at the Lutheran College of Eperies, Hungary. During the great upheaval of 1848 he supported the revolutionists in the war between Hungary and Austria, and it was he who executed the order of General Torök to blow up the bridge at Szegedin, by which act the advance of the Austrian army was checked. Wounded and taken prisoner, he was confined in a fortress, from which he managed to escape the night before his intended execution. Fleeing to Triest, he took passage for Ireland and landed at Cork, proceeding thence to Dublin, where he preached by invitation of the congregation. He then went to London, and subsequently was elected minister of the United Congregation at Manchester. This was before the secession which led to the establishment of a Reform congregation in that city.

Chiefly owing to Professor Theodores, Schiller-Szinessy was offered and he accepted the office of minister to the newly formed congregation. This position he resigned in 1863 and went to Cambridge, where he engaged in teaching, and likewise undertook to examine the Hebrew manuscripts in the University Library. The fruit of his labors in the latter direction was his "Catalogue of the Hebrew Manuscripts Preserved in the University Library, Cambridge," Cambridge, 1876. In 1866 he was appointed teacher of Talmud and rabbinical literature, and subsequently reader in rabbinic. In recognition of his services the university conferred upon him the degree of M.A. in 1878.

Among Schiller-Szinessy's contributions to literature may be mentioned an edition of David Ḳimḥi's commentary on the Psalms, book i., and "Massa ba-'Arab," Romanelli's travels in Morocco toward the end of the eighteenth century.

J. G. L.

SCHINDLER, SOLOMON: German-American rabbi and author; born at Neisse, Germany, April 24, 1842. In 1868 he was selected to take charge of a small congregation in Westphalia, but, owing to his Reform tendencies, he was compelled to resign, and in 1871 he emigrated to the United States. Shortly after his arrival he was called as rabbi to Congregation Adath Emuno, Hoboken, N. J., which he left in 1874 for Congregation Adath Israel of Boston, Mass. In 1888 he was elected to the Boston school board by the unanimous vote of all political parties. In 1894 Schindler retired from the rabbinate to become superintendent of the Federation of Jewish Charities of Boston, but resigned that position in 1899 to become superintendent of the Leopold Morse Home for Infirm Hebrews and Orphanage at Mattapan, Mass., which position he still (1905) holds.

Schindler is the author of: "Messianic Expectations and Modern Judaism," "Dissolving Views in the History of Judaism," and "Young West: A Sequel to Looking Backward." He has written also many articles for the "Arena" and other periodicals.

A. J. LEB.

SCHLEMIHL: Popular Yiddish term for an unfortunate person. It occurs also in the form **Schlimmilius** ("Jüdische Volksbibliothek," vii. 80). According to Heine ("Jehuda-ben-Halevy"), it is derived from the Bible name "Shelumiel," owing to the fact that the person transfixed by the spear of Phinehas for incontinence with the Moabite woman (Num. xxv. 6) was so killed by mistake. Others derive the term from a corruption of the expression "schlimm mazzal" (unlucky star).

Many of the most popular anecdotes of the ghetto relate to the experiences of persons who, through no fault of their own, are pursued by misfortune to the end, and endure it without murmuring. They resemble in Jewish folk-tales the Gothamites or "Schildbürgers" of English and German folk-lore. Chamisso used the term as the name of the hero of his popular story, "Peter Schlemihl," but without much reference to its Jewish meaning. He may have heard the term through Itzig, the Berlin banker, to whom Heine was indebted for his interpretation of the word.

BIBLIOGRAPHY: Chamisso, *Peter Schlemihl*, ed. Jacobs, Preface, p. xii., London, 1898; D. Sanders, *Deutsches Wörterbuch*; idem, *Kritiken*, ii. 137; B. Felsenthal, in Geiger's *Jüd. Zeit.* vi. 60; A. Wünsche, in *Jüdisches Litteraturblatt*, viii. 135.

A. J.

SCHLESINGER, HERMAN: German physician; born at Adelebsen, Hanover, April 1, 1856; committed suicide at Frankfort-on-the-Main Aug. 23, 1902. He was an M.D. of Göttingen (1879), from which university he received a prize for the treatise "Experimentelle Untersuchungen über die Wirkung Lange Zeit Fortgegebener Kleiner Dosen Quecksilber auf Thiere," published in the "Archiv für Experimentelle Pathologie und Pharmacie," 1880. After a postgraduate course in Berlin he settled in Frankfort-on-the-Main.

Schlesinger became in 1899 editor of "Die Aerztliche Praxis," published at Würzburg. He was the author of "Aerztliches Handbüchlein für Hygienisch-Diätetische, Hydrotherapeutische und Andere Verordnungen," 1891 (6th ed. 1896; translated into Italian by Raffaelo Supino, Florence, 1897).

BIBLIOGRAPHY: Pagel, *Biog. Lex.*

S. F. T. H.

SCHLESINGER, JOSEF: Austrian mathematician; born at Mährisch-Schönberg Dec. 31, 1831. The son of very poor parents, he had to earn a livelihood even as a mere boy. In 1858 he graduated from the Polytechnic Institute in Vienna, at which institution he became assistant in the following year. In 1866 he passed the state board examination as teacher of geometry, and was employed in the schools of the Austrian capital. In 1870 he was called to the forestry academy at Marienbrunn, where he became professor of geometry; in 1875 he was appointed in a similar capacity at the agricultural academy at Vienna; and in 1891 he was sent as representative of Vienna to the Austrian Reichsrath.

Of Schlesinger's works may be mentioned: "Darstellende Geometrie im Sinne der Neuen Geometrie," Vienna, 1870; "Die Geistige Mechanik der Natur," Leipsic, 1888; "Licht für's Leben," Vienna, 1890; "Die Entstehung der Physischen und Geistigen Welt aus dem Aether," *ib.* 1892.

Bibliography: Eisenberg, *Das Geistige Wien*, i., Vienna, 1893.

SCHLESINGER, MARKUS. See Glogauer, Meïr ben Ezekiel.

SCHLESINGER, SIGMUND: Austrian writer; born at Vienna 1811; educated at the Schottengymnasium and the University of Vienna (M.D. 1835). He published in 1828 in the "Sammler" a poem on Ludwig Devrient, and wrote in 1831 a drama on the marriage of the Austrian crown prince Ferdinand, which was produced several times on the Vienna stage. In the same year, using the nom de plume "Sigmund," he became a collaborator on the "Theater Zeitung." In 1833 he traveled through Moravia, and in 1835 published in Leipsic his "Mährische Reisebriefe." He went to Dalmatia in 1837 as physician and served as surgeon in the honved army during the years 1848 and 1849. His subsequent history can not be traced.

Other works by Schlesinger are: "Eleonore von Toledo," Vienna, 1833; "Herbst-Novellen," *ib.* 1835, and Leipsic, 1838; and "Vindobona," Vienna, 1837.

Bibliography: Brümmer, *Deutsches Dichter-Lexikon*, Stuttgart, 1876.

s. F. T. H.

SCHLETTSTADT: Town in Alsace, about 27 miles south-southwest of Strasburg. In the year 1349, under Emperor Charles IV., its Jewish inhabitants suffered during the general persecution of Jews throughout Germany. They were expelled from the town, but later returned; they then, however, became the object of new persecutions, which caused Charles in 1387 to place the town under a ban for two years. The synagogue building dating from this time still exists. It has served for different purposes; thus, before the war of 1870 it was used as an arsenal and was called "Sainte Barbe." The burial-ground dates from the thirteenth century, and is one of the largest in the country; tombstones bearing inscriptions of the year 1400 have been found. During the time that Jews were forbidden to live in the city and during the various revolutions after 1350 most of the tombstones were carried off and used in building houses, barns, and fences.

From the middle of the fourteenth century until the commencement of the nineteenth no Jew was allowed to pass the night within the town limits. All those that were in Schlettstadt on business had to leave before night, a bell being rung to announce the hour for departure. The bell and bell-tower are still in existence. The first Jew to receive permission to settle in Schlettstadt (1806) was Solomon Moise, a German, who subsequently changed his name to Solomon Dreyfus.

Since 1862 the town has been the seat of a rabbinate. It has a modern synagogue designed in the Russian style. The first rabbi was Meyer Ulmo (d. *c.* 1886), who was succeeded by the present rabbi, Benjamin Wahl.

The Jews of Schlettstadt at present (1905) number about 230 in a total population of 9,135.

s. M. Lv.

SCHLETTSTADT, SAMUEL BEN AARON: German rabbi; born at Schlettstadt; lived at Strasburg in the second half of the fourteenth century. He was rabbi and head of an important yeshibah in the latter city, where he was highly respected by both his community and his pupils, when suddenly he was caused to act in a case which nearly cost him his life. The community of Strasburg about 1370 had among its members two informers ("moserim"), through whom it was constantly exposed to the depredatory incursions of the knights of Andlau. As the Jews could not summon the two moserim before the Christian court without involving the powerful knights, they ap-

Condemns an Informer to Death.

plied to their rabbi for assistance. The latter secretly constituted a court of justice, which condemned the two traitors to death, and the sentence was carried out on one of them, named Salamin. The second, however, made good his escape, and, having embraced Christianity, returned to his friends and protectors, whom he informed of what had happened. The knights of Andlau, followed by an armed mob, came to Strasburg clamoring for vengeance on the Jews for the death of their ally. The Jews, when questioned about the affair, told the magistrates that the man had been executed at the command of Schlettstadt. The knights consequently set out toward the latter's house, but Schlettstadt succeeded, probably through the connivance of one of the knights, in securing refuge, with his pupils, in the castle of Hohelandsberg, near Colmar. From this fortress he petitioned the leaders of the community to intervene on his behalf so that he might return to his home. But either they neglected his request entirely or their action in his behalf was not forceful enough to be successful; for he remained six years in confinement.

Tired of waiting, Schlettstadt left his hiding-place in 1376 and went to Babylonia, where he brought a complaint before the prince of the captivity ("nasi") against the chiefs of the Strasburg community. The nasi, supported by the rabbinate of Jerusalem, wrote in Schlettstadt's favor a ban ("ḥerem") against the community of Strasburg, invoking against its members all the curses if they should persist in their refusal to interfere in his behalf. Carmoly ("La France Israélite," pp. 138-144, Frankfort-on-the-Main, 1858) and Grätz ("Gesch." 3d ed., viii. 12 *et seq.*) think that the prince who issued the ḥerem was the exilarch David b. Hodiah, and they identify the ban with the one published by Kirchheim in "Orient, Lit." vi. 739; David b. Hodiah lived almost two centuries earlier, however.

Returns to Strasburg.

Armed with this ban, Schlettstadt returned to Germany. He sojourned at Ratisbon, the rabbis of which town were terrified by the ban written by the leader of the Eastern Jews. They immediately wrote to the chiefs of the Strasburg community begging them to use all their energy in obtaining permission for Schlettstadt's return, and threatening that otherwise they would be put under the ban. As a result the desired permission was at length granted. On the day of his arrival all the Jews of Strasburg went out to meet him, among others his son Abraham. The latter, while crossing the Rhine in a boat in order to go to his father, met with an accident and was drowned. It is not known how long Schlettstadt lived after this event; but, as the narrator of the foregoing events (Joseph Loanz, whose narrative was published by Grätz in "Monatsschrift," xxiv. 408 *et seq.*) states likewise that a few years later (*c.* 1380) all the Jews of Strasburg were massacred, it is possible that Schlettstadt perished together with his community.

Schlettstadt is particularly known for his abridgment, entitled "Ḳiẓẓur Mordekai" or "Mordekai ha-Ḳaṭon" (still unpublished), of Mordecai ben Hillel's "Sefer ha-Mordekai." Both Carmoly and Grätz think that Schlettstadt wrote the work in the fortress of Hohelandsberg. Although Schlettstadt generally followed Mordecai b. Hillel, yet in certain instances he deviated from his predecessor, and he also added certain laws which are not found in the "Sefer ha-Mordekai." That his work was considered as an independent one is shown by the fact that it is quoted, now alone, now together with Mordecai ben Hillel's work, by Israel Bruna (Responsa, No. 163), by Israel Isserlein ("Pesaḳim," No. 192, *passim*), who refers to it as the "Mordekai" of Samuel Schlettstadt, by Jacob Weil (Responsa, No. 88), and by Jacob Mölln (Responsa, No. 155; "Minhagim," section "Sukkot"). Schlettstadt furthermore furnished Mordecai b. Hillel's work with numerous notes ("Haggahot Mordekai," first published at Riva di Trento, 1558, as an appendix to the "Sefer ha-Mordekai," and afterward included in box-heads in the text of that work). The author of the "Haggahot" was for a long time unknown. Zunz was the first to point out (in Steinschneider, "Hebr. Bibl." ix. 135) that they were written by Schlettstadt. Internal evidence of his authorship is afforded by the following references by Schlettstadt himself: "In the 'Mordekai Ḳaṭon' which I composed" ("Mordekai" on Yeb. 110); "I, Samuel, the small one" (*ib.* Giṭ. 456). In many other places the author refers to his "Ḳiẓẓur Mordekai" simply as "my work" (*ib.* Yeb. 106, *passim*; Ket. 304; Ḳid. 544). Finally, Jacob Weil (*l.c.* No. 147) refers to Schlettstadt's responsa.

SCHLOESSINGER, MAX: German philologist and theologian; born at Heidelberg Sept. 4, 1877; educated at the public school and the gymnasium of his native place, the universities of Heidelberg, Vienna, and Berlin (Ph.D. 1901), the Israelitisch-Theologische Lehranstalt at Vienna, the Veitel-Heine-Ephraim'sche Lehranstalt and the Lehranstalt für die Wissenschaft des Judenthums, Berlin (rabbi, 1903). In 1903 he went to New York and joined the editorial staff of The Jewish Encyclopedia, which position he resigned in 1904, on his appointment as librarian and instructor in Biblical exegesis at the Hebrew Union College, Cincinnati, Ohio.

Schloessinger has published "Ibn Kaisan's Commentar zur Mo'allaqa des 'Amr ibn Kultum nach einer Berliner Handschrift," in C. Bezold's "Zeitschrift für Assyriologie und Verwandte Gebiete," vol. xvi., part i., pp. 15 *et seq.*, Strasburg, 1901.

A. F. T. H.

SCHMELKES, GOTTFRIED S.: Austrian physician; born at Prague Sept. 22, 1807; died at Interlaken, Switzerland, Oct. 28, 1870. Educated at the universities of Prague and Vienna (M.D. 1837), he became in 1838 physician to the Jewish hospital at Töplitz (Teplitz), Bohemia, at which watering-place he established himself as a physician, practising there until his death.

Of Schmelkes' works may be mentioned: "Physikalisch-Medizinische Darstellung des Kohlenmineral-Moors und Dessen Anwendung zu Bädern," Prague, 1835; "Die Thermalbäder zu Teplitz," Berlin, 1837; "Teplitz und Seine Mineralquellen," Dresden and Leipsic, 1841; "Teplitz Gegen Lähmung," Dessau, 1855; "Teplitz Gegen Neuralgien," Berlin, 1861; "Sedimente Meiner Praxis an den Thermen zu Teplitz," *ib.* 1867. He wrote also some poetry. Schmelkes proposed the building of the hospital for invalid soldiers of the kingdom of Saxony, founded at Töplitz in 1849, and was its chief physician until his death.

SCHMID, ANTON VON: Christian publisher of Hebrew books; born at Zwettl, Lower Austria, Jan. 23, 1765; died at Vienna June 27, 1855. His father, an employee of the convent, destined him for the clerical career, and with this view Anton received a collegiate education at the convent. He continued his studies at the Zwettl seminary in Vienna to prepare himself for the university, but, declining to become a clergyman, he had to leave the institution. In 1785 he entered as an apprentice the establishment of the court printer Kurzbeck. Schmid attended the Oriental academy, and in consequence was assigned to Hebrew typesetting, for which he had a great predilection. Having become acquainted with Jewish scholars and booksellers and with the wants of the Hebrew reading public, he bought from Kurzbeck his Hebrew types in order to establish himself as a printer and publisher; but through the intrigues of the Vienna printers he was unable to obtain from the government the requisite permission to pursue that calling. Thereupon he presented a petition to Emperor Francis II., who granted him the privilege on the condition that he would present a copy of each book printed by him to the imperial library.

Schmid's great success soon enabled him to buy Kurzbeck's entire printing establishment. In 1800 the government prohibited the import of Hebrew books, to the great advantage of Schmid, who without hindrance reprinted the works issued by Wolf Heidenheim in Rödelheim. The printing was under the supervision of Joseph della Torre and afterward of his son Adalbert, and Schmid became more and more prosperous. By the year 1816 he had presented to the imperial library eighty-six works comprising 200 volumes; and his great merit was acknowledged by a gold medal from the emperor. He then enlarged his establishment, printing Arabic, Persian, and Syriac books also, and upon the donation of 17 new Oriental works in 44 volumes to the court library he received a title of nobility. A few years later he made a third donation of 148 works in 347 volumes, presenting a similar gift to the Jewish religious school of Vienna. His son **Franz Schmid** took charge of the establishment in 1839, and sold it to Adalbert della Torre in 1849. Among the principal works published by Schmid were the Hebrew Bible with German translation and the commentary of the Biurists, the Talmud, the Hebrew periodical "Bikkure ha-'Ittim," the works of Maimonides and of Judah Löb Ben-Zeeb, and Jewish prayer-books and catechisms.

SCHMIEDL, ADOLF: Austrian rabbi and scholar; born at Prossnitz, Moravia, Jan. 26, 1821. He held the office of rabbi at Gewitsch, Moravia, from 1846 to 1849, during which time he contributed to the journals "Kokebe Yiẓḥaḳ" and "Der Orient." In 1849 he was called as "Landesrabbiner" to Teschen, Austrian Silesia, where he officiated until 1852. Leaving Teschen, he held successively the rabbinates of Bielitz, Prossnitz, Sechshaus (1869–94; now a part of Vienna), and Leopoldstadt, the second district of Vienna, where he still (1905) officiates.

Besides numerous contributions to periodical literature, Schmiedl has written: "Sansinim," homilies on the Pentateuch (Prague, 1859 and 1885); "Studien zur Jüdisch-Arabischen Religionsphilosophie" (Vienna, 1869); "Saadia Alfajumi und die Negativen Vorzüge Seiner Religionsphilosophie" (*ib.* 1870); "Die Lehre vom Kampf ums Recht im Verhältniss zum Judenthume und dem Aeltesten Christenthum" (*ib.* 1875).

SCHNABEL, ISIDOR: Austrian physician; born at Neubidschow, Bohemia, Nov. 14, 1842. Educated at the University of Vienna (M.D. 1865), he became there assistant in the ophthalmological clinic and established himself as privat-docent. He was elected professor of ophthalmology successively at the universities of Innsbruck (1877), Graz (1887), Prague (1892), and Vienna (1896), in which last-named city he still lives (1905).

Schnabel has written many works, of which may be mentioned: "Zur Lehre von den Ursachen der Kurzsichtigkeit," in "Archiv für Ophthalmologie," xx.; "Die Begleit- und Folgekrankheit von Iritis," in "Archiv für Augenheilkunde," v.; "Zur Lehre vom Glaucom," *ib.* vii., xvi.; "Zur Lehre von der Ophthalmoskopischen Vergrösserung," *ib.* ix.; "Ueber Syphilitische Augenerkrankungen," in "Wiener Medizinische Blätter," 1882; "Ueber Myopieheilung," *ib.* 1898; "Kleine Beiträge zur Lehre von der Augenmuskellähmung und zur Lehre vom Schielen," in "Wiener Klinische Wochenschrift," 1899.

SCHNABEL, LOUIS: Austrian teacher and journalist; born at Prossnitz, Moravia, June 29, 1829; died at New York May 3, 1897. He was educated at various yeshibot, and, after completing his studies at the University of Vienna, he taught in the Talmud Torah of his native city, and at Boskowitz and Vienna. In 1854 he went to Paris, where he remained until 1863, teaching in Derenbourg's school for boys and in Madame Cahn's school for girls. During this period he contributed extensively to the Jewish papers.

Schnabel emigrated to America in 1869 and became superintendent of the Hebrew Orphan Asylum of New York, establishing at the same time a magazine, "Young Israel," which existed for eight years. In 1875 he became principal of the preparatory school for the Hebrew Union College; and in 1890 he took charge of the English classes for Russian immigrants established by the Baron de Hirsch Fund. He was the Hebrew instructor of Emma Lazarus.

Schnabel published a collection of ghetto stories under the title "Vögele's Marriage and Other Tales."

SCHNITZLER, JOHANN: Austrian laryngologist; born at Nagy-Kanizsa, Hungary, April 10, 1835; died at Vienna May 2, 1893. Educated at the University of Vienna (M.D. 1860), he became assistant at the general hospital (Allgemeines Krankenhaus) under Oppolzer and received the "venia legendi" in 1866. In 1878 he was made titular professor, and in 1880 was appointed assistant professor of laryngoscopy. From 1888 he had charge of the general dispensary. Schnitzler founded, with P. Markbreiter, in 1860, the "Wiener Medizinische Presse," of which paper he was editor until 1886.

Of Schnitzler's many works, treating especially of diseases of the throat and larynx, may be mentioned: "Die Pneumatische Behandlung der Lungen- und Herzkrankheiten," 2d ed., Vienna, 1877; "Ueber Laryngoskopie und Rhinoskopie und Ihre Anwendung in der Aerztlichen Praxis," *ib.* 1879; "Ueber Lungensyphilis und Ihr Verhältniss zur Lungenschwindsucht," *ib.* 1880.

SCHNORRER: Judæo-German term of reproach for a Jewish beggar having some pretensions to respectability. In contrast to the ordinary house-to-house beggar, whose business is known and easily recognized, the schnorrer assumes a gentlemanly appearance, disguises his purpose, gives evasive reasons for asking assistance, and is not satisfied with small favors, being indeed quite indignant when such are offered. He usually travels from city to city and even into foreign countries; but he must not be confounded with the tramp, whose counterpart is not to be found in Jewish beggary. The schnorrer class includes the Jew who collects a fund to provide a dowry for his daughter or for an orphan relative about to be married, which fund is called "hak-nasat kallah"; also the one who asks for means to rehabilitate himself after his house or chattels have been burned in a general conflagration, in which case he is known as a "nisraf." The author who considers that the world owes him a living for his "great work" for "enlightening mankind" and who presses the acceptance of his book on the unappreciative rich in consideration of whatever sums they may be willing to contribute, is characterized as a literary schnorrer.

The schnorrer period began with the CHMIELNICKI massacres in Poland (1648–57), when thousands of Jews fled to Germany. In the eighteenth century schnorrers flourished principally in Germany, Holland, and Italy, and came from Poland (mainly from Lithuania), and also from Palestine, one from the latter country being known as a "Yerushalmi." In later times impudence and presumption were characteristics of the schnorrer. This was more especially the case with those who laid claim to a rabbinical education and who regarded themselves as privileged persons, giving the impression, with an assumption of condescension, that they were doing a favor in rendering an opportunity to their rich neighbors to perform a worthy deed by making a contribution. This trait has been graphically delineated in Zangwill's "The King of Schnorrers." The equivalent Hebrew term of the Maḥzor, "melek ebyon," has been adopted in the Yiddish vernacular to denote a person of extreme poverty and shabby gentility. See BEGGING AND BEGGARS.

SCHNURMANN, NESTOR IVAN: English educationist; born 1854 in Russia. He went to England about 1880, and began his career as a teacher of Russian and kindred languages to army officers, becoming examiner in Bulgarian to the civil service commissioners. He was for some time lecturer in Russian and other Slavonic languages at the University of Cambridge. In 1894 he was appointed assistant master at Cheltenham College, and head of a house for Jewish boys at that institution.

Schnurmann is the author of several text-books of instruction in Russian: "The Russian Manual," London, 1888; "Aid to Russian Composition," *ib.* 1888; "Russian Reader," *ib.* 1891.

SCHOMBERG, SIR ALEXANDER: British naval officer; born 1716; died in Dublin March 19, 1804; younger son of Meyer Löw Schomberg. He entered the navy in Nov., 1743. In 1747 he was promoted lieutenant of the "Hornet"; in 1755 he was appointed to the "Medway," one of the fleet in the Bay of Biscay; and in 1757 he became captain of the "Richmond"; from this vessel he was transferred to the "Diana" frigate, which in 1760 was one of the squadron that repulsed an attempt by the French to regain Quebec. Schomberg was then appointed to the "Essex," a ship of 64 guns, and in 1761 he took part under the command of Commodore Keppel in the reduction of Belle-Isle. In 1770 he was appointed to the "Prudent," and in 1771 to the command of the "Dorset." He was knighted by the lord lieutenant in 1777, and for many years headed the list of captains.

Sir Alexander was the author of a work entitled "A Sea Manual Recommended to the Young Officers of the Royal Navy as a Companion to the Signal-Book," 1789.

SCHOMBERG, ISAAC: English physician; born at Cologne Aug. 14, 1714; died in London May 4, 1780; son of Meyer Löw Schomberg. He received a liberal education, and pursued his medical studies at Ledyen, where he took the degree of M.D. Returning to England, he commenced practise in London.

His career was remarkable for his dispute with the Royal College of Physicians. In Feb., 1745(6), he was summoned by the board of censors to submit himself to examination as a licentiate. In reply he sent a letter of excuse which was termed "improbable and indecent." In 1747 he was entered at Trinity College, Cambridge, and on appearing before the censors to give notice of the fact, he was formally interdicted by the Royal College of Physicians from practising his profession. Receiving baptism, he was created M.D. at Cambridge by royal mandate July 21, 1749; and thereupon he demanded examination for admission to the Royal College of Physicians as a right derived through his Cambridge degree. The examinations were allowed, and he was found fully competent to practise; but admission to the college was again denied him, and his repeated applications thereafter were sedulously dismissed. Moses Mendez assisted Schomberg in writing on the subject a satire entitled "The Battiad." It was not until after the lapse of many years and after many subsequent appeals that the feeling engendered by these occurrences was removed. In the meantime Schomberg's conduct had been correct and conciliatory, and with the view doubtless of marking their approval the college admitted him as a licentiate on Dec. 23, 1765. He obtained a fellowship Sept. 30, 1771, and was appointed censor at the college in 1773 and again in 1778. Schomberg attended Garrick in his last illness.

J. G. L.

SCHOMBERG, MEYER LÖW: English physician; born at Fetzburg, Germany, 1690; died in London March 4, 1761. He was the eldest son of a Jewish practitioner of medicine whose original name was Löw, which he changed to Schomberg. Schomberg obtained the degree of M.D. from the University of Giessen on Dec. 21, 1710, having entered the university on Dec. 13, 1706. Obtaining a license, he began to practise at Schweinburg and later removed to Blankenstein. After 1710 he practised at Metz, and went to England about 1720.

Schomberg was admitted as a licentiate of the Royal College of Physicians March 19, 1721(2). At that time he was in very reduced circumstances, and the college considerately accepted his bond for the future payment of his admission fees. Cultivating an intimacy with the Jews of Duke's place, he obtained introductions to some of the leading merchants, and soon became the foremost physician of the city, being in receipt of a professional income of 4,000 guineas ($21,000) a year. He was elected a fellow of the Royal Society in 1726, and was a strong supporter of the action of his son, Isaac SCHOMBERG, against the Royal College of Physicians.

J. G. L.

SCHOMBERG, RALPH (RAPHAEL): English physician and author; born at Cologne, Germany, Aug. 14, 1714; died at Reading, England, June 29, 1792; twin brother of Isaac Schomberg. He was educated at Merchant Taylor's School, and studied medicine at Rotterdam, obtaining the degree of M.D. from another university. He first settled at Yarmouth and practised there as a physician, also publishing some works on professional subjects. He was elected a fellow of the Society of Antiquaries in 1752, and soon afterward removed to Bath, in which city he practised for some years with success. During his residence there circumstances arose which compelled his retirement from Bath and from public practise. He removed to Pangborne in Berkshire, and afterward to Reading. He corresponded with E. M. da Costa.

A voluminous and miscellaneous writer, Schomberg has been described as "a scribbler destitute of either genius or veracity." He wrote: "An Ode on the Present Rebellion," 1746; "An Account of the Present Rebellion," 1746; "Aphorismi Practici, sive Observationes Medicæ," 1750; "Prosperi Martiani Annotationes in Cæcas Prænotationes Synopsis," 1751; "Physical Rhapsody," 1751; "Van Swieten's Commentaries," 1762; "A Treatise on the Colica Pictonum or Dry Belly-Ache," 1764; "Duport de Signis Morborum Libri Quatuor," 1766; "Death of Bucephalus" (1765), burlesque acted at Edinburgh; "The Life of Mæcenas," 1767; "Judgment of Paris" (1768), burlesque performed at the Haymarket; "A Critical Dissertation on the Characters and Writings of Pindar and Horace"; "Medico Mastix," 1771; "The Theorists" (1774), a satire; "Fashion" (1775), a poem. His productions met generally with an unfavorable reception.

SCHÖNERER, GEORG VON: Austrian politician and anti-Semitic agitator; born at Vienna July 17, 1842. He devoted himself to agriculture, and in 1873 entered the Austrian Diet, where he represented the German-National party and gave his support to the anti-Semitic movement. Having entered by force the office of the "Neues Wiener Tageblatt" (called "Judenblatt" because it pleaded the cause of the Jews), he was condemned (May 5, 1888) to four months' imprisonment and loss of his title of nobility and his immunity as a member of the Diet. Later he regained his status. He propagated his ideas in his semimonthly "Unverfälschte Deutsche Worte." In 1895 he retired from public life, but continued to be a bitter opponent of the Christian-Social party and its leaders Laeger and Vergani. He embraced Protestantism Sept. 2, 1899.

Schönerer published "Zwölf Reden" (Vienna, 1886) and "Fünf Reden" (*ib.* 1891). His father, **Mathias**, a railroad contractor in the employ of the Rothschilds, left him a large fortune. His wife is a great-granddaughter of R. Samuel Löb Kohen, who died at Pohrlitz in 1832. See JEW. ENCYC. i. 646, *s.v.* ANTI-SEMITISM.

SCHÖNHAK, JOSEPH: Russian author; born at Tiktin 1812; died at Suwalki Dec. 10, 1870. Schönhak led a retired life, devoting his time to writing and study. He was the author of "Toledot ha-Areẓ" (Warsaw, 1841) and "Ha-Mashbir," or "'Aruk he-Ḥadash" (*ib.* 1858). The "Toledot ha-Areẓ" is a natural history in three parts. The subjects are arranged and classified, and a full description of each is given as to color, form, and habitat. Those that are mentioned in the Bible are given book, chapter, and verse; and so with those mentioned in the Talmud. The "Ha-Mashbir" is an Aramaic-German rabbinical dictionary, based on Nathan ben Jehiel's "'Aruk." His "Sefer ha-Milluim" was published at Warsaw in 1869.

SCHOR, ABRAHAM ḤAYYIM BEN NAPHTALI HIRSCH: Galician rabbi; died at Belz, a small town near Lemberg, Jan. 3 (or 23), 1632; buried in Lemberg. He was rabbi in Satanow and later in Belz, and, according to Lewinstein (in "'Ir Tehillah"), in Lemberg also. He wrote: "Torat Ḥayyim" (part i., Lublin, 1624; part ii., Cracow, 1636), novellæ on nine treatises of the Talmud; "Ẓon Ḳodashim" (Wandsbeck, 1729), notes on the Talmudic treatises of the order Ḳodashim, in collaboration with Mordecai Asher, rabbi of Brzezany; and "Ḳontres Bedeḳ ha-Bayit," notes on the part of the Shulḥan 'Aruk, Eben ha-'Ezer that deals with divorces ("hilkot giṭṭin"), printed with Judah Aryeh b. David's "Gur Aryeh" (Amsterdam, 1733). Schor is quoted by Benjamin Aaron Salnik in his responsa "Mas'at Binyamin" (No. 88), and by Delmedigo in his "Elim."

SCHOR, (MOSES) EPHRAIM SOLOMON (the Elder): Polish rabbi; died in Lublin in 1633. He was the son of Naphtali Hirsch of Moravia and a descendant of the tosafist Joseph Bekor Schor. Ephraim Solomon married Hannele, the daughter of Saul Wahl of Brest-Litovsk, of which city he later became rabbi. He succeeded R. Samuel Edels (MaHaRSHA) as rabbi of Lublin, where he remained until his death.

Schor was the author of a work entitled "Tebu'ot Shor," an abridgment of Joseph Caro's "Bet Yosef." He is sometimes called the elder "Tebu'ot Shor," to distinguish him from his brother's great-grandson Alexander Sender Shor of Zolkiev, who was the author of a work bearing the same name. Ephraim Solomon's son **Jacob**, author of "Bet Ya'aḳob," on Sanhedrin, was rabbi of Brest-Litovsk from 1652 to 1655.

SCHOR, NAPHTALI HIRSCH BEN ZALMAN (known also as **Hirsch Elsasser**): Moravian Talmudist of the sixteenth century. He was a pupil of Moses Isserles, who addressed to him many of his responsa, most of which are explanations of the "Sefer ha-Mordekai." It seems from No. 121 of these responsa that Schor's residence was at Posen, and from No. 112 that he was for a long time absent from his home, seeking a position in one of the German towns. The most prominent among his pupils was Joel Sirkes, author of "Bayit Ḥadash (BaḤ)."

According to Fuenn ("Ḳiryah Ne'emanah," pp. 54–55), Schor is to be identified with Naphtali Herz, rabbi of Brest-Litovsk, one of the signatories to a decision in the affair of the 'AGUNAH of Brest (Isserles, Responsa, No. 14). It has, however, been proved that this identification is not warranted, as the rabbi of Brest-Litovsk in question speaks in the responsum not as a pupil of Isserles, but as an older authority.

SCHORR, JOSHUA HESCHEL (commonly known as **Osias Schorr**): Galician Hebrew scholar, critic, and communal worker; born at Brody May 22, 1814; died there Sept. 2, 1895. His parents were rich, but, owing to the obscurantism which prevailed in Galicia, Schorr received a rather scanty education in the ḥeder. Prompted, however, by an invincible desire for more knowledge, the boy sought the acquaintance of the Galician Hebrew scholars of the time, and finally became acquainted with Isaac Erter, under whose guidance he studied Hebrew, Talmud, foreign languages, and the secular sciences. It was chiefly Erter that influenced young Schorr, who learned from him his elevated style, his critical spirit, and also his sarcasm. Schorr was greatly influenced by Samuel David Luzzatto also with regard to criticism and the study of science; but with respect to Talmudical Judaism, as will be shown later, he was directly opposed to Luzzatto.

Early Career.

Schorr was married young to a woman of good family; and, having become independent, he devoted the remainder of his life to literary pursuits. About 1865, however, his wife and only son died, and he besides lost the larger part of his fortune, so that after that time he lived almost in seclusion. These reverses seem to have preyed on Schorr's mind, as may be seen by the difference in tone between the first six and the latter parts of his "He-Ḥaluẓ." Schorr began his literary activity in Hebrew with articles on the history of Jewish literature for the periodical "Ẓiyyon," edited by Jost and Creiznach. As this periodical could not publish the large number of contributions from Hebrew writers, Erter resolved upon founding one of his own. He had already drawn up the plan of the new periodical and written part of the preface, when his labors were interrupted by death, and Schorr was left to carry out his master's plan. The new journal was entitled HE-ḤALUẒ.

Founds "He-Ḥaluẓ."

Schorr distinguished himself by his pungent style and the satirical humor with which he attacked his opponents. He was undaunted in his criticism of anything or any one that opposed the spread of modern civilization. Together with Erter and other champions of the HASKALAH, he fought against Ḥasidism and obscurantism, but he went much farther than his contemporaries in that he even attacked the Talmud itself. He declared that the rabbis of the Gemara did not fully understand the meaning of the Mishnah, and that therefore their decisions were very often absurd and contrary to reason as well as to the spirit of the Mishnah. In his attacks upon the Talmud he cited particularly those passages which were not in accord with the modern spirit or which appeared to be obscene. Hence, while in the early volumes of "He-Ḥaluẓ" he had as collaborators men like Abraham Geiger, Abraham Krochmal, Steinschneider, Samuel David Luzzatto, and others, he remained almost alone in the later volumes. It is true that some of his former collaborators had died; but there were many others who turned against him and became the objects of his satirical shafts.

As a Critic.

Indeed, Schorr spared no one who was not of his own opinion, and with the exception of Nachman Krochmal's "Moreh Nebuke ha-Zeman" and Geiger's "Urschrift" no work which came under his criticism was left unscathed. He was an able critic and had published as early as 1841, in "Ẓiyyon" (i. 147 *et seq.*), a critical essay on the "Shibbole ha-Leḳeṭ" and the "Sefer Tanya." In Biblical criticism he was influenced by Kennicott, and wrote in "He-Ḥaluẓ" many notes on the Bible, as well as numerous comments on Talmudic and midrashic passages.

Schorr, in the later numbers of his "He-Ḥaluẓ," became even more bitter in his attacks. This may have been due to the moroseness into which he was thrown by his reverse of fortune. There is even a difference of ideas evident in the later and the earlier issues of the periodical; for whereas in the early volumes Schorr declared that many of the sayings of the Rabbis are taken from Zoroastrianism and that most of the words are Persian (Pahlavi), in the later numbers he declared them to be of Greek origin. As was natural, many polemical works were written against Schorr, in which the authors did not refrain even from violent personal abuse; for example, Meïr Kohn Bistritz in his "Bi'ur Ṭiṭ ha-Yawen."

As a Communal Worker.

As a communal worker Schorr was indefatigable, interesting himself in all questions regarding the Galician communities. He fought together with Abraham Cohen of Lemberg for the abolishment of the meat- and candle-tax in Galicia, and strove to improve the education of the Jewish youth, insisting, in spite of his liberal ideas with regard to religion, upon the need of Jewish denominational schools, in which the Jewish spirit might be preserved in its purity. His articles in the "'Ibri Anoki," which he wrote on the occasion of the foundation of the Maḥaziḳe ha-Dat society in Lemberg, show clearly that he was a fervent Jewish nationalist. He bequeathed his property and his library, which was a considerable one, to the rabbinical seminary of Vienna.

W. B. M. SEL.

SCHORR, NAPHTALI MENDEL: Galician Hebrew writer; died at Lemberg Dec. 14, 1883. He was the founder (1861) of the Hebrew weekly "Ha-'Et," of which only twenty-two numbers appeared. In 1855 he edited in Lemberg Jedaiah Bedersi's "Beḥinat ha-'Olam" and "Baḳḳashat ha-Memim," to which latter work he added a German translation and a Hebrew commentary entitled "Patshegen ha-Ketab."

Schorr was, besides, the author of "Har ha-Mor," a collection, in three parts, of narratives from Jewish medieval history (Lemberg, 1855-75), and of "Mas'at Nefesh," called also "Mishle Berakman" (*ib.* 1867), a Hebrew translation of the "Brahmanische Weisheit," to which he wrote an introduction. Schorr contributed articles to Hebrew periodicals over the signature ילר, formed of the last letter of each of his names.

SCHOSSBERGER DE TORNA, SIMON WOLF: Hungarian merchant and estate-owner; born 1796 at Sasvar (Sassin, Schossberg, Comitat Nyitra); died at Budapest March 25, 1874. Through his many commercial, industrial, and agricultural enterprises he attained wealth and honor; and by his promotion of the tobacco industry he solved a Hungarian economic problem.

Previous to 1861 Schossberger was twice president of the Jewish community of Pesth. He was the first Hungarian Jew elevated to the nobility by Emperor Francis Joseph I. (1862); he assumed the name "De Torna."

One of Schossberger's sons, **Sigmund von**

Schossberger, was in 1885 created a baron, being the first Jew thus honored in Hungary.

S. L. V.

SCHOTT (SCHOTTLÄNDER), BENEDICT (BARUCH): German educationist; born in Danzig March 11, 1763 (or 1764); died at Seesen July 21, 1846. Left an orphan at an early age, he wandered through Germany as a scholar ("baḥur"), and among other places sojourned in Glogau, Breslau, and Berlin. In the last-named city he was tutor in the house of the banker Herz Beer, father of the composer Meyerbeer. In 1804 Schott was called as a teacher to the newly established Jacobsonschule in Seesen, and two years later he was made its director.

At Jacobson's request the title "hofrat" was conferred upon Schott by Landgrave Ludwig X. of Hesse-Darmstadt.

In 1806 Schott, commissioned by Jacobson, went to Paris to submit to the Sanhedrin summoned by Napoleon a memorial urging the necessity of better education among the Jews. After a long term of activity in the Jacobsonschule, Schott retired July 1, 1838, in his seventy-fifth year.

Schott was the author of the following works: "Der Levit von Ephraim," Breslau, 1798; "Toldoth Noach, oder die Geschichte der Sündfluth," *ib.* 1799; "Zaphnat Paneach," a collection of moral teachings, proverbs, stories, and poems from the Talmud and other Jewish works; a reader for Jewish children, designed especially for use in the Jacobsonschule, vol. i., Königslutter, 1804; vol. ii., Hildesheim, 1812; "Sendschreiben an Meine Brüder, die Israeliten in Westfalen, die Errichtung eines Jüdischen Konsistoriums Betreffend," Brunswick, 1808.

Bibliography: *Ha-Meassef*, ix. 9; *Sulamith*, iii., part v., 301; new series, vol. i., part ii., p. 157, notes; P. Philippson, *Biographische Skizzen*, ii. 168, and notes; Steinschneider, *Cat. S. A. Lew.

SCHOTTLÄNDER, JULIUS: German merchant; born at Münsterberg, Silesia, March 22, 1835; educated at the public schools of his native town and at Breslau. He established himself as a wool- and grain-merchant in Münsterberg; but in 1859 removed his business to Breslau, associating himself with his brother-in-law, Louis Pakully. From 1864 to 1869 he leased from the city of Breslau the Mittel mill, where he manufactured sweet-oil. During the Prusso-Austrian war of 1866 he was contractor for the sixth Prussian army corps, and in the Franco-Prussian war of 1870–71 for the third German army. During the following twenty years Schottländer engaged in milling, mining, the manufacture of cement, bricks, and sugar, and in real-estate transactions. In 1890 he retired from active business life, and since then has devoted himself to agriculture, having acquired a large tract of farm-land in Silesia.

Schottländer has been identified with many charities in the cities of Breslau and Münsterberg, and has contributed largely to the embellishment of the latter city.

Bibliography: *Münsterberger Zeitung*, March 22, 1905.

SCHOTTLÄNDER, JULIUS: German gynecologist; born at St. Petersburg April 12, 1860. Studying at the universities of Munich and Heidelberg, he graduated as doctor of medicine in 1887. During the following two years he was assistant to Kehr in Halberstadt, later to Martin in Berlin. In 1893 he established himself as a physician in Heidelberg, and became privat-docent in gynecology at the university. In 1897 he was appointed assistant professor.

Schottländer has written several essays in the medical journals, and is the author of "Eierstocktuberculose," Jena, 1896.

SCHREIBER, EMANUEL: American rabbi; born at Leipnik, Moravia, Dec. 13, 1852. He received his education at the gymnasium of Kremsir, the University of Berlin, the Talmudical college of his native town, the rabbinical seminary at Eisenstadt, Hungary, and the Hochschule in Berlin (Ph.D., Heidelberg, 1873). In 1874 he was appointed teacher at the Samson School at Wolfenbüttel, and subsequently became rabbi of Elbing (1875) and Bonn on the Rhine (1878). In 1881 he accepted a call to the rabbinate of Mobile, Ala., where he remained until 1883, when he was elected rabbi of Denver, Colo. He then held successively the rabbinates of Los Angeles, Cal. (1885–89); Little Rock, Ark. (1889–91); Spokane, Wash. (1891–92); Toledo, O. (1892–97); and Youngstown, O. (1897–1899). Since 1899 he has been rabbi of Congregation Emanu-El, Chicago, Ill.

Schreiber was editor of the "Jüdische Gemeinde- und Familien-Zeitung" (later "Die Reform") from 1876 to 1881, and of the "Chicago Occident" from 1893 to 1896; and he has written many essays for the Jewish press. Of his works may be mentioned: "Die Principien des Judenthums Verglichen mit Denen des Christentums," Leipsic, 1877; "Abraham Geiger," *ib.* 1879; "Erzählungen der Heiligen Schrift," 4th ed., Leipsic, 1880; "Die Selbstkritik der Juden," Berlin, 1880, and Leipsic, 1890; "Graetz's Geschichtsbauerei," *ib.* 1881; "Der Talmud vom Standpunkt des Modernen Judenthums," *ib.* 1881; "The Talmud," Denver, 1884; "Reform Judaism and Its Pioneers," Spokane, 1892; "Moses Bloch, a Biography," Chicago, 1894; and "The Bible in the Light of Science," Pittsburg, 1897.

Bibliography: *American Jewish Year Book*, 5664 (1904).

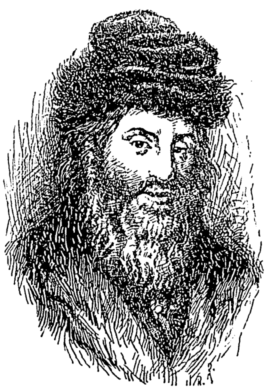
SCHREIBER, MOSES B. SAMUEL (known also as **Moses Sofer**): German rabbi; born at Frankfort-on-the-Main Sept. 14, 1763; died at Presburg Oct. 3, 1839. His mother's name was Reisil. At the age of nine he entered the yeshibah of R. Nathan Adler at Frankfort, and when only thirteen years old he delivered public lectures the excellence of which took his audiences by surprise. So great was the boy's fame that R. Phinehas Horowitz (Hurwitz), author of the "Sefer Hafla'ah," then rabbi of Frankfort, invited him to become his pupil. Schreiber consented, but remained under Horowitz for one year only, when he left for the yeshibah of R. Tebele Scheuer in the neighboring city of Mayence, who gladly welcomed the boy. Scheuer gratuitously supplied all his wants, and Schreiber with increased energy and assiduity devoted himself to the study of the Talmud. All the prominent residents of Mayence took an interest in the boy's welfare and facilitated the progress of his studies.



Moses Schreiber.

In spite of his great devotion to Bible and Talmud Schreiber succeeded in acquiring a knowledge of secular sciences also, becoming proficient in astronomy, astrology, geometry, and general history. His teacher then gave him the rabbinical diploma, authorizing him to render decisions on questions of law. Yielding to the entreaties of his former teachers in Frankfort, Schreiber returned to his native city.

In 1782 R. Nathan Adler was called to the rabbinate of Boskowitz, and Schreiber followed him. From Boskowitz Schreiber went, at Adler's advice, to Prossnitz, where he married Sarah, the widowed daughter of R. Moses Jerwitz, by whom all his material wants were supplied for two years. He became head of the yeshibah at Prossnitz, and later accepted his first official position, becoming rabbi of Dresnitz, after he had procured the sanction of the government to settle in that town. In the year 1798, shortly before the Feast of Tabernacles, he resigned the rabbinate, and accepted that of Mattersdorf, Hungary. There he established a yeshibah, and pupils flocked to him. About this time he declined many other offers of rabbinates, but in 1803 accepted a call to Presburg. Here also he established a yeshibah, which was attended by about 500 pupils, many of whom became famous rabbis. He did not, however, enjoy his stay at Presburg, his activity in behalf of his people being hampered by the disturbances resulting from the war between Austria and France; and in 1812 his troubles were augmented by the death of his wife. After the lapse of some time he married Sarah, the daughter of Akiba Eger.

In 1819 the Reform movement among the Jews of Hamburg was initiated. Schreiber declared open war against the reformers, and attacked them in his speeches and writings with all the force at his command. In the same spirit he fought also the founders of the Reformschule in Presburg, which was established in the year 1827. This war against the reformers he prosecuted unremittingly for the remainder of his life.

Although in his early days an adherent of the Pilpul, Schreiber later discarded its methods. His lectures, which were very lucid, were presented in such a simplified form as to be easily understood by all his hearers. His relations to his pupils were tender in the extreme. He was likewise an efficient preacher; he was never sparing in his denunciation of evil-doers, and fearlessly attacked them irrespective of their position and standing in the community. He was moreover distinguished especially for his modesty as well as for his charitable deeds, being the founder of many benevolent institutions.

About 100 volumes were left by Schreiber in manuscript, of which the following have been printed: (1) "Ḥatam Sofer" (6 vols., Presburg, 1855–64), a collection of responsa; (2) "Ḥatam Sofer," consisting of "ḥiddushim" to many Talmudical treatises published at various dates and places; (3) "Shirat Mosheh" (*ib.* 1857), various poems of a cabalistic nature; (4) "Ẓawwa'at Mosheh" (Vienna, 1863), antemortem instructions to his children and descendants; (5) "Torat Mosheh" (Presburg, 1879–93), commentaries and notes on the Pentateuch; and (6) "Sefer Zikkaron" (Drohobicz, 1896), a narrative of the author's sufferings during the siege of Presburg. In addition to the foregoing works, ḥiddushim by him were included in several works of other authors.

Bibliography: L. Landsberg, *Biographie des Moses Sofer*, Presburg, 1876; S. Schreiber, *Hut ha-Meshullash*, vol. i., Munkacs, 1894; Zedner, *Cat. Hebr. Books Brit. Mus.* p. 687.

E. C. B. Fr.

SCHREIBER, SIMON: Austrian rabbi; born at Presburg, Hungary, 1821; died March 25, 1883, at Cracow; son of Moses Schreiber. In 1842 he became rabbi of Mattersdorf; in 1857 he declined a call from the congregation of Papa; and in 1860 he accepted a similar invitation to the city of Cracow. He became the foremost leader of the Orthodox Jews of Galicia in religious as well as in worldly matters; and his reputation for shrewdness and prudence in secular affairs was such that in 1879 he was elected a member of the Austrian Parliament.

In 1880 Schreiber founded the Hebrew weekly "Maḥaziḳe ha-Dat," which is still (1905) published in Lemberg.

SCHREINER, ABRAHAM: Austrian discoverer of petroleum; born in Galicia in the second decade of the nineteenth century; died after 1870. He was a merchant in Boryslaw, where he possessed some land. On this land was a hollow from which exuded a greasy, tarry secretion; this the farmers of the neighborhood had for a long time used as a kind of panacea. Schreiner took some of this stuff and, forming a ball of it, inserted therein a wick, which, when lighted, burned with a red flame. He now tried to distil the mass by filling an old iron pot with it and placing it upon the fire. The result was disastrous: the pot exploded, and the experimenter was severely injured. Schreiner, upon his recovery, went to an apothecary who sold him a distilling-apparatus and instructed him in its use. With this Schreiner succeeded in 1853 in producing petroleum, which he sold to the druggists in Drohobicz and in Sambor. Later he disposed of 100 pounds of it for 15 florins to the Lemberg chemist Nikolasen, who refined it and produced a colorless, clear liquid. The Austrian Northern Railway in 1854 bought 300 pounds of refined petroleum at 20 florins per hundredweight and tested it for illuminating purposes. Schreiner now sank wells and procured oil in larger quantities; but his buildings were twice burned, and after the last conflagration, in 1866, he became impoverished.

In the meantime the Americans had introduced petroleum to the world (1859), and Schreiner was no longer able to compete with them. He died a poor man at the age of about fifty.

s. F. T. H.

SCHREINER, MARTIN: Hungarian rabbi; born at Grosswardein July 8, 1863; educated at the local gymnasium and the rabbinical seminary and at the University of Budapest (Ph.D. 1885; rabbinical diploma, 1887). From 1887 to 1890 he officiated as rabbi at Somogy-Csurgó, and in 1893 became professor at the Jewish normal school at Budapest. In the following year he was called to the Lehranstalt für die Wissenschaft des Judenthums in Berlin as instructor in Jewish history and the philosophy of religion.

Schreiner is the author of the following works: "Adalékok a Bibliai Szöveg Kiejtésének Történetéhez," Budapest, 1885 (in German also), historical notes on the pronunciation of the Biblical text; "Az Iszlám Vallásos Mozgalmai az Elsö Négy Században," *ib.* 1889, on the religious movements of Islam during the first four centuries A.H.; "Zur Geschichte des Asch'aritenthums," Leyden, 1890; "Le Kitâb al-Muhâdhara wa-l-Mudhâkara de Moïse ibn Ezra, et Ses Sources," Paris, 1892; "Der Kalam in der Jüdischen Litteratur," Berlin, 1895; "Contributions à l'Histoire des Juifs en Egypte," *ib.* 1896; and "Die Jüngsten Urtheile über das Judenthum," *ib.* 1902. Schreiner has published also a volume of sermons in Hungarian (Csurgó, 1887), and has contributed many articles to the "Philologiai Közlöny," "Magyar Zsidó Szemle," "Zeitschrift der Deutschen Morgenländischen Gesellschaft" (including his "Zur Geschichte der Polemik Zwischen Juden und Muhammedanern"), "Revue des Etudes Juives," and "Monatsschrift für die Geschichte und Wissenschaft des Judenthums."

Bibliography: *Pallas Lex.*

s. L. V.

SCHRENZEL, ABRAHAM. See Rapoport, Abraham.

SCHREYER, JAKOB: Hungarian jurist; born Feb. 7, 1847, in Ugra. He studied at Nagyvarad, Debreczin, Budapest, and Vienna (Doctor of Law, 1870), and was admitted to the bar at Budapest in 1872. He is (1905) a member of the aldermanic board, and corresponding member of the chamber of commerce and industry. In 1893 he was commissioned by the minister of justice, Desider Szilágyi, to draft a bill for the revision of the laws pertaining to bankruptcy, as well as one regulating extrajudicial questions. In 1896 he was made a knight of the Order of Francis Joseph.

Schreyer is the author of the following works: "A Perorvoslatok Teljes Rendszere," a system of legal procedure, awarded a prize of 100 ducats by the Academy of Science, Budapest; "A Polgári Törvénykezési Rendtartás," in 2 vols., treating of procedure in civil cases; "25 év a Magyar Kereskedelmi Csarnok Történetéből," a history of the Hungarian chamber of commerce, printed in 1896 under the auspices of the Hungarian ministry of commerce.

s. L. V.

SCHUDT, JOHANN JAKOB: German polyhistor and Orientalist; born at Frankfort-on-the-Main Jan. 14, 1664; died there Feb. 14, 1722. He studied theology at Wittenberg, and went to Hamburg in 1684 to study Orientalia under Ezra Edzardi. He then settled in his native city as teacher in the gymnasium in which he had been educated, and of which he became rector in 1717. He devoted himself especially to Jewish history and antiquities, beginning with the publication of a "Compendium Historiæ Judaicæ" (1700). His greatest work was his "Jüdische Merckwürdigkeiten," of which three parts appeared in 1714, and a supplementary part in 1717. Up to that time he had been on friendly terms with the Jews of Frankfort, writing a preface to Grünhut's edition of Ḳimḥi's Commentary on the Psalms, 1712, while in 1716 he published the Purim play of the Frankfort and Prague Jews with a High German translation. He had, however, previously published "Judæus Christicida," attempting to prove that Jews deserved corporal as well as spiritual punishment for the crucifixion. His "Jüdische Merckwürdigkeiten" is full of prejudice, and repeats many of the fables and ridiculous items published by Eisenmenger; but it contains also valuable details of contemporary Jewish life, and will always be a source for the history of the Jews, particularly those of Frankfort. Schudt also contributed to Ugolini's "Thesaurus" (vol. xxxii.) a dissertation on the singers of the Temple.

SCHUHL, MOÏSE: French rabbi; born at Westhausen, Alsace, May 2, 1845. He received his education at the lyceum at Strasburg and at the Rabbinical Seminary, Paris, becoming rabbi at Saint-Etienne in 1870, chief rabbi of Vesoul in 1888, and chief rabbi of the consistory of Epinal in 1896.

Schuhl is the author of: "Sentences et Proverbes du Talmud et du Midrasch," Paris, 1878; "Superstitions et Coutumes Populaires du Judaïsme Contemporain," *ib.* 1882; "Les Préventions des Romains Contre la Religion Juive," *ib.* 1882; and "Nos Usages Religieux," *ib.* 1896.

s. F. T. H.

SCHUL: Judæo-German designation for the temple or the synagogue ("bet ha-midrash"), used as early as the thirteenth century. The building of synagogues being forbidden in nearly every European country at that period, the Jews were obliged to hold their services in private buildings; and for this purpose they used the schools which they were permitted to conduct. It thus became customary for them to say merely "I go to school" instead of "I go to the chapel in the school."[1] According to Lazarus ("Treu und Frei," p. 285), however, this use of "schul" for "synagogue" merely indicates the interchange of the two allied concepts, while Güdemann asserts, on the other hand ("Gesch." iii. 94, note), that the Jews originally called the synagogue a "schul" in the sense of "assembly," this designation being accepted by the Jews since the Christians would not term the synagogue a church.

It thus becomes explicable why this term was adopted for the synagogue in nearly all countries, *e.g.*, "scuola" in Italy, "schola" in England, and "szkola" in Poland. According to Jacobs ("Jews of Angevin England," p. 245, London, 1893), however, "the frequent reference to Jewish scholæ in the English records may refer to real schools and not to the synagogues, as has been hitherto assumed." At Norwich the school built before 1189 was not identical with the synagogue, and the same remark applies to London.

J. S. O.

SCHULBAUM, MOSES: Austrian Hebraist; born at Jezierzany, Galicia, April 25, 1835. His mother was a descendant of Ḥakam Ẓebi. At an early age he devoted himself to the study of Hebrew, and in 1870 entered the printing-house of Michael Wolf at Lemberg as proof-reader. When the Baron de Hirsch schools were founded in Galicia, Schulbaum was called (1889) as teacher of Hebrew to Kolomea; in 1897 he was transferred to the Baron de Hirsch school at Mikulince, where he is still (1905) teaching.

Schulbaum is one of the foremost Neo-Hebraic writers. He has translated into Hebrew Schiller's "Die Räuber" (Lemberg, 1871) and the pseudo-Aristotelian "Ethics" (*ib.* 1877); and has edited a complete revision of Ben Zeeb's "Oẓar ha-Shorashim" (5 vols., *ib.* 1880-82). The last four parts of this book—namely, the Chaldeo-German, Neo-Hebraic, and German-Hebraic glossaries, and the glossary of proper names—were compiled independently by Schulbaum; likewise the following parts which have appeared in a second edition: Hebrew-German dictionary (*ib.* 1898), and German-Hebrew dictionary (*ib.* 1904).

(From Schudt, "Jüdische Merckwürdigkeiten," 1714.)

SCHÜLER GELAUF: Organized attacks upon the Jews of different Polish cities by Christian youths, especially pupils of the many Jesuit schools that existed in Poland during the seventeenth and eighteenth centuries. These youths not only assaulted individual Jews whom they met on the streets, but they organized themselves into bands, invading and pillaging the Jewish quarters. Such disturbances were of frequent occurrence in cities which possessed large Jewish populations, as Brest-Litovsk, Cracow, Posen, and Wilna; and the riots often ended in bloodshed. Thus, in 1663 the students of the Jesuit academy in Cracow, under the pretext that some Jews had blasphemed the Christian religion, invaded the Jewish quarter, killed or wounded many persons, destroyed 120 houses, and carried off more than 4,000 florins, after having made their victims promise not to prosecute them.

The authorities tolerated and even encouraged such affairs; and, in order to protect their lives and property, the Jews had to contribute annually to the various Jesuit institutions.

SCHULHOF, ISAAC BEN ZALMAN BEN MOSES: Austrian rabbi; born about 1650 at Prague; died there Jan. 19, 1733. He settled in Ofen as the rabbi of a small congregation, and in 1686, when that city was stormed by the imperialists, he was overwhelmed by calamities. His wife was murdered; his son died in prison at Raab; while he himself was incarcerated, and barely escaped death on Elul 14 (Sept. 3), 1686. The anniversary of his escape was celebrated by his family as Schulhof Purim.

Schulhof wrote elegies in commemoration of the deliverance of the Jews of Ofen during the assault of 1686, and recounted his own afflictions in a megillah. The latter was published in 1895 by David Kaufmann.

E. C. A. Bü.

SCHULHOFF, JULIUS: Austrian pianist and composer; born at Prague Aug. 2, 1825; died at Berlin March 15, 1898. Kisch and Tedesco were his teachers in piano, and he studied theory under Tomaschek. He made his début at Dresden in 1842, and later played at the Leipsic Gewandhaus. He then went to Paris, where Chopin encouraged him to become a professional pianist. The concerts which he gave at Chopin's suggestion met with such success that he went on a long tour through France and to London, continuing his travels through Spain (1851) and Russia (1853). After this he returned to Paris, where he devoted himself entirely to composition and teaching. In 1870 he settled in Dresden, and later removed to Berlin.

Of Schulhoff's compositions may be mentioned: a grand sonata in F minor, twelve études, and a series of caprices, impromptus, waltzes, mazurkas, etc.

S.

SCHULKLOPFER: Name given in the Middle Ages to a beadle who called the members of the congregation to service in the synagogue. It is stated in the "Minhagim" of R. Jacob Levi, or Maharil (ed. 1688, p. 88b), that the beadle used to summon the congregation for service daily except on the Ninth of Ab. At Neustadt the beadle struck four times on the door: first one blow; after a short interval two blows; and then a fourth. R. Israel Isserlein, rabbi of that town, traces this custom to the Biblical passage, "I shall come to thee and bless thee" (Ex. xx. 24), the numerical values of the letters of the first word in the Hebrew text, אבא, being 1, 2, 1. In the Rhine province, however, it was customary to strike thrice only—a single blow followed by two others. See also Jew. Encyc. iv. 197, *s.v.* Community.

The Christians called these officials "campanatores" (bell-strikers) in Latin, and "Glöckener" or "Glöckner" in German—names by which similar officials of the Church are called.

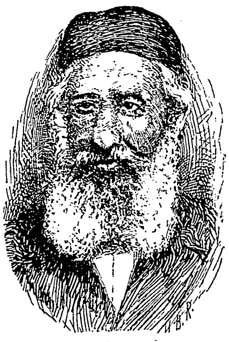
A. M. Sel.

SCHULMAN, KALMAN: Russian author, historian, and poet; born at Bykhov, government of Moghilef (Mohilev), Russia, in 1819; died in Wilna Jan. 2, 1899. He studied Hebrew and Talmud in the ḥeder, and two years after his marriage he went to the yeshibah at Volozhin (1835). The six years spent by him in study there caused an affection of his eyes, to cure which he migrated to Wilna. There he entered the "Klaus" of Elijah Gaon for the study of Talmud. His extreme poverty forced him to divorce his wife. Soon after he left Wilna and went to Kalvariya, where he became an instructor in Hebrew and commenced the grammatical study of the Hebrew and German languages. In 1843 he returned to Wilna, where he entered the yeshibah of Rabbi Israel Ginsberg (Zaryechev), from whom he received the rabbinical diploma.



Kalman Schulman.

Schulman's aim was to bring about a Jewish renaissance in Russia. He knew that the only language by means of which this aim might be reached was Hebrew, and that this had been neglected for centuries. He set out to resuscitate it. Schulman, in his writings, limited himself to the use of strictly Biblical terms, but so expert was he in the use of Hebrew that there was hardly any shade of thought or any modern idea that he could not easily express in that language. The result was that he came to be the most widely read Jewish author. He succeeded in creating a new epoch by implanting in the hearts of his brethren a new love for literature and science, and by showing them that they had a glorious and resplendent history, and that outside of their dark, cramped quarters in Russia there existed a beautiful world.

Schulman first became known as a writer through a petition addressed by him to Sir Moses Montefiore in 1846 in behalf of those Jews who had resided within the limit of fifty versts from the German and Austrian boundary-lines, and who by a special law of the Russian government had been driven from their homes. The beauty and clearness of his diction made such an impression on Loewe, the friend and secretary of Sir Moses, that he expressed a great desire to become acquainted with the author. Through him Schulman was introduced to the poet Isaac Baer Levinsohn and to the other Progressivists in Wilna. From this time forward his literary activity was redoubled. His first publication was a funeral oration delivered on the occasion of the death of Rabbi Ginsberg, and printed under the title "Ḳol Bokim." This was followed in 1848 by "Safah Berurah," a collection of proverbs and epigrams.

In 1849 Schulman was appointed instructor in the Hebrew language and literature in the lyceum at Wilna. In 1858 "Harisut Beter," a description of the heroic deeds of Bar Kokba, was published; and this was followed in 1859 by "Toledot Yosef," a biography of the high priest Joseph b. Mattathias. To this class of works on Jewish history belong also "Milḥamot ha-Yehudim," on the Jewish wars, and "Dibre Yeme ha-Yehudim" (Vienna, 1876), a translation of the first part of Grätz's "Geschichte der Juden." On the history of antiquities he wrote the following works: "Halikot Ḳedem" (1854), an ethnographic description of Palestine and other Asiatic countries; "Shulammit," a continuation of "Halikot Ḳedem"; "Ariel" (1856), on the antiquities of Babylonia, Assyria, Nineveh, etc.; and "Ḳadmoniyyot ha-Yehudim." In order to appeal to the imagination and to illustrate the higher emotions of the human heart, Schulman wrote a beautiful translation of Eugene Sue's novel "Les Mystères de Paris," and published it under the title "Mistere Paris" (1854). His most important work, however, was a universal history in nine parts, based on the well-known works of Weber and Becker; it appeared under the title "Dibre Yeme 'Olam" in 1867. Other works by him were: "Ḳiryot Melek Rab," a historical description of St. Petersburg, Russia; "Mosede Ereẓ," a general geography; "Toledot Ḥakme Yisrael," biographical sketches; and "'Osher u-Ẓedaḳah," a biography of the founder of the house of Rothschild.

Schulman was active also as a journalist, contributing to "Ha-Maggid," "Ha-Lebanon," "Ha-Karmel," and "Ha-Meliẓ." In 1895, at the celebration of the jubilee of his literary activity, there was a great gathering of Jewish scholars in Wilna.

SCHULMAN, SAMUEL: American rabbi; born in Russia Feb. 14, 1865. He was taken to New York when hardly one year old, and was educated in the public schools there and in the College of the City of New York. Schulman took his rabbinical diploma from the Hochschule für die Wissenschaft des Judenthums in Berlin. He has occupied rabbinates in Helena, Mont., and Kansas City, Mo., and in 1901 was elected associate rabbi at Temple Beth-El, New York city, becoming rabbi on the election of Dr. Kohler to the presidency of the faculty of Hebrew Union College. He was awarded the degree of D.D. by the Jewish Theological Seminary of America, 1904.

Bibliography: *American Jewish Year Book*, 5662-3 (1902).

A. F. T. H.

SCHULMANN, LUDWIG: German philologist and writer; born at Hildesheim 1814; died at Hanover July 24, 1870. He studied philology at the University of Göttingen, and then taught for a time in his native city. In 1842 he began to advocate the systematic training of Jewish public-school teachers in the kingdom of Hanover; and in consequence of his efforts a seminary for Jewish teachers was opened in the city of Hanover on Nov. 7, 1848. This institution is still in existence. Schulmann was for a time editor of the "Allgemeine Zeitung und Anzeigen" (Hildesheim), and in 1863 he became editor of the "Neue Hannoversche Anzeigen" (Hanover). When the latter paper was combined with the "Hannoverscher Courier," he retained the editorship, which he continued to hold until his death.

Schulmann was the author of the following works: "Talmudische Klänge" (Hildesheim, 1856), poems dedicated to District Rabbi M. Landsberg of Hildesheim; "Norddütsche Stippstörken un Legendchen" (*ib.* 1856; 2d ed. 1900); "Das Bödeker-Lied" (*ib.* 1864); "Das Waterloo-Lied" (Hanover, 1865); and "Michael," a ballad cycle (in L. Stein's "Israelitischer Volkslehrer," 1856, pp. 315-322). He was a contributor to the "Allgemeine Zeitung des Judenthums" and, under the pen-name "Justus," to other periodicals.

S. A. Lew.

SCHULTENS, ALBERT: Dutch Orientalist; born at Gröningen Aug. 23, 1686; died Jan. 26, 1756. He studied Arabic at Leyden under Van Til, and at Utrecht under Reland. He took his degree (Doctor of Theology) at Gröningen in 1709; became teacher of Hebrew at Franeker in 1713; and ultimately settled at Leyden as curator of the manuscripts of the Warner Oriental collection. He was the first in modern times to make scientific use of Arabic for the elucidation of Hebrew, and he has been called "the father of modern Hebrew grammar." His most important treatises on this subject are: "Institutiones" (Leyden, 1737); "Vetus et Regia Via Hebraizandi" (*ib.* 1738).

His chief works of interest to Hebrew students are an elaborate edition of Job in two quarto volumes (*ib.* 1737), which was translated into German (1748), and by Richard Gray into English, and an edition of Proverbs (*ib.* 1748). In reply to criticisms of his Job and Proverbs he wrote two letters to Mencken in defense of his exegetical method (*ib.* 1749).

E. C. J.

SCHUR, WILLIAM: American author; born at Outian, near Vilkomir, Russia, Oct. 27, 1844. He studied Talmud at his native town and at the Yeshibah, Kovno, and theology at the Lehranstalt für die Wissenschaft des Judenthums at Berlin (1868-70). During the following two years he taught Hebrew in Constantinople, and in 1873 in Port Said and Cairo. He then spent five years (1874-1879) in travel, visiting Africa, India, China, the Philippine Islands, and the islands of the China Sea. Returning to Europe, he settled in Vienna, and became a contributor to Smolenskin's "Ha-Shaḥar," as well as to "Ha-Meliẓ" and "Ha-Yom." In 1887 he went to America, and lived successively in the cities of New York, Baltimore, Boston, St. Louis, and Chicago, in which last-named city he has resided since 1897.

Schur is the author of "Maḥazot ha-Ḥayyim" (Vienna, 1884) and "Mas'ot Shelomoh" (*ib.* 1885), both containing descriptions of his journeys; of the following novels: "Masse'at Nafshah"; "Afiḳomen ha-Ganub"; "Ha-Nebi'ah Nilel Hilton"; "Ha-Halikah el ha-Ḥeder"; "Kapparat 'Awon"; "Wa-Yippol ba-Shaḥat"; "Aḥar ha-Meridah ha-Gedolah"; and of a historico-religious work, "Neẓaḥ Yisrael."

Bibliography: *American Jewish Year Book*, 5665 (1905), p. 183.

SCHUSTER, ARTHUR: English physicist; born at Frankfort-on-the-Main Sept. 12, 1851. He was educated at Frankfort, at Owens College, Manchester, and at the University of Heidelberg (Ph.D. 1873). He early took an interest in physics, especially in spectrum analysis; he was appointed chief of the expedition that went to Siam in 1875 to observe the eclipse of the sun, and he took part in a similar expedition to Egypt in 1882. In recognition of his researches he obtained the medal of the Royal Society, of which he is a fellow (1893). He has been professor of physics in Owens College since 1885, and a large number of papers by him are preserved in the "Transactions of the Royal Society." He is a large contributor to various scientific journals.

Bibliography: Poggendorff, *Biographisch-Literarisches Handwörterbuch*; *Who's Who*, 1905.

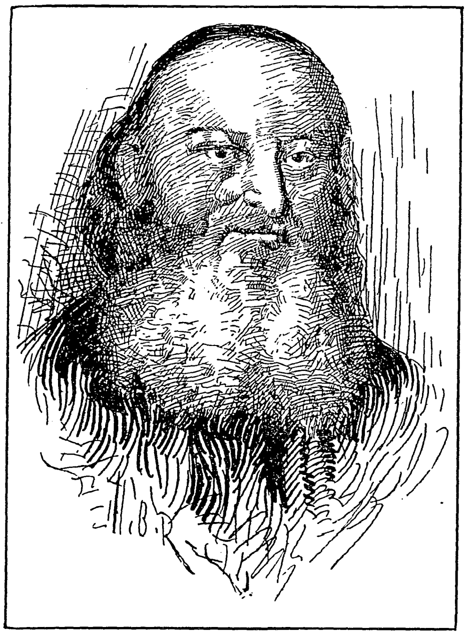
J.

SCHUTZJUDE: Jew under the special protection of the head of the state. In the early days of travel and commerce the Jews, like other aliens, used to apply to the ruling monarchs for letters of protection, and they obtained "commendation" when their stay was for any length of time. Such letters of protection were granted to Jews in the Carlovingian period (Stobbe, "Juden in Deutschland," p. 5). When the idea arose that all Jews of the empire were practically serfs of the emperor, he granted similar letters of protection, for which annual payment was made by the Jews; when he transferred his rights to local feudal authorities, the same or increased payments were exacted, in return for which these authorities gave the Jews "Schutzbriefer"; and when, later, wholesale expulsions took place in Germany during the sixteenth century, those Jews who returned to places from which they had been expelled were admitted only if they obtained such "Schutzbriefe" for which they paid "Schutzgeld" (protection money). It was under these conditions that Jews were allowed to reenter Hesse in 1524; and similar regulations prevailed in Bavaria, where, according to the "Judenordnung" of Sept. 1, 1599, all Jews had to have either a "Schutzbrief," if they remained in the kingdom, or a "Geleit," if they passed through it (Kohut, "Gesch. der Juden," p. 554).

When the Jews of Frankfort were allowed to remain there under the conditions of the "Neue Stättigkeit" of Jan. 3, 1617, their numbers, as well as their marriages, were limited. They could not be burgesses, but only protégés of the town council ("Rathschutzangehörige"; Schudt, "Jüdische Merckwürdigkeiten," pp. 59-90). Similarly, when Frederick William, the "Great Elector," allowed fifty families which had been expelled from Austria to settle in Brandenburg, each of them was required to pay eight thaler yearly, as well as other special taxes; these had increased very much by the time Frederick the Great issued his "General-Privilegium" or "Juden Reglement" (April 17, 1750), which restricted the numbers of the Jews and classified them as "ordinary" and "extraordinary Schutzjuden," the privileges of the former passing on to one child, those of the latter being valid only during the life of the original grantee.

The Prussian Jews were collectively liable for a certain amount of "Schutzgeld." This amount was fixed at 3,000 ducats in 1700, at 15,000 thaler in 1728, and at 25,000 thaler in 1768. In 1715 every Jewish family of Metz was ordered to pay 40 livres annually for permission to stay there, and the number was limited in 1718 to 480 families. The tax was granted to Count de Brances and Countess de Fontaine (reference to this tax was made by Louis XVI. in 1784; see Jost, "Gesch." viii. 30). As time went on a further division was made among the protected Jews. In Silesia an upper class of "Schutzjuden," called the "Geduldeten," was constituted, its numbers being limited, as, for example, to 160 at Breslau, all the rest being required to pay "Schutzgeld." These limitations were removed at the same time as the Leibzoll. In Mecklenburg-Strelitz, for example, the "Schutzjude" regulation was suspended in 1812; but with the reaction following Napoleon's fall it was reinstituted (1817).

J.



Löw Schwab.

SCHWAB, LÖW (called originally **Baḥur Löb Krumau**): Moravian rabbi; born at Krumau, Moravia, March 11, 1794; died April 3, 1857; pupil of R. Mordecai Benet in Nikolsburg, R. Moses Sofer in Presburg, R. Joshua Horwitz in Trebitsch, and R. Joachim Deutschmann in Gewitsch. He held successively the rabbinates of Gewitsch (1824), Prossnitz (1831), and Budapest (1836). Unaided, he obtained a knowledge of French and German and acquired also a good mathematical and philosophical education; he was well versed, moreover, in Jewish and Kantian philosophy as well as in Christian theological literature, especially Protestant homiletics.

Schwab was a conservative theologian and sanctioned only those reforms in the religious services which, in view of the changes in esthetic standards, were absolutely necessary to prevent the better-educated classes of the community from being alienated from the Synagogue. He was the first rabbi in Moravia to preach in German and to perform the wedding ceremony in the synagogue (1832). He was averse to radical reforms, and in 1852 he brought about the dissolution of the Reform association in Budapest, which had been modeled on that of Berlin. Schwab's work in Budapest left lasting traces in the Jewish community, and the establishment of the first important hospital and the large synagogue in that city was due to his efforts.

Schwab frequently used his pen in the struggle for the emancipation of the Hungarian Jews, although he was averse to publication. He drafted petitions from the Jews of the country to the Landtag, and wrote a refutation of malicious attacks made upon them. A short treatise by him on faith and morals (1846) is still widely used as a text-book in Hungarian intermediate schools. A volume of his sermons was published in 1840.

After the suppression of the Revolution in 1849, Schwab was tried before a court martial and imprisoned for twelve weeks; but, notwithstanding this, he frequently served as councilor to the government in Jewish affairs.

His son, the mathematician **David Schwab**, also preached for a time, and was for four years on the staff of the "Pester Lloyd."

S. I. Lö.

SCHWAB, MOÏSE: French librarian and author; born at Paris Sept. 18, 1839; educated at the Jewish school and the Talmud Torah at Strasburg. From 1857 to 1866 he was secretary to Salomon Munk; then for a year he was official interpreter at the Paris court of appeals; and since 1868 he has been librarian at the Bibliothèque Nationale in the French capital. In 1880 he was sent by the minister of public instruction to Bavaria and Württemberg to make investigations with regard to early Hebrew printing-presses.

Schwab has been a prolific contributor to the Jewish press; and he is the author of the following works, all of which were published in Paris:

1866. Histoire des Israélites (2d ed. 1896).
1866. Ethnographie de la Tunisie (crowned by the Société d'Ethnographie).
1871-1889. Le Talmud de Jérusalem, Traduit pour la Première Fois en Français (11 vols.).
1876. Bibliographie de la Perse (awarded Brunet prize by the Institut de France).
1878. Littérature Rabbinique. Elie del Medigo et Pico de la Mirandole.
1879. Des Points-Voyelles dans les Langues Sémitiques.
1879. Elie de Pesaro. Voyage Ethnographique de Venise à Chypre.
1881. Al-Ḥarisi et Ses Pérégrinations en Orient.
1883. Les Incunables Hébraïques et les Premières Impressions Orientales du XVIe Siècle.
1883. Bibliotheca Aristotelica (crowned by the Académie des Inscriptions et Belles-Lettres).
1888. Monuments Littéraires de l'Espagne.
1889. Maqré Dardeqé, Dictionnaire Hébreu-Italien du XVe Siècle.
1890. Deuxième Edition du Traité des Berakhoth, Traduit en Français.
1896-99. Vocabulaire de l'Angélologie.
1899-1902. Répertoire des Articles d'Histoire et de Littérature Juive (3 vols.).
1900. Salomon Munk, Sa Vie et Ses Œuvres.
1904. Rapport sur les Inscriptions Hébraïques en France.

His most important work is "Le Talmud de Jérusalem," which was commenced in 1867 or 1868, before the appearance of Zecharias Frankel's "Introduction" or of the special dictionaries of the Talmud. The first part appeared in 1871 and was well received, although the critics did not spare Schwab. The latter then sought the cooperation of the leading Talmudists; but he was unsuccessful and had to complete the work alone.

S. F. T. H.

SCHWABACH, JULIUS LEOPOLD: British consul-general in Berlin; born in Breslau 1831; died there Feb. 23, 1898. At the age of sixteen he entered the banking-house of Bleichröder, and twenty years later became a partner; from 1893, when Baron Gerson von Bleichröder died, he was the senior partner of the house. He was also president of the directors of the Berlin Bourse, and subsequently presided over a standing committee of that institution.

J. G. L.

SCHWALBE, GUSTAV: German anatomist and anthropologist; born at Quedlinburg Aug. 1, 1844. Educated at the universities of Berlin, Zurich, and Bonn (M.D. 1866), he became in 1870 privat-docent at the University of Halle, in 1871 privat-docent and prosector at the University of Freiburg in Baden, in 1872 assistant professor at the University of Leipsic, and then professor of anatomy successively at the universities of Jena (1873), Königsberg (1881), and Strasburg (1883).

Schwalbe is editor of the "Jahresberichte für Anatomie und Entwicklungsgeschichte" and of the "Zeitschrift für Morphologie und Anthropologie." He edited also the second edition of Hoffmann's "Lehrbuch der Anatomie des Menschen" (Erlangen, 1877-81), and is the author of: "Lehrbuch der Neurologie," *ib.* 1881; "Ueber die Kaliberverhältnisse der Nervenfasern," Leipsic, 1882; "Lehrbuch der Anatomie der Sinnesorgane," Erlangen, 1886; "Studien über Pithecantropus Erectus," Leipsic, 1899; "Der Neander Schädel," *ib.* 1901; "Vorgeschichte der Menschen," *ib.* 1903.

S. F. T. H.

SCHWARZ, ADOLF: Austrian theologian; born July, 1846, at Adász-Tevel, near Papa, Hungary. He received his early instruction in the Talmud from his father, who was a rabbi. He then went to the gymnasium in Papa, and subsequently entered the University of Vienna, where he studied philosophy, at the same time attending the lectures of A. Jellinek and I. H. Weiss at the bet ha-midrash of that city. In 1867 he entered the Jewish theological seminary at Breslau, and continued his philosophical studies at the university there. In 1870 and 1872 respectively he published two of his prize essays: "Ueber Jacobi's Oppositionelle Stellung zu Kant, Fichte und Schelling" and "Ueber das Jüdische Kalenderwesen."

Soon after leaving the Breslau seminary he received an invitation to become instructor at the

Landesrabbinerschule, then being established in Budapest; but, as the opening of that institution was delayed, he accepted a call to Carlsruhe, Baden, as "Stadt-und Konferenzrabbiner." He occupied this position for eighteen years, and was then (1893) called to Vienna to become rector of the new Jewish theological seminary there, which position he still (1905) holds.

Schwarz is a prolific writer on theological, homiletic, and philosophical subjects. He has published: "Sabbathpredigten zu den Wochenabschnitten der Fünf Bücher Moses," 5 parts, Carlsruhe, 1879–83; "Festpredigten für Alle Hauptfeiertage des Jahres," *ib.* 1884; "Predigten. Neue Folge," *ib.* 1892; "Die Tosifta der Ordnung Moëd" (part i., "Der Tractat Sabbath," *ib.* 1879; part ii., "Der Tractat Erubin," *ib.* 1882); "Tosifta Juxta Mischnarum Ordinum Recomposita et Commentario Instructa" (part i., "Seraim," Wilna, 1890 [Hebr.]; part ii., "Chulin," Frankfort, 1902); "Die Controversen der Schammaiten und Hilleliten. Ein Beitrag zur Entwickelungsgesch. der Hilelschule," in "Jahresbericht der Israelitisch-Theologischen Lehranstalt," Vienna, 1893; "Die Hermeneutische Analogie in der Talmudischen Literatur," *ib.* 1897; "Der Hermeneutische Syllogismus in der Talmudischen Literatur. Ein Beitrag zur Geschichte der Logik im Morgenlande," *ib.* 1901; "Die Frauen der Bibel. Drei Vorträge," *ib.* 1903; "Die Erzählungskunst der Bibel. Zwei Vorträge," *ib.* 1904; "Der Mischneh Torah," *ib.* 1905.

s. M. K.

SCHWARZ, ANTON: Austrian chemist; born at Polna, Bohemia, Feb. 2, 1839; died at New York city Sept. 24, 1895. He was educated at the University of Vienna, where he studied law for two years, and at the Polytechnicum, Prague, where he studied chemistry. Graduating in 1861, he went to Budapest, and was there employed at several breweries. In 1868 he emigrated to the United States and settled in New York city. The following year he was employed on "Der Amerikanische Bierbrauer" ("The American Brewer") and soon afterward became its editor. A few years later he bought the publication, remaining its editor until his death. He did much to improve the processes of brewing in the United States, and in 1880 founded in New York city the Brewers' Academy of the United States.

Schwarz's eldest son, **Max Schwarz** (b. in Budapest July 29, 1863; d. in New York city Feb. 7, 1901), succeeded him as editor of "The American Brewer" and principal of the Brewers' Academy. He studied at the universities of Erlangen and Breslau and at the Polytechnic High School at Dresden. In 1880 he followed his father to the United States and became associated with him in many of his undertakings.

Both as editor and as principal of the academy he was very successful. Many of the essays in "The American Brewer," especially those on chemistry, were written by him. He was a great advocate of the "pure beer" question in America.

BIBLIOGRAPHY: *The American Brewer*, New York, Nov., 1895, and March, 1901.

A. F. T. H.

SCHWARZ, GUSTAV: Hungarian lawyer; born at Budapest 1858; educated in his native city and at German universities. In 1884 he became privat-docent in Roman law at Budapest, being appointed assistant professor nine years later, and professor in the following year. In 1895 he was made a member of the editorial committee in charge of the drafting of the Hungarian civil law; and in 1902 he became a privy councilor.

Schwarz's works include: "A Végrendelkezési Szabadság a Római Jogban" (Budapest, 1881), on the unrestricted right of disposal in Roman law; "Uj Irányok a Magánjogban" (*ib.* 1884), new tendencies in civil law; "A Tulajdonfentartás" (*ib.* 1885), on the right of ownership; "Az Animus Domini" (*ib.* 1885); "Magánjogi Esetek" (*ib.* 1886), cases relating to civil law; "Magánjogi Fejtegetések" (*ib.* 1890), studies in civil law; "A Házassági Jogról" (*ib.* 1894), on marital law.

Schwarz was converted to Christianity in 1902.

BIBLIOGRAPHY: *Pallas Lex.*

SCHWARZ, ISRAEL: German rabbi; born at Hürben, Bavaria, March 15, 1830; died at Cologne Jan. 4, 1875; educated by his father, R. Joachim Schwarz of Hürben. At the age of eighteen he passed the state examination for Bavarian rabbis, and was then elected district rabbi of Bayreuth, where he remained until 1856, when he was called to the rabbinate of Cologne. Schwarz was an ardent supporter of the Alliance Israélite Universelle, and founded several local branches of that society.

Schwarz's works include: "Tiḳwat Enosh" (1868), containing his own translation of Job as well as the haggadic sayings to this book, and the commentaries of Isaiah di Trani, Moses and Joseph Ḳimḥi, and Zerahiah b. Israel of Barcelona; and a translation of a geography of Palestine, written in Hebrew by Joseph Schwarz.

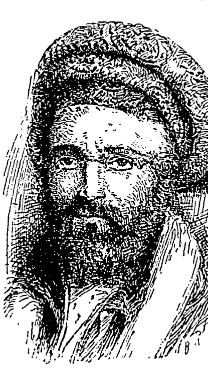
SCHWARZ, JOSEPH: Palestinian geographer; born at Flosz, Bavaria, Oct. 22, 1804; died at Jerusalem Feb. 5, 1865. When he was seventeen years old he graduated as teacher from the Königliches Schullehrerseminar of Colberg, after which he joined his brother Israel at the University of Würzburg, where for five years he devoted himself to the history and geography of the Holy Land, and published a map of Palestine (1829; republished at Vienna, 1831, and Triest, 1832). It was his ardent desire, however, to study in Palestine itself the physical history and geography of the Holy Land, where his knowledge of Talmudic sources and early Jewish writers would be of more service. Accordingly he decided to settle in Jerusalem, whither he went



Joseph Schwarz.

in 1833. Schwarz then began a series of journeys and explorations in various parts of Palestine, to which he devoted about fifteen years. The results of his investigations and researches into the history, geography, geology, fauna, and flora of that country have placed him in the front rank of Palestinian explorers and geographers. He is the greatest Jewish authority on Palestinian matters since Estori Farḥi (1282–1357), the author of "Kaftor wa-Feraḥ." One of the first of his undertakings was to record from personal observations, made on Mount Olivet in Jerusalem, the exact time of sunrise and sunset for every day in the year, for the purpose of determining for the pious Watiḳin, of whose sect he was a devout member, the proper time for the morning "Shema'."

In America.

Schwarz adopted the ritual, minhagim, and customs of the Sephardim. In 1849 he accepted the mission of meshullaḥ, visiting especially England and the United States, and staying for a time in New York. An incident of his visit to America was the translation of his "Tebu'ot ha-Areẓ" into English by Isaac Leeser; it was probably the most important Jewish work published in America up to that time. The expense of publication was met by A. Hart. Later Schwarz revisited his native country, where, in 1852, was published a German translation of his work, for which he was decorated by the Emperor of Austria. Schwarz then returned to Jerusalem, and continued his study of rabbinical literature and Cabala, joining the Beth-El cabalistic congregation in Jerusalem.

Another important event in his career was his attempt to discover the Ten Tribes, which he thought might be found in Africa (Abyssinia, Central and South Africa) and in Yemen, Tibet, and China. He ridiculed the idea of identifying them with the American Indians or the East-Indians. An interesting correspondence on this subject is added to Leeser's edition of the "Tebu'ot ha-Areẓ" (pp. 493–518).

Works.

Schwarz published the following works: "Luaḥ," a calendar for the year 5604 (Jerusalem, 1843); "Tebu'ot ha-Shemesh," in four parts, on the physical history of the Holy Land, the cycle of the sun, and the calculation of sunrise and sunset (*ib.* 1843); "Tebu'ot ha-Areẓ," geography, geology, and chronology of Palestine (*ib.* 1845); "Peri Tebu'ah," Biblical and Talmudic notes on Palestine, the second part, entitled "Pardes," treating of the four methods of commentating (*ib.* 1861); "Teshubot," responsa and, under the title "Shoshannat ha-'Emeḳ," additions to and corrections of his former works (*ib.* 1862); "Luaḥ," tables of sunrise and sunset in the latitude of Jerusalem, published by his son-in-law Azriel Aaron Jaffe (*ib.* 1862). The English translation of the "Tebu'ot ha-Areẓ" made by Isaac Leeser bore the title "A Descriptive and Historical Sketch of Palestine," and was published with maps, engravings, and a portrait of the author (Philadelphia, 1850). A German translation was published by Israel Schwarz under the title "Das Heilige Land" (Frankfort-on-the-Main, 1852). Extracts from the "Tebu'ot" were published by Kalman Schulmann in his "Shulmit" (Wilna, 1855), and a complete edition of the work was printed by Joseph Kohen-Ẓedeḳ at Lemberg in 1865; Luncz's edition, Jerusalem, 1890, contains a complete biography of Schwarz, an index of the geographical names, and notes.

S. J. D. E.

SCHWARZ, PETER (PETRUS NIGER or **NIGRI):** German Dominican preacher and anti-Jewish writer of the fifteenth century. According to John Eck ("Verlegung eines Juden-Büchleins," signature H, i.b), Schwarz was a Jewish convert to Christianity; but for this assertion there are no proofs. Having obtained the degree of bachelor in theology, Schwarz turned his attention to the Hebrew language and literature. He studied at different universities, among them that of Salamanca, Spain, in which city he secretly associated with Jewish children and listened to the lectures of the rabbis in order to perfect himself in Hebrew. He then entered the Order of St. Dominic and set himself the task of spreading Christianity among the Jews. To this end he obtained an imperial edict compelling them to attend his sermons. In 1474 he preached in Hebrew, Latin, and German at Frankfort-on-the-Main, Ratisbon, and Worms, challenging the rabbis of each place to a disputation, which they, however, declined. Enraged by this failure, he composed two works vehemently attacking the Jews and the Talmud: one in Latin, which has no special title, being designated as "Tractatus Contra Perfidos Judæos" (Esslingen, 1475); the other in German, bearing the title "Stern Maschiach" (*ib.* 1477). Later he was invited to direct the Dominican College of Alt-Ofen, Hungary; and he wrote there the "Clypeus Thomistarum" (Venice, 1482).

In the first two of the above-mentioned works Schwarz brought to bear all his scholarship, and at the same time all his spite, against the Jews. He characterized the Talmud as an infamous and deceptive work which no Christian should tolerate and which ought to be burned when found in any country of Christendom. Reuchlin, naturally, declared Schwarz's works absurd ("Augenspiegel," p. 3). Both books are supplied with appendixes containing the Hebrew alphabet, rules for reading Hebrew, some grammatical rules, the Decalogue in Hebrew, etc., and they are among the earliest specimens of printing from Hebrew type in Germany.

J. M. Sel.

SCHWARZFELD: Rumanian family which became prominent in the nineteenth century.

Benjamin Schwarzfeld: Rumanian educator and writer; father of Elias, Moses, and Wilhelm Schwarzfeld; born April, 1822; died at Jassy Nov. 27, 1896. After completing his Hebrew education he turned his attention to modern secular studies. From 1845 he contributed to the "Kokebe Yiẓḥaḳ," edited by E. Stern. His wedding, in 1848, deserves to be mentioned because of the fact that he was the first Rumanian Jew to appear under the bridal canopy in a frock coat and high silk hat instead of in the customary caftan and fur cap. The event aroused so great an excitement among the Orthodox, especially among the Ḥasidim, that the police were compelled to interfere to prevent public disturbances. Schwarzfeld started his career as a banker, and was the first to introduce fire insurance into Moldavia.

In spite of the opposition of the conservative element among the Rumanian Jews he opened in 1852, at his own expense, the first modern Jewish school. On account of this he was excommunicated, but, owing to his relations with various foreign consuls, the ban remained without any practical effect. He remained at the head of the school, which was conducted until 1857. In 1858 he prevailed upon the minister, Cantacuzino, to close the old-fashioned Jewish schools (ḥadarim) and compel the communities to appoint rabbis with a modern education. In 1860 he accepted the honorary position of inspector-general of the Jewish schools of Moldavia. Schwarzfeld was a continuous contributor to the Hebrew papers published in Rumania, and acted as correspondent for a number of foreign Jewish periodicals.

Bibliography: E. Schwarzfeld, in *Anuarul pentru Israelitzi*, x. 108.

Elias Schwarzfeld: Rumanian historian and novelist; born March 7, 1855, at Jassy. He received his early education in the public schools of Jassy, and while still a student, between 1871 and 1873, contributed to the Jassy papers "Curierul de Jasi" and "Noul Curier Roman." In 1872 he was interested in the foundation of the "Vocea Aparatorului," which was started in behalf of the Jews. In May, 1874, Schwarzfeld founded in Jassy the "Revista Israelitica," in which he published his first Jewish novel, "Darascha." From 1874 to 1876 he studied medicine at the University of Bucharest, abandoning it later, however, to take up the study of law (LL.D. 1881). From 1877 to 1878 he edited the "Jüdischer Telegraf," a Yiddish daily; and after this had ceased publication he edited the Yiddish biweekly "Ha-Yoeẓ." In 1878 he published his first pamphlet, "Chestia Scoalelor Israelite si a Progresului Israelit in Romania," which was occasioned by a circular which the Alliance Israélite Universelle had issued calling for information regarding the state of education among the Rumanian Jews.

In 1881, on his return to Bucharest, he took charge of the paper "Fraternitatea." He was at this time one of the principal collaborators on the "Anuarul Pentru Israelitzi," founded by his brother Moses in 1877. In this he published, from 1884 to 1898, his numerous studies on the history of the Jews in Rumania. As vice-president of the "Fraternitatea" lodge, and later as secretary-general of the supreme council of the Jewish lodges of Rumania, Schwarzfeld prepared the ground for the B'nai B'rith. In 1885 he published, in behalf of coreligionists in the small towns and villages, the two pamphlets "Radu Porumbaru si Ispravile lui la Fabrica de Hartie din Bacau" (translated into German) and "Adeverul Asupra Revoltei de la Brusturoasa."

Schwarzfeld's activities having rendered him objectionable to the government, he was expelled Oct. 17, 1885, only forty-eight hours being given him to arrange his personal affairs. He went immediately to Paris. In 1886 he was appointed by Baron Maurice de Hirsch secretary of his private bureau of charity. When the Jewish Colonization Association was founded Schwarzfeld became its secretary-general; up to the death of Baroness Hirsch he acted as her secretary in the distribution of her charities. Schwarzfeld continued at Paris his literary activity in behalf of his Rumanian brethren, and he was the co-editor of the "Egalitatea," founded in 1890 in Bucharest by his brother. To the "American Jewish Year Book" for 5662 (1901–2) he contributed two essays: "The Jews of Rumania from the Earliest Time to the Present Day" and "The Situation of the Jews in Rumania Since the Berlin Treaty (1878)"; an essay on "The Jews of Moldavia at the Beginning of the Eighteenth Century" appeared in the "Jewish Quarterly Review," vol. xvi., and another entitled "Deux Episodes de l'Histoire des Juifs Roumains" in the "Revue des Etudes Juives," vol. xiii.

Schwarzfeld is the only Rumanian writer of note who has cultivated the specifically Jewish novel. To this class of literature belong his "Rabinul Facator de Minuni, Conte Populaire" (1883); "Bercu Batlen" (1890); "Gangavul," "Betzivul," "Prigonit de Soarta" (1895); "O Fata Batrana," "Unchiul Berisch," "Un Vagabond," "Schimschele Ghibor," "Judecata Poporana" (1896); and "Polcovniceasa" (1897). Most of these novels have been translated into Hebrew and published by Mebaschan. His "Les Juifs en Roumaine Depuis le Traité de Berlin" appeared under the pseudonym "Edmond Sincerus" (London, 1901).

Schwarzfeld also translated into Rumanian several novels of Leopold Kompert, Ludwig Philippson, M. Lehman, Leopold von Sacher-Masoch, S. Kohn, and others; Isidore Loeb's article "Juifs"; Arsène Darmesteter's pamphlet on the Talmud; and the two lectures by Ernest Renan on Judaism.

Bibliography: *Anuarul pentru Israelitzi*, ix. 156–158; *Almanachul Israelit Ilustrat, 5664*, p. 250; *Calendarul Ziarului, 1886*, *Vocea Dreptatzei*, pp. 24–26.

Moses Schwarzfeld: Rumanian writer; third son of Benjamin Schwarzfeld; born at Jassy Dec. 8, 1857. After studying medicine for a short time at Bucharest he turned his attention exclusively to literature, his first article appearing in 1877, in the "Revista Israelita," published by his brother Elias. In the same year he founded the "Calendarul Pentru Israelitzi," a Jewish literary year-book, the title of which was changed in the following year to "Anuarul Pentru Israelitzi." This publication, the last volume of which appeared in 1898, became the organ of the most eminent Jewish writers in Rumania; it contains a vast number of original essays on the history, folk-lore, and literature of the Rumanian Jews. In 1881 Schwarzfeld became the principal contributor, under the pseudonym "Ploesteanu," to the periodical "Fraternitatea," published by his brother Elias.

A special merit of Schwarzfeld's is the revival of one of the most original and popular figures of Rumanian Judaism, namely, Moses Cilibi, whose biography and literary remains he published under the title "Practica si Apropourile lui Cilibi Moise Vestitul din Tzara Romaneasca" (Crajova, 1883; 2d ed., Bucharest, 1901). After the expulsion of his brother

Elias, and on account of the suspension by the government of the periodical "Fraternitatea," Schwarzfeld withdrew from political journalism and founded the Julius Barasch Historical Society, whose main purpose was to collect historical material concerning the Jews of Rumania.

Of the studies which were published by Schwarzfeld in the annals of the society the following deserve special mention: "Ochire Asupra Istoriei Evreilor in Romania dela Inceput Pana la Mijlocul Acestei Veac" (Bucharest, 1887); "Excursiuni Critice Asupra Istoriei Evreilor in Romania" (*ib.* 1888); "Monente din Istoria Evreilor in Romania" (*ib.* 1889). His "Poesile Populare, Colectia Alexandri" (Jassy, 1889) and "Vasile Alecsandri sau Mesterul Dregestrica si Aparatorii Sai" (Crajova, 1889) are contributions to general Rumanian literature. In 1890 Schwarzfeld founded the "Egalitatea," in Bucharest. He is an advocate of political Zionism and has been a delegate to several Zionist congresses.

Wilhelm Schwarzfeld: Rumanian author; second son of Benjamin Schwarzfeld; born at Jassy May 22, 1856; died at Bucharest Feb. 22, 1894. After receiving an education at Jassy he went to Bucharest to study for a short time at the Faculté des Lettres. He contributed frequently to the "Fraternitatea," "Propasirea," "Egalitatea," and "Anuarul Pentru Israelitzi," and took an active part in the foundation and development of the Julius Barasch Historical Society, for which he compiled a collection of inscriptions from the more important Jewish cemeteries of Rumania. He published a number of important historical and literary essays in the "Anuarul Pentru Israelitzi" (vols. xii., xiii., xv., xvii., and xviii.). His "Amintiri din Viatza Scolara" (1894) constitute a valuable contribution to the contemporaneous history of the Jews of Rumania.

S.

SCHWEIDNITZ. See SILESIA.

SCHWEINFURT (Hebrew, שוינוורט): Town in Lower Franconia. The first mention of its Jews dates from the year 1243, when Henry of Bamberg ordered 50 marks in silver to be paid them. In 1263 the murder of a seven-year-old Christian girl was attributed to the Jews, and it was only by the mayor's active interference that a persecution of them by the rabble was prevented. It developed later that the child had been murdered in one of the factional quarrels of the town. In common with those of other Franconian towns, the Jews of Schweinfurt suffered much from the persecutions in 1298 and 1349. They were severely affected in 1390 also, when Wenceslaus IV. annulled all debts owing to them, and in 1544, when the schools were closed and the Jewish advocate Jud Hesel in vain endeavored to bring about their reopening.

Schweinfurt is now (1905) the seat of the "Landesrabbiner" (present chief rabbi, Dr. S. Stein), its Jews numbering 415 in a total population of about 12,500; and it has four benevolent societies. The total number of Jews in the district is 1,500, of which the town of **Gerolzhofen** has 148, that of **Wiederwerrn** 140, and that of **Theilheim** 116.

SCHWERIN. See MECKLENBURG.

SCHWERIN, GÖTZ: Hungarian rabbi and Talmudist; born in 1760 at Schwerin-on-the-Warthe (Posen); died Jan. 15, 1845; educated at the yeshibot of Presburg and Prague. In 1796 he settled in Hungary, at first living the life of a private scholar in Baja; but in 1812 he was appointed rabbi of Szabadka and in 1815 of Baja. His house became the intellectual center of the district. In 1827 he was elected chief rabbi of Hungary by the heads of all the communities, with the right to officiate as the highest judge, to summon the contending parties, and even to compel their appearance. He attended the meetings of the "asifah," or county communal gatherings, to supervise the apportioning of the toleration tax, to settle disputes, to record the minutes on important occasions, and to formulate decisions. No rabbi or ritual official could be appointed in the county without his consent, his decision in this regard being final. Religious questions and marital difficulties and lawsuits, matters relating to elections and taxation, and differences between congregations and rabbis were brought before him, involving thousands of decisions during his term of office.

Schwerin used his power with inflexible justice, even appealing to the authorities when necessary. He was not entirely untouched by the spirit of Reform. He gave to the sermon, for instance, its due place in the service; nor was he therein satisfied with the far-fetched interpretations of Biblical and Talmudic passages current at that time, but sought to edify and elevate his hearers. In 1844 he was an important member of the rabbinical conference of Paks (Hungary). A detailed account of Schwerin's life was written in Hungarian by his grandson Samuel Kohn, rabbi in Budapest ("Magyar Zsidó Szemle" [1898-99], xv., xvi.).

D. E. N.

SCHWOB (MAYER ANDRÉ), MARCEL: French journalist; born at Chaville (Seine-et-Oise) Aug. 23, 1867; died at Paris Feb. 27, 1905. He received his early instruction at Nantes, where his father was editor of the "Phare de la Loire." Settling in Paris, he became connected with the "Echo de Paris," in which paper appeared his first stories, and with the "Evénement Journal," the "Revue des Deux Mondes," etc. Through the influence of his uncle Leon Cahun, curator of the Mazarin Library, he received a thorough education (A.B. 1888) and was appointed professor at the Ecole des Hautes Etudes.

Schwob, who was one of the most brilliant of modern French writers, was the author of: "Etude sur l'Argot Français," 1889, with M. Guiyesse; "Jargon des Coquillards en 1455," 1890, a work on the adventures and life of the French poet Villon; "Cœur Double," 1891; "Le Roi au Masque d'Or," 1892; "Le Livre de Monelle" and "Mimes," 1894; "La Croisade des Enfants," 1895; "Spécilège" and "Vies Imaginaires," 1896; "La Lampe de Psyché," 1903; etc. He also translated Shakespeare's "Hamlet" with Eugène Moran, Sarah Bernhardt appearing in the title rôle of the production of his version, and "Broad Arrows" by Stevenson, with whom he became quite intimate.

S. F. T. H.

SCOPUS: An elevation seven stadia north of Jerusalem, where, according to tradition, the high priest and the inhabitants of the city welcomed Alexander the Great (Josephus, "Ant." xi. 8, § 5). Josephus states that the place was called Σαφείν (Aramaic, צפין; Hebrew, צופין), which name was translated into Greek as Σκοπός = "prospect," since from this height one might see Jerusalem and the Temple. It is evident from this statement that Σκοπός was not originally a proper name, and that it became one only by degrees. The account of Josephus was based on Eupolemus; and Schlatter ("Zur Topographie und Geschichte Palästina's," 1893, p. 56) therefore infers that the Hellenistic Eupolemus understood Hebrew or at least Aramaic. According to the Talmud, however, the meeting with Alexander took place at ANTIPATRIS; and since this city was formerly called Kefar Saba, Grätz ("Gesch." 2d ed., ii. 221), like Reland, inferred that there was a confusion between the names Σαφά and Σαβά. Of the two accounts that of Josephus is the more plausible. See ALEXANDER THE GREAT.

Scopus is next mentioned in the account of the war against Rome as being the site of a camp of Cestius Gallus (Josephus, "B. J." ii. 19, § 4), and later of Titus, who slowly approached the city from that point, leveling the ground thence to Herod's monument (*ib.* v. 3, § 2).

Scopus frequently appears in the Talmud under the name "Ẓofim." In certain halakic respects it is regarded as a boundary of Jerusalem (Pes. iii. 8; Tosef., Pes. ii. 13); and it is also said to be a place from which Jerusalem is visible (M. Ḳ. 26a; Yer. M. Ḳ. 83b; Sem. ix.). It is, however, evidently a mere play on words when a sort of honey is named after the place (Soṭah 48b).

In 1889 a canal, four meters in depth and roughly hewn in the rock, was discovered at the foot of the hill of Scopus; and this aqueduct is regarded by Gordon as the water-conduit of the Temple ("Mittheilungen und Nachrichten des Deutschen Palästina-Vereins," 1900, p. 48). A Jewish ossuary inscribed with Hebrew and Greek letters, recently discovered on the Mount of Olives, is supposed to have come from Scopus (Clermont-Ganneau, in "Revue Biblique," 1900, p. 307).

Opposite Scopus is an elevation, now called Al-Ḳahḳir, on which enormous stones have been found, and which has been identified as the site of the camp of Titus (Luncz, "Jerusalem," vi. 81). Scopus is located by Buhl, however, in the southern portion of the elevation, which is bounded on the north by the Wadi al-Jauz.

G. S. KR.

SCORPION (Hebrew, "'aḳrab"): An arachnid resembling a miniature flat lobster, and having a poisonous sting in its tail. It is common in the Sinaitic Peninsula and the desert of El-Tih. In Palestine, where it is represented by eight species, it swarms in every part of the country, and is found in houses, in chinks of walls, among ruins, and under stones. In Ezek. ii. 6 "scorpion" is employed as a metaphor of bitter, stinging words; and in I Kings xii. 11, 14 it is applied to a scourge which was probably provided with metal points. A place-name derived from the scorpion may perhaps be seen in Maaleh Akrabbim ("ascent of the scorpions"), occurring in Num. xxxiv. 4, Josh. xv. 3, and Judges i. 36.

In the Talmud the scorpion is said to live in empty cisterns, in dung-heaps, in holes, among stones, and in crevices of walls (Ḥag. 3a and parallels). It attacks without provocation or warning; and its bite is even more dangerous than that of the snake, because it repeats it (Yer. Ber. 9a). The scorpions of Adiabene (Ḥadyab) were considered especially dangerous (Shab. 121b). The urine of a forty-day-old infant and the gall of the stork were used as curatives (*ib.* 109b; Ket. 50a). The scorpion itself was employed as a medicament in curing cataract (Giṭ. 60a). Among the permanent miracles of Jerusalem was numbered the fact that no one was ever bitten there by a scorpion or a serpent (Ab. v. 5). The anger of the wise is likened to the sting of the scorpion (*ib.* ii. 10). Metaphorically, "'aḳrab" is used of the iron bit of the horse (Kelim xi. 5, xii. 3).

J. I. M. C.

SCOTLAND: Country forming the northern part of Great Britain. Jews have been settled there only since the early part of the nineteenth century. In 1816 there were twenty families in EDINBURGH, which was the first Scottish city to attract Jewish settlers. The establishment of a Jewish community in GLASGOW came later, in 1830. These are the two principal communities, and contain nearly the whole of the Jewish population of Scotland, which may be set down as something over 8,000.

There are three other congregations—one at **Dundee**, another at **Aberdeen**, and a third at **Greenock.** Dundee, which has a Jewish population of 110, has a Hebrew Benevolent Loan Society connected with its synagogue in Murraygate. The Aberdeen congregation, though very small, came into prominence some years ago in connection with an action at law which was brought against it by the local branch of the Society for the Prevention of Cruelty to Animals, the Jewish method of slaughtering having been called in question and denounced as inhumane. The congregation at Greenock is numerically insignificant.

J. I. H.

SCOTT, CHARLES ALEXANDER (KARL BLUMENTHAL): English author; born in London 1803; died at Venice Nov., 1866. At an early age he went to Italy, where he remained for a considerable time. He was master of several languages, and traveled extensively. In 1848 he joined in the Italian revolution against Austria and fought bravely before the fall of Venice. Later he enlisted as a soldier of fortune with Garibaldi.

When the latter organized his expedition in 1860 Scott sought the permission of that general to set out for Rome with some companions disguised as monks, with the object of carrying off young Mortara. This attempt at abduction was, however, abandoned.

In 1860 Scott had a quarrel with Lord Seymour, who publicly horsewhipped him. Scott brought an action and was awarded £500 damages; but he never recovered from the chastisement he received, which accelerated his death. He left considerable sums to Jewish charities and institutions.

SCOURGING. See Stripes.

SCRANTON: Third largest city in the state of Pennsylvania and capital of Lackawanna county. Jews settled there when the place was still called **Harrison** or **Slocum's Hollow,** the present name having been given to the city about 1850. The first Jew to hold public office was Joseph Rosenthal, who was Scranton's first, and for a long time its only, policeman. This was in 1860, when the population numbered but 8,500. The first Jewish congregation was organized in 1858, and was reconstituted in 1860 under the name "Anshe Ḥesed." In 1866 the synagogue on Linden street was built, it being the first building reared exclusively as a Jewish place of worship in Lackawanna county. This edifice, after having been twice rebuilt, was sold to the first Polish congregation in 1902, when the present temple, situated on Madison avenue near Vine street, was dedicated. E. K. Fisher was the first rabbi; and his successors were Rabbis Cohn, Weil, Sohn, Eppstein, Freudenthal, Löwenberg, Feuerlicht, and Chapman; A. S. Anspacher is the present (1905) incumbent. There are now about 5,000 Jews in Scranton in a total population of 105,000. They support, in all, five congregations, and two Hebrew schools holding daily sessions. One of the latter, the Montefiore Hebrew School, has a well-equipped corps of teachers and an enrolment of about 200 male pupils. The other school, larger in point of attendance, possesses its own house, situated on the south side of the city, and is supported entirely by the large Hungarian community.

The more important charitable organizations are: the Hebrew Ladies' Relief Society, the Ladies' Aid Society, the Deborah Verein, the South Side Relief Society, the Kitchen Garden School, and the Industrial Aid Society, a branch of the New York Removal Office.

Although the Jews are chiefly merchants and there are but few manufacturers among them, they are well represented in the legal and medical professions. For fourteen years a Jew active in communal work was president of the board of education; and he was subsequently appointed director of public safety, the second highest office of the municipality.

A. A. S. A.

SCRIBES (Hebrew, סופרים; Greek, Γραμματεῖς): **1.** Body of teachers whose office was to interpret the Law to the people, their organization beginning with Ezra, who was their chief, and terminating with Simeon the Just. The original meaning of the Hebrew word "soferim" was "people who know how to write"; and therefore the royal officials who were occupied in recording in the archives the proceedings of each day were called scribes (comp. II Sam. viii. 17; II Kings xix. 2, *passim*); but as the art of writing was known only to the intelligent, the term "scribe" became synonymous with "wise man" (I Chron. xxvii. 32). Later, in the time of Ezra, the designation was applied to the body of teachers who, as stated above, interpreted the Law to the people. Ezra himself is styled "a ready scribe in the law of Moses" (Ezra vii. 6). Indeed, he might be correctly so called for two reasons, inasmuch as he could write or copy the Law and at the same time was an able interpreter of it. The Rabbis, however, deriving סופר from ספר (= "to count"), interpret the term "soferim" to mean those who count the letters of the Torah or those who classify its contents and recount the number of laws or objects belonging in each group; *e.g.*, five classes of people that are exempt from the heave-offering, four chief causes of damages, thirty-nine chief works which are forbidden on the Sabbath, etc. (Yer. Sheḳ. v. 1; Ḥag. 15b; Ḳid. 30a; Sanh. 106b). While this may be only a haggadic interpretation of the term "soferim," it is evident that these scribes were the first teachers of the Torah and the founders of the oral law.

Origin and Meaning.

The activity of the scribes began with the cessation of that of the Prophets. In fact, after the Israelites who came back from Babylon had turned their hearts to God, there was greater need of men to instruct the people and to assist them in obtaining a clear understanding of the Law. This body of teachers is identified by Zacharias Frankel ("Darke ha-Mishnah," p. 8) and Nachman Krochmal ("Moreh Nebuke ha-Zeman," ch. xi.) with the "men of the Great Synagogue" (comp. the expression συναγωγὴ γραμματέων in I Macc. vii. 12), of which Simeon the Just was the last member (comp. Ab. i. 2). If this identification is correct, the organization of the scribes lasted from the time of Ezra till the conquest of Palestine by Alexander the Great, a period of about 200 years. It must be said, however, that the term "soferim" was sometimes used, particularly in the post-Maccabean time, to designate teachers generally. Thus Moses and Aaron are styled the "soferim of Israel" (Targ. of pseudo-Jonathan to Num. xxi. 19; Targ. to Cant. i. 2). Besides, in certain passages it is quite evident that "soferim" refers to Talmudists of a later period, as, for instance, in Yer. Ber. i. 7 and R. H. 19a, where the expression "dibre soferim" (= "the words of the scribes") seems to refer to the school of Hillel. But as a general rule the term refers to the body of teachers the first of whom was Ezra and the last Simeon the Just. It seems that after Simeon the teachers were more generally styled "elders" ("zeḳenim"), and later "the wise ones" ("ḥakamim"; Shab. 64b; Suk. 46a), while "soferim" was sometimes used as an honorific appellation (Soṭah 15a). In still later times "soferim" became synonymous with "teachers of little children" (*ib.* 49a).

Range of Activity.

Although, as will be shown later, the activity of the scribes was manifold, yet their main object was to teach the Torah to the Jewish masses, and to the Jewish youth in particular. It was they who established schools, and they were particularly enjoined to increase the number of their pupils (Ab. i. 1). Their mode of teaching is indicated in Neh. viii. 8: "So they read in the book in the law of God distinctly, and gave the sense, and caused them to understand the reading." This passage is explained by the Rabbis as meaning that they first read the Hebrew text and then translated it into the vernacular, elucidating it still further by dividing it into passages ("pesuḳim"; Meg. 3a; Ned. 37b). Moreover, the scribes always connected with the text the laws which they deduced from the Biblical passages; that is, they read the passage, explained it, and then deduced the law contained in it; they did not in general formulate abstract halakot apart from the Biblical text. The halakot were the work of (1) the "Zugot" (duumvirates), who immediately followed the scribes, and (2) the Tannaim, who treated the law independently of the Biblical text. There are, however, some mishnayot which, from their style, seem to have emanated directly from the scribes (comp. Neg. ii. 5-7). The latter seem not to have departed from the literal interpretation of the text, although they adapted the laws to the requirements of the times, sometimes instituting by-laws ("seyagim"), this, according to Abot (*l.c.*), being one of the three main duties of their office (comp. R. H. 34a; Yeb. ii. 4; Sanh. xii. 3).

Used Square Hebrew Characters.

From the time of Ezra, however, the scribes occupied themselves also with plans for raising Judaism to a higher intellectual plane. They were, consequently, active in reviving the use of Hebrew, which had been to a great extent forgotten during the exile in Babylon, and in giving it a more graceful and suitable script. As to the latter, it is stated that the Torah had first been written in Hebrew characters; then, in the time of Ezra, in characters called "ketab ashshuri" (probably ≐ "ketab suri" = Syrian or Aramean script; comp. Kohut, "Aruch Completum," *s.v.* אשור), the present square type, the former script being left to the "Hedyoṭot," that is, the Cutheans or Samaritans (Sanh. 21b-22a). It is evident that the scribes, in making this change, wished to give the Torah a particularly sacred character in distinction to the Samaritan Pentateuch. The term "ketab ashshuri" is explained by one authority as meaning "the even writing" (Yer. Meg. i. 71b), as contrasted with the forms of the ancient Hebrew or Samaritan characters.

The scribes are still better known for their work in connection with the liturgy and in the field of Bible emendation; for, besides the many benedictions and prayers which are ascribed to them, they revised the Hebrew text of the Scriptures, their revisions being called "tiḳḳune soferim." The number of these scribal emendations is given as eighteen (in Mek., Beshallaḥ Shirah, 6, and in Tan., Yelammedenu Beshallaḥ, ed. Vienna, 1863, p. 82b), of which the following may be cited: "but Abraham stood yet before the Lord" (Gen. xviii. 22), substituted for the original text, "but the Lord stood yet before Abraham" (see Gen. R. xlix. 12); "and let me not see my wretchedness" (Num. xi. 15), an emendation of the original text, "and let me not see thy wretchedness"; "to your tents . . . unto their tents" (I Kings xii. 16), instead of "to your gods . . . unto their gods." Other traces of the scribes' revision of the text are dots above certain words the meaning of which seemed doubtful to them, the original marks being ascribed to Ezra (Ab. R. N., ed. Schechter, pp. 97-98; Num. R. iii. 13). For the "tiḳḳune soferim" see Masorah, and for the institutions ("taḳḳanot") established by the scribes, Synagogue, Great; Taḳḳanah.

2. The professional scribes, known also as "liblarin" ("liblar" = "libellarius"). There were two kinds of professional scribes: (*a*) one who was engaged in the transcription of the Pentateuch scroll, phylacteries, and mezuzot, and who was called "sofer STaM" (= סת"ם, the initials of "Sefer Torah," "Tefillin," and "Mezuzah"); (*b*) one who acted as notary public and court secretary.

(*a*) The productions of the sofer being the principal religious paraphernalia, he was a necessity in a Jewish community. A learned man was prohibited from residing in a town in which there was no scribe (Sanh. 17b). The sofer was so indispensable that, according to R. Joshua b. Levi, the men of the Great Assembly observed twenty-four fast-days on which they prayed that the soferim might not become rich and therefore unwilling to write. A baraita confirms the statement that writers of the Torah scrolls, tefillin, and mezuzot, and those that deal or trade in them are not blessed with riches (Pes. 50b; Tosef., Bik. ii., end). Even to this day the vocation of the sofer is the worst paid of all Jewish professions.

Artistic Work.

The Talmud, quoting the passage "This is my God, and I will beautify Him" (Ex. xv. 2, Hebr.), says: "Serve Him in a beautiful manner . . . prepare a beautiful Sefer Torah, written in good ink with a fine pen by an expert sofer" (Shab. 133b). The ink must be indelible, and the parchment specially prepared; the lines, traced and squared so that the writing may be straight and uniform. The Talmud declares that the rule regarding lines must be observed in the case of the mezuzah, which is written on one roll, but does not apply in the case of the tefillin-rolls. Both, however, may be copied from memory, the wording being familiar to the sofer (Meg. 18b). The tracing is done with a ruler and a style (comp. Giṭ. 6b; Tosef., Giṭ. *s.v.* אמר).

There were artists among the soferim. The Alexandrian scribes especially were noted for their skill in illumination. They used to gild the names of God found in the Pentateuch; but the rabbis of Jerusalem prohibited reading from such scrolls and ordered them to be placed in the genizah (Masseket Soferim i.; Shab. 103b).

The utmost care and attention were bestowed upon spelling, crowning certain letters (Taggin), dotting others, copying abnormalities, and upon the regulations as to spacing for parashiyyot and sections. Some soferim were careful to begin the columns of the Sefer Torah with a word commencing with a "waw," allowing an equal number of lines to every column. Such columns were known as "wawe ha-'ammudim" or "waw-columns." The preparation of phylacteries and mezuzot required a similar exercise of watchfulness. R. Ishmael said to a sofer: "My son, be careful in thy work, as it is a heavenly work, lest thou err in omitting or adding one iota, and so cause the destruction of the whole world" ('Er. 13a). The sofer was required to copy the text from a model form made by an expert, and was not permitted to rely on his memory. "Let thine eyes look right on, and let thine eyelids look straight before thee" (Prov. iv. 25) is the advice given to a sofer. R. Ḥisda, finding R. Hananeel writing a Sefer Torah from memory, said to him: "Indeed thou art able to write the whole Torah by heart; but our sages have forbidden the writing of even one letter without an exemplar" (Meg. 18b).

"Tiḳḳun Soferim."

The model from which the sofer copied the Pentateuch was called "tiḳḳun soferim" (which must not be confounded with tiḳḳune soferim = "changes in the text"). An ancient fine copy of a tiḳḳun soferim, written on vellum, and vocalized and accented, with "waw-columns" of sixty lines each, was found in the old synagogue of Cracow ("Ha-Maggid," xii. 6, Feb. 5, 1868). Among the printed model forms are: "Tiḳḳun Soferim," by Solomon de Oliveyra, Amsterdam, 1666; "'Ezrat ha-Sofer," with wawe ha-'ammudim, edited by Judah Piza, *ib.* 1769; "'En ha-Sofer," with wawe ha-'ammudim, by W. Heidenheim, 10 parts, Rödelheim, 1818–1821. The modern "Tiḳḳun Soferim," without vowels or accents, was first published in Wilna, in 1874, with wawe ha-'ammudim in two half-columns of forty-two lines. This edition has been reprinted several times and is now the standard copy.

Moses Ḥagiz, in his "Mishnat Ḥakamim" (§§ 227–228, Wandsbeck, 1733), urges scrupulous carefulness as to the qualification of the sofer, and refers to Moses Zacuto, who complained of the malpractises of the soferim in their work. He refers also to Zacuto's letter enumerating ten rules for the guidance of the sofer and addressed to the rabbis of Cracow, who had requested the information. A copy of this letter is among the manuscripts of the Bodleian Library, Oxford. It contains cabalistic rules by Moses Zacuto for the writing of a Pentateuch roll according to Luria; but it is addressed to Isaac, rabbi of Posen, and includes Isaac's answer copied in the year 5438 = 1678 (Neubauer, "Cat. Bodl. Hebr. MSS." cols. 1871, 2, and 1890).

Colophons.

The ordinary Bible for study was usually vocalized, accented, and sometimes illuminated (see Bible Manuscripts). In most cases the sofer would only write upon the order of a patron; and he would append his signature at the end of his work as a guaranty of its correctness, with the date, place of production, and sometimes the name of his patron also, as an identification in case of loss. These colophons are interesting from an antiquarian and historical point of view. Probably the earliest is that of Moses ben Asher's Bible, which was ordered by Jabez b. Solomon and given to the Karaite congregation in Jerusalem, and of which Jacob Saphir saw the Prophets in the possession of the Karaite congregation at Cairo ("Eben Sappir," i. 14b, Lyck, 1868). It was written in Tiberias and dated in the year 827 from the destruction of the Second Temple (= 896 C. E.); the colophonic matter appearing at the end of the Minor Prophets. Some colophons are written in letters of gold with an illuminated border, giving the date according to the era of the Creation, the Seleucidan era, and that of the destruction of the Temple; a blessing for the patron follows; and the closing words are: "May salvation [or "the redeemer"] speedily come." In rare instances the scribe acknowledges the receipt of his compensation in full; in others he apologizes for any error or shortcoming and pleads for God's forgiveness.

Expertness in writing was highly developed during the existence of the Second Temple. Ben Ḳamẓar was able to manipulate four pens between his five fingers and to write a four-lettered word at one stroke. He was blamed for not teaching his art to others (Yoma 38b). The vocation of the sofer was a regular profession; and many Talmudists were known by the appellation "Safra." The scribe was recognized in the street by the pen behind his ear (Shab. i. 3; 11a).

Notary and Secretary.

(*b*) The other kind of sofer was employed in the preparation of bills of divorce requiring special care. He acted also in the capacity of a public notary, and as a recording clerk in the court-house ("bet din"). There were two clerks: one recording the charge of the accuser; the other, the answer of the accused (Sanh. 17b). The sofer was, moreover, the public secretary. It is stated that the nasi Rabban Gamaliel in his official seat on the Temple site had before him Johanan the sofer, to whom he dictated three letters: (1) "To our brethren residing in upper and lower Galilee"; (2) "To our brethren in the South"; and (3) "To our brethren in exile in Babylon and Media and other exilic countries of Israel. Peace with you shall ever increase. We inform you," etc. (Sanh. 11b). In later times the scribe of the community (= "sofer ha-ḳahal") was the recording secretary of the Pinḳes, and acted as notary as far as legal documents were concerned. The community had the power to consider as valueless all contracts not written by the appointed sofer (Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 61, 1).

The sofer's fee was not fixed, nor might he make any charge except for loss of time. It was advisable therefore to make a bargain with him beforehand (*ib.* Eben ha-'Ezer, 154, 4). The question by whom the sofer shall be paid is settled for almost every possible case. The underlying principle is that the one who is in duty bound to give the document, or who receives the most benefit from the transaction, shall pay the scribe; otherwise the parties share the expense. Those responsible for the sofer's fee are enumerated thus: (1) The purchaser of property (Ḥoshen Mishpaṭ, 238, 1). (2) The borrower of money; but if the lender loses the note and desires a duplicate, he must pay for it. The lender pays for writing the receipt against a note; but when there is no note, and the borrower wishes to have a receipt, he must pay for it (*ib.* 39, 14; 54, 1). (3) The bridegroom, for the betrothal contract; but if the bride desires a duplicate, she must pay for it. The groom pays for the ketubah (Eben ha-'Ezer, 51, 1). (4) The husband, for a bill of divorce and the receipt for the dowry (*ib.* 110, 1; 120, 1). (5) Both parties, for writing arbitration papers (Ḥoshen Mishpaṭ, 13, 6). The plaintiff and defendant share alike the cost of writing their pleas and briefs for submission to a higher court (*ib.* 13, 3; 14, 2). The person who is in contempt of court must pay the expense incurred in issuing the summons (*ib.* 11, 4).

SCROLL OF ANTIOCHUS. See ANTIOCHUS, SCROLL OF.

SCROLL OF THE LAW (Hebrew, "Sefer Torah"): The Pentateuch, written on a scroll of parchment. The Rabbis count among the mandatory precepts incumbent upon every Israelite the obligation to write a copy of the Pentateuch for his personal use. The passage "Now therefore write ye this song for you, and teach it the children of Israel" (Deut. xxxi. 19) is interpreted as referring to the whole Pentateuch, wherein "this song" is included (Sanh. 21b). The king was required to possess a second copy, to be kept near his throne and carried into battle (Deut. xvii. 18; Maimonides, "Yad," Sefer Torah, vii. 1, 2). One who is unable to write the scroll himself should hire a scribe to write it for him; or if he purchases a scroll he should have it examined by a competent SOFER. If a Jew inherits a scroll it is his duty to write or have written another. This scroll he must not sell, even in dire distress, except for the purpose of paying his teacher's fee or of defraying his own marriage expenses (Meg. 27a).

Every One to Possess a Sefer Torah.

The Pentateuch for reading in public (see LAW, READING FROM THE) must be written on the skin (parchment) of a clean animal, beast or fowl (comp. Lev. xi. 2 *et seq.*), though not necessarily slaughtered according to the Jewish ritual; but the skin of a fish, even if clean, can not be used (Shab. 108a). The parchment must be prepared specially for use as a scroll, with gallnut and lime and other chemicals that help to render it durable (Meg. 19a). In olden times the rough hide was scraped on both sides, and thus a sort of parchment made which was known as "gewil." Later the hide was split, the outer part, of superior quality, called "ḳelaf," being mostly used for making scrolls of the Law, while the inner and inferior part, called "doksosṭos" (= δύσχιστος), was not employed for this purpose. The writing was inscribed on the outer or hair side of the gewil, and on the inner or flesh side of the ḳelaf (Shab. 79b). Every page was squared, and the lines were ruled with a stylus. Only the best black ink might be used (see INK), colored ink or

Method of Preparation.

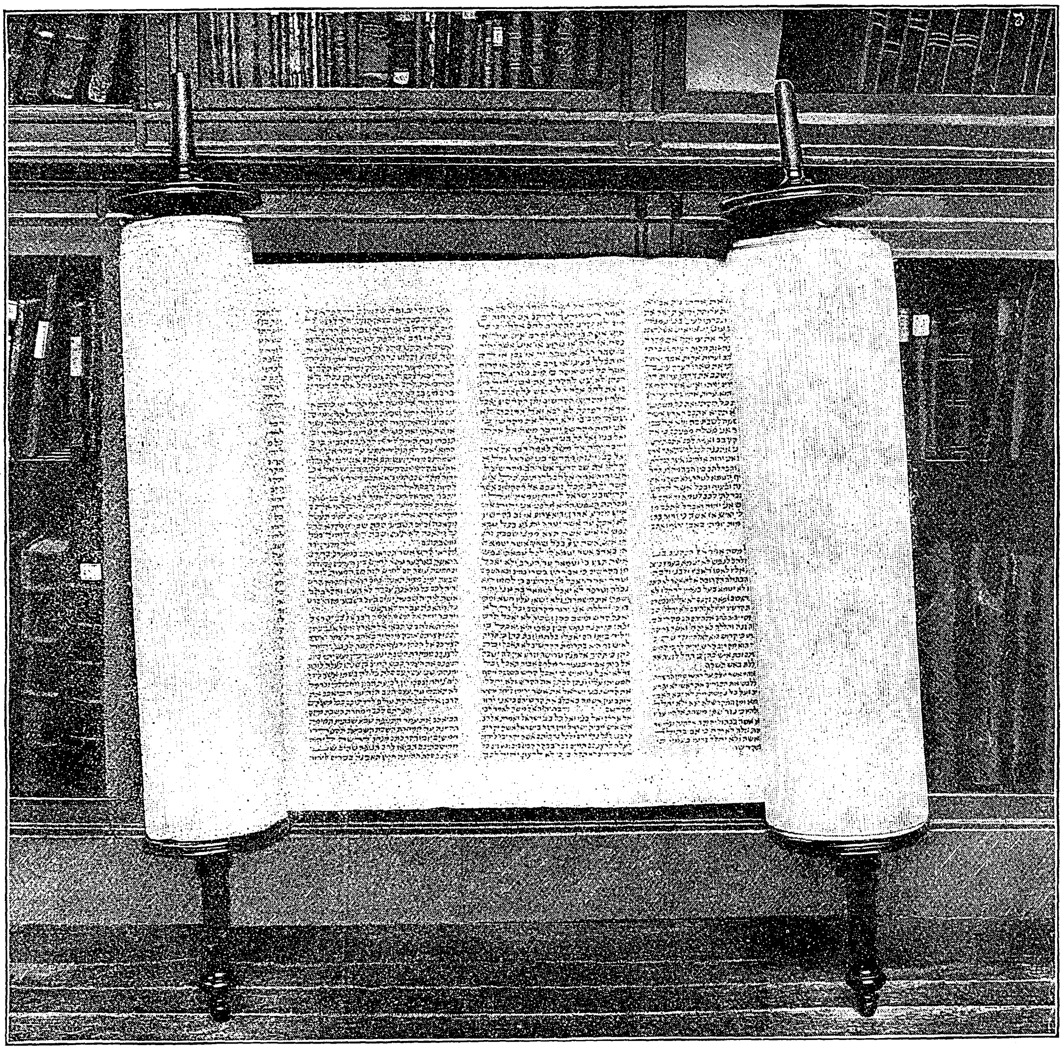
(From Bodenschatz, "Kirchliche Verfassung," 1748.)

gilding not being permitted (Massek. Soferim i. 1). The writing was executed by means of a stick or quill; and the text was in square Hebrew characters (*ib.*).

Size of the Scroll and Margin.

The width of the scroll was about six handbreadths (= 24 inches), the length equaling the circumference (B. B. 14a). The Baraita says half of the length shall equal the width of the scroll when rolled up (Soferim ii. 9). The length of the scroll in the Ark was six handbreadths, equal to the height of the tablets (B. B. *l.c.*). Maimonides gives the size of the regular scroll as 17 fingers (= inches) long (see below), seventeen being considered a "good" number (טוב = 17). Every line should be long enough to contain thirty letters or three words equal in space to that occupied by the letters למשפחותיכם. The lines are to be neither too short, as in an epistle, nor too long, involving the shifting of the body when reading from beginning to end. The sheet (“yeri‘ah”) must contain no less than three and no more than eight columns. A sheet of nine pages may be cut in two parts, of four and five columns respectively. The last column of the scroll may be narrower and must end in the middle of the bottom line with the words לעיני כל ישראל (Men. 30a).

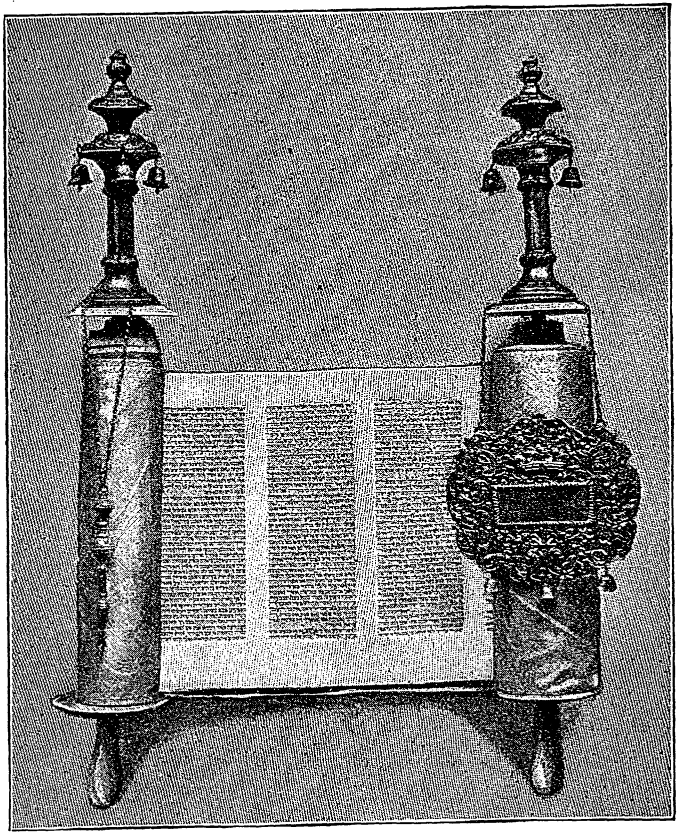


Scroll of the Law from China.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

The margin at the bottom of each page must be 4 fingerbreadths; at the top, 3 fingerbreadths; between the columns, 2 fingers' space; an allowance being made of 1 fingerbreadth for sewing the sheets together. Maimonides gives the length of the page as 17 fingers, allowing 4 fingerbreadths for the bottom and 3 fingerbreadths for the top margin, and 10 fingerbreadths for the length of the written column. In the scroll that Maimonides had written for himself each page measured 4 fingers in width and contained 51 lines. The total number of columns was

266, and the length of the whole scroll was 1,366 fingers (= 37.34 yds.). Maimonides calculates a finger-measure as equal to the width of 7 grains or the length of 2 ("Yad," *l.c.* ix. 5, 9, 10), which is about 1 inch. The number of lines on a page might not be less than 48 nor more than 60 (*ib.* vii. 10). The Baraita, however, gives the numbers 42, 60, 72, and 98, based respectively on the 42 travels (Num. xxxiii. 3-48), 60 score thousand Israelites (Num. xi. 21), 72 elders (*ib.* verse 25), and 98 admonitions in Deuteronomy (xxviii. 16-68), because in each of these passages is mentioned "writing" (Soferim ii. 6). (At the present day the forty-two-lined column is the generally accepted style of the scroll, its length being about 24 inches.) The space between the lines should be equal to the size of the letters (B. B. 13a), which must be uniform, except in the case of certain special abnormalities (see SMALL AND LARGE LETTERS). The space between one of the Pentateuchal books and the next should be four lines. Extra space must be left at the beginning and at the end of the scroll, where the rollers are fastened. Nothing may be written on the margin outside the ruled lines, except one or two letters required to finish a word containing more than twice as many letters.



Scroll of the Law, with Crown, Breastplate, and Pointer.

(In the British Museum.)

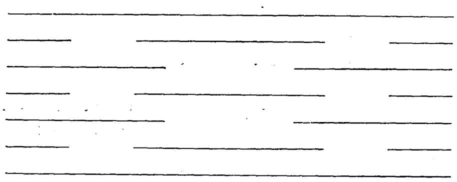
Some scribes are careful to begin each column with initial letters forming together the words ביה שמו ("by his name JAH"; Ps. lxviii. 4), as follows: בׄראשית (Gen. i. 1), יׄהודה (*ib.* xlix. 8), הׄבאים (Ex. xiv. 28), שׁמר (*ib.* xxxiv. 11), מׄה (Num. xxiv. 5), וׄאעידה (Deut. xxxi. 28). Other scribes begin all columns except the first with the letter "waw"; such columns are called "wawe ha-'ammudim" = "the waw columns" (see SCRIBES).

It is the scribe's duty to prepare himself by silent meditation for performing the holy work of writing the Pentateuch in the name of God. He is obliged to have before him a correct copy; he may not write even a single word from memory; and he must pronounce every word before writing it. Every letter must have space around it and must be so formed that an ordinary schoolboy can distinguish it from similar letters (Shulḥan 'Aruk, Oraḥ Ḥayyim, 32, 36; see TAGGIN). The scroll may contain no vowels or accents; otherwise it is unfit for public reading.

The scroll is not divided into verses; but it has two kinds of divisions into chapters ("parashiyyot"), distinguished respectively as "petuḥah" (open) and "setumah" (closed), the former being a larger division than the latter (Men. 32a). Maimonides describes the spaces to be left between successive chapters as follows: "The text preceding the petuḥah ends in the middle of the line, leaving a space of nine letters at the end of the line, and the petuḥah commences at the beginning of the second line. If a space of nine letters can not be left in the preceding line, the petuḥah commences at the beginning of the third line, the intervening line being left blank. The text preceding the setumah or closed parashah ends in the middle of the line, a space of nine letters being left, and the setumah commencing at the end of the same line. If there is no such space on the same line, leave a small space at the beginning of the second line, making together a space equal to nine letters, and then commence the setumah. In other words, always commence the petuḥah at the beginning of a line and the setumah in the middle of a line" ("Yad," *l.c.* viii. 1, 2). Maimonides gives a list of all the petuḥah and setumah parashiyyot as copied by him from an old manuscript in Egypt written by Ben Asher (*ib.* viii., end). Asheri explains the petuḥah and setumah differently, almost reversing the method. The general practise is a compromise: the petuḥah is preceded by a line between the end of which and the left margin a space of nine letters is left, and commences at the beginning of the following line; the setumah is preceded by a line closing at the edge of the column and commences at the middle of the next line, an intervening space of nine letters being left (Shulḥan 'Aruk).

Verses.

The poetic verses of the song of the Red Sea ("shirat ha-Yam"; Gen. xv. 1–18) are metrically arranged in thirty lines (Shab. 103b) like bricks in a wall, as illustrated below:



The first six lines are placed thus:

אז ישיר משה ובני ישראל את השירה הזאת ליהוה ויאמרו
לאמר אשירה ליהוה כי גאה גאה סוס
ורכבו רמה בים עזי וזמרת יה ויהי לי
לישועה זה אלי ואנוהו אלהי
אבי וארממנהו יהוה איש מלחמה יהוה
שמו מרכבת פרעה וחילו ירה בים ומבחר

The verses of the song of "Ha'azinu" (Deut. xxxii. 1–43) are placed in seventy double rows, the first four lines as follows:

האזינו השמים ואדברה ותשמע הארץ אמרי פי
יערף כמטר לקחי תזל כטל אמרתי
כשעירם עלי דשא וכרביבים עלי עשב
כי שם יהוה אקרא הבו גדל לאלהינו

The scroll must be written in accordance with the Masoretic Ketib, the abnormalities of certain letters being reproduced (see Small and Large Letters). If the final letters םןץףך are written in the middle of a word, or if their equivalents מנצפכ are written at the end, the scroll is unfit for public reading (Soferim ii. 10).

Name of God.

Scrupulous care must be taken in writing the Names of God: before every name the scribe must say, "I intend to write the Holy Name"; otherwise the scroll would be unfit ("pasul") for public reading. When the scribe has begun to write the name of God he must not be interrupted until he has finished it. No part of the name may extend into the margin outside the rule. If an error occurs in the name, it may not be erased like any other word, but the whole sheet must be replaced and the defective sheet put in the genizah. When the writing is set aside to dry it should be covered with a cloth to protect it from dust. It is considered shameful to turn the writing downward ('Er. 97a).

If an error is found in the scroll it must be corrected and reexamined by a competent person within thirty days; if three or four errors are found on one page the scroll must be placed in the genizah (Men. 29b).

The sheets are sewed together with threads made of dried tendons ("gidin") of clean beasts. The sewing is begun on the blank side of the sheets; the extreme ends at top and bottom are left open to allow stretching. The rollers are fastened to the ends of the scroll, a space of two fingerbreadths being left between them and the writing. Every sheet must be sewed to the next; even one loose sheet makes the scroll unfit. At least three stitches must remain intact to hold two sheets together (Meg. 19a; Giṭ. 60a).

Sewing the Sheets Together.

If the scroll is torn to a depth of two lines, it may be sewed together with dried tendons or fine silk, or a patch may be pasted on the back; if the tear extends to three lines, the sheet must be replaced. If the margin or space between the lines is torn, it may be sewed together or otherwise repaired. Care must be taken that every letter is in its proper place and that the needle does not pierce the letters.

A scroll written by a non-Jew must be put aside in the genizah; one written by a heretic ("apikoros") or sectarian Jew ("min") must be burned, as it is to be apprehended that he has wilfully changed the text (Giṭ. 45b).

תורה היא
עץ חיים

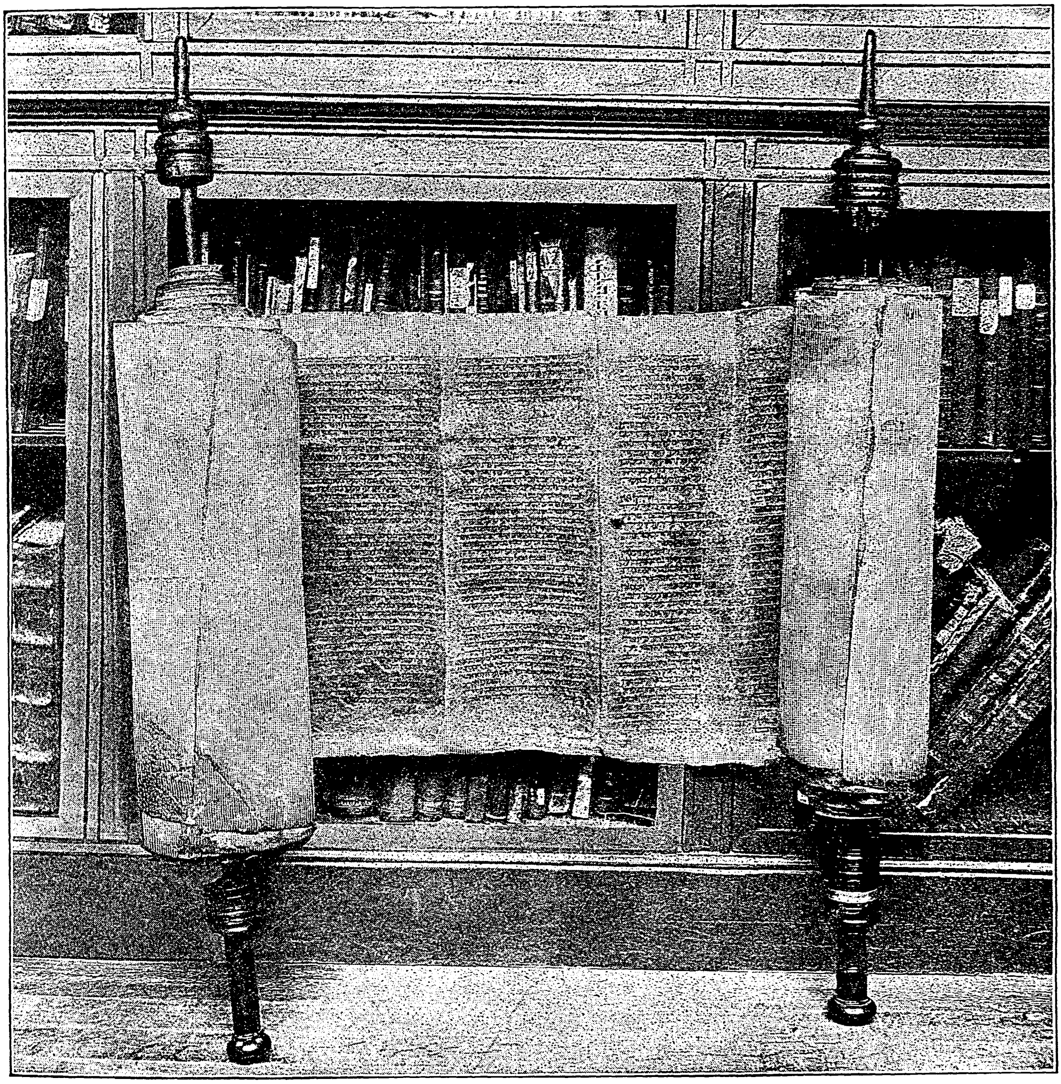
Breastplate for Scroll of the Law.
(Designed by Leo Horvitz.)

Every one who passes a scroll must kiss its mantle. The scroll may not be kept in a bedroom (M. Ḳ. 25a). A scroll of the Law may lie on the top of another, but not under the scroll of the Prophets, which latter is considered inferior in holiness to the scroll of the Pentateuch (Meg. 27a).

Decayed and worn-out scrolls are placed in the Genizah or in an earthen vessel in the coffin of a talmid-ḥakam (Ber. 26b). See also Manuscripts.

Appurtenances. The reverence with which the scroll of the Law is regarded is shown by its costly accessories and ornaments, which include a beautiful Ark as a receptacle, with a handsomely embroidered "paroket" (curtain) over it. The scroll itself is girded with a strip of silk and robed in a Mantle of the Law, and is laid on a "mappah," or desk-cover, when placed on the almemar for reading. The two rollers, "eẓ ḥayyim," are of hard wood, with flat, round tops and bottoms to support and protect the edges of the parchment when rolled up. The projecting handles of the rollers on both sides, especially the upper ones, are usually of ivory. The gold and silver ornaments belonging to the scroll are known as "kele ḳodesh" (sacred vessels), and somewhat resemble the ornaments of the high priest. The principal ornament is the Crown of the Law, which is made to fit over the upper ends of the rollers when the scroll is closed. Some scrolls have two crowns, one for each upper end.

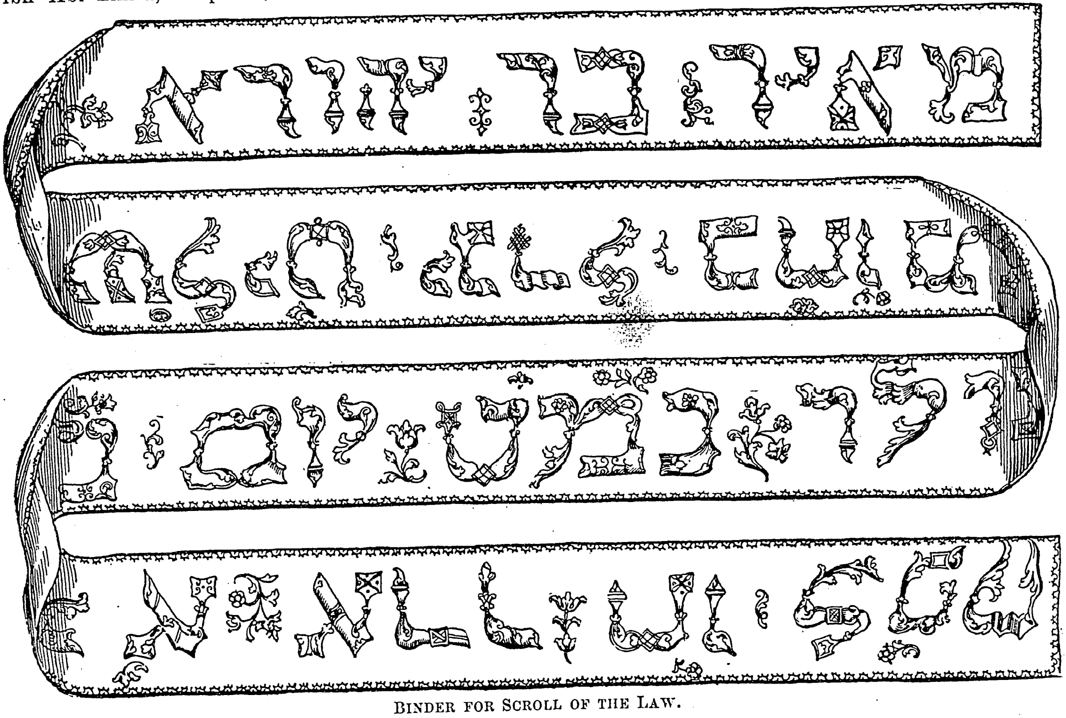
Suspended by a chain from the top of the rollers is the breastplate, to which, as in the case of the crowns, little bells are attached. Lions, eagles, flags, and the Magen Dawid either chased or embossed, or painted, are the principal decorations. The borders and two pillars of Boaz and Jachin on the sides of the breastplate are in openwork.



Scroll of the Law from Tafilet, Morocco.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

The Breastplate. In the center there is often a miniature Ark, the doors being in the form of the two tablets of the Law, with the commandments inscribed thereon. The lower part of the breastplate has a place for the insertion of a small plate, bearing the dates of the Sabbaths and holy days on which the scroll it distinguishes is used. Over the breastplate is suspended, by a chain from the head of the rollers, the YAD. In former times the crown was placed upon the head of the "ḥatan Torah" when he concluded the reading of the Pentateuch on the day of the Rejoicing of the Law, but it was not permitted to be so used in the case of an ordinary nuptial ceremony (Shulḥan 'Aruk, Oraḥ Ḥayyim, 154, 10). The people used to donate, or loan, the silver ornaments used for the scroll on holy days (*ib.* 153, 18). When not in use these ornaments were hung up on the pillars inside the synagogue (David ibn Abi Zimra, Responsa, No. 174, ed. Leghorn, 1651). In modern times they are placed in a drawer or safe under the Ark when not in use.



BINDER FOR SCROLL OF THE LAW.
(From Kirchner, "Jüdisches Ceremonial," 1726.)

For domestic use, or during travel, the scroll is kept in a separate case, which in the East is almost invariably of wood; when of small dimensions this is sometimes made of the precious metals and decorated with jewels.

J. J. D. E.

The awe with which the Torah was regarded, even in its outward form, and the immutability of the East in general and of Jewish antiquity in particular, have preserved the scroll of the Law practically unchanged, and it may therefore be considered as the representative of the ancient Hebrew book. All the rules enumerated above find parallels in the Talmud and in the Midrash, and may be verified with the aid of the table of contents and index in Blau's "Das Althebräische Buchwesen" (see also MANUSCRIPTS). The material used for synagogue scrolls in ancient times was generally leather made of the skins of wild animals, parchment being used but seldom (Blau, *l.c.* pp. 23 *et seq.*, especially p. 30). This material continued to be employed in the East; for in the second half of the sixteenth century Joseph Caro was the first to codify the word "gewil," thus giving the Polish Jew Moses ISSERLEIN occasion to remark that "our parchment is better" (comp. also Löw, "Graphische Requisiten," i. 131). In Europe, on the contrary, parchment scrolls were approved; and it was even permitted to read from the Torah in book-form if there was no scroll at hand (Maimonides, *l.c.* x., end; "Migdal 'Oz" *ad loc.*; and Löw, *l.c.* ii. 138).

History.

In antiquity a scroll of small size with very fine script was generally used; and the largest copy, the official Torah scroll of Judaism, which was kept in the sanctuary at Jerusalem, and from which the high priest and the king read to the congregation on solemn occasions, did not exceed 45 cm. in height, as is shown both by direct statements and by the illustration on the arch of Titus (Blau, *l.c.* pp. 71-78). Under European influence, however, gigantic scrolls, specimens of which still exist, became the fashion in the Middle Ages, although side by side with them small, graceful rolls likewise were used both for synagogal and for private worship. The earliest extant manuscript of the Torah is said to have been written before 604; only fragments of it have been preserved (see JEW. ENCYC. iii. 180b, *s.v.* BIBLE MANUSCRIPTS). Among noteworthy scrolls of the Law which have disap-

peared may be mentioned, in addition to the official copy noted above, the roll of leather with golden script sent by the high priest in the third century B.C. to the King of Egypt, at the latter's request, to be translated into Greek (Letter of Aristeas, §§ 176–179; Blau, *l.c.* pp. 13, 157–159), and the Torah scroll which Maimonides wrote with his own hand. The latter scroll, made of ram's skin, was 1,366 fingers (about 25 meters) in length, contained 266 columns six fingers wide, with 51 lines in each, and conformed to the rule, enforced even in antiquity (B. B. 14a), that the girth of the scroll should correspond to its height (Maimonides, *l.c.* ix. 10).

Personal Copies of the Torah.

The history of the dissemination of the scrolls of the Law is one of vicissitudes. While they were few in number at the time of the Chronicler (II Chron. xvii. 7–9), their number increased enormously in the Talmudic period as a result of a literal interpretation of the command that each Jew should write a Torah for himself, and also in consequence of the custom of always carrying a copy (magic influence being attributed thereto) on the person. In the later Middle Ages, on the contrary, the scrolls decreased in number, especially in Christian Europe, on account of the persecutions and the impoverishment of the Jews, even though for 2,000 years the first duty incumbent on each community was the possession of at least one copy (Blau, *l.c.* p. 88). While the ancient Oriental communities possessed scrolls of the Prophets and of the Hagiographa in addition to the scroll of the Law, European synagogues have, since the Middle Ages, provided themselves only with Torah scrolls and, sometimes, with scrolls of Esther. Six or nine pigeonholes, in which the rolls are lying (not standing as in modern times), appear in certain illustrations of bookcases (comp. Blau, *l.c.* p. 180; also illustrations in "Mittheilungen," iii.–iv., fol. 4), these scrolls evidently representing two or three entire Bibles, each consisting of three parts, the Torah, the Prophets, and the Hagiographa. Curiously enough, the interior of the Ark in the synagogue of Modena is likewise divided into six parts (comp. illustration in "Mittheilungen," i. 14). See also SCRIBES.

E. C. L. B.

SCYTHIANS: A nomadic people which was known in ancient times as occupying territory north of the Black Sea and east of the Carpathian Mountains. Herodotus relates how they swept down over Media and across to the shores of the Mediterranean, even to the threshold of Egypt. So far as can be determined this was between 628 and 610 B.C. The King of Egypt, it is said, bought them off and induced them to return. They were foragers and pillagers, and hence left no traces of any system of government inaugurated by them. It is true that there was a city in Palestine called Scythopolis (earlier Beth-shean); but it is not known that it owes its name to these barbarians. By many it is thought that Jer. iv. 3–vi. 30 refers to the ravages of the Scythian invaders; and it is possible that Ezekiel in picturing the hordes that poured down from the north (Ezek. xxxviii.) had the Scythians in mind. It has been suggested that the ASHKENAZ of the Bible is equivalent to Scythia.

In Roman times Scythia is designated as a territory in northeastern Europe and Nearer Asia, occupied by barbarians of various types without any definite and fixed character. Paul in his letter to the Colossians (Col. iii. 11) speaks of the Scythian and the barbarian as those whom Christianity unifies. From the random references to them the Scythians seem to have been peoples of unknown home in central Asia, whose character and habits were ascertained only as they crowded themselves upon the civilized nations of southwestern Asia and southern Europe in the centuries from 600 B.C. down to the first century of the common era.

SCYTHOPOLIS. See BETH-SHEAN.

SEA, THE MOLTEN. See BRAZEN SEA.

SEA-MEW: For Biblical data see CUCKOO. In the Talmud (Ḥul. 62b) is mentioned an unclean bird under the name פרוא, and (*ib.* 102b) under קלניתא, explained by Rashi as "a very lean bird." Some would connect these words with the Latin "prava" (bad) and the Greek *κηλόν* (meager, dry), and see in these birds species of the sea-mew.

SEAL: An instrument or device used for making an impression upon wax or some other tenacious substance. At a very early period the Jews, like the other peoples of western Asia, used signets which were cut in intaglio on cylindrical, spherical, or hemispherical stones, and which were employed both to attest documents (Neh. x. 1 *et seq.*) instead of a signature, and as seals (Isa. xxix. 11). They were highly valued and carefully guarded (Hag. ii. 23) as tokens of personal liberty and independence, while as ornaments they were suspended by a cord on the breast (Gen. xxxviii. 18), and subsequently were worn on a finger of the right hand (Jer. xxii. 24) or on the arm (Cant. viii. 6). A large number of ancient Hebrew seals has been preserved, although it is difficult to distinguish them from Aramaic and Phenician signets, both on account of the similarity of the script and because of the figures; these frequently contain symbols connected with idolatry, especially in the case of the oldest specimens, which date probably from the eighth century B.C. Although the words בת, בן, and אשת, which frequently occur on seals, indicate that they are not Aramaic, and although the grammatical form of the name also helps to indicate the origin, it is the script which is usually the decisive factor; for the Aramaic, Phenician, and ancient Hebrew alphabets, derived indeed from the same source, each developed in the course of time according to an

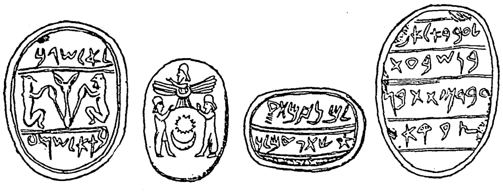
individual type, although this is a surer criterion in the later seals than in the earlier ones. The inscriptions on the seals usually give the name of the owner, with the occasional addition of the name of the father or husband, although other phrases sometimes occur, such as "May YHWH have mercy,"

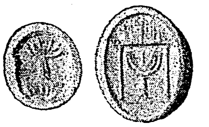


Ancient Hebrew Seals.
(From Levy, "Siegel und Gemmen.")

or "The work of YHWH," the latter inscription being found on a seal in the Paris coin-cabinet. When several names are engraved on a seal which has no design, they are separated by a double line. It is noteworthy that a number of the seals which have been preserved belonged to women, although in later times it was not customary for females to wear seal-rings in Palestine (Shab. vi. 3; *ib.* Gem.), while in Europe, on the contrary, women have worn them since the Middle Ages (see RING).

Use by Women.

In both the tannaitic and amoraic periods the hoop of the ring was occasionally made of sandalwood and the seal of metal, or vice versa (Shab. vi. 1; *ib.* Gem. 59b). Seals dipped in a sort of India ink were used for signing documents, or the impression was made in clay if the document was inscribed on a tablet (see also the factory-marks, JEW. ENCYC. i. 440). In Talmudic times ('Ab. Zarah 31 *et seq.*), furthermore, seals were used as they are still employed, to attest the preparation of food according to ritual regulation (Plate i., Fig. 7; Plate ii., Fig. 39). The signets of the period bore various emblems, that of Abba Arika representing a fish, Ḥanina's a branch of a date-palm, Rabbah b. Huna's a mast of a ship, and Judah b. Ezekiel's a human head. The meaning of these emblems is unknown; and the attempted explanations of the medieval Talmudists are entirely inadequate.



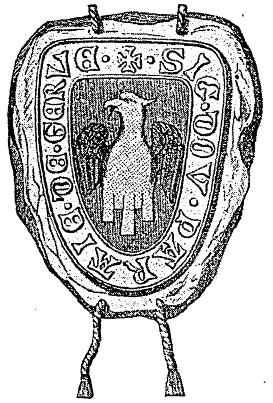
Seals with Seven-Branched Candlestick, Third Century.
(In the Albertinum at Dresden.)

The seals (originally at Bonn) now in the Albertinum at Dresden probably date from the time of Rab, 175–247. One of these, an amethyst, shows the seven-branched candlestick on a pedestal, while the other, a carnelian, represents the same candlestick between two pillars covered by a canopy (Boaz and Jachin[?]; see illustration above, and Plate 3 in Belandin, "De Spoliis Templi").

Seal-rings were worn generally in Babylon, according to Herodotus and Strabo; but since they were regarded as a mark of distinction, Mohammed's second successor, the calif Omar (581–644), forbade Jews and Christians to wear them, although he made an exception in favor of the exilarch Bostanai, who was thus enabled to give an official character to his documents and decrees (for his emblem see JEW. ENCYC. iii. 331a, *s.v.* BOSTANAI). This privilege probably remained with the exilarchate and the gaonate; for the last gaon, Hai b. Sherira (969–1038), is known to have had a seal with the emblem of a lion, probably in allusion to his descent from King David, since, according to tradition, the device on the escutcheons and banners of the Jewish kings was a lion. When the exilarchate was revived, about the middle of the twelfth century, the resh galuta Samuel was permitted, according to the account of Pethahiah, to have an official seal for his diplomas, "which were recognized in all countries, including Palestine." Shortly afterward Jewish seals came into use in Europe; for, while the ancient custom of employing signets had been retained in France, whence it was carried to Germany, the cities did not begin to use seals generally until about the middle of the twelfth century.

Spread of Custom.

Nor did the secular corporations, the lesser nobility, or the burghers follow their example until a hundred years later. Jewish seals must, therefore, date from after this period. The statement made that the Jews were not allowed to use seals is erroneous; for in the thirteenth century the Jewish communities were corporations of equal standing with the communities of Christian burghers, and were recognized by the state. They were therefore, like Christian organizations, entitled to use seals (Nübeling, "Die Judengemeinden des Mittelalters," p. 200).



Seal of the Jewish Community of Metz.
(From Carmoly, "Revue Orientale.")

From that period date the seals of the Jewish communities of Augsburg (a double eagle, with a Jew's hat in chief, and the legend "Sigillum Judæorum Augustæ," חותם יהוד[ים] אוג[וסטא]; see illustration in JEW. ENCYC. ii. 306), of Ulm (an ox-head; Jäger, "Gesch. Ulms," p. 400), of Metz ("Revue Orientale," ii. 328), and of Ratisbon (crescent, with a large star in chief, and the inscription חותם קהל דרגנשבורקי). Both the figures on the Ratisbon seal appear also on the seal of Masip Crechent ("Jahrb. Gesch. der Jud." ii. 290), and on a Swiss seal of about the same period with an inscription no longer legible (Plate ii., Fig. 29).

Even individual Jews, like the nobility, as being freemen and servants of the Imperial Chamber, were entitled to have seals; this privilege, however, like many others, was sometimes recognized and sometimes denied, as is shown, to cite but one of many examples, by a passage in a receipt of the Magdeburg community dated 1493, "because none of them have seals" ("Monatsschrift," 1865, p. 366), although the Jews

of that city had affixed a seal to a document in 1364 ("Cod. Dipl. Anhaltin." iv. 320). The conditions were similar in other European countries; thus in 1396 Duke William of Austria decreed that all promissory notes should be sealed both by the city judge and by the Jews judge (Nübeling, *l.c.* p. 205). Further, in a manuscript of the municipal archives of Presburg of the year 1376 is found the enactment with regard to the "Jüdenpüch," that "a Christian and a Jew shall seal the book with their seals" (Winter, "Jahrb." 5620, p. 16). In 1402 the chief rabbi ("rabbi mor") of Portugal, who was appointed by the king, and who had jurisdiction over all the Jews of the country, was ordered by John I. to have a signet, with the coat of arms of Portugal and the legend "Scello do Arraby [Arrabiado] Moor de Portugal," with which his secretary sealed all the responsa, decisions, and other documents which he issued; and the seven provincial chief justices appointed by him used a similar seal having the same coat of arms with the inscription "Seal of the ouvidor [the ouvidores] of the communities . . ." (Kayserling, "Gesch. der Juden in Portugal," pp. 10, 13). When Alfonso V. reorganized the legal affairs of the Jews in 1480, he decreed that the chief rabbi should act as judge in the name of the king, and should seal his verdicts with the royal seal (Depping, "Die Juden im Mittelalter," pp. 322 *et seq.*). On the other hand, the fact that Gedaliah ibn Yaḥya refers in his "Shalshelet ha-Ḳabbalah" to the coat of arms of his ancestor Yaḥya ibn Ya'ish, the favorite of Alfonso Henriquez, seems to indicate that the Jews of Portugal used seals at a very early time. The Spanish Jews also had signets; and there are two in the British Museum which probably date from the fourteenth century: the signet of the community of Seville (Plate ii., Fig. 27) and one belonging to Todros ha-Levi, son of Samuel ha-Levi (Plate iii., Fig. 9).

Use in Spain.

Double Seals.

The Jews of Navarre, on the contrary, were obliged to have their documents sealed with the royal seal in the notary's office (which was farmed out), although they had their own courts in the thirteenth century (Kayserling, "Gesch. der Juden in Navarra," p. 73). The French king Philip II. decreed in 1206 that the Jews should affix to promissory notes a special seal, the signet to remain in the custody of two notables of the city (Depping, *l.c.* p. 148). His son, Louis VIII., however, deprived the Jews of this seal, perhaps because, as Depping assumes (*l.c.* p. 155), it contained merely a Hebrew inscription without figures, in obedience to Jewish law, so that documents sealed with it escaped supervision, which led to many abuses. The plausibility of this hypothesis is increased by the fact that ultra-orthodox rabbis occasionally objected to seals with figures in intaglio (Löw, "Beiträge," i. 37, 57), even though such scruples were comparatively rare, and R. Israel Isserlein (15th cent.) unhesitatingly used a seal bearing a lion's head. Most Jewish seals of the Middle Ages had devices, together with an inscription in Latin or in the vernacular in addition to the Hebrew legend. Some Jews had a double seal, with a Hebrew inscription on one side and a legend in the vernacular on the other, the latter being used to sign legal papers in transactions with Christians; *e.g.*, the seal of Kalonymus (Plate ii., Figs. 24, 25). Such double seals were used also at a later time, as by Saul Wahl (Edelmann, "Gedullat Sha'ul," p. 22); and their employment continued even in the nineteenth century (Plate ii., Figs. 35, 36) While most medieval Jewish seals, as already noted, contain a figure in the center of the signet (Plate ii., Fig. 30), some seals occur in which the device is set in a scutcheon (Plate ii., Figs. 23, 24, 25, 26, 28, 29), an arrangement all the more remarkable since at that time it was the privilege of those "born to the shield and helmet." The shield in all these signets is French ("écu français"); but no occurrence of the helmet is known. Most of the seals were round (Plate ii., Fig. 30), though square seals also are found (Plate iii., Fig. 9), as well as seals in the form of a parabola (Plate ii., Fig. 34), the latter being used chiefly by the clergy.

"Armes Parlantes."

Some of these seals are "armes parlantes," in which a device represents the owner's name, according to an etymology which may be either true or false, as in Vislin's seal (Plate ii., Fig. 26), which bears three fishes embowed in pairle, or in the seal of Masip Crechent, mentioned above, in which the crescent is a play upon the owner's name. Family seals ("armes de famille") were used by the medieval Jews, as is shown by the seal of Moses b. Menahem and his brothers Gumprecht and Visli ("Illustrirte Zeitung," July 2, 1881), which bears three Jew's hats with points meeting, in pairle (Plate ii., Fig. 23). The knightly family of Jüdden in Cologne, which was of Jewish descent, had a similar coat of arms: three Jew's hats argent in a field gules; crest, a bearded man (Jew) in a coat gules, wearing a Jew's hat argent (Fahne, "Gesch. der Kölner Geschlechter," p. 192).

In later times new emblems appeared on the Jewish seals. Thus, the Magen Dawid ("David's shield") is found with increasing frequency on communal seals even to the present time, occurring, for instance, on that granted to the ghetto of Prague by Emperor Ferdinand II. in 1627 (Plate i., Fig. 13), where it surrounds the Swedish hat and bears the legend "Sigillum Antiquæ Communitatis Pragensis Judæorum," with the letters מגזדרד in the corners, which are to be read "magistrat." The shield of David is found also on the seal of the community of Vienna of the year 1655, with the inscription קהלא קדישא פה ווינא (Kaufmann, "Letzte Vertreibung," p. 151); on that of the community of Fürth, with the legend ק"ק"פ (Würfel, "Judengemeinde Fürth," p. 71); on that of Kremsir, about 1690 (Plate ii., Fig. 38); on that of the community of Kriegshaber, which bears the inscription קהל קריסהבר (Plate i., Fig. 18); on the seals of the Dresden and Beuthen communities (Plate ii., Figs. 33, 41), both of which date from the nineteenth century; and on many others.

Different devices are found, moreover, on the seals of other communities. Thus, the seal used by the community of Halberstadt after its return to the city in 1661 bears a dove with an olive-branch hovering over the Ark, and the motto "Gute Hoffnung" in chief, with the words אפו ד'ק'ק ה'ש below, and the legend "Vorsteher der Judenschaft in Halberstadt" (Plate i., Fig. 11). **Communal Seals.** The seal of the community of Ofen has an Ark of the Law with the inscription ק"ק בעיר אובן חדש and the words "Ofner Judengemeinde" (Plate i., Fig. 9). In 1817 seals were granted both to the principal community and to the Portuguese community of Amsterdam, the former bearing a lion holding in one paw a bundle of arrows and in the other a shield with a magen Dawid, and the latter having a shield with a pelican (see Jew. Encyc. i. 545b, *s.v.* Amsterdam). The seal of the Portuguese community of Hamburg (Plate i., Fig. 1) has a rose-bush (probably originally the emblem of the Rosalis family) with the legend "Portugiesisch Jüdische Gemeinde Hamburg." Other communal seals have only inscriptions, as that of Kamionka in Poland, which bears merely the legend קהל עדת ישורן דקק קאמינקא and "Kamionker Gemein. Vorschtehr" (sic!) (Plate ii., Fig. 40), and the seal of the chief rabbinate of Swabia (seat of the rabbi of Pfersee), dating from the middle of the eighteenth century, which has simply the inscription מדינות שוואבן (Plate i., Fig. 2). Among Jewish corporations the butchers' gild of Prague is said by tradition to have received from King Ladislaus (12th cent.), in reward of bravery, a seal with the Bohemian lion, and it is known that in the seventeenth century this gild had a seal **Gild Seals.** (Plate ii., Fig. 32) bearing on a shield engrailed a key with the magen Dawid, and in chief the Bohemian lion "queue fourchée," holding a butcher's ax in one paw, with the legend "Prager Jüdisch. Fleischer Zunfts Insigl." (sic!). The members of this gild bore also on their seals the same lion with the ax (Plate i., Fig. 5), while the members of the Jewish barbers' gild of the city likewise had the lion, with a bistoury. The Paris Sanhedrin had a seal with the imperial eagle holding the tables of the Law; and the Westphalian consistory was allowed to use a signet with the arms of the state and the legend "Königl. Westphael. Konsistorium der Israeliten." An official seal closely resembling that of the community was given in 1817 to the Hoofdcommissie tot de Zaken der Israelieten of Amsterdam. Four years previously the school board of the Philan-

Animal Designs.

Emblems indicating the name of the owner appear frequently on the seals of the Jews of the later period. These devices are either symbolic, as a bear for Issachar, or a bull's head for Joseph—*e.g.*, in the case of Josel of Rosheim—or are "armes parlantes," like the stag on the seal of Herz (Hirz = Hirsch) Wertheimer of Padua, the contemporary and adversary of Judah Minz (d. 1508), the rose-bush of the Rosalis family, the triple thorny branch of blossoms of Spinoza, and the crow with the severed shield and two hands of priests in chief in the seal of Abraham Menahem b. Jacob ha-Kohen Rabe of Porto (Rapoport). The two hands of priests as an emblem of the descendants of Aaron appear with great frequency on their seals after the end of the sixteenth century (Plate i., Fig. 4), and in like manner the water-jar is very common on the signets of Levites, as on that of Hirz Coma, described by Kaufmann ("Die Letzte Vertreibung der Juden aus Wien," Vienna, 1889). The lion, which appears chiefly on the seals of Portuguese Jews, perhaps represents on their signets the "lion of Judah," although elsewhere it frequently denotes merely the name "Judah," "Aryeh," or "Löw"; and a stone lion was carved on the house of the "hoher" R. Löw at Prague. The devices sometimes admitted of a mystic or cabalistic interpretation. Thus the two mountains on the seal of Solomon Molko (*c.* 1501–31) alluded to the hills which he saw in his vision, and the two "lameds" below them, which were taken from his name, likewise had a mystic meaning (see letter in "'Emeḳ ha-Baka," p. 92a). Similarly the serpent in a circle on the seal of Shabbethai Ẓebi was said to refer to his Messianic mission, since the Hebrew word for "serpent" (נחש) has the same numerical value as the word "Messiah" (משיח).

Many of the devices that are represented on Jewish seals and whose meaning is no longer known may correspond to the emblems which the Jews in some places, as at Frankfort-on-the-Main and Worms (after 1641), were compelled to attach to their houses, such as a ship, a castle, a green hat, and which gave rise to such family names as "Rothschild" and "Grünhut." Among the emblems alluding to the occupation of the owner may be mentioned the anchor, referring to the merchant gild (Plate ii., Fig. 35), which occurs frequently on Jewish seals after the eighteenth century. Many Sephardic Jews of Jerusalem in official positions use seals representing the wailing-place (כותל המערבי); note, *e.g.*, the seal of the ab bet din Joseph Nissim (Bourla [?]; see Jew. Encyc. vi. 183), and that of the English interpreter Jacob Hai b. Moses Jacob Mizraḥi (Plate ii., Fig. 31). In the second half of the seventeenth century it became customary in some parts of Germany for a Jew to have on his seal the sign of the zodiac which presided over the month of his nativity, with his name as the legend (Plate i., Figs. 3, 12, 14, 15, 16, 21, 22), this being occasionally abbreviated, as on the seal (described by Schudt, "Jüdische Merckwürdigkeiten," iv. 2, p. 175) used by Kalonymus b. Mordecai, which has the inscription קבמן.

The seals of other Jews had merely their owners' names (Plate i., Fig. 20), with occasionally the modest הקטן (Plate i., Fig. 10; abbreviated ה"ק, Plate i., Fig. 12) or הצעיר (Plate i., Fig. 17). The father's name was generally affixed to that of the owner, and if his parent was still alive, the son added one of the pious formulas: יצ"ו = ישמרהו צורו וגואלו (Plate i., Fig. 16), שליט"א = שיחיה לימים טובים אמן (Plate ii., Fig. 31), or נר"ו = נרו יאיר ויזרח (Plate i., Fig. 8). If the father was no longer living, the phrase ז"ל = זכרונו לברכה was substituted (Plate i., Fig. 6). The owner of a seal sometimes styles himself בלא"א = בן לאדוני אבי (Plate i., Fig. 8). Other seals bear the initials of their owners, Moses Mendelssohn using a signet with only the letters מ"ד (= Moses Dessau), and below the letters "M. M." At the present time the Jews of the leading nations generally use seals which differ in no respect from those of their fellow citizens of other creeds. See Coat of Arms.

SEBAG, SOLOMON: English teacher and Hebrew writer; born in 1828; died at London April 30, 1892; son of Rabbi Isaac Sebag. He was educated in the orphan school of the Portuguese congregation, London, subsequently becoming master of the Sha'are Tiḳwah School. On the death of Ḥazzan De Sola, Sebag acted temporarily as reader in the Bevis Marks Synagogue. In 1852 he wrote a Hebrew primer which was for a long time the chief textbook for Hebrew instruction among Jewish children in England; and several of his Hebrew poems and odes written for special occasions were printed.

SEBASTE. See Samaria.

SEBASTUS: The port of Cæsarea on the Mediterranean Sea. Cæsarea itself, which Herod had made an important seaport, received its name in honor of Julius Cæsar, while the harbor proper was called "Sebastus" as a tribute to the Emperor Augustus (Greek, *Σεβαστός*; Josephus, "Ant." xvii. 5, § 1; *idem*, "B. J." i. 31, § 3); the inscription "Cæsarea at the Port of Sebastus" appears on the coins of Nero. The city is called also simply *Καισαρεία Σεβάστη*; but the name "Sebastus" is never found as the designation of an independent city. Consequently the phrase *Καισαρεὶς καὶ Σεβαστηνοί* ("Ant." xix. 9, § 1) does not denote "the inhabitants of Cæsarea and Sebastus," as Grätz ("Gesch." 4th ed., iii. 353) assumed, but the civil population of Cæsarea and the military troops, which latter were called "Sebasteni."

G. S. Kr.

SECCHI, PABLO MARINI: Italian Christian merchant; lived at Rome in the sixteenth century. He made a wager with a Jew, Samson Ceneda, that Santo Domingo would be conquered. The terms of the wager were that in the event of Ceneda losing he was to give Secchi a pound of his flesh. If Secchi lost, he was to pay the Jew 1,000 scudi. The Jew lost the wager; and Secchi insisted upon the payment of the penalty. The affair came to the ears of Pope Sixtus V., who inflicted a punishment on both parties for having entered upon such a wager. The incident has been treated by Shakespeare in his drama "The Merchant of Venice," in which, however, the characters are inverted. But see Shylock.

SECOND DAY OF FESTIVALS (Hebrew, יום טוב שני של גליות): Day added by the Rabbis to all holy days except Yom Kippur. Jews living at a distance from Jerusalem were informed by messengers of the day on which the New Moon ("Rosh Ḥodesh") had been announced by the bet din. These messengers would set out on the first day of the months of Nisan, Ab, Elul, Kislew, and Adar, and on the second of Tishri (the first day being holy, travel thereon was interdicted), and would rest on the Sabbath and on Yom Kippur; hence they did not travel as far in Tishri as in the other months. The Jews living in the Diaspora, not knowing exactly on what day the New Moon would be announced, might easily have supposed a full month ("male," *i.e.*, one of thirty days) to be "defective" (ḥaser, *i.e.*, of twenty-nine days), and thus have observed a festival a day too soon (*e.g.*, might have eaten leavened food on the 21st of Nisan), or they might have erred the other way, and begun the Passover a day too late. By observing two days for every festival this was obviated. At places which the messengers were able to reach in time, this precaution was of course unnecessary. Since, however, there were places which the messengers reached in time during Nisan, but not in Tishri, there would naturally be a zone wherein Passover might be observed seven days and Tabernacles nine. To obviate this inconsistency, all places in which the Tishri messengers did not arrive in time observed each of the festivals, even the Feast of Weeks, on an additional day.

History.

When, in the middle of the fourth century of the common era, Rabbi Hillel fixed the method of calculating the calendar, and the exact date of festivals was no longer in doubt, the celebration of the second day was by some rabbis deemed unnecessary. The Palestinian authorities, although in a similar case it had once been decided that abstention from work on two successive days should be avoided (R. H. 23a), sent word to the teachers in Babylonia as follows: "Guard the custom you have from your fathers. At some time the government might decree laws that would lead to confusion." Therefore, outside a certain district, every festival except Yom Kippur was observed on two days, until the nineteenth century, when conditions changed and the custom proved a great hardship. The fathers of the Reform movement in Germany considered this observance of a second day an unauthorized innovation by the Rabbis, unwarranted in Biblical law, and, having outlived its raison d'être, a hardship unbearable to the majority. Accordingly at the conference held at Breslau in 1846 it was resolved that congregations were justified in abolishing the second days of festivals, except the second day of Rosh ha-Shanah. To avoid dissensions, however, it was further resolved that the wishes of even a small minority for the retention of these days should be respected as far as services in the synagogue were concerned; but the prohibition of work was definitely annulled ("Protokolle der Dritten Rabbinerversammlung zu Breslau," p. 312).

New-Year.

The second day of Rosh ha-Shanah was retained by the conference in view of the fact that it was observed in Palestine (where every other festival is kept but one day) in order to prevent the possibility of labor being performed on the festival day itself. This latter contingency might arise when the new month was announced to begin on the very day after the observation of the new moon, which would render such day a festival. Thus Rosh ha-Shanah might have been even in Jerusalem and at Jabneh (Jamnia) celebrated on two successive days. This may have happened only rarely; but whether the statement of R. Ḥinena b. Kahana (R. H. 19b), that it had never occurred since the time of Ezra, and that therefore the case was purely theoretical, is true or an exaggeration, can not now be determined. At any rate the fact that Rosh ha-Shanah may have at times been so observed in Palestine gives to the second day its exceptional character. As a matter of fact, the second and not the first day ought to have been made the starting-point for the festivals in Tishri. R. Ephraim of Bonn (*c.* 1150) declares that the Jews of Palestine ought to observe the New-Year on one day only; and R. Zerahiah in his "Ha-Ma'or" holds that such had indeed been the custom there, and that the second day's observance was an innovation introduced by rabbis from Provence, under the influence of R. Isaac Alfasi.

Besides the above-noted inconsistency, that the second day of New-Year, if it ever existed, would have been the real beginning of the year, there are others. That a double Day of Atonement could never be enforced was evident, and therefore it never was introduced, according to R. Ḥinena's statement

Inconsistencies.

that Elul never had more than twenty-nine days. This should make the observance of the second day of Tabernacles and its concluding festival unnecessary. Moreover, if an error had been made, and the day observed as the first of Tabernacles was in reality only the 14th of Tishri, then the day observed as Shemini 'Aẓeret was rather the seventh day of Tabernacles, or Hosha'na Rabbah. As lessons from the Pentateuch (and in the Ashkenazic rite in the Musaf prayer also) the order of the sacrifices, as contained in Num. xxviii. and xxix., is read; during Ḥol ha-Mo'ed the order for two days ("sefeḳa de-yoma") is read, it being either the third or the fourth day of the festival, according to whether the second or the first day was correct. To render all these inconsistencies less glaring it was decided that no doubt should be cast on the second and eighth days; that the seventh day should be observed as Hosha'na Rabbah; that the eighth day, as far as the ritual and cessation from work were concerned, should be the Feast of 'Aẓeret; that in order to meet the doubt existing as to the actual day, meals (or at least some food) should be eaten on that day in the "sukkah"; and that the ninth, or the second day of the festival, should be devoted to and set apart for Simḥat Torah.

A similar inconsistency occurs at Passover. According to rabbinical law the counting of the 'Omer begins on the day after the first festival day. If the second day of Passover is the first day in 'Omer, it is semiholy only, and there would be a doubt as to the day until the Feast of Weeks. Moreover, since during the early times, even when announcing messengers were sent, the exact date of Passover must sooner or later have been definitely known, there would seem to have been no necessity for extending the Feast of Weeks (which is determined not by date, but by Passover) another day. It is therefore analogy rather than consistency that sanctifies the second day of Shabu'ot and the eighth day of Passover. For the 'Omer, the second day of Passover, although it was deemed sacred, is the recognized beginning.

Laws.

The Rabbis, having ordained the observance of the second day of festivals, legislated fully for it; and although since the fixation of the calendar the observance of this day has become a custom rather than a legal necessity, yet as the custom has remained the provisions of the former laws have also retained their validity. The second day of the festivals is, according to rabbinical law, to be observed with all the sanctity appertaining to the first. However, in the case of a corpse awaiting burial, the Rabbis have considered the second as a work-day, even permitting the cutting of the shroud and the plucking of the myrtle with which the coffin was decked; and this rule applies even to the second day of the New-Year. The custom of the Ashkenazic Jews was, however, to have the coffin, shroud, etc., prepared by non-Jews wherever possible, leaving to Jews only the transportation to the grave and the interment. The rending of the garment, the rounding of the top of the grave, and similar unnecessary labor, were omitted on that day. Naḥmanides and his successors forbade all not directly employed at the interment, even the mourners, to ride to the cemetery. Still-born children are not buried by Jews on the second day of the festival.

Nothing must be specially cooked on the first day for the second, and nothing on the second for the day following. An egg laid on the first day, or fruit that has fallen from a tree, or has been plucked by non-Jews, or has been brought from a distance greater than a Sabbath-day's journey by non-Jews on the first day, may be eaten or prepared on the second day. To this rule, however, the second day of the New-Year is the exception, as the two days of Rosh ha-Shanah are legally considered as forming but one day. If the second day is Friday or Sabbath, the "thing prepared" (see above) on Friday may not be used on the Sabbath; and food "prepared" on the first day of the festival, if on Thursday, may not be used till after the conclusion of the Sabbath. As to the preparation of food for the Sabbath immediately following the second day of festivals see Beẓah; Talmud.

SEDECHIAS. See Zedekiah.

SEDER: The term used by the Ashkenazic Jews to denote the home service on the first night of the Passover, which, by those who keep the second day of the festivals, is repeated on the second night. The Sephardic Jews call this service the "Haggadah" (story); and the little book which is read on the occasion is likewise known to all Jews as the "Haggadah," more fully as "Haggadah shel Pesaḥ" (Story for the Passover). The original Passover service, as enjoined in Ex. xii. 1 *et seq.*, contemplates an ordinary meal of the household, in which man and wife, parents and children, participate. The historical books of Scripture do not record how and where the Passover lamb was eaten during the many centuries before the reform of King Josiah, referred to in II Kings xxiii.; it is related only that during all that long period the Passover was not celebrated according to the laws laid down in the Torah. In the days of the Second Temple, when these laws were observed literally, the supper of the Passover night must have lost much of its character as a family festival; for

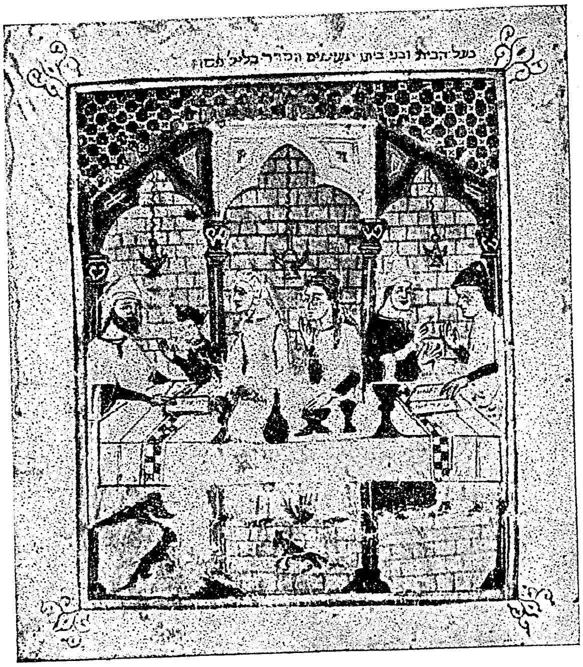
Passover at Jerusalem.

only the men were bidden to attend at the chosen place; and the Passover lamb might not be killed elsewhere (Deut. xvi. 5–6). Thus, only those dwelling at Jerusalem could enjoy the nation's birthday as a family festival. There is no information as to how the night was celebrated during Temple times by the Jews outside the Holy Land, who did not "go up to the feast." The destruction of the Temple, while reducing the Passover-night service into little more than a survival or memorial of its old self, again brought husbands, wives, and children together around the same table, and thus enabled the father to comply more closely with the Scriptural command: "Thou shalt tell thy son on that day."

Before the schools of Hillel and Shammai arose in the days of King Herod, a service of thanks, of which the six "psalms of praise" (Ps. cxiii.-cxviii.) formed the nucleus, had already clustered around the meal of the Passover night; of this meal the roasted lamb, unleavened bread, and bitter herbs were necessary elements (Ex. *l.c.*; Num. ix. 11). The service began with the sanctification of the day as at other festivals, hence with a cup of wine (see Ḳiddush); another cup followed the after-supper grace as on other festive occasions. But to mark the evening as the most joyous in the year, two other cups were added: one after the "story" and before the meal, and one at the conclusion of the whole service. The Mishnah says (Pes. x. 1) that even the poorest man in Israel should not drink less than four cups of wine on this occasion, this number being justified by the four words employed in Ex. vi. 6–7 for the delivery of Israel from Egypt.



בעל הבית ובני ביתו עושים הסדר בליל פסח

Seder.

(From a medieval manuscript in the British Museum.)

The Seder Table.

Both in the arrangement of the table and in the psalms, benedictions, and other recited matter the Seder of the present day agrees substantially with the program laid down in the Mishnah. Three thick unleavened cakes, wrapped in napkins, are laid upon the Seder dish; parsley and a bowl of salt water are placed next, to represent the hyssop and blood of the Passover of Egypt; further, watercress or horse-radish-tops, to serve as bitter herbs, and a mixture of nuts and apples, to imitate the clay which the Israelites worked into bricks; also slices of horseradish. A roasted bone as a memorial of the paschal lamb, a roasted egg in memory of the free-will offering of the feast, and jugs or bottles of wine, with a glass or silver cup for each member of the family and each guest, likewise are placed on the table. It is customary to fill an extra cup for the prophet Elijah. Ḳiddush is recited first, as at other festivals; then the master of the house (as priest of the occasion), having washed his hands, dips the parsley in the water, and, with the short prayer of thanks usual before partaking of a vegetable, hands some of it to those around him. He then breaks off one-half of the middle cake, which is laid aside for Afiḳomen, to be distributed and eaten at the end of the supper. Then all stand and lift up the Seder dish, chanting slowly in Aramaic: "This is the bread of affliction which our fathers ate in Egypt: whoever is hungry come and eat: whoever is in need celebrate Passover with us," etc. Thereupon the youngest child at the table asks: "Why is this night different from other nights?" etc., referring to the absence of leavened bread, to the bitter herbs, and to the preparations for dipping. In the days of the Temple, and for some time after its downfall, there was also a question, "Why is the meat all roasted, and none sodden or broiled?" For this no longer appropriate question another was substituted, now also obsolete: "Why do all of us 'lean around'?" in allusion to the Roman custom at banquets—which became current among the Jews—of reclining on couches around the festive board. The father or master of the house then answers: "We were slaves to Pharaoh in Egypt, and the Lord delivered us thence," etc. This question and its answer are meant as a literal compliance with the Biblical command, found thrice in Exodus and once in Deuteronomy, that the father shall take occasion at the Passover ceremonies to tell his children of the wonderful delivery from Egypt.

A number of detached passages in the language of the Mishnah—all referring in some way to the Exodus—follow, introducing Bible verses or commenting upon them, and "beginning with reproach and ending with praise," *e.g.*, the verses from Joshua xxiv. declaring that before Abraham men were all idolaters, but that he and Isaac and Jacob were chosen. The longest of these passages is a running

comment on Deut. xxvi. 5: "A wandering Syrian [A. V. "a Syrian ready to perish"] was my father," etc., almost every word of which is illustrated by a verse from some book of Scripture; the comment closing with the suggestion that the last words (*ib.* verse 8), "with a mighty hand and with an outstretched arm, and with great terribleness, with signs and with wonders," refer to the Ten Plagues. Further on it is stated that none has done his duty on that night until he has given voice to the three words "pesaḥ" (paschal lamb), "maẓẓah" (unleavened bread), and "maror" (bitter herb). A more important remark follows, to the effect that it is the duty of every Israelite to feel as if he personally had been delivered from Egypt. Then two of the "psalms of praise" (Ps. cxiii.-cxiv.) are read, in accordance with the teaching of Hillel's school; while Shammai's school read only one of these before supper. A benediction follows, in which the restoration of the Passover sacrifice is prayed for. A second cup of wine is drunk; and with this the first part of the Seder ends, all present washing their hands for supper.

This meal is begun by handing around morsels of the first and third cakes, giving thanks first to Him "who brought forth bread from the earth," and then to Him "who sanctified us by the command to eat maẓẓah." The bitter herb, dipped in the imitation clay, is eaten next, with thanks for the duty of eating bitter herbs; and then horseradish-slices are made into sandwiches with parts of the middle cake, in memory of Hillel's action in Temple times, when he ate pieces of paschal lamb literally "upon" unleavened cake and bitter herbs.

The real meal then begins, its last morsels being broken from the afiḳomen. Then follows the grace after meals with the insertion for the festival; and afterward the third cup is drunk. This grace, the remaining four psalms of praise (Ps. cxv.-cxviii.), the so-called "Great Hallel" (Ps. cxxxvii.) with its recurring burden "Ki le'olam ḥasdo" (His mercy endureth forever), Nishmat, and the words of thanks after wine make up the second part of the Seder.

Such was the order of exercises as far back as the middle of the third century. But as he "who talked the most of the departure from Egypt" was always deemed most worthy of praise, a few additions were made in various countries at different times. Thus, the Jews of Yemen still insert in the ḳiddush on this night, after the words "who has chosen us above every people," a piece of rather grotesque self-praise, such as "He called us a community of saints, a precious vineyard, a pleasant plantation; compared to the host of heaven and set like stars in the firmament." Such passages were at one time recited in other countries also. Many of the Jews in Mohammedan countries have in their service-books legendary comments upon the Haggadah, mainly in Arabic, which the father reads by way of explanation and elaboration of the text. The Sephardic Jews in Turkey recite in Spanish some legends about the Exodus, not found in the Haggadah. The German and Polish Jews add five poetic pieces at the end of the exercises: one arranged according to the alphabet, with the burden, "It was in the midst of the night" (referring to events in the past, or foretold in prophecy, which happened at that hour); another, an indescribable jingle ("Ki lo Na'eh") before the last cup. In Germany two other pieces were added which from old German nursery songs had first become festal songs and then were invested with a higher significance as if they typified specific Jewish ideas. See Eḥad Mi Yodea' and Ḥad Gadya.

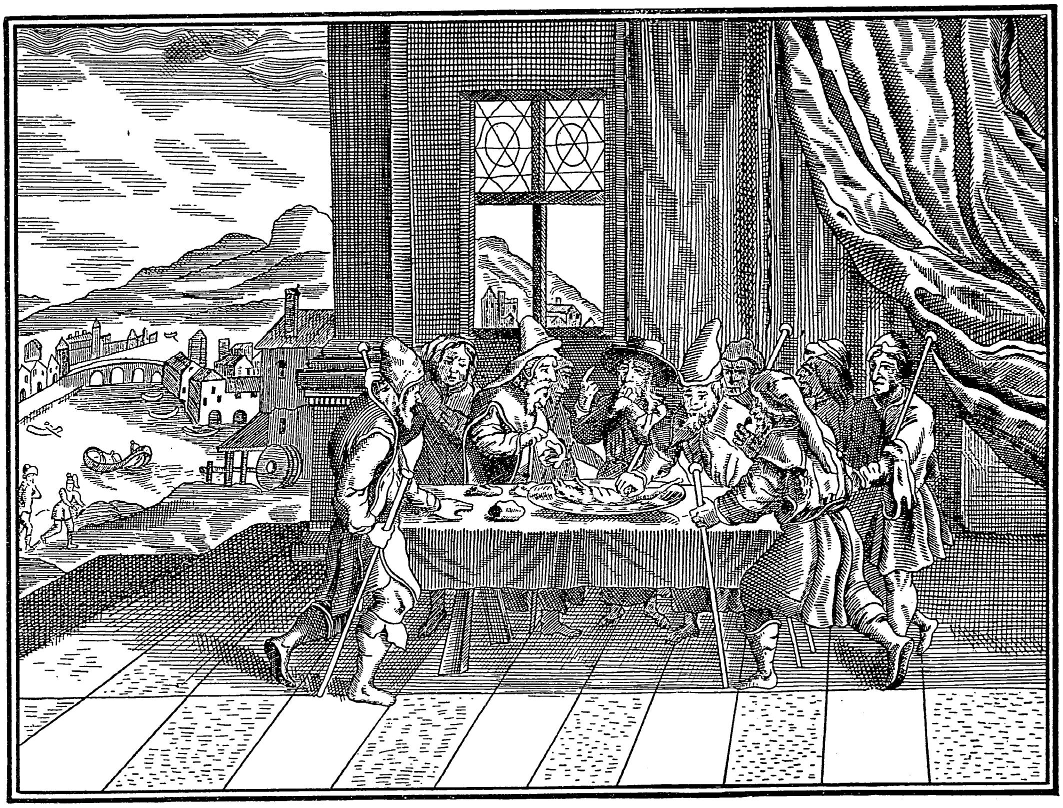
SEDER 'OLAM RABBAH: Earliest post-exilic chronicle preserved in the Hebrew language.



Seder.
(From a seventeenth-century Haggadah.)

Title and Divisions. In the Babylonian Talmud this chronicle is several times referred to simply as the "Seder 'Olam" (Shab. 88a; Yeb. 82b; Nazir 5a; Meg. 11b; 'Ab. Zarah 8b; Niddah 46b), and it is quoted as such by the more ancient Biblical commentators, including Rashi. But with the twelfth century it began to be designated as "Seder 'Olam Rabbah," to distinguish it from a later, smaller chronicle, "Seder 'Olam Zuṭa"; it was first so designated by Abraham ibn Yarḥi ("Ha-Manhig," p. 2a, Berlin, 1855). In its present form the work consists of thirty chapters, each ten chapters forming a section, or "gate." It is a chronological record, extending from Adam to the revolt of Bar Kokba, in the reign of Hadrian; but the chronicle is complete only up to the time of Alexander the Great; the period from Alexander to Hadrian occupies a very small portion of the work—the end of the thirtieth chapter. It may be concluded, therefore, that originally the "Seder 'Olam" was more extensive, and that it consisted of two parts, the second of which, dealing with the post-Alexandrian period, has been lost, with the exception of a small fragment that was added by the copyists to the first part. Many passages quoted in the Talmud are missing in the present edition of the "Seder 'Olam."

Object of Work. The author probably designed the work for calendrical purposes, to determine the era of the Creation; his system, adopted as early as the third century (see Era), is still followed. Adhering closely to the Bible texts, he endeavored not only to elucidate many passages, but also to determine certain dates which are not indicated in the Bible, but which may be inferred by calculation. In many cases, however, he gave the dates according to tradition, and inserted, besides, the sayings and halakot of preceding rabbis and of his contemporaries. In discussing Biblical chronology he followed three principles: (1) to assume that the intention of the Biblical redactor was, wherever possible, to give exact dates; (2) to assign to each of a series of events the shortest possible duration of time, where necessary, in order to secure agreement with the Biblical text; and (3) to adopt the lesser of two possible numbers. The following examples will illustrate the manner in which these principles are applied. The confusion of languages is said to have taken place in the days of Peleg (Gen. x. 25). The author concludes that the first year of Peleg's life can not be meant, as at the time of the confusion Peleg had a younger brother, Joktan, and the latter had several children; nor could it have occurred during the middle years of his life, for Peleg lived 239 years, and the designation "middle years" is not an exact one (Gen. xi. 18–19); had the redactor intended to indicate only a general period, he would have used the phrase "in the days of Peleg and Joktan." The Bible must therefore mean that the confusion of languages took place in the last year of Peleg's life, and by comparing the dates of the previous generations, the author concluded that it occurred 340 years after the Flood, or 1,996 years after the creation of the world.

Examples of Method.

After dealing, in the first ten chapters, with the chronology of the period from the creation of the world to the death of Moses, the writer proceeds to determine the dates of the events which occurred after the Israelites, led by Joshua, entered the Holy Land. Here Biblical chronology presents many difficulties, dates not being clearly given; and in many cases the "Seder ‘Olam" was used by the later Biblical commentators as a basis of exegesis. Thus, it is known that from the entry of the Israelites into the Holy Land to the time of Jephthah a period of 300 years elapsed (Judges xi. 26). By computing the life periods of the Judges and assuming that Jephthah sent his message, in which he alluded to the 300 years, in the second year of his rulership, the writer concluded that the reign of Joshua lasted twenty-eight years. It may be added that he placed the making of the image for Micah (*ib.* xvii. 1 *et seq.*) and the destruction of nearly the whole tribe of Benjamin in consequence of the wrong done to the Levite and his concubine in Gibeah (*ib.* xix. 1 *et seq.*) in the time of Othniel.

It is further stated that Solomon began to build the Temple in the fourth year of his reign, 480 years after the Exodus (I Kings vi. 1), that is, 440 years after the Israelites entered the Holy Land. Thus there was a period of 140 years from the second year of Jephthah to the building of the Temple. The author of the "Seder ‘Olam" concluded that the forty years during which the Israelites were harassed by the Philistines (Judges xiii. 1) did not begin after the death of Abdon, as it would seem, but after that of Jephthah, and terminated with the death of Samson. Consequently there was a period of eighty-three years from the second year of Jephthah to the death of Eli, who ruled forty years (I Sam. iv. 18), the last year of Samson being the first of Eli's judgeship. At that time the Tabernacle was removed from Shiloh, whither it had been transferred from Gilgal, where it had been for fourteen years under Joshua; consequently it remained at Shiloh for a period of 369 years, standing all that time on a stone foundation. It is also to be concluded that Samuel judged Israel for eleven years, which with the two years of Saul (*ib.* xiii. 2), the forty of David's reign (I Kings ii. 11), and the four of Solomon's reign, make fifty-seven years, during which the Tabernacle was first at Nob, then at Gibeon. The chronology of the Kings was more difficult, as there were differences to reconcile between the books of Kings and of Chronicles. Here especially the author applied the principle of "fragments of years" ("shanim meḳuṭṭa‘ot"), by which he regarded the remainder of the last year of any king's reign as identical with the first year of his successor's. In the twentieth chapter, which closes the second part ("Baba Meẓi‘a"), the author deals with the forty-eight prophets that flourished in the land of Israel. Beginning with Joshua, the author reviews the whole prophetic period which terminated with Haggai, Zechariah, and Malachi, elucidating as he proceeds many obscure points. Thus, the prophet mentioned in Judges vi. 8 was, according to the "Seder ‘Olam," Phinehas, and the man of God that came to Eli (I Sam. ii. 27) was Elkanah.

The prophecy of Obadiah occurred in the time of Amaziah, King of Judah (comp., however, Yalḳ., Obad.), and those of Joel, Nahum, and Habakkuk in the reign of Manasseh. After devoting the twenty-first chapter to the prophets that lived before the conquest of the land, to the seven prophetesses, and to the seven prophets of the Gentiles, the author resumes the chronology of the Kings. He continues it to the end of ch. xxvii., where he reaches the destruction of the Temple, which, according to his computation, occurred after it had existed 410 years, or 3,338 years after the creation of the world. Then follow the seventy years of the Captivity and the 420 years of the Second Temple, which was destroyed, as may be seen, in the year 3828 of the Creation.

The 420 years of the Second Temple are divided into the following periods: the domination of the Persians, 34 years; of the Greeks, 180 years; of the Maccabees, 103 years; of the Herods, 103 years. It will be seen that the allowance, contrary to historical facts, of only thirty-four years for the Persian domination is necessary if agreement with the Biblical text is to be insisted upon; for it is stated (Dan. ix. 24) that the second exile was to take place after seventy Sabbaths of years (= 490 years). If from this number the seventy years of the first Captivity be deducted, and the beginning of Alexander's domination over Palestine be placed, in accordance with Talmudical evidence, at 386 years before the destruction of the Second Temple, there remain only thirty-four for the Persian rule. From the destruction of the Second Temple, which, according to the "Seder ‘Olam," occurred at the end of the last week of the Sabbatical year, to the suppression of Bar Kokba's revolt, or the destruction of Bethar, was a period of fifty-two years. But the text here is very confused, and gave rise to various emendations and interpretations (comp. Salzer in Berliner's "Magazin," iv. 141 *et seq.*).

Authorship.

Assuming that this "Seder ‘Olam" is the same as the "Seder ‘Olam" mentioned in the Talmud, Jewish authorities generally ascribe its authorship to the well-known Talmudist Jose b. Halafta, on the strength of R. Johanan's statement, "The tanna of the ‘Seder ‘Olam’ was R. Jose" (Yeb. 82b; Niddah 46b). Johanan's comment is supported by the fact that Jose was known as one who occupied himself with Jewish chronology; further, many sayings of R. Jose's quoted in the Talmud are paralleled in the "Seder 'Olam." Objecting, however, that the "Seder 'Olam" often conflicts with opinions of Jose's expressed in the Talmud, that Jose is referred to in it in the third person ("R. Jose said"), and finally that mention is made in it of Talmudists that lived later than Jose, Ratner ("Mabo leha-Seder 'Olam Rabbah," Wilna, 1894) concludes that Jose was not its author; he thinks that Jose was only the principal authority of the "Seder 'Olam," and that Johanan's statement, mentioned above, is similar to another statement made by him—"Any anonymous opinion in the Mishnah belongs to R. Meïr" (Sanh. 86a), although the redactor of the Mishnah was Judah I. Ratner further supposes that R. Johanan himself compiled the work, following generally the opinion of R. Jose. He endeavors to prove this view by showing that many utterances of R. Johanan are taken from the "Seder 'Olam."

Ratner's objections, however, are answered by other scholars, who think that in the "Seder 'Olam" Jose preserved the generally accepted opinions, even when they were contrary to his own, as is clearly indicated in Niddah (*l.c.*). Besides, this work, like all the works of the ancient Talmudists, underwent many alterations at the hands of the copyists. Very often, too, finding that the utterance of a later rabbi agreed with the "Seder 'Olam," the copyists inserted the name of that rabbi. A careful examination shows that certain additions are later than the latest midrashim, and it may be that Abraham ibn Yarḥi (*l.c.*), Isaac Lattes ("Sha'are Ẓiyyon," p. 25), and Menahem Meïri (introduction to Abot, p. 14), who seem to place the redaction of the "Seder 'Olam" at the time when the Massektot Derek Ereẓ Rabbah, the Derek Ereẓ Zuṭa, the Soferim, and other later treatises were composed, may have referred to the work in its present form.

Besides directly quoting the "Seder 'Olam," the Talmud often alludes to it under "tanya" (= "we learned"), "tana" (= "he learned"), "tanu rabbanan" (= "our teachers learned"), "amar mar" (= "the teacher said"): often the sentences following these phrases are found in the "Seder 'Olam." In addition, many of its passages have been taken into the Mishnah without any allusion to their source. It is not mentioned in the Jerusalem Talmud, although several passages in the latter are based on it. Finally, many of the sayings of the "Seder 'Olam" have been taken into the Mekilta, the Sifra, and the Sifre.

The "Seder 'Olam Rabbah" first appeared at Mantua, in 1514, together with the "Seder 'Olam Zuṭa," the "Megillat Ta'anit," and Abraham b. David's "Sefer ha-Ḳabbalah." It has been reedited several times since then. In 1577 the "Seder 'Olam Rabbah" and the "Seder 'Olam Zuṭa" were published in Paris, with a Latin translation by Gilbert Genebrard. The former was edited, with a Latin translation, notes, and introduction, by John Meyer (Amsterdam, 1699). Commentaries on the work were written by Jacob Emden (with the text, Hamburg, 1757), by Elijah Wilna (with the text, Shklov, 1801), and by Enoch Zundel b. Joseph (a double commentary, "'Eẓ Yosef" and "'Anaf Yosef," Wilna, 1845). The three latest editions are those of Ratner (with critical and explanatory notes, Wilna, 1897), A. Marx (who published the first ten chapters, basing the text upon different manuscripts and supplying it with a German translation and an introduction; Berlin, 1903), and Jeroham Meïr Leiner (containing the commentaries of Jacob Emden and Elijah Wilna, and the editor's annotations under the title "Me'r 'Ayin," Warsaw, 1904).

Genealogy of the Exilarchs.

SEDER 'OLAM ZUṬA: Anonymous chronicle, called "Zuṭa" (= "smaller," or "younger") to distinguish it from the older "Seder 'Olam Rabbah." This work is based upon, and to a certain extent completes and continues, the older chronicle. It consists of two main parts: the first, comprising about three-fifths of the whole, deals with the chronology of the fifty generations from Adam to Jehoiakim (who, according to this chronicle, was the father of the Babylonian exilarch), the second deals with thirty-nine generations of exilarchs, beginning with Jehoiachin. It is apparent that the object of this work was to show that the Babylonian exilarchs were direct descendants of David. After a short introduction, taken from the "Seder 'Olam Rabbah," giving the general chronology from Adam to the destruction of the Second Temple—a period of 3,828 years—and stating the number of years which elapsed between the most important events, such as between the Flood and the confusion of tongues, etc., the chronology recommences with Adam. The "Seder 'Olam Zuṭa" is more complete at this point than the larger work, as it gives the duration of the generations between Adam and Abraham, which is lacking in the "Seder 'Olam Rabbah." It gives also the lifetime of each of Jacob's twelve sons as recorded by tradition. Otherwise it merely enumerates the generations.

From David onward it gives the names of the high priests and prophets who lived in the time of each king. Thus, for instance, David had Abiathar as high priest, and Nathan and Gad as prophets; Solomon, who ascended the throne at the age of three, had Zadok for high priest, and Jonathan, Iddo, and Ahijah as prophets. In this way it completes the list of the high priests enumerated in I Chron. v. 34 *et seq.* Shallum (verses 38-39) officiated in the time of Amon, and between the former and Azariah, who served in the time of Rehoboam, there were twelve high priests. But in I Chron. (*l.c.*) only five high priests are enumerated, whose names are not found at all among those given by the "Seder 'Olam Zuṭa." The author of the work divided these fifty generations into five series, each of ten generations, the last of each series being, respectively, Noah, Abraham, Boaz, Ahaziah, and Jehoiakim.

The second part of the work begins with the statement that Jehoiachin, who reigned only three months

The Descendants of Jehoiachin.

and ten days, was carried into captivity by Nebuchadnezzar (comp. II Kings xxiv. 8; II Chron. xxxvi. 9). He was afterward given high rank by Evil-merodach, thus becoming the first prince of the Captivity. Correcting the somewhat confused genealogical account of I Chron. iii. 17–19, the "Seder 'Olam Zuṭa" declares that Jehoiachin had four sons, the eldest of whom was Shealtiel, who succeeded his father. It is worth while noting that, according to this chronicle, Darius conquered Babylon after it had been supreme for seventy years, beginning with the reign of Nebuchadnezzar, and fifty-two years after the destruction of the First Temple. Zerubbabel, Shealtiel's son, who departed for Jerusalem in the first year of the reign of Cyrus, returned to Babylon after the Temple and the walls of Jerusalem had been rebuilt by Ezra, and succeeded his father in the exilarchate. Then the chronicle enumerates the successive exilarchs, the account being in part taken from I Chron. iii. 16 *et seq.*, but differing greatly from the text of the latter. In fact, the first, thirteenth, sixteenth, eighteenth, and nineteenth exilarchs (the last one being Shaphat, the father of Anan), whose lives extended over a period of more than 600 years, are mentioned in I Chron. (*l.c.*) not as immediate successors, but as related individuals, and in contemporaneous groups. Sometimes, too, the father in I Chronicles is the son in the "Seder 'Olam Zuṭa."

With the deaths of Haggai, Zechariah, and Malachi—more exactly, in the fifty-second year of the Persian domination, or year 3442 of the Creation—prophecy ceased and the period of the wise men ("ḥakamim") began. From Hananiah (Zerubbabel's grandson) onward every exilarch is indicated as having been guided by wise men. The names of the kings that reigned over Palestine from Alexander the Great to the destruction of the Second Temple are given. Like the "Seder 'Olam Rabbah," this chronicle gives the reigns of the Maccabees and the Herods as covering 103 years each. It may be stated that the Herodian dynasty consisted, according to the "Seder 'Olam Zuṭa," of three kings only—Herod, Agrippa, and Monobaz; at the end of Monobaz's reign and during the time of the eleventh exilarch, Shechaniah, the son of Shemaiah, the Romans destroyed the Temple. Further, from Nahum, the seventeenth exilarch, the names are given of the wise men, probably the chiefs of the academy, who assisted the exilarchs. With Rab Huna, the twenty-ninth exilarch, the direct male line of descent from David terminated. The exilarchs following are stated to have been descendants of Rab Huna through his daughter, the wife of R. Hananiah, the head of the yeshibah, whose marriage is related at length.

After having stated that Mar Zuṭra II., the thirtieth exilarch, was executed in the year 478 C.E., and that his posthumous son Mar Zuṭra III. betook himself, in the year 4280 of the Creation (= 520 C.E.), to Palestine, where he became chief of the Sanhedrin, the chronicle mentions eight succeeding exilarchs, the last one being Rab Ḥazub, son of Rab Phinehas. Apart from certain misstatements, this part contains many authenticated facts, and is therefore considered by modern scholars as a document of historical value. It may be seen that the lives of thirty-one exilarchs covered a period of more than 900 years, averaging three exilarchs to a century. This might help to determine the time at which the "Seder 'Olam Zuṭa" was written, for the thirty-ninth exilarch, according to this estimate, would have lived at the end of the eighth century. The additions of the copyists, however, render this task difficult.

In a fragment of a chronicle published by Neubauer ("M. J. C." i. 197) there is a sentence, regarding the reign of John Hyrcanus, which is found in the "Seder 'Olam Zuṭa" but is referred to the "Seder 'Olam de-Rabbanan." Lazarus (Brüll's "Jahrb." x. 8) supposes that after "de-Rabbanan" the word "Sabura'e" should be inserted, as a chronicle under the title "Seder 'Olam de-Rabbanan Sabura'e" is mentioned by Baruch b. Isaac of Worms ("Sefer ha-Terumah," Hilkot "'Abodah Zarah," § 135) and by Moses of Coucy ("Sefer Miẓwot Gadol," ii. 866), in connection with the statement that the year 4564 (= 804 C.E.) was a Sabbatical year. This induced many modern scholars, as Grätz, Steinschneider, and Zunz, to identify the "Seder 'Olam Zuṭa" with the "Seder 'Olam de Rabbanan Sabura'e."

Time of Redaction.

As to the determination of the time of its redaction, there have existed many differences of opinion among authorities. Zunz observed that the sentence quoted by R. Baruch and Moses of Coucy with regard to the year 804 C.E. (see above) might be the author's colophon—omitted by the copyist—showing the time of composition. Zunz's opinion has since apparently been confirmed by a manuscript of the "Seder 'Olam Zuṭa" (Parma, De Rossi MSS., No. 541, 10, published by S. Schechter in "Monatsschrift," xxxix. 23 *et seq.*) which lacks the introduction spoken of above, but has at the end the following sentence: "From Adam to this day, which is the eleventh day of Kislew of the Sabbatical year, 4,564 years have elapsed": this gives the year 804 C.E. However, a closer examination of the text seems to show that the enumeration of the eight exilarchs following Mar Zuṭra III. was added by two later hands—that of six by one, and that of two, Phinehas and Ḥazub, by another—and that the chronicle was composed in the first quarter of the sixth century.

For the editions and Latin translations of the "Seder 'Olam Zuṭa" see SEDER 'OLAM RABBAH. It must be added that Abraham Zacuto inserted in his "Yuḥasin" the greater part of this chronicle, his text being more nearly correct than that of any other edition or manuscript. Zacuto's text was republished by Neubauer in his "Mediæval Jewish Chronicles" (ii. 67 *et seq.*), where the text of the Mantua edition also is given. The second part, dealing with the exilarchs, has been edited by Lazarus in Brüll's "Jahrb." (x. 157 *et seq.*).

E. C. M. SEL.

SEDUCTION: The act of inducing a woman or girl of previously chaste character to consent to unlawful sexual intercourse. The Mosaic law (Ex.

xxii. 15, 16, Hebr. [A. V. 16, 17]) says: "And if a man entice a virgin that is not betrothed and lie with her, he shall surely endow her to himself for a wife. If her father shall refuse to give her unto him, he shall weigh out silver according to the endowment [not dowry] of virgins." As may be seen under Ketubah, the groom makes a written contract with the bride, securing to her, aside from his other duties, upon death or divorce, fifty shekels of silver, the virgin's endowment. For the protection of wives the Law fixed the minimum of this sum at a mina (in Babylon sixty shekels, among the Hebrews fifty shekels) for a virgin, and half as much for a widow.

In City and in the Country.

The Mishnah (Ket. ii., iii.) does not speak of any means for forcing the seducer to marry the seduced girl, but only of the penalty in money. It nowhere defines the meaning of "enticing"; but it seems that no misrepresentation or promise of marriage is implied by it; the enticed (or rather the deceived) girl is named only as one who consents, in contrast to the victim of force, who is spoken of in Deut. xxii. 28, 29. When the act takes place in a city, the girl's consent is presumed in the absence of witnesses to the contrary; if in the field or forest, where her cries for help would not have brought any one to defend her, the presumption lies the other way (*ib.* 26, 27).

The status of the girl's father in the text greatly narrows the application of the Law; for she must apparently be young enough to be in the father's power; that is, she must be either below the age of puberty (less than twelve years and a day) or a "na'arah" (A. V. "damsel"), which she remains only until she is twelve years and six months of age; for thereafter she is "overripe" ("bogeret"). To the Western world of the present day this restriction would make the whole Law worthless for lack of cases to which it could apply; not so in Palestine, where very few girls, in the days of the Mishnah, were not betrothed at the age of twelve years and six months.

Though the death of the father before the seduction defeats the literal enforcement of the Law, the tradition in such a case awards the amount of the penalty to the girl herself; so, also, if the father should die before the penalty is adjudged. But if he dies after judgment, the benefit thereof descends to his sons as heirs.

Where the Law forbids intercourse between the seducer and the seduced under penalty of death, the mulct ("ḳenas") of fifty shekels is not paid; for, under the general principle (derived from Ex. xxi. 22), "those deserving of death do not pay." But where the act is punishable only by excision ("karet"), which carries stripes, or by stripes only, as in several cases of incest, or some other forbidden connections, the mulct is only remitted if the seducer has been criminally convicted, according to the rule, "Those who are flogged do not pay."

Exceptions.

Aside from this class of cases, there are ten other exceptions for which the mulct is not paid: in the case of the (1) bogeret; (2) impotent ("aylonit"); (3) insane; (4) deaf-mute; (5) one refusing (a girl married by mother and brothers when she was an infant and who refuses her husband when she reaches puberty); (6, 7, 8) one converted from the heathen, redeemed from captivity, or manumitted from bondage after the age of three years; (9) one divorced, though still a virgin; (10) one of an evil name, proof of which is established by the evidence of two witnesses to acts of solicitation.

It is held by the old authorities that the mulct can be adjudged only upon proof by witnesses, not upon the seducer's admission; this doctrine, when carried out, must have almost entirely nullified the Law for inflicting the mulct or penalty.

But the seducer is liable also for depreciation ("pegam") and for shame. The former is estimated on the basis of the loss of value in a slave-girl for being deflowered; the latter depends on the social standing of the girl and inversely on the rank or standing of her seducer. The damages under these two heads go to the father along with the fifty shekels, or to the girl when he is dead; and they may be awarded on the seducer's admission.

Views of Maimonides.

Maimonides ("Yad," Na'arah) treats the law of the seduced and of the violated girl very clearly, drawing from Ket. ii.-iii., the Gemara on the same, and Ḳid. 46. He adds, almost entirely on his own authority, that the penalty and damages should be paid only when the seduction has taken place without the father's knowledge and consent; but that for the father to say to a young man, "Cohabit with my daughter, and pay me penalty and damages," would be highly sinful, the father breaking the precept of the Law (Lev. xix. 29), "Profane not thy daughter to make her a harlot," and the daughter sinning against the prohibition, "There shall be no harlot ["ḳedeshah"] of the daughters of Israel" (Deut. xxiii. 18). No right of action can arise from such a shameful agreement.

One incident of seduction—the father's responsibility for the support of the child, the fruit of lawless love—is not treated by the Talmud or the codes in connection with the "penalty" and damages arising from the act, but is disposed of elsewhere. It has been shown under Agnates that the child of an Israelite from "anywhere," except one born of a Gentile or a bondwoman, is considered a son or a daughter for all the purposes of the Law, and more especially for the purposes of inheritance. So also the father is bound for the support of his child in infancy, no matter whether the child was born in wedlock or not. An ordinance ("taḳḳanah") proclaimed at Usha in the latter half of the second century regulates the child's right to support; but this right was undoubtedly recognized long before. The right of a daughter to be supported till "overripeness" (*i.e.*, the age of 12½ years) or betrothal, whichever happens first, from the estate of the dead father, is derived from the mother's ketubah, and does not therefore belong to a natural daughter (see "Yad," Ishut, xix. 14).

The Shulḥan 'Aruk says very little concerning the seduced damsel, as the jurisdiction of the courts over the subject had long before been lost, and this code confines itself to practical subjects.

E. C. L. N. D.

SÉE: A family of Alsatian origin whose most important members are:

Abraham Adolphe Sée: French barrister; born in Colmar, Alsace, 1819; died in Paris Feb. 26, 1905; brother of Marc Sée and Gustave Sée. He was educated in his native town and, on being admitted to the bar, settled there as counselor at law. When, in 1871, France lost Alsace, Sée removed to Paris, where he practised law in the court of appeals.

Sée took an active part in Jewish affairs. He was president of the Jewish consistory at Colmar; he financially assisted the rabbinical school there; and he was a member successively of the Jewish consistories of Vesoul and Epinal.

Bibliography: *Jew. Chron.* March 3, 1905, p. 11.

Camille Sée: French deputy and jurist; born at Colmar, Alsace, March 10, 1847; nephew and son-in-law of Germain Sée. Having studied law at the University of Strasburg, he became counselor at Paris in 1869. In 1870, after the downfall of the empire, he was appointed assistant to the secretary of the interior, resigning in the beginning of 1871. In 1872 he became subprefect of Saint-Denis, but resigned in 1874. Two years later he was elected deputy from Saint-Denis, joining the left wing of the Republicans; he was reelected in 1877, but was defeated in 1881. During the five years of his parliamentary service he took special interest in legislation concerning the education of girls; and measures proposed by him for the government of girls' schools were passed by the Senate in 1880. In 1881 Sée received the title of councilor of state.

Sée is the author of "Les Lycées et Collèges de Jeunes Filles," Paris, 1881.

Bibliography: *La Grande Encyclopédie.*

S. F. T. H.

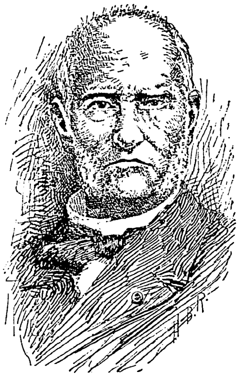
Eugène Léon Sée: French state functionary; born at Colmar, Alsace, Dec. 18, 1850. He graduated from the Free School of Political Science in 1873, and was one of the younger generation who, together with Thiers, Gambetta, Jules Favre, and others, rallied around the leaders of the Liberal party during the empire, and prepared the way for the Third Republic. He served the latter in various offices, namely, as secretary-general of the prefects of the departments of Tarn and Garonne, the Aube, and Upper Marne; subprefect of Toul (1877), Louviers (1880), Boulogne-sur-Mer (1882), and Rennes (1884); prefect of the Orne (1886), Upper Saône (1887), and Haute-Vienne (1891 to 1895). In 1896 he was a member of the extraparliamentary commission for administrative decentralization. Since Sept., 1897, he has filled the post of receiver and collector of taxes at Paris. He is the originator of a plan of cattle insurance in the country districts.

Since 1901 Sée has been a member of the central committee of the Alliance Israélite Universelle. He is also an officer of the Legion of Honor.

S. J. Ka.

Germain Sée: French physician; born at Ribeauvillé (Rappoltsweiler), Alsace, March 16, 1818; died in Paris May 12, 1896. After studying medicine at the Sorbonne, Paris, he graduated in 1846, and established himself as a physician in the French capital. In 1852 he became hospital physician; in 1866 professor of therapeutics in the medical faculty as successor to Armand Trousseau; in 1869 professor of medicine, in succession to Monneret, and member of the Académie de Médecine; and in 1876 physician at the Hôtel-Dieu.

Sée studied therapeutics from the physiological point of view, and, not contenting himself with clinical observation, had recourse to experimental pathology. He was a collaborator on the "Nouveau Dictionnaire du Médecine Pratique," and contributed many essays to the medical journals. He was the author of: "De la Chorée et des Affections Nerveuses en Général," Paris, 1851; "Leçons de Pathologie Expérimentale," *ib.* 1866; "Du Sang et des Anémies," *ib.* 1866; "Du Diagnostic et du Traitement des Maladies du Cœur," *ib.* 1878 (translated into German by Max Salomon, 5 vols., Berlin, 1886).



Germain Sée.

S. F. T. H.

Gustave Sée: French forester; born at Ribeauvillé (Rappoltsweiler), Alsace, Dec. 25, 1832; brother of Abraham Adolphe Sée and Marc Sée. His classical studies were pursued at the lyceum of Strasburg. From 1853 to 1855 he attended the Foresters' School at Nancy, and in the latter year he was appointed warden-general of forests. He subsequently held similar posts at Allevard (Isère), Niederhaslach (Lower Alsace), and Sartène (Corsica). In 1862 he was promoted to the rank of subinspector. In 1865 he was recalled to Paris by the central administration of the Department of Agriculture, and attached to the service of the inspector-general of the department of forests, a position which he held until 1870, when he was appointed subdirector of the bureau of replanting. In 1877 he became head of the bureau; and in 1881 he was appointed inspector-general of the department of forests. He retired from active service in 1898.

Julien Sée: Librarian of the Bibliothèque Professionelle d'Art et d'Industrie, Paris; born Aug. 31, 1839, at Colmar, Upper Alsace. He is the author of "Le Journal d'un Habitant de Colmar Pendant le Guerre de 1870" and "Nos Elections au Reichstag" (1874). Sée made the first translation in French of Joseph ha-Kohen's "'Emeḳ ha-Baka," a history of the sufferings of the Jewish people from the time of their dispersion to the present day (Paris, 1881). Sée is an officer of public instruction.

Leopold Sée: French general; born at Bergheim, Alsace, 1822; died in Paris March 17, 1904. In 1840 he entered the military school of Saint-Cyr, and in 1849 received his captain's commission and served in Algeria. Five years later he was ordered to the Crimea, and took part in the battles of Inkerman and Traktir as well as in the storming of Malakoff, where he was wounded. He was appointed chief of battalion the following year. He served in the Italian campaign of 1859, and fought at Magenta, and in 1867 was with the army of occupation in the Papal States. The following year he was commissioned colonel of the sixty-fifth regiment of the line at Valenciennes, joining in 1870 the fourth army corps commanded by de Ladmirault: he fought at Borny, Gravelotte, and Saint-Privat, being severely wounded in the last-cited place. Regarded by the Prussians as invalided, he was allowed to remain in France unconditionally. After a few months of treatment, however, he recovered and offered his services to the Government of National Defense, which appointed him brigadier-general and placed him in charge of the lines at Carentan. In 1871 he commanded the subdivision of Seine-et-Marne at Melun, and in 1873 was placed at the head of the twenty-sixth brigade of infantry at Langres, being transferred to the eighteenth brigade at Paris two years later. In 1880 he was promoted general of division, commanding the twentieth division of infantry, but was transferred three years later to the tenth at Paris, which command he held until his retirement in 1887.

In 1885 Sée was made a grand officer of the Legion of Honor.

S. J. Ka.

Marc Sée: French surgeon; born at Ribeauvillé (Rappoltsweiler), Alsace, Feb. 17, 1827; nephew of Germain Sée. He received his education at the Sorbonne, Paris, graduating as doctor of medicine in 1856 and becoming "agrégé" in 1860. He was appointed hospital surgeon in 1866, serving at the hospitals of Bicêtre, du Midi from 1867, Sainte-Eugénie from 1872, and Maison Municipale de Santé from 1875, in which year he was appointed also professor of anatomy at the Sorbonne.

Sée took an active part in the Franco-Prussian war of 1870–71, and was elected a member of the Paris Académie de Médecine in 1878.

Sée was a collaborator on Cruveilhier's "Traité d'Anatomie Descriptive," and has written many essays for the medical-journals. Among his works may be mentioned: (with Béclard) "Eléments d'Histologie Humaine" (Paris, 1856; 2d ed. 1868), a translation of Kölliker's "Handbuch der Gewebelehre für Aerzte und Studirende"; (with Tarnier and Lenoir) "Atlas de l'Art des Accouchements" (*ib.* 1871); "Rapport sur la Campagne Faite par la Deuxième Ambulance" (*ib.* 1871), report on his treatment of 1,200 wounded after the battle at Beaumont; "Recherches sur l'Anatomie et de la Physiologie du Cœur" (*ib.* 1875).

SEEGEN, JOSEF: Austrian balneologist; born at Polna May 20, 1822. He studied medicine at Prague and Vienna (M.D. 1847), becoming privatdocent at Vienna in 1854 and assistant professor in 1859. From 1854 to 1884 he practised during the summer months at Carlsbad. In 1856 Seegen founded with Oppolzer and Sigmund the Verein für Quellenkunde in Oesterreich.

Seegen has published many essays in the medical journals, especially on balneology, and is the author of: "Compendium der Allgemeinen und Speciellen Heilquellenlehre," Vienna, 1857 (2d ed. 1862): "Diabetes Mellitus," Berlin, 1875; "Studien über den Stoffwechsel im Thierkörper," *ib.* 1887; "Die Zuckerbildung im Thierkörper, Ihr Umfang und Ihre Bedeutung," *ib.* 1890.

SEELIG (ABI 'EZRI) BEN ISAAC MARGOLIOTH: Polish Talmudist of the seventeenth and eighteenth centuries; born at Polock; died probably in Palestine. He was preacher at Prague and at Kalisz; and after the death of Israel Darshan he went to Yaroslav. From 1701 to 1711 he was a beneficiary of the bet ha-midrash of Bärmann Levi at Halberstadt, and he was finally sent by his benefactor to Palestine. Seelig was the author of "Kesef Nibḥar" (Amsterdam, 1712), a homiletic commentary on the Pentateuch, and of "Ḥibbure Liḳḳuṭim" (*ib.* 1715), collectanea consisting of Talmudic novellæ and responsa.

E. C. M. Sel.

SEER.—Biblical Data: Rendering in the English versions of the Hebrew הראה, which in I Sam. ix. 9 is reported to have been the old popular designation for the later נביא ("prophet"). The seer was an "ish Elohim," a man of God, and for a remuneration, as would appear from the story of Saul in quest of his father's asses (I Sam. ix. 3 *et seq.*), acted as intermediary between Yhwh and those that came to "inquire of him." In other words, he would consult Yhwh and give directions accordingly. Samuel more especially is designated as "the seer" (I Sam. ix. 11, 18, 19; I Chron. ix. 22, xxvi. 28, xxix. 29); but Hanani also bears the title (II Chron. xvi. 7, 10). A synonym, חזה or החזה, likewise is translated "the seer." Gad is known as such a "ḥozeh" (I Chron. xxix. 29), more especially as the ḥozeh of David (*ib.* xxi. 9; II Chron. xxix. 2, 5). Heman is another denominated "the king's seer," with the addition of the qualifying phrase "in the words of God" (I Chron. xxv. 5), as are also Jeduthun (II Chron. xxxv. 15), Iddo (Hebr. "Jedi" or "Jedo"; *ib.* ix. 29, xii. 15), Hanani (*ib.* xix. 2), and Asaph (*ib.* xxix. 30).

As the seer is a ḥozeh, his written "visions" are called "ḥazot" (II Chron. ix. 29). The title (in the plural "ḥozim" = "seers") occurs in parallelism with "prophets" ("ro'im"; Isa. xxx. 10). The ro'im are called the heads, while the nebi'im are called the eyes of the people (*ib.* xxix. 10); all "vision" is become as a sealed book. In Micah the seers are quoted in one breath with the diviners (Mic. iii. 7). As for the prophets that "see vanity" and that "divine lies" ("see lies" in Ezek. xiii. 8), God's hand will be against them (Ezek. xiii. 9; comp. *ib.* xxii. 28).

——**Critical View:** Comparison of the foregoing passages makes it plain that the seer in primitive time passed, and perhaps with good reason, for a clairvoyant. Among the kindred races, the ancient Arabs and even their modern descendants, sheiks were and are found with the ability to give such counsel as Saul expected to receive from Samuel (Wellhausen, "Reste Arabischen Heidentums," 2d ed., pp. 135, 136; "Z. D. P. V." 1889). The distinction between both the priest ("kohen") and the diviner ("ḳosem"), on the one hand, and the seer, on the other, was probably that the kohen threw or shot lots (hence "torah"), the urim and thummim, in order to ascertain the future, and the ḳosem resorted to various tricks and incantations, while the seer spurned any of these accessories and paraphernalia, and discovered the will of Yhwh while in a state of trance. Balaam's description of himself as "geber shetum ha-'ayin," and later as "geluy 'enayim," and as seeing the visions of Shaddai (Num. xxiv. 4, 5, 15, 16) while falling, probably discloses the methods of the seers. They succeeded in putting themselves into a state of autohypnosis. The term "shetum ha-'ayin" ought to be read "ḥatum ha-'ayin" = "sealed as to the eye" (comp. Isa. xxix. 10, the "sealed" book in connection with seers upon whom sleep has fallen and whose eyes are tightly closed; or if the text be left unemendated, the strange word שתם certainly means "half-opened and fixed," "immovable," in order to produce the hypnotic state). When the seer falls (נפל) into this quasi-cataleptic condition (as Mohammed did) his eyes are inwardly opened ("geluy 'enayim"), and he sees the vision.

These ḥozim or ro'im became absorbed into the nebi'im, who in their earlier days were also mere shouting dervishes (hence their name, "nabi" = "shouter"), relying on song and dance to arouse themselves and others (I Sam. x. 5, 10 *et seq.*; "mitnabbe'im" note the "hitpa'el" in the verb in I Sam. x. 5). E. G. H.

SEESEN: Town in the Harz Mountains, where in the fall of 1801 Israel Jacobson founded the school which was called after him (see Jacobson, Israel). The institution received large endowments from the founder and his descendants, and from other philanthropists, especially Nathan Beer Isaac, court agent at Brunswick, being thereby enabled to receive a number of free scholars, among whom (from 1805) were many Christians, principally from Seesen. In 1810 the school was organized as an elementary common school. In the same year a temple was built by Jacobson for the institution, and was the first Jewish place of worship into which German sermons, a choral service, and an organ were introduced. The continuously increasing number of pupils necessitated repeated enlargements of the school. In 1886 the curriculum was changed in conformity with the Prussian normal-school plan for Realschulen. The school is under the supervision of the ducal school commission of Brunswick, and is empowered to give certificates for the one-year volunteer military service. The present (1905) director of the school is Dr. Emil Philippson. There are ten classes, with a total of 275 pupils, of whom 123 are Jews and 152 Christians.

In 1852 Jacobson's eldest son, **Meyer Jacobson,** founded in Seesen an orphan asylum for Jewish and Christian boys. The first building used for its purposes was the original home of the Steinway family of New York, and this was replaced by a large new building in 1902.

The Jews of Seesen number 69 in a total population of 4,729.

SEFER HA-TORAH. See Scroll of the Law.

SEFER YEẒIRAH. See Yeẓirah, Sefer.

SEFIROT, THE TEN: Potencies or agencies by means of which, according to the Cabala, God manifested His existence in the production of the universe. The term is derived from the Hebrew noun "sefirah," which, meaning originally "number" or "category," alternately assumed in the language of the Zohar the significations of "sphere" (σφαῖρα) and "light" (from ספיר). It was first used in a metaphysical sense by the anonymous author of the "Sefer Yeẓirah"; but the real doctrine of Sefirot, which became the corner-stone of the Cabala, dates from the twelfth century. It is based upon the Neoplatonic conception of God and the theory of emanation. The Neoplatonists, in order to surmount the difficulties involved in the idea of creatio ex nihilo, which is incompatible with their principle that God can have no intention, thought, word, or action, resorted to the doctrine of emanation. According to this doctrine all that exists has been produced not by any creative power, but as successive emanations from the Godhead; so that all finite creatures are part and parcel of the Divine Being. These emanations, or intelligences as they are called, are the intermediary agents between the intellectual and the material worlds.

Doctrine of Emanation.

The cabalists of the twelfth century, who shared the view of the Neoplatonists with regard to God, were naturally compelled to adopt the doctrine of emanation; but in order to clothe it in a Jewish garb they substituted the Sefirot for the intelligences. These Sefirot, according to their order of emanation, are divided into three groups: (1) the first three, forming the world of thought; (2) the next three, the world of soul; and (3) the next three, the world of corporeality. They are all dependent upon one another, being united like links to the first one, which was latent from all eternity in the En Sof as a dynamic force. This first Sefirah emanated from the Infinite Light of the En Sof, and is variously called כתר ("the Crown"), עתיקא ("the Aged"), נקודה ראשונה or נקודה פשוטה ("the Primordial Point" or "Simple Point"), רישא חוורה ("the White Head"), אריך אנפין ("the Long Face," "Macrosapon"; or "the Slow to Anger"; see Bloch, "Monatsschrift," 1905, p. 158), רום מעלה ("the Immensurable Height"), and אהיה ("I am"). From it emanated the masculine or active potency called חכמה ("Wisdom"), from which proceeded the feminine or passive potency denominated בינה ("Intelligence"). This first triad of the Sefirot forms the world of thought. The union of the masculine and feminine potencies, which are called also אבא ("Father") and אמא ("Mother"), produced again the active or masculine potency חסד ("Mercy") or גדולה ("Greatness"), and the feminine or passive potency דין, גבורה, or פחד ("Justice," "Power," or "Awe"), from the combination of which proceeded

Names and Derivation.

Relation to the En Sof.

תפארת ("Beauty"). These are the second triad of Sefirot, forming the world of soul. From the medium of the second triad, *i.e.*, תפארת, proceeded the masculine or active potency נצח ("Triumph"); this again gave birth to the feminine or passive potency הוד ("Glory"); and from the union of the two proceeded יסוד ("Foundation"). This triad of the Sefirot constitutes the world of corporeality or the natural world. The tenth and last Sefirah, called מלכות ("Kingdom"), is the sum of the permanent and immanent activity of the other Sefirot. Thus each triad is a compound of force, counter-force, and their connecting link; namely, active and passive agents and combination. They were all combined in the Adam Ḳadmon ("Primordial Man") or Adam ‘Ila’ah ("Heavenly Man").

There is a divergence of opinion among the cabalists concerning the relation of the Sefirot to the En Sof. Azriel (commentary on the "Sefer Yeẓirah," p. 27b) and, after him, Menahem Recanati ("Ṭa‘ame ha-Miẓwot," *passim*) considered the Sefirot to be totally different from the Divine Being; the "Ma‘areket" group took the Sefirot to be identical in their totality with the En Sof, each Sefirah representing merely a certain view of the Infinite ("Ma‘areket," p. 8b); the Zohar clearly implies that they are the names of the Deity, and gives for each of them a corresponding name of God and of the hosts of angels mentioned in the Bible; while Luria and Cordovero, without regarding them as instruments, do not identify them with the essence of the Deity. The "Absolute One," they argue, is immanent in all the Sefirot and reveals Himself through them, but does not dwell in them; the Sefirot can never include the Infinite. Each Sefirah has a well-known name; but the Holy One has no definite name ("Pardes Rimmonim," pp. 21-23). In so far as man is formed after his prototype, the primordial man, in whom were combined all the ten Sefirot, the latter are represented in his body by the ten following members: (1) the head, (2) the brain, (3) the heart, (4) the right arm, (5) the left arm, (6) the chest, (7) the right leg, (8) the left leg, (9) the genital organs, and (10) the complete body. See Cabala.

SEGOL. See Accents in Hebrew.

In the Fourteenth Century.

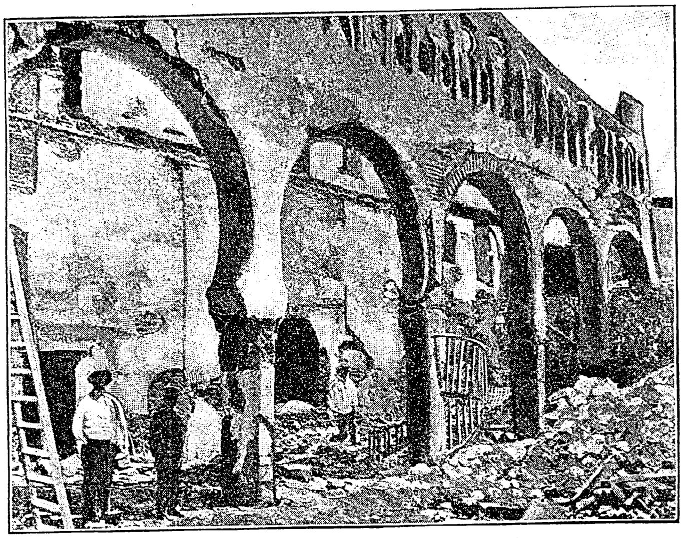
SEGOVIA: City of Spain in Old Castile; situated between Burgos, Toledo, and Avila. When conquered by Alfonso VI. it already had a considerable Jewish community, which in 1294 paid 10,806 maravedis in taxes. In 1303 the Jews failed to pay the 30 dineros which each Jew of fourteen years and upward was required to contribute to the bishop of the diocese; but the next year, on the complaint of the bishop, a special order was issued (Aug. 29) by King Ferdinand III., and they were forced to make immediate payment. The Jews of Segovia, who engaged in commerce and manufactures, and especially in tanning and the production of cloth, were very wealthy. They suffered severely during the fratricidal war between D. Pedro and Henry de Trastamara, being plundered of their goods and of all the notes and pledges which they held from Christians. Envy at the influence which certain Jews, *e.g.*, the king's physician, D. Meïr Alguades, exercised at court brought upon the Jewish inhabitants a charge of desecrating the host (1410). The bishop, Juan de Tordesillas, believed the malicious accusation, and caused several Jews—among them D. Meïr Alguades—to be arrested as participants in the crime; and two of the most distinguished were executed. Not satisfied with this, the bishop wrongfully accused the Jews of attempting to wreak their vengeance upon him by bribing his cook to place poison in his food. As a result of this charge many Jews were killed, and numbers fled from the city. This incident is recorded by Alonso de Spina, the author of "Fortalitium Fidei," who deeply hated and defamed his former coreligionists, and who in 1455 entered the monastery of S. Antonio in Segovia; by S. Usque, "Consolaçam as Tribulaçoens de Yisrael," No. 23, p. 191a; by Joseph ha-Kohen, "‘Emeḳ ha-Baka," pp. 78 *et seq.*; and by Colmenares, "Historia de Segovia," ch. xxvii.; while Alvar Garcia de S. Maria, who was the author of a history of the reign of Queen Katharina, and Paul de Burgos make no mention of the occurrence.

Synagogue Converted into a Church.

A further result of this accusation was that the Jews, by an edict issued by Queen Katharina in the name of her minor son, Juan II., were ordered to leave the old Juderia. Both their synagogues were taken from them; the larger one was transformed (Oct. 16, 1412) into a church known first as "Iglesia Nueva" (New Church) and later as "Corpus Christi," and the smaller one, in the Calle de la Almuzura, was given (April 12, 1413) to the S. Maria de la Merced monastery, for use as a hospital. The new quarters assigned to the Jews as their Juderia were situated on territory belonging to the above-mentioned monastery. After the death of the hostile Queen Katharina, however, the Jews were permitted to dwell outside the Juderia; but from Oct. 29, 1481, they were, by order of the Catholic regents, restricted absolutely to a new Juderia completely separated from the dwellings of the Christians. It was located between the former large synagogue and the present slaughter-house.

Massacre of Maranos in 1474.

On May 16, 1474, a terrible massacre took place among the Maranos, who, since 1391, had been quite numerous in Segovia. It was instigated by the ambitious Juan Pacheco, himself of Jewish origin, and other noblemen. In the same year the number of Jews in Segovia was still so large that their taxes amounted to 11,000 maravedis.



Remains of the Ancient Synagogue at Segovia.
(From a photograph.)

The Jewish cemetery was situated on the slope of the mountain near the Juderia, on the hill now known by the name "Cuesta de los Hoyos"; in 1886 complete skeletons were found there, especially in two large grottoes hewn in the rock. To these caves the Jews of Segovia are said to have fled when in 1492 the time-limit for their compulsory emigration expired; and from them they addressed a petition to the regents asking for a respite. Many found their death in these places of refuge, while others, to save their lives, submitted to baptism. For this reason the place for a long time bore the name "Prado Santo." After the expulsion the Juderia was called "Barrio Nuevo."

Among the wealthiest Jews in Segovia were various members of the Galhon family. Jacob Galhon, Judah Caragoçi, and Jacob Batidor acted in 1480 as representatives of the community. D. Juce Galhon de Pediaza sold his tannery before the expulsion, and left the country together with Rabbi Feayme (Ḥayyim or Ephraim) de Vidas, a son of Meïr de Vidas; whereas his son Gabriel remained in Spain and was baptized, assuming the name "De la Fuente." Another rich tanner was Judah Salero, whose son took the name "Juan Lopez." Abraham Senior, who stood in high favor with the court, was a native of this town.

Segovia was the birthplace or place of residence of many Jewish scholars. It numbered among its residents at the end of the thirteenth century the brothers Isaac and Jacob Cohen, cabalists, and Meshullam ben Ḥunain, author of a grammatical work; in the middle of the fifteenth century, the authors Joseph ben Shem-Ṭob and Joseph and Moses Benveniste.

The only existing (1905) memorials of the once flourishing Jewish community are the ruins of the large and handsome synagogue which was erected simultaneously with the old synagogue in Toledo (later transformed into the Church of S. Maria la Blanca) and in the same architectural style. This, as mentioned above, was transformed into the Corpus Christi Church and given to the monks of Parrades. From 1572 it was in the possession of the Franciscan nuns, and served as a church until in later days, owing to its beauty, it was included among the national monuments. The monastery was located next to the church, on the spot where the rabbis' house formerly stood. On Aug. 3, 1899, the synagogue was destroyed by fire, nothing remaining of the old building but its massive walls and two beautiful arcades. The walls were found to be without crack or crevice or sign of repair, thus disproving the statement made by Alonso de Spina and others 500 years before, when the accusation of host-desecration was lodged against the Jews, that on account of the supposed crime "the synagogue trembled and its walls and pillars shook."

SEGRE: Italian family of scholars.

Abraham ben Judah Segre (known as **Rab ASI**): Rabbi in Casale in the seventeenth and eighteenth centuries. He was on terms of intimate friendship with Judah Finzi of Mantua and with Benjamin Kohn of Reggio, and was a pupil of Judah Briel. A responsum of his, treating of the defilement of the tent ("Ṭum'at Ohel"), is reprinted in Lampronti's "Paḥad Yiẓḥaḳ," p. 72; and another is included in Corinaldi's "Dibre Shalom we-Emet." He was the author also of a poem expressing grief over the ravages of a pestilence, in which the words of Middot are introduced in such a manner as to form the opening and closing phrases of each of the four cantos. According to Zunz ("Literaturgesch." p. 448), he was a descendant of the Judah ben Abraham who in 1627 was leader of the Jewish community at Chieri. Abraham is mentioned in Raphael Meldola's "Mayim Rabbim" (ii. 8), in Samson Morpurgo's "Shemesh Ẓedaḳah" (iii. 13), and in "Milḥamah la-Adonai" (p. 17, Amsterdam, 1714).

Bibliography: Nepi-Ghirondi, *Toledot Gedole Yisrael*, pp. 4, 7; Mortara, *Indice*, p. 60.

Abraham ben Judah Segre: Scholar of the eighteenth century; born at Turin; died at Safed 1772. He went to the latter city at the age of twenty-five, and there pursued his Talmudical studies together with the Polish scholar Israel Ashkenazi. He wrote commentaries on the Mishnah and on Maimonides' "Yad ha-Ḥazaḳah"; also a collection of responsa and sermons, published under the title "Ḥibburim." He is said to have had a family of ten sons and two daughters. At a ripe age he undertook travels abroad in order to collect alms. For a time he sojourned in Jerusalem.

BIBLIOGRAPHY: Nepi-Ghirondi, *Toledot Gedole Yisrael*, pp. 23-25; Mortara, *Indice*, p. 60.

Abraham ben Zarah Segre: Dayyan at Alexandria, where he died in 1641.

Alessandro Segre: Rabbi of Parma in the beginning of the nineteenth century.

Benjamin ben Judah Segre: Scholar of Vercelli; flourished in the eighteenth and nineteenth centuries. He was the father of Joshua Benzion Segre, who was a member of the Paris consistory from 1805 to 1809.

BIBLIOGRAPHY: Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 107; Mortara, *Indice*, p. 60.

Elisha ben Ḥayyim Segre: Lived in Vercelli in the seventeenth and eighteenth centuries. He was the father of Joshua Benzion Segre, rabbi of Vercelli.

BIBLIOGRAPHY: Mortara, *Indice*, p. 60.

Ḥayyim Segre: Scholar of Padua; flourished in the seventeenth and eighteenth centuries. He was the grandfather of Benjamin ben Judah Segre, and was one of the three Italian delegates who in 1746 were sent to the Levant in order to inquire into the origin and purpose of the Shabbethaian movement. He himself was a follower of Shabbethai Ẓebi.

Ḥayyim was the author of "Binyan Ab," in which he treated especially of R. Abbahu's rules regarding the blowing of the shofar at the New-Year festival. Ḥayyim was the father of Elisha Segre, rabbi of Vercelli.

BIBLIOGRAPHY: Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 107; Mortara, *Indice*, p. 60; Grätz, *Gesch.* x. 423.

Ḥayyim Segre: Scholar of Vercelli, where he died in 1854.

BIBLIOGRAPHY: Mortara, *Indice*, p. 60.

Jacob ben Isaac Segre: Rabbi of Casale Monferrato in the seventeenth century. According to Zunz's "S. P." p. 362, he died in 1619; but according to the same author's "Literaturgesch." p. 425, in 1629. An eminent liturgical poet, he was the author of: a hymn to the New Moon, in five stanzas, which is signed "Ya'aḳob Segre," and is reprinted in Mordecai Jare's "Ayyelet ha-Shahar"; a long prayer in prose, beginning with the words "U-beken ribbono shel 'Olam"; a seliḥah (in prose) on the siege of Casale in 1629, beginning with five stanzas; a poetical approbation of "Ḥesheḳ Shelomoh," which appeared in 1588; an approbation of Isaac Alatrino's commentary on the Song of Solomon (1605).

Jacob was on friendly terms with Mordecai Meisel of Prague, and wrote a poem on the occasion of the founding of the Meisel Synagogue (Purim, 1590). Another of his poems has been inscribed on a tablet in that synagogue.

Jehiel Benjamin Segre: Rabbi of Treves in the eighteenth century. He was related to S. D. Luzzatto, and was a colleague of Raphael Nathan Tedesco Vitale.

BIBLIOGRAPHY: *Mosè*, i. 178; Mortara, *Indice*, p. 60.

Joshua Benzion Segre: Dayyan of Vercelli and, later, rabbi of Aqui Casale and Scandiano; died toward the close of the eighteenth century; son of Elisha and grandson of Ḥayyim Segre. De Rossi mentions Joshua as the author of an unpublished commentary on the Psalms, and relates that he had in his possession also the manuscript of "Asham Talui," a work written by Joshua against Christianity. This was replete with mistakes, and in it Joshua, although not conversant with the Latin language, endeavored to convict Jerome of having made inaccurate statements. The sixth chapter contained Joshua's disputation with Zuccati in Aqui regarding the oracle of Jacob, and also an attack upon Moronini's "Via della Fede." In his "Bibliotheca Judaica Antichristiana," p. 106, De Rossi has reprinted the preface to this work, and gives a synopsis of the various chapters. A condensation by Trefot was included in the library of J. Almanzi.

Joshua Benzion Segre: Son of Benjamin Segre; born at Vercelli 1720; died in Paris Aug., 1809. He was a real-estate owner, rabbi, and municipal councilor in his native city, and was an adherent of the Reform movement in Judaism. He was a member of the Italian delegation of the French Synod, to which the imperial ministry on July 25, 1806, propounded twelve questions. On Aug. 15 following Joshua delivered in Paris an Italian sermon in which he was greatly exaggerative in his praise of Napoleon. On Feb. 9, 1807, he was chosen ab bet din of the Jewish Sanhedrin, and thereafter lived in Vercelli until 1809, when he again went to Paris, in which city he remained till his death.

Nathaniel ben Aaron Jacob Segre: Born in the seventeenth century in Chieri, Savoy; died in 1691 at Cento, whither he had emigrated with his father. He was the author of a collection of responsa which he named "'Ezer Ya'aḳob" after his father, and which he dedicated to Abraham Rovigo. The work is extant in manuscript.

SEHERR-THOSS, JOHANN CHRISTOPH (in Jewish sources **FRANZ**), **FREIHERR VON:** Austrian soldier; born at Lissen Feb. 17, 1670; died Jan. 14, 1743. He is known in Jewish history as having been the first to give official recognition to the slander that the Austrian Jews treasonably aided the Prussian army in the wars between Frederick the Great and Maria Theresa. Appointed as commanding general of the troops in Moravia with headquarters in the fort of Spielberg at Brünn (Oct., 1741), he issued an order on March 14, 1742, that the Moravian Jews should by the twentieth of the same month pay 50,000 florins as a fine for their alleged treasonable acts. The Jews, through the intercession of Baron Aguilar, succeeded in obtaining a repeal of the edict (March 21); but a demand for the same sum was repeated, without, however, being given the objectionable name of a fine for treason, and the Jews were compelled to pay it. A consequence of this accusation was the decree expelling all the Jews of Moravia, Jan. 2, 1745, although the empress merely speaks of "various important reasons" which had prompted her to issue the edict of expulsion.

D.

SEIBERLING, JOSEPH: Russian educator, censor, and communal worker; born in Wilna; died at an advanced age after 1882. His father, Isaac Markusewich, was one of the few Jewish physicians who graduated from the university which existed in Wilna from 1803 to 1833, when it was removed to Kiev. Isaac's annotations of the "'Aruk," written about 1830, were published fifty years later in Smolenskin's "Ha-Shaḥar" (x. 44–52). Joseph Seiberling, who was educated in a German university (Ph.D.), was censor for Jewish books in Kiev for about fifteen years, and was entrusted by the Russian Ministry of Public Instruction with Jewish educational interests as the successor to Leon Mandelstamm ("Allg. Zeit. des Jud." 1868, p. 378). During the time he resided in St. Petersburg he took a prominent part in its Jewish communal affairs; he was also the friend and patron of such well-known scholars as I. B. Lewinsohn, A. B. Gottlober, P. Smolenskin, and others. He received from the Russian government four decorations, including that of the Order of Vladimir of the fourth class, and a pension in recognition of his services. Being more practical than his predecessor, he amassed a large fortune, and after having served his government thirty years he obtained permission to become an Austrian subject and settled in Vienna.

Seiberling wrote various articles on the Jews for the "Journal of the Ministry of Public Instruction."

S. P. Wi.

SEIR: 1. Region that took its name from Seir the Horite, whose descendants occupied it, followed by Edom and his descendants. The earliest reference to the name is found in the Harris Egyptian papyrus, in which Rameses III. says (*c.* 1200 B.C.) that he gained a victory over the "Sa-'a-ira" (= "Se'irim"), one of the Bedouin tribes of the desert. A distinction was at that time made between them and the Edomites. It has not been definitely decided whether the Seirites are identical with the Sheri mentioned in one of the Tell el-Amarna tablets. The Old Testament makes no distinction between them and the Edomites. According to the Old Testament, the Horites occupied the country before the Edomites (Gen. xiv. 6, xxxvi. 20; Deut. ii. 12, 22). These statements do not contradict the Egyptian account, since the word "Horite" (= "cave-dweller") is not the name of a certain tribe, but may be a designation for the Seirites. The Edomites probably conquered the country after 1200 B.C. The Old Testament mentions most frequently the "mountains" of Seir (Gen. xxxvi. 8 *et seq.*; Deut. i. 2, ii. 1, *et passim*).

But the phrase "land of Seir" also occurs (Gen. xxxii. 3, xxxvi. 30), as well as "sons of Seir" (II Chron. xxv. 11, 14; Gen. xxxvi. 20 *et seq.*), the latter referring both to the original inhabitants, the Horites, and to the Edomite population. The name of Seir, when used alone, designates either the land of Seir (Gen. xxxiii. 14 *et passim*) or the inhabitants (Ezek. xxv. 8). This district, the mountains of Seir, is Esau's home (Gen. xxxvi. 8), assigned to him and his descendants by Yhwh (Deut. ii. 5). Its location is given in Deut. ii. 1. The people of Israel skirted the mountains of Seir on the south so as not to enter Edomite territory; then they followed the eastern edge northward to the steppe of Moab. Hence the mountains of Seir lay on the east side of the Araba, that is, the dip extending from the Dead Sea southward to the northern point of the Gulf of Akaba (see Palestine; comp. Gen. xiv. 6). Mountains rise on both sides of the dip, those on the east being considerably higher than those on the west. On the north the mountains end in the deep cut of the Wadi al-Aḥsa; and on the south a steep slope of the mountains forms a natural boundary toward Moab, while on the east the hills slope down toward the Syrian desert.

The country of Seir is only about 15 or 20 miles wide, and is now called Jabal al-Shara. It is traversed by several valleys running east and west to the Araba. The mountain-tops are now bare, but the ancient name is generally interpreted to mean "a wooded region." The country is described as fertile; the information regarding it is still insufficient, being confined to the accounts of a few travelers. Although the name of Seir was originally that of this mountain country, it was gradually used in a wider sense, as designating the land of Edom; but the territory of Edom included the mountain country west of the Araba. The name is used in this wider sense in, for example, Judges v. 4, Deut. xxxiii. 2, and Josh. xi. 17. See Edom.

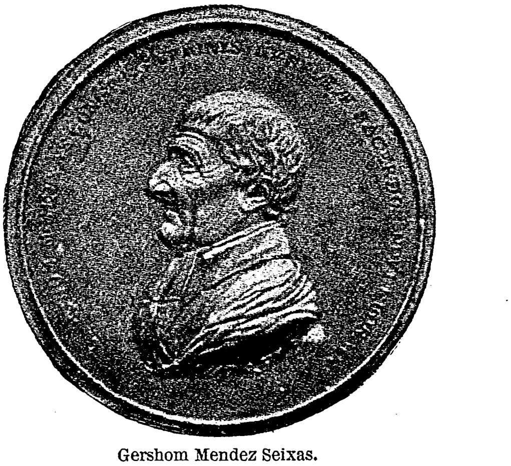
F. T. H.

SEIXAS: American family, the founder of which removed from Portugal to the United States in 1730.

Abraham Seixas: American merchant and soldier; born in 1750 in New York city. He served in the American army and carried despatches for Gen. Harry Lee between Charleston, S. C., and Georgia. In 1782 he took the oath of allegiance to the state of Pennsylvania, where he settled at the close of the war.

Benjamin Mendez Seixas: Fourth son of Isaac Mendez Seixas; born in Newport, R. I., 1747; died in New York city Aug. 16, 1817. He was a prominent merchant in Newport, Philadelphia, and New York, and was one of the founders of the New York Stock Exchange.

Gershom Mendez Seixas: American rabbi and patriot; born in New York city Jan. 14, 1745; died there July 2, 1816; son of Isaac Mendez Seixas (1708–80) and Rachel Levy, daughter of Moses Levy, an early New York merchant. Seixas became the minister of Shearith Israel, the Spanish and Portuguese congregation of his native city, in 1766, and occupied the rabbinate for about half a century. At the outbreak of the American Revolution he at once espoused the Patriot cause, though many of the Christian ministers of the city sympathized with the Tories. It was largely due to his influence that the Jewish congregation closed the doors of its synagogue on the approach of the British, and decided to leave the town rather than continue under British rule. On the appearance of the British fleet in New York Bay (Aug., 1776) Seixas preached a sermon in English in which he feelingly stated that the synagogal services on that occasion might be the last to be held in the historic edifice.



Gershom Mendez Seixas.

(By courtesy of the Jewish Publication Society of America.)

On the dispersion of the congregation Seixas left New York for Stratford, Conn., taking with him the scrolls of the Law and other ceremonial paraphernalia belonging to his charge. At Stratford he was joined by several members of his flock. When, in 1780, the Patriots who had fled to Philadelphia were about to establish a permanent congregation, Seixas was requested to officiate, and he at once proceeded thither from Connecticut, taking with him the synagogal property of his former charge. In this way was established the Congregation Mickvé Israel of Philadelphia. On the completion of its newly erected house of worship, Seixas was one of the committee that waited on the governor of Pennsylvania, inviting him to attend the dedication; and in the course of his patriotic address at the ceremony he invoked the blessing of Almighty God on "the Members of these States in Congress assembled and on his Excellency George Washington, Commander-General of these Colonies."

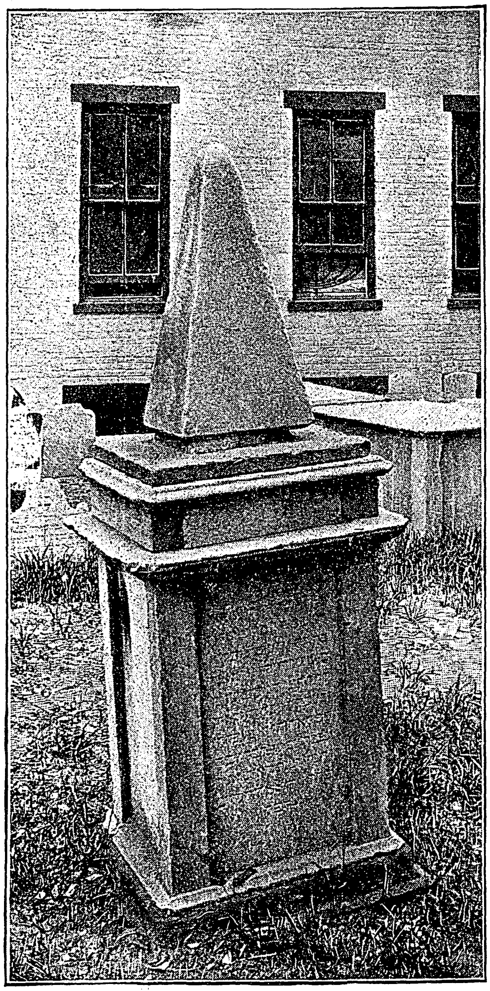
Tablet in Shearith Israel Synagogue, New York.

(From a photograph.)

During his entire stay at Philadelphia, Seixas showed himself a public-spirited citizen, figuring also as a zealous defender of religious liberty. Thus when Pennsylvania adopted the religious test as an indispensable qualification for office, he and several members of his congregation addressed the Council of Censors on the subject (Dec., 1783), characterizing the test as "unjust to the members of a persuasion that had always been attached to the American cause and given a support to the country, some in the Continental army, some in the militia, and some by cheerfully paying taxes and sustaining the popular cause." Westcott, the historian, expressly calls attention to this protest, stating "that it doubtless had its influence in procuring the subsequent modification of the test clause in the Constitution."



Tombstone of Gershom Mendez Seixas in Chatham Square Cemetery, New York.

(From a photograph.)

After the war Seixas returned to New York (March 23, 1784) and resumed his former position as rabbi of Congregation Shearith Israel. He was one of the first ministers to preach a regular Thanksgiving Day sermon (see "Daily Gazette," Dec. 23, 1789), and was also one of the fourteen clergymen participating in the ceremony of the inauguration of George Washington as first president of the United States. In 1787 he became a trustee of Columbia College in the city of New York, and held that office continuously to 1815, being the only Jew ever so honored. When the college was incorporated, Seixas' name appeared in the charter as one of the incorporators.

Seixas was on terms of intimate friendship with the ministers of other denominations, particularly with the Episcopal clergy of New York. The latter, tradition relates, frequently visited the Portuguese synagogue, while the Jewish minister in turn was invited to address Christian congregations. The manuscript of one such discourse delivered by Seixas (Aug., 1800) in historic St. Paul's, New York, is still preserved by his congregation. Public-spirited at all times, he earnestly exhorted his congregation to support the administration during the War of 1812; and an address containing his appeal for the sufferers during that struggle is still extant.

He also took the lead in philanthropic work, founding in 1802 the charitable organization known as "Hebra Hased Ve Amet," which is still (1905) in existence.

Seixas was twice married, his first wife being Elkalah Cohen (1749-85), to whom he was wedded in 1775, and his second, Hannah Manuel, whom he married in 1789. His descendants are among the prominent Jewish families of New York. His remains lie in the old cemetery on New Bowery, in the city of New York.

Isaac B. Seixas: American rabbi; born in 1782; died Aug. 10, 1839, in New York city; a son of Benjamin Mendez Seixas. He became rabbi of the Congregation Shearith Israel, New York city, in 1828, in succession to Moses L. M. Peixotto.

MOSES SEIXAS
being Nov. 29, 1809
Aged 66

Tombstone of Moses Seixas at Newport, R. I.
(From a photograph.)

Isaac Mendez Seixas: American merchant; born in Lisbon 1708; died at Newport, R. I., Nov. 3, 1780. He emigrated to North America via Barbados, arriving in New York about 1730, established a mercantile business there, and settled at Newport, R. I., in 1765. He married Rachel Franks, daughter of Moses Levy, by whom he had seven children.

Moses Seixas: Merchant; eldest son of Isaac Mendez Seixas; born in New York March 28, 1744; died in New York city Nov. 29, 1809. He was one of the founders (1795) of the Newport Bank of Rhode Island, of which he was cashier until his death. It was Moses Seixas who addressed a letter of welcome in the name of the congregation to George Washington when the latter visited Newport, and it was to him that Washington's answer was addressed.

SELA. See WEIGHTS AND MEASURES.

SELAH (Hebrew, סלה): Term of uncertain etymology and grammatical form and of doubtful meaning. It occurs seventy-one times in thirty-nine of the Psalms, and three times in Hab. iii. It is placed at the end of Ps. iii., ix., xxiv., xlvi., and in most other cases at the end of a verse, the exceptions being Ps. lv. 20, lvii. 4, and Hab. iii. 3, 9. Of the psalms in which it is found, twenty-three belong to the group in which "Elohim" is used to designate God; twenty-eight to that called by Briggs the "director's (למנצח = "choir-leader"; see PSALMS, CRITICAL VIEW) copies"; and twenty to the "Davidic" collection. Again, nine of the twelve Korahite and seven (LXX. eight, including lxxx. 8) of the twelve Asaph psalms have the term. Three psalms with "Selah" are headed "Miktam"; seven, "Maskil"; ten, "Shir"; twenty-six, "Mizmor"; while Habakkuk iii. is superscribed "Tefillah."

Technical Term.

That the real significance of this curious term (or combination of letters) was not known even by the ancient versions is evidenced by the variety of renderings given to it. The Septuagint, Symmachus, and Theodotion translate *διάψαλμα*—a word as enigmatical in Greek as is "Selah" in Hebrew. The Hexapla simply transliterates *σελ*. Aquila, Jerome, and the Targum give it the value of "always" (Aquila, *ἀεί*; Jerome, "semper"; Targum, for the most part לעלמין = "in secula" or תדירא = "semper"). Theodotion in Ps. ix. 17 has the translation *ἀεί*; the Quinta gives *εἰς τοὺς αἰῶνας* (לעלמין); and the Sexta, *διαπαντός* (in Ps. xx. 4, *εἰς τέλος*). Jacob of Edessa, quoted by Bar Hebræus (on Ps. x. 1), notices that instead of *διάψαλμα* some copies present *αεί* = בכל זבן; and he explains this as referring to the custom of the people of reciting a doxology at the end of paragraphs of the liturgical psalms. In five passages (see Field, Hexapla on Ps. xxxviii. [Hebr. xxxix.] 12) Aquila offers, according to the Hexaplar Syriac, עיניתא = "song," the *ᾆσμα* by which Origen reports Aquila to have replaced the *διάψαλμα* of the Septuagint. According to Hippolytus (De Lagarde, "Novæ Psalterii Græci Editionis Specimen," 10), the Greek term *διάψαλμα* signified a change in rhythm or melody at the places marked by the term, or a change in thought and theme. Against this explanation Baethgen ("Psalmen," p. xv., 1st ed., Göttingen, 1892) urges the circumstance that the enigmatical expression occurs also at the end of psalms. The cogency of this objection would hold if the mark had been inserted by the original writer and not, as is most probable, by a later editor who may have expected the Psalms to be recited in succession without reference to the divisions in the Masoretic text; or if it were an indubitable fact that where in the Hebrew a psalm now ends it ended in the original. Augustin (on Ps. iv. 3) regards διάψαλμα as indicating that what follows is not to be joined to the preceding. He suggests also the possibility that the Hebrew "Selah" meant "Fiat" = "Let there be [made]." The Masoretic accentuation always connects "Selah" with the preceding, as though it were part of the text or thought, most likely because it was held to mean "forever." In fact, the vowel-points in סלה seem to indicate a "ḳere" נצח (with "ḳameẓ" on account of ה) = "forever" (see B. Jacob in Stade's "Zeitschrift," xvi. [1896] 129 *et seq.*).

Modern Views.

Nor is there greater unanimity among modern scholars than among the ancient versions. Only on one point is there agreement, namely, that "Selah" has no grammatical connection with the text. It is either a liturgico-musical mark or a sign of another character with a bearing on the reading or the verbal form of the text. As thirty-one of the thirty-nine psalms with the caption "To the choirmaster [למנצח]" present "Selah," the musical value of the mark has been regarded as well assured. In keeping with this it has been assigned to the root סלל, as an imperative that should properly have been vocalized סֹלָה, "Sollah" (Ewald, "Kritische Grammatik der Hebräischen Sprache," p. 554; König, "Historisch-Kritisches Lehrgebäude der Hebräischen Sprache," ii., part i., p. 539). The meaning of this imperative is given as "Lift up," equivalent to "loud" or "fortissimo," a direction to the accompanying musicians to break in at the place marked with crash of cymbals and blare of trumpets, the orchestra playing an interlude while the singers' voices were hushed. The effect, as far as the singer was concerned, was to mark a pause. This significance, too, has been read into the expression or sign, "Selah" being held to be a variant of "shelah" (שלה = "pause"). But as the interchange of "shin" and "samek" is not usual in Biblical Hebrew, and as the meaning "pause" is clearly inapplicable in the middle of a verse or where a pause would interrupt the sequence of thought, this proposition has met with little favor. Neither has that which proposes to treat it as a loan-word from the Greek ψάλλε = "strike the harp," etc.

Grätz ("Kritischer Commentar zu den Psalmen," i. 93 *et seq.*) argues that "Selah" introduces a new paragraph as it were, a transition in thought, and also in some instances a quotation (*e.g.*, Ps. lvii. 8 *et seq.* from cviii. 2 *et seq.*). The fact that the term occurs four times at the end of a psalm would not weigh against this theory. As stated above, the Psalms were meant to be read in sequence, and, moreover, many of them are fragments; indeed, Ps. ix. is reckoned one with Ps. x. in the Septuagint, which omits διάψαλμα also at the end of Ps. iii., xxiv., and xlvi. B. Jacob (*l.c.*) concludes (1) that since no etymological explanation is possible, "Selah" signifies a pause in or for the Temple song; and (2) that its meaning was concealed lest the Temple privileges should be obtained by the synagogues or perhaps even by the churches.

More Liturgical than Musical.

Another series of explanations is grounded on the assumption that its signification is liturgical rather than musical. It marks the place, and is an appeal, for the bystanders to join in with a eulogistic response. Briggs ("Jour. Bib. Lit." 1899, p. 142) accepts the etymology and grammatical explanation given above, *i. e.*, that "Selah" is a cohortative imperative, meaning "Lift up [your benediction]," the eulogy with which psalms or sections of psalms were concluded. One would expect the imperative to be in the plural if the address was to more than one bystander. However, Briggs' explanation indicates the line along which the mystery connected with this term or combination of consonants is to be removed. It has been suspected that "Selah" is an artificial word formed from initials. That is probably the case, though the resolution of the initials usually suggested, סב למעלה השר (= "Return to the beginning, O singer"), has to be abandoned. The renderings in the versions, "'olmin," ἀεί, and the like (= "forever"), if they do not prove that סלה is a corruption for עולם—the word "'olam" standing for the first noun in the benediction—create a strong presumption that the initials of the verse in which "'olam" occurs are hidden in the puzzling word "Selah." Grätz (*l.c.*) shows that in Ps. lv. 20 סלה is a corruption for כלה (or even for כלם), meaning "destroy"; and a similar corruption of the first and third consonants throughout has contrived to make "Selah" the "crux interpretum." If in some instances כלה or כלם (= "destroy") be read and in others כלח, the enigma disappears. "K l ḥ" represents the eulogy "Ki le-'olam ḥasdo" (כי לעולם חסדו), hence the עלמין or ἀεὶ of the versions—a eulogy which is familiar and which is found as such in the Psalms (Ps. c. 5, cvi. 1, cvii. 1, cxviii. 1 *et seq.*; especially cxxxvi.; also I Chron. xvi. 34, 41; II Chron. v. 13, xx. 21). This is confirmed by the fact that just such phrases as כי־טוב, and perhaps ועד עולם, actually do occur in passages where "Selah" might stand equally well and with as little bearing on the context (Ps. lii. 11, 12). In Ps. xxxiv. 11 טוב at the end is certainly superfluous; but it stands where one would expect this very term סלה; and, therefore, it is not too bold a conjecture to read here כי טוב in the sense of a technical abbreviation of the eulogy. In this connection the midrash on Ps. cxviii. is of importance; quoting Isaiah iii. 10, it commands that after the mention of the righteous the words כי טוב should be added, but that after reference to an evil-doer a curse should be pronounced.

Probably a Contracted Form.

The latter injunction throws light on many passages in which "Selah" has another sense than that noted above, and in which it should be read כלה or כלם (= "Destroy them"), as one word. It is noticeable that the term occurs frequently after a reference to evil-doers (Ps. iv. 3; vii. 6; ix. 21; xxxii. 5; xlix. 14 [xlix. 16 ?]; lii. 5; liv. 5; lvii. 4, 7; lix. 6; lxii. 5; lxvi. 7; lxxxii. 2; lxxxviii. 8; lxxxix. 46, 49; cxl. 6; Hab. iii. [A. V. ii.] 13); and at the mention of these the bystanders break forth into malediction, as they do into benediction at the mention of God's wonderful deeds. Their comment on the recital is "Destroy them," "Make an end of them," or "of the evils," *i.e.*, "Forego" (as in Ps. lxxxviii. 8). "Selah" is thus identical with כלה as twice repeated in Ps. lix. 14 (Hebr.), "Destroy in anger; destroy that they be no more." This very verse ends with "Selah," which, as explained above, is a repetition (but in the mouths of the bystanders) of the passionate outcry כלה (= "Destroy").

Sometimes Meaning "Delete."

Some few passages remain in which סלה seems to fit in neither as a eulogy—*i.e.*, as a corruption of עולם or as an artificial combination of initials making כלה—nor as an imprecation. But even in these the reading כלה (= "Destroy") suggests itself, not indeed as a liturgical response, but as a note to indicate that something in the text should be deleted. This seems to be the case in Ps. lv. 8 (R. V. 7), where verses 8 and 9 virtually conflict; for the desert is the place where storms blow. "Selah" here has the appearance of a sign that the verse, being a quotation from somewhere else and really not belonging to the psalm, should be omitted. The same holds good in Ps. lxxxi. 8, where the third member of the verse is clearly a marginal note explanatory of the preceding. "Selah" after על מי מריבה, "at the waters of Meribah," indicates this fact, and means כלה (= "Delete"). Another instance of this is Ps. lx. 6, where the words מפני קשט break the connection between verses 6a and 7, and really make no sense. In Hab. iii. (ii.) 3, 9, also, "Selah" points to some defect in the text.

Perhaps the latter use of the term will throw light on the origin of the Greek *διάψαλμα*. It may be connected with the verb *διαψάω* = "to rub away thoroughly," "to erase." At all events some of the versions point to a reading in which כל was visible, *e.g.*, *διαπαντός* (Sexta), while the translation of Aquila according to the Hexaplar Syriac, עוניתא, meaning "responsive, antiphonal song," corroborates the assumption that the benediction or malediction was marked as anticipated in the passage.

"Selah" occurs also in the text of the SHEMONEH 'ESREH. This fact shows that at the time when the text of this prayer was finally fixed, the term had become a familiar one; and as the "Shemoneh 'Esreh" draws its vocabulary largely from the Psalms, the appearance of "Selah" in the prayer is not strange. In the Talmud that word is treated as a synonym of "neẓaḥ" and "wa'ed," all three signifying eternal continuance without interruption ('Er. 54a, אין לו הפסק עולמית). Ḳimḥi connects the term with the verb סלל (= "lift up"), and applies it to the voice, which should be lifted up, or become louder at the places marked by it (commentary on Ps. iii. 2). Ibn Ezra (on Ps. iii. 2) regards it as an equivalent of בן הוא or נכון הדבר, an affirmative corroborative expletive.

E. G. H.

SELDEN, JOHN: English jurist and Orientalist; born Dec. 16, 1584, at Salvington, Sussex; died at Whitefriars, London, Nov. 30, 1654. He was educated at Oxford, and was admitted to the Inner Temple June 14, 1612. He had the use of the valuable library of Sir Robert Cotton, and became interested in Oriental subjects in his antiquarian researches, the fashion of the time seeking the origin of all things in Hebrew antiquity. He was an exceedingly voluminous writer, and was one of the leading jurists on the side of the Parliamentarians in the struggle which led to the Civil war, undergoing imprisonment for his opinions.

Almost all of Selden's works quote and refer to rabbinic opinions. Those of special interest to Jewish literature are: "A Treatise on the Jews in England," published in 1617 by Purchas, who curtailed and mutilated it; "De Diis Syris" (1617), the first careful study of Phenician and Syrian mythology; "History of Tythes" (1617), in which he based his heretical views on rabbinic authorities; "De Successione in Bona Defunctorum ad Leges Ebræorum" (1631); "De Successione in Pontificatum Ebræorum" (1636), dedicated to Laud; "De Jure Naturali et Gentium Juxta Disciplinam Ebræorum" (1640); "De Anno Civili et Calendario Veteris Ecclesiæ seu Reipublicæ Judaicæ" (1644); "Uxor Ebraica seu de Nuptiis et Divortiis Veterum Ebræorum Libri Tres" (1646); "De Synedriis Veterum Ebræorum" (1646), a work of which the second part appeared in 1653, and the unfinished third part posthumously. Reprints of these works appeared on the Continent; and till nearly the end of the nineteenth century they were for the outer world the chief sources on their respective subjects.

Selden was one of the earliest to deal with the views of the Karaite Jews, in his "De Anno Civili"; and his work on the Jewish woman has been authoritative in all discussions of the subject. In his "Marmora Arundelliania" (1629) he translates a few Hebrew inscriptions. The work "De Synhedriis" seems to have been written mainly to prove the proposition that mere priests should have no judicial or political power of any kind; but that, on the other hand, the ordinary judges, such as the Rabbis and the members of the greater and smaller sanhedrin were, should sit in judgment in all cases, including those involving questions of religion. The erudition of the author is displayed in numerous quotations in Greek, Latin, Hebrew, Aramaic, Arabic, and all the languages of western Europe.

SELEUCIA (Talmud, "Selik," "Selika," "Selikos," Ket. 10b, Mak. 10a; Targum, "Salwaḳia," "Salwaḳya"; Greek, *Σελεύκεια*): **1.** Greek colony founded about the end of the third century B.C. on Lake Merom. According to the inference of Grätz, based on the scholium to Meg. Ta'an., the remnant of the Pharisees spared by Alexander Jannæus found a refuge there. Seleucia and Sogane were the first cities, after Gamala, to revolt from Agrippa in the revolution of 66 C.E. In his enumeration of the places conquered by Alexander Jannæus in eastern Syria, Josephus locates the town near Lake Semechonitis ("B. J." iv. 1, § 1).

2. Parthian city on the Tigris, to which the Babylonian Jews, when hard pressed by the Gentile population, fled. The Greeks and Syrians of Seleucia, who were continually quarreling, became reconciled out of common hatred of the fugitives, of whom they killed 5,000 about 41 B.C. (Josephus, "Ant." xviii. 9, § 9).

3. According to Schürer, a city identical with Abila, which was situated 12 Roman miles east of Gadara. It is first mentioned in history in connection with the conquest of Palestine by Antiochus the Great. The inhabitants called themselves Σελευκεῖς 'Αβιληνοί.

J. S. O.

SELEUCIDÆ: Powerful Syrian dynasty, which exercised an influence on the history of the Jews for two centuries (312–112 B.C.).

Seleucus I., Nicator ("the victorious"): Founder of the line; born about 357; died about 280. He was one of the generals of Alexander the Great, and was engaged in prolonged warfare with his rivals, the other Diadochi. His victory at Gaza (312) secured for him dominion over Babylon and a great part of Asia Minor, while the battle of Ipsus (301) added Syria and Armenia to his kingdom.

The Seleucidan Era.

Seleucus reckoned the years of his reign from 312, which thus marks the beginning of the Seleucidan era (see Era). Since legal documents were dated according to this epoch, the Jews called it the "era of contracts" ("æra contractuum," "minyan sheṭarot"), although later both Jews and Syrians termed it the "Greek era" ("minyan Yewanim"). It is generally reckoned from Oct. 1, 312, although the Babylonians, Syrians, and Jews, following an old custom, regarded it as beginning with the spring of the year 311 (see Ideler, "Handbuch der Chronologie," i. 450–453; Clinton, "Fasti Hellenici," 2d ed., iii. 472; Wachsmuth, "Einleitung in das Studium der Alten Geschichte," p. 306, Leipsic, 1895; comparative tables of the Greek Olympian, the Seleucidan, the Roman, and the Christian eras are given by Schürer in his "Gesch." 3d ed., i., appendix v.). The Seleucidan era was adopted in the Books of the Maccabees, as well as in those passages of Josephus which he based on these apocrypha. It was likewise used by the Oriental Jews and Syrians until late in the Middle Ages, and is still occasionally employed by Jews in the East.

Seleucidan Cities.

The Hellenization of the Orient, begun by Alexander the Great, was eagerly furthered by the Seleucidæ, and the Jews also were involved in the movement. Like the other Diadochi, the Seleucidæ were founders of cities; and some of the Greek towns in Palestine may well date from the time of the first members of this dynasty, although the country was still vassal to Egypt. Among the most important of these cities were Abila, Gadara, and Seleucia. The last-named, which was situated on the shores of Lake Merom, is frequently mentioned by Josephus and in rabbinical literature. In all cities founded by Seleucus in Asia Minor and Syria he granted the Jews full civil rights, especially in Antioch, the capital; and they retained these privileges until the time of Josephus (see Josephus, "Ant." xii. 3, § 1; *idem*, "Contra Ap." ii. 4). This was a deed worthy of a great ruler, such as Seleucus I. proved himself to be; but the account of Josephus is very much doubted, and justly so, since it is intended only as an apology for the Jews. This same monarch is by implication referred to in Dan. xi. 5.

According to Josephus ("Ant." xii. 3, § 2), the rights of citizenship were conferred both on the Jews and on the Ionians of Asia Minor by Antiochus II., Theos (261–246), but in the year 14 B.C. the Hellenic population besought Marcus Agrippa to restrict these privileges to themselves exclusively. The limitations of paganism rendered it impossible for the Jews of Hellenic cities to obtain civic rights at this time except when they were sufficiently numerous to form a separate community, in which case a royal act of grace sometimes placed them on an equal footing with the Greek communities (see Tarsus).

Seleucidæ and Ptolemies.

Although Seleucus I. had regarded Cœle-Syria and Judea as his rightful domains and had left the Ptolemies in possession only because he had been obliged to do so, it was not until the reign of Antiochus III. the Great (223–187) that the Seleucidæ felt themselves sufficiently strong to press their claim; and from 218 to 198 Judea was racked by violent wars between the Ptolemies and their rivals. Antiochus III. lost the great battle at Raphia in Judea (218); but by his victory at Paneas on the Jordan (198) he won Judea and Phenicia. Judea then remained under Seleucidan sovereignty until 142, when it regained its independence through Simon Maccabeus. The Syrian rule, however, caused the inhabitants long to remember the milder and more tranquil Egyptian sway; and a Ptolemaic faction, to which the Jews, as a body, adhered, was maintained at Jerusalem, where it devoted its energies to the interests of the Tobiads.

The Seleucidæ in Palestine followed in general outlines the policy of the Ptolemies. With them, as with the Egyptian dynasts, the high priests continued to be the heads of the Jewish communities; but the political governors of Palestine exercised greater powers under the Syrian rule, although they, in their turn, were subordinate to the governor-general of Cœle-Syria. The well-known high priests and so-called Tobiads, Jason and Menelaus, are, according to Büchler, to be considered as political governors; and, since tradition generally regards them as high priests, Josephus is justified in saying ("Ant." xx. 10, § 3) that Antiochus V., Eupator and his viceroy Lysias were the first to depose a high priest (*i.e.*, Menelaus). This reference is apparently an evidence of a favorable attitude on the part of the Syrians; but the financial burdens imposed upon the Jews make their condition appear very wretched. References to these taxes are found in a pseudo-Antiochian decree exempting the elders, the priests, the scribes, and the singers in the Temple from the payment of the poll-tax, the crown-tax, and other dues (*ib.* xii. 3, § 3).

Additional information is derived from incidents, of the reign of **Seleucus IV., Philopator** (187–175), when Heliodorus forced his way into the Temple at Jerusalem to seize its treasures for the king. In addition to the high priest Onias III., a certain Simon seems to have officiated as political governor at that time; and it was apparently he, and not the high priest, who was responsible for the taxes, and who consequently called the king's attention to the treasure in the Temple (II Macc. iii. 4).

Taxation.

During the reign of Antiochus IV., Epiphanes (175–164) Jason paid 360 talents for the dignity which the king had conferred upon him, and an additional 80 talents from another source of revenue (II Macc. iv. 8). The fact that part of this sum is mentioned as an "additional" sum justifies the inference that it represents an excess offered by Jason over the regularly established amount of the tax; indeed, it is probable that even the sum of 360 talents included such an excess, the established sum evidently being 300, which very likely had been paid during the reign of Seleucus IV. as well. Indeed, Sulpicius Severus asserts ("Sacra Historia," ii. 17) that the Jews under the high priests paid Seleucus 300 talents, and he also mentions a similar sum as having been given to Antiochus Epiphanes. This statement agrees with the circumstance that Jonathan offered King Demetrius II. the sum of 300 talents to exempt Judea from taxation (I Macc. xi. 28).

Seleucus IV. was extolled because he held the Temple in high honor, and also because he personally defrayed the cost of the sacrifices (II Macc. iii. 3); but the only statements concerning Antiochus IV. record his brutal excesses against the Temple as well as against the Jewish people and their religion. How this policy finally caused a crisis and put an end to the Seleucidan dominion in Judea is described elsewhere (see Jonathan Maccabeus; Judas Maccabeus; Simon Maccabeus).

The Later Seleucidæ.

The succeeding members of the Seleucidan dynasty may be more briefly enumerated. The saying, generally ascribed to Josephus, that after the death of Antiochus VII., Sidetes, the Seleucidæ were no cause of concern to Hyrcanus I., must be considerably modified; for the dynasty had not yet relinquished its claims to Judea, and it was still to cause the Jews many difficulties. Antiochus IX., Cyzicenus devastated Judea; and it was only when he had been deserted by his Egyptian allies and had suffered great losses in warfare against his brother, that Hyrcanus ventured to besiege Samaria. Antiochus hastened to relieve the city, but was repulsed by the sons of Hyrcanus; so that, after another raid through Judea, he was obliged to leave the Jews in peace.

Alexander Jannæus was much more powerful than his father, Hyrcanus, yet he was attacked and completely defeated by the Seleucid Demetrius III. at Shechem during the civil war brought on by the Pharisees, while even one of the last of the Seleucidæ, Antiochus XII., Dionysus, was strong enough to break through the fortifications of Alexander Jannæus and to march straight across Judea against the Arabs.

The Seleucidan dynasty gradually degenerated into condottieri, who served the powerful Greek cities with their mercenaries. As lords without lands, they led a precarious existence, and were able to demonstrate their military strength only when the vital interests of the Hellenic cities were at stake. Such an occasion was the war against the Jews which threatened the very existence of the Greek cities. The civil war which raged uninterruptedly after the year 112 B.C. finally broke the power of the Seleucidæ (Gutschmid, "Kleine Schriften," ii. 309).

In Rabbinical Literature.

The Seleucidæ are mentioned but rarely in rabbinical literature. An allusion in Seder 'Olam Rabbah xxx., which Zunz, however, declares to be an interpolation, runs as follows: "In the Diaspora [Babylon being the place especially implied] documents were dated according to the era of the Greeks" (comp. 'Ab. Zarah 10: "in the Diaspora they reckon only according to the kings of the Greeks"). Eight monarchs are then enumerated (all Diadochi, excepting Alexander the Great), among them Seleucus (Nicator), Antiochus (III., the Great), and Antiochus Epiphanes (comp. Seder 'Olam Zuṭa, ed. Neubauer, in "M. J. C." ii. 71). A midrash on Ps. ix. 8 (comp. Yalḳ., Ps. 642) says that Alexander built Alexandria; Seleucus, Seleucia, *i.e.*, Seleucia on the Tigris (see "R. E. J." xliv. 38); and (this is stated first in the midrash) Antiochus, Antioch. The Jewish sources show a more intimate knowledge of Antiochus Epiphanes only, this being due to I Macc., which makes him the immediate successor of Alexander the Great, as do also various other chronicles ("R. E. J." xlv. 28).

SELF-DEFENSE. See Homicide.

SELIGMAN: American Jewish family having its origin in Baiersdorf, Bavaria. The eight sons of David Seligman have formed mercantile establishments spread throughout the chief commercial centers of the United States. The eldest, Joseph, went to the United States in 1837; he was followed by his two brothers William and James in 1839, and by Jesse in 1841. These established a small clothing business at Lancaster, Pa. They then removed to Selma, Ala., and from there opened branch stores at Greensboro, Eutaw, and Clinton. In 1848 the Seligmans, who had been joined by their younger brothers Henry and Leopold, determined on settling in the North. Accordingly Henry and Jesse established themselves in Watertown, N. Y., where the latter became acquainted with Lieutenant (afterward General) Grant. In 1850, at the outbreak of the gold-fever in California, Jesse established a store in San Francisco, in the only brick building then existing, which escaped the fire of 1851.

SELIGMAN PEDIGREE.

Dealings with United States Government.

In 1857 the clothing business had become so lucrative that it was decided to supplement it by a banking business, Joseph Seligman, the head of the firm, going to Europe and establishing relations with German bankers, at the same time placing United States bonds on the Frankfort Stock Exchange; since that period the firm of Seligman Brothers has been concerned with every issue of United States bonds.

In 1862 Joseph Seligman established the firms of J. & W. Seligman & Co., New York; Abraham Seligman & Co., San Francisco (subsequently merged with the Anglo-Californian Bank); Seligman Brothers, London; Seligman Frères et Cie., Paris; and Seligman & Stettheimer, Frankfort-on-the-Main.

An interesting feature about the formation of these firms was that the profits and losses of all of them were divided equally among the eight brothers, who thus followed the business policy established by the Rothschilds and pursued by that family for many years. In 1879 the Seligmans, with the Rothschilds, took over the whole of the $150,000,000 bonded loan of the United States. They have been financial agents for the Navy and the State Department of the United States since 1876, and are the accredited agents of that government both abroad and at home. Besides their interests in United States bonds, the firm of J. & W. Seligman is connected with many railway companies, especially in the Southwest.

In 1905 the members of the family established at their original home in Baiersdorf an institution for the training and support of children during the absence of their parents at work, and open to all the inhabitants of Baiersdorf without distinction of creed.

Bibliography: *In Memoriam Jesse Seligman*, New York, privately printed, 1894.

Edwin Robert Anderson Seligman: American political economist; born in New York April 25, 1861; educated at Columbia University (Ph.D. 1884); studied at the universities of Berlin, Heidelberg, Geneva, and Paris. He became prize lecturer at Columbia in 1885, full professor in 1891, and is now (1905) head of the faculty of economics and sociology. He has particularly devoted himself to the economics of finance, on which he has written two important treatises: "Essays in Taxation," 3d ed. 1900; and "The Shifting and Incidence of Taxation," 2d ed. 1899. He has written also "Railway Tariffs," 1887; "Progressive Taxation in Theory and Practise," 1894; and "Economic Interpretation of History," 1902.

Seligman has been president of the American Economic Association, besides being connected with many scientific and philanthropic societies. He was a member of the Committee of Seventy and secretary of the Committee of Fifteen in New York city; having shown great interest in municipal reform, he became president of the Tenement-House Building Company of New York. He is likewise president of the Ethical Culture Society of New York.

Bibliography: *Who's Who in America*, 1905.

Isaac Newton Seligman: American banker and communal worker; born in New York July 10, 1855; educated at Columbia Grammar School and Columbia College, from which he graduated in 1876. He was one of the crew which won the university eight-oar college race on Saratoga Lake in 1874. In 1878, after having finished an apprenticeship in the firm of Seligman & Hellman, New Orleans, he joined the New York establishment, of which he became head in 1880, on the death of his father, Joseph Seligman. He has been connected with almost all the important social-reform committees in New York, and is a trustee of nineteen important commercial, financial, and other institutions and societies, including the Munich Life Assurance Company, St. John's Guild, and the McKinley Memorial Association, and has been a member of the Committee of Seventy, of Fifteen, and of Nine, each of which attempted at various times to reform municipal government in New York; of the last-named body he was chairman. He is a trustee of Temple Emanu-El and of the Hebrew Orphan Asylum, as well as of the United Hebrew Charities, though he is also a member of the Ethical Culture Society.

Bibliography: *Bankers' Magazine*, March, 1899; *Union Historical Association*, 1901, special issue; *New York Tribune*, July 4, 1899.

Jesse Seligman: American banker and philanthropist; born at Baiersdorf, Bavaria, Aug. 11, 1827; died at Coronado Beach, Cal., April 23, 1894. He followed his brothers to the United States in 1841, and established himself at Clinton, Ala. In 1848 he removed with his brothers to Watertown, N. Y., and thence, with his brother Leopold, went to San Francisco in the autumn of 1850, where he became a member of the Vigilance Committee, as well as of the Howard Fire Company. He remained in California till 1857, when he joined his brother in establishing a banking business in New York. With his brother Joseph he helped to found the Hebrew Orphan Asylum in 1859, and was connected with it till his death. At the time of his death he was a trustee of the Baron de Hirsch Fund. He was a member of the Union League Club, of which he was vice-president, and from which he resigned in 1893 when the club for racial reasons refused to admit to membership his son Theodore. He was head of the American Syndicate formed to place in the United States the shares of the Panama Canal.

Jesse Seligman.

Bibliography: *In Memoriam Jesse Seligman*, New York, privately printed, 1894, p. 229.

Joseph Seligman: Founder of the firm of Seligman Brothers; born at Baiersdorf, Bavaria, Nov. 22, 1819; died at New Orleans April 25, 1880. He was educated at the gymnasium of Erlangen, from which he graduated in 1838. He then studied medicine, and in the same year went to the United States, where he acted as cashier and private secretary to Judge Asa Packer, president of the Lehigh Valley Railway. Establishing himself as a dry-goods merchant at Greensboro, Ala., he was joined by his brothers, and soon acquired sufficient capital to open an importing house in New York (1848). At the outbreak of the Civil war he founded the banking-house of J. & W. Seligman & Co., New York, having visited Germany in order to acquire financial connections in that country. In large measure the financing of the Civil war, so far as European capital was concerned, was managed by the Seligman firm. In 1877 he rendered an important service to the Navy Department of the United States by holding over till the following fiscal year a large debt due to the firm; for this he received the official thanks of the department, of which his firm was thenceforth the financial representative. He was an intimate friend of President Grant, by whom he was at one time offered the post of secretary of the treasury, which he declined.

Seligman was the founder of the Hebrew Orphan Asylum, and was one of the founders of the Society for Ethical Culture, toward which he contributed large amounts, and of which he was president till his death. For a number of years he was a member of the Board of Education of the City of New York, and he was chairman of one of its most important committees. He was a member of the famous Committee of Seventy, during the Tweed régime. The first Rapid Transit Commission, which initiated the whole plan for better transportation facilities in New York, was presided over by him, and he was an early president of the American Geographical Society, in which he took much interest.

The Judge Hilton Affair.

In the summer of 1877 great indignation was aroused by the refusal of Judge Hilton, on racial grounds, to receive Mr. Seligman and his family at the Grand Union Hotel in Saratoga. It was the first incident of this kind that had occurred in the United States. It called forth most emphatic expressions of disapproval by representatives of various races and religions, and evoked a long eulogy (June 27) on the Hebrew race by Henry Ward Beecher. It is understood that the incident caused the ruin of A. T. Stewart's store, then managed by Judge Hilton, and which was afterward taken over by John Wanamaker of Philadelphia.

Bibliography: *New York Tribune*, July 4, 1899. Henry Ward Beecher's eulogy was reprinted in *The Menorah*, March, 1905.

A. J.

SELIGMANN, FRANZ ROMEO: Austrian physician and Persian scholar; born at Nikolsburg June 30, 1808; died at Vienna Sept. 15, 1892. Educated at the gymnasium and University of Vienna (M.D. 1830), he became privat-docent at his alma mater in 1833. From that year to 1838 he was assistant at the Allgemeine Krankenhaus; in 1848 he received the title of professor; in 1850 he was appointed assistant professor and in 1869 professor of the history of medicine. He resigned his university position in 1878.

Of Seligmann's works may be mentioned: "De Re Medica Persarum" (Vienna, 1832), a translation and interpretation of the oldest Neo-Persian manuscript on medicine; "Liber Fundamentorum Pharmacologiæ Auctore Abu Mansar" and "Ueber Drei Höchst Seltene Persische Handschriften," *ib.* 1833; "Götter, Satyren und Faune," *ib.* 1838; "Die Heilsysteme und die Volkskrankheiten," *ib.* 1850; "Adam Chenot und Seine Zeit," *ib.* 1861; "Ueber Begräbniss in Culturhistorischer Beziehung," *ib.* 1864.

S. F. T. H.

SELIGMANN, LEOPOLD, RITTER VON: Austrian army surgeon; born at Nikolsburg Jan. 18, 1815; brother of Franz Romeo Seligmann. He received his education at the gymnasium of his native town and at the University of Vienna, taking the medico-surgical course at the Joseph-Akademie (M.D. 1843). He was appointed assistant surgeon in the army in 1843, and surgeon in 1855, after the revolution in Italy. He took part in the wars of 1859 and 1866, both in Italy; from 1868 to 1876 he was attached to the Ministry of War at Vienna; he became surgeon-major in 1871, and resigned in 1876, with the rank of lieutenant-colonel.

Besides his essays in the professional journals Seligmann has written "Gemeinnützige Auszüge aus den Sanitätsvorschriften zum Selbstunterricht für Reserveärzte," 1873.

Bibliography: Eisenberg, *Das Geistige Wien*, ii., Vienna, 1893.

SELIGSOHN, MAX: Russian-American Orientalist; born in Russia April 13, 1865. Having received his rabbinical training at Slutsk, government of Minsk, he went in 1888 to New York, where he studied modern languages till 1894, in which year he went to Paris to study Oriental languages, especially Semitics ("élève diplômé" of the Ecole des Langues Orientales, 1897, and of the Ecole des Hautes Etudes, 1900). In 1898 he was sent by the Alliance Israélite Universelle to Abyssinia to inquire into the conditions of the Falashas; but, certain difficulties arising, he was able to proceed no farther than Cairo, where he taught for eighteen months. Returning to Paris, he was invited in 1902 to go to New York to become a member of the staff of office editors of The Jewish Encyclopedia.

Seligsohn is the author of: "Le Diwan de Ṭarafah ibn al-'Abd" (Paris, 1900), a translation from the Arabic into French, with notes and an introduction; a French translation of "Kitab al-Raml," an Arabic work on geomancy, with preface and notes; (with E. N. Adler) "Une Nouvelle Chronique Samaritaine," Paris, 1903. He is a contributor to the "Jewish Quarterly Review" and the "Revue des Etudes Juives," mostly on Judæo-Persian literature.

A. F. T. H.

SELIGSOHN, SAMUEL: Hebrew poet; born at Samoczin, Posen, 1815; died there Oct. 3, 1866. He published "Ha-Abib" (Berlin, 1845), an epos. Another epos, on the destruction of Jerusalem, and various essays by him remained in manuscript.

Bibliography: *Orient, Lit.* 1845, No. 22; *Allg. Zeit. des Jud.* 1866, No. 45.

J. D.

SELIḤAH (plural, **Seliḥot**): Penitential prayers; perhaps the oldest portion of the synagogal compositions known under the term of PIYYUṬIM. The word "seliḥah" (from "salaḥ" = "he forgave") is particularly used in the Hagiographa as meaning "forgiveness"; in the Middle Ages it was employed to designate penitential prayers and invocations for God's clemency and forgiveness. Originally seliḥot were instituted for the Day of Atonement only, the main object of that day's service being to implore God's forgiveness for man's sins; the service itself was called "Seder Seliḥah" (Eliyahu Zuṭa, ch. xxiii.). In the course of time New-Year's Day (Rosh ha-Shanah), being considered as the day of judgment ("yom ha-din"), came to be regarded as the precursor of the Day of Atonement; consequently penitence and supplication for God's mercy were felt to be necessary on that day also. The days intervening between New-Year and the Day of Atonement are therefore known as "penitential days," and together with the two holy days just mentioned are generally called "the ten days of repentance," also "days of awe" ("yamim nora‘im"; comp. Ephraim b. Jacob's seliḥah "Ani ‘Abdeka"); for these days also penitential prayers were arranged. The recitation of such prayers was then extended to several days before New-Year—on which days even fasting was instituted ("Mordekai," Yoma, No. 723; Aaron of Lunel, "Orḥot Ḥayyim," p. 100d)—and sometimes to the whole month of Elul.

Originally for the Day of Atonement.

Besides the above-mentioned fast-days several others were instituted (see FASTING AND FAST-DAYS), as the Tenth of Ṭebet, the Thirteenth of Adar (Fast of Esther), the Seventeenth of Tammuz, the Ninth of Ab, and various occasional fast-days in commemoration of epidemics or other calamities (comp. PURIMS, SPECIAL). On these days, according to the Mishnah (Ta‘an. ii. 1), the service was opened with an exhortation to repentance, and was consequently suitable for the introduction of penitential prayers or seliḥot.

Originally the synagogal service consisted mainly of Biblical passages selected for the occasion and grouped together (comp. Yer. Ber. v. 1; Soṭah 39b; Massek. Soferim xiv. 8). The term "seliḥot" was applied to such verses for the Day of Atonement by Amram Gaon in his "Siddur" and later by Abudarham (Abudarham, p. 91a). Afterward, when the verses were accompanied by piyyuṭim of a penitential character, the whole was termed "seliḥot," the Biblical verses being termed "pesuḳe riẓẓui seliḥah" (= "verses invoking God's willingness to forgive"; Amram Gaon, "Siddur"). or, by the Karaites, "pesuḳe teshubah" (= "verses of penitence").

As God is generally styled "Lord of forgiveness and mercies" ("Ba‘al ha-seliḥot weha-raḥamim"; comp. Dan. ix. 9), the penitential prayers are called also "raḥamim" or "raḥamaniyyot" (Amram and Saadia in their "Siddurim"; Hai Gaon, Responsa). These terms are applied particularly to the supplications ("baḳḳashot") which depict the sufferings of Israel and to the shorter invocations of God's mercy; and the Biblical verses in these seliḥot are called "pesuḳe de-raḥame" (Tos. to Ber. 5a, Meg. 32a, and ‘Ab. Zarah 8a). It may be said, however, that with only one exception (in the seliḥah beginning "Aromimeka Shem") the authors of penitential piyyuṭim do not refer to their compositions as seliḥot. Forgiveness, which is the real meaning of "seliḥah," comes only from God, while the composition itself is in reality a supplication for forgiveness. It is therefore variously referred to by the authors of seliḥot as "baḳḳashah," "‘atirah," "teḥinnah," "taḥanun," and other terms, all meaning "supplication."

"Supplication" Rather than "Forgiveness."

With the gradual extension in the course of time of the synagogal service for the Day of Atonement a distribution of the seliḥot became necessary. Those connected with the ḲEROBOT were spread over the five services of the Day of Atonement, each of which was now called "ma‘amad," a term frequently met with in synagogal poetry, particularly in that of Isaac ibn Ghayyat. The earliest seliḥot, after the Biblical verses were accompanied by penitential compositions, were very simple. One of them, beginning "Mi she-‘anah," is mentioned in Ta‘an. ii. 2-4 as having been recited in the service of the fast-days, and as having been interpolated in the six benedictions added to the daily eighteen (see SHEMONEH ‘ESREH). Of the other better-known early seliḥot may be mentioned "El melek yosheb" and "El erek appayim," both being introductions to the thirteen attributes of God (see MIDDOT, SHELOSH-‘ESREH), and "Shomer Yisrael," which has been incorporated in the daily morning prayer. The fast-days offering an opportunity for the composition of seliḥot in which the people might tell of their misery, confess their sins, and implore God's mercy and love, a poetic seliḥah literature began to develop in the Middle Ages, similar to the Psalm literature of more ancient times. Both the seliḥot and the Psalms treat of exile, oppression, and martyrdom; both contain the people's confession of their sins and repentance; both represent the vanity of life; and both are the creation of several centuries. There is, however, this difference between them: the seliḥot were composed in the metrical style of the surrounding nations—the Syrians, Byzantines, and Arabs—which is entirely lacking in the Psalms.

The first piyyuṭim, including the poetic seliḥot, were composed probably in the course of the seventh century. The oldest poetic seliḥot are in the form of litanies, consisting of short sentences, sometimes arranged in alphabetical order, and sometimes having terminations evidencing an attempt to rime. From such litanies originated the rimeless seliḥah, composed after the model of the alphabetical Psalms, in sentences of equal length. Sometimes, also, the sentences are subdivided; so that a kind of rhythm prevails throughout the seliḥah. In the course of time the construction of the seliḥot became still more elaborate, as is seen in the one beginning "Attah mebin sarappe leb," in which each division consists of three sections of two sentences each. All the sections of a division begin with the same letter; and the concluding word of one section is the commencing word of the next. A transition to rimed seliḥot now en-

Earliest Poetic Seliḥot.

sued which consisted mostly of three-lined strophes, the third line being generally a Biblical passage. The four-lined strophe of the "ḳerobah" also was adapted to the seliḥah; and many seliḥot of this kind were written as early as the ninth, perhaps even in the eighth, century. The alphabetical seliḥot are composed either in אבגד or in תשרק order; and here again the concluding word of one strophe is employed to begin the next. In the four-lined strophes, likewise, the fourth is often a Biblical passage; sometimes all the lines of a strophe begin with the same word. Certain seliḥot have no divisions, being simply arranged in alphabetical order; and, like the Arabic "ḳaṣidah," they have one and the same rime throughout the whole composition. This arrangement is met with even in the old penitential prayers, but is most prevalent in the opening seliḥah ("petiḥah"), in the teḥinnah, and in the metrical baḳḳashah. Thus, it may be seen that all the more elaborate characteristics of the piyyuṭim in general, such as division into strophes, connecting words, middle rimes, and variation of Biblical passages, are met with even in the older seliḥot.

Like the other piyyuṭim, the seliḥot are, according to their poetic arrangement, called "sheniyyah" (= "of two-lined strophes"), "shelishiyyah" (= "of three-lined strophes"), and "shalmonit" (= "entire"; *i.e.*, of four-lined strophes; Dukes and Zunz, however, explain "shalmonit" as indicating that the composition was written by Solomon b. Judah ha-Babli. This is scarcely probable, as several shalmoniyyot were by other authors; see "Ha-Maggid," ix., No. 36).

The Various Forms.

When, in early times, the term "seliḥot" was applied to the whole body of penitential compositions, including the collection of Biblical verses and prayers written in prose, any poetic penitential composition divided into strophes was called a PIZMON. But in the course of time the appellation "seliḥah" became restricted to poetic penitential compositions, and the term "pizmon" was then applied only to hymns provided with refrains. In the artistic development of the seliḥah the strophes acquired a certain rhythm. Thus in the sheniyyah the lines are seen to be composed either throughout of five words each or of a varying number ranging from three to seven. The sheniyyah is sometimes provided, too, with a middle rime, either only in the first line, as in the seliḥah "Torah ha-ḳedoshah," or in both lines, as in Eleazar of Worms' well-known seliḥah "Maknise raḥamim." Special mention should be made of Isaac b. Yaḳar's sheniyyah "Arid be-siḥi," in which the middle rime occurring in both lines is the same as the final rime. Moreover, the second hemistich begins with the final word of the first. In the shelishiyyah the lines generally consist of three or four words each. But the greatest number of the older seliḥot consist of shalmoniyyot or four-lined strophes, most of which have no final Biblical verse. In the last-mentioned class the number of words is very rarely fixed, generally varying from three to seven. There are, however, some in which the lines consist throughout of three words each, as in Solomon b. Judah's "Omerah la-El," or of four words, as in Judah Leonte b. Moses' "Laḥash ẓaḳun haḳsheb." Generally the four lines of each strophe have the same rime, but sometimes, particularly in the Spanish and Italian seliḥot, they have an alternate and also a middle rime. Certain four-lined pizmonim, such as Samuel ha-Kohen's "Mal'ake raḥamim," have also a common rime for the concluding lines of the strophes. Seliḥot of more than four lines are found only in pizmonim and taḥanunim belonging to the period beginning with Ibn Gabirol. The strophes in such seliḥot have from five to twelve lines each; and in the former case the fifth line of the first strophe, riming with the preceding four lines, becomes the refrain of the whole hymn. It may be added that besides the two alphabetical arrangements mentioned above, other alphabetical combinations, called GEMAṬRIA (comp. Yer. Ta'an. iii. 10; Pesiḳ. R. 43; Rashi on Isa. vii. 6 and on Pes. 5a), are met with, namely, את בש, אל בם, אחס בטע, and איק בכר. The word with which the seliḥah begins shows that its selection is due to a certain influence. Thus, owing to the common practise of arranging verses in alphabetical order the seliḥot most frequently begin either with "alef" or with "taw," even when the composition is not arranged alphabetically. Very often also they begin with the same letter as the author's name; many others begin with a Biblical passage; others, again, with one of the names of God. Some of the older seliḥot begin with the concluding word of the preceding one, as if to indicate a continuation.

The Different Classes.

The seliḥot for holy days are historical and haggadic in character, and resemble therefore the ḳerobot and dirges ("ḳinot"). But those composed for the Ten Days of Repentance present a greater variety of material, and are divided into the following categories: exhortations ("tokaḥot"); those dealing with the sacrifice of Isaac ("'aḳedah"); those describing persecutions ("gezerot"); those commemorating the execution of the ten martyrs; and supplications ("teḥinnot"). The tokaḥah originated in the hortatory addresses delivered on the fast-days, warning the people against sin, and consist mainly either of sheniyyot or of shelishiyyot. Many of the latter belong to ancient unknown authors; others, to Solomon b. Judah, Gershom b. Judah Me'or ha-Golah, Simeon b. Isaac, etc. For the sacrifice of Isaac see 'AḲEDAH. The gezerot depict in particular those voluntary sacrifices made for the sake of the Jewish religion, and therefore come in close connection with the 'Aḳedah in the service for the Day of Atonement. Such seliḥot originate almost exclusively in France and Germany; and among their authors are found Ephraim b. Jacob of Bonn, David b. Samuel ha-Levi, David b. Meshullam, and Joel ha-Levi; there are also some anonymous seliḥot of this category. The Midrash Eleh Ezkerah, narrating how ten prominent Talmudists suffered martyrdom by order of a Roman emperor, is the basis of seliḥot recited on the Ten Days of Repentance and also on the Ninth of Ab (see MARTYRS, THE TEN). These compositions are called "Seliḥot 'Asarah Haruge Malkut," their authors including Saadia Gaon (the earliest), Eliezer b. Nathan, and Ephraim b. Jacob of Bonn. Of this class there are also three anonymous seliḥot, in which there is a disagreement both with regard to the names of the ten martyrs and the cause of their martyrdom.

Authors of Seliḥot.

Of the seliḥah-composers that lived before Hai Gaon, only three are known: Jose b. Jose (end of 6th cent.), supposed to be the author of the seliḥah "Omnam ashamenu," recited in the evening service for the Day of Atonement; Saadia Gaon, who in his "Siddur" added his own compositions to the seliḥot of earlier payyeṭanim; and Meborak b. Nathan (a contemporary of Saadia), among whose seliḥot is one beginning "Maddua' narim rosh," recited also in the evening service for the Day of Atonement. About the beginning of the eleventh century seliḥot of all kinds and in increasing numbers were composed in Greece, Italy, France (including Provence), and Spain, and about half a century later, Germany. The earliest composer of that period was Solomon b. Judah ha-Babli, of whose seliḥot almost all are of four-lined strophes or shalmoniyyot. A junior contemporary of Solomon was Shephatiah b. Amittai, author of the well-known pizmon "Yisrael nosha'"; and a generation later flourished Gershom b. Judah Me'or ha-Golah, author of seliḥot of different forms, and his countryman Simeon b. Isaac b. Abun, among whose numerous piyyuṭim are twenty-four seliḥot. But the most prolific seliḥah-composer of the eleventh century was Benjamin b. Zeraḥ, author of forty seliḥot found in the Maḥzor of the German rite. Toward the end of the eleventh century seliḥot were composed by the following: Rashi, some with Biblical and some with haggadic phrases; Meïr b. Samuel, Rashi's son-in-law; Meïr b. Isaac of Orleans; Amittai b. Shephatiah; and Zebadiah.

The earliest of the German seliḥah-composers of that epoch was Meïr b. Isaac b. Samuel of Worms (*c.* 1060), an eminent Talmudist, who presented Biblical subjects in the Talmudic style. His contemporary Isaac b. Moses ha-Makiri was the author of two seliḥot, in one of which, like Benjamin b. Zeraḥ, he artistically interwove the Twenty-two Lettered Name. In the eleventh century Rome, too, produced skilful seliḥah-composers, among the earliest of whom were Shabbethai b. Moses (*c.* 1050); his son Kalonymus, who soon after 1070 was called to Worms; and Jehiel b. Abraham, probably the father of Nathan b. Jehiel, author of the "'Aruk." Seliḥah-composers of the first half of the twelfth century whose native country can not be ascertained are: Elijah b. Shemaiah; several authors named Moses; Samuel b. Judah; Samuel b. Isaac; Isaac ha-Kohen he-Ḥaber, author of the rimeless seliḥah beginning "Adon be-foḳdeka"; Benjamin b. פשרון, author of two seliḥot; and a certain Joseph, author of three. Of the most prominent German seliḥah-writers of the twelfth century may be mentioned the following: Eliezer b. Nathan, who described the horrors of the Crusades in 1096 and 1146; Moses b. Samuel; Joel b. Isaac ha-Levi; Abraham b. Samuel of Speyer; Ephraim b. Isaac of Regensburg; and Ephraim b. Jacob of Bonn. Indeed, the twelfth century was particularly favorable for seliḥah-composition owing to the cruelties of the Crusades. One of the most prolific German seliḥah-composers of the end of the twelfth century and the beginning of the thirteenth was Eleazar b. Judah of Worms, who lost his family in one of the Crusades (1193 or 1196 or 1214), and who composed no less than thirty-five seliḥot, some of which are alphabetically arranged, and all of which begin with "alef." Moreover, a great many of the anonymous seliḥot belong to this century, which is therefore considered the golden epoch of the piyyuṭ in general and of the seliḥah in particular.

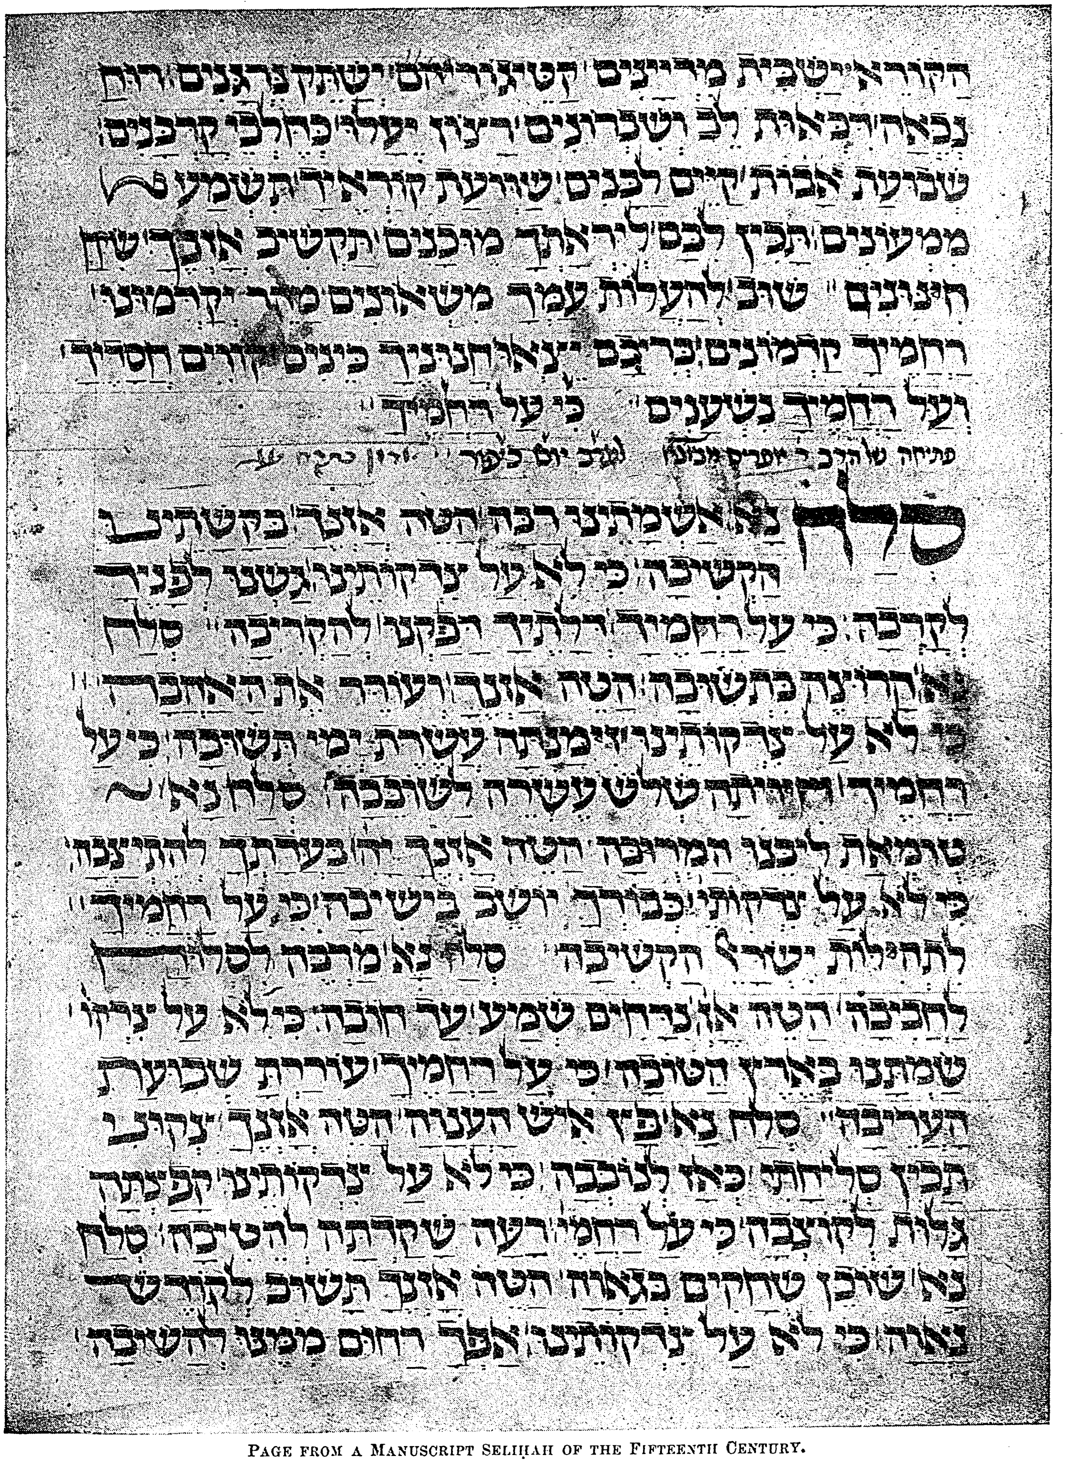
More elaborate are the penitential prayers of the Spanish liturgists from the beginning of the eleventh century. These writers, occupying themselves with Hebrew grammar and following the Arabic poets, adopted instead of the piyyuṭic the poetic style proper. They introduced meter into the seliḥah; and Solomon ibn Gabirol's pizmon "She'eh ne'esar," recited on the Seventeenth of Tammuz, is a real poem. Scarcely less poetic are the seliḥot of Ibn Gabirol's junior contemporary Isaac ibn Ghayyat. In the twelfth century the most prolific Spanish composers of poetic seliḥot were Moses ibn Ezra (the "Sallaḥ," or composer of seliḥot), and Judah ha-Levi; and these were followed as models by later payyeṭanim in Italy and in Provence and the rest of France.

During the period extending from 1240 to 1350 the poetic spirit declined even in Spain, owing to the study of the speculative sciences which absorbed the Jewish mind. Still there was at that time a considerable number of payyeṭanim; and in Germany they were almost exclusively seliḥah-composers. The most active centers of seliḥah-composition at that time were Rome and Greece; and many Karaites were among those who wrote seliḥot in those countries. The most noteworthy composers of the period in question were Meïr of Rothenburg; Benjamin b. Abraham Anaw, in Rome, who skilfully imitated the Spanish pizmon and "mustajab"; Isaac b. Meshullam; Immanuel b. Solomon of Rome; and Judah b. Shemariah.

Seliḥah Poets, 1350-1540.

In the two centuries between 1350 and 1540 the composition of synagogal poetry was confined almost exclusively to southern countries. The seliḥot of that period were not always called forth by certain events or by the poetic impulse of their authors. Certain composers wrote seliḥot in which they gave expression to their personal sufferings, adapting their utterances to the theological teachings of the time, that is to say, either of the Zohar or of the "Moreh." About 1400 many penitential hymns were composed as the result of rivalry between pairs of liturgists who, choosing the same Biblical subject, employed different Biblical words for the termination of the seliḥah-strophes. Among such competitors may be mentioned Nissim and Abraham ha-Levi in Provence, Elkanah b. Shemariah and Samuel b. Shabbethai, as well as Caleb and Moses Ḥazzan in Greece. Throughout this period many sanguinary persecutions occurred; and especially cruel were those of the fourteenth century. Abigdor Ḳara, in a seliḥah beginning "El neḳamot," describes the massacres of Prague in 1389.

From what has been said it will be seen that during these four centuries there is a difference in the seliḥot of the payyeṭanim of Spain and those com-



Page from a Manuscript Seliḥah of the Fifteenth Century.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

posed in other countries. The motive that prompted seliḥah-composition was everywhere the same, namely, persecution; but in Spain in the eleventh and twelfth centuries besides this motive there was a poetic impulse as well. The difference, too, is seen in the number as well as in the character of the seliḥot; for, while 1,200 of them were composed in France, Italy, Greece, and Germany, by about 250 authors, no less than 1,000 piyyuṭim, among which were many seliḥot, were composed by the five Spanish poets Solomon ibn Gabirol, Isaac ibn Ghayyat, Moses ibn Ezra, Judah ha-Levi, and Abraham ibn Ezra. It may be added that only some of these composers are known also as teachers, rabbinical authors, or cantors, while in the case of most of them the names are known only through their compositions.

Selihah-Authors, 1540-1750.

In the middle of the sixteenth century the standard rituals of both the Ashkenazim and the Sephardim were fixed. Thus, although the following two centuries (1540–1750), owing to their many persecutions and massacres, produced a considerable number of composers of seliḥot, these compositions were either not adopted at all for the synagogal service or were adopted only in their respective countries and only for special days. Of the Italian, German, and Polish composers of the first of these two centuries may be mentioned the following: Samuel Archevolti in Padua; Eliezer b. Elijah (d. 1586), who removed from Egypt to Bohemia and thence to Poland; Akiba b. Jacob (d. 1597) in Frankfort-on-the-Main; Moses Mordecai Margolioth (d. 1616) in Cracow; and Samuel Edels (MaHaRSHA) in Posen, the last two being composers of seliḥot commemorating the martyrs of 1596. In the period between 1640 and 1750 the Thirty Years' war and the massacres of the Jews under Chmielnicki led to the composition of the earliest seliḥot; the sufferings caused by the Thirty Years' war being described in seliḥot by Samson Bacharach of Prague and by an unnamed payyeṭan in Kremsier, while the horrors committed by the Cossacks in Nemirov, the Ukraine, and Poland are commemorated by Yom-Ṭob Lipmann Heller, Shabbethai ha-Kohen (SHaK), Moses Cohen, Scheftel Horwitz, Joseph of Gnesen, and Gabriel b. Heschel. The seliḥot of Shabbethai ha-Kohen have been adopted by the Polish communities, which recite them on the Twentieth of Siwan. Later sufferings in Poland are commemorated in seliḥot by Wolf b. Löb and Joseph b. Uri, both of whom flourished at the end of the seventeenth century. Of other seliḥah-composers may be mentioned: Abraham Auerbach in Cösfeld (1674), Aaron b. Eliezer, Naphtali ha-Kohen (d. 1717), Samuel b. Moses of Lithuania, and Jacob b. Isaac of Posen. Among the Italian seliḥah-writers were: Joseph Ravenna, Moses Zacuto, Solomon Nizza (1700), and Isaac Pacifico (d. 1746); and among the best-known German seliḥah-composers were: Samuel Schotten, David Oppenheimer, Jacob London (1730), and Lemel Levi, who, at the siege of Glogau (1741), composed a baḳḳashah in four-versed strophes. At that time there was in Amsterdam Abraham Hezekiah Bashan, who composed a rimed teḥinnah for the Ten Days of Repentance. The latest seliḥah-composer seems to have been a certain Moses who, driven from Russia about this time, settled in the Crimea.

The composition of many of the later seliḥot was due to causes other than persecutions. Thus, when societies for early devotion ("shomerim la-boḳer") were formed, the necessity for special prayers was felt; and seliḥot were composed for such occasions. Moreover, epidemic diseases, drought, fires, and wars gave rise to seliḥot supplicating God's mercy and the intervention of angels.

Among Sephardim and Ashkenazim.

The main divisions of the seliḥot are two, Sephardic and Ashkenazic, each of which presents various local differences. These two divisions differ from each other with regard to (1) the number of the seliḥah days (the Sephardim having the larger), (2) the nature of the seliḥot, and (3) their arrangement. The Sephardic collection is the older. In the time of Amram Gaon, as appears from his "Siddur," seliḥot were composed for all the fast-days, including the Ninth of Ab, on which day the Ashkenazim recite only ḳinot (see Ḳinah). But even in Amram's time the practise differed in certain communities with regard to the introductory seliḥah, which in some places was "Lo be-ḥesed we-lo be-ma'asim banu le-faneka," in others "Atanu 'al shimka" or "Abinu malkenu abinu attah." Each of these introductory seliḥot was common to all the fast-days, and after it special seliḥot appropriate to the occasion were recited. In Amram's time the seliḥot were recited in the middle of the sixth prayer of the "Shemoneh 'Esreh"; later they were transferred to its end. Except at Ferrara, this is now the custom observed by both the Sephardim and the Ashkenazim (Shulḥan 'Aruk, Oraḥ Ḥayyim, 566, 4).

The Sephardic collection contains seliḥot (1) for the Ten Days of Repentance, which, like the Ashkenazic seliḥot for those days, are generally printed separately; (2) for New-Year and the Day of Atonement, which are incorporated in the Sephardic Maḥzor; and (3) for public fast-days, which are published in the ritual. The recital of seliḥot for the penitential days begins, according to Hai Gaon, on the first day of Elul, as is the custom in Yemen and Venice. In certain places, however, they are first recited on the fifteenth of the same month, while in others again they are recited only on the days between New-Year and the Day of Atonement. Unlike the seliḥot for the public fast-days, these are recited before dawn, that is to say, in the last night-watch; they are therefore called "Seder ashmoret ha-boḳer."

Besides the penitential prayers which are common to all days on which seliḥot are recited, such as the introductory seliḥot and the thirteen attributes of God, with their two introductions, there are two or more special seliḥot for each week-day as well as for each of the days between New-Year and the Day of Atonement. On New-Year the Sephardim recite only a few seliḥot, namely, one beginning "Elohai al tedineni," before Nishmat, a pizmon after the "Shaḥarit" prayer—that for the first day beginning "Le-ma'anka Elohai" and composed by David ibn Paḳuda, and that for the second day beginning "Ya'aneh be-bor abot"—and a long pizmon beginning "'Et sha'are raẓon le-hippateaḥ," before the blowing of the shofar. On the Day of Atonement seliḥot consisting of confessions ("widduyim") and pizmonim are recited in all the five services.

The seliḥot for public fast-days consist of those arranged for the five universal fast-days, namely, the Third of Tishri (Fast of Gedaliah), the Tenth of Ṭebet, the Thirteenth of Adar (Fast of Esther), the Seventeenth of Tammuz, and the Ninth of Ab, and those compiled for the Minḥah service of these five days and for that of the eve of New Moon. At the morning service of each of the five fast-days there are recited, besides the ordinary seliḥot, two or three special ones and a pizmon. The Minḥah service has one compilation for all the five days and another for the twelve eves of New Moon. Both compilations begin with the seliḥah "Shema' ḳoli," which opens the Minḥah service, except on the eve of New-Year, when the service is opened with the seliḥah beginning "Elohai al tedineni." The morning service of the Ninth of Ab has comparatively few seliḥot, their place being occupied by ḳinot. It may be said that in Saadia's "Siddur" all the piyyuṭim recited on the Ninth of Ab are termed seliḥot, though in reality many of them are dirges. Some seliḥot are recited by the Sephardim on the seventh day of the Feast of Tabernacles (Hosha'na Rabbah) also, this day being considered one of the penitential days.

Development of Seliḥot.

As stated above, the Sephardic seliḥot differ according to the localities in which they are employed; consequently seliḥah collections based on the customs of the Sephardic communities of Yemen, Tripoli, Venice, and other places are met with. As already mentioned, Amram's "Siddur" indicates differences of practise concerning the introductory seliḥah. Later on, with the development of the seliḥot literature, these local differences became still more marked, each community choosing certain seliḥot and deciding the method of arrangement. The differences extend also to the grouping of the Biblical verses to which the poetic seliḥot are attached. Some examples may be given here. The Tripolitan collection has for every seliḥah morning eleven seliḥot, different for each day, and beginning with a "petiḥah" and terminating with a "ḥaṭanu." On the days which precede New-Year special closing seliḥot, mostly by Isaac ibn Ghayyat, are recited. There are also seliḥot for the Sabbath service of the Ten Days of Repentance. The seliḥah collection of Oran and Tlemçen has six seliḥot for each of the twenty-five seliḥah nights, the services for which are always opened and in most cases closed by Isaac ibn Ghayyat's compositions. A manuscript collection of African seliḥot (Neubauer, "Cat. Bodl. Hebr. MSS." No. 1162) contains 391 for twenty-six seliḥah nights preceding and six nights following New-Year, the numbers for each night varying from nine to nineteen. The Tripolitan seliḥah collection consists chiefly of Isaac ibn Ghayyat's compositions, the remainder being by Solomon ibn Gabirol, Judah ha-Levi, Moses Ḳimḥi, and David ibn Paḳuda.

For Yom Kippur Kaṭon.

The Ashkenazic seliḥah division comprises: seliḥot for the penitential days, generally published separately under the title "Seder Seliḥot" or simply "Seliḥot"; those for the services of the Day of Atonement, generally incorporated in the Maḥzor; and those for the public fast-days together with the occasional seliḥot, all incorporated in the prayer-books. The recitation of the main Ashkenazic seliḥot for the penitential days begins on the Sunday before New-Year, or, if the first day of the latter falls on Monday or Tuesday, on the Sunday of the preceding week. Thus the number of the seliḥah days before New-Year varies from four to eight; each of these days has special seliḥot assigned to it, as has also, in all cases, the eve of New-Year. The number of seliḥot for the New-Year Day is considerably larger than that for the other penitential days. Then follow the seliḥot for the six days (excepting Sabbath) between New-Year and the Day of Atonement, beginning with the Fast of Gedaliah and terminating with the eve of the Day of Atonement. All the seliḥot of the penitential days, including those of the Fast of Gedaliah, are recited by the Ashkenazim before dawn. The seliḥot compiled for the public fast-days include those arranged for Monday, Thursday, and Monday following the feasts of Passover and Tabernacles, and those arranged for the three obligatory fast-days, the Tenth of Ṭebet, the Thirteenth of Adar (Fast of Esther), and the Seventeenth of Tammuz. It should be stated that the seliḥot of Monday, Thursday, and Monday are recited only if there are ten men of the congregation fasting. Like the Sephardic Minḥah seliḥot for every eve of New Moon, some Ashkenazic siddurim include a compilation of seliḥot entitled "Yom Kippur Ḳaṭon." These are taken from other seliḥah collections and used to be recited each month in the Minḥah service of the eve of New Moon, if the quorum of fasters was present. This custom, however, has become almost obsolete, the seliḥot being recited only on the eve of the New Moon of Elul. It has been remarked above that the seliḥot for the Ninth of Ab were later superseded in the Ashkenazic rite by ḳinot. In Germany, Poland, and Italy this change was made as early as the thirteenth century; but in the siddurim of Provence and Avignon some traces of seliḥot for that fast-day still remain. Like the Sephardic seliḥot, those of the Ashkenazic rite differ in various countries with regard to selection, number, and arrangement. Thus, while in Germany, Lithuania, and Poland the number recited on the eve of New-Year is considerably greater than that on the eve of the Day of Atonement, the contrary is the case at Avignon and Carpentras. Again, a difference between the two latter communities exists with regard to the selection and number of the seliḥot. Moreover, special seliḥot are recited on special days in various places in commemoration of certain mournful local events. The best known of the local seliḥah days are: Nisan 1, at Erfurt; Nisan 23, at Cologne and some other places, in commemoration of the massacres of 1147; Iyyar 23, at Worms; Siwan 20, in France, England, and the Rhine provinces, in commemoration of the martyrs of Blois in 1171; the same date, in Poland since the Chmielnicki massacres (1649); Ṭebet 29, at

Worms; Adar 2, at Prague, in commemoration of the troubles of 1611; and Adar 29, at Nuremberg and Fürth. A seliḥah composed by Shabbethai Sofer in 1630, to be recited by the community of Przemysl on the eve of the New Moon of Nisan, has recently been discovered and has been published in "Ha-Shaḥar" (ii. 157). It consists of four-lined strophes and is arranged alphabetically; it relates a sanguinary event which befell the community of Przemysl, and describes the martyrdom of some Jewish families.

For Special Occasions.

There are special seliḥot for the members of the Ḥebra Ḳaddisha, the established day for the recital of which is generally the fifteenth of Kislew, although different communities have different arrangements. For example, the seliḥot for the ḥebra ḳaddisha of Halberstadt differ from those for the Frankfort-on-the-Main society; the Lemberg ḥebra recites its special seliḥot on the Thursday of Shemot, while that of Cracow recites its own seliḥot on the Monday of the same week. In certain places seliḥot are recited on Mondays and Thursdays of Shemot, Wa'era, Bo, Beshallaḥ, Yitro, Mishpaṭim, Terumah, and Teẓawweh (שובבים תת), in a leap-year. These seliḥot were first recited in Austria, Moravia, and Bohemia; and since 1639 they have been used in Lublin also. In the Nuremberg seliḥah collection also there are seliḥot for שובבים תת; they are recited on Thursdays only. The Italian communities recite seliḥot, composed by Moses Zacuto, in the Minḥah services of the first six weekly lessons (שובבים) only. The Nuremberg collection contains, besides, special seliḥot for recitation on the eves of the New Moons of Nisan and Ab, respectively; others for circumcision when this ceremony falls on a seliḥah day; and still others, composed by Simeon b. Zalman Fischhoff of Vienna, for recitation when the smallpox is raging.

The earliest seliḥah edition is that according to the Roman ritual (Soncino, 1487), the next oldest being that of the community of Prague (Prague, 1529). Then follows the seliḥah edition of the German order, edited by Meïr Katzenellenbogen of Padua (Heddernheim, 1546). Two years later there appeared at Venice the same seliḥah collection, with a commentary on the difficult words. The collection of the Polish rite, with a full commentary by Mordecai Mardus, was published at Cracow in 1584, and in 1597 that of the German rite, with a commentary by the same author, appeared in Prague. A German translation of the Polish seliḥot, made by Jacob b. Elijah ha-Levi, was published at Frankfort-on-the-Oder, 1602. In 1671 there were published in the same place the seliḥot of both the German and Polish rites, with a German translation. At Amsterdam in 1688 Eliakim b. Jacob published a Judæo-German translation of the Ashkenazic seliḥot for the whole year, that is to say, of those that are printed in the "Siddur." Thirty years later those for the penitential days, with a Judæo-German translation by Eliakim, appeared in the same city.

W. B. M. Sel.

——**Music:** The more antique the traditional melody, the more ancient, as a general rule, the section of the liturgy in connection with which it has been handed down. Thus the reading of the Scriptures, the earliest devotional exercise of the Synagogue, is in all the various groups of rituals (see Liturgy) framed on the musical theory of the first few centuries of the common era, and presents the form of Cantillation, founded on an elementary notation by neumes or accents, in which the music of antiquity was cast. The free improvisation, again, on a fixed traditional model, to which the next oldest section of the devotions, the "'Amidah" and the blessings centering around the "Shema'," is intoned, is cast in scales (comp. Jew. Encyc. ix. 122, *s.v.* Music, Synagogal) nearer to those employed in the plain-song of the Catholic Church and the Perso-Arab melody, and developed in the period from the seventh to the eleventh century; while it exhibits a form of song equally late (comp. Gevaert, "Origines du Chant Liturgique de l'Eglise Latine," p. 30, Ghent, 1890), and still flourishing in Mediterranean regions and in India (comp. Day, "The Music of Southern India," *s.v.* "Raga," London, 1894; Gevaert, "Histoire et Théorie de la Musique de l'Antiquité," ii. 316). But when, later on, the ancient propitiatory prayer for the fast-days (Ta'an. 16b) developed into the seliḥah (see above) and the liturgy of penance took its shape as a complete service (comp. Zunz, "Ritus," pp. 120 *et seq.*), the ḥazzan's intonation of that service, termed collectively "seliḥot," exhibited still later musical elements, being based on scales more closely agreeing with those of post-medieval Western melody and shaped on its more rhythmic and mensural forms.

Later Origins.

While, too, agreement between the various northern or southern rituals is complete in the method and style, as in the matter, of the cantillation, and is approximated in the recitation, as in the diction, of the older benedictions and prayers, a wide divergence is at once observable in the melody as in the text of the penitential rituals containing the seliḥot, the main point of contact being the imitation of such non-Jewish airs as possess a strain of melancholy (comp. Menahem de Lonzano, "Shte Yadot," p. 65b). The first presentation in the synagogue of the liturgical melodies of the fast-days, therefore, may be assigned to between the tenth and the fifteenth century; and their prevailing wail of grief, even more noticeable than the note of contrition, voices the melancholy experiences of Jewry during that period. Their especial transmission by the line of the so-called Polish precentors has led some to enlarge on their resemblance, in this expression of sadness, to the airs redolent of gloom and despair favored by the peasantry of Slavonic and other east-European regions. The melancholy and grief, however, are but natural expressions of penance; and the minor mode is as noticeable in the German or in the Spanish tradition.

The central feature of the seliḥot is the proclamation of the thirteen attributes of mercy (Ex. xxxiv.

6-7; see Middot, Shelosh-'Esreh) with the prayer introducing them. This is normally recited after each selihah-hymn, and so in the Spanish rite is uttered as many as twenty-six times in the Atonement services. Reform congregations usually now limit its utterance to once in each service. With the Sephardim, also, it is followed by a flourish on the Shofar during the week-days from the 3d to the 9th of Tishri (*i.e.*, the "ten days of penitence"), recalling the similar practise of the Talmudical period (Ta'an. ii. 1). Other features common to all the rituals are the extensive quotation of selected texts, the prayer of contrition and the short confession Ashamnu, and the ancient concluding summaries, as that in alphabetical acrostic, with the form "Answer us, A, B, C, etc., answer us," or the Aramaic prayer reproducing that outlined in the Talmud (*ib.*) in Hebrew. Otherwise the rituals differ extensively, more particularly in the selection and even in the ranking of the medieval hymns of penitence.

Divergence in Rituals.

These poems, indeed, constitute the difference within the wider uses, as between the Bohemian (and Polish and English) and the German (and Dutch) orders. In these two orders the selihot are recited during the week preceding the New-Year and between it and the Day of Atonement. In the Sephardic ritual they are read on forty days, from the 2d of Elul to the Day of Atonement (in allusion to Deut. ix. 18).

In the Ashkenazic use the selihot service is of two types: (1) A longer order, recited at early morning on the days mentioned, before and after the New-Year, as well as in the "Kol Nidre" service on the evening of Atonement, forms a quasi-independent service by itself. (2) An abbreviated order, in the morning, additional, and afternoon services of Atonement, and in the morning service of the fasts of Monday, Thursday, and Monday after Passover and Tabernacles (see Fasting), the Tenth of Ṭebet, the Thirteenth of Adar, and the Seventeenth of Tammuz, is inserted in the repetition of the "'Amidah." The longer order itself commences with an antiphonal series of Scriptural texts, strung together in compliance with R. Simlai's dictum that praise should precede prayer, and associated in the Talmud with the passage Ex. xxxii., read on fast-days (Ber. 23a). These versicles are intoned to a melodious and interesting chant (A in the music herewith), a slight variation of which (B) forms the beautiful melody which closes the intonation.

The thirteen attributes are customarily proclaimed without definite melody by the assembly. But the versicles (modified from Ps. lxxxvi. 6, v. 3, ciii. 13, xx. 10, etc.) which follow them lead on in the Polish ritual, after the introduction, to the prayer of Moses (Num. xiv. 19-20) and its response, from which the selihot derive their title; and this is usually chanted to a florid melody of the fifteenth or sixteenth century, founded on the general intonation of the penitential evening service, and quoted from its most important position as ushering in the Day of Atonement after the proclamation of Kol Nidre.

Pizmon Melodies.

In modern days the tradition has been received of reading each seliḥah in an undertone, the conclusion being marked by the ḥazzan's singing of the last stanza to the general penitential melody. The sole exceptions to this custom, which otherwise covers every metrical and subject form of seliḥah, are the Pizmon or chief and last hymn in each service, and some few hymns in the Atonement services (see Ne'ilah; Omnam Ken). Of the pizmon hymns, a number possess characteristic melodies of their own, as, for example, Adonai, Adonai; Bemoẓa'e Menuḥah; Ne'ilah; She'eh Ne'esar; Shofeṭ Kol ha-Areẓ; Yisrael Nosha'; Zekor Berit. But where no such musical tradition prevails, the pizmon is chanted at length to the melody of the concluding verse of ordinary seliḥot, which also ushers in the abbreviated order and leads up to the congregational proclamation of the "Middot" as well. It may be considered the general seliḥah-chant, and seems to date in its present form from the fifteenth century. But its final phrase, which serves as a congregational response on the Day of Atonement, appears to be much more ancient. It is precisely the intonation and mediation of the second tone ("alter tristibus aptus") of the Gregorian psalmody, with this "mediation" treated as an "ending" in the sixth tone ("sextus lachrymatur et plorat"). The initial portion of the chant also exhibits the tonality of

le - ka we - na - shu - bah; ḥad - desh... ya - me - nu ke - ḳe - - dem.
Thee, and we re - turn;.... re - new.... our days.......... as of old.

A prayer commencing "Zekor" (Remember) follows the last seliḥah, based on the consolatory promises of Scripture and quoting the text in each case. It is recited by the ḥazzan in a sad chant of ever-increasing intensity, which rises to a climax when the concluding prayer (v. 21) of Lamentations is recited to the affecting melody here quoted, and leads into the confession of faith, Ashamnu.

The Sephardic ritual is not characterized by such a regular change of hymns as are the seliḥot of the Ashkenazim; and the melodies, likewise, are more constant and invariable after the opening hymn (Anna Beḳorenu; Adonai Beḳol Shofar; Yah Shema'). But they are characteristic, and, like so very many other airs of the Sephardic tradition, give evidence of their Peninsular origin. In some of the phrases sung, as in the "Shema'

Yisrael," etc., which is repeated in the Atonement selihot, there is an essential resemblance to ancient musical sentences of the Ashkenazic tradition (comp. NE'ILAH), whose general selihah chant is also reproduced to some extent. Compare the Amsterdam tradition (E) in the preceding antiphony with C in the transcription of the selihah chant, and the Leghorn tradition (F) with D there shown.

Antiphony.

The Sephardic recitation of Scriptural verses is calmer and more chant-like than the Ashkenazic, if only because so much more falls to the congregants, as compared with the precentor, in the former tradition. The more emphatic of these texts are, however, chanted first by the ḥazzan and antiphonally repeated by the congregation, and the concluding verse from Lamentations likewise, in the southern use, closes as climax the central section of the selihot.

Repeatedly employed, as the general chant is in the Ashkenazic use, and similarly utilized, is a more formal melody, in which the first strain is repeated as often as the length of the hymn or prayer necessitates, and the second strain ends, with a long-drawn wail.

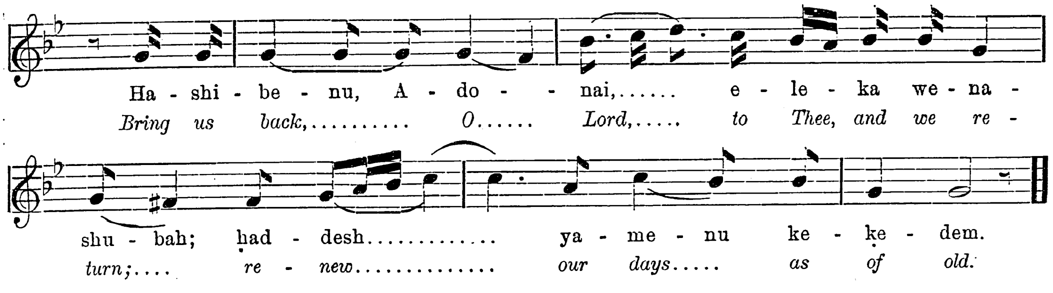
SEMAḤOT ("Joys"): Euphemistic name of the treatise known as "Ebel Rabbati," one of the so-called small or later treatises which in the editions of the Babylonian Talmud are placed after the fourth order, Neziḳin; it treats of mourning for the dead. A collection of baraitot entitled "Ebel Rabbati" is cited in the Talmud (M. Ḳ. 24a, 26b; Ket. 28a), sentences therefrom being quoted; but it



Ha - shi - be - nu, A - do - - nai,...... e - le - ka we - na -
Bring us back,.......... O...... Lord,..... to Thee, and we re -
shu - bah; had - desh............. ya - me - nu ke - ke - dem.
turn;.... re - new............. our days..... as of old.

is not identical with the treatise now under consideration, since only one of the three sentences in question, namely, that cited in Ket. 28a, is found even in an approximate form in Semaḥot (ii. 13–14).

"Ebel Rabbati."

The designation "Ebel Rabbati" in the Talmud seems indeed to presuppose that a shorter treatise of like content was in existence at the time of the Amoraim, although it is probable that the term "Rabbati" (the Large) was used merely because the collection of mourning regulations to which it was applied was more copious than that contained in the Mishnah (M. Ḳ. iii.). So much, however, is certain, that besides the treatise which is now known as Semaḥot or Ebel Rabbati there was an older collection of baraitot concerning funeral ordinances, and that the former was designated "Rabbati" to distinguish between the two. The gaon Naṭronai b. Hilai (853–856), in answer to the question "What is the Ebel Rabbati?" gives the reply: "Ebel is a treatise of the Mishnah in which are contained the regulations concerning mourning for the dead and most of the halakic ordinances of the third chapter of Mo'ed Ḳaṭan. There are two such: a large and a small one" (in Edelmann, "Ḥemdah Genuzah," No. 90; comp. "'Aruk," *s.v.* אבל). Numerous fragments of the so-called "small" Ebel treatise have been preserved, notably in Isaac ibn Ghayyat's "Halakot," in Naḥmanides' "Torat ha-Adam," in "Tanya," and in Jacob b. Asher's "Ṭur" (see the comparison of these passages by Brüll in his "Jahrb." i. 10–22). To judge from these fragments the small Ebel contained regulations concerning visitation of the sick, treatment of the dying, laying out of the corpse, mourning for the dead, arrangement of graves, and collection of the bones ("ossilegium"), which was customary among the Jews as well as among the Greeks. This treatise, which is the oldest collection of halakot on mourning customs, was compiled in Palestine; and, according to Brüll (*l.c.*), R. Eleazar b. Zadok, who lived in Lydda at the time of Gamaliel II., prepared the nucleus of it. It was then amplified, enriched, and revised by R. Ḥiyya; but as it was known to a small circle only, it was replaced by the later treatise Ebel Rabbati, which borrowed much from it.

Contents of the "Small" Ebel.

The treatise Semaḥot is a post-Talmudic product and originated in Palestine. This explains the many coincidences of its contents with the baraitot of the Palestinian Talmud. It is a compilation from various older works; and in many passages traces of revision are to be noticed. The compiler incorporated a considerable part of the small Ebel, as well as much from other works, besides adding original matter. The late date of the compilation of the treatise may be seen from the use of the two Talmudim and from the character of the composition itself, which is unmistakable.

Late Date.

The work reached Babylonia in the geonic period; and even at that time it received amplifications and additions from both Talmudim. It took on its present form probably in the middle of the eighth century (Brüll, *l.c.* p. 48), if not later. The work was comparatively widely circulated at the time of the later geonim, since reference to a passage in it is made in a question addressed to Sherira and Hai from a distant region. In their responsum to this question they call the treatise "Mishnatenu" = "our Mishnah" (Naḥmanides, "Torat ha-Adam," p. 51a, Venice, 1598). Rashi had the work in its present form, since he explicitly cites as the commencement of the treatise the opening words of the present text.

The treatise is divided into fourteen chapters; and this division dates from the thirteenth century at the latest, since even Mordecai cites it by chapters ("Mordekai" on M. Ḳ. 919, 926, 929). The tractate contains almost complete instructions as to the treatment of the dying and the dead, from the commencement of the death-agony to the arrangement of the grave which receives the remains. Numerous examples from current practise are cited. A large number of haggadot also are included. On the whole, it furnishes much valuable material for the study of Oriental antiquities in general and of ancient Jewish practises in particular, for the verification of historical facts, and for an understanding of the development of Jewish customs. The present text is defaced by many corruptions; so that its original form can not now be determined. Whereever possible the commentators have made corrections on the basis of critical comparison, or have called attention to the corruptions.

The following is a short outline of the contents of the treatise:

The first chapter is preceded by a haggadic introduction, inasmuch as it is considered desirable to begin so mournful a treatise with a sentence of a lighter character (comp. Brüll, *l. c.* p. 27, note 41).

Ch. i.: A person in the agony of death is regarded in every respect as fully alive (§§ 1–8);

Contents.

mourning to be observed for heathen and slaves; other regulations concerning slaves. In this connection it is said that only the three patriarchs Abraham, Isaac, and Jacob may correctly be called the fathers of the Hebrew race, and only the four women Sarah, Rebekah, Rachel, and Leah, the matriarchs (§§ 9–14).

Ch. ii.: Mourning customs to be observed for a suicide; cases in which a person found dead is to be regarded as a suicide (§§ 1–6); mourning to be observed, for a person condemned and executed by a Jewish tribunal (§§ 7–9); no mourning is to be observed, even by their nearest relatives, for persons who have renounced their nationality and their faith (§ 10); mourning to be observed for a person executed by a non-Jewish tribunal; other regulations (§§ 11–14).

Ch. iii.: The different burial customs, varying according to the age of the deceased.

Ch. iv.: Cases in which a priest may handle a corpse, although he thereby loses his priestly purity.

Ch. v.: Mourners are prohibited from performing any work during the seven days of mourning; laws relating to excommunicants.

Ch. vi.: What a mourner may and may not do during the seven days of mourning; what a person under a ban may not do; attitude of the community toward him.

Ch. vii.: Nature of the thirty days' mourning. In connection therewith many other regulations are enumerated which have to do with terms of thirty days.

Ch. viii.: Customs which one may observe, although they appear to be heathen customs; various proverbs, anecdotes, and historical narratives.

Ch. ix.: Different mourning customs for different relatives and for different events.

Ch. x.: Mourning while the corpse is still in the house; mourning for scholars and princes; and other regulations.

Ch. xi.: When two corpses are in the city, which of the two is to be buried first; the mourning of a wife for the relatives of her husband; signs of mourning to be displayed in the house of a mourner.

Ch. xii., xiii.: Regulations concerning ossilegium (see above); various other regulations, and anecdotes.

Ch. xiv.: Regulations concerning graves and the laying out of burial-places; the mourning feast in the house of the mourner. See Burial; Funeral Rites; Mourning.

SEMALION (סמליון): Name occurring in an obscure passage relating to the death of Moses (Sifre, Deut. 357; Soṭah 13b), which modern scholars consider to be identical with the Greek *Σημαλέον* (= "giving a sign") and about which the ancient commentators disagreed, being uncertain whether it was the name of a man or of an angel. Rashi (on Soṭah *l.c.*) holds that it is the name of a scholar; but R. Hananeel (quoted in Tos. *ad loc.*) declares that some think it to be the name of an angel. In the latter case Semalion would be the angel who announced Moses' death (comp. Samuel Edels on Soṭah *l.c.*), whence his name.

The name סימואל is found in the Hebrew MS. No. 770 of the Bibliothèque Nationale, Paris (p. 125b) as that of an angel presiding over the month of Marḥeshwan, and in "Sefer Razi'el" (p. 5a) as that of the angel who presides over the second solar period ("teḳufah"). This name is supposed by M. Schwab ("Vocabulaire de l'Angélologie," pp. 197–198) to be identical with *Σημαλέος*. It may be said that the latter name is in Greek mythology an epithet of Zeus. If, however, "Semalion" is the name of a person, it is identical with the "Semellius" (*Σεμέλλιος*) of I Esd. ii. 16.

SEMIATITSCH, GEDALIAH: Lithuanian Talmudist of the seventeenth and eighteenth centuries. He was one of the Ḥasidic party which in 1700 made a pilgrimage to Palestine under the leadership of Judah Ḥasid. In his work "Sha'alu Shelom Yerushalayim" (Berlin, 1716) Semiatitsch gives a full description of this pilgrimage, including the adventures of the party and the death of Judah Ḥasid. He adds an account of the history and a description of the ruins of Jerusalem as well as a list of the sepulchers of the Holy Land, the narrative being followed by some dirges.

SEMIKAH ("laying on [of hands on the sacrificial victim]"): A ceremony obligatory on one who offered an animal sacrifice. The regulations governing its observance were as follows: The owner of the sacrificial victim (Sifra, Wayiḳra, v. [ed. Weiss, 6d–7a]) was required to lay both his hands with all his might between the horns of the animal just before it was killed (Maimonides, "Yad," Ma'ase ha-Ḳorbanot, iii. 13). The act of imposition, which took place in the court of the Temple where the victim was slain (Men. 93a, b; Zeb. 32b–33a; Maimonides, *l.c.* iii. 11–12), was to be performed with bare hands, and there might be nothing between them and the head of the animal (Maimonides, *l.c.* iii. 13; Men. 93b). During this ceremony the sacrificer, in case he brought a sin-offering or an offering of atonement, confessed his sins, saying: "I have done thus and so, but have repented; may this sacrifice bring me forgiveness and be an atonement for me" (Yoma 35b; Maimonides, *l.c.* iii. 14). In the case of a thank-offering or a meal-offering at which sins were not confessed, the sacrificer recited hymns and prayers of thanksgiving during the act (Maimonides, *ib.*).

In Sacrifices.

Semikah was observed only when sacrifices were offered by Jews, not when brought by Gentiles (Men. 93a; Maimonides, *l.c.* iii. 5). The ceremony was not observed, however, when the sacrifice was a fowl (Giṭ. 28b; Maimonides, *l.c.* iii. 6), nor was it performed, except in two cases, at communal sacrifices (Men. 92a, b; Maimonides, *l.c.* iii. 10). It was observed, on the other hand, at all sacrifices offered by an individual, except that of the paschal lamb, that of the first-born, and that of the tithes of cattle (Men. *ib.*; Maimonides, *l.c.* iii. 6). Only the owner of the sacrificial animal might observe the ceremony, and it might not be performed by proxy (Men. 93b; Maimonides, *l.c.* iii. 8). In case, therefore, several persons made an offering in common, it was necessary that they should lay their hands in succession on the head of the victim (Maimonides, *l.c.* iii. 9). When, however, one dedicated a thank-offering or a meal-offering and died before he could fulfil his vow, his male heir might offer it and observe semikah (Men. 92a, in opposition to R. Judah; Maimonides, *l.c.* iii. 9). Even when the semikah was omitted a sacrifice was still acceptable; but the forgiveness obtained through it was not as complete as if the ceremony had been performed (Men. 93b; Maimonides, *l.c.* iii. 12).

Its Meaning.

The symbolism of this custom has been variously explained. According to Philo ("De Victimis," § 4 [ed. Mangey, p. 240]), the sacrificer intended his act to imply that "these hands have done no wrong, but have performed good and useful deeds." This, however, applies only to thank-offerings and meal-offerings, and not to sin-offerings or to offerings of atonement. Some rabbinical authorities, followed by certain Church Fathers, interpreted "semikah" as meaning that the sacrificer, by laying his hands upon the victim, transferred his sins to it, and imposed upon it the punishment which his conduct had merited (Sforno on Lev. i. 5; Levi b. Gershon on Lev. i. 4). This explanation is based on the ritual associated with the scapegoat, upon which Aaron laid the sins of the children of Israel, who were thereby freed from their iniquity (Lev. xvi. 21 *et seq.*). This interpretation, however, is not well founded, since there is no evidence that the sins of Israel were conceived of as being transferred to the goat through the laying on of hands, although they may have been considered as being so transferred by the confession that formed part of the semikah ceremony, in which case the real factor was the liturgical formula rather than the ritual act.

This explanation of semikah, moreover, does not apply in the case of meal-offerings and thank-offerings, for they had nothing to do with a transference of sins. Since semikah was prescribed for sin-offerings and for offerings of atonement, as well as for meal-offerings and thank-offerings, it must have had a meaning which applied to all these various sacrifices, and must therefore have had some connection with the basal concept of sacrifice. Such a connection is established by the theory, advanced by Bähr and accepted by many modern scholars, that semikah was analogous to the Roman manumission. The hands, the members with which one holds and gives, were laid upon the victim's head as implying on the part of the sacrificer the words: "This is my property, which I dedicate to God."

Halakic Controversy.

The Talmud throws no light on the origin of semikah; but justification for the inference that the ceremony was connected with the transfer of property may be drawn from such Talmudic regulations as the requirement that only the owner of the sacrificial animal or the owner's heir might perform the semikah. The necessity of observing semikah, even when the sacrifice was offered on a feast-day, was a moot question for five generations. One member of each of the five pairs ("zugot"), who were considered the foremost teachers of the Law, favored semikah, while his colleague decided against it (Ḥag. ii. 2; comp. the Talmudic explanation, *ib.* Gem. 16a, b). This difference of opinion was the first halakic controversy, according to Tosef., Ḥag. ii. 8 and Yer. Ḥag. ii. 77. Weiss, Frankel, and Levi offer various explanations of the meaning and importance of the controversy, but there are also notes on Ḥag. ii. 2 which state that the difference of opinion did not refer to the semikah ceremony during the sacrifice, or to its necessity or admissibility on a feast-day (comp. Sidon, "Die Controverse der Synhedrialhäupter," in "Kaufmann Gedenkbuch," pp. 355–364, Breslau, 1900; Schwarz, in "Monatsschrift," xxxvii. 164–169, 201–206). See also ORDINATION.

SÉMINAIRE ISRAÉLITE DE FRANCE: French rabbinical school. On Jan. 23, 1704, Abraham Schwab and Agathe, his wife, founded a yeshibah at Metz; and on Nov. 12, 1705, there was executed before a notary public a deed of trust, a copy of which is still preserved in the seminary archives. The founders gave a site in the Rue de l'Arsenal, Metz, and endowed the yeshibah with a yearly income of 6,000 "livres écus" for the support of five rabbis as professors.

Origin.

On March 30, 1820, the minister of the interior approved a resolution of the Consistory of Metz, dated Dec. 21, 1819, by which the yeshibah became a Talmud Torah, the sum of 1,200 francs being set aside for its support and placed in the hands of a committee of five members chosen by the consistory. The number of pupils was limited to eight, four of whom were exempt from the payment of fees. In addition to religious instruction, the students were required to attend for one hour daily classes in elementary French and arithmetic in the primary school of Metz.

On Aug. 21, 1829, a decree of the French government sanctioned the resolution, presented for consideration by the Central Consistory of the Jews of France, elevating the Talmudic school at Metz to the status of a central rabbinical school. The institution was accordingly opened in July of the following year, and was maintained at the expense of the Jewish communities of France until March 28, 1831, when the government of Louis Philippe made an annual appropriation of 8,500 francs for the state support of the school. Shortly after this the pupils were released by a ministerial circular from the obligation of military service. The successive directors of the school at Metz were: Chief Rabbi Lion Mayer Lambert, 1829–38; Chief Rabbi Mayer Lazard, 1838–1856; and Chief Rabbi Isaac Trénel, 1856–59.

By a decree of the empress-regent Eugénie, dated July 1, 1859 (Napoleon III. being in Italy at the time), the Central Rabbinical School was transferred from Metz to Paris as the Séminaire Israélite de France, and it was granted an annual subsidy of 22,000 francs. Chief Rabbi Isaac Trénel was the director of the seminary until his death in 1890, his successor in October of the same year being the present (1905) incumbent, Chief Rabbi Joseph Lehmann.

Constitution.

On Dec. 1, 1860, new regulations for the institution were approved by the minister of public instruction and worship, by which it was placed under the government of the Consistory of Paris subject to the supervision of the Central Consistory, and administered by a committee consisting of the chief rabbi of the Central Consistory (president), the chief rabbi of the Consistory of Paris (vice-president), two lay members of the Central Consistory, and six members to be appointed by the Consistory of Paris and confirmed by the Central Consistory. The number of resident pupils receiving gratuitous tuition was limited to ten, and the annual subsidy of 22,000 francs was increased to 32,000 francs. In 1884, however, the allowance of 10,000 francs for free scholarships was discontinued by the state, although the grant of 22,000 francs was maintained. The average annual expenses soon rose to 80,000 francs, this sum being furnished by the subsidies of the state, by the Paris and provincial consistories, and by donations and annual subscriptions. The military law of July 27, 1872, exempted candidates for the rabbinate from military service; but by the enactment of July 15, 1889, they were required to serve one year in the army.

The Minor Seminary.

The constitution of the Société du Talmud-Thora or minor seminary was adopted Dec. 5, 1852; and the school itself was opened in the following year under the management of Chief Rabbi Isaac Trénel. Rabbi Zadoc Kahn became its director in 1862, being succeeded some years later by Chief Rabbi Lazare Wogue. In 1873 the Talmud Torah was placed under the same control and in the same building as the seminary, although it retained its separate organization. On Dec. 30, 1892, the minister of public instruction and worship ratified the following amendment to the regulations of Dec. 1, 1860: "To secure the steady growth of the Jewish seminary, a preparatory class, or Talmud Torah, shall be established, where candidates for the rabbinate may pursue both the study of the classics and the elementary study of theology. This class shall be held in connection with the Jewish seminary, and shall be under the direction of the administrative committee of that institution." A class of ḥazzanim was established in the minor seminary in 1899.

On Sept. 12, 1882, the chief rabbis Lazare Isidor and Zadoc Kahn, and Isaac Trénel, the director of the seminary, delivered addresses at the opening of its oratory. The public is admitted to this oratory; the curator is Lucien Dreyfuss, a member of the administrative board of the synagogues of Paris.

The faculty of the Séminaire Israélite de France and of the Talmud Torah is at present composed of the following members, besides a number of rabbis and lay professors who give instruction in general subjects: Chief Rabbi Joseph Lehmann, director; Chief Rabbi Abraham Cahen, adjunct director; Israel Lévi; Hartwig Derenbourg, member of the Institut de France; Mayer Lambert; Jacques Kahn; Joseph Halévy; Julien Weill; and S. Debre.

S. J. Ka.

SEMITES (originally **Shemites**): Term used in a general way to designate those peoples who are said in Gen. x. 21–30 to be the descendants of the patriarch Shem.

——**Biblical Data:** These descendants are enumerated in the passage cited as Elam, Asshur (Assyria), Arphaxad, Lud, and Aram. Elam, a mountainous country on the east of Babylonia, was known in history before 4000 B.C. through its wars with the Babylonian king Eannadu (comp. Barton, "Semitic Origins," p. 180). Its language is, however, not Semitic (comp. Jensen in "Z. D. M. G." 1901, lv. 223 *et seq.*). It was probably reckoned among the descendants of Shem here because of its numerous Semitic immigrants.

Arphaxad.

The identification of Arphaxad has been the subject of many wild guesses. The identification with Arrapachitis in the mountainous district of the Upper Zab is now generally abandoned; and there is general agreement that the last element of the name, כשד, is the Hebrew "Kasdim" or Chaldeans. J. D. Michaelis revived this view, which Josephus ("Ant." i. 6, § 4) seems to have anticipated. Difference of opinion still exists as to the meaning of the first part of the name. Dillmann ("Genesis," i. 372 *et seq.*) and Holzinger ("Genesis," in "K. H. C." p. 105) hold that the first element is ארף, which in Arabic and Ethiopic means "boundary," "limit," the whole word meaning "district of the Chaldeans." Hommel ("Ancient Hebrew Tradition," p. 292), who is followed by W. Max Müller (comp. Arphaxad), explains the name as a corruption of "Ur-kasdim"; but this view leaves the presence of the פ unexplained. The Egyptian article (Hommel) is out of place here. Cheyne (in Stade's "Zeitschrift," xvii. 190) explains the word as being composed of ארפך, name of the Assyrian province of Arbaha, and כשד. Whatever the origin of the name, it no doubt refers to the Babylonians.

Lud can here hardly refer to Lydia; its meaning is unknown. Aram refers to the Arameans, a well-known division of the Semites. The descendants of Aram are said (Gen. x. 23) to be: Uz, a region probably somewhere in the neighborhood of the Hauran (comp. Dillmann, *l.c.* i. 375); Hul and

Gether, two localities quite unknown; and Mash, probably the Mount Mash of the Gilgamish Epic (comp. Schrader, "K. B." vi. 203), which Jensen (*ib.* vi. 467) places in southwestern Arabia, but which Zimmern (in Schrader, "K. A. T." 3d ed., pp. 573 *et seq.*) identifies with the Lebanon and Anti-Lebanon Mountains. Dillmann and Gunkel identify it with Mount Masius north of Nisibis (comp. their commentaries *ad loc.*).

Sons of Eber.

The most important descendant of Arphaxad is said (Gen. x. 24) to be Eber (עבר), whose name is clearly connected with that of the Hebrews (עברים). Eber is said to have had two sons: Peleg, from whom Abraham and the Hebrews were descended (*ib.* xi. 10-27), and Joktan. The descendants of Joktan (*ib.* x. 26) are, so far as is known, Arabians. Almodad is as yet unidentified. Sheleph is the Arabic "Silf," a name of frequent occurrence in Yemen (comp. Glaser, "Skizze der Geschichte und Geographie Arabiens," p. 425). Hazar-maveth is Hadramaut, on the Indian Ocean. Jerah, according to Glaser (*ib.*), whom Gunkel follows, is to be identified with Mahra. Hadoram is probably Dauram near Ṣan'a, while Uzal is Ṣan'a itself (Glaser, *l.c.* p. 426). Obal is probably the Ebal of Gen. xxxvi. 23 (*ib.*), while Diklah and Abimael are unknown. Sheba is the well-known Sab'a of southern Arabia. Ophir, the land of gold in the days of Solomon, lay in Arabia, probably on the coast of the Persian Gulf (comp. Glaser, *l.c.* p. 368). Havilah was situated somewhere in Arabia, probably extending from the north-central part to the east (comp. Glaser, *l.c.* pp. 339 *et seq.*). Jobab is to be identified with the Jobaritæ of Ptolemy—an Arabian tribe.

Uncertain as some of these names are, it is clear that, according to the Biblical classification, the Arabs, Babylonians, Assyrians, Arameans, and Hebrews were regarded as Semites, or the descendants of Shem.

——**Critical View:** In modern times the highest criterion of kinship between nations is the possession of a common language, or languages which have a common derivation. This criterion is not infallible; but when checked by other tests, kinship in speech is most important evidence of kinship in race. When determined by this test, the catalogue of Semitic nations differs somewhat from the Biblical list. It includes the North-Arabians, South-Arabians (Minæans, Sabeans, etc.), the Abyssinians, Babylonians, Assyrians, Arameans (consisting of many widely scattered tribes extending from the Persian Gulf to Lebanon and the Hauran), the Phenicians, Canaanites, and Hebrews, together with the kindred of the last-named, the Moabites and the Edomites. The list in Gen. x. classes the Phenicians and Canaanites with the Hamites; but the linguistic and historical evidence is overwhelmingly in favor of their kinship to the Semites.

Classification and Kinship to Hamites.

On linguistic grounds the Semites are usually divided into two groups: the northern and the southern Semites. The latter include the Arabs, Yemenites (Minæans, Sabeans, the modern Mehri), and the Abyssinians; the northern group, the rest. For the southern group this classification is excellent, certain well-marked features of the languages, such as the inner or broken plurals common to these Semitic tongues alone, distinguishing them from the northern group. For the latter group the classification is not so happy, as the northern languages are not so closely related to one another. It is clear from the great variations which they show that the peoples speaking them did not live as long together in one center and separate from the southern Semites. Northern Semitic really consists of three groups of languages: the Babylonian (including Assyrian), the Aramean (including Syriac and many dialects, from Samaritan to Mandæan), and the Canaanitish (including Phenician, Hebrew, and Moabite). These languages, intimately related to one another, are less closely related to the group of languages of which ancient Egyptian is the most important representative, and which is now usually termed "Hamitic" (comp. Zimmern, "Vergleichende Grammatik der Semitischen Sprachen," p. 5; Barton, *l.c.* pp. 9 *et seq.*). This Hamitic group consists of Egyptian, Coptic, the Berber languages (Kabyle, Tamachek, etc.), and the so-called Cushite languages (Bishari, Saho, Galla, Afar, Somali, Bilin, Chamir, etc.).

Primitive Home and Civilization.

Formerly, on account of certain animal names common to all the Semitic tongues, it was held by Hommel and others that the Semites separated from the Aryans in the high table-lands of Turkestan and wandered to Babylonia, whence they spread over the Arabian Peninsula and Syria. This view is now generally abandoned, most scholars agreeing that Arabia was the cradle-land of the Semites, while North Africa was that of the united Hamito-Semitic race, and that the Semites in prehistoric times separated from their kinsmen and migrated to Arabia, where their special racial characteristics and the distinguishing features of their languages were developed, and whence they were distributed over other Semitic countries. The life of the Hamites and the Semites in North Africa and Arabia developed in a desert country dotted with occasional oases. The hard conditions of life forced them, long before the dawn of history, from savagery into a barbarism in which the cultivation of the date-palm was a prominent feature. The family was loosely organized; descent was reckoned through the mother; and the most influential divinity was a goddess of fertility, the marks of whose cult are deeply embedded in the civilization of all the Semites. This deity was known in South Arabia as "Athtar"; in Abyssinia, as "Ashtar"; in Mesopotamia, as "Ishtar"; among the Arameans as "Atar"; and among the Canaanites and Phenicians as "Ashtart"; in the Masoretic text of the Old Testament the name is perverted to "Ashtoreth." This cult profoundly influenced even the religion of Israel. Like kinship of language, it is a mark of the kinship of the Semitic races. Its development and elimination constitute the story of Semitic evolution. Traces of a similar civilization and religion are found among the Hamites (Maspero, "Dawn of Civilization," pp. 51 *et seq.*); and in both peoples it was due to the influence of oasis life (comp. Ashtoreth).

The Arabs and Abyssinians.

The Arabs in the desert fastnesses of central and northern Arabia have, on account of their isolated position, preserved unchanged more features of primitive Semitic character, custom, and language than any other Semitic nation; the conditions of life have always been too hard to permit the development of any high state of civilization. But Arabia from time immemorial has poured forth wave upon wave of Semites over the surrounding lands; and finally, under the influence of Mohammed in the seventh century of the current era, Arabia became for a time a great world-power, and the Arabs, urged on by a new religious enthusiasm, conquered in the course of a century western Asia and North Africa, extending their power from India to the Mediterranean and advancing also across Spain into France. The fertility of these lands soon caused the seat of Arabic power to move beyond the borders of Arabia. In the conquered countries the Arabs have become only one element of the population; but they are still an important factor in the world's history (comp. ARABIA; CALIFS; ISLAM).

Archeological investigation has in recent years revealed in southwestern Arabia, the most fertile portion of the peninsula, the presence of a high degree of civilization as early as the thirteenth century B.C. This civilization centered in the cities of Ma'in and Saba, and has left a large number of inscriptions written in a dialect which differs considerably from that of northern Arabia (comp. Hommel, "Süd-Arabische Chrestomathie," Munich, 1893). From southern Arabia emigrants crossed the Straits of Bab-el-Mandeb and established a colony in Africa, which in time not only became independent, but even conquered a part of the mother country (comp. Glaser, *l.c.*; *idem*, "Die Abessinier in Arabien und Afrika"). These Semites are known as Ethiopians or Abyssinians. Their earliest inscriptions are written in the language and script of southern Arabia. By 115 B.C. the old kingdom of Saba had been overthrown and the kingdom of Saba and Raidan established on its ruins. This kingdom lay in part in Africa. About 380 C.E. there arose in Africa the kingdom of Aksum; and about the same time the Sabean script gave place in Abyssinia to the Ge'ez script, which still prevails in that country (comp. D. H. Müller, "Epigraphische Denkmäler aus Abessinien," Vienna, 1894; Bent, "Sacred City of the Ethiopians," 1893). Christianity entered the country during the same century and finally prevailed. There are still spoken in Abyssinia the dialects into which the old Ethiopic has broken up, such as the Amharic, the Tigre, and the Tigriña. Abyssinia is still an independent kingdom.

The Babylonians and Assyrians.

The oldest Semitic civilization ever developed was the Babylonian. This, if not the oldest, is one of the oldest civilizations in the world; in the opinion of the majority of those competent to judge, its beginnings antedate the Semitic occupation of Babylonia and were originated by a non-Semitic people, whom German scholars call "Sumerians," and English, "Accadians." The Sumerians had made the beginnings of civilization and of the cuneiform writing (comp. Weissbach, "Sumerische Frage," Leipsic, 1898; Barton, *l.c.* pp. 164 *et seq.*). Before the dawn of written history, probably by 5000 B.C., Semites from Arabia had mingled with the Sumerians (comp. Barton, *l.c.* pp. 196 *et seq.*).

The earliest history known at the present day through written documents reveals a number of cities—Shirpurla, Kish, Gishban, Ur, Erech, Larsa, and Agade—struggling for supremacy. One city held the leadership for a while, and then it would pass to another. There is reason to believe that in prehistoric times similar struggles had occurred between Nippur, Eridu, and Ur. Only thus can the position held by these cities at the dawn of history be accounted for. About 2300 B.C. Babylon emerged from obscurity and became supreme under a dynasty which belonged to a new wave of emigration from Arabia; and for about 1200 years it was the most important city in the country. About 1700 the Kassites, a race from the southeast, invaded Babylonia and founded a dynasty which lasted for 576 years; but these foreigners were soon Semitized. After about the year 1000 the Babylonian kingdom became weak. The city retained a commanding religious and cultural influence; but leadership in political affairs passed to Assyria (comp. BABYLONIA).

Assyria was a Semitic colony, or a series of colonies, from Babylonia. It begins to emerge into the annals of written history about the middle of the nineteenth century B.C. By 1100 it was the strongest power in western Asia; and at various periods after that it held the hegemony. In the ninth, eighth, and seventh centuries it dominated Palestinian affairs; in the two latter centuries, Babylonia; and in the seventh century it conquered Egypt. Its people lacked the culture and refinement of the Babylonians; but they were, perhaps, the most vigorous warriors whom the Semites ever produced (comp. ASSYRIA).

The Chaldeans and Arameans.

Another wave of Semitic emigration from Arabia is represented by the Chaldeans. For a long time they hovered around the southern border of Babylonia, where they appeared about 1000 B.C. By the eighth century one of their number had seized the throne of Babylon for a time, and in 625 the Chaldean Nabopolassar succeeded in establishing the Chaldean or Neo-Babylonian empire. As Assyria fell in 606, this empire succeeded to the dominion of western Asia until it was overthrown by Cyrus in 538 (comp. CHALDEA).

The Arameans never formed one united independent state. They were scattered along the western border of Babylonia; extended up the Euphrates to the Taurus Mountains; occupied the region between the Euphrates and Lebanon; established a kingdom at Damascus; in early Israelitish times pushed down into the Hauran; and later, as the Nabatæans, occupied Edom, Moab, and the Sinaitic Peninsula, and advanced into Arabia as far as Taima. They were the middlemen of the East. In the time of Sennacherib their language had become a kind of *lingua franca* (II Kings xviii. 26); and it seems in time to have displaced both the Babylonian in Babylonia (comp. Aramaic "dockets" in Stevenson, "Assyrian and Babylonian Contracts"; Clay, "Business Documents of Murashû Sons") and the Hebrew in Palestine (comp. Aramaic Language). The Arameans appear in the inscriptions about 1500 B.C., by which time they had begun to migrate into Palestine. Hebrew tradition preserves the legend that Israel was of Aramean extraction (comp. Gen. xii., xxviii.-xxxii.; Deut. xxvi. 5). On the Arameans comp. Paton, "Early History of Syria and Palestine," ch. vii., viii.; Aram; Aram-Geshur; Aram-Maachah; Aram-Naharaim; Aram-Rehob; Aram-Zobah; Damascus; Nabatæans.

Phenicians, Canaanites, and Hebrews.

The Phenicians and Canaanites were one race and spoke one language. Perhaps they came into Syria and Palestine as a part of that movement of races which gave Egypt her Hyksos kings about 1700 B.C. (comp. Paton, *l.c.* ch. v.). They never developed a consolidated kingdom, but formed small city dominions, over which petty sovereigns ruled. The Phenicians, who inhabited the little strip of land between Mt. Lebanon and the Mediterranean, became great sailors. They performed on the sea the part which the Arameans did on land, carrying Semitic influences to Greece and Egypt. It is commonly supposed that they originated the alphabet. Perhaps this is not true; but they were probably the distributors of it. The Canaanites, although conquered by the Hebrews, gave to the latter their language (comp. Canaan; Canaanites; Phenicia).

The Hebrews were in origin an offshoot of the Arameans; but they adopted the Canaanitish language. Their history is told under Israel, People of. Their great contribution to the world's civilization has been a religious one. The Edomites and the Moabites were closely connected with Israel and apparently spoke the same language (comp. Edom; Moab; Moabite Stone).

Semitic Contributions to Civilization.

The Semites, though never especially gifted in philosophical power, have contributed much to the civilization of the world. The Babylonians through millenniums of painful development established many of the primary elements of civilized life. The fact that the Egyptians were developing many of these elements independently in no wise detracts from the credit due the Babylonians. The beginnings of astronomy, the division of time by weeks, and perhaps the beginnings of mathematics are traceable to Babylonia, and are at least in part to be credited to the Semites. Phenicia, as stated above, in all likelihood distributed, if she did not invent, the alphabet. Three of the most influential of the world's religions, Judaism, Christianity, and Mohammedanism—religions which embody for many millions who are not Semites their highest ideals and hopes—are Semitic contributions.

E. G. H. G. A. B.

SEMITIC LANGUAGES: Languages spoken by the Semitic peoples (comp. Semites). These peoples are the North-Arabians, the South-Arabians, the Abyssinians (ancient and modern), the ancient Babylonians and Assyrians, the various Aramean tribes, the Hebrews and their kindred (the Moabites and Edomites), the Canaanites, and the Phenicians and their colonies.

Not Related to the Aryan Tongues.

Like the Aryan languages, the various dialects of the Semitic group are inflectional. Both in the Aryan and in the Semitic tongues the agglutinative stage of development has passed, and words (such as verb-stems and pronouns) originally placed in juxtaposition have been worn down and welded into inflectional forms. Here the analogy ends; and the differences between the two groups are so striking that it is probable that they belong to two independent families of languages, each developed in a different part of the world quite apart from the other, and each representing an independent evolution of human speech.

The most fundamental characteristic of the Semitic languages is the triliteral form of their roots. With the exception of some biliterals, each root consists of three letters, as "ḳtl." A few have been worn down through use; but most of the words still exhibit the triliteral character. These roots consist entirely of consonants, vowels being only secondary; the substantial meaning resides in the former. When vowels are added the word is inflected, as "ḳatala" = "he killed," "ḳâtilu^{n}" = "one who kills," and "ḳutila" = "he was killed." The Aryan roots are totally different, as "i" = "go," "sthâ" = "stand," and "vid" = "know." The Semitic languages contain a system of guttural and palatal letters, some of which ("alef," "'ayin," and "ghayin") have no parallels in Aryan, and are nearly impossible for Aryan vocal organs. Moreover, the Aryan languages have an elaborate system of tenses; the peoples which originated them were careful to express *when* an action occurred. The Semites possess but two so-called tenses, neither of which primarily denotes time, but which simply represent an action as complete or incomplete: while little attention is paid to the time of an action or state, the manner of its occurrence is expressly noted; *i.e.*, whether it was done simply or intensively, whether it was done reflexively or was caused by another, whether it was complete or incomplete, etc. Semitic modes of indicating these ideas, such as the doubling of the middle radical (thus, "ḳattala") to express the intensive, the prefixing of "'a," "ha," or "sha" to represent the causative idea, and the prefixing of "na" or prefixing or inserting of "t" to express the reflexive, are absolutely foreign to the genius of the Aryan tongues. In expressing the dependence of one noun upon another in the genitive relation Semites modify the first noun, producing what is known as the construct state, while the

Aryans modify the second or dependent noun. In short, the whole method of conceiving and expressing thought is different in the two groups of languages.

Relation to the Hamitic Tongues.

With reference to the languages sometimes called Hamitic the case is quite different. Here a degree of kinship is demonstrable. The Hamitic tongues are the ancient Egyptian, Coptic, Tameshek, Kaby'e, Bedza, Galla, Somali, Saho, Belin, Chamir, and Dankali, or 'Afar. The kinship of this group to the Semitic is indicated by the following facts: (1) The oldest known representative of the group, Egyptian, possesses the peculiar gutturals "alef" and "'ayin." (2) The roots of ancient Egyptian, like those of the Semitic languages, were criginally triliteral (comp. Erman in "Sitzungsberichte der Königlichen Akademie der Wissenschaften zu Berlin," 1900, p. 350); the same is probably true with regard to the primitive stock of the whole group. (3) The personal pronouns in the two groups are almost identical; and as pronouns are ordinarily the most individual of all the parts of speech, the similarities here are the more significant. (4) In both the Hamitic and the Semitic groups intensive stems are formed by doubling the second radical (comp. Erman, *l.c.* p. 321; F. Müller, "Grundriss der Sprachwissenschaft," iii., section ii., pp. 268 *et seq.*). (5) Both groups form reflexive or passive verb-stems by prefixing or infixing the letter "t." (6) In both groups a causative stem is formed by prefixing "s" or "sh," which in some of the Semitic dialects is thinned to "ha" and even to "'a." (7) Five of the numerals, viz., two, six, seven, eight, and nine, are expressed by the same roots in the two groups (comp. Barton, "Sketch of Semitic Origins," p. 9, note 2). (8) The two groups have also the same endings to denote the two genders: masculine, "u" or "w"; feminine, "t."

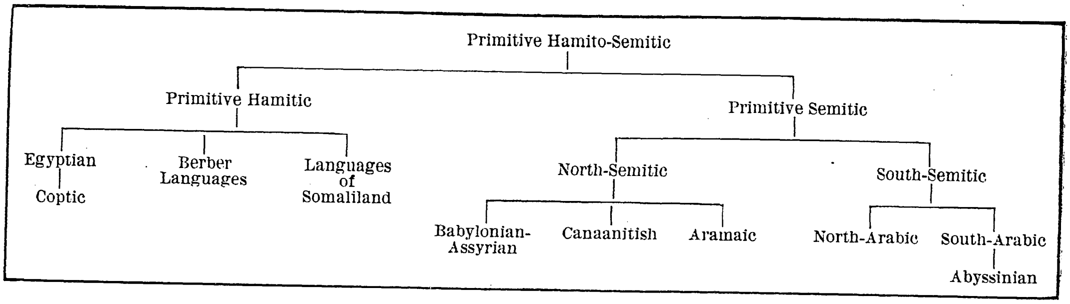
It can not, therefore, be doubted that the two groups of languages sprang from the same stock. The Semitic languages betray their relationship one to another not only by similarity of articulation and grammatical foundation, but by identity of roots and word-forms; while the Hamitic languages reveal their kinship merely by a similarity in morphology and of the forms of their roots, less often in the material of the roots (comp. Müller, *l.c.* p. 225; Barton, *l.c.* p. 11).

Classification of the Semitic Languages.

The linguistic differences of the various Semitic tongues (described below) lead most scholars to divide them into two groups, the South-Semitic and the North-Semitic. Hommel ("Aufsätze und Abhandlungen," pp. 92 *et seq.*) proposed to divide them into East-Semitic and West-Semitic, the former consisting of Babylonian-Assyrian, and the latter including the other languages. The older and more generally accepted classification is, however, far more satisfactory, as it groups the languages much more in accordance with their similarities and differences. These groups are subdivided as follows:

South-Semitic Languages	North-Arabic dialects. South-Arabic dialects. Abyssinian dialects.
North-Semitic Languages	Babylonian-Assyrian. Canaanitish dialects (including Phenician and Hebrew). Aramaic dialects.

The probability has been demonstrated in recent years that the Hamito-Semitic stock was a part of the Mediterranean race, that its primitive home was in North Africa, and that the Semites migrated to central Arabia, where in their sheltered existence their special linguistic characteristics were developed (comp. SEMITES, CRITICAL VIEW; Barton, *l.c.* ch. i.). The linguistic differences between the northern and southern Semites make it probable that the ancestors of the northern group migrated at an early time to the northeastern part of Arabia, whence they found their way in successive waves to the Mesopotamian valley and thence to the Syro-Palestinian coast. The following is a tentative genealogical chart of the ancestry of the Semitic languages:



Known Dialects of Semitic.

The known dialects of these languages are as follows:

SOUTH-SEMITIC LANGUAGES.

(1) *North-Arabic Dialects:* Old classical Arabic; North-Arabic inscriptions (various dialects); the Safaïtic inscriptions; modern Arabic (embracing many dialects, as Syrian Arabic, Egyptian Arabic, Tunisian Arabic, Algerian Arabic, Maltese Arabic, 'Omani Arabic, etc; often each separate village has a dialect of its own).

(2) *South-Arabic Dialects:* Minæan and Sabean inscriptions; modern South-Arabic dialects (as Mehri and Socotri).

(3) *Abyssinian Dialects:* Old Ethiopic inscriptions; Ethiopic (Ge'ez); and the modern dialects Tigre, Tigriña, Amharic, Harari, and Gurāgē.

NORTH-SEMITIC LANGUAGES.

(1) *Babylonian-Assyrian* (including inscriptions from c. 4000 B.C. to c. 250 B.C.).

(2) *Canaanitish Dialects:* Canaanitish glosses in the El-Amarna tablets; Hebrew (including Biblical Hebrew and post-

Biblical Hebrew); Moabitish (Moabite Stone); Phenician (including Punic).

(3) *Aramaic Dialects:* West-Aramaic, including: inscriptions of Zenjirli; Jewish Aramaic (embracing Biblical Aramaic, Jewish Palestinian Aramaic [Targ. Onḳ. and Targ. Jonathan], Galilean Aramaic [Jerusalem Talmud, Jerusalem Targumim, and Midrashim]); Christian Palestinian Aramaic (a version of the Gospels), closely related to the Galilean Aramaic; Samaritan; Palmyrene inscriptions; Nabatæan inscriptions; modern dialect of Ma'lula in the Lebanon. East-Aramaic, including: Babylonian Aramaic (dockets to cuneiform tablets and the Babylonian Talmud); Mandæan; Syrian (Edessan); Syriac inscriptions from north-central Syria (comp. Littmann, "Semitic Inscriptions"); modern dialects spoken at Tur 'Abdin and in Kurdistan, Assyria, and Urumia.

Consonants and Vowels.

The Semitic languages contain the following consonants: gutturals, "alef," "'ayin," "h," and "ḥ"; lower palatals, "ḳ," "kh," and "gh"; upper palatals, "k," "g," ("y"); sibilants, "s" (ס), "ç" (צ), "s" (שׁ), "sh," "z," "ẓ"; dentals, "t," "d," "ṭ," "th," "dh," "ḍ"; liquids, "l," "n," "r"; labials, "p," "ph" (f), "b," "m," and "w." Some of these characters ("ḍ" and "ẓ") are peculiar to the South-Semitic group.

A comparison of the Semitic languages reveals such facts of phonetic equivalence as the following: (1) In passing from one language to another the gutturals frequently interchange: ' with "h," as Arabic "'aḳtala," Syriac "'aḳṭel," but Hebrew "hiḳṭil," Biblical Aramaic "haḳṭel," and Sabean "hḳtl"; also Arabic "humu," but Ethiopic "'emūntū." So, "ḥ" with ', as Hebrew "ḥob," Syriac "'obba," Arabic "'ubb."

(2) "T" and "ṭ" are frequently interchanged, as Hebrew "ḳaṭal," Syriac "ḳṭal," but Arabic "ḳatala," and Ethiopic "ḳatal."

(3) Hebrew "z" is often equivalent to Aramaic "d" and Arabic "dh," *e.g.*: Hebrew "zahabh," Aramaic "dᵉhabh," Arabic "dhahab"; Hebrew "zabaḥ," Ethiopic "zabḥa," Aramaic "dᵉbhaḥ," Arabic "dhabaḥ."

(4) Hebrew and Assyrian "sh" is frequently represented in Aramaic by "t" ("th"), in Arabic by "th," and in Ethiopic by "s," as: Hebrew "shor," Assyrian "shuru," but Aramaic "tora," Arabic "thaur," and Ethiopic "sōr"; Hebrew "yashabh," Assyrian "ashabu," but Aramaic "yetheb," Syriac "itheb," Arabic "wathaba."

(5) "Sh" or "s" is sometimes thinned to "h" and then to '; *e.g.*, Assyrian "shu," Sabean "su," but Hebrew "hu'," Aramaic "hu," Arabic "hua." This appears in the causative of the verb: Assyrian has a "shaf'el" (*e.g.*, "shukshud"), which in Hebrew and Sabean is a "hif'il" (*e.g.*, Hebrew "hiḳṭil," Sabean "hḳtl"), and in Arabic and Ethiopic "'af'el" (*e.g.*, Arabic "'aḳtala," Ethiopic "'angar"). Aramaic exhibits all three forms, since Biblical Aramaic has the hif'il or haf'el, while Syriac presents the shaf'el and 'af'el side by side. In Phenician a further change to "y" occurred, making a "yif'il" or "if'il" (*e.g.*, "yṭn'th" = "I caused to erect").

(6) Hebrew "ç" (צ) is often represented in Aramaic by ', and in Arabic by "ḍ"; *e.g.*, Hebrew "'ereç," Aramaic "'ar'a," Arabic "'arḍ." For fuller illustration of consonantal equivalence compare the literature cited below.

It is characteristic of all the Semitic languages that the peculiarities of the gutturals, the weakness of "w" and "y," and the tendency of a vowelless "n" to assimilate with the following letter, create "weak" or irregular verbs and cause anomalous noun-forms.

It is probable that in primitive Semitic, as in classical Arabic, there were but three vowels, "a," "i," and "u," of each of which there were a long and a short variety. Perhaps there was also the volatilized vowel "shewa" (ᵉ). In Assyrian an "e" was developed; and in the other dialects in which the vowels can be determined both an "e" and an "o" were developed. "W" and "y" in combination with "a" resulted in the diphthongs "au" and "ai."

The Verb.

The two Semitic verb-states mentioned above are the perfect and the imperfect. The former expresses a completed action; the latter, an uncompleted action. The perfect is formed in all the languages by affixing to the verb-stem certain particles which were once pronouns or fragments of pronouns. The third person singular masculine is an exception to this, as it is the verb-stem alone. The imperfect is formed by prefixing particles, likewise of pronominal origin, to the stem, and, in some forms, by adding affixes also. The stems are vocalized differently in the different languages.

The South-Semitic languages are characterized by a fuller and more symmetrical development of the verb-forms than are the North-Semitic, by a more complete system of characters for the expression of sounds, by the fact that they often make the plural of nouns by means of internal changes (as "waḥshuⁿ" = "a beast." "wuḥūshuⁿ" = "beasts"), and by many minor differences.

South-Semitic Languages. Arabic.

The Arabic language with its various dialects is used to-day by a much greater number of people than is any other Semitic tongue. This preeminence it owes to the influence of Islam. Although its literary monuments are much younger than those of several of the other Semitic languages, scholars recognize in the classical Arabic (of which the Koran is the chief example) the dialect which has retained most fully the forms of the primitive Semitic speech. These were preserved in Arabic owing to the isolated position of the Arabian people. Living in the desert fastnesses of central Arabia, they were not subjected to the disintegrating influences of foreign contact. In both verb- and noun-forms, accordingly, classical Arabic is much richer than the other Semitic languages. The development of its verb may be comprehended by a glance at the verb-stems. They are as follows:

I.	II.	III.	IV.	V.	VI.
ḳatala	ḳattala	ḳātala	'aḳtala	taḳattala	taḳātala
VII.	VIII.	IX.	X.	XI.	XII.
inḳatala	iḳtatala	iḳtalla	istaḳtala	iḳtālla	iḳtautala
XIII.	XIV.	XV.			
iḳtawwala	iḳtanlala	iḳtanla(y).			

Of these forms, I. denotes the simple action; II., the intensive of I.; III., an attempted or indirect action; IV., a causative action; V. is reflexive of II.; VI. is reflexive or reciprocal of III.; VII. and VIII. are reflexive or passive of I.; IX. and XI. are used to denote inherent qualities or bodily defects; X. is a reflexive of IV.; and XII.-XV., while rare and obscure, seem to indicate the doing of a deed, or the possession of a quality, in intensity. All the forms except IX. and XI.-XV. possess a passive as well as an active voice, whence it will be seen that the characteristic of the Semitic verb in contrast with the Aryan has here its fullest expression. In the imperfect of the verb, also, Arabic is more fully developed than the other languages, having the following modes in both the active and the passive voices:

Indicative. Subjunctive. Jussive. First Energic. Second Energic.

Moreover, in the richness of its development of infinitives or verbal nouns Arabic far surpasses the other Semitic tongues. This is not easily illustrated in a short article; but it has led grammarians to make the Arabic forms the standard by which to measure and explain all Semitic nouns. In the modern dialects of Arabic many of the refinements of form and syntax are neglected, and much phonetic decay is apparent.

Minæan and Sabean.

The grammatical development of the South-Arabic dialects seems to be less complete. In the older dialects, as known from the inscriptions (which are written in a distinctive South-Arabic alphabet), the verb-stems corresponding to the Arabic I., II., III., V., VI., VII., VIII., and X. are found. Instead of the Arabic IV. ('af'al), in Minæan the original "sh" of the Semitic causative is preserved in a saf'el (as "saḳnaḳa"), and in Sabean it is only thinned to a hif'il (as "haḥdatha"). In the modern dialects (Mehri and Socotri) considerable decay is noticeable.

Abyssinian Dialects.

The oldest inscriptions from Abyssinia are written in the Sabean script, but inscriptions of about 380 C.E. written in the Ge'ez character are met with. In the Ge'ez (or Ethiopic) a version of the Scriptures was soon made; and there exists in it a considerable Christian literature. It is still the sacred language of Abyssinia, bearing to the modern dialects much the same relation that Latin bears to the Romance languages. While Ethiopic has many features in common with the other South-Semitic dialects (such, for example, as "broken" or internal plurals), it has preserved some features in common with certain members of the North-Semitic group (such as the "k" of the first person perfect of the verb). Such characteristics are important philologically; for coincidences in languages far removed from one another in locality are strong evidence of the survival of primitive features. Ethiopic, moreover, has evolved the most symmetrical development of the Semitic verb. It has, first, the stems corresponding to the Arabic I., II., and III. Then it makes a causative not only of I., as in Arabic, by prefixing "'a," but also of II. and III. in like manner. Again, from the three stems first mentioned it makes three passive or reflexive stems by prefixing "ta." Then, lastly, from each of the three simple stems it forms a causative-reflexive stem by prefixing "'asta." Thus a very symmetrical system of twelve forms is secured. The modern Abyssinian dialects present considerable linguistic change from the Ethiopic. Of these the Tigre and Tigriña are closely related, while the Amharic, Hararī, and Gurāgē form another closely related group.

As noted above, the North-Semitic languages are not so closely related to one another as are the South-Semitic. It seems probable that from a common North-Semitic home in northeastern Arabia, where they had been but loosely held together, the ancestors of these tongues migrated in three great separate waves, all of which moved by way of the Tigris-Euphrates valley. Of course there were many minor, intermediate waves of migration, as well as much direct mixture from Arabia later; but these three main types were strong enough to impose their languages upon later comers.

North-Semitic Languages. Babylonian-Assyrian.

The Semitic ancestors of the Babylonians migrated into the Mesopotamian valley long before the dawn of history (comp. SEMITES, CRITICAL VIEW; Barton, *l.c.* pp. 196 *et seq.*). Their language, which was perpetuated by their colonists, the later Assyrians, in some respects differs from the Semitic prototype more than does any other Semitic tongue. This is no doubt owing to the fact that upon their settlement in Babylonia the Semites came into contact with the highly civilized Sumerians, among whom they settled, and whom they gradually absorbed. At first the Semites when they committed their thoughts to writing employed the Sumerian language; but Semitic idiom betrays itself in such inscriptions as early as 4000 B.C. The Sumerians had developed a system of picture-writing. This the Semites adapted to their own language partly as a syllabic method of writing and partly as an ideographic system. Semitic was written thus as early at least as the time of Manishtu-irba (*c.* 3900 B.C.), and continued to be so written as late at least as the time of the Seleucid king Antiochus I. (282-261 B.C.).

Some of the most striking of the peculiarities of this dialect are as follows: (1) All the gutturals, including the lower palatal "gh," are worn away. The presence of the stronger of them is indicated by the change of an original "a" or "i" to "e." (2) The form called "permansive," which corresponds to the perfect in the other Semitic languages, has lost its original significance and is used to express a state. The imperfect has been differentiated into two forms, the shorter of which is used to express completed action, and the longer uncompleted, and thus performs the functions of both the perfect and the imperfect. (3) The forms of verb-stems exhibit the following scheme: there are four stems, which correspond in meaning respectively to the Arabic stems I., II., IV., and VII. Three of these are formed analogously to the Arabic; but the causative is the original Semitic shaf'el. Grammarians indicate these as follows: I. 1 (simple stem); II. 1 (intensive); III. 1 (causative); and IV. 1 (reflexive). By inserting a "t" in stems I. 1, II. 1, and III. 1 after the first consonant a secondary series (I. 2, II. 2, III. 2), each of which was originally the reciprocal or reflexive of a corresponding form of the first series, is produced. One other form (I. 3) is obtained by inserting in the form I. 1 the syllable "tan" after the first radical. This system is somewhat analogous to the Ethiopic verb-system, but is not so complete.

(4) Babylonian-Assyrian exhibits several phonetic laws peculiar to itself. For example, a vowelless sibilant before a dental frequently, though not invariably, becomes "l"; as "lubultu" for "lubushtu" and "Kaldaai" for Hebrew כשדים.

The Canaanitish Group.

With the exception of a few inscriptions, of which that of Mesha (Moabite), that of Eshmunazer (Phenician), and the Marseilles inscription (Punic) are the longest, modern knowledge of the Canaanitish group is confined to Hebrew. As the Hebrews were partly, if not largely, of Aramean stock, it follows that they adopted the language of the Canaanites among whom they settled (comp. SEMITES, CRITICAL VIEW). This Canaanitish language was spoken in Palestine and Phenicia as early as 1400 B.C.; for its idioms appear in the El-Amarna letters (comp. TELL EL-AMARNA). The Canaanites, who appear to have moved westward between 1700 and 1800 B.C., settled among the Amorites. The latter appear to have moved into Palestine about 2400 or 2500 B.C., at the time of the Semitic migration which brought to Babylonia the founders of the first Babylonian dynasty (comp. Paton, "Early History of Syria and Palestine," ch. iii.). It is possible that the Amorites fixed the type of the Canaanitish languages and that the Canaanites borrowed it from them, as the Hebrews did at a later time from the Canaanites. This is mere conjecture; but the divergence of Canaanitish from Aramaic would warrant one in supposing that those who developed the former were isolated from their kinsfolk at an early date. The chief distinguishing characteristic of the Canaanitish languages is the construction known as "waw consecutive," in which a peculiarly vocalized conjunction connecting two verbs in a narrative enables a discourse begun in the imperfect state to be continued in the perfect, and vice versa. This construction gives especial vividness to a narrative, enabling the reader to stand as a spectator of the original events and watch their development. It is found only in Biblical Hebrew and in the Mesha inscription on the Moabite Stone. From later Hebrew, from Phenician (no known inscription of which is earlier than 500 B.C.), and from Punic, it has disappeared.

The forms of the verb-stems known in Canaanitish are: the "ḳal" (simple stem = Arabic I.), the "pi'el" and "pu'al" (active and passive of the intensive, Arabic II.), the "hif'il" (Phenician, "yif'il") and "hof'al" (active and passive of the causative, Arabic IV.), the "hitpa'el," formed by prefixing "hit" to the "pi'el" (reflexive of the latter, equivalent to Arabic V.), and the "nif'al" (equivalent in form and meaning to Arabic VII.). Compare HEBREW LANGUAGE.

Aramaic.

The Arameans appear in history about 1500 B.C. At this time they were making their way westward via Mesopotamia into Syria (comp. Paton, *l.c.* ch. vii., viii.). They were the middlemen of the East; and their language became a means of international communication, displacing both Babylonian and Hebrew. Thus it happens that many of the dialects, through the literary monuments of which Aramaic is known to-day, are dialects spoken by foreigners.

Jewish Aramaic

The oldest Aramaic known is found in dockets to Babylonian tablets, inscriptions on weights, and the much longer inscriptions from Zenjirli of the eighth and seventh centuries B.C. This language, though undoubtedly Aramaic, approximates much more closely to Canaanitish than does the later Aramaic. During the Persian period Aramaic was the official language of the western provinces. Some inscriptions of this period—one as early as Xerxes—and several tattered papyri in Aramaic are known, all of which exhibit much the same form of the language, though differing from that of Zenjirli. Aramaic as spoken by the Jews is known in several dialects as noted above. Of these, the Biblical Aramaic has been much influenced by Hebrew. The other Palestinian dialects closely resemble the Biblical Aramaic, but exhibit a later form of it. In them the causative in "ha" instead of "'a," and the formation of the passive by means of internal vowel-changes have disappeared (comp. ARAMAIC LANGUAGE).

Samaritan, Nabatæan, and Palmyrene.

The Samaritans translated their sacred books into Aramaic, writing it in a script peculiar to themselves but developed out of the old Hebrew character. Their dialect of Aramaic is closely related to the other Palestinian dialects, though perhaps they softened the gutturals a little more. They have often arbitrarily introduced into their sacred books Hebrew forms from the original. This has led some wrongly to suppose that Samaritan is a mixture of Hebrew and Aramaic. Aramaic is the language also of the inscriptions of the Nabatæan kingdom, which flourished for two or three centuries with its capital at Petra, until overthrown by Trajan in 105 C.E. It is thought by Nöldeke that the Nabatæans were Arabs who used Aramaic simply as a literary language. At Palmyra Aramaic inscriptions are found dating from a time shortly prior to the beginning of the Christian era down to the third century. The dialect of the Palmyrene inscriptions, while in most respects resembling closely West-Aramaic, has some features, such as the plural in ־ֶא, in common with East-Aramaic.

Modern knowledge of the dialect of north-central Syria is confined to the Syriac inscriptions collected by Littmann ("Semitic Inscriptions," pp. 1–56). These offer but little grammatical material. While they exhibit some dialectical differences, the formation of the third person imperfect with "n" links the dialect with East-Aramaic.

Edessan or Syriac.

Syriac is the language of the Christian versions of the Bible made from the second century onward, and of a large Christian literature. Through this literature it became widely influential even in parts where it had not been previously known. It was called Syriac because the name "Aramaic," which belonged to the old inhabitants of the country, had come to the Christians to mean "heathen." In the eastern part of the Roman empire it was, next to Greek, the most important language until the Arabian conquest. Its characteristics, such as the imperfect in "n," and the emphatic state in "a" from which all trace of its use as a definite article had disappeared, were clearly marked from the beginning.

Babylonian and Mandæan Dialects.

The Babylonian Talmud (Gemara) is written in Babylonian Aramaic; but, as there is a constant mingling of Hebrew and Aramaic passages, the Aramaic is not pure. Closely akin to this is the dialect of the Mandæans, a peculiar sect, half Christian, half heathen, whose members lived probably in a different part of Babylonia. Mandæan is, therefore, slightly purer, because not subject to Hebrew influence. These dialects employ an imperfect either in "n" or in "l." They were displaced by the Arabian conquest, though possibly the Mandæans still speak among themselves a descendant of their old language.

In the region of ancient Assyria, Kurdistan, and Urumia dialects of Aramaic are still spoken by many Christians and by some Jews. American missionaries have developed the dialect spoken in Urumia into a new literary language. These modern dialects present many changes from the older usage, especially in verbal forms.

The Verb-Stems of Aramaic.

The formal relation of Aramaic to the other Semitic languages can, perhaps, be best illustrated by a glance at its verb-stems. These are most fully developed in Edessan and Mandæan, where are found (I.) a simple stem = Arabic I.; (II.) an intensive stem = Arabic II.; (III.) an 'af'el and (IV.) a shaf'el, both equivalent to Arabic IV. A reflexive of each of these stems is formed by prefixing "t." As this "t" is vowelless it takes prosthetic ' with the auxiliary vowel "i," making "'it." Thus stems V., VI., VII., and VIII. become the reflexives of I., II., III., and IV.

In the Jewish Palestinian dialects the shaf'el and its reflexive (*i.e.*, stems IV. and VIII.) are wanting. In Biblical Aramaic and the inscriptions of Zenjirli the haf'el takes the place of the 'af'el, and it has no reflexive; so that in these dialects stems IV., VII., and VIII. are wanting.

SEMITIC MUSEUM, HARVARD UNIVERSITY: Founded by Jacob H. Schiff of New York in 1889, at Cambridge, Mass. Its objects are to gather, preserve, and exhibit all known kinds of material illustrating the life, history, and thought of the Semitic peoples, to increase the knowledge of the Semitic past by taking part in the exploration of Semitic countries and ruins, and by publishing the results of such investigations to show what have been the Semitic contributions to civilization. The founder gave in 1889, $10,000 to the university to purchase objects illustrating the subjects of Semitic instruction. On May 13, 1891, the collection thus purchased was formally opened to the public in a room of the Peabody Museum; in the winter of 1902-3 it was transferred to the Semitic Museum Building, also the gift of its founder.

The ground floor contains the library (the gift of the same donor) and three lecture-rooms; the second floor comprises a large hall, the Assyrian Room, containing the Babylonian, Assyrian, and Hittite exhibits, and the curator's room. The Palestinian Room is on the third floor.

The growth of the collection has been continuous, through both gift and purchase. In 1899 about $20,000 was raised by subscription for the purpose of further purchases.

The Assyrian Room contains casts from the Babylonian, Assyrian, and Hittite monuments and from bas-reliefs in the museums of London, Paris, Berlin, and Constantinople; original Babylonian and Assyrian inscriptions on stone and clay; stone seal cylinders; statuettes; and building-bricks. The Palestinian Room contains, from Palestine (including the Merrill Collection), Phenicia, Palmyra, Damascus, Moab, Arabia, and Philistia, monuments, inscriptions, and coins; geological specimens; specimens of flora and fauna; glassware, pottery, and utensils; costumes and ornaments; books, manuscripts, and photographs. It contains also objects from Egypt and Persia, illustrating the important connections of these countries with the Semitic peoples.

SEMON, CHARLES: Philanthropist; born in Danzig 1814; died in Switzerland July 18, 1877. He emigrated to England and settled in the manufacturing town of Bradford, Yorkshire, becoming one of its most prominent citizens. He was elected mayor in 1874, and was a justice of the peace, and a deputy-lieutenant of the riding. He was also a member of the chamber of commerce from its foundation, served for several years on the council of that body, and in 1871 was elected a vice-president. In 1874 Semon built the Convalescent Home at Ilkley, which in 1876 was handed over to the local corporation. He promoted the formation of the Bradford branch of the Anglo-Jewish Association; and on his initiative the Bradford chamber of commerce made representations to the British government on the subject of the proposed Rumanian commercial treaty.

At his death Semon bequeathed £35,000 ($175,000) for the benefit of educational institutions in the town of his adoption.

SEMON, SIR FELIX: English specialist in diseases of the throat; born at Danzig Dec. 8, 1849; nephew of Julius Semon. He studied medicine at the universities of Heidelberg, Berlin, Vienna, and Paris and at St. Thomas's Hospital, London, receiving his diploma as physician in 1873. His studies were interrupted by the Franco-Prussian war, in which he took part as assistant surgeon.

Settling in the English capital in 1874, he became assistant at St. Thomas's Hospital, where from 1883 to 1897 he was chief of the laryngological department. At present (1905) he is laryngologist to the Hospital for Epilepsy and Paralysis, Queen's square, London.

In 1894 Sir Felix received the title of professor from the crown of Prussia; in 1897 was knighted by the Queen of England; and in 1901 was appointed physician extraordinary to the King of England. He was one of the founders of the Laryngological Society of London, of which he was president for a number of years; he founded and is the editor of the "International Journal of Laryngology and Rhinology"; and is a fellow of the Royal College of Physicians.

Sir Felix has translated into German Sir Morell Mackenzie's "Diseases of the Throat and Nose," and has written many valuable papers on diseases of the throat and on interlaryngeal operations.

SEN BONET BONJORN. See BONET, JACOB BEN DAVID.

SENATOR, HERMAN: German clinicist and medical author; born at Gnesen, province of Posen, Prussia, Dec. 6, 1834; M.D. Berlin, 1857. During his medical course he was for a year and a half amanuensis to the physiologist Müller. He established himself as a physician at Berlin in 1858, and in 1868 was admitted to the university as privat-docent in medicine and pharmacology. In 1875 he was elected assistant professor, and till 1888 was chief physician of the medical department of the

Augusta Hospital. In 1881 Senator became also chief physician of the medical department at the Charité. After Professor Frerichs' death in 1885 he had charge of the first medical clinic of the university for one semester. In 1888 his department in the Charité was enlarged and became the third medical clinic of the university, Senator being made its director. In 1899 he was appointed professor with the title "Geheimer Medicinalrath."

Since 1872 Senator has been one of the editors of the "Centralblatt für die Medizinische Wissenschaft," and he has written many essays and books on physiology, general and special pathology, and therapy. Among these may be mentioned: "Untersuchungen über den Fieberhaften Process und Seine Behandlung," Berlin, 1873; "Die Krankheiten des Bewegungs-Apparates," *ib.* 1875; "Diabetes Mellitus und Insipidus," in Ziemssen's "Handbuch der Speciellen Pathologie," 1879; "Die Albuminurie im Gesunden und Kranken Zustande," Berlin, 1882 (translated into various European languages; into English by the New Sydenham Society); and "Die Erkrankungen der Nieren," in Nothnagel's "Handbuch der Speciellen Pathologie und Therapie," Vienna, 1896.

S. F. T. H.

SENECA, LUCIUS ANNÆUS: Stoic philosopher; born about 6 B.C.; died 65 C.E.; teacher of Nero. Like other Latin authors of the period, Seneca mentions the Jews, although his opinions are known only from fragments. He devotes a long passage to an unfavorable criticism of Jewish ceremony, and especially of the Sabbath, on the ground that the Jews pass a seventh part of their lives in idleness, and he bitterly adds: "Yet the customs of this most base people have so prevailed that they are adopted in all the world, and the conquered have given their laws to the conquerors" ("victi victoribus leges dederunt," cited from Seneca's "De Superstitione" by Augustine, "De Civitate Dei," vi. 10). He says further: "They at least know the reasons for their ceremonies; but the mass of the rest of mankind know not why they do what they do" (*ib.*). He gibes at the ceremony of lighting the Sabbath lamp, since the gods did not need the illumination, and men would object to the smoke ("Epistolæ," xcv. 47); and he mentions ("Quæstiones Naturales," iv. 1) the distribution of grain which Josephus ("Contra Ap." ii. 5) declares was refused by Cleopatra to the Jews. It is noteworthy that some letters of Seneca were translated into Hebrew by BRIELI.

Seneca shared the prejudices of Roman society against the Jews, although as a Stoic philosopher he should have been attracted by their self-restraint. His ethics correspond, to a certain extent, to the purer concepts of Judaism; and in this fact lies the explanation of the tradition that he was a Christian.

SENEH. See BOTANY.

SENIOR, ABRAHAM: Court rabbi of Castile, and royal tax-farmer-in-chief; born in Segovia in the early part of the fifteenth century; a near relative of the influential Andreas de Cabrera. On account of his wealth, intelligence, and aristocratic bearing he was in such favor with the Castilian grandees that he (1469) succeeded in bringing about the marriage of the Infanta (later, Queen) Isabella to Ferdinand of Aragon. Some years later (1473) he effected a reconciliation between Isabella and her brother, Henry IV. of Castile. The queen, whose confidence Senior enjoyed, granted him, in token of her gratitude for the services he had rendered her, a life pension of 100,000 maravedis, which in 1480 was confirmed at the instance of Hernando de Talavera, her confessor.

Senior received also the royal appointment of "rab de la corte" (court rabbi—for which office, however, he, like many of his predecessors, lacked the proper qualifications) and of tax-farmer-in-chief. He was so highly respected by the grandees that in 1480 the Cortes of Toledo presented him with 50,000 maravedis from the revenues collected through his agency. In the farming of the royal taxes he associated himself with Isaac ABRAVANEL, who soon became his intimate friend. During the war between Castile and the last king of the Moors, especially in the conquest of Granada, Senior rendered the Spanish army valuable services as factor-general.

His interest in his persecuted coreligionists was an active one. It was through his efforts that the Jews of Castile raised a large sum to ransom those of their own faith who had been taken prisoners at the capture of Malaga. He is said, however, to have sold the jewelry belonging to the captive women, and to have added the proceeds to the ransom-money. When the decree expelling the Jews from Spain (March 31, 1492) had become generally known, Senior, together with Isaac Abravanel, hastened to the queen imploring her to spare them. He was not heeded, however, and was weak enough to yield to the queen's request that he desert his brethren. On June 15, 1492, he and his son were baptized in Valladolid, the king and queen and the primate of Spain acting as sponsors. He then assumed the name "Ferrad [Fernando] Perez Coronel." R. David Messer Leon alludes to him in his comment on the appointment of a court rabbi of Castile "who lacked knowledge, and fear of God—'kemo shehokiaḥ sofo 'al teḥillato,'" as his end proved (see the responsum of David Leon in "R. E. J." xxiv. 135). With Senior was baptized the rabbi Meïr, who was, according to Bernaldez ("Historia de los Reyes Católicos," p. 336, Seville, 1870), his father-in-law, or, according to Elijah Capsali (see "Likḳuṭim Shonim," ed. Lattes, p. 73, Padua, 1869), his brother-in-law.

SENIOR, PHOEBUS BEN JACOB ABIGDOR: Talmudic scholar and author; lived in the first half of the eighteenth century. He wrote a commentary on the six orders of the Mishnah, entitled "Melo Kaf Naḥat," in which he collected explanations from Rashi, Maimonides, Bertinoro, and Tosafot Yom-Ṭob, and made extracts especially from Isaac ibn Gabbai's commentary "Kaf Naḥat." His work was printed with the text of the Mishnah in six volumes (Amsterdam, 1732; Offenbach, 1737), and later in the edition of the Mishnah with a German translation by Jost (Berlin, 1832–34).

SENLIS (Hebrew, שנליין; Latin, "Silvanectum," "Silvanectis," "Silvanectæ"): Chief town of an arrondissement of the department of the Oise, France, and a noted health and pleasure resort. It possessed Jewish inhabitants apparently as early as the twelfth century; for Odon, Bishop of Cambrai from 1105 to 1113, says in the preface to his work on the incarnation that while passing through Senlis on his way to the Council of Poitiers, in 1106, he became involved in a religious controversy with a Jew named Leon (= Judah), who sought him at his inn to debate with him, the disputation being reduced to writing by the bishop. The story, even were it fictitious in itself, would nevertheless serve, according to Israel Lévi (in "R. E. J." v. 245), to prove that Jews resided in the city at the period which is in question.

The records of the taxes paid by the Jews in 1202 and from 1298 to 1300 include contributions from those in Senlis, who must, to judge from the large amounts paid by them, have been either very numerous or very rich. According to Delisle, Banditus de Silvanectis (Senlis) was one of the Jews who were permitted in 1204 to reside in the Châtelet of Paris. In 1225 Guérin, Bishop of Senlis, issued a decree annulling all debts which had been contracted with the Jews of his diocese within the preceding four years, excepting such as were acknowledged, thus seeking to deprive the Jews of their wealth. Joucet of Pontoise, who "belonged" to Charles, Count of Anjou, by an agreement which the latter made in April, 1296, with his brother, King Philip IV., was a sort of agent for the Jews, and paid the royal officials the sum total of the taxes levied on the bailiwick of Senlis.

The bishops of Sens and Senlis were among the ecclesiastical dignitaries who attended the controversy held at the court of Louis IX. at Paris in 1240 between Nicholas Donin of La Rochelle and the four rabbis, Jehiel, head of the school of Paris, Judah ben David of Melun, Samuel ben Solomon of Château-Thierry or of Falaise, and Moses of Coucy.

SENNACHERIB (Assyrian, "Sin-aḥe-erib" = "Sin hath increased the brethren"; Hebrew, סנחריב): King of Assyria, 705–681 B.C.; son and successor of Sargon. His reign was a warlike one, yet it was marked by grandeur in architecture and art. Almost immediately after his accession to the throne Sennacherib was obliged to quell a revolt headed by Merodach-baladan, King of Babylonia, who had been dethroned by Sargon, and who now made an attempt, which was unsuccessful, to involve Hezekiah in his rebellion (II Kings xx. 12; Isa. xxxix. 1). In 703, at Kisu, about ten miles from Babylon, the Assyrian king completely defeated his opponent (comp. Jer. l. 2), who fled to Guzumani in Susiana. After taking Babylon and overrunning Chaldea, Sennacherib conquered a number of minor tribes along the middle Euphrates and in Zagros; and in the fourth year of his reign he marched against Luli, King of Tyre. This monarch fled, and his territory was seized by the Assyrians, who received tribute from a number of other petty rulers and, after the capture of Ascalon, invaded Egypt. This attack was caused by the Philistine city of Ekron, which had dethroned its king, Padi, a friend of the Assyrians, and had sent him to Hezekiah, who imprisoned him. Ekron then entered into an alliance with Egypt and Ethiopia; but this coalition was completely overthrown by Sennacherib at Altaku (the Eltekeh of Josh. xix. 44), near Ekron, and Padi was restored to his throne.

Besieges Jerusalem.

Hezekiah, however, by his partizanship had exposed himself to the hostility of Sennacherib, who began in 701 a campaign which is described at some length in the Bible (II Kings xviii.-xix.; II Chron. xxxii.; Isa. xxii., xxxvi.-xxxvii.; comp. Josephus, "Ant." x. 1). The invasion was at first completely successful for the Assyrian arms. City after city of Judah fell, and Hezekiah was besieged in Jerusalem until he submitted to the payment of a ransom of 300 talents of silver (or, according to Sennacherib himself, of 800) and 30 of gold, the Temple itself being stripped to make up the amount. The conqueror then withdrew to Nineveh, but, after a marauding expedition into Cilicia, he was obliged in the following year again to subdue Merodach-baladan, who had fled to Nagitu on the Persian Gulf. With the aid of Phenician shipwrights, Sennacherib constructed a fleet on the Tigris, and finally reached Nagitu. After a stubborn resistance the fugitives were routed and forced to return.

Disaster Before Jerusalem.

Despite certain chronological difficulties, it seems probable on the whole that Sennacherib again invaded Palestine, about 699, because Hezekiah, relying on Egyptian support, had once more revolted. Directing his main attacks on Libnah and Lachish, the Assyrian king sent a strong force to Jerusalem to demand its surrender. The insolent tone adopted by his officers, however, rendered all overtures impossible; and, recognizing their inability to carry the city by storm, they returned to Sennacherib, who had meanwhile reached Pelusium, where he was about to attack Sethos, Pharaoh of Egypt. Before a battle could be fought a mysterious calamity befell the Assyrian army, which is said to have lost 185,000 men in a single night, while the remnant, fleeing in terror, was pursued by the Egyptians (II Kings xix. 35; Isa. xxxvii. 36; Herodotus, ii. 141). This disaster, however, which naturally is not mentioned in the Assyrian inscriptions, did not stay the career of Sennacherib. His expedition to Nagitu brought upon Babylonia a retaliatory raid by the Elamites, who set a new king on the throne of Babylon. The Assyrians were completely victorious over the combined forces of Elamites and Babylonians, and in the following year (692) Sennacherib overran Susiana, capturing many towns, including the temporary capital of Kudur-Nakhunta, the Elamitic king, who fled, but survived his defeat only three months. His son and successor, Umman-Minanu, made an alliance with Mushezib-Marduk, King of Babylonia; and their forces were augmented by some of the Euphratean tribes which Sennacherib had subdued in the third year of his reign. After a fierce battle at Khalule on the lower Tigris, the Assyrian king routed his opponents, and followed up his victory by sacking Babylon itself (689). The events of the last eight years of the reign of Sennacherib are not recorded. In 681 the king was assassinated in the temple of Nisroch (possibly another name for Marduk) at Nineveh by two of his sons, Adrammelech and Sharezer. The throne was seized by Esar-haddon, another son of Sennacherib.

SENS (Hebrew, שנץ, שאנץ, שניץ, שנוא, etc.; Latin, "Agedincum," "Civitas Senonum," "Senones"; Old French, "Sanz," "Sans," "Sens"): Chief town of an arrondissement of the department of the Yonne, France. Jews were among its inhabitants as early as the sixth century, residing in the Rues de la Juiverie, de la Petite-Juiverie, and de la Synagogue, and having two cemeteries, one in the Rue Saint-Pregts, sold for the king by the bailiff of Sens in 1309, and the other in the Rue de la Parcheminerie, which passed into the possession of the Celestine monks in 1336. The magnificent synagogue, with its beautiful paintings representing Hebrew ceremonies, was torn down in 1750 to make room for a salt-warehouse.

In the ninth century Anségise, Archbishop and Viscount of Sens and Primate of Gaul, expelled the Jews from Sens, probably under the pretext that they were in secret communication with the Normans; but in 1146 Louis VII. permitted them to return. Pope Innocent III. complained to Philip Augustus in 1208 that the Jews had built a synagogue at Sens which surpassed the neighboring church, and that they prayed in it so loudly that they disturbed the Christian worshipers.

The chief Jewish scholars whose names are associated with Sens are: Isaac ben Solomon, Eliezer of Sens, Moses of Sens, Nathan Official, Isaac ha-Levi b. Judah, Judah of Sens, Simeon or Samson of Sens, and Samson b. Abraham of Sens, head of the school of the city and surnamed "the Prince of Sens" ("ha-Sar mi-Sans" or "Rabbenu Simson mi-Sans"). The itinerary of an anonymous traveler in Palestine, a pupil of Naḥmanides, in describing the tombs at the foot of Mount Carmel, notices especially those of R. Samson, son of Abraham of Sens, and R. Joseph of Sens, nephew of Samson of Sens.

SENSES, THE FIVE (Hebrew, חמש הרגשות or חמשה חושים): According to the Aristotelian psychology, the human soul possesses, besides the rational and nutritive faculties, that of perceiving external objects, through the medium of bodily organs which are adapted to produce the sensations of sight, hearing, smell, taste, and touch. This theory entered into Jewish literature with the introduction of Greco-Arabic philosophy. It was first propounded by Saadia, who endeavored to show that the five senses are mentioned in the Bible ("Emunot we-De'ot," ed. Slucki, p. 7). Baḥya ibn Paḳuda ("Ḥobot ha-Lebabot," ix. 5) pointed out the Mosaic prohibitions that are connected with the five senses, to which Ibn Gabirol attributed the twenty qualities of the soul (S. Wise, "The Improvement of the Soul," p. 17).

The Philosophers.

With the exception of certain writers, who regarded speech, movement, etc., as so many additional senses, the absoluteness of the number five was universally admitted in the Middle Ages; and authors like Judah ben Solomon, Shem-Ṭob ibn Falaquera, and Ẓemaḥ Duran even endeavored to demonstrate the inadmissibility of more than five senses. Judæo-Arabic philosophy established a parallel between the five senses and the faculties of the soul; and for this reason the former were called "external senses" and the latter "internal senses." The former were divided into two groups: (1) the finer or intellectual senses, and (2) the coarser or material ones. To the first group belonged sight, hearing, and smell; to the second, taste and touch (Judah ha-Levi, "Cuzari," iii. 5). The superiority of the first three is shown by the fact that their respective functions are exercised from a distance and need not come in contact with their object, while the last two must be in touch with it. Another mark of superiority of the first three is that they are found only in the higher animals, while the last two are met with even in the lowest animals. The external senses perceive objects; but it is the internal which observe their difference. It is, therefore, the fault of the latter if the former err (Saadia, *l.c.* vi. 98; Baḥya, *l.c.* i. 10).

Development of the Senses.

The senses develop in the child gradually. At the moment of birth only the coarsest sense, that of touch, is present; after a while comes the sense of taste; then, at various intervals, appear the senses of smell, hearing, and sight (Baḥya, *l.c.* ii. 3; Albo, "Sefer ha-'Iḳḳarim," iii. 10). Death silences the senses in the inverse order. The dying lose the sense of sight first, and retain until the last moment that of touch. Sleep suspends first the sense of touch.

Gershon ben Solomon and many other writers of the Middle Ages drew a parallel between the five fingers on each hand and the five senses. Each finger, according to them, stands in a natural connection with one of the senses: the thumb is attracted to the mouth; the index, to the nose; the middle finger, to the skin, the organ of touch; the ring-finger, to the eye; the ear-finger, to the ear (Baḥya ben Asher, "Shulḥan Arba'," p. 8a, Lemberg, 1858). There is a divergence of opinion between Aristotle and Galen as to the seat of the central organ of perception, the former placing it in the heart, while the latter locates it in the brain. With rare exceptions, the Jewish writers of the Middle Ages sided with Galen.

In Exegesis.

The five senses were prominent in Biblical exegesis, in the interpretation of the Haggadah, and in the symbolism of certain Mosaic prescriptions. Thus, Isaac Arama sees in the narrative of Gen. xxvii. 18–27 the striving of Isaac to replace by the remaining four senses that of sight, which had failed him ("'Aḳedat Yiẓḥaḳ," p. 62c, Venice, 1573). Each of the five priestly prohibitions (Lev. xxi. 16 *et seq.*) corresponds, according to Solomon ha-Levi, to one of the five senses ("Dibre Shelomoh," p. 265c, Venice, 1596). Nathan ben Solomon finds in the "Shema'" ten elements, the first five of them corresponding to the five internal senses, by which man arrives at the knowledge of God, and the last five to the five external senses, which serve him to carry out God's commandments ("Mibḥar ha-Ma'amarim," Leghorn, 1840). The three bowls on each branch of the candlestick in the Temple represented, according to Levi ben Gershon, the three coarser senses; the knop, the sense of hearing; the flower, that of sight ("Perush 'al ha-Torah," p. 105b). Moses Isserles sees in the five gates of the Temple a symbol of the five senses: the western gate typifies the sense of hearing, which is the symbol of night; the eastern, the sense of sight, which is the symbol of day; the northern, the sense of touch, which is considered to be the author of mischief among the senses; while the two southern gates are symbols of the sun, which ripens the fruits and flowers whence smell and taste draw their nourishment ("Torat ha-'Olah," i. 7). The five food-offerings are another symbol of the five senses (Lev. ii.).

The quorum of ten (Minyan), which is required for the holding of public worship, is, according to Abraham ben Shalom, a symbol of the five internal and the five external senses. The former five are symbolized also by the five compartments of the phylacteries (Solomon ibn Parḥon, "Maḥberet he-'Aruk," ed. S. G. Stern, p. 24).

SENTENCE. See Judgment.

SEPHARDIM (called also **Spagnioli, Spaniols,** or, more rarely, **Franconians**): Descendants of the Jews who were expelled from Spain and Portugal and who settled in southern France, Italy, North Africa, Turkey, Asia Minor, Holland, England, North and South America, Germany, Denmark, Austria, and Hungary. Among these settlers were many who were the descendants, or heads, of wealthy families and who, as Maranos, had occupied prominent positions in the countries they had left. Some had been state officials, others had held positions of dignity within the Church; many had been the heads of large banking-houses and mercantile establishments, and some were physicians or scholars who had officiated as teachers in high schools. The many sufferings which they had endured for the sake of their faith had made them more than usually self-conscious; they considered themselves a superior class, the nobility of Jewry, and for a long time their coreligionists, on whom they looked down, regarded them as such.

This sense of dignity which the Sephardim possessed manifested itself in their general deportment and in their scrupulous attention to dress. Even those among them whose station in life was low, as, for example, the carriers in Salonica, or the sellers of "pan de España" in the streets of Smyrna, maintained the old Spanish "grandezza" in spite of their poverty.

The Sephardim never engaged in chaffering occupations nor in usury, and they did not mingle with the lower classes. With their social equals they associated freely, without regard to creed, and in the presence of their superiors they displayed neither shyness nor servility. They were received at the courts of sultans, kings, and princes, and often were employed as ambassadors, envoys, or agents. The number of Sephardim who have rendered important services to different countries is considerable, from Samuel Abravanel (financial councilor to the viceroy of Naples) to Benjamin Disraeli. Among other names mentioned are those of Belmonte, Nasi, Pacheco, Palache, Azevedo, Sasportas, Costa, Curiel, Cansino, Schonenberg, Toledo, Toledano, and Teixeira.

The Sephardim occupy the foremost place in the roll of Jewish physicians; great as is the number of those who have distinguished themselves as statesmen, it is not nearly as great as the number of those who have become celebrated as physicians and have won the favor of rulers and princes, in both the Christian and the Mohammedan world. That the Sephardim were selected for prominent positions in every country in which they settled was due to the fact that Spanish had become a world-language through the expansion of Spain. From Tangier to Salonica, from Smyrna to Belgrade, and from Vienna to Amsterdam and Hamburg, they preserved not only the Spanish dignity, but the Spanish idiom also; and they preserved the latter with so much love and with so much tenacity that it has remained surprisingly pure up to the present day. It must be remembered that Judæo-Spanish, or Ladino, is in no wise as corrupt a language as is the Judæo-German.

For a long time the Sephardim took active part in Spanish literature; they wrote in prose and in rime, and were the authors of theological, philosophical, belletristic, pedagogic, and mathematical works. The rabbis, who, in common with all the Sephardim, laid great stress on a pure and euphonious pronunciation of Hebrew, delivered their sermons in Spanish or in Portuguese; several of these sermons appeared in print. Their thirst for knowledge, together with the fact that they associated freely with the outer world, led the Sephardim to establish new educational systems wherever they settled; they founded schools in which the Spanish language was the medium of instruction.

In Amsterdam, where they were especially prominent in the seventeenth century on account of their number, wealth, education, and influence, they established poetical academies after Spanish models; two of these were the Academia de los Sitibundos and the Academia de los Floridos. In the same city also they organized the first Jewish educational institution, with graduated classes in which, in addition to Talmudic studies, instruction was given in the Hebrew language. The Sephardim have preserved the romances and the ancient melodies and songs of Spain, as well as a large number of old Spanish proverbs. A number of children's plays, as, for example, "El Castillo," are still popular among them, and they still manifest a fondness for the dishes peculiar to Spain, such as the "pastel," or "pastelico," a sort of meat-pie, and the "pan de España," or "pan de Leon." At their festivals they follow the Spanish custom of distributing "dulces," or "dolces," a confection wrapped in paper bearing a picture of the "magen Dawid."

Although the Sephardim live as loyal citizens in the various countries of their adoption, among themselves they still mainly employ the Spanish language, and in their correspondence they use the Spanish cursive script. They bear exclusively Spanish given names, as Aleqria, Angel, Angela, Amado, Amada, Bienvenida, Blanco, Cara, Cimfa, Comprado, Consuela, Dolza, Esperanza, Estimada, Estrella, Fermosa, Gracia, Luna, Niña, Palomba, Preciosa, Sol, Ventura, and Zafiro; and such Spanish surnames as Belmonte, Benveniste, Bueno, Calderon, Campos, Cardoso, Castro, Curiel, Delgado, Fonseca, Cordova, Leon, Lima, Mercado, Monzon, Rocamora, Pacheco, Pardo, Pereira, Pinto, Prado, Sousa, Suasso, Toledano, Tarragona, Valencia, and Zaporta.

Although the Sephardim lived on peaceful terms with other Jews, they rarely intermarried with them; neither did they unite with them in forming congregations, but adhered to their own ritual, which differed widely from the Ashkenazic. Wherever the Sephardic Jews settled they grouped themselves according to the country or district from which they had come, and organized separate communities with legally enacted statutes. In Constantinople and Salonica, for example, there were not only Castilian, Aragonian, Catalonian, and Portuguese congregations, but also Toledo, Cordova, Evora, and Lisbon congregations.

Great authority was given to the president of each congregation. He and the rabbinate of his congregation formed the "ma'amad," without whose approbation (often worded in Spanish, Portuguese, or Italian) no book of religious content might be published. The president not only had the power to make authoritative resolutions with regard to congregational affairs and to decide communal questions, but he had also the right to observe the religious conduct of the individual and to punish any one suspected of heresy or of trespassing against the laws. He often proceeded with great zeal and with inquisitorial severity, as in the cases of Uriel Acosta and Spinoza at Amsterdam.

The Sephardim, who speak a purer Hebrew than do the Ashkenazim, do not attribute great value to the "ḥazzanut," and their form of cantillation is simpler than that of other Jews. The main point in which they differ from the Ashkenazim is, however, their liturgy. The Sephardic liturgy originated in part with the Geonim; it is more natural and elevating than the Ashkenazic, and also less burdened with "piyyuṭim." The Sephardim admit into their liturgy only the piyyuṭim of Spanish poets, which are characterized by Rapoport as "mediators between the soul and its Creator," while the Ashkenazic piyyuṭim are "mediators between the nation and its God."

The Sephardic ritual with its many variations, as instanced in the Castilian, Aragonian, Catalonian, and Provençal rituals, has been very widely adopted. The number of Sephardic rabbis is great, and many of them enjoyed reputations as authorities. There are several among them who have published valuable works, as well as collections of legal opinions and decisions which are highly esteemed by all Jews. The Cabala found many supporters, including several rabbis, among the Sephardim, who as a rule are imaginative and superstitious. Shabbethai Ẓebi likewise found among them his most faithful adherents. In modern times the Sephardim have lost more or less of the authority which for several centuries they exercised over other Jews. As to number, they are still important in Constantinople, Salonica, Adrianople, Smyrna, Damascus, Nicopolis, and Cairo; also in Amsterdam, and in different communities in Servia and Bulgaria. The total number of Spanish-speaking Sephardim is about half a million. See Liturgy; Marano; Spain.

SEPPHORIS (Greek, Σέπφωρις; Hebrew, צפורין, צפורי; lit. "bird"): City in Palestine which derived its name from the fact that it was perched like a bird on a high mountain. It is first mentioned by Josephus, who records ("Ant." xiii. 12, § 5) that Ptolemy Lathyrus vainly endeavored to conquer it in the early part of the reign of Alexander Jannæus. When the country was redivided by the Romans under Gabinius (57–55 B.C.), one of the five sanhedrins was assigned to Sepphoris (Josephus, *l.c.* xiv. 5, § 4; *idem*, "B. J." i. 8, § 5); so that it must then have been the most important city of Galilee. Subsequently it sided with King Antigonus; but it soon fell into the hands of his rival Herod ("Ant." xiv. 15, § 4; "B. J." i. 16, § 2). During the turmoil which followed the death of Herod, the city evidently supported the Jewish nationalists; for Varus was obliged to send against it a detachment of Roman soldiers, who burned it and sold its inhabitants into slavery ("Ant." xvii. 10, § 9; "B. J." ii. 5, § 1).

Sepphoris then entered upon a new phase of its history; for the influence of the Greek element of the

Capital of Galilee.

city increased while that of the Jewish population declined, since the place now had Hellenic institutions and was friendly to the Romans. Herod Antipas, like all his dynasty, was a founder of cities, and rebuilt Sepphoris, which he transformed into one of the most beautiful towns of Galilee, also granting it an autonomy which seems to have resembled that given the Greek cities of the Decapolis ("Ant." xviii. 2, § 1). Its coins, on which the inhabitants call themselves Σεπφωρηνοί, date probably from this period. It was not until the time of Felix, however, that Sepphoris rose to the rank of capital of Galilee (Josephus, "Vita," § 9) and became a rival of Tiberias, which theretofore had claimed that distinction. The younger Agrippa removed the royal treasury (τράπεζα) and the "archive" (ἀρχεῖα, which denotes probably the court of justice) from Tiberias, and it is to be assumed that he transferred them to Sepphoris. Tiberias subsequently reassumed the hegemony; but under Agrippa the archive was again taken to Sepphoris. The Mishnah (Ḳid. iv. 5) accordingly alludes to an "earlier" archive at Sepphoris (ארכי הישנה); and noble Jewish families kept their family records there (Schürer ["Gesch." 3d ed., ii. 164], who translates ארכי by "government," draws incorrect inferences from the passage). The Mishnah, moreover, refers to the ancient fortress of Sepphoris ('Ar. ix. 6; comp. Tos. Shab. xiii. 9), probably meaning the one which existed until the time of Varus, when the Romans doubtless built a new acropolis.

During the Rebellion.

Sepphoris is described sometimes as the largest city of Galilee ("Vita," §§ 45, 65; "B. J." iii. 2, § 4), and sometimes as one of the two or three largest, the others being Tiberias ("Vita," § 65) and Gabara (*ib.* § 25); and it was furthermore considered the most strongly fortified city of the province ("B. J." ii. 18, § 11), its citadel being especially mentioned ("Vita," § 67). That this large city sided with the Romans was, therefore, a disaster for the Jews. The beginning of the war proved advantageous for Sepphoris, for Cestius Gallus entered it peaceably while the neighboring cities were ravaged ("B. J." ii. 18, § 11). But the Romans were obliged to depart; and the inhabitants of Sepphoris, fearing for their city, had to submit to the domination of the rebellious Jews. Josephus, as governor of Galilee, ordered the fortification of Sepphoris, among other cities ("Vita," § 37), entrusting this task to its citizens; for he knew that they desired the war ("B. J." ii. 20, § 6), although this may have been a mere ruse on their part to keep the Jewish governor at a distance. John of Giscala, however, endeavored to alienate the city from Josephus ("Vita," § 25), and Sepphoris, Gabara, and Tiberias actually became hostile to the latter ("B. J." ii. 21, § 7), although their action was due not to loyalty to the national cause, but doubtless to the conviction of the inhabitants of Sepphoris that John, who was acting on his own initiative, would be less dangerous to them than Josephus, who was subject to the central government at Jerusalem. Josephus was then obliged to storm the city, which was plundered by his troops despite his efforts to restrain them ("Vita," § 67). Sepphoris was soon to be relieved, however, from the horrors of war. Cestius Gallus sent a garrison thither; and when Josephus again entered the place, he was repulsed (*ib.* § 71; comp. § 15). The inhabitants, moreover, being dissatisfied with the aid they had received, also requested Vespasian to send them a Roman detachment for their protection, which they received in due time (*ib.* § 74; "B. J." iii. 4, § 1).

There are two other important events in the history of the city. From the time of Antoninus Pius it was called "Diocæsarea" on its coins. This change of name implies that the city had become Hellenized; and since there must have been some cause for this, it has been assumed by Schlatter ("Zur Topographie und Gesch. Palästinas," p. 164) that Sepphoris was involved in the insurrection of the Jews during the reign of Antoninus. The city must have taken part in still another insurrection; for it was destroyed by Gallus (Sozomen, "Hist. Eccl." iv. 10; see, also, Patricius). The importance of the city was now at an end: the name "Diocæsarea," frequently found also in the Greek and Roman writers of the earlier centuries, disappeared; and the old native name was restored.

In Rabbinical Literature.

Sepphoris is frequently mentioned in rabbinical works, and is identified, although no attempt is made to prove the identification, with Kitron (Judges i. 30; Meg. 6a), the name צפורי being derived, as stated above, from the fact that the city was perched like a bird on a mountain, although, according to another passage, it was situated on several hills (Pesiḳ. R. 8). R. Jose, writing in the second century, refers to it, in the florid style of the Talmud, as follows: "I saw Sepphoris in its time of prosperity; and it contained 180,000 booths of sellers of spices" (B. B. 75b). The catastrophe which R. Jose implies had since that time overtaken the city was probably one which occurred during the reign of Antoninus Pius. Situated on a high mountain, Sepphoris was said to have a cold climate, so that its inhabitants were predisposed to catarrh (Yer. Shab. 14c); yet Judah I., the patriarch, lived there for seventeen years (Yer. Kil. 32b; Gen. R. xcvi.), and made it, in a certain sense, the center of Judaism. According to tradition, he was buried at Sepphoris, although his tomb is really in Beth-she'arim (Ket. 103b), in the vicinity of the city. In the Middle Ages his tomb was thought to be in a certain cave which was closed by a stone door (Estori Farḥi, "Kaftor wa-Feraḥ," xi., in Luncz, "Jerusalem," i. 99). Several other rabbis, besides the patriarch, lived at Sepphoris in the Talmudic period (see Frankel, "Mebo," pp. 3-4).

A special form of the Roman coin "tressis," which was probably minted there, is a proof of the importance of the city as a commercial center (Tos. Ma'as. Sh. iv. 3); and the upper and the lower market are expressly mentioned ('Er. 54b). In view of the importance of the place as an emporium, many foreign Jews settled there; so that allusions both to the synagogue of the people of Guphna (Yer. Naz. 56a) and to a synagogue of the Babylonians at Sepphoris are met with (Yer. Sanh. 28a; comp. Yer. Soṭah 22a). Millers of Sepphoris who did not work on the semiholy days are mentioned in approving terms (Yer. Pes. 30d); and a tailor named Justus was once governor of the place (Reland, "Palæstina," ii. 1001). Joseph b. Simai, a pious and prominent man, who lived in olden times at Siḥin in the immediate vicinity of Sepphoris, is said to have been "the governor of the king," this term probably denoting some prince of the house of Herod ("epitropos" perhaps = "procurator"; Shab. 121a; Tos. Shab. xiii. 9).

Despite the fact that Sepphoris was the seat of prominent Talmudic scholars and of great academies, and thus owed its importance in later times to the Rabbis, its inhabitants were by no means friendly to them. Although the people showed their sympathy on the death of R. Judah I. (Yer. Ket. 32b; Bab. Ket. 103b), and although the city had a school of its own, which was termed simply the "Sepphorian" (Yer. Shab. 7a; Yer. M. Ḳ. 82d), nevertheless the people were likened to "desert, obscurity, and darkness" (Yer. Ḥag. 77a); and it was said of them: "The people of Sepphoris have a hard heart: they hear the words of the Law; but they do not bow down before it" (Yer. Ta'an. 66c). R. Ḥama b. Ḥanina was even refused ordination as a teacher solely because he was a native of the place (Yer. Ta'an. 68a).

Exact Site.

The exact site of this important city may be determined through several references. A series of caves and military outposts extended from Tiberias to Sepphoris (Yer. 'Er. 22b); and it was situated in upper Galilee (Tos. Pe'ah iv. 10; Ket. 67b). According to the Talmudic references, the city lay eighteen Roman miles from Tiberias; but, according to Eusebius and Jerome, only ten, thus being west of Mt. Tabor; still another passage of the Talmud locates it half-way between Kefar 'Utni and Kefar Ḥananyah (Bek. 55a). All these data justify an identification with the modern Ṣaffuriyah, a village northwest of Nazareth.

The fact that Benjamin of Tudela refers to the city, but says nothing of any Jews there, shows that Sepphoris had no Jewish population in the twelfth century, probably in consequence of the Crusades. R. Moses Israel, who flourished in the early part of the eighteenth century, refers to its Jewish community; but no Jews now (1905) live in the city (Grünhut, "Benjamin von Tudela," ii. 15, Jerusalem, 1903).

SEPTUAGINT. See Bible Translations.

SEPULVEDA: City in the bishopric of Segovia, Spain, inhabited by Jews as early as the eleventh century. Its old laws contained a paragraph (No. 71) to the effect that if a Jew had intercourse with a Christian woman, he should be condemned to be garroted and she to be burned, and that, in case the man denied his guilt, yet was convicted on the testimony of two Christians and one Jew, the sentence should be carried out. The aljama of Sepulveda, which was not large, although the taxes amounted in 1290 to 5,046 maravedis, is best known on account of a martyrdom suffered by its members. In Holy Week, 1468, the report was spread by their enemies that, on the advice of their rabbi, Solomon Picho, the Jews had tortured and crucified a Christian child. Thereupon Juan Arias Davila, Bishop of Segovia, son of the baptized Jew Diego Arias Davila, caused eighteen of the alleged ringleaders to be taken to Segovia, some of whom were condemned to the stake and others to the gallows. The excited populace, which thought the fanatical bishop had proceeded too mildly, attacked the remaining Jews and killed most of them, only a few finding refuge in flight.

J. M. K.

SEQUIRA, ISAAC HENRIQUE: English physician; born at Lisbon 1738; died in London Nov., 1816. He came of a medical family, his grandfather, father, and two uncles having all been physicians. He was instructed in general literature and philosophy by the Fathers of the Oratory, a body of learned men then highly popular in Portugal. Having chosen medicine as his profession, he was sent to the University of Bordeaux, France, where he remained for two years. He then removed to Leyden, and, completing the three years' residence which the statutes of the university required, received his M.D. degree Aug. 31, 1758. Eventually he settled in London, was admitted a licentiate of the Royal College of Physicians (March 25, 1771), and was introduced into practise by his uncle, Dr. de la Cour, who soon after withdrew to Bath.

Sequira gained a high reputation among his countrymen resident in England. He held the honorary appointment of physician extraordinary to the Prince Regent of Portugal, and was physician to the Portuguese embassy at the Court of St. James. He lived to an advanced age, and at the time of his death was the oldest licentiate of the Royal College of Physicians.

SERAH: Daughter of Asher, son of Jacob. She is counted among the seventy members of the patriarch's family who emigrated from Canaan to Egypt (Gen. xlvi. 17), and her name occurs in connection with the census taken by Moses in the wilderness (Num. xxvi. 46). She is mentioned also among the descendants of Asher in I Chron. vii. 30. The fact of her being the only one of her sex to be mentioned in the genealogical lists seemed to the Rabbis to indicate that there was something extraordinary in connection with her history; and she became the heroine of several legends. According to one of these, she was not Asher's daughter, but his stepdaughter. She was three years old when Asher married her mother, and she was brought up in the house of Jacob, whose affection she won by her remarkable piety and virtue ("Midrash Abot," p. 45). She was the first person to tell

Jacob that his son Joseph was still living; and for this reason the patriarch blessed her with eternal life (*ib.*). Moses addressed himself to Serah when he wished to learn where the remains of Joseph were to be buried (Soṭah 13a; Deut. R. xi.). According to the Midrash (Eccl. R. vii. 11), Serah was "the wise woman" who caused the death of Sheba ben Bichri (II Sam. xx.). In reference to the grave of Serah bat Asher and the synagogue named in her honor at Ispahan, see Jew. Encyc. vi. 660.

W. B. I. Br.

SERAIAH (שריה).—**1.** A scribe, and one of the officials under David (II Sam. viii. 17; comp. xx. 25, where he appears under the name **Sheva**). In I Kings iv. 3 his sons, Elihoreph and Ahiah, occupy the position of their father (here called **Shisha**), this implying that Seraiah had died before Solomon's accession. In I Chron. xviii. 16 he is called **Shavsha**. A comparison of these four forms justifies the conclusion that his real family name was Shavsha or Shisha (comp. Klostermann, "Die Bücher Samuelis und der Könige," in "Kurzgefasster Kommentar zu den Heiligen Schriften"; Thenius, "Die Bücher Samuelis," in "Kurzgefasstes Exegetisches Handbuch").

2. Chief priest during the reign of Zedekiah, mentioned with Zephaniah, the second priest; both were executed, with others of rank, by Nebuchadnezzar at Riblah (II Kings xxv. 18, 21; Jer. lii. 24–27). Seraiah was the son of Azariah (I Chron. vi. 14), and the father of Ezra the Scribe (Ezra vii. 1).

3. The son of Tanhumeth the Netophathite, and one of the heroic band that saved themselves from the fury of Nebuchadnezzar when he stormed Jerusalem. They repaired to Gedaliah, the son of Ahikam, but killed him on account of his allegiance to the Chaldeans (II Kings xxv. 25). In the parallel passage, Jer. xl. 8, the sons of Ephai the Netophathite are mentioned in addition to Seraiah.

4. Son of Kenaz, and younger brother of Othniel, and father of Joab, the chief of Ge-harashim (I Chron. iv. 13, 14, R. V.).

5. Grandfather of Jehu, of the tribe of Simeon (I Chron. iv. 35).

6. Priest, third in the list of those who returned from Babylon to Jerusalem with Zerubbabel (Ezra ii. 2; Neh. vii. 7 [here called **Azariah**], xii. 1), and third also in the record of those who sealed the covenant binding all Jews not to take foreign wives (Neh. x. 2). As the son of Hilkiah, and consequently a direct descendant of the priestly family, he became governor of the Temple when it was rebuilt (Neh. xi. 11). He is mentioned (under the name Azariah) also in I Chron. ix. 11.

7. Son of Azriel, one of those whom Jehoiakim commanded to imprison Jeremiah and Baruch, the son of Neriah (Jer. xxxvi. 26).

8. The son of Neriah, who went into banishment with Zedekiah. He bore the name also of Sar Menuḥah (="prince of repose"; comp. the commentaries of Dillmann and Nowack, *ad loc.*). The Targum renders "Sar Menuḥah" by "Rab Taḳrubta" (="prince of battle"), and the Septuagint by *ἄρχων δώρων* (="prince of gifts" [reading "Minḥah" for "Menuḥah"]). At the request of Jeremiah he carried with him in his exile the passages containing the prophet's warning of the fall of Babylon, written in a book which he was bidden to bind to a stone and cast into the Euphrates, to symbolize the fall of Babylon (Jer. li. 59-64).

E. G. H. S. O.

SERAPHIM (שרפים): Class of heavenly beings, mentioned only once in the Old Testament, in a vision of the prophet Isaiah (vi. 2 *et seq.*). Isaiah saw several seraphim, their exact number not being given, standing before the throne of Yhwh. They were winged beings, each having six wings—two covering their faces, two covering their feet, and two for flying. The seraphim cry continually to each other, "Holy, holy, holy, is the Lord of hosts: the whole earth is full of his glory" (vi. 3). The "foundations of the thresholds" (R. V.) of the Temple were moved by the sound of their voices. One of the seraphim flew to Isaiah with a live coal in his hand, which he had taken with the tongs from off the altar, and with which he touched the lips of the prophet to purge him from sin. Isaiah gives no further description of the form and appearance of the seraphim; he apparently assumes that his readers are acquainted with them. Nevertheless, it may be concluded from the description that the seraphim were conceived as having human faces, human hands, and human voices. However, one should not too hastily conclude that the seraphim were winged human forms. At least this was not the original conception, although later Judaism pictured them so. The seraphim are frequently mentioned in the Book of Enoch (xx. 7, lxi. 10, lxxi. 7), where they are designated as *δράκονες* ("serpents"), and are always mentioned, in conjunction with the cherubim, as the heavenly creatures standing nearest to God. In Rev. iv. 6–8 four animals are pictured as standing near the throne of God; each has six wings, and, as in Isaiah, they sing the "Trisagion."

Vision of Isaiah.

Meaning.

The passages cited furnish conclusive evidence against the idea, popular for a time, that the seraphim belong to the same category as angels. They have nothing whatever to do with the "messengers of God"; in the Jewish conception the two have always been distinguished. Dan. x. 13, the Book of Tobit, and other sources, afford information concerning a series of "chief" angels, but allusions to the seraphim are entirely lacking, and an etymological connection of the name "seraf" with the Arabic "sharif" (to be exalted or distinguished) is equally valueless.

On the other hand, there is a striking similarity between the seraphim and cherubim. Both are winged creatures, half human, half animal; both stand near the throne of God, and appear as its guardians; and, as has already been stated, they are always mentioned together in the Book of Enoch. This, however, by no means proves that the origin of the two was the same; it only shows that in later Jewish conception, as well as in the conception of the contemporaries of Isaiah, these two classes of heavenly beings were closely related.

Some authorities hold that the seraphim had their origin in the Egyptian "seref," a composite, winged creature, half lion and half eagle, which guarded graves, carried dead kings up to heaven, and transmitted prayers thither. The form and office of the seref, however, suggest rather the Jewish cherubim.

Babylonian Origin.

According to other investigators, the conception was of Babylonian origin. Friedrich Delitzsch and Hommel associate the seraphim with the Assyrian "sharrapu," a name which, in Canaan, designated the Babylonian fire-god Nergal. The seraphim, then, would be the flames in which this god manifested himself. An argument against this theory is that until now no one has been able to show that the word "seraph" was ever used as a name of a god. According to a third and more probable theory, the seraphim originally were serpents, as the name implies. Among many peoples of antiquity serpents played an important part in myth and folk-lore. For instance, there were Tiamat in the Babylonian legend of the Creation, and the Uræus serpent in Egypt. Consequently, since the Jews shared the superstitious ideas of surrounding nations in other respects, it should not be a matter of wonder if they adopted this notion as well. That the serpent filled a special rôle among them as a demoniacal being may be seen from the story of Adam's fall (Gen. iii.). In this connection the names "Dragon Spring" and "Serpent Pool" (places in the vicinity of Jerusalem) are worthy of being noted. A brazen serpent brings relief from the effects of the bite of the fiery serpents (Num. xxi. 9 *et seq.*) which YHWH sent among his disobedient people in the wilderness. Isaiah (xiv. 29, xxx. 6) speaks of fiery, flying serpents and dragons; and a brazen serpent, Nehushtan, stood in the Temple at Jerusalem, and was an object of worship until the time of Hezekiah, who destroyed it as being idolatrous (II Kings xviii. 4 *et seq.*). The worship of Nehushtan was plainly a remnant of ancient superstition, and was reconciled with the worship of YHWH by connecting Nehushtan with the scourge of snakes in the wilderness and the rescue from them (Num. xxi. 9 *et seq.*). Therefore the theory seems possible, even probable, that the seraphim have their counterpart in the flying serpents of Isaiah (comp. also II Esd. xv. 29). It is only natural that these winged guardians of YHWH's throne were soon ranked as higher beings and invested with the human form or with some features of the human body; and it was because of the very fact that they were adopted into the YHWH cult that they were, in process of time, ennobled and spiritualized.

E. G. H. I. BE.

SEREBSZCZYZNA ("silver tax"): Land-tax imposed upon the inhabitants of Lithuania and Russia in the Middle Ages, and deriving its name from the fact that it had to be paid all in silver. Originally Russia had to pay the "serebszczyzna" to the Tatars, and later to Poland and Lithuania. In the course of time it became a state tax throughout Lithuania and all the provinces taken from the Russians. The "serebszczyzna" is often mentioned in documents concerning the Jewish communities of Lithuania, mostly in cases where the Jews had successfully applied for exemption from it. This must not, however, be regarded as implying a special privilege granted to them, but only as an act of justice, inasmuch as they paid their general taxes annually in a lump sum according to an assessment fixed at the annual sessions of the Diet.

H. R. G. D. R.

SERENE (SERENUS): Pseudo-Messiah of the beginning of the eighth century; a native of Syria. The name is a Latin form of שריני, which is found in a responsum of Naṭronai Gaon ("Sha'are Ẓedeḳ," p. 24a, b). Gregorius bar Hebræus ("Chronicon Syriacum," ed. Kirsch and Bruns, p. 123), however, speaking of the same false Messiah, writes his name סאורא, which was rendered "Severus" by the translators of the chronicle. Naṭronai states in his responsum (*l.c.*) that Serene represented himself as the Messiah, establishing certain religious observances opposed to the rabbinical law, abolishing prayer, neglecting the laws of "ṭerefah," not guarding the wine against "nesek," working on the second holy day, and abolishing both the ketubah and certain incest laws established by the scribes.

The date of Serene's appearance is given by Isidor Pacensis ("Chronicon," in Florez's "España Sagrada," viii. 298) as 103 of the Hegira (*c.* 720 C.E.), which was during the reign of Yazid II. This same historian states that in Spain many Jews abandoned all their property and prepared to join the supposed Messiah. The latter, indeed, owing to his promise to put the Jews in possession of the Holy Land, and, perhaps, owing to his hostility toward the Talmud, gained many adherents. He was finally captured and taken before Yazid II., who put some questions to him concerning his Messianic qualities which he was unable to answer. He declared that he had never had any serious design against the calif, and that he desired only to mock the Jews, whereupon he was handed to the latter for punishment. His adherents, having repented of their credulity, on the advice of Naṭronai Gaon were received again into their communities.

SERPENT: The following terms are used in the Old Testament to denote serpents of one kind or another: (1) "naḥash," the generic and most frequently used term; (2) "peten" (asp or adder; Deut. xxxii. 33; Isa. xi. 8; *et al.*), perhaps identical with the Egyptian cobra (*Naja haje*), which is found in southern Palestine, and is frequently kept by snake-charmers; (3) "ẓefa'" (A. V. "cockatrice," R. V. "basilisk," LXX. "asp"; Isa. xiv. 29); (4) "ẓif'oni" (adder, basilisk, cockatrice; Isa. xi. 8, lix. 5, *et al.*), perhaps the large viper (*Duboia xanthina*); it is identified also, by some, with the cat-snake (*Tarbophis fallax*); (5) "ef'eh" (Arabic, "af'a" = "viper"), connected in Isa. xxx. 6 with Egypt; (6) "shefifon" (adder; Gen. xlix. 17 [R. V., margin, "horned snake"]), perhaps identical with the *Cerastes hasselquistii*, said to have been the asp with which Cleopatra killed herself; (7) "'akshub" (Ps. cxl. 3; LXX. "asp," Arabic version, "viper," A. and R. V. "adder": Talmud and Rashi, a kind of spider, or tarantula [comp. "'akkabish"]); (8) "zoḥale 'afar" (Deut. xxxii. 24; comp. Micah vii. 17, which designates the serpent as creeping on the earth); (9)

"tannin" (Ex. vii. 9 *et seq.*; elsewhere, "dragon," "monster"); (10) "ḳippoz" (Isa. xxxiv. 15; A. V. "great owl," R. V. "arrow-snake"; the connection suggests some bird); (11) "saraf" and "naḥash saraf" (Num. xxi. 6; Deut. viii. 15; the epithet "fiery" probably refers to the burning sensation and inflammation caused by the venom of the snake).

The idea of flying serpents ("saraf me'ofef"; Isa. xiv. 29, xxx. 6) rests, perhaps, on the confusion of serpents with lizards, which is found also in classical writers. They belong to those fanciful creatures with which folk-lore peoples the desert regions ("Pal. Explor. Fund, Quarterly Statement," 1894, p. 30). For the "naḥash bariaḥ" and "naḥash 'akalaton" in Isa. xxvii. 1 see LEVIATHAN.

Serpents abound in Palestine, as well as in Egypt, the Sinaitic Peninsula, and the Arabian desert. According to Tristram, the serpent tribe is represented in Palestine by eighteen species, mostly belonging to the genera *Ablabes* and *Zamanis*, of the *Colubridæ* family.

The qualities and habits attributed to the serpent in the Old Testament are subtlety (comp. Gen. iii. 1), the disposition to lie concealed in holes, walls, and thickets (comp. Amos v. 19; Eccl. x. 8; Prov. xxx. 18-19), and the habit of eating dust (comp. Gen. iii. 14; Isa. lxv. 25), a belief in which was common among the Greeks and Romans. The art of serpent-charming is referred to in Ex. iv. 3, vii. 9, Jer. viii. 17, and Eccl. x. 11. The ability to stiffen serpents into rods is still possessed by Oriental jugglers.

In the Talmud.

The generic names for the serpent are "naḥash" and חוויא (Ber. 12b). Like fish, the snake has its eyes in the sides of its head (Niddah 23a); and it is endowed with a keen sense of hearing ('Ab. Zarah 30b). Its back is curved, its belly flat (Ned. 25a). Its mode of progression is by slowly raising first the head and then gradually the rest of the body (Ber. 12b). Serpents copulate with their bellies turned toward each other; the period of gestation is seven years, during which intercourse continues (Bek. 8a). The serpent lives in empty cisterns and in houses, where it has a dangerous enemy in the cat, the latter being immune to its poison (Ḥag. 3a *et al.*). It tastes dust in whatever it eats; still it is fond of water, wine, milk, and melted suet (Ter. viii. 4; 'Ab. Zarah 30a, b; Shab. 85a; Beẓah 7b). It is driven off by the smoke of the burning antler of the hart (Yalḳuṭ Shim'oni, ii. 97c; comp. Ælianus, "De Natura Animalium," ix. 20; Pliny, "Historia Naturalis," viii. 32, 50). The skin of the serpent was made into covers for the seats of kings (Yer. Ned. iv.; Ḥal. 3); and in Pirḳe R. El. xx. (comp. Gen. R. xxiv. 6) it is said that the garments of Adam and Eve (Gen. iii. 21) were made of the same material.

Their Poison.

The poison of the serpent forms a coherent mass (B. Ḳ. 115b). It varies in strength and weight. That of a young serpent is heaviest, and falls to the bottom when dropped into a vessel of water; that of an older one remains suspended midway; and that of a very old one floats on the surface. While the serpent is one of the three creatures which grow stronger with age (the other two being the fish and the swine), the intensity and deadliness of its poison decreases with advancing age ('Ab. Zarah 30b). The poison of the serpent is deadly ('Ab. Zarah 31b). If it is left in the wound it causes a burning pain, so that one sentenced to die by fire may be bitten by a snake instead (Soṭah 8b). The poison spreads through the whole body, and it is therefore dangerous to eat the flesh of an animal which was bitten by a snake (Ter. viii. 6), and even to wear sandals made from its hide (Ḥul. 94a, Rashi). If the bone of a snake enters the foot death may result (Pes. 112b). The snake alone of all animals harms without gain to itself, and is therefore compared to the slanderer (Ta'an. 8a *et al.*). It is also revengeful (Yoma 23a). Still, it seldom attacks unless provoked; and it gives warning by hissing (Ber. 33a; Shab. 121b). The snakes of Palestine were considered particularly dangerous (*ib.*); but it is mentioned as one of the perpetual miracles of Jerusalem that no one there was ever bitten by a snake (Ab. v. 5).

The flesh of the snake, mixed with other things, was considered the most effective antidote against the poison of the snake as well as of other animals (Shab. 109b). Other cures for snake-bite are: placing the bitten part into the body of a hen which has been opened alive; applying to the wound the embryo taken from the womb of a sound, white she-ass; and putting crushed gnats on the wound (Yoma 83b; Shab. 77b, 109b). A snake cooked in olive-oil was considered a curative for itch (Shab. 77b).

Probably the anaconda is referred to in Ned. 25a *et al.*, where it is related that in the time of Shabur a serpent devoured the straw of thirteen stables.

Species or Varieties.

The ringed snake is mentioned under the name of עכנא (comp. Greek ἔχις, ἔχιδνα; B. Ḳ. 17b and parallels) as encircling the opening of a cave. Of the "shefifon" it is said that it is the only snake which is solitary in its habits, that its poison is effective even after its death, and that its strength is mainly in its head (Gen. R. cxi. 2, cxiii. 3; comp. Yer. Ter. 45d). The period of gestation of the "ef'eh" is set at seventy years (Bek. 8a). The water-snake ("'arad" or "'arod") occurs in the miraculous story of Ḥanina b. Dosa (Ḥul. 127a), where Rashi explains it to be the hybrid of the serpent and toad. The anger of the wise is compared to the bite of the "saraf" (Ab. ii. 10). The dragon, finally, has its equivalent in דרקון, which, however, in some passages seems to designate some kind of worm, as, for instance, in Ber. 62b and Giṭ. 57a. Another name for the dragon is יארוד (Ket. 49b; comp. Targ. on Jer. x. 9).

A bad wife is called a snake in the proverb, "No man can live in the same basket with a snake" (Ket. 72a). But the appearance of a snake in a dream is of good omen (Ber. 57a). For the relation of the serpent to Adam and Eve see Shab. 146a.

E. G. H. I. M. C.

SERRAGLIO DEGLI EBREI. See GHETTO.

SERRE. See Dauphiné.

SERVANT. See Master and Servant.

SERVANT OF GOD: Title of honor given to various persons or groups of persons; namely, Abraham, Isaac, Jacob (Deut. ix. 27; comp. Ps. cv. 6, 42), Moses (Deut. xxxiv. 5; Josh. i. 1; I Chron. vi. 49; II Chron. xxiv. 9; Neh. x. 29; Dan. ix. 11), Joshua (Josh. xxiv. 29; Judges ii. 8), David (Ps. xviii., xxxvi., captions), the Prophets (Jer. vii. 25, xxv. 4, and elsewhere), Isaiah (Isa. xx. 3), Job (Job i. 8, ii. 3, xlii. 8), and even Nebuchadrezzar (Jer. xxv. 9, xxvii. 6, xliii. 10). In the second part of Isaiah, in some passages of Jeremiah, and in Ezekiel the expression occurs with a special significance.

Semitic Use of "Servant."

That devoted worshipers of the Deity were commonly designated as God's servants is attested by the theophorous personal names frequent in all Semitic dialects, and in which one element is some form of the verb "'abad" (עבד) and the other the name of the god (comp. "'Abd Allah"; see Lidzbarski, "Handbuch der Nordsemitischen Epigraphik," pp. 332 *et seq.*). It is in this sense that Abraham, Moses, Job, and Joshua are designated as "the servants" of Yhwh. In the case of Nebuchadrezzar, the meaning is somewhat different. By the prophet the Babylonian king is considered as the instrument of God's plans. To explain why the title was conferred on him it is not necessary to speculate on the possibly monotheistic leanings of this monarch. Nebuchadrezzar in Daniel and Judith is the very prototype of Antiochus Epiphanes, the execrated enemy of God. Nor is the use of the epithet in this connection satisfactorily explained by the theory advanced by Duhm, that Nebuchadrezzar bore the title because during his reign Israel could not very well claim to be Yhwh's representative on earth. Unless "'Abdi" in the passages in Jeremiah given above is a scribal corruption—which most probably it is not—Nebuchadrezzar is so designated because he carries out, as would a slave who has no choice, the designs of Yhwh (comp. "Ashur shebeṭ appi," Isa. x. 5).

Applied to Israel.

But the epithet represents the whole people or a section of Israel in the following passages: Ezek. xxviii. 25, xxxvii. 25; Jer. xxx. 10, xlvi. 27; Isa. xli. 8; xlii. 19 *et seq.*; xliii. 10; xliv. 1 *et seq.*, 21; xlv. 4; xlviii. 20; it has ceased to be an "epitheton ornans" used to honor and distinguish an individual. This is patent from the use of "Jacob" as a synonymous designation (Ezek. xxviii. 25, xxxvii. 25; Jer. xxx. 10; Isa. xliv. 1, xlv. 4, xlviii. 20). Israel's destiny and duty, rather than its previous conduct, are indicated in this denomination. Israel is God's "chosen one," the equivalent of the expression "servant of Yhwh" used by these exilic prophets (Isa. xliii. 20, xlv. 4; comp. *ib.* lxv. 9, 15, 22). "My chosen [ones]" = "My servants" (Sellin, "Studien zur Entstehungsgeschichte der Jüdischen Gemeinde," i. 81). Yhwh has "called" and "strengthened" Israel (Isa. xli. 9); therefore it is not abandoned and need not be afraid (*ib.* verse 10). Its enemies shall be confounded (*ib.* verses 11, 12). Yhwh has called Israel by its name (*i.e.*, His "servant" or "son"): therefore it belongs to Him; for He has created it and formed it (*ib.* xliii. 1, 2). Through flood and fire it may pass unscathed; for Yhwh is with it. He would exchange Egypt, Ethiopia, and Sheba (the richest countries) for Israel. God loves it: it is precious in His eyes (*ib.* verses 3 *et seq.*). Yhwh's spirit will be poured out on its seed, and His blessing on its shoots (*ib.* xliv. 3). Israel is, in fact, a witness unto Yhwh: as He is one, so Israel is the one unique chosen people (*ib.* xliv. 6, 7, 8, "'Am 'Olam"). As such a servant, predestined to be a light for the nations, Israel is called from the womb (*ib.* xlix. 1-6; but see below). It is for this that Israel will return from exile (Jer. xxx. 10), which was a disciplinary visitation (*ib.* verse 11). Israel, however, does not as yet recognize its own opportunity (Isa. xl. 2). Though Israel has sinned God has not abandoned it (*ib.* xlii. 24), because He has not abdicated (*ib.* xlii. 8). It is for His own sake, not for Israel's, that God has chosen Israel (*ib.* xlviii. 11). In another passage Israel is filled with doubts concerning this (*ib.* lxiii. 15 *et seq.*; probably this is a non-Isaian chapter). At all events, as yet it is blind and deaf, although, inasmuch as it has eyes and ears, it should and might be both an observer and a hearer as behooves one that is "meshullam" and "'ebed Yhwh" (*ib.* xlii. 18-20; "meshullam" = "one that has completely given himself over," a synonym of "'ebed," as Mohammed's religion is Islam and he "'Abd Allah," xlii. 18-20). Hence the command "Bring forth the blind people that have eyes, and the deaf that have ears" (*ib.* xliii. 8).

Special Usage in Isaiah.

There are, however, four passages in the Isaian compilation where perhaps the "national" interpretation is not admissible, namely, Isa. xlii. 1-4, xlix. 1-6, l. 4-9, lii. 13-liii. 12. The descriptions in them of the attitude and conduct of the 'ebed Yhwh seem to be idealizations of the character of an individual rather than of the whole of Israel. Especially is this true of Isa. lii. 13-liii. 12, the exaltation of the "man of suffering." In this a prophetic anticipatory picture of the Messiah has been recognized by both Jewish and Christian tradition. Modern critics read into it the portraits of Jeremiah (so Bunsen), Zerubbabel (Sellin, "Serubbabel," 1898, and Kittel, "Zur Theologie des Altentestaments," 2d ed.: "Jesaja und der Leidende Messias im A. T."), or Sheshbazar (Winckler, "Altorientalische Forschungen," ii. 452-453). Rothstein (and Sellin at present) holds the description to be meant for Jehoiachin (Rothstein, "Die Genealogie des Jehojachin"); while Bertholet ("Zu Jesaja LIII."), dividing the chapters into two distinct "songs," regards the first (Isa. lii. 13-15, liii. 11b-12) as a glorification of a teacher of the Torah; and the second (*ib.* liii. 1-11a) as that of Eleazar (II Macc. vi. 18-31). Duhm also is inclined to separate this description into two distinct "songs" (Duhm, "Das Buch Jesaia," 3d ed., 1902, pp. 355-367); but he declares it to be impossible to assign a definite person as the model. The "man of suffering" is, however, a teacher of the Torah. Even the period when these four 'ebed Yhwh songs were written is not determinable save in so far as they are post-exilic—perhaps as late as the days immediately preceding the Maccabean uprising.

It may be noted that these interpretations, according to which the picture is that of a definite individual, were anticipated among Jewish commentators of the Middle Ages. Saadia referred the whole section (Isa. lii. 13–liii. 12) to Jeremiah; and Ibn Ezra finds this view a probable one (see Neubauer and Driver, "The Fifty-third Chapter of Isaiah According to the Jewish Interpreters"). Kraetzschmar ("Der Leidende Gottesknecht"), among moderns, selects Ezekiel for the model on account of Ezek. iv. Cheyne was at one time inclined to associate this 'ebed Yhwh with Job ("Jewish Religious Life," p. 162).

Present Conditions of Problem.

Ingenious as these various identifications are, of late years there has been in evidence a decided reversion to the theory that also Israel, or at least a part of the congregation, is idealized in these songs. Budde (in "American Journal of Theology," 1899, pp. 499–540) has successfully met the arguments of Duhm; and other scholars, *e.g.*, Marti (see his commentary on Isaiah), Giesebrecht, and König, are now ranged on his side. This concession must be made: in the four songs, somewhat more strongly than in others where Israel is hailed the servant of Yhwh, stress is laid on missionary activity, both within and without Israel, on the part of the servant; furthermore various characteristics are dwelt on that are attributed in a certain group of the Psalms to the "pious." For this reason there is strong presumption that the "poor," the "'anawim" (meek) of the Psalms, are the Israel to which the epithet "'ebed Yhwh" and the portrayal of his qualifications refer. Budde reverts to the theory of Rashi, Ibn Ezra, and Ḳimḥi, that the confession in Isa. liii. is uttered by the "nations" referred to in Isa. lii. 15, and that thus Israel is the martyr, with which view Wellhausen, Giesebrecht, Marti, and others agree. If the "remnant" (the "poor") be personified in the "servant," the "We" of the confession may refer to those of Israel that had rejected these "poor" and "meek"; if such an interpretation were to be accepted the exilic date of these idealized personifications would, of course, have to be abandoned. But these "poor" were just such quiet missionaries as are described in Isa. xlii. 1–4. They suffered in the pursuit of their missionary labors (*ib.* l. 4) as well as at the hands of their own fellow Israelites (*ib.* lii., liii.).

SERVI CAMERÆ. See Kammerknechtschaft.

SERVI, FLAMINIO EPHRAIM: Italian rabbi; born at Pitigliano, Tuscany, Dec. 24, 1841; died at Casale-Monferrato Jan. 23, 1904. He received his education in his native town, at Padua, and at the rabbinical school and the University of Florence. He became rabbi at Monticelli in 1864; from 1868 he held the rabbinate of Mondovi, and in 1872 was appointed chief rabbi at Casale-Monferrato, where he was also editor of "Il Vessillo Israelitico," in succession to Giuseppe Levi. He edited also the almanac "Annuario della Famiglia Israelitica," Corfu, 1870–74, and "Lunario Israelitico," Casale, 1881–1904.

Servi was a prolific writer, contributing a great number of essays on literature and Jewish science to the Jewish journals of Italy, *e.g.*, "Educatore," "Corriere Israelitico," "Il Vessillo Israelitico," etc. He was the author of: "Statistica degli Israeliti Italiani," Vercelli, 1866; "Israeliti d'Europa nella Liberta," Turin, 1872; "Dante e gli Ebrei," Casale, 1893; "Studii sulla Missione della Donna Israelità," *ib.* 1903; "Versi in Ebraicæ in Italiano"; etc.

SERVIA: Kingdom of southeastern Europe; until 1876 a vassal state of Turkey. The history of the Jews of the country is almost identical with that of Belgrade and of Nish, its two oldest communities. There was no regularly organized congregation in Belgrade until the year 1530, when one was established through the efforts of Don Joseph Nasi, while the foundation of the community of Nish dates only from 1728. According to Samuel di Medina, rabbi of Salonica, there were two other communities, at Semendria and Shabats, although the Jews of the latter city, threatened by the rebellious Haiduks or Oksoks, were greatly reduced in number by emigrations in 1690 and 1787 to the Banat, Slavonia, and even to Buda. From a religious point of view all these communities of Servia were under the supervision of the congregation of Salonica.

The Servian Jews were frequently molested in times of general disturbance, *e.g.*, by the Turks in 1792, and by the orthodox Servians in 1807 and 1813, the political equality of all Servians being first proclaimed by Milosch Obrenovich in 1817. From that period until 1830 the Servian Jews enjoyed all legal rights, and contributed materially to the prosperity of the country.

Alexander (the son of Czerni-George [Kara-Georgevich]), who was elected on the abdication of Milosch in 1842, inaugurated a policy of oppression. The new prince thus repaid the support given him by the merchants of the orthodox religion on his accession to power; and the Jews were forbidden to settle in the interior of the country. In the Treaty of Paris (1856) a paragraph was inserted which gave full liberty in matters of religion, legislation, and commerce to the Servian Jews, though their condition was once more to be aggravated by the law of Oct. 30, 1856.

The restoration of Milosch to the throne in 1858 revived the hopes of the Jews; and a decree issued by him Sept. 26, 1858, repealed all laws in force against them. Prince Michel, the successor of Milosch, however, restricted their right to settle in the interior. At this period Servia contained 2,475 Jews, residing in Belgrade, Nish, Pojarevatz, Semendria, Shabats, and Obrenovatz. In 1861 sixty

Jewish families were driven from the cities of the interior, further expulsion taking place in 1862 and 1863, and especially at Shabats in 1864.

The Outrage of Shabats.

A protest made in Dec., 1864, by the Alliance Israélite Universelle against the anti-Semitic journal "Svetovide" was ineffectual, and in January of the following year two Jews of Shabats were assassinated, whereupon the Servian Jews went into voluntary exile. In 1865 there were but 1,805 left in the country, the greater number of them living at Belgrade in a ghetto beyond the entrenchments of the fortress. The Jews, however, still sought for assistance, and were aided by J. A. Longworth, G. J. Ricketts, and J. C. Blunt, successively English consuls at Belgrade from 1861 to 1869. These officials presented a petition and several verbal protests from the Servian Jews to three successive ministers at the English Foreign Office. As the Jews of Servia wished to place themselves under the protection of England, the problem was discussed in the House of Commons on March 29, 1867, when a memorial was presented to the British government by Sir Francis Goldsmid. In a like spirit the Alliance Israélite Universelle and its president, Adolphe Crémieux, as well as the Board of Deputies in London, and its president, Sir Moses Montefiore, drew the attention of the English, Turkish, and Servian governments to this Jewish question. At the same time Count Abraham Camondo brought all his influence to bear on the viziers Ali Pasha and Fuad Pasha, and even on Prince Milan, when he visited Constantinople in 1867. The Servian constitution, proclaimed in 1869, while professedly liberal in character, reaffirmed the anti-Jewish laws of 1856 and 1861, and, moreover, rendered the Jews liable to military service. The English, French, Italian, and Austrian consuls at Belgrade at once protested in the names of their respective governments against the inconsistency of these laws; and the victims of the measures emigrated from the country in large numbers.

The most influential Jew of Belgrade at that time was David Russo, who kept the Alliance Israélite Universelle and the proper authorities informed with regard to Jewish matters. In 1873 the Alliance again sought to intervene with Prince Milan on behalf of the Jews when he passed through Paris; but his reply was evasive. In 1876 eleven families were expelled from Semendria. When Servia revolted against Turkey in 1876 fifty-five soldiers from 230 Jewish families fought in the Servian army (see the list in Loeb, "Situation des Israélites de Turquie," etc., p. 407). In 1873 the Jews of Belgrade were permitted to elect a deputy to the Skupshtina; and in 1880 Prince Milan appointed six Jews as members of his private body-guard. The constitution of Jan. 2, 1889, finally abolished the anti-Jewish laws of 1856 and 1861, and from that time to the present date (1905) no important event has marked the history of the Jews of Servia.

In 1884 there were 3,492 Jews in Servia. Now, in a total population of 2,493,770 there are 6,430, distributed as follows: **Belgrade,** 4,000; **Nish,** 800; **Shabats,** 600; **Pirot,** 300; **Pojarevatz,** 200; **Lescovatz,** 200; **Semendria,** 150; **Obrenovatz,** 100; **Vatjevo,** 50; **Onb,** 30. Since 1841 Belgrade has had a Hebrew press in the national printing-office, and from 1888 to 1893 a Judæo-Spanish journal, "El Amigo del Pueblo," was published there.

Although the Jews have possessed legal equality since the promulgation of the constitution of 1889, this equality scarcely exists in general intercourse, and the Jews have therefore taken little part in public affairs. The Jewish state functionaries number only one schoolmaster, one schoolmistress, one head of a department in the Ministry of the Interior, one consul-general, one ex-deputy, and one sublieutenant. In the liberal professions are eight lawyers, six physicians, and three engineers.

SERVICE OF PROCESS. See PROCEDURE IN CIVIL CAUSES.

SESSA, KARL BORROMÄUS ALEXANDER: Anti-Jewish author; born at Breslau Dec. 20, 1786; died there Dec. 4, 1813. He studied philosophy and medicine in various universities, graduated as doctor of medicine in Frankfort-on-the-Oder (1807), and was district physician in his native city. Besides essays on medicine and various poems and plays he wrote a comedy entitled "Die Judenschule," which presents Jewish characters in the most vulgar way, all of them being actuated by the lowest mercenary motives and speaking a repulsive jargon or a ridiculously stilted German. The play was first presented in Breslau Feb. 11, 1813; then, under the title "Unser Verkehr," in Berlin and elsewhere, until the police prohibited its repetition. It was published anonymously in Breslau in 1815, and often reprinted, even in Reclam's "Universalbibliothek." Treitschke ("Deutsche Geschichte," iii. 756, Leipsic, 1885) says that some thought Goethe had written the work, and that the house of Rothschild offered a prize for the discovery of the author. According to Treitschke, the author was Karl Andreas Mertens, a Protestant minister at Halberstadt. Both of these statements of Treitschke are unfounded.

D.

SET-OFF (sometimes termed **Counter-Claim**): Effort of a defendant to set up a cause of action against a plaintiff, to the end that the judgment of the court may satisfy the claims of both at the same time; the "compensatio" of Roman law. Although there is no name for it, the principle is allowed in the jurisprudence of the Talmud; and the right of the defendant to set up his claim against that of the plaintiff in the same proceeding in which he is brought before the court, to have both claims discussed at the same time, and to have the judgment cover both of them, is nowhere directly denied.

Under ASSAULT AND BATTERY it has been shown that where two men have assaulted and beaten each other, the damage done to one may be set off against the damage done to the other, and judgment may be rendered for the difference only. But apart from this instance hardly any definite recognition of the right of set-off exists in the Talmud. The only passage referred to by commentators and codifiers (B. Ḳ. 46b) gives hardly more than a hint, and is to this effect: The plaintiff is always called upon first [to state and to prove his case]; but it is said later on that sometimes the defendant is called upon first when it appears that his estate would "go off cheap" [would be sacrificed]. Rashi expounds these two sayings thus: "For instance, A sues B for a mina which he has lent him before witnesses or on a bond; and B answers him, 'Thou hast seized my property; return to me what thou hast seized,' or, 'Thou hast a pledge from me in thy hand and hast converted it to thy own use.' They [the judges] turn first to A's claim and adjudge to him the mina which B owes him, and afterward they turn to B's claim to judge of the seizure or the pledge. But B's estate might be sacrificed; *i.e.*, there are merchants who would now buy his goods at a high price, but might leave to-morrow. And as to his real estate, it might depreciate under the effect of the judgment against him, when it is seen that B is pressed; hence it is best to compel A to return the seized or pledged goods to B so that he may pay his debt out of them." In other words, the mutual claims ought to be heard at the same time when the contrary course would lead to the sacrifice of the defendant's property.

The matter is brought up in the Shulḥan 'Aruk (Ḥoshen Mishpaṭ, 24), where Joseph Caro simply copies the words of the Talmud; but ReMA, in his gloss, takes Rashi's views, assuming in addition that B is not prepared with his witnesses, and can not undertake to prove his counter-claim within the thirty days which the court regularly allows to the defendant to make his defense. He concludes that, if there is danger that B's property would otherwise be sacrificed, the court should not render judgment till B has had a chance to prove his counter-claim.

Both the Roman and the Anglo-American systems of procedure grew out of a set of writs or of formulas, and cross-actions were not provided for in these; thus it required either the equitable expansion of the old common law or of the "jus quiritum" by the chancellor or by the pretor, or the intervention of the law-making power, to provide for such a contingency; hence the remedy had its own name and its own rules. The Jewish procedure was always oral, and had no fixed forms for one or another class of actions or defenses; hence there was no name for the set-off or "compensatio," and it was treated like any other just defense.

W. B. L. N. D.

SETH (Hebrew, שת; Greek, Σὴθ).—**Biblical Data:** According to Gen. iv. 25, 26 and v. 3–8, Seth was the third son of Adam. He was born after Cain had murdered Abel and when Adam was 130 years old. Seth lived to the age of 912. His eldest son was Enosh, who was born when Seth was 105 years old. In Gen. v. the line of descent from Adam to Noah is reckoned through Seth. Seth is mentioned also in I Chron. i. 1 and in Luke iii. 38; but neither passage contains additional information.

E. G. H. G. A. B.

——**In Rabbinical Literature:** Notwithstanding the etymology of the name given in Gen. iv. 25, the Rabbis consider "Seth" to mean "foundation"—*i.e.*, Seth was the founder of the world (Num. R. xiv. 12; Midrash Agadah to Gen. *l.c.*). By "God hath appointed me another seed" (Gen. *l.c.*) Eve alluded to the Messiah, who would descend from Seth through Ruth the Moabite (Gen. R. xxiii. 7). After the expulsion from paradise Seth was the first of Adam's children who had the face and form of man, Adam's earlier post-expulsion progeny having had the shapes of demons and apes (*ib.* xxiv. 6; Tan., Bereshit, 26). Seth was one of the seven shepherds whom Micah (v. 5) prophesied should rise against the Assyrians (Cant. R. viii. 9).

W. B. M. Sel.

——**Critical View:** The account of Seth in Gen. v. is contained in the P document, being a part of that writer's list of antediluvian patriarchs. This list, beginning with Cainan and including Lamech, is the same as the list of J in Gen. iv. (comp. Harper, "Hebraica," v. 35). Both are transcripts of a Babylonian list preserved in a corrupt form by Berosus (comp. Gunkel, "Genesis," in Nowack, "Handkommentar," p. 121). Since "Enosh" in P's list means "man," as does also "Adam" in J's list, probably "Seth" in the Babylonian list was the name of a deity. Hommel (in "Proc. Soc. Bibl. Arch." xv. 244 *et seq.*) conjectures that "Seth" was originally "Shitti," an epithet of Marduk, who in Berosus' list occupies this place under the name "Adapara."

SEVEN. See Numbers and Numerals.

SEVERIN. See Masorah.

SEVERUS, ALEXANDER. See Alexander Severus.

SEVERUS, JULIUS: Roman general; consul in 127. Later he held a number of offices in the provinces, and was legate of Dacia, Mœsia, and, according to an inscription ("C. I. L." iii., No. 2830), of Britain. This is confirmed by Dion Cassius, who states (lxix. 13) that Severus was sent from Britain to Judea to quell the rebellion of Bar Kokba, being appointed "legatus pro prætore" of the province of Judea and subsequently legate of Syria.

Severus did not attack the Jews in open battle, but hunted them down one by one after tedious struggles in their fastnesses, caverns, and ravines, until, to quote the words of Dion Cassius, "he annihilated, destroyed, and exterminated them." The statement of Dion's epitomizer (*ib.* 14), that Severus was appointed legate of Bithynia on the conclusion of the war, is due to a confusion with another Severus, who was apparently called "G. J. Severus," while the one under consideration had the prænomen "Sextus." The Senate, according to his inscription, decreed him a triumph "ob res in Iudæa prospere gestas."

G. S. Kr.

SEVERUS, LUCIUS SEPTIMIUS: Emperor of Rome from 193 to 211 C.E. At the beginning of his reign he was obliged to war against his rival, Pescennius Niger, who had proclaimed himself Emperor of the East. Which ruler the Jews preferred is unknown, but the other Palestinians, including the Greeks and Syrians, and even the Samaritans, fought for Niger, so that when Severus proved victorious he deprived the inhabitants of Neapolis (Shechem) of their citizenship (Spartianus, "Vita Severi," ix.). It was not until Severus had conquered his last rival, Albinus (197), that he freed the Palestinians from the punishment which their fidelity to Niger had evoked (*ib.* xiv.).

On the conclusion of the Parthian war (199) Severus marched through Syria, and it was probably at that time that Palestine was detached from Syria and made a separate province (Krauss, in "R. E. J." xlvi. 220), while Sebaste (Samaria) became a Roman colony (Ulpian, in "Corpus Juris," "Digesta," xv. 1, § 7). During this period one Claudius, who is not, however, characterized as a Jew, is said to have overrun all of Judea and Syria as a bandit, and to have succeeded in reaching the emperor himself, and threatening his life, nor was he afterward captured (Dion Cassius, "Epitome of Xiphilinus," lxxv. 2). Orosius (vii. 17) and Eusebius ("Chronicon") likewise mention a rebellion of the Samaritans and Jews, and it was probably for that reason that the Senate granted the emperor a triumph over the Jews ("Judaicum triumphum decreverat"; Spartianus, *l.c.* xvi.), which Severus, on account of his illness, permitted his son CARACALLA to celebrate.

Tombstone of Solomon ben Abraham Found at Seville.
(From a photograph.)

In 202 the emperor and his son both assumed the title of consul in Syria, and in his march to Alexandria Severus enacted for the inhabitants of Palestine a number of laws, including a prohibition against conversion to Judaism or Christianity (*ib.* xvii.). On the other hand, both Severus and Caracalla permitted Jews to fill offices of state, although they were obliged to bear all disadvantages connected with their status ("Digesta," ii. 3, § 3). The inscription on the synagogue of Ḳaisun names all the members of the house of Severus.

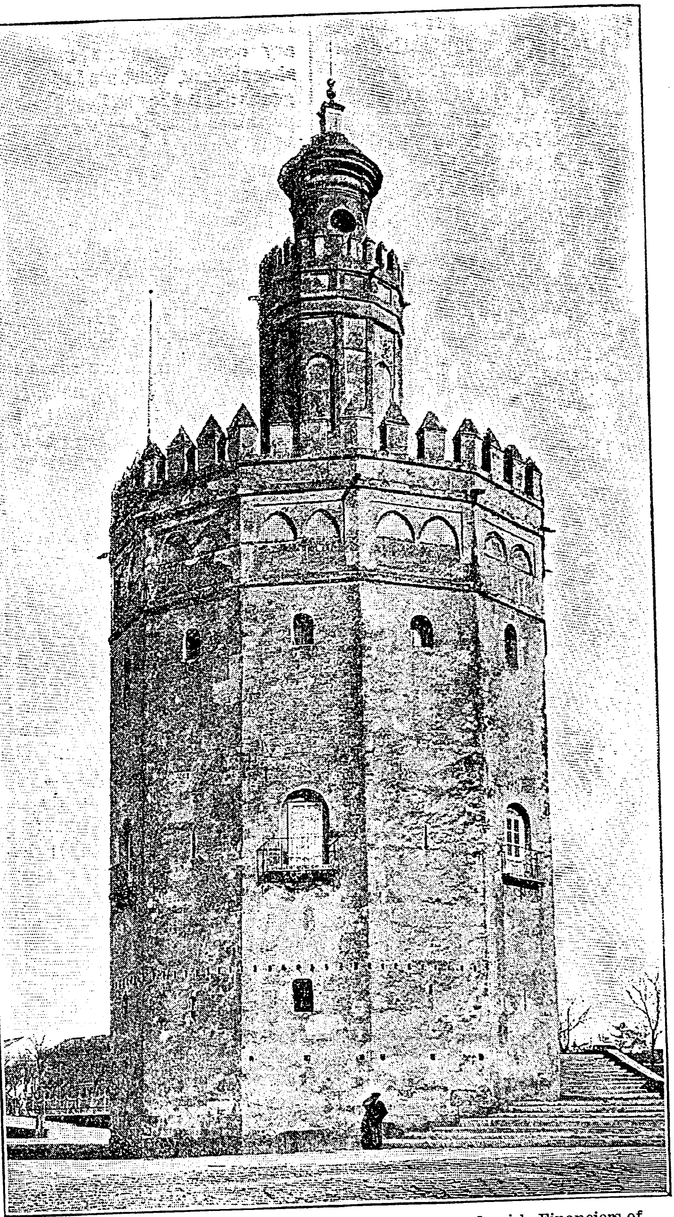
G. S. KR.

Early History.

SEVILLE: Capital of the former kingdom of Seville; after Madrid the greatest and most beautiful city of Spain. The community of Seville is one of the oldest and largest in the country. Jews are said to have settled there, as at Toledo, shortly after the destruction of the Temple of Jerusalem ("Shebet Yehudah," ed. Wiener, p. 14). When the Mohammedan conqueror Musa took the city he placed it in charge of its numerous Jewish inhabitants. As a result of dynastic dissensions at Granada, followed by a massacre, many Jews of that city fled to Seville, where they were hospitably received by King Mohammed al-Mu‘tamid. Several of these Jews, including Joseph ibn Misgay, a faithful adherent of the pretender to the throne of Granada, were sent on diplomatic missions and entrusted with offices of state, while the king appointed Isaac b. Baruch ibn al-Balia, the scholarly author of a Talmudic and astronomical work, to the posts of court astronomer and prince ("nasi") over all the Jewish communities of the realm. Through Ibn al-Balia Seville became the center of Jewish scholarship, taking the place hitherto occupied by Cordova and Granada. Al-Mu‘tamid, who hanged, at Seville, Isaac ibn Shalbib, the envoy of Alfonso VI. of Castile, and who absolutely refused to subject himself to the Christian kings, was deposed by the ALMORAVIDES in 1091.

The Jews of Seville lived peaceably under the Almoravides. Abu Ayyub Sulaiman ibn al-Mu‘allam was physician to Ali; and Abraham ibn Kaminal occupied a high position at court, with the title of vizier, while the wealthy Eleazar b. Naḥman ibn Ashar, a pupil of Alfasi and a man of much poetic talent, was the rabbi of the flourishing community. In 1148 Seville fell into the hands of the ALMOHADES, whose leader, ‘Abd al-Mu'min, ordered the Jews to accept Mohammedanism, many who remained faithful to Judaism being either sold into slavery or imprisoned. Even those who pretended to be Mohammedans suffered greatly under the Almohades, and it was not until a century later that their condition improved.

In Nov., 1248, Ferdinand III. of Castile conquered Seville after a siege of eighteen months. The Jews, carrying the scrolls of the Law, met him as he entered the city, and presented him with the key of the ghetto, handsomely worked in silver and inlaid either with Arabic or with Hebrew and Spanish inscriptions (see illustration, Jew. Encyc. v. 363). Historians differ as to whether the key, which is preserved in the Cathedral of Seville, was given to King Ferdinand or to his son, afterward King Alfonso X., who directed the campaign as crown prince. Amador de los Rios has advanced the opinion that there were two keys, one of which was presented to Ferdinand and bore Arabic inscriptions, while the other key, with Hebrew and Spanish inscriptions, was given a few years later to Alfonso as a token of gratitude ("Hist." i. 372 *et seq.*).



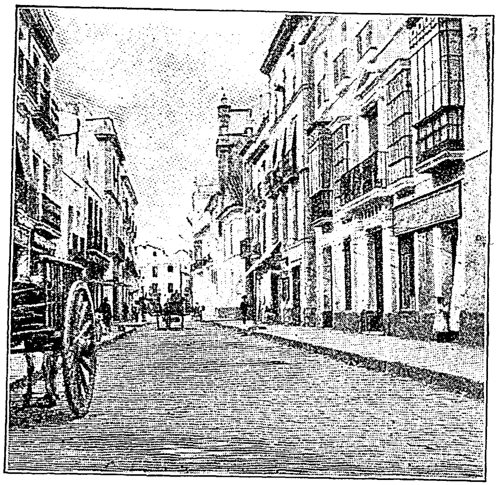
The Golden Tower at Seville. Used as a Residence by Jewish Financiers of the Kings of Castile.
(From a photograph.)

Ferdinand was very gracious to the Jews. In dividing the land he remembered all who had rendered him any service in capturing the city, as well as the Jewish tax-collectors, physicians, and interpreters; he gave the Jews some of the mosques also, to be transformed into synagogues, and permitted them to live in the ghetto. This quarter, which was very large, was situated close to the Alcazar, the former residence of the Moorish kings, and extended as far as the Puerta de Carmona. It included several parishes, and was surrounded by a high wall with two gates opening into the city, one on the Borceguineria, as the street is still called, and the other on S. Nicolas street. A third street, the Calle de los Levies, received its name from the wealthy Jews who resided there, though this name was subsequently changed to Correo Mayor; another street was known as the Xamardana. In the ghetto were situated the shops of the Jews, the market, the Jewish court, the slaughter-houses, and the synagogues, of which there were three large and about twenty small ones. The entrance to the largest synagogue was through the Puerta de la Carne, or de la Juderia (called also Puerta de Min Joar, after a wealthy Jew who owned land there). The Jewish cemetery was situated outside the Puerta de la Carne in the suburb of S. Bernardo, or Ben Ahvar (Zuñiga, "Anales de Sevilla," i. 140, 155; Fidel Fita, "La España Hebrea," i. 215 *et seq.*).

Alfonso X. confirmed his father's gifts to the Jews and granted them various commercial and industrial privileges, although he assigned the tithes of the large and wealthy community to the first Archbishop of Seville and his chapter. In the middle of the fourteenth century between 6,000 and 7,000 Jewish families were living at Seville; many of them were engaged in industry and commerce. Their wealth, however, soon aroused the envy and hatred of the populace. As early as 1341 the farmers of the municipal taxes were enjoined to rent shops to the Jews only in case all the shops of the community were already occupied. The Jews were frequently exposed to attacks and maltreatment, and a special decree was issued to the effect that any one who struck a Jew in his shop, whether wounding or killing him, should be fined 72, 600, or 6,000 maravedis, according to the enormity of the offense. The hostility manifested against the Jewish population was accentuated by the execution of Don Joseph Pichon, the administrator of the royal taxes, who had been very popular at Seville; and it was especially increased by the frequent vituperative sermons of the archdeacon Ferrand MARTINEZ, whose baneful activity the directors of the aljama repeatedly but vainly endeavored to check.

Riot of 1391.

For fifteen years Martinez incited the people of Seville to kill the Jews. A riot finally broke out on March 15, 1391, during which several Jews were slain; but the nobles, who protected them, soon quelled the uprising. Three months later, on June 6, the persecution was renewed. The infuriated populace attacked the ghetto from all sides, plundering and burning the houses. More than 4,000 fell victims to the mob's fury, although most of the Jews accepted baptism to save their lives. Women and children were sold to Mohammedans as slaves (Zuñiga, *l.c.* i. 238; "Shebeṭ Yehudah," ed. Wiener, p. 38, and pp. 128 *et seq.* [letter of Ḥasdai Crescas]).



Old Juderia, Street in Which the Santa Maria de la Blanca is Situated.
(From a photograph by Dr. William Popper.)

In 1396 Henry III. presented the ghetto, including all its houses, lands, and synagogues, to his favorites Diego Lopez de Estuñiga and Juan Hurtado de Mendoza, who were empowered by the deed of gift to sell, pawn, give, exchange, demolish, or otherwise dispose of this property according to their will and pleasure. The ghetto received the name of Villa Nueva, and the synagogues were transformed into churches, one, Santa Maria de la Blanca, being among the finest ecclesiastical edifices in the city. Another was called the Church of S. Cruz; a third became the convent Madre de Dios; while the fourth was not left to the Jews, as was alleged, but was transformed into the Church of S. Bartolomé, which for a long time bore Hebrew inscriptions over its doors and which still stands as originally erected (Caro, "Antiguedas de Sevilla," pp. 20a, 42b, Seville, 1634).

Despite the fact that there was now no real community at Seville, some Jews remained there even after the fearful slaughter and the destruction of the ghetto. They lived in the old Jewish quarter, as well as among the Christians; and with the permission of the municipal council, which keenly felt the loss of the Jews' taxes, they resumed their customary occupations as smiths, silversmiths, tailors, shoemakers, workers in leather, merchants, and surgeons; but they suffered so much from the fanatical populace that they were compelled to hire a guard of 300 men for their protection. There were also many Maranos who remained Jews at heart, being confirmed in their faith by Judah ibn Verga ("Shebeṭ Yehudah," pp. 94, 96); they were among the wealthiest inhabitants of the city. The tribunal of the Inquisition was first instituted at Seville, its earliest victims being the wealthy Maranos who had entered into a conspiracy against the Holy Office. The Jewish cemetery of Seville was transformed into a garden after the expulsion, but was not entirely laid out until 1580. The graves were obliterated, and the costly tombstones were ruthlessly destroyed by the populace.

Native Scholars.

Seville, the home of Abravanel and Ibn Tibbon, was the residence or birthplace of many Jewish scholars who took their names from it. Among the earliest of these were: Abun b. Sharada, the poet; Judah ibn Balaam, author of commentaries on the Bible; Abu ibn Afla, a mathematician and translator of a mathematical work; the famous Joseph ibn Migash; Moses Levi Abulafia (d. 1255), physician to the last Moorish king of Seville; the poet Judah Samuel 'Abbas; Yom-Ṭob b. Abraham, a commentator on the Talmud; and David Abudarham, author of a liturgical work. Contemporaneous with them were the physicians Moses b. Samuel (as a Christian called Juan de Avignon) and Judah Alashkar; Isaac ben Moses (whose son Joseph wrote a treatise on astronomy); David b. Solomon ibn Ya'ish and his father, the physician Solomon ibn Ya'ish (called also Don Ṣoliman), the author of a large Arabic commentary on the canon (Caro, *l.c.* p. 42a; Zunz, "Z. G." p. lii; Fidel Fita, *l.c.* i. 276 *et seq.*, quotes the legible portions of the inscription on Solomon's tombstone, which still exists).

Don Ephraim, called Al-Barceloni, and Don Moses b. Sacar were contemporaries of Isaac b. Sheshet, as were "Ha-Sar ha-Tafsar" and Don Moses b. R. Saadia פינה (= "Picho"), probably a relative of Joseph Pichon (Isaac b. Sheshet, Responsa, No. 209). Judah ibn Verga, the author of the "Shebeṭ Yehudah" and of mathematical works, was living at Seville at the time when the Inquisition was introduced.

Seville has (1905) a population of 146,205, including about 200 Jewish families. Most of the latter are in poor circumstances, being immigrants from Tangier and other African cities. See FERDINAND III.; INQUISITION; PICHON, JOSEPH.

G. M. K.

SEXTON. See SHAMMASH.

SEXTUS, JULIUS AFRICANUS: Byzantine chronographer, noted for his surprisingly lucid interpretations of some Biblical questions; flourished in the first half of the third century of the common era. Suidas (*s.v.* 'Αφρικανός) says that Africanus was a Libyan philosopher; and this statement is supported by Julius' works, which, although written in Greek, betray their author's knowledge of Latin, indicating, therefore, that he was a native of Latin North Africa. He was, it seems, the scion of a noble family. This assumption explains the fact that he took part in the expedition of Septimius Severus against Osrhoene in 195. He was a friend of Abgar VIII. of Edessa; and he found much material for his works in the archives of that city. These relations with the Orient explain his knowledge of Syriac, which he shows, for example, in the fourth chapter of his Κεστοί, where he gives the Syrian name of a fish. He may also have become personally acquainted with the condition of the Jews in Babylon; for he says in the Susanna Epistle that the Jews were living under their own jurisdiction in the Exile. His works in Biblical criticism indicate that he knew Hebrew also. Toward the end of his life he was presbyter, or, according to others, bishop, of Emmaus (Nicopolis) in Palestine, and as such headed an embassy to Rome in behalf of that city. He was a contemporary and friend of ORIGEN, and lived under the emperors Heliogabalus and Alexander Severus.

His Knowledge of Languages.

All the works of Africanus, which are of course especially important for Christianity, are also highly interesting for Judaism. These works include: (1) a chronography in five books, in virtue of which he is not only the founder of Church history and the predecessor of Eusebius, but also the source and pattern for the Byzantine chronographers, who frequently make extracts from this work, thereby preserving considerable fragments. He divides the history of the world into seven epochal weeks, similar to the Jewish work "Lepto Genesis" (Jubilees), treating within these divisions the earliest history of the human race, then Jewish history, and, finally, the latter synchronistically with general history. He places Moses 1,020 years before the first Olympiad, a date probably derived from Justus of Tiberias, from whose lost history much has been preserved by Africanus; and it is to this source that are to be traced various statements of facts found in Africanus' history and parallel to those given by Josephus. In connection with the Biblical stories Africanus relates many legends whose origin may in part be found in the Apocalypses and the Midrashim.

His Works.

(2) Κεστοί (= "Embroidery"), a figurative name given to a large work said to have included twenty-four (according to others, fourteen and nineteen) books, and dedicated to Alexander Severus. The two books that have been preserved deal chiefly with matters pertaining to warfare, the whole work having been devoted to similar subjects. Here also are found important data relating to Jewish history; *e.g.*, that the Pharisees, *i.e.*, the Jews engaged in war with Titus, destroyed a division of the Roman army by poisoning the wine the soldiers drank (Κεστοί, § 3). This work, filled with pagan views and gross superstitions, was formerly ascribed to a pagan author; but recent criticism assigns it to Africanus. (3) A letter to Origen relative to the Susanna Epistle appended in the Septuagint to the Book of Daniel. The penetration that Africanus displays in proving this letter to be a forgery has earned for him the reputation of a sound Bible critic. (4) A letter to Aristides on the discrepancies in the genealogy of Jesus. In this letter also Africanus shows that he is well versed in Jewish history. (5) He may also have written a commentary on Daniel's weeks of years.

SFAX. See TUNIS.

SFEJ, ABRAHAM: Rabbinical author; born at Tunis in the early part of the eighteenth century; died at Amsterdam in 1784, while discharging the duties of collecting rabbi for the community of Jerusalem. Sfej left his native city and settled in Jerusalem, sojourning for a time in Constantinople. He wrote a work entitled "'Ene Abraham" (Amsterdam, 1784), a commentary on the "Yad ha-Ḥazaḳah" of Maimonides.

D. M. FR.

SFORNO: Italian family, many members of which distinguished themselves as rabbis and scholars. The most prominent of these were the following:

Hananeel ben Jacob Sforno: Talmudist; lived at Bologna in the fifteenth and sixteenth centuries; brother of Obadiah Sforno, who mentions him in the introduction to his commentary on the Pentateuch. A responsum of Hananeel's was inserted by Shabbethai Baer in his "Be'er 'Eshek," § 55.

BIBLIOGRAPHY: Fürst, *Bibl. Jud.* iii. 318; Mortara, *Indice*, p. 61; *Mosè*, vi. 192.

Israel Sforno: Talmudist; lived at Viadano in the sixteenth century. A halakic decision of his is quoted in a manuscript collection of 260 responsa of the Italian rabbis (No. 235).

BIBLIOGRAPHY: Mortara, *Indice*, p. 61.

Jacob ben Obadiah Sforno: Venetian scholar of the sixteenth and seventeenth centuries. Shabbethai Bass, and, after him, Wolf, attributed to Jacob a work entitled "Iggeret ha-Ṭe'amim" (Venice, 1600), containing mystic explanations of the accents. The correctness of the ascription is, however, doubted by Steinschneider, who believes that this work is identical with one of the same title by Aaron Abraham ben Baruch.

BIBLIOGRAPHY: Shabbethai Bass, *Sifte Yeshenim*, s.v.; Wolf, *Bibl. Hebr.* i. 1089; Steinschneider, *Cat. Bodl.* cols. 716, 1255.

Nissim Isaac ben Judah Sforno: Rabbi at Mantua in the sixteenth century. He was the author of an epistle on the "Cuzari"; and a responsum of his is quoted in the above-mentioned collection.

BIBLIOGRAPHY: Wolf, *Bibl. Hebr.* i. 915; Mortara, *Indice*, p. 61.

Obadiah ben Israel Sforno: Venetian Talmudist of the sixteenth and seventeenth centuries. He edited Menahem Azariah di Fano's "Yemin Adonai Romemah" (Venice, n.d.); and a responsum of his is inserted in Di Fano's collection of Responsa (Venice, n.d., p. 83).

Obadiah ben Jacob Sforno: Italian exegete, philosopher, and physician; born at Cesena about 1475; died at Bologna in 1550. After acquiring in his native town a thorough knowledge of Hebrew, rabbinical literature, mathematics, and philosophy, he went to Rome to study medicine. There his great learning won for him a prominent place among scholars; and when Reuchlin was at Rome (1498–1500) and desired to perfect his knowledge of Hebrew literature, Cardinal Domenico Grimani advised him to apply to Obadiah. Equally high was Obadiah's reputation as a casuist. Meïr KATZENELLENBOGEN consulted him on legal questions (Responsa, p. 97, § 48), and Joseph COLON invoked his authority (Responsa, p. 96, No. 192, Sudilkov, 1834). At the request of Israel ben Jehiel Ashkenazi, rabbi of Rome, Obadiah issued a decision in the case of Donina, daughter of Samuel Ẓarfati, the renowned physician of the pope. About 1525 Obadiah left Rome and led for some time a wandering life. From several letters of that epoch addressed to his brother Hananeel at Bologna it would appear that Obadiah was in poor circumstances. Finally he settled at Bologna, where he founded a Talmudical school, which he conducted until his death.

Obadiah was an indefatigable writer, chiefly in the field of Biblical exegesis. The characteristic features of his exegetical work are respect for the literal meaning of the text and a reluctance to entertain mystical interpretations. He possessed excellent judgment in the selection of explanations from the earlier exegetes, as Rashi, Ibn Ezra, RaSHBaM, and Naḥmanides, and he very often gives original interpretations which betray an extensive philological knowledge. He wrote the following commentaries: on the Pentateuch (Venice, 1567); on Canticles and Ecclesiastes, that on the latter being dedicated to King Henry II. of France (*ib.*); on the Psalms (*ib.* 1586); "Mishpaṭ Ẓedeḳ," on Job (*ib.* 1589); on the books of Jonah, Habakkuk, and Zechariah, published with David ibn Hin's "Liḳḳuṭe Shoshannim" (Amsterdam, 1724). He wrote also "Kawwanat ha-Torah," prefixed to the Pentateuch commentary.

Obadiah was active also in the domain of religious philosophy. In a work entitled "Or 'Ammim" (Bologna, 1537) he endeavored to combat with Biblical arguments the theories of Aristotle on the eternity of matter, on God's omniscience, and on the universality of the soul, as well as various other Aristotelian views that seemed to conflict with religion. In the introduction Obadiah says that he was induced to write his work by the fact that even so great a man as Maimonides had expressed the opinion that all the theories of Aristotle concerning the sublunary world are absolutely correct. Obadiah himself translated the "Or 'Ammim" into Latin and sent it to Henry II. of France, but it has never been published. Another work on religious philosophy by Obadiah is his commentary on the sayings of the Fathers, published in the introduction to the Roman Maḥzor (Bologna, 1540).

Obadiah was also the author of the following works, still extant in manuscript: "Bi'ur le-Sefer Uḳlidas," a paraphrase of the eight books of Euclid, translated from the Arabic (Bibliothèque Nationale, MS. No. 435); "Derashot" (Halberstam MSS., No. 331); "Diḳduḳ Leshon 'Ibri," a Hebrew grammar.

Osheah ben Nissim Isaac Sforno: Rabbi at Mantua in the first half of the seventeenth century. A religious poem of his was inserted by Joseph Jedidiah Karmi in his "Kenaf Renanim."

BIBLIOGRAPHY: Mortara, *Indice*, p. 61.

Solomon Samuel ben Nissim Israel Sforno: Rabbi at Asti, later at Venice; died in 1617. Several responsa of his were inserted by Jacob Heilbronner in his "Naḥalat Ya'aḳob" (Padua, 1622). Solomon left in manuscript commentaries on Psalms, Proverbs, Job, Daniel, the Megillot, Ezra, Nehemiah, and Chronicles. He edited the "Cuzari" with the commentary of Judah Moscato (Venice, 1594). On his death a funeral sermon was pronounced by Leon of Modena, who lauded him in the highest terms.

S. I. BR.

SHA'AṬNEZ (שעטנז): Fabric consisting of a mixture of wool and linen, the wearing of which is forbidden by the Mosaic law (Lev. xix. 19; Deut. xxii. 11). The Septuagint rendering is *κίβδηλον* (something false, adulterated, or drossy). In the Coptic or Egyptian language "sasht" means "weave" and "nouz," "false"; the compound "sha'aṭ-nez," therefore, signifies a "false weave." The Mishnah explains the word שעטנז as the acrostic of three words, שוע, טוי, נוז ("carded," "woven," and "twisted"; Kil. ix. 8).

The combining of various fabrics in one garment, like the interbreeding of different species of animals, or the planting together of different kinds of seeds, is prohibited as being contrary to the laws of nature. The cabalists regard such combination as a defiance of God, who established natural laws and gave each species its individuality.

Views of Maimonides.

Maimonides bases the prohibition on the general law against imitating heathen customs: "Ye shall not walk in the manners of the nation, which I cast out before you" (Lev. xx. 23), and says, "The heathen priests adorned themselves with garments containing vegetable and animal materials, while they held in their hand a seal of mineral. This you will find written in their books" ("Moreh," iii. 37). Other critics consider the prohibition of sha'aṭnez from a hygienic point of view, and reason that the elements of wool and linen are diametrically opposed to each other, since the wool has an absorbing and shrinking nature while linen is resistant and non-shrinkable, these conflicting tendencies neutralizing each other and causing disorder in connection with the effusion of perspiration from the body.

It appears, however, that sha'aṭnez was permitted in the case of the priest's girdle, which was interwoven with purple, blue, and scarlet wool (Ex. xxxix. 29); it may be used also in the case of the purple and the blue cord entwined in the ẓiẓit, or the woolen ẓiẓit on a linen garment (Yeb. 4b, 5b), as the sacredness of the purpose is supposed to protect against any evil effect. The phrase "lo yaḥgeru ba-yaza' " ("they shall not gird themselves with any thing that causeth sweat"; Ezek. xliv. 18) is interpreted in the Talmud to mean "they shall not gird themselves around the bent of the body, where sweat effuses most" (Zeb. 18b). Rabbi is of the opinion that the girdle of the ordinary priest was of sha'aṭnez; R. Eleazar says it was of fine linen. The high priest wore a linen girdle on Yom Kippur and a girdle of sha'aṭnez on all other days (Yoma 12b).

By the Mosaic law sha'aṭnez is prohibited only after it has been carded, woven, and twisted, but the Rabbis prohibit it if it has been subjected to any one of these operations (Niddah 61b). Hence felt cloth, of mixed wool and linen, is forbidden (Kil. ix. 9). On the other hand, the Rabbis recognize only sheep's wool as wool, the finest being that of lambs and rams (comp. II Kings iii. 4); they exclude camels' hair, the fur of hares, and the wool of goats. If any of the excluded wools is mixed with sheep's wool, or spun with it into thread, the character of the material is determined by the proportion of each. If the greater part of it is sheep's wool, it is reckoned as wool; if the contrary, it is not so regarded, and may be mixed again with linen (Kil. ix. 1).

Exceptional Cases.

A woolen garment may be worn over a linen garment, or vice versa, but they may not be knotted or sewed together. Sha'aṭnez is prohibited only when worn as an ordinary garment, for the protection or benefit of the body (Sifra, Deut. 232), or for its warmth (Beẓah 15a), but not if carried on the back as a burden or as merchandise. Cushions and tapestry with which the bare body is not in touch do not come under the prohibition (Kil. ix. 2). To lie on sha'aṭnez is permitted by the strict interpretation of the Mosaic law, but the Rabbis feared lest some part of the sha'aṭnez might fold over and touch part of the body; hence they went to the extreme of declaring that even if only the lowest of ten couch-covers is of sha'aṭnez one may not lie on them (Yoma 69a). Pillows, if of a kind that leaves no likelihood of their folding over and touching the body, are permitted to be of sha'aṭnez. Felt soles with heels are also permitted (Beẓah 15a), because they are stiff and do not warm the feet.

In later times the Rabbis were inclined to modify the law. Thus sha'aṭnez was permitted to be used in stiff hats ("Sefer ha-Ḥinnuk," section "Ki Teẓe," No. 571). Silk resembling wool, and hemp resembling linen, which formerly were forbidden "for appearance sake" (Kil. ix. 3), were later permitted in combination with either wool or linen, because "we now know how to distinguish them." Hempen thread was manufactured and permitted for use in sewing woolen clothing.

A linen admixture is detected during the process of dyeing cloth, as wool absorbs the dye more readily than does linen (Niddah 61b). Wool is distinguished from linen by three tests—feeling, burning, and smelling; linen burns in a flame, while wool singes and creates an unpleasant odor. There were special experts employed to detect sha'aṭnez ("Ha-Karmel," i., No. 40).

The observance of the laws concerning sha'aṭnez was relaxed in the sixteenth century; and the COUNCIL OF FOUR LANDS found it necessary to enact (1607) a "taḳḳanah" against sha'aṭnez, especially warning women not to sew woolen trails to linen dresses, nor to sew a velvet strip in front of the dress, as velvet had a linen back (Grätz, "Gesch." vii. 36, Hebrew ed., Warsaw, 1899).

W. B. J. D. E.

SHABABO (זיין), JESHUA: Egyptian scribe and rabbi; lived in the last quarter of the seventeenth century. His teachers were Rabbis Abraham ha-Levi of Cairo and Joseph Nazir, who afterward became his father-in-law (see JOSEPH NAZIR BEN ḤAYYIM MOSES HA-LEVI). The relation between teacher and pupil may be inferred from the fact that Abraham ha-Levi included some dissertations of his pupil in his work "Ginnat Weradim." The two men differed in opinion, and the pupil answered his teacher in "Peraḥ Shushan" (Constantinople, 1732). Besides, he wrote "Sha'are Orah," "Sha'are Torah," and a large work in two parts entitled "Sha'are Yeshu'ah," containing responsa. Shababo was for some time a sofer, but resigned this office from religious motives when he was appointed dayyan of Cairo.

E. C. L. GRÜ.

SHABBAT ("Sabbath"): Treatise in the Mishnah, Tosefta, and both Talmuds; devoted chiefly to rules and regulations for the Sabbath. The Scriptural passages that treat of the Sabbath and of the laws for its observance, thus forming the exegetical basis of this treatise, are: Ex. xvi. 22 *et seq.*; xx. 10; xxiii. 12; xxxiv. 21; xxxv. 2, 3; Num. xv. 32 *et seq.*; Deut. v. 14; Jer. xvii. 21 *et seq.*; Amos viii. 5; Neh. x. 31, xiii. 15 *et seq.* Shabbat is the first treatise in the mishnaic order Seder Mo'ed, and is divided into twenty-four chapters, containing 138 paragraphs in all.

Contents.

Ch. i.: Ways in which things may not be brought from a private domain ("reshut ha-yaḥid") to the public domain ("reshut ha-rabbim") and vice versa on the Sabbath (§ 1); things which may not be done on Friday afternoon or by lamplight on Friday evening (§§ 2-3); rules adopted at the council in the upper chamber of Hananiah b. Hezekiah b. Garon (§ 4); additional particulars concerning things which may not be done on Friday (§§ 5-11).

Ch. ii.: Illumination on the Sabbath, the kinds of oil which may be used, and the materials which may serve as wicks (§§ 1-3); further details concerning lamps (§ 4); cases in which lamps may be extinguished on the Sabbath (§ 5); the three duties of women neglect of which may cost them their lives (§ 6); the three things of which the master of the house must remind his household at twilight on Friday evening (§ 7).

Ch. iii. and iv.: Permitted and prohibited methods in which food may be warmed or kept warm on the Sabbath; concerning things which are regarded as set apart ("muḳẓeh") and which one is forbidden to move on that day.

Ch. v.: With what an animal may be led on the Sabbath (*e.g.*, a halter), and what may be placed on it (*e.g.*, a blanket), and what may not be placed on it, every object not requisite for the health or safety of the animal, or for guarding it, being regarded as a burden, and it being forbidden to load a beast on that day.

Ch. vi.: Garments which may be worn by men, women, and children, and those which may not be worn; a discussion of the question whether weapons adorn a man, the majority of the sages deciding that they disgrace him who bears them, since they are implements of murder, inasmuch as, according to Isa. ii. 4, the ideal of the future is a time when the nations shall dwell in everlasting harmony and shall change their arms to implements of peace.

Ch. vii.: The gradations, according to circumstances, of the sin-offering for breaking the Sabbath; enumeration of the thirty-nine chief kinds of work which are forbidden, namely, seven of agriculture, four of cooking, thirteen of tailoring, seven of butchering and tanning, two of writing and erasing, two of building and demolishing, two of kindling and extinguishing fires, one of the hammer-stroke (giving the finishing touch to a thing), and one of carrying an object from the reshut ha-yaḥid to the reshut ha-rabbim and vice versa.

Ch. viii.: Determination of quantities in the case of various objects which render one guilty of a violation of the Sabbath in carrying them on that day. In the last paragraph (§ 7) of this chapter Isa. xxx. 14 is quoted as a text.

Ch. ix.: Biblical verses cited as additional proofs or texts (§§ 1-4); further details concerning the quantities of many things that may not be carried on the Sabbath (§§ 5-7).

Ch. x.: Concerning those cases in which one who transports an object is not guilty of violating the Sabbath (§§ 1-4); cases in which two persons who carry an object together from one place to another are guilty, and those in which they are innocent; on the transportation of a corpse or of a living man (§ 5); on the problem whether one who bites or cuts his nails or plucks out his hair on the Sabbath is guilty of a violation of that day (§ 6).

Ch. xi.: On throwing objects from one place to another, from one house across the street to another, from the land into the water and vice versa, or from a ship into the sea and vice versa.

Ch. xii.: Concerning building, hammering, sawing, boring, weeding fields, felling trees, and gathering wood or greens (§§ 1-2); on writing two letters of the alphabet and of writing in general, together with the cases in which one by writing does not violate the Sabbath (§§ 3-6).

Ch. xiii.: Concerning weaving, spinning, sewing, tearing, washing, dyeing, and hunting.

Ch. xiv.: Cases in which hunting on the Sabbath does not render one guilty of violation of that day (§ 1); on the preparation of a solution of salt (§ 2); medicines and remedies permitted on the Sabbath, and those which are forbidden (§§ 3-4).

Ch. xv.: The knots which may be tied on the Sabbath and those which may not be tied (§§ 1-2); on putting clothes away and on making beds (§ 3).

Ch. xvi.: In case a fire breaks out on the Sabbath, sacred writings and phylacteries ("tefillin") may be rescued, as well as such food as is necessary for that day; non-Jews, but not Jews, may be allowed to extinguish the fire; but a Jew may not urge a non-Jew to do any work for him on the Sabbath.

Ch. xvii.: Vessels which may be carried on the Sabbath; blinds may be lowered on that day.

Ch. xviii.: Things which may be moved on the Sabbath; calves and the foals of asses may be led; a woman may lead her child, though she may not carry it; cattle may be helped when about to give birth; and the Sabbath is not broken by assisting a woman in labor.

Ch. xix.: Circumcision on the Sabbath; that day is not violated by a circumcision or by the necessary preparations for one.

Ch. xx.: Wine may be strained and cattle fed on the Sabbath.

Ch. xxi.: In what manner many objects, regarded as set apart, may be moved and put away (§§ 1-2); the clearing of the table (§ 3).

Ch. xxii.: On the preparation of food and drink on the Sabbath (§§ 1-4); bathing and anointing with oil on that day (§§ 5-6).

Ch. xxiii.: Lending, raffling, and distributing food and drink on the Sabbath (§§ 1-2); preparations for the evening of the week-day which may be made on the Sabbath (§§ 3-4); the degree of care for the dead which is permissible on the Sabbath (§ 5).

Ch. xxiv.: On the case of a traveler overtaken by the Sabbath eve before he reaches a city (§ 1); the feeding of cattle (§§ 2-4); the fulfilment of vows on that day (§ 5).

The catalogue and definition of various tasks, and the lists of garments, utensils, and ornaments, as well as of materials for fuel and illumination, all detailed in the Mishnah, render it especially important for the history of civilization.

The Tosefta.

The Tosefta is divided into eighteen chapters, and contains many important maxims and sayings besides additions to and amplifications of the Mishnah. Particularly noteworthy is its enumeration, in ch. vi. and vii., of current customs, usages, and superstitions, some of them being regarded by the scholars as harmless and permissible, while others were forbidden as heathenish and pagan. Certain superstitious views and usages may be mentioned here. In beginning an undertaking the first part of the work should be done by some one deft of touch, as a sign that the completion of the task will not be arduous (vi. 3). When sparks fly from the fire and fall on the ground it is a sign that guests may be expected (vi. 2). If a hen crows like a cock, she must be stoned (vi. 5). If one turns his shirt inside out when taking it off, he will dream at night. If one kisses a coffin containing a corpse, he will see the dead man in his dreams (vi. 7). If one puts a lamp or a candle on the ground, it angers the dead (vi. 2). If two persons walk together and some one comes between them, the friendship between the pair will be broken (vii. 12).

The following advice given by R. Eliezer b. R. Jose ha-Gelili in the Tosefta is also noteworthy: "If a pious man beginneth a journey which thou also must make, strive thou to go with him; for good angels accompany him. But if a blasphemer beginneth a journey which thou also must make, go thou before him or go thou after him, but beware lest thou be with him; for Satan and evil angels accompany the blasphemer on his way" (xvii. 2-3).

The Gemaras.

Origin of Ḥanukkah.

The Babylonian Gemara to this treatise, besides its explanations and discussions of the Mishnah, contains a large number of stories, legends, and historical accounts, as well as parables, aphorisms, and other haggadic interpretations and utterances, of which a few may be cited: It is declared that the Book of Ezekiel would have been considered apocryphal because of the many passages in it that contradict the Pentateuch, had not Hananiah ben Hezekiah (who outlined the scroll of fasting) taken pains to elucidate it and by his interpretations and explanations succeeded in removing all the contradictions (13b). In like manner, the sages would have declared the books of Ecclesiastes and Proverbs apocryphal, since each of them contains passages inconsistent with the other; but they succeeded in interpreting those passages in such a manner as to explain away the contradictions (30b). In 21b the origin of Ḥanukkah is described. When the Hasmoneans conquered the Syrians and purified the Temple at Jerusalem, restoring the legal worship, they found only one small jar of oil sealed with the high priest's seal and, therefore, ritually pure. It was apparently sufficient for a single day only; but by a miracle it lasted for eight days, so that the Feast of Ḥanukkah is celebrated for eight days. The mildness of Hillel, as contrasted with the severity of Shammai, is illustrated by several examples; and the saying of Hillel, to the effect that the entire Law is but a commentary on the fundamental principle of love to one's fellow men, is cited (31a). The reprehensibility of indecent conversation and the severe punishment of those who indulge in it are set forth (33a). The story of R. Simeon b. Yoḥai, who was forced to flee on account of his criticisms of Roman institutions, and who lived for twelve years in a cave, is given (33b). The hatred of the Jews felt by other nations is explained as a religious animosity dating from the time when the revelation on Sinai gave Israel a faith which differentiated it from other nations (89b). The legend of the two angels who accompany the Jew from the synagogue to his home on Friday evening is related (119b). A few excellent examples are given to show how men should judge their fellow creatures with gentleness, even though circumstances are apparently against them (127b); also the parable to illustrate the purity of the soul (152b), and the simile of the royal banquet, showing how needful it is to be ever ready to appear before God.

In the Yerushalmi the Gemara to ch. xxi.-xxiv. is no longer extant.

W. B. J. Z. L.

SHABBAT HA-GADOL ("The Great Sabbath"): The Sabbath preceding Passover. The designation "great" for this Sabbath is mentioned by Rashi (11th cent.), and is due to the great miracle of the Sabbath that preceded the Exodus, as related in the Midrash. When God ordered the Israelites to prepare a lamb on the 10th of Nisan for Passover (Ex. xii. 3) they feared the vengeance of the Egyptians, because the lamb was the Egyptian deity (*ib.* viii. 26). According to one version, the Egyptians fainted when they saw the lamb tied to the foot of the bed in the houses of the Israelites (Pesiḳta Zuṭarti, Bo, xii. 6 [ed. Buber, p. 29a]); according to a second, they were paralyzed and could not prevent the lambs being sacrificed (Ex. 3); and according to yet another, the first-born, learning on the 10th of Nisan that the lamb and the first-born, both regarded as deities by the Egyptians, were to be sacrificed, urged their parents to let the Israelites go and opposed the Egyptians for retarding the Exodus (Tos. to Shab. 87b, *s.v.* ואותו); the 10th of Nisan in question was a Sabbath (Seder 'Olam R. V.; Mek. p. 46b; Pesiḳ. R., ed. Friedmann, p. 78a). The author of "Shibbole ha-Leḳeṭ" (13th cent.) adds the explanation that on this Sabbath there is a "long" service in the forenoon, in which the lecturer explains the laws and regulations governing the coming Passover. In this sense the Sabbath preceding the other festivals are likewise "great." Abudarham gives as another reason that the first commandment of the Almighty to the Israelites as a nation was given on the 10th of Nisan, which on that occasion fell on Sabbath.

Zunz thinks that the designation "great" is of Christian origin, copied from the Church Fathers, who called the Saturday before Easter "great," and that the Greek Jews, who probably first adopted this term, applied it only to the Sabbath falling on the 14th of Nisan and to no other Sabbath preceding Passover. A plausible explanation of the word is that by S. H. Sonnenschein, who bases its use on the phrase "the great and dreadful day of the Lord" (Mal. iii. 23 [A. V. iv. 5]), found in the hafṭarah beginning "We-'arebah" for the Sabbath before Passover. But as the hafṭarah, according to some authorities, is read only when the Sabbath falls on the 14th of Nisan, it would appear that the theory is correct that originally such Sabbath only was recognized as "great." One authority thought the word הגדול ("great") to be a corruption of הגדה ("Haggadah"), because the Haggadah is read on the Sabbath in question.

The service of the "Shaḥarit" prayer of Shabbat ha-Gadol includes "yoẓerot" (see Baer, "'Abodat Yisrael," pp. 706-720); and the Haggadah, to the paragraph beginning "Rabban Gamaliel," is recited in the afternoon. Shabbat ha-Gadol, together with Shabbat Shibah, is the principal Sabbath; on these days the rabbi in olden times lectured in the forenoon to the people—especially to those that came from the neighboring villages to celebrate the holy day in the city—and acquainted them with the laws and customs of the approaching festival, while the maggid generally preached in the afternoon, relating the wonderful achievement of freedom from Egyptian bondage and the miracles of the Exodus. In later times the rabbi lectured and preached in the afternoon only, and usually made an effort to deliver his most learned and pilpulistic discourse of the year.

SHABBAT GOY: The Gentile employed in a Jewish household on the Sabbath-day to perform services which are religiously forbidden to Jews on that day. The Shabbat goy's duty is to extinguish the lighted candles or lamps on Friday night, and make a fire in the oven or stove on Sabbath mornings during the cold weather. A poor woman ("Shabbat goyah") often discharges these offices. The hire in olden times was a piece of ḥallah; in modern times, about 10 cents.

According to strict Jewish law, a Jew is not allowed to employ a non-Jew to do work on the Sabbath which is forbidden to a Jew. The rule of the Rabbis is "amirah le-goy shebut" (*i.e.*, "to bid a Gentile to perform work on the Sabbath is still a breach of the Sabbath law," though not so flagrant as performing the work oneself); but under certain circumstances the Rabbis allowed the employment of non-Jews, especially to heat the oven on winter days in northern countries.

Legendary literature contains many instances in which the Shabbat goy was replaced by a Golem. The latest story in which the Shabbat goy plays a rôle is that of K. L. Silman Franco, in Hebrew, in "Aḥiasaf," 5665 (1904–5). Maxim Gorki, the Russian novelist, was once employed as a Shabbat goy by the Jewish colonists in the governments of Kherson and Yekaterinoslav.

SHABBAT NAḤAMU: First Sabbath after the Ninth of Ab; so called because the hafṭarah begins with the words: "Naḥamu, naḥamu 'ammi" = "Comfort ye, comfort ye my people" (Isa. xl. 1). The custom of reading certain lessons from the Prophets independently of the sidrot on the three Sabbaths before and the seven immediately following this fast-day is apparently a very old one. The Pesiḳta generally assigned to Rab Kahana (ed. Buber) enumerates these ten hafṭarot in the same order in which they are now read everywhere; namely, Dibre (Jer. i.), Shim'u (*ib.* ii.), Ekah (Isa. i. 21). Modern custom assigns to the third Sabbath the first part of the chapter, beginning with the word "Ḥazon"; hence the name of that Sabbath among the Ashkenazim is "Shabbat Ḥazon." Maimonides ("Yad," Tefillah, xiii. 19) assigns the first twenty verses of Isa. i. to the second Sabbath, and the remainder of the chapter to the third. Among the Sephardim this third Sabbath is called "Shabbat Ekah."

All, however, agree that for the Sabbath following the Ninth of Ab the fortieth chapter of Isaiah is the most suitable; and although, in the résumé of this portion of his work, Maimonides suggests Jer. xxxii. 16 as hafṭarah for Wa'etḥannan, he states that it is the custom of most people to read the consolations of Isaiah on the Sabbaths between the fast in Ab and Rosh ha-Shanah. These seven hafṭarot are: (1) Isa. xl. 1–26; (2) xlix. 14–li. 4; (3) liv. 11–lv. 6; (4) li. 12–lii. 12; (5) liv. 1–11; (6) lx.; (7) lxi. 10–lxiii. 9. According to Maimonides, (5) and (6) change places. It sometimes happens that the third of these Sabbaths is also Rosh Ḥodesh Elul, in which case the usual hafṭarah for Rosh Ḥodesh (Isa. lxiv.) is read because it also speaks of consolation, and on the fifth Sabbath the hafṭarah is extended to Isa. lv. 6. In some congregations the order of these seven hafṭarot is never changed.

Naturally, Shabbat Naḥamu, being the first of these seven, is the most important and the most widely observed. Although no special celebration is connected with it, it is the Sabbath of pleasure. A bar miẓwah ceremony that would in the ordinary course occur in the "three weeks" is generally postponed to it. Immanuel of Rome states ("Maḥberot," ix.; xxii. 17, 35) that his countrymen celebrated the day by eating goose.

In the order of sidrot, the Ten Commandments and the "Shema'" are read on this day; and this has given occasion for piyyuṭim in the German and Polish rituals.

A. W. Wi.

SHABBAT SHUBAH: The Sabbath between Rosh ha-Shanah and Yom Kippur; so called from the first words of the hafṭarah read on that day, "Shubah Yisra'el" = "Return, O Israel." It is often called also "Shabbat Teshubah" (= "Sabbath of Repentance"), from the fact that it occurs within the ten days of penitence. Since, however, all prayers referring to sin are omitted on this day, the title given at the head of this article is the more appropriate one. To the hafṭarah (Hos. xiv. 2–end) are generally added the last three sentences of Micah; and in the Polish ritual Joel ii. 15–27 is inserted between these two passages.

In the Middle Ages the Talmudic rule that the people should be instructed in the laws of the festival thirty days before its occurrence was generally disregarded, as far as sermons were concerned. Twice a year, however, the rabbi—not the maggid or preacher—delivered public addresses; namely, on the Sabbath before Passover, and on Shabbat Shubah. The discourse was naturally intended to be a call to repentance; but it often took the form of a discussion of some Talmudic dictum on the subject, and appealed more to the intellect of the learned than to the emotions of the common people. Both the German and Polish rituals contain piyyuṭim calling upon Israel to return from sin and transgression.

SHABBETHAI BEN ISAAC (surnamed **Sofer** and **Medaḳdeḳ**): Talmudist and grammarian; born at Lublin, Poland; lived at Przemysl in the sixteenth and seventeenth centuries; teacher of the Talmudist and cabalist Ḥayyim Bochner. Shabbethai was the author of: "Teshubah," a responsum on the writing of the Tetragrammaton, addressed to Meïr Lublin and inserted in the "Teshubot ha-Ge'onim" edited by Holleschauer (Amsterdam, 1717); "Nimuḳim le-Sefer Mahalak" (Lublin, 1622; Hamburg, 1788), annotations to the grammatical treatise "Mahalak" of Moses ben Joseph Ḳimḥi, and to the glosses thereon by Elijah Levita; "Haggahot" (Dyhernfurth, 1690), grammatical annotations to the prayer-book, with a critical introduction. He left in manuscript: "Ḳontres Yesod ha-Lashon," the rudiments of Hebrew grammar; "Ḳontres mi-Ḥiyyub Limmud Ḥokmat ha-Diḳduḳ," on the obligation of studying grammar, demonstrated from the Targum, Mishnah, Gemara, and Midrash, and from the Zohar, Sefer Yeẓirah, and other cabalistic works; "Baḥure Ḥemed," a defense of David Ḳimḥi's grammar "Miklol" against the criticisms of Elijah Levita; "Nimuḳim le-Sefer ha-Shorashim," a defense of Ḳimḥi's Hebrew dictionary against the criticisms of Elijah Levita. A poem by Shabbethai is prefixed to "Maṭṭeh Mosheh" (Cracow, 1590–91), a work on the practical ritual laws by Moses ben Abraham Mat.

SHABBETHAI JUDAH ISAAC BEN LEVI. See JUDAH IBN SHABBETHAI.

SHABBETHAI B. MEÏR HA-KOHEN (SHaK): Russian Talmudist; born at Wilna 1621; died at Holleschau on the 1st of Adar (Rishon), 1662. In 1633 he entered the yeshibah of R. Joshua at Tyktizin, studying later at Cracow and Lublin. Returning to Wilna, he married the daughter of R. Simeon Wolf b. Isaac Benimus, and shortly after was appointed one of the assistants of R. Moses, author of "Ḥelḳat Meḥoḳeḳ." In 1646 he went to Cracow, and in the following year published his "Sifte Kohen," commentary on the Shulḥan 'Aruk, Yoreh De'ah, a work that was approved by eighteen of the greatest scholars of that generation. In 1648 the communities of Russian Poland were devastated by Chmielnicki, Shabbethai ha-Kohen being among the sufferers. About this time he published his "Megillah 'Afah." After a short stay at Prague, where he had sought refuge from the Cossack uprising, he was called to the rabbinate of Dresin, and later to that of Holleschau, where he gained the intimate friendship of Magister Valentini Vidrich of Leipsic.

Shabbethai ha-Kohen was regarded by his contemporaries as more than usually learned. He frequently contested the decisions of his predecessors, and followed an entirely new path in the interpretation of the Talmudic law. He made light, too, of the decisions of his contemporaries, and thus drew on himself the enmity of some among them, including David b. Samuel ha-Levi, author of "Ṭure Zahab," and Aaron Samuel Kaidanover, author of "Birkat ha-Zebaḥ." Nevertheless, the majority of contemporary scholars considered his commentary, "Sifte Kohen," as of the highest authority, and applied his decisions to actual cases as the final word of the Law. In addition to his knowledge of the Talmudic law he was versed in the Cabala, which he used in explaining various passages of the Bible. His mastery of Hebrew is evidenced by the seliḥot which he composed in commemoration of the Chmielnicki tragedies. As a logician he stood, perhaps, first among the Talmudic scholars of his age.

Shabbethai wrote the following works: "Sifte Kohen" (referred to above); "Seliḥot" for the 20th of Siwan, in memory of those killed during the tragedy of 1648 (Amsterdam, 1651); "Sifte Kohen," on Shulḥan 'Aruk, Ḥoshen Mishpaṭ (Amsterdam, 1667); "Ha-Aruk," a commentary on the Yoreh De'ah (Berlin, 1667); "Neḳuddot ha-Kesef," criticism of the "Ṭure Zahab" of R. David ha-Levi of Lemberg (Frankfort-on-the-Oder, 1677); "Teḳafo Kohen," general laws concerning "teku," etc. (Frankfort-on-the-Oder, 1677); "Geburat Anashim," on section 154 of the Shulḥan 'Aruk, Eben ha-'Ezer (Dessau, 1697); "Po'el Ẓedeḳ," an arrangement of the 613 commandments of Maimonides (Jessnitz, 1720); a discourse upon the passage "Kammah Ma'alot" in the Haggadah (Presburg, 1840; abbreviation of "Kerem Shelomoh").

T. B. FR.

SHABBETHAI BEN MOSES: Halakist and liturgical poet; flourished at Rome in the first half of the eleventh century. Of his halakic decisions only a few fragments are extant. After Solomon ha-Babli he was the first Hebrew poet of Rome; his poems for Pesaḥ are in the Roman Maḥzor (in manuscript); one of them, with his name in acrostic, begins "An'im ḥiddushe shirim." His "seliḥot" also are extant in manuscript. One of them, beginning "Re'eh ẓoneka," has been translated by Zunz ("S. P." p. 202). His sons **Moses** and **Kalonymus** are likewise known as liturgical poets (see JEW. ENCYC. vii. 429). Shabbethai was president of the Jewish congregation.

SHABBETHAI NAWAWI (נאוואוי): Rabbi and scholar of the end of the seventeenth century; lived in Rosetta (רושידי), Egypt. He was a contemporary of Abraham b. Mordecai ha-Levi, in whose "Ginnat Weradim" some of his responsa are included. Responsa by him are quoted in the "Masse'at Mosheh" of Moses Israel and in Judah Zain's "Sha'are Yeshu'ah." Azulai had in his possession the manuscripts of two of his halakic and haggadic works.

BIBLIOGRAPHY: Azulai, *Shem ha-Gedolim*, i. 160b.

E. C. S. O.

SHABBETHAI RAPHAEL: Shabbethaian agitator of the seventeenth century; a native of Morea. About 1667 Shabbethai Raphael was in Italy, where he assiduously preached and propagated the Shabbethaian teaching; but when the conversion to Islam of the false Messiah became known Shabbethai Raphael betook himself to Germany, where, owing to the lack of rapid communication between the Jews of different countries, he could carry on his impostures undisturbed for a time. There he passed as a prophet, and committed acts which Judaism ordinarily considered crimes. In Sept., 1667, he went to Amsterdam, and there, too, made a substantial number of proselytes, even among the members of the Portuguese communities; the German Jews also permitted him to preach in their synagogue. But when he pretended to be a prophet who was in direct communication with Elijah, he was compelled by the Portuguese Jews to leave the city (Nov., 1667). At Hamburg he was violently opposed by Jacob Sasportas, and his flattery of the latter did not prevent his being harassed there. He thereupon represented himself as a physician, and secured the protection of one of the burgomasters, whom he had treated for the gout. Finally his true character became known, and in the beginning of the year 1668 he was obliged to flee to Poland.

Four years later Shabbethai appeared at Smyrna, where he commenced to gather about him the secret Shabbethaians. The rabbis, however, soon brought about his imprisonment, after which nothing was heard of him.

SHABBETHAI B. SOLOMON: Rabbi and scholar; lived at Rome in the second half of the thirteenth century. In the controversy regarding the study of philosophy in general, and of Maimonides' "Moreh Nebukim" in particular, which arose between Hillel b. Samuel of Verona and Zeraḥiah b. Isaac of Barcelona, Shabbethai sided with the latter, severely censuring Hillel. He was the author of "She'elot u-Teshubot" and "Pisḳe," and devoted himself also to philosophy.

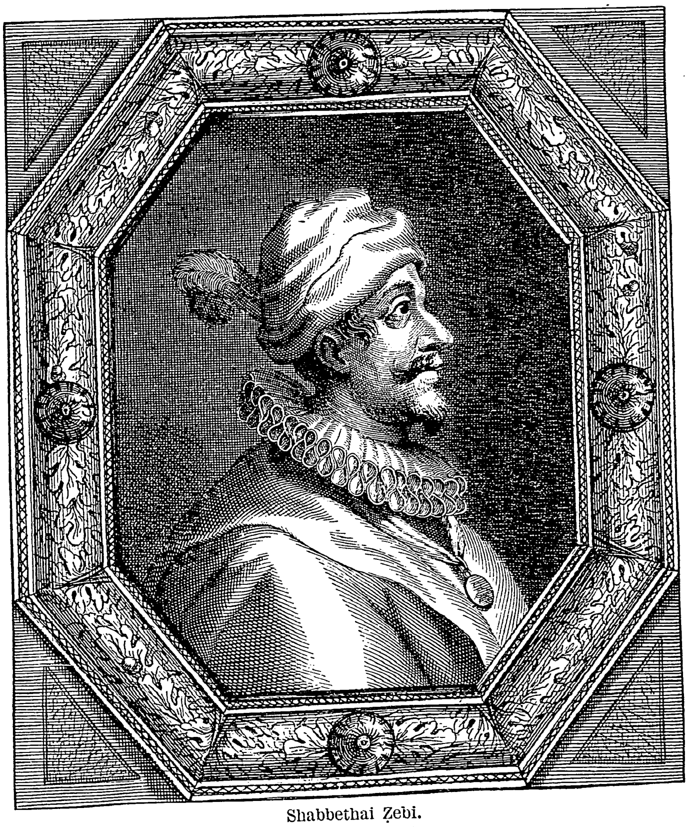
W. B. S. O.

SHABBETHAI ẒEBI B. MORDECAI: Pseudo-Messiah and cabalist; founder of the Shabbethaian sect; born on the Ninth of Ab (July 23, 1626) at Smyrna; died, according to some, on the Day of Atonement (Sept. 30), 1676, at Dulcigno, a small town in Albania. He was of Spanish descent. His father (Mordecai) had been a poor poultry-dealer in the Morea. Later, when, in consequence of the war between Turkey and Venice under the sultan Ibrahim, Smyrna became the center of the trade in the Levant, Mordecai became the agent in that town of an English house, whose interests he guarded with strict honesty; and he acquired considerable wealth.

Early Years.

In accordance with the prevailing custom of the Oriental Jews of that time, Shabbethai was destined by his father for a Talmudist. In his early youth he attended the yeshibah under the veteran rabbi of Smyrna, Joseph ESCAPA; but halakic and pilpulistic studies did not appeal to his enthusiastic and fanciful mind, nor did he apparently attain any proficiency in the Talmud. On the other hand, mysticism and the Cabala, in the prevailing style of Isaac LURIA, had a great fascination for him. Especially did the practical Cabala, with its asceticism, and its mortification of the body—whereby its devotees claimed to be able to communicate with God and the angels, to predict the future, and to perform all sorts of miracles—appeal to him. In his boyhood he had inclined to a life of solitude. According to custom, he married early, but avoided intercourse with his wife; so that she applied for a divorce, which he willingly granted. The same thing happened with a second wife. Later, when he became more imbued with the fancies of the Cabala, he lost all mental equilibrium. He imposed the severest mortifications on himself—bathed frequently in the sea, even in winter; fasted day after day—and lived constantly in a state of ecstasy.



Shabbethai Ẓebi.
(From an old print.)

Influence of English Millenarianism.

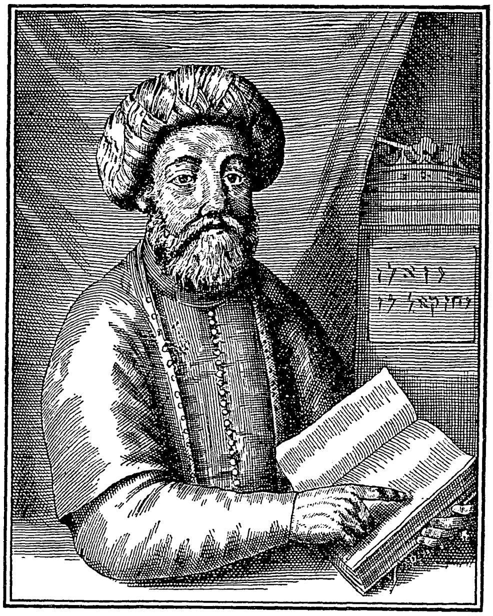
In connection with the preliminary causes, which, as far as they are known, may account for the fateful rôle which was subsequently assumed by Shabbethai, another point should be mentioned here. During the first half of the seventeenth century some extravagant notions of the near approach of the Messianic time, and more especially of the redemption of the Jews and their return to Jerusalem, were set forth by Christian writers and entertained by Jews and Christians alike. The so-called apocalyptic year was assigned by Christian authors to the year 1666. This belief was so predominant that Manasseh b. Israel in his letter to Cromwell and the English Parliament did not hesitate to use it as a motive for his plea for the readmission of the Jews into England, remarking that "the opinions of many Christians and mine do concur herein, that we both believe that the restoring time of our Nation into their native country is very near at hand" (see Grätz, "Gesch." x., note 3, pp. xxix. *et seq.*). Shabbethai's father, who as the agent of an English house was in constant touch with English people, must have frequently heard of these expectations and, himself strongly inclined to believe them, must naturally have communicated them to his son, whom he almost deified because of his piety and cabalistic wisdom.

Claims Messiahship.

Apart from this general Messianic theory, there was another computation, based on a presumably interpolated passage in the Zohar and particularly popular among the Jews, according to which the year 1648 was to be the year of Israel's redemption by the Messiah. All these things so worked on the bewildered mind of Shabbethai as to lead him to conceive and partly carry out a plan which was of the gravest consequences for the whole of Jewry and whose effects are felt even at the present time: he decided to assume the rôle of the expected Messiah. Though only twenty-two years old, he dared (in the ominous year 1648) to reveal himself at Smyrna to a band of followers (whom he had won over through his cabalistic knowledge, his attractive appearance and personality, and his strange actions) as the true Messianic redeemer designated by God to overthrow the governments of the nations and to restore Israel to Jerusalem. His mode of revealing his mission was the pronouncing of the Tetragrammaton in Hebrew, an act which was allowed only to the high priest in the Sanctuary on the Day of Atonement. This was of great significance to those acquainted with rabbinical and especially cabalistic literature. However, Shabbethai's authority at the age of twenty-two did not reach far enough to gain for him many adherents. Among the first of these to whom he revealed his Messiahship in the foregoing manner were Isaac Silveyra and Moses Pinheiro, the latter a brother-in-law of the Italian rabbi and cabalist Joseph Ergas. Shabbethai remained for several years at Smyrna, leading a pious, mystic life, and causing in the community many bickerings, the details of which are not known. The college of rabbis having at their head his teacher, Joseph Escapa, watched Shabbethai closely; and when his Messianic pretensions became too bold they put him and his followers under the ban.

About the year 1651 (according to others, 1654; see Grätz, *l.c.* p. xxxii.) Shabbethai and his disciples were banished from Smyrna. Whither he betook himself is not quite certain. In 1653, or at the latest 1658, he was in Constantinople, where he made the acquaintance of a preacher, ABRAHAM HA-YAKINI (a disciple of Joseph di Trani and a man of great intelligence and high repute), who, either from selfish motives or from delight in mystification, confirmed Shabbethai in his delusions. Ha-Yakini is said to have forged a manuscript in archaic characters and in a style imitating the ancient apocalypses, and which, as he alleged, bore testimony to Shabbethai's Messiahship. It was entitled "The Great Wisdom of Solomon" and began:

> "I, Abraham, was confined in a cave for forty years, and I wondered greatly that the time of miracles did not arrive. Then was heard a voice proclaiming, 'A son will be born in the year 5386 [1626] to Mordecai Ẓebi; and he will be called Shabbethai. He will humble the great dragon; . . . he, the true Messiah, will sit upon My [God's] throne.'"



Shabbethai Ẓebi.

(From Coenen's "Shabbethai Ẓebi," Amsterdam, 1669.)

In Salonica.

With this document, which he appears to have accepted as an actual revelation, Shabbethai determined to choose Salonica, at that time a center of cabalists, as the field for his further operations. Here he boldly proclaimed himself as the Messiah, gaining many adherents. In order to impress his Messiahship upon the minds of his enthusiastic friends he indulged in all sorts of mystic juggleries; *e.g.*, the celebration of his marriage as Son of God ("En Sof") with the Torah, preparing for this performance a solemn festival, to which he invited his friends. The consequence was that the rabbis of Salonica banished him from the city. The sources differ widely as to the route taken by him after this expulsion, Alexandria, Athens, Constantinople, Jerusalem, Smyrna, and other places being mentioned as temporary centers of his impostures. Finally, however, after long wanderings, he settled in Cairo, Egypt, where he resided for about two years (1660-62).

At that time there lived in Cairo a very wealthy and influential Jew named Raphael Joseph Ḥalabi (= "of Aleppo"), who held the high position of mint-master and tax-farmer under the Turkish government. Despite his riches and the external splendor which he displayed before the public, he continued to lead privately an ascetic life, fasting, bathing, and frequently scourging his body at night. His great wealth he used most benevolently, supplying the needs of poor Talmudists and cabalists, fifty of whom permanently dined at his table. Shabbethai at once made the acquaintance of Raphael Joseph, who, being possessed by eccentric, mystic ideas, became one of the most zealous promulgators of his Messianic plans.

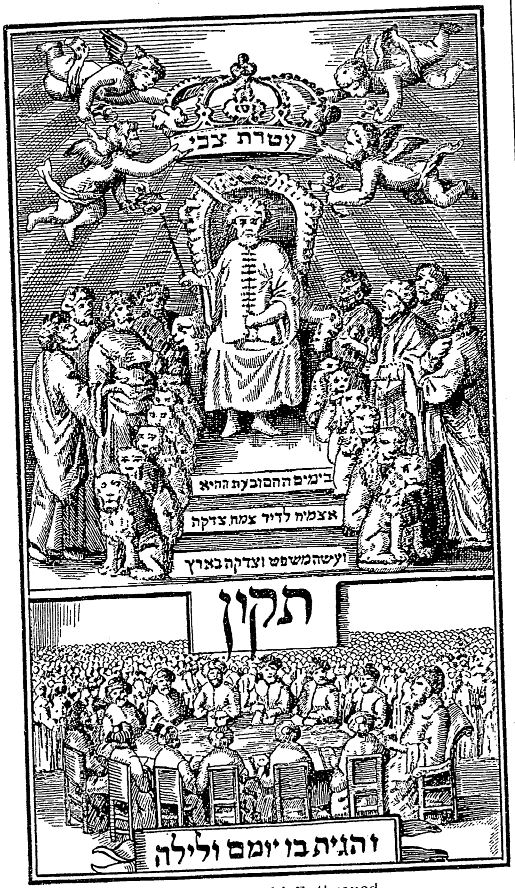
It seems, however, that Cairo did not appear to Shabbethai to be the proper place wherein to carry out his long-cherished scheme. The apocalyptic year 1666 was approaching; and something had to be done to establish his Messiahship. He therefore left the Egyptian capital and betook himself to Jerusalem, hoping that in the Holy City a miracle might happen to confirm his pretensions. Arriving there about 1663, he at first remained inactive, so as not to offend the community. He again resorted to his former practise of mortifying the body by frequent fasting and other penances in order to gain the confidence of the people, who saw therein proofs of extraordinary piety. With great shrewdness he adopted also various means of an inoffensive character which helped him to endear himself to the credulous masses. Being endowed with a very melodious voice, he used to sing psalms during the whole night, or at times even coarse Spanish love-songs, to which he gave a mystic interpretation, attracting thereby crowds of admiring listeners. At other times he would pray at the graves of pious men and women and, as some of his followers reported, shed floods of tears, or he would distribute all sorts of sweetmeats to the children on the streets. Thus he gradually gathered around him a circle of adherents, who blindly placed their faith in him.

At this juncture an unexpected incident brought him back to Cairo. The community of Jerusalem needed money in order to avert a calamity which greedy Turkish officials planned against it. Shabbethai, known as the favorite of the rich Raphael Joseph Ḥalabi, was chosen as the envoy of the distressed community; and he willingly undertook the task, as it gave him an opportunity to act as the deliverer of the Holy City. As soon as he appeared before Ḥalabi he obtained from him the necessary sum, a success which gave him great prestige and offered the best prospects for his future Messianic plans. His worshipers indeed dated his public career from this second journey to Cairo.

Another circumstance assisted Shabbethai in the course of his second stay at Cairo. During the

Chmielnicki massacres in Poland a Jewish orphan girl named Sarah, about six years old, had been found by Christians and sent to a nunnery. After ten years' confinement she escaped in a miraculous way and was brought to Amsterdam. Some years later she came to Leghorn, where, according to authentic reports, she led an irregular life. Being of a very eccentric disposition, she conceived the notion that she was to become the bride of the Messiah who was soon to appear. The report of this girl reached Cairo; and Shabbethai, always looking for something unusual and impressive, at once seized upon the opportunity and claimed that such a consort had been promised him in a dream. Messengers were sent to Leghorn; and Sarah was brought to Cairo, where she was wedded to Shabbethai in Ḥalabi's house. Through her a romantic, licentious element entered into Shabbethai's career. Her beauty and eccentricity gained for him many new followers; and even her past lewd life was looked upon as an additional confirmation of his Messiahship, the prophet Hosea having been commanded to marry an unchaste woman.

Marries Sarah.



Shabbethai Ẓebi Enthroned.

(From the title-page of "Tiḳḳun," Amsterdam, 1666.)

Equipped with Ḥalabi's money, possessed of a charming wife, and having many additional followers, Shabbethai triumphantly returned to Palestine. Passing through the city of Gaza, he met a man who was to become very active in his subsequent Messianic career. This was Nathan Benjamin Levi, known under the name of Nathan Ghazzati. He became Shabbethai's right-hand man, and professed to be the risen Elijah, the precursor of the Messiah. In 1665 Ghazzati announced that the Messianic age was to begin in the following year. This revelation he proclaimed in writing far and wide, with many additional details to the effect that the world would be conquered by him, the Elijah, without bloodshed; that the Messiah would then lead back the Ten Tribes to the Holy Land, "riding on a lion with a seven-headed dragon in its jaws"; and similar fantasies. All these grotesque absurdities received wide credence.

Nathan Ghazzati.

The rabbis of the Holy City, however, looked with much suspicion on the movement, and threatened its followers with excommunication. Shabbethai, realizing that Jerusalem was not a congenial place in which to carry out his plans, left for his native city, Smyrna, while his prophet, Nathan, proclaimed that henceforth Gaza, and not Jerusalem, would be the sacred city. On his way from Jerusalem to Smyrna, Shabbethai was enthusiastically greeted in the large Asiatic community of Aleppo; and at Smyrna, which he reached in the autumn of 1665, the greatest homage was paid to him. Finally, after some hesitation, he publicly declared himself as the expected Messiah (New-Year, 1665); the declaration was made in the synagogue, with the blowing of horns, and the multitude greeted him with "Long live our King, our Messiah!"

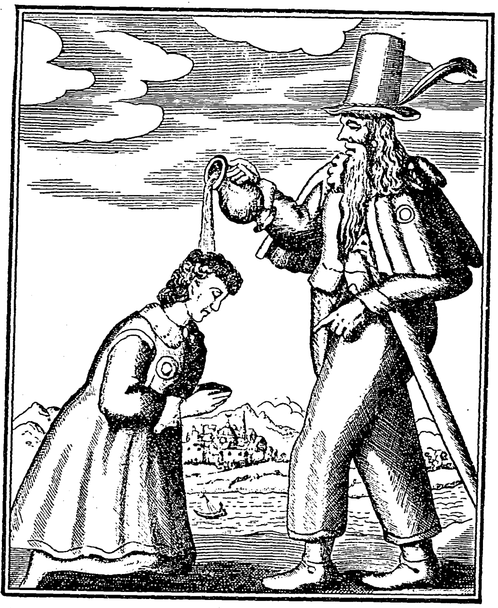
The delirious joy of his followers knew no bounds. Shabbethai, assisted by his wife, now became the sole ruler of the community. In this capacity he used his power to crush all opposition. For instance, he deposed the old rabbi of Smyrna, Aaron Lapapa, and appointed in his place Ḥayyim Benveniste. His popularity grew with incredible rapidity, as not only Jews, but Christians also, spread his story far and wide. His fame extended to all countries. Italy, Germany, and Holland had centers where the Messianic movement was ardently promulgated; and the Jews of Hamburg and Amsterdam received confirmation of the extraordinary events in Smyrna from trustworthy Christians. A distinguished German savant, Heinrich Oldenburg, wrote to Spinoza ("Spinozæ Epistolæ," No. 16): "All the world here is talking of a rumor of the return of the Israelites . . . to their own country. . . . Should the news be confirmed, it may bring about a revolution in all things." Even Spinoza himself entertained the possibility that with this favorable opportunity the Jews might reestablish their kingdom and again be the chosen of God.

Proclaimed Messiah.

Among the many prominent rabbis of that time who were followers of Shabbethai may be mentioned Isaac da Fonseca Aboab, Moses Raphael de Aguilar, Moses Galante, Moses Zacuto, and the above-mentioned Ḥayyim Benveniste. Even the semi-Spinozist Dionysius Mussafia (Musaphia) likewise became his zealous adherent. The most fantastic reports were spread in all communities, and were accepted as truth even by otherwise dispassionate men, as, for instance, "that in the north of Scotland a ship had appeared with silken sails and ropes, manned by sailors who spoke Hebrew. The flag bore the inscription 'The Twelfe Tribes of Israel.'" The community of Avignon, France, prepared, therefore, to emigrate to the new kingdom in the spring of 1666.

Spread of Influence.

The adherents of Shabbethai, probably with his consent, even planned to abolish to a great extent the ritualistic observances, because, according to a tradition, in the Messianic time most of them were to lose their obligatory character. The first step toward the disintegration of traditional Judaism was the changing of the fast of the Tenth of Ṭebet to a day of feasting and rejoicing. Samuel PRIMO, a man who entered Shabbethai's service as secretary at the time when the latter left Jerusalem for Smyrna, directed in the name of the Messiah the following circular to the whole of Israel:



Shabbethai Ẓebi in Festive Attire.
(From an old print.)

> "The first-begotten Son of God, Shabbethai Ẓebi, Messiah and Redeemer of the people of Israel, to all the sons of Israel, Peace! Since ye have been deemed worthy to behold the great day and the fulfilment of God's word by the Prophets, your lament and sorrow must be changed into joy, and your fasting into merriment; for ye shall weep no more. Rejoice with song and melody, and change the day formerly spent in sadness and sorrow into a day of jubilee, because I have appeared."

This message produced wild excitement and dissension in the communities, as many of the pious orthodox rabbis, who had hitherto regarded the movement sympathetically, were shocked at these radical innovations. Solomon ALGAZI, a prominent Talmudist of Smyrna, and other members of the rabbinate, who opposed the abolition of the fast, narrowly escaped with their lives.

In Constantinople.

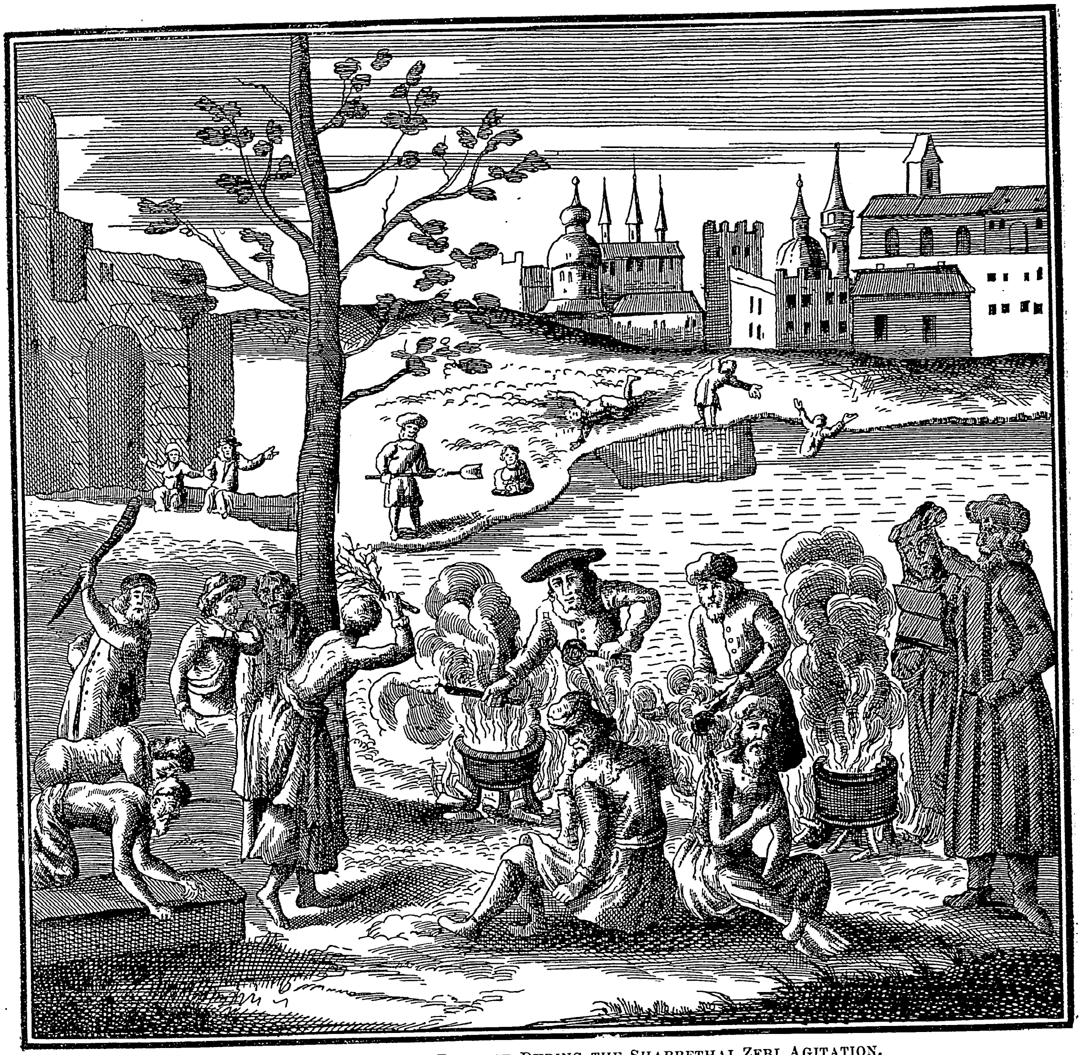
At the beginning of the year 1666 Shabbethai again left Smyrna for Constantinople, either because he was compelled to do so by the city authorities or because of a desire and a hope that a miracle would happen in the Turkish capital to fulfil the prophecy of Nathan Ghazzati, that Shabbethai would place the sultan's crown on his own head. As soon as he reached the landing-place, however, he was arrested at the command of the grand vizier, Aḥmad Köprili, and cast into prison in chains. An under-pasha, commissioned to receive Shabbethai on the ship, welcomed him with a vigorous box on the ear. When this official was asked later to explain his conduct, he attempted to exonerate himself by blaming the Jews for having proclaimed Shabbethai as their Messiah against his own will.

Shabbethai's imprisonment, however, had no discouraging effect either on him or on his followers. On the contrary, the lenient treatment which he secured by means of bribes served rather to strengthen them in their Messianic delusions. In the meantime all sorts of fabulous reports concerning the miraculous deeds which the Messiah was performing in the Turkish capital were spread by Ghazzati and Primo among the Jews of Smyrna and in many other communities; and the expectations of the Jews were raised to a still higher pitch.

At Abydos ("Migdal 'Oz").

After two months' imprisonment in Constantinople, Shabbethai was brought to the state prison in the castle of Abydos. Here he was treated very leniently, some of his friends even being allowed to accompany him. In consequence the Shabbethaians called that fortress "Migdal 'Oz" (Tower of Strength). As the day on which he was brought to Abydos was the day preceding Passover, he slew a paschal lamb for himself and his followers and ate it with its fat, which was a violation of the Law. It is said that he pronounced over it the benediction "Blessed be God who hath restored again that which was forbidden." The immense sums sent to him by his rich adherents, the charms of the queenly Sarah, and the reverential admiration shown him even by the Turkish officials and the inhabitants of the place enabled Shabbethai to display royal splendor in the castle of Abydos, accounts of which were exaggerated and spread among Jews in Europe, Asia, and Africa. In some parts of Europe Jews began to unroof their houses and prepare for the exodus. In almost all synagogues Shabbethai's initials, "S. Ẓ.," were posted; and prayers for him were inserted in the following form: "Bless our Lord and King, the holy and righteous Shabbethai Ẓebi, the Messiah of the God of Jacob." In Hamburg the council introduced this custom of praying for Shabbethai not only on Saturday, but also on Monday and Thursday; and unbelievers were compelled to remain in the synagogue and join in the prayer with a loud "Amen." Shabbethai's picture was printed together with that of King David in most of the prayer-books; and his cabalistic formulas and penances were embodied therein.

These and similar innovations caused great dissensions in various communities. In Moravia the excitement reached such a pitch that the government had to interfere, while at Sale, Africa, the emir ordered a persecution of the Jews. This state of affairs lasted three months (April to July), during which time Shabbethai's adherents busied themselves in sending forged letters to deceive their brethren in distant communities. It was also during this period that Shabbethai, in a general desire for innovations aiming at the abrogation of all laws and customs, transformed the fasts of the Seventeenth of Tammuz and the Ninth of Ab (his birthday) into feast-days; and it is said that he contemplated even the abolition of the Day of Atonement.



Jews of Salonica Doing Penance During the Shabbethai Ẓebi Agitation.

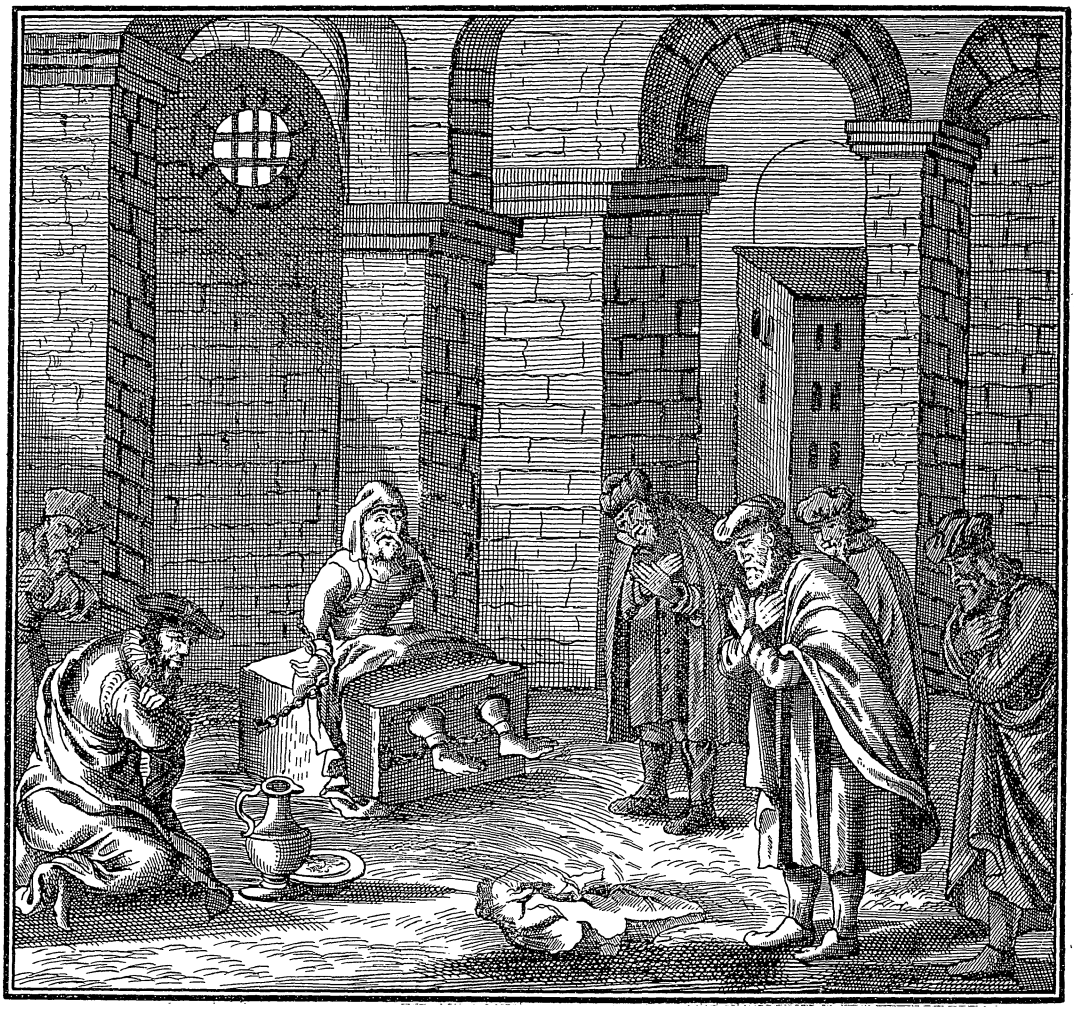
(From "Ketzer Geschichte," 1701, in the possession of George Alexander Kohut, New York.)

Nehemiah ha-Kohen.

At this time an incident happened which resulted in discrediting Shabbethai's Messiahship. Two prominent Polish Talmudists from Lemberg, Galicia, who were among the visitors of Shabbethai in Abydos, apprised him of the fact that in their native country a prophet, Nehemiah ha-Kohen, had announced the coming of the Messiah. Shabbethai ordered the prophet to appear before him (but see Jew. Encyc. ix. 212a, *s.v.* Nehemiah ha-Kohen); and Nehemiah obeyed, reaching Abydos after a journey of three months, in the beginning of Sept., 1666. The conference between the two impostors ended in mutual dissatisfaction, and the fanatical Shabbethaians are said to have contemplated the secret murder of the dangerous rival. Nehemiah, however, escaped to Constantinople, where he embraced Mohammedanism and betrayed the treasonable desires of Shabbethai to the kaimakam, who in turn informed the sultan, Mohammed IV. At the command of Mohammed, Shabbethai was now taken from Abydos to Adrianople, where the sultan's physician, a former Jew, advised Shabbethai to embrace

Islam as the only means of saving his life. Shabbethai realized the danger of his situation and adopted the physician's advice. On the following day (Sept. 16, 1666; comp. Büchler in "Kaufmann Gedenkbuch," p. 453, note 2, Breslau, 1900), being brought before the sultan, he cast off his Jewish garb and put a Turkish turban on his head; and thus his conversion to Islam was accomplished. The sultan was much pleased, and rewarded Shabbethai by conferring on him the title (Mahmed) "Effendi" and appointing him as his doorkeeper with a high salary. Sarah and a number of Shabbethai's followers also went over to Islam. To complete his acceptance of Mohammedanism, Shabbethai was ordered to take an additional wife, a Mohammedan slave, which order he obeyed. Some days after his conversion he had the audacity to write to Smyrna: "God has made me an Ishmaelite; He commanded, and it was done. The ninth day of my regeneration."

Adopts Islam.



Shabbethai Ẓebi a Prisoner at Abydos.
(From "Ketzer Geschichte," 1701, in the possession of George Alexander Kohut, New York.)

The effects of the pseudo-Messiah's conversion on the Jewish communities were extremely disheartening. Prominent rabbis who were believers in and followers of Shabbethai were prostrated by compunction and shame. Among the masses of the people the greatest confusion reigned. In addition to the misery and disappointment from within, Mohammedans and Christians jeered at and scorned the credulous and duped Jews. The sultan even purposed to exterminate all the adult Jews in his empire and to decree that all Jewish children should be brought up in Islam, also that fifty prominent rabbis should be executed; and only the contrary advice of some of his counselors and of the sultana mother prevented these calamities. In spite of Shabbethai's shameful fiasco, however, many of his adherents still tenaciously clung to him, pretending that his conversion was a part of the Messianic scheme. This belief was further upheld and strengthened by false prophets like Ghazzati and

Disillusion.

Primo, who were interested in maintaining the movement. In many communities the Seventeenth of Tammuz and the Ninth of Ab were still observed as feast-days in spite of bans and excommunications.

Meanwhile Shabbethai secretly continued his plots, playing a double game. At times he would assume the rôle of a pious Mohammedan and revile Judaism; at others he would enter into relations with Jews as one of their own faith. Thus in March, 1668, he gave out anew that he had been filled with the Holy Spirit at Passover and had received a revelation. He, or one of his followers, published a mystic work addressed to the Jews in which the most fantastic notions were set forth, *e.g.*, that he was the true Redeemer, in spite of his conversion, his object being to bring over thousands of Mohammedans to Judaism. To the sultan he said that his activity among the Jews was to bring them over to Islam. He therefore received permission to associate with his former coreligionists, and even to preach in their synagogues. He thus succeeded in bringing over a number of Mohammedans to his cabalistic views, and, on the other hand, in converting many Jews to Islam, thus forming a Judæo-Turkish sect (see Dönmeh), whose followers implicitly believed in him.

This double-dealing with Jews and Mohammedans, however, could not last very long. Gradually the Turks tired of Shabbethai's schemes. He was deprived of his salary, and banished from Adrianople to Constantinople. In a village near the latter city he was one day surprised while singing psalms in a tent with Jews, whereupon the grand vizier ordered his banishment to Dulcigno, a small place in Albania, where he died in loneliness and obscurity.

SHABU'OT. See Festivals; Pentecost.

SHADCHAN (Heb. **Shadkan**): Marriage-broker. The verb "shadak" ("meshaddekin"), referring to the arrangements which two heads of families made between themselves for the marriage of their children, was used in Talmudical times (Shab. 150a). But the appellation "shadchan" for the marriage-broker, who undertakes, for a consideration, to bring the two families together and to assist in the formation of a union between them, does not appear in rabbinical literature until the thirteenth century. His legal status and the validity of his claims for compensation were briefly discussed in "Or Zarua'" by Isaac of Vienna in the first half of the thirteenth century, and more extensively in the "Mordekai" (in the last section of Baba Ḳamma) about half a century later. The profession of the shadchan seems to have been old and well established at that period; and the usage of Austrian Jews, who did not reward the shadchan until after the marriage had taken place, is contrasted with that of the upper (Rhenish) countries, where he was paid as soon as the interested parties reached an agreement (Meïr of Rothenburg, Responsa, No. 498; see Berliner, "Aus dem Leben der Deutschen Juden im Mittelalter," p. 43, Berlin, 1900). The legal aspects of the shadchan's business are treated by all later codifiers of the Halakah and in numerous responsa, but there is no indication that he was known among the earlier medieval Sephardic Jews.

The occupation of the shadchan was highly respected, and great rabbis like Jacob Mölln and Jacob Margolioth did not deem it beneath their dignity to engage in it (see Abrahams, "Jewish Life in the Middle Ages," pp. 170-171, London, 1896). His work was deemed of more importance than that of the ordinary "sarsur," or broker, and he was considered entitled to more than two per cent, or, when the contracting parties lived more than ten miles apart, to more than three per cent, of the amount involved (usually the bride's dowry), while the sarsur was entitled only to from one-half of one to one per cent (see the transcript of ordinances adopted by the Council of Four Lands, in Buber's "Anshe Shem," p. 225, Cracow, 1895; comp. also "Orient, Lit." 1845, p. 310). See Marriage Ceremonies.

The business of the shadchan still flourishes among the Jews of the Slavonic countries and among the Jews who emigrated from those countries to the United States and elsewhere. Among the old-fashioned Jews in the Old World almost all marriages are brought about with the assistance of a shadchan, because it would be considered immodest in a young man to do his own courting, and pride would not allow either family to make a direct advance to the other. Those who resort to his services in America usually give the additional reason that they are all "strangers" there, and that they are therefore constrained to utilize the knowledge and experience of an expert marriage-broker. The shadchan's method of exaggerating to each side the advantages to be derived from the union which he proposes, and of praising the bride's beauty and kindness, or the wealth and prominence of her parents, and the bridegroom's learning, ability, and other good qualities, is, with slight modifications, the same everywhere. The most characteristically American addition to his means of persuasion is probably the guaranty against a lawsuit for breach of promise of marriage, which would be likely to follow under certain circumstances if the prospective bridegroom should reject the girl who is recommended and introduced to him by the shadchan.

The shadchan and his occupation are favorite subjects for humorous description by Jewish and non-Jewish writers. *Naḥshon*, in Mapu's "Ayiṭ Zabua'," is said to be drawn from life. Zangwill describes the shadchan in "Children of the Ghetto." One of I. M. Dick's drollest Yiddish stories is entitled "Der Shadchan" (Wilna, 1874), while shorter descriptions of the same nature have appeared in numerous Jewish and non-Jewish periodicals in various languages.

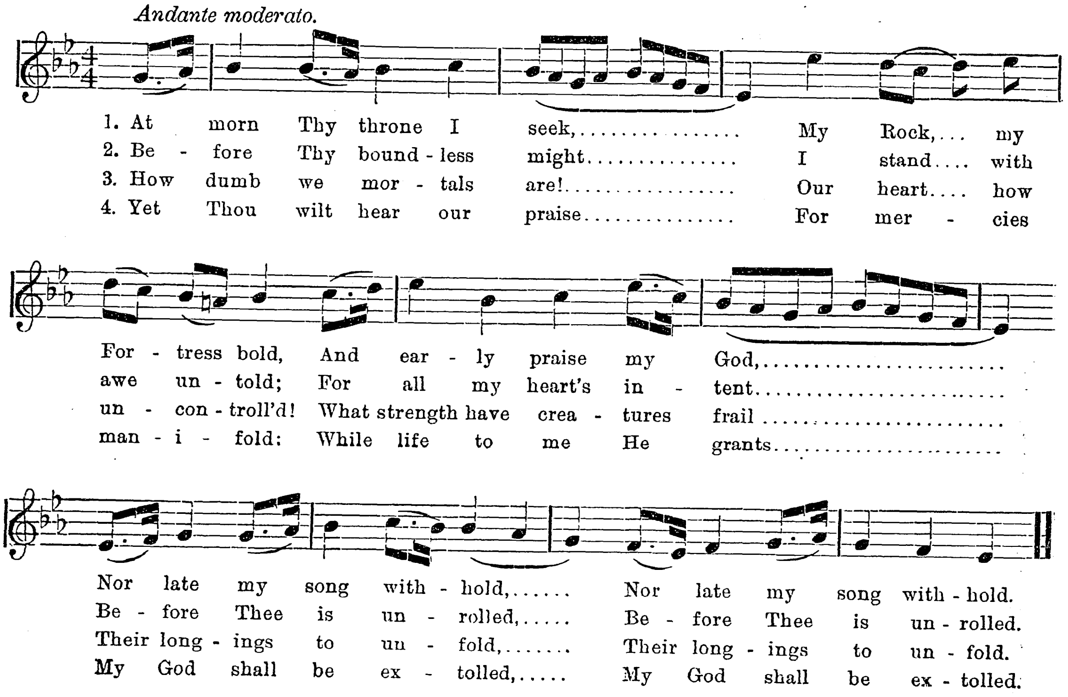
SHADDAI. See Names of God.

SHADRACH (שדרך): Name given by the chief of the eunuchs to Hananiah (Dan. i. 7 *et passim*). Various theories as to its etymology have been put forward, of which the most likely (Delitzsch, "Liber Daniel," xii.) seems to be that the name is the Babylonian "shudur aku" (= "the command of the moon-god").

E. G. H. M. Sel.

SHAḤAR ABAḲḲESHKA ("At morn I will seek Thee"): Morning hymn written about 1050 by Solomon ibn Gabirol (Zunz, "Literaturgesch." p. 188), whose name appears in an acrostic. It is quoted in the prayer-book of the Sephardim, and particularly among the "supplications" following the same author's "Keter Malkut" and preceding the regular morning service of the Day of Atonement. It is associated with a tune of Morisco origin, which should be compared with the old melody of the same use for Lekah Dodi. The transcription reproduces the rime and meter scheme of the Hebrew verses.

SHAḤAR ABAḲḲESHKA



Andante moderato.
1. At morn Thy throne I seek,....... My Rock,... my
2. Be - fore Thy bound - less might....... I stand.... with
3. How dumb we mor - tals are!....... Our heart.... how
4. Yet Thou wilt hear our praise....... For mer - cies
For - tress bold, And ear - ly praise my God,.......
awe un - told; For all my heart's in - tent.......
un - con - troll'd! What strength have crea - tures frail.......
man - i - fold: While life to me He grants.......
Nor late my song with - hold,...... Nor late my song with - hold.
Be - fore Thee is un - rolled,..... Be - fore Thee is un - rolled.
Their long - ings to un - fold,....... Their long - ings to un - fold.
My God shall be ex - tolled,..... My God shall be ex - tolled.

SHAKNA, SHALOM (commonly called **Shakna ben Joseph**): Polish Talmudist; born about 1510; died at Lublin Oct. 29, 1558. He was a pupil of Jacob Pollak, founder of the method of Talmudic study known as the Pilpul. By the year 1528 he had already become famous as a teacher, and hundreds flocked to Lublin to receive instruction at his yeshibah. Many of his pupils became recognized rabbinical authorities, among them being: Moses

Isserles of Cracow (Shakna's son-in-law); Moses Heilprin, author of "Zikron Mosheh"; Solomon ben Judah, rabbi of Lublin; and Ḥayyim ben Bezaleel, rabbi at Friedberg.

Shakna on his death-bed, from motives of extreme modesty, enjoined his son R. Israel from printing any of his (Shakna's) manuscripts. One of his writings, however, namely, the treatise "Pesaḳim be-'Inyan Ḳiddushin," was edited by Moses, son of the physician Samuel (Cracow, 1540 ?).

SHALAL (SHOLAL), ISAAC HA-KOHEN: Head ("nagid") of the community of Cairo, Egypt, in succession to his uncle Nathan ha-Kohen Shalal; died, according to Grätz ("Gesch." 3d ed., ix. 496), at Jerusalem 1525. The appointment of "dayyanim" being one of his functions, he selected them from among deserving Spanish fugitives, and one of these appointments gave rise to much correspondence. He had made a vow that he would become a Nazarite, like Samson, if he were compelled to nominate a certain man. But as he could find no one more competent than the man referred to, he regretted his vow; responsa on the subject were addressed to him by Elijah Mizraḥi, Jacob Berab, and Jacob b. Ḥabib. Isaac Shalal was the last nagid; for Salim I., having conquered Egypt, abolished the office. Isaac then (*c.* 1517) removed to Jerusalem. In 1514 the community of Jerusalem sent its statutes to him for his approbation, which he signed, together with his pupil David ibn Abi Zimra. See Jew. Encyc. v. 69a.

SHALET (SHOLENT). See Cookery in Eastern Europe.

SHALKOVICH, ABRAHAM LEIB. See Ben-Avigdor.

SHALLUM.—Biblical Data: 1. King of Israel who dethroned Zechariah, the last of Jehu's dynasty, and succeeded him. He was in turn dethroned by Menahem (II Kings xv. 10-16).

2. Son of Josiah, King of Judah (Jer. xxii. 11). Probably the term is used merely as an epithet = "the desired one"; hence I Chron. iii. 15 makes Shallum the fourth son of Josiah.

3. Husband of Huldah, the prophetess (II Kings xxii. 14).

E. G. H. E. I. N.

——In Rabbinical Literature: Even at the time of the prophet Elisha, Shallum was one of the most eminent men ("mi-gedole ha-dor") in the country. Yet he did not think it beneath his dignity to lend personal aid to the poor and the needy. It was one of his daily habits to go outside the gates of the city in order that he might give water to thirsty wanderers. God rewarded him by endowing him and his wife Huldah with the gift of prophecy. Another special reward was given him for his philanthropy, for it is he who is referred to in II Kings xiii. 21, where one who was dead awoke to life after being cast into Elisha's sepulcher and touching the prophet's bones. A son was granted him, who became distinguished for exceeding piety—Hanameel, Jeremiah's cousin (Jer. xxxii. 7; Pirḳe R. El. xxxiii.). In Sifre, Num. 78 he is expressly designated as a prophet, David Luria's emendation of the passage in note 59 to the Pirḳe being, therefore, justified. Shallum and his wife were descendants of Rahab by her marriage with Joshua (Sifre, *l.c.*; Meg. 14b).

W. B. L. G.

4. A Judahite (I Chron. ii. 40 *et seq.*).

5. A descendant of Simeon (*ib.* iv. 25).

6. A high priest; son of Zadok (*ib.* vi. 12-13; Ezra vii. 12).

7. A son of Naphtali (I Chron. vii. 13; "Shillem" in Gen. xlvi. 24 and Num. xxvi. 49).

8. Ancestor of a family of gatekeepers of the sanctuary (I Chron. ix. 17; Ezra ii. 42 = Neh. vii. 45).

9. A Korahite gatekeeper (I Chron. ix. 19; "Shelemiah," *ib.* xxvi. 14; "Meshelemiah," *ib.* xxvi. 1, 2, 9).

10. Father of Jehizkiah, an Ephraimite chief (II Chron. xxviii. 12).

11, 12. A porter (Ezra x. 24), and a son of Bani (*ib.* x. 42), both of whom took foreign wives.

13. Uncle of Jeremiah from whom the prophet bought the field in Anathoth (Jer. xxxii. 7).

14. The son of Halohesh (R. V. "Hallohesh"); he was among those who helped to repair the wall of Jerusalem (Neh. iii. 12).

15. Father of Maaseiah; keeper of the threshold (Jer. xxxv. 4).

16. Son of Col-hozeh (Neh. iii. 15).

SHALMANESER (שלמנאסר; **Enemessar** in Tobit i. 2, 13, 15; **Salmanasar** or **Salmanassar** in II Esd. xiii. 40): King of Assyria from 727 to 722 B.C.; successor, and possibly son, of Tiglath-pileser III. According to II Kings xvii. 3-6, he attacked Hoshea, King of Israel, and made him his vassal. Later Hoshea conspired with So (probably Sabako), King of Egypt, and did not send the customary tribute. Therefore the King of Assyria invaded Israel, put Hoshea in prison, attacked Samaria, and, after a siege of three years, took the city and carried Israel captive to Assyria. No records of Shalmaneser have been found among the Assyrian inscriptions. The Assyrian form of his name is "Shulmânuasharid"; and he was the fourth king of Assyria who bore that name. According to the Babylonian Chronicle (Schrader, "K. B." ii. 276), "he sat on the throne the 25th of Ṭebêtu. The city Samara'in [= Samaria] he destroyed. In his fifth year he died. Five years had he reigned in Assyria." The Assyrian eponym canon gives the names of the eponyms for the five years of his reign, and states that military expeditions were undertaken in the third, fourth, and fifth years; but the destination of these is not given. Some of the standard lion-weights found at Kalah bear his name.

Tiglath-pileser claims to have put Hoshea upon the throne, so that king's vassalage began before

Shalmaneser's accession. Sargon, the successor of Shalmaneser, and apparently the founder of a new dynasty, in one of his inscriptions accuses Shalmaneser of having deprived the city of Asshur of its ancient rights. He claims also to have taken Samaria, which probably fell into the hands of the besiegers about the time of or shortly after the death of Shalmaneser. The facts that this king had also invaded Philistia and that Sargon completed the subjugation of that country are probably referred to in Isa. xiv. 28–32 (H. P. Smith, "Old Testament History," p. 241).

SHALOM, ABRAHAM BEN ISAAC BEN JUDAH BEN SAMUEL: Italian scholar and theologian; died in 1492. In his "Neweh Shalom" (1574) he places Scriptural and Talmudic knowledge far above philosophy, although he admits that investigation is not only permissible, but necessary for the perfection of Scriptural knowledge. His translation of Marsilius Ingenus' work on logic, to which he contributed a preface, was published by Jellinek ("Ha-Karmel," vi. 12). According to De Rossi, he wrote a commentary on Al-Ghazali's "Natural Philosophy."

Bibliography: Steinschneider, *Hebräische Uebersetzungen*, p. 469.

E. C. J. L. S.

SHALOM BEN JOSEPH SHABBEZI (Salim al-Shibzi): Yemenite poet and cabalist; flourished toward the end of the seventeenth century at Ṭa'iz, a city ten days' journey south of Sanaa. He was a weaver by trade, but occupied himself also with cabalistic literature, especially the Zohar and the "Shi'ur Ḳomah." He wrote poems both in Hebrew and in Arabic, many of his hymns having one half of each verse in one language and the remaining half in the other. Most of the liturgical hymns recited by the Yemenite Jews on the Sabbath and on holy days, as may be seen from Neubauer, "Cat. Bodl. Hebr. MSS." No. 2377, were composed by Shalom. But, like Israel Najara, he wrote also many love-songs with a mystical tendency, some of which, in Hebrew, were published by Jacob Saphir in his "Eben Sappir" (i. 82b–87b). David Günzburg published in the "Steinschneider Festschrift" (Hebrew part, pp. 95 *et seq.*) an Arabic dirge composed by Shalom in 1687 on a catastrophe at the Yemenite town of Mauza'. This dirge, of the "muwashshaḥ" class (a poem with double rimes), was taken by the editor from Shalom's "Diwan," then in his possession. It may be added that Shalom's brother **David** and his son **Simeon** also were poets of mark. Poems by them are contained in the Bodleian manuscript mentioned above.

Shalom is considered as a saint by all the Yemenite Jews, and they attribute to him many miracles. His tomb at Ṭa'iz, near which are a ritual bath ("miḳweh") and a prayer-house with a scroll of the Law written by Shalom himself, is reputed to have curative powers in regard to all diseases. Jacob Saphir declares that he saw other cabalistic works by Shalom, besides his "Diwan."

SHALOM OF VIENNA: Austrian rabbi; lived at Wiener-Neustadt in the second half of the fourteenth century. He was distinguished for Talmudic learning, and was the first to receive the title "Morenu." Like his colleagues Meïr ha-Levi and Abraham Klausner, rabbis at Vienna, he devoted himself to recording the religious customs ("minhagim") of the Jewish communities. His collection is contained in the "Minhagim" of his pupil Jacob Mölln. Another of his disciples, Isaac Tyrnau of Hungary, also made a compilation of minhagim.

SHAMGAR.—Biblical Data: One of the Judges; son of Anath. He smote 600 Philistines with an ox-goad and saved Israel (Judges iii. 31). During his judgeship so unsettled were the times that "the highways were unoccupied, and the travelers walked through byways" (*ib.* v. 6).

——**Critical View:** In the song of Deborah (Judges v. 6) Shamgar is connected with the hour of Israel's deepest humiliation. He was, therefore, probably not a judge, but a foreign oppressor of Israel. From the form of his name it has been conjectured that he may have been a Hittite (comp. "Sangar," Hittite king of Carchemish in the ninth century B.C.); Moore, in "Jour. American Oriental Society" (xix. 2, p. 160), shows reason for believing that he was the father of Sisera.

Judges iii. 31, in which Shamgar is first mentioned, is out of place, the whole verse being a late addition to the chapter. Ch. iv., the story of Jabin and Sisera, connects directly with the story of Ehud. Moreover, the introduction of the Philistines is suspicious, for they do not appear in Hebrew history till shortly before the time of Saul. Moore has noted also that in a group of Greek manuscripts, and likewise in the Hexaplar Syriac, Armenian, and Slavonic versions, this verse is inserted after the account of the exploits of Samson, immediately following Judges xvi. 31, in a form which proves that it was once a part of the Hebrew text. It was observed long ago that this exploit resembled the exploits of David's heroes (II Sam. xxi. 15-22, xxiii. 8 *et seq.*), especially those of Shammah, son of Agee (*ib.* xxiii. 11 *et seq.*). Probably an account similar to this last was first attached to Judges xvi. 31; then the name was in course of time corrupted to "Shamgar," through the influence of ch. v. 6; and, lastly, the statement was transferred to ch. iii. 31, so that it might occur before the reference in ch. v.

SHAMḤAZAI (or **Shamaḥzai,** from "Shamayḥazai" = seizer of the heaven): Name of a fallen angel. According to Targ. pseudo-Jonathan on Gen. vi. 4, "nefilim" (A. V. "giants") denotes the two angels Shamḥazai and his companion Uzzael or

Azael, who fell from heaven and dwelt on earth "in those days," that is, at the time of the Flood. The legend of the fall of these two angels is narrated in a midrash as follows: When God became angry at the children of men because of their idolatry in the time before the Flood, the two angels Shamḥazai and Azael arose and said: "Lord of the world, said we not unto Thee at the foundation of the world, 'Man is not worthy that thou shouldst be mindful of him'?" God answered them: "It is plain and manifest to me that if ye should dwell on earth, evil passion would rule you, and ye would be still baser than they." Thereupon the angels besought permission to live among mankind and to hallow the name of God upon earth. This was granted them; but when they had descended from heaven to earth, they could not restrain their infatuation for the beautiful daughters of men. Shamḥazai became enamored of a maiden named Isṭar; but when he asked her to return his love, she declared that she would do so only on condition that he reveal to her the name of God ("Shem ha-Meforash"), by which he was able to ascend to heaven. When, however, he revealed the name to her, she uttered it, and at once ascended to the sky. The baffled Shamḥazai married another woman; by her he had a son named Ḥiya or Aḥiyah, who became the father of Sihon and Og.

When Shamḥazai heard that God was about to bring the Flood upon the world, he was in agony for his children's sake, and for penance suspended himself head downward from the sky, remaining in this position between heaven and earth (Midr. Abkir, in Yalḳ., Gen. 44; Jellinek, "B. H." iv. 127-128).

According to the Book of Enoch, Semyaza, as Shamḥazai is there called, did not descend to hallow the name of God on earth, but fell, together with Azael and his host of 200 angels, because of his infatuation for the daughters of men. He was therefore bound by Michael at the command of God, and lies in prison beneath the mountains; there he will remain until the day of judgment, when punishment will be measured out to him and to his companions (*ib.* vi. 3 *et seq.*, x. 10 *et seq.*).

W. B. J. Z. L.

SHAMIR: Term designating a hard stone in the Targums, but in the Bible thrice (Jer. xvii. 1; Ezek. iii. 9; Zech. vii. 12) connoting ADAMANT, a substance harder than any stone and hence used as a stylus (Löw, "Graphische Requisiten," i. 181-183, Leipsic, 1870; Cassel, "Schamir," in "Denkschriften der Königlichen Akademie der Wissenschaften in Erfurt," p. 63, Erfurt, 1856). In the post-Biblical literature of both Jews and Christians are found many legends concerning the shamir, its quality of splitting the hardest substance being the property especially emphasized.

The shamir was the seventh of the ten marvels created in the evening twilight of the first Friday (Ab. v. 6; comp. Pes. 54a; Sifre, Deut. 355; Mek., Beshallaḥ, 5 [ed. Weiss, p. 59b; ed. Friedmann, p. 51a]), and it was followed, significantly enough, by the creation of writing, the stylus, and the two tables of stone. Its size was that of a grain of barley; it was created after the six days of creation. Nothing was sufficiently hard to withstand it; when it was placed on stones they split in the manner in which the leaves of a book open; and iron was broken by its mere presence. The shamir was wrapped for preservation in spongy balls of wool and laid in a leaden box filled with barley bran.

A Marvel of Creation.

With the help of this stone Moses engraved the names of the twelve tribes on the breastplate of the high priest, first writing on the stones with ink and then holding the shamir over them, whereupon the writing sank into the stones. With its aid, moreover, Solomon built the Temple without using any tool of iron (comp. I Kings vi. 7; Ex. xx. 25; Tosef., Soṭah, xv. 1 [ed. Zuckermandel, p. 321]; Soṭah 48b; Yer. Soṭah 24b). The shamir was expressly created for this latter purpose, since it ceased to exist after the destruction of the Temple (Soṭah ix., 10; Tosef. xv. 1).

According to one legend, an eagle brought the shamir from paradise to Solomon at the latter's command (Yalḳ. ii. 182), while another tradition runs as follows: When Solomon asked the Rabbis how he could build the Temple without using tools of iron, they called his attention to the shamir with which Moses had engraved the names of the tribes on the breastplate of the high priest, and advised him to command the demons under his sway to obtain it for him. Solomon accordingly summoned ASMODEUS, the prince of the demons, who told him that the shamir had been placed not in his charge, but in that of the Prince of the Sea; the prince entrusted it only to the wood-grouse, in whose oath he confided. The wood-grouse used the shamir to cleave bare rocks so that he might plant seeds of trees in them and thus cause new vegetation to spring up; hence the bird was called the "rock-splitter" (נגר טורא). The shamir was taken from the wood-grouse by the following ruse: Its nest was found and its young covered with white glass. The bird then brought the shamir and put it on the glass, which broke; at that moment Solomon's emissary, who had concealed himself close by, frightened the bird so that it dropped the shamir, which was immediately seized and taken to Solomon. The wood-grouse killed itself because it had violated its oath (Giṭ. 68a, b).

Folk-Legends.

This last account is Babylonian in origin, and both language and content prove that it was a legend of the people rather than a tradition of the schools, as is the case with the stories mentioned above. There were, however, learned circles in Palestine which refused to credit the use of the shamir by Solomon (Mek., Yitro, end). Others, however, believed that Solomon employed it in the building of his palace, but not in the construction of the Temple, evidently taking exception to the magical element suggested by a leaden box as a place of concealment, for in magic brass is used to break enchantment and to drive away demons (Soṭah 48b; Yer. Soṭah 24b). It was a miracle, on the other hand, and not magic if the Temple, as many believed, built itself (Pesiḳ. R. 6. [ed. Friedmann, p. 25a]).

Opinion is divided concerning the nature of the shamir. Jewish tradition unanimously declares it to be a small worm (Rashi, Pes. 54a, overlooked by Grünbaum ["Gesammelte Aufsätze," p. 32]; Maimonides, commentary on Ab. 5, 6), this view having a textual basis. Cassel, on the other hand, considered the shamir to be a powder of corundum, developing his theory as follows: "From the powdery emery was made a living creature of infinite minuteness, regarded by later authorities as a worm, although rabbinical tradition itself merely terms it 'shamir' without the addition of 'worm' or any other term" (*l.c.* p. 69). This view, however, is rightly rejected by Löw. According to another legend, the wood-grouse used a herb to burn or draw out a wooden nail (Lev. R. xxii. 4 and parallels), this herb being hidden by Simeon b. Ḥalafta lest it should fall into the hands of thieves. A similar story is told by Ælian of the hoopoe ("Historia Animalium," iii. 26; Cassel, *l.c.* p. 73; comp. other Oriental and classical parallels given by Bochart, Cassel, and Grünbaum).

Arab Legends.

The tradition of the shamir was carried from the Jews to the Arabs (Grünbaum, "Neue Beiträge," *passim*, especially p. 229); in Arabic tradition Solomon, under instructions from Gabriel, has recourse to a worm when he desires to bore through a pearl, and to a white worm when he wishes to thread the onyx (Grünbaum, *l.c.* p. 218). The belief was still current in the Middle Ages, since it is found in the Cabala (Zohar, i. 74; see story of Solomon in Jellinek, "B. H." ii. 86). According to the English version of the "Gesta Romanorum" (ed. Grässe, ii. 227), the emperor Diocletian enclosed in a glass case a young ostrich found in the forest and carried it to his palace. He was followed by the mother, who, that she might regain her young, brought in her beak on the third day a "thumare" (shamir), a worm, and dropped it on the glass, which was thus broken. Vincent of Beauvais, Gervase of Tilbury, and Albertus Magnus relate similar stories, and the last-named expressly gives Jewish tradition as his source (Cassel, *l.c.* pp. 50 *et seq.*, 77 *et seq.*). The other two writers, in the true spirit of medievalism, give a remarkable variant to the effect that the bird smeared the glass with the blood of the worm and so broke it.

W. B. L. B.

SHAMMAI (called also **Shammai ha-Zaḳen** [= "the Elder"]): Scholar of the first century B.C. He was the most eminent contemporary and the halakic opponent of Hillel, and is almost invariably mentioned along with him. After Menahem the Essene had resigned the office of vice-president ("ab bet din") of the Sanhedrin, Shammai was elected to it, Hillel being at the time president ("nasi"; Ḥag. ii. 2). Shammai was undoubtedly a Palestinian, and hence took an active part in all the political and religious complications of his native land. Of an irascible temperament and easily excited, he lacked the gentleness and tireless patience which so distinguished Hillel. Once, when a heathen came to him and asked to be converted to Judaism upon conditions which Shammai held to be impossible, he drove the applicant away; whereas Hillel, by his gentle manner, succeeded in converting him (Shab. 31a).

Nevertheless Shammai was in no wise a misanthrope. He himself appears to have realized the disadvantages of his violent temper; hence he recommended a friendly attitude toward all. His motto was: "Make the study of the Law thy chief occupation; speak little, but accomplish much; and receive every man with a friendly countenance" (Ab. i. 15). He was modest even toward his pupils (B. B. 134b; comp. Weiss, "Dor," i. 163, note 1).

In his religious views Shammai was strict in the extreme. He wished to make his son, while still a child, conform to the law regarding fasting on the Day of Atonement; and he was dissuaded from his purpose only through the insistence of his friends (Yoma 77b). Once, when his daughter-in-law gave birth to a boy on the Feast of Tabernacles, he broke through the roof of the chamber in which she lay in order to make a sukkah of it, so that his new-born grandchild might fulfil the religious obligation of the festival (Suk. 28a). Some of his sayings also indicate his strictness in the fulfilment of religious duties (comp. Beẓah 16a).

In Sifre, Deut. § 203 (ed. Friedmann, 111b) it is said that Shammai commented exegetically upon three passages of Scripture. These three examples of his exegesis are: (1) the interpretation of Deut. xx. 20 (Tosef., 'Er. iii. 7); (2) that of II Sam. xii. 9 (Ḳid. 43a); and (3) either the interpretation of Lev. xi. 34, which is given anonymously in Sifra on the passage, but which is the basis for Shammai's halakah transmitted in 'Orlah ii. 5, or else the interpretation of Ex. xx. 8 ("Remember the Sabbath"), which is given in the Mekilta, Yitro, 7 (ed. Weiss, p. 76b) in the name of Eleazar b. Hananiah, but which must have originated with Shammai, with whose custom of preparing for the Sabbath (Beẓah *l.c.*) it accords.

Shammai founded a school of his own, which differed fundamentally from that of Hillel (see Bet Hillel and Bet Shammai); and many of Shammai's sayings are probably embodied in those handed down in the name of his school.

SHAMMAITES. See Bet Hillel and Bet Shammai.

SHAMMASH (lit. "servant"): Communal and synagogal officer whose duties to some extent correspond with those of the verger and beadle. In Talmudical times he was called "ḥazzan"; and then it was also a part of his duties to assist in reciting some of the prayers (see Jew. Encyc. vi. 284-285, *s.v.* Ḥazzan). But early in the Middle Ages the term "shammash" was already in vogue; and Rashi almost always renders it for the Talmudical "ḥazzan."

In the quasi-autonomous Jewish communities of the Middle Ages the shammash was an officer of

Functions.

considerable power and responsibility. "He assessed the members according to their means . . . and . . . was a sort of permanent under-secretary-of-state, who governed while the parnas was supposed to rule" (Jacobs, "Jewish Year Book" for 5658 [1897–98], p. 262, London, 1897). He was the overseer of the synagogue and the executor of the sentences of the Jewish tribunal ("bet din"), in which capacity he also inflicted corporal punishment on those whom the Jewish court condemned to that penalty. In some localities it was part of his duty to announce every Saturday the results of lawsuits and to inform the community concerning properties which were to be sold. He acted also as the public crier, and, ascending to a high roof on Friday afternoon, notified the community, with a blast of the trumpet thrice repeated at long intervals, that work must cease. In later periods a wooden mallet was substituted for the shofar or trumpet, and notice was given by rapping on the gates that it was time to prepare for attendance at the synagogue. The shammash also made announcements in the edifice itself, sometimes interrupting the prayers to do so. He carried invitations to private festivities, and reminded members of the congregation of their duties, such as leaving their boots at home on the eve of the Day of Atonement and observing certain mourning rites on the Ninth of Ab in case it fell on the Sabbath.

Schul- and Stadt-Shammash.

In the large communities and in the Jewish cities which developed in Poland in the sixteenth and following centuries it naturally became impossible for the shammash to perform all the duties which were originally connected with his office in the small communities of the Middle Ages; and many of them devolved upon subordinates or upon special shammashim, while other services were relegated to men who no longer bore the title of shammash. Every synagogue in the Slavonic countries usually has a shammash, who is merely an overseer and is assisted by an "unter-shammash," the latter acting as janitor of the building and performing such manual labor as sweeping the floors, cleaning the candlesticks, etc. The synagogal shammash and his assistant have charge also of the "baḥurim" and "perushim," *i.e.*, the unmarried and the married Talmudical students who make the synagogue their home; and the influence of the shammash is exerted to procure "days" for the former, that is, to find seven households in each of which the poor student may be fed on one day in the week. A large community, however, has besides the "schul-shammash," whose duties and privileges are confined to his own synagogue, one or more "stadt-shammashim" or city shammashim, who are under the immediate jurisdiction of the rabbi and the Ḳahal, or of the representatives and leaders of the entire communal organization. The city shammash usually acts as shammash of the chief place of worship, and in very large communities, where there are often as many as eight or ten city shammashim, each of them in turn fulfils this duty for a certain time.

The Bet Din Shammash.

The Schulklopfer (one who calls the congregation to the synagogue by rapping on the gates with a wooden mallet), who is now disappearing even from the most backward communities, and who is only a memory in the larger cities of eastern Europe, and the "better" (inviter), who goes from house to house inviting the occupants to a marriage or a "berit milah," are two of the functionaries upon whom have devolved some of the duties of the shammash, but who have not inherited his title. There remains, however, the "bet din shammash," or shammash of the Jewish court of dayyanim, who is the "sheliaḥ bet din" (messenger of the court) of Talmudical times, and whose office probably always had a separate existence, except in very small communities. There is also the shammash of the Ḥebra Ḳaddisha (burial society), whose duties are analogous to those of a sexton.

In the United States every Orthodox synagogue has its shammash, who performs most of the duties of the "schul-shammash" of the Old World. He is as a rule better paid than his confrère in Europe, and often has much influence in congregational matters. The office of bet din shammash is found to-day only in the large Jewish centers where rabbis establish a bet din on their own account. As there are no separate communal organizations forming municipalities in the United States, the office of city shammash does not exist in that country.

In modern Jewish Reform temples the sexton performs all the duties of the original shammash which remain under the new arrangements.

The term "shammash" is applied also to the candle by means of which the Ḥanukkah lights are lighted and which has a defined position in every well-constructed Ḥanukkah lamp.

J. P. Wi.

SHANGHAI: Chinese city. The first Jew who arrived there was Elias David Sassoon, who, about the year 1850, opened a branch in connection with his father's Bombay house. Since that period Jews have gradually migrated from India to Shanghai, most of them being engaged from Bombay as clerks by the firm of David Sassoon & Co. The community is composed mainly of Asiatic, German, and Russian Jews, though there are a few of Austrian, French, and Italian origin among them. Jews have undoubtedly taken a considerable part in developing trade in China, and several have served on the municipal councils, among them being S. A. Hardoon, partner in the firm of E. D. Sassoon & Co., who had served on the French and English councils at the same time. During the early days of Jewish settlement in Shanghai the trade in opium and Bombay cotton yarn was mainly in Jewish hands.

Opium Trade.

Early in the seventies a hall was hired for purposes of worship; now (1905) there are two small synagogues in Shanghai. One of these, the Beth El synagogue, is situated in Peking road, one of the principal thoroughfares in the English settlement; the other, the Shearith Israel synagogue, is situated in Seward road, the best and busiest street in the American settlement. The latter synagogue was established about 1898 by D. E. J. Abraham. At present the German Jews form themselves into a congregation during the New-Year and Yom Kippur holy days, rent a place of worship, and employ their own ḥazzan. The community possesses a cemetery in Mohawk road, presented to it by David Sassoon. In Nov., 1898, a branch of the Anglo-Jewish Association was established at Shanghai.

A Rescue Society was established in 1900 to open communications with the Jews of the orphan colony of K'ai-Fung-Foo, and in April, 1901, eight of the Chinese Jews arrived in Shanghai (see CHINA). In Nov., 1902, it was resolved to form a Talmud Torah school, to be known as the Shanghai Jewish School. The Shanghai Zionist Association was established April 26, 1903, and was represented at the Sixth Zionist Congress, held at Basel. On Feb. 11, 1904, a Jewish Benevolent Fund was founded. A bi-weekly paper entitled "Israel's Messenger" was established on April 22, 1904. The total population of the city is 620,000, of whom about 500 are Jews.

J. N. E. B. E.

SHANGI: Turkish family many members of which distinguished themselves as rabbis and scholars.

Astruc ben David Shangi: Rabbi at Sofia, Bulgaria; died at Jerusalem at the beginning of the seventeenth century. A halakic decision of his is given by Ḥayyim Benveniste in his "Sheyare Keneset ha-Gedolah" on the Shulḥan 'Aruk, Oraḥ Ḥayyim, 174 (Smyrna, 1671; comp. Conforte, "Ḳore ha-Dorot," 51b).

David Shangi: Rabbi at Constantinople at the end of the sixteenth century and at the beginning of the seventeenth. His scholarship and character were highly praised in the sermon delivered on his death by Isaac ibn Vega, who published it in his "Bet Ne'eman" (1621).

Eliezer ben Nissim Shangi: Rabbi at Constantinople in the seventeenth and eighteenth centuries. He was a prolific writer; but most of his works were destroyed by a fire in 1712. Those which have been published are: "Haḳdamah," preface to the responsa collection "'Edut be-Yehosef" of Joseph Almosnino (Constantinople, 1711); a responsum inserted by Moses Shelton in his "Bene Mosheh" (*ib.* 1712); "Dat wa-Din" (*ib.* 1726), in three parts: (1) sermons arranged in the order of the Sabbatical sections; (2) responsa; and (3) halakic decisions of the author's brother, Jacob Shangi.

Isaac ben Elhanan Shangi: Rabbi at Salonica; died at Jerusalem in the first half of the eighteenth century. He was the author of: "Be'er Yiẓḥaḳ," homilies on Genesis and Exodus, with thirty-two funeral sermons entitled "Be'er Beḥai," published by I. Crispin at Salonica in 1735; "Sefer Be'erot ha-Mayim" (*ib.* 1755), responsa on the four Ṭurim.

Meïr Shangi: Rabbi at Constantinople in the second half of the sixteenth century. He was the author of the preface to the "Yefeh To'ar" of Samuel Jafe (Venice, 1597).

S. I. BR.

SHAPHAN: **1.** Son of Azaliah and scribe of King Josiah. He received from Hilkiah, the high priest, the book of the Law which had been found in the Temple. Shaphan was one of those sent by the king to the prophetess Huldah (II Kings xxii.; II Chron. xxxiv.). In Jer. xxxvi. 10-12 mention is made of the hall in which, in the reign of King Jehoiakim, Shaphan's son officiated.

2. Father of Ahikam, who was sent, with others, by King Josiah to the prophetess Huldah, and who subsequently saved Jeremiah from his persecutors (II Kings xxii. 12; II Chron. xxxiv. 20; Jer. xxvi. 24).

3. Father of Elasah, to whom Jeremiah gave a letter to the exiles in Babylon (Jer. xxix. 3).

4. Father of Jaazaniah, who was one of the seventy men whom Ezekiel in his vision of the Temple saw sacrificing to idols (Ezek. viii. 11).

E. G. H. S. O.

SHAPIRA, ISAIAH MEÏR KAHANA: Polish-German rabbi and author; born at Memel, Prussia, July 28, 1828; died at Czortkow, Galicia, Jan. 9, 1887. He is said to have been familiar at the age of thirteen with all the "sedarim" of both Talmudim and with a part of the "posḳim." About 1845 he studied philosophy, mathematics, and astronomy, and as early as 1848 he wrote on ethics for different journals. Shapira engaged in business as a merchant; but a fire destroyed all his belongings, and he was compelled to accept the rabbinate of Czortkow. Before assuming office, however, he went to Lemberg to train himself in the necessary secular studies. He studied philosophy, ethics, and theology in the academy there for nine months, and was installed as rabbi in 1860. After two years a quarrel broke out between the two Ḥasidic sects in the town. Shapira interposing to make peace, the brunt of the dissension was turned against him and his inclination to secular education; and he was for a time even deprived of his livelihood. Peace was, however, soon restored. The last ten years of his life Shapira spent in retirement.

Besides numerous contributions to different Hebrew periodicals, he wrote: "Ḥaḳirat Reshit le-Yamim" (Lyck, 1872), on chronology and the calendar, in opposition to Ḥ. S. Slonimski; and "Sefer Zikkaron" (Eydtkuhnen, 1872), on the oral law, written in the form of a dialogue.

H. R. A. S. W.

SHAPIRA, M. W.: Polish purveyor of spurious antiquities; born about 1830; committed suicide at Rotterdam March 11, 1884. He appears to have been converted to Christianity at an early age, and to have then gone to Palestine, where he opened a store for the sale of local antiquities. After the discovery of the Moabite Stone he obtained, in 1872, a number of Moabite potteries, which were purchased by the Prussian government for 22,000 thaler. These, however, were proved by Clermont-Ganneau to have been fabricated by one Salim al-Kari, a client of Shapira's. This conclusion was confirmed by Kautzsch and Socin ("Aechtheit der Moabitischen Alterthümer," Strasburg, 1876), though Schlottmann and Koch for some time upheld their authenticity. The matter was brought before the Prussian Landtag March 16, 1876.

Shapira still continued to buy and sell antiquities and manuscripts, many of the earliest Yemenite Hebrew manuscripts purchased by the Berlin Royal Library and the British Museum being furnished by him. In July, 1883, he offered for sale to the British Museum, it is said for £1,000,000, a number of strips of leather bearing, in archaic Hebrew characters, matter similar to, but with many variations from, the speeches of Moses in the Book of Deuteronomy. These he declared he had received from a Bedouin who had found them in a cave in Moab. Great interest was shown in these fragments, which were examined by C. D. Ginsburg, who published translations of them in the London "Times" Aug. 4, 17, and 22, 1883. Commissioned by the French government to investigate into the authenticity of these writings, Clermont-Ganneau arrived in London Aug. 15, 1883, and applied for permission to see them, which was refused by the British Museum authorities at the request of Shapira. Notwithstanding this, from an examination of the strips exhibited to the public, he was enabled to publish in the "Times" of Aug. 18 a convincing proof of their spurious nature. The forger had taken the lower margin of some scrolls of the Law and written his variants of Deuteronomy upon them, but they still showed traces of the stylus used to mark off the original columns, over which the new writing extended without regard to them. Ginsburg shortly afterward reported to the British Museum that the document was spurious. Shapira then went to Amsterdam and Rotterdam, in which latter city he committed suicide, as stated above. It was never definitely proved that he himself was the forger. The text of the fragments was published by Guthe ("Fragmente einer Lederhandschrift," Leipsic, 1884).

S.

SHAPIRO, ARYEH LÖB B. ISAAC: Polish rabbi and grammarian; born 1701; died at Wilna April, 1761. He went to Wilna in his childhood, and married a daughter of Mordecai b. Azriel, one of its prominent citizens. His Talmudical knowledge was extensive, and he studied also mathematics, grammar, and logic. In his younger days he corresponded with the Karaite scholar Solomon of Troki, author of "Appiryon." In his later years Shapiro was a dayyan and scribe of the community of Wilna. He was the author of a double commentary on Masseket Soferim, the two parts of which he called respectively "Naḥalat Ariel" and "Me'on Arayot"; they were published together with the text at Dyhernfurth in 1732. He wrote also "Ḳebuẓat Kesef" (Zolkiev, 1741), on Hebrew grammar. One of his responsa, dated 1754, is found in "Teshubat Shemu'el" by R. Samuel of Indura (Wilna, 1859).

Bibliography: Fuenn, *Ḳiryah Ne'emanah*, pp. 111-112, 269, Wilna, 1860; Fürst, *Bibl. Jud.* iii. 371; Benjacob, *Oẓar ha-Sefarim*, p. 516. For the genealogy of the Shapiro family see H. L. Steinschneider (Maggid), *'Ir Wilna*, p. 299, note.

H. R.

SHAPIRO, CONSTANTIN: Russian photographer and Hebrew poet; born at Grodno, Russia, 1841; died in St. Petersburg March 23, 1900. He obtained his early education in the yeshibot, but at the same time, like the other Maskilim (see Maskil) of his age, he studied secretly the Hebrew language and literature. He lived in a very fanatical circle, and was bitterly persecuted for striving after secular knowledge. Eventually he left his birthplace and went to St. Petersburg. There he entered the Academy of Art; but after a short time he left it and learned photography. As a photographer he published an album containing portraits of Russian writers and a collection of illustrations to "Sapiski Sumashedshavo" by Gogol. He began to write verses for the Hebrew papers and magazines in 1885. His first poem, "Me-Ḥezyonot Bat 'Ammi," created a very strong impression, and at once gained for him a place in the foremost rank of Hebrew poets. His subsequent poems are distinguished by the same characteristics—strength, lightness, and simplicity of diction. The best known of them are: "Shire Yeshurun"; "Kinnor Yeshurun"; "Amarti Yesh Li Tiḳwah," a translation of Schiller's "Resignation"; and "Sodom," an allegoric description of the Dreyfus affair.

Shapiro lived in material wealth; but his life was nevertheless not a very happy one. In St. Petersburg he separated from his Jewish wife, and, after accepting the Russian Orthodox religion, married a Russian. Till the end of his life, however, he remained at heart a Jew, kindly disposed toward his people. The discordance between his external position in Christian society, which caused him to be very often reminded of his origin, and his internal life, which belonged to the persecuted people whom he had forsaken, resulted in much anguish, which was accentuated by the fact that his former coreligionists and friends blamed him severely for his apostasy. These tortures he expressed in ardent verses, which are among the best lyric compositions in the Hebrew language.

H. R.

SHARON: Large plain of Palestine, with an average elevation of between 280 and 300 feet above sea-level; bounded by Mount Carmel on the north, Jaffa on the south, the mountains of Gilboa on the east, and the Mediterranean Sea on the west. Its principal rivers are the Nahr al-Zarḳa (Crocodile River) and the Nahr Mafjir (the "Dead River" of the Crusaders). The soil is fertile; and the plain is still called "the garden of Palestine," chiefly on account of its red and white lilies and its anemones.

The plain of Sharon was famous in Biblical times as a pastoral region (Isa. lxv. 10); and some of David's herds fed there (I Chron. xxvii. 29). Utter desolation of the country was implied by saying that Sharon was turned into a wilderness (Isa. xxxiii. 9), although in the Messianic time it is to be a fold for flocks (*ib.* lxv. 10). The poet dwells on the beauty of the flowers which blossom there abundantly (*ib.* xxxv. 2); and the Shulamite in Cant. ii. 1 compares herself to the rose of Sharon (comp. Rose). The comparison with Carmel (Isa. xxxv. 2;

seems to show that at one time there were groves in the plain. Josephus, indeed, speaks of a grove near Antipatris, while, like the Septuagint, he translates the word "Sharon" by "oak-coppice" ("Ant." xiv. 13, § 3; "B. J." i. 13, § 2).

Another Sharon is mentioned by Eusebius ("Onomasticon") as lying between Mount Tabor and Tiberias. To this Sharon the passage Cant. ii. 1 is sometimes referred; but the phrase "rose of Sharon" was a proverbial one, and from Isa. xxxv. 1 *et seq.* it is evident that the rose there mentioned blossomed in the larger plain. The Talmud speaks of the wine produced in this latter Sharon (Men. viii. 2; Shab. 70a), while the prayer of the high priest on the Day of Atonement, "May God watch over the inhabitants of Sharon, lest they be buried in the ruins of their homes" (Yer. Yoma v. 3), can refer only to those who resided in the eastern Sharon, since no earthquakes occurred in the western plain. The statement of Eusebius regarding a Sharon situated in Galilee is confirmed by the existence of the modern Sarona.

In Josh. xii. 18 the King of Sharon is enumerated among the thirty-one kings vanquished by the Israelites. The "Sharon" mentioned in I Chron. v. 16 appears to be the name of a city in the territory of Gad.

SHATZKES, MOSES AARON: Russian Hebrew author; born at Karlin 1825; died at Kiev Aug. 24, 1899. He received a general as well as a Hebrew education, and he devoted himself to literature. His literary labors brought him little material benefit, however, and he was always in straitened circumstances. He spent the last twenty years of his life in Kiev.

The most important work by Shatzkes is "Ha-Mafteaḥ" (Warsaw, 1866-69), in which he applied modern methods of investigation to the allegorical sayings of the Talmud and Midrash. This book at the time of its publication created a stir among the Orthodox Jews on account of its radical views, for it represented an innovation in the field of Hebrew literature. To Judæo-German readers Shatzkes is best known through his "Yüdisher Erev Pesach," a satirical sketch of Jewish life, which has been often republished. He wrote also "Hashḳafah 'al Debar Sefer Iyyob" (in "Ha-Asif," ii. 241-261), on the religious philosophy of the Book of Job. He left a number of manuscripts in Hebrew and Judæo-German.

H. R. A. S. W.

SHAVING: The Mosaic law prohibits shaving the corners of the head and of the beard (Lev. xix. 27), the priests being particularly enjoined not to desecrate their persons by violating the latter prohibition (*ib.* xxi. 5). The prophet says: "Neither shall they [the priests] shave their heads, nor suffer their locks to grow long; they shall only poll their heads" (Ezek. xliv. 20). The phrase "kasom yiksemu" (poll) is explained in the Talmud as meaning "clipped and artistically cut in the Lylian style, . . . the ends of the hair of one row reaching the roots of the next row." The high priest had his hair treated thus every Friday; the ordinary priest, once in thirty days; and the king, every day (*ib.*; Ta'an. 17a). This mode of hair-cutting among the nobility probably distinguished them from the common people, whose heads were shaved entirely except the ends or ear-locks ("pe'ot") and the ends of their beards; it was very expensive, and Ben Eleasah is said to have squandered a fortune by his endeavor to imitate it (Sanh. 22b).

This Mosaic prohibition, like many others, was intended to counteract the influence on the Israelites of the heathen rites, "the ways of the Amorite." Maimonides says: "The prohibition against rounding the corners of the head and marring the corners of the beard, such being the custom of idolatrous priests . . ." ("Moreh," iii. 37). The custom of shaving the hair of the head with the exception of a central queue is still practised among the Chinese; and it would seem that it was against this style that the prohibition was directed, inasmuch as the Talmud defines the "rounding of the head" thus: "to make the hair of the temples even with the hair behind the ears on a straight line with the forehead" (Mak. 20b). The "corners of the beard" are defined as five ends; namely, two on each cheek, and one on the chin, called "shibbolet" = "ear of corn" (Shebu. 3b; Mak. 20a, b).

The prohibition of shaving applies only to the operation with a razor, but not to the removal of hair with scissors or by means of chemical depilatories.

For the purification of a leper, it was necessary to shave the hair of the entire body (Lev. xiv. 8). The Nazarite at the expiration of his period of separation shaved the hair of his head (Num. vi. 9). The captive woman after her period of mourning was required to shave the hair of her head (Deut. xxi. 12), but in this case cutting of the hair is probably referred to.

Shaving the hair on certain parts of the body, which appears to have been the custom in the fifteenth and sixteenth centuries, was forbidden to males in districts where this was a feminine habit, the prohibition being based on Deut. xxii. 5 (Shulḥan 'Aruk, 182, 1).

The observance of the law was generally relaxed in the western countries of Europe, especially among the Sephardim; and R. Jacob Emden considered it impracticable to enforce the law when the majority of the common people were against it ("She'elat Ya'abeẓ," i., No. 80). In some places in eastern Europe the Ḥasidim still shave their heads, and leave only the pe'ot in long locks.

A. J. D. E.

SHE-HEḤEYANU: The benediction "Blessed be the Lord, our God, King of the Universe, who has kept us alive ["she-heḥeyanu"] and sustained us and welcomed us to this season"; in actual usage the blessing begins with the words "She-heḥeyanu," the preceding clause being suppressed. The benediction was originally recited on meeting a beloved one after a separation of more than thirty days or less than a year (after a longer period the benediction is "Meḥayyeh ha-metim" = "Who revivest the dead"); on hearing good news in which one is personally concerned; also on acquiring and first making use of a new house, new utensils, new garments, or new books. The benediction was omitted when one acquired trivial objects, except in the case of a poor man, who felt happy in their possession. In modern times the blessing is pronounced only on eating fruits for the first time in their respective seasons—especially on the second night of Rosh ha-Shanah—being recited after the regular benediction. "She-heḥeyanu" is recited after Ḳiddush on the first nights of the festivals; at the blowing of the shofar on Rosh ha-Shanah, at the lighting of the Ḥanukkah candles, and the reading of the Scroll of Esther in public on Purim.

SHEALTIEL ḤEM. See GRACIAN, SHEALTIEL (ḤEN).

SHEAR-JASHUB: Son of the prophet Isaiah; so named by his father as a prophecy that God would restore the REMNANT of His people that had been carried into captivity by Assyria. Isaiah took his son with him when he went to meet Ahaz and to exhort him to trust in God and not to despair of victory over Rezin of Damascus and Pekah of Israel (Isa. vii. 1 *et seq.*).

E. G. H. S. O.

SHEBA. See SABEANS.

SHEBA, QUEEN OF: Monarch of a south-Arabian tribe, and contemporary with Solomon, whom she visited. The Queen of Sheba, hearing of the wisdom and wealth of Solomon, visited him at Jerusalem, accompanied by a brilliant retinue. There she found that his fame, great as it was, fell far short of the truth, and after exchanging costly presents with him, she returned to her own land, marveling at what she had seen and heard (I Kings x. 1–13). According to Josephus, she was the queen of Egypt and Ethiopia, and brought to Palestine the first specimens of the balsam, which grew in the Holy Land in the historian's time ("Ant." viii. 6, §§ 5–6). The country over which she ruled is usually supposed to have been the district of Saba in southern Arabia, but despite thorough explorations by recent travelers and scholars, no reference to any Queen of Sheba has been found in the numerous Sabean inscriptions. R. Jonathan (*c.* 250 C.E.) asserts that the phrase מלכת־שבא does not refer to a queen, but to a kingdom, and hence to a king, whose contemporary is said to have been Job (B. B. 15b).

In the Bible, Josephus, and the Talmud.

These are all the known historical references to the mysterious Oriental princess, and neither of the two Talmuds contains any other allusions. The legends connected with her name seem, therefore, to have originated in Abyssinia, and especially in Arabia, both of which countries were rivals for her renown, and from them the traditions concerning her entered Jewish circles. The kings of Abyssinia trace their descent back to a certain Menelik, the reputed son of the Queen of Sheba and Solomon (Ewald and Winer). The African traveler Hugues le Roux claims to have discovered in an Abyssinian manuscript in the Geez dialect the earliest version of the story of Solomon and the Queen of Sheba, which had been known previously only through popular tradition ("Deutsche Literaturzeitung," 1904, col. 1826). The present (1905) ruler of Abyssinia, at the time of his victory over the forces of Italy, actually declared himself to be a descendant of the Judean lion. A study on the legend in question as it exists in the tradition of Axum, a place of pilgrimage to the west of Adua, was published by Littmann in 1904.

Abyssinian Legends.

The Temanites, the inhabitants of Arabia Felix, have better grounds for claiming the Queen of Sheba, whom they have adorned with the rich imagery of Oriental imagination. Solomon has become very popular among the Arabs through the tradition which associates his name with hers, and this legend serves to introduce the story of Mohammed and the califs. Solomon commanded the Queen of Sheba to come to him as a subject, whereupon she appeared before him (Koran, sura xxvii. 30-31, 45). His throne, which was renowned in early Arabian legend, originally belonged to this queen, who is called Bilḳis in the commentaries on the Koran. She recognized the throne, which had been disguised, and finally accepted the faith of Solomon. Imagination runs riot in this story, in which spirits, animals, and other creatures appear as the servants of the Jewish king (*ib.* xxvii. 34; comp. also the other Arabic sources quoted by Grünbaum, "Neue Beiträge zur Semitischen Sagenkunde," pp. 211–221).

Arabia.

Jewish tradition has many points in common with the Arabian legend. The story of the Queen of Sheba is found in detail in the Second Targum to Esther (literal translation of the greater portion by Grünbaum, *l.c.* pp. 211 *et seq.*). There, as in the Koran, it is the hoopoe that directed Solomon's attention to the country of Sheba and to its queen. The dust of that land was more precious than gold, and silver was like dirt in the streets; the trees dated from the Creation and the waters came from paradise, whence came also the garlands which the people wore. The hoopoe carried Solomon's letter under its wing to the queen, who resided at Kitor. In the letter Solomon commanded her to appear before him, otherwise his hosts of beasts, birds, spirits, devils, and demons of the night would take the field against her. In terror she consulted with her elders and princes, who, however, knew nothing of Solomon. Notwithstanding their ignorance, she loaded her ships with costly woods, precious stones, and pearls, and sent to Solomon 6,000 boys and girls, all born in the same hour, all of the same height and appearance, and all clothed in purple. In the letter to Solomon which they bore with them, she declared that although the journey from Kitor to Jerusalem usually took seven years to accomplish, she would

Jewish Legends.

comply with his mandate and visit him within three years. He in his turn sent a youth "like the dawn" to meet her, and on her arrival he received her in a glass house. Thinking that Solomon was sitting in the water, she lifted up her skirt, whereupon he noticed hair on her feet, and said: "Thy beauty is a woman's beauty, but thy hair a man's hair; hair adorneth man, but disfigureth woman."

The Queen of Sheba propounded to Solomon the following three riddles to test his wisdom: "What is a well of wood, a pail of iron which draws up stones and pours out water?" Solomon answered, "A tube of cosmetic." "What is that which comes from the earth as dust, the food of which is dust, which is poured out like water, and which looketh toward the house?" Solomon answered, "Naphtha." "What is that which precedeth all, like a general; which crieth loudly and bitterly; the head of which is like a reed; which is the glory of the rich and the shame of the poor, the glory of the dead and the shame of the living; the joy of the birds and the sorrow of the fishes?" Solomon answered, "Flax." Other riddles are quoted in the Midrash (Prov. ii. 6; Yalḳ. ii., § 1085): "Seven depart, nine enter; two pour, one drinks." Solomon answered, "Seven days of woman's uncleanness, nine months of pregnancy: two breasts of the mother at which the child is nourished." "A woman saith unto her son, 'Thy father is my father, thy grandfather my husband; thou art my son; I am thy sister.'" Solomon answered, "This mother is one of the daughters of Lot, who were with child by their father" (comp. Gen. xix.). Arabic tradition also tells of Solomon solving riddles and of other proofs of his wisdom, and contains in general most of the stories found in Jewish tradition (Grünbaum, *l.c.*).

The Middle Ages.

The story of the Queen of Sheba was current likewise in Europe. Although legends regarding her are frequent in Jewish circles, the Jews have derived their views of the famous queen from the Christians, adding nothing of their own. The story of the queen has been dramatized in Goldmark's well-known opera "The Queen of Sheba."

SHEBARIM. See SHOFAR.

SHEBAṬ (A. V. "Sebat"; Hebrew, שבט; Greek, Σαβάτ; Assyrian, "Shabaṭu"): Eleventh ecclesiastical and fifth civil month of the Jewish year (Zech. i. 7); I Macc. xvi.), corresponding to January–February, and always consisting of thirty days. The 1st of Shebaṭ, according to the school of Shammai, or the 15th, according to the school of Hillel, is the New-Year for Trees with respect to the tithe (R. H. i. 1). This month was chosen because most of the annual rains occur before Shebaṭ; so that the trees which blossom afterward are considered as belonging to another year (*ib.* 14a). As the school of Hillel is the standard authority, the 15th of Shebaṭ has continued to be observed as a semiholy day. When a community institutes a fast for Mondays and Thursdays, it must not be observed if one of those days falls on the 15th of Shebaṭ ("Mordekai" on R. H., beginning).

There is a tradition that when a goose is killed in Shebaṭ the shoḥeṭ must eat its heart; otherwise he will die. According to another tradition, a goose should not be eaten on the 8th of Shebaṭ (Isserles in Shulḥan 'Aruk, Yoreh De'ah, 11, 4; Simeon Duran, "Tashbeẓ," No. 101). The reason given in the "Sefer ha-Ḳanah" is that in Shebaṭ the demons prevail; so that he who slaughters a goose in that month is likely to die himself ("Be'er Heṭeb" on Shulḥan 'Aruk, *l.c.*).

SHEBI'IT ("Seventh Year"; "Year of Release"): Treatise of the Mishnah, Tosefta, and Palestinian Talmud. It belongs to the order Zera'im, in which it stands fifth, and is divided into ten chapters, containing eighty-nine paragraphs in all. According to the Law in the Pentateuch, every seventh year must be a Sabbath of rest for the land, during which neither fields may be sown nor vineyards pruned, while it is also forbidden to reap or gather for the purpose of gain the produce that grows "of its own accord," which is to be eaten by the owner, his servants, and his guests, as well as by the poor (Ex. xxiii. 10-11; Lev. xxv. 2-7). The Law further states that in this year, or, more accurately, at the end of it (Sifre, Deut. 111 [ed. Friedmann, p. 97a]), every creditor must release any loan made to his neighbor (Deut. xv. 1-3); so that on account of this requirement the seventh year bears the name "shenat ha-shemiṭṭah" (year of release).

Contents.

Nine of the chapters of the treatise deal with the exact definition of the laws relating to the soil, while the tenth and last chapter contains the rules for the release of debts.

Ch. i.: Concerning fields on which trees grow; what parcels of land are considered fields; and the length of time during which such lands may be cultivated in the sixth year.

Ch. ii.: Concerning treeless fields; how long such lands may be cultivated, fertilized, and otherwise tilled in the year before the seventh year (§§ 1-3); how late in the sixth year crops may be planted, and how long those already planted may be tended (§§ 4-6); concerning fields of rice and millet, and those in which beans, onions, and gourds are planted (§§ 7-10).

Ch. iii.: The time in the seventh year after which preparatory work in fields, such as fertilizing, fencing, and removal of stones, may be done; concerning labor in a quarry and tearing down a wall, in both of which cases all appearance of work preparatory to cultivating the fields must be avoided.

Ch. iv.: Concerning the clearing of stones, wood, and weeds from fields, this having formerly been permitted, although it was a sort of preparation for actual cultivation, while later it was forbidden on the ground that it frequently led to transgression of the Law (§ 1); cases in which, as a punishment for preparatory work done in the seventh year, the field may not be sown even in the eighth year (§ 2); a Gentile should be encouraged when engaged in tilling the soil in the seventh year; not so a Jew (§ 3); concerning cutting down and pruning trees (§§ 4-6, 10); the time after which one may begin to eat what has grown in the fields in the seventh year, and when one may take it home (§§ 7-9).

Ch. v.: Observances necessary in the case of certain plants, such as white figs, arum, early onions, and madder (§§ 1-5); objects, such as agricultural implements, which may not be sold in the seventh year, and those which may not be lent (§§ 6-9).

Ch. vi.: Distinctions between the provinces with regard to the seventh year, together with an account of the regions of Palestine which were settled by the first Hebrew colonies from Egypt, and those which were occupied by the Jews who came from Babylon under Ezra; details concerning Syria; forbidden exports from and imports to the land of Israel.

Ch. vii.: General rules with regard to matters subject to the regulations of the seventh year; in connection with the prohibition against dealing in the produce of this year (§ 3), many other things are enumerated in which it is forbidden to trade.

Ch. viii.: General regulations for the produce of the seventh year; how it may be sold without being measured, weighed, or counted; the course necessary in case the money received for the produce of the seventh year is spent in the purchase of land, cattle, or any other object.

Ch. ix.: Herbs which may be purchased in the seventh year from any one; use and removal of the produce of the seventh year, and the division of the Holy Land with regard to removing such crops.

Ch. x.: Concerning release from debt; debts which fall due in the seventh year and those which do not; arrangements and form of the Prosbul and cases in which it is invalid; the sages are well pleased with those who pay their debts even though the year of release would cancel them; likewise those who, though not obliged to do so by law, refund a loan received from a proselyte, as well as all those who fulfil their obligations even in cases where they are not legally bound to do so, receive the entire approbation of the Rabbis.

The Tosefta on this treatise is divided into eight chapters, and contains elucidations of many mishnaic laws. Especially noteworthy is the statement in viii. 1 *et seq.* that in ancient times it was customary to take the entire produce of the seventh year from its owner and to store it in the granary of the community, where it was divided every Friday among all the families according to their need.

The Gemara of the Palestinian Talmud discusses and explains the halakot of the Mishnah, and contains, besides, haggadic teachings and interesting accounts of events in the lives of many noteworthy men. Of these latter the following may serve as an example (35a): R. Abba bar Zebina worked in the shop of a Gentile tailor in Rome. One day his employer set before him meat from an animal which had not been slaughtered in the manner prescribed by the ritual, and threatened him with death should he decline to eat it. When, however, despite his threats, R. Abba would not touch the meat, the Roman admitted that he would have killed him had he eaten the meat, "for," said he, "if one is a Jew, one should be a true Jew, and should observe the principles of his religion."

W. B. J. Z. L.

SHEBNA (שבנא, שבנה): Chamberlain of the king's palace, the office being filled also by Jotham (II Kings xv. 5). Shebna may be identified with the officer designated as "ha-soken" (Isa. xxii. 15-19), probably a caretaker or steward (see Bloch, "Phönizisches Glossar," *s.v.* "Zakan").

The prophet censures Shebna because he built for himself a tomb in the upper part of the rock, perhaps near the royal tombs on Mount Zion. The beginning of Isaiah's denunciation, "What hast thou here? And whom hast thou here?" has been construed as implying that Shebna was of alien birth. But probably the meaning implied is that Shebna was an upstart or intruder. His non-Israelitish origin, however, is indicated in the kind of punishment with which he is threatened: Yhwh will roll him like a ball into a country less mountainous than Canaan, but broad—referring to the wide plains of the Euphrates and Tigris.

Shebna favored the political connection of the kingdom of Judah with Egypt; hence it is very probable that he was taken prisoner as an enemy of the Assyrians during an invasion of the latter. The name "Shebna" itself points to a non-Israelitish origin in the more northerly regions, either Phenicia or Syria; the same stem has been found by Levy in שבניו ("Siegel und Gemmen mit Aramäischen, Phönizischen, Althebräischen und Altsyrischen Inschriften," p. 40, Breslau, 1869). Probably Shebna had risen to office under King Ahaz, who favored foreign undertakings and connections.

It has been argued that the Shebna to whom reference is made above is not the same as that mentioned in the following passages: Isa. xxxvi. 3, 11, 22; xxxvii. 2; II Kings xviii. 18, 26, 37; xix. 2, in which, with the exception of II Kings xviii. 18, 26 (where שבנה occurs), the name is uniformly written שבנא. This Shebna, who is called "sofer" (scribe), is everywhere mentioned after Eliakim; but in all likelihood he was identical with the office-holder censured by Isaiah.

E. G. H. E. K.

SHEBU'OT ("Oaths"): Treatise in the Mishnah, Tosefta, and both Talmuds, dealing chiefly with the various forms of the oath. In most of the editions it is the sixth treatise of the order Neziḳin, and is divided into eight chapters, containing sixty-two paragraphs in all.

Contents.

Ch. i.: In connection with the statement that oaths may be divided into two classes, which are again subdivided into four, other actions and conditions are enumerated which are similarly divided; *e.g.*, the perception of defilement, carrying from a private domain to the public domain on the Sabbath and vice versa, and the appearance of the different kinds of leprosy (§ 1); further details concerning the method of recognizing uncleanness; manner of effecting atonement, by various private or communal sacrifices, for offenses committed consciously or unconsciously in a state of uncleanness, or for other trespasses against the Law (§§ 2–7).

Ch. ii.: Further details relating to the perception of uncleanness; the statement that a person who enters the Temple in a condition of uncleanness must offer a sacrifice, is supplemented by one to the effect that all the apartments subsequently added to the Temple must be regarded in this respect as the Temple proper; in connection therewith the ceremonial accompanying the enlargement of the Temple and of the city is described.

Ch. iii.: On the four kinds of oaths, and the difference of opinion between R. Ishmael and R. Akiba in regard to this subject (§§ 1–5); if a person swears to fulfil or to disregard a religious duty, he is not bound to offer a sacrifice in the case of not fulfilling his vow (§ 6); concerning a thoughtless vow ("shebu'at biṭṭuy") and a vain oath ("shebu'at shaw"), *e.g.*, when a person affirms an absurd statement by an oath, as that a stone is gold, or that he saw a camel fly through the air (§§ 7–8); violation of an oath (§ 9); the punishment for the intentional violation of a thoughtless oath, and the sacrifice which must be offered in the case of an unintentional violation (§ 10); the punishment for transgressing a vain oath (§ 11).

Ch. iv.: Concerning the oath of the witness; if a person asks two witnesses to testify in his favor before the court, and they deny under oath that they can give testimony for him, then they are guilty of violating the witness' oath (comp. Lev. v. 1); cases and persons to whom the witness' oath applies; and forms under which the oath is administered to witnesses by the plaintiff, in order that they may be found guilty of breaking such oath in refusing to testify.

Ch. v.: On the oath relating to a deposit ("shebu'at ha-piḳḳadon"; comp. Lev. v. 21 *et seq.*), *i.e.*, the oath taken in cases where objects have been wrongfully or forcibly acquired or retained; the persons taking it; and the cases in which it is taken.

Ch. vi.: Concerning the oath administered by the judge; in civil cases the judge administers it to the defendant only if he partly confesses his guilt; regulations regarding this oath, the minimum of the claim, and the minimum of the defendant's admission; in order that from the nature of a claim the defendant may be required to take the oath the plaintiff must be an adult of normal mind; the claim must be definitely formulated, and may have reference only to money, goods, or other movable objects; no oath may be enforced in connection with a claim to real estate, slaves, or bills of exchange, nor with a claim on the part of the Sanctuary.

Ch. vii.: The cases in which the plaintiff takes the oath, and wins his case on the strength of it, *e.g.*, in the case of a hireling or storekeeper; other cases in which the defendant may be suspected of swearing falsely; enumeration of the cases in which the defendant may be compelled to take the oath even in reference to indefinite claims; thus every trustee in charge of property may be compelled to take an oath to the effect that he has managed it faithfully and honestly; on an oath occasioned by another oath ("gilgul shebu'ah").

Ch. viii.: The four kinds of wardens (comp. Ex. xxii. 6–14): the unsalaried, the salaried, borrowers, and tenants.

The Tosefta.

The Tosefta to this treatise is divided into six chapters, and contains some interesting moral maxims, besides additions to the Mishnah. R. Eleazar b. Mattai says that it is unpleasant for a person to behold a man commit crimes; but that a benefit is conferred upon a person if he is fortunate enough to behold a person perform noble deeds (iii. 4). A person who commits an act of unfaithfulness toward his fellow man has thereby committed an act of unfaithfulness toward God. Every crime is a denial of God; for the criminal who is about to commit the crime denies that God has forbidden all unjust and immoral deeds (iii. 6).

The Gemaras.

Both the Gemaras discuss and explain the contents of the Mishnah. The Babylonian Gemara contains in addition some interesting sentences and comments. Ps. xci. is designated as "shir shel pega'im" or "nega'im" (= "the psalm of the plagues"; 15b). An interesting enumeration is given of the names of God occurring in the Bible which really do not designate God, and of other names which must be referred to God, although they apparently do not apply to Him. Thus "Adonai" in the story of Lot (Gen. xix. 18) designates God, although it might seem that Lot was addressing the angels by this name (35b). In the story of Micah (Judges xvii., xviii.) all the divine names that occur must be referred to God, though according to R. Eliezer only a few of them must be so referred. In the Song of Solomon the name "Solomon" designates God, except in one passage, Cant. viii. 12 *et seq.* Noteworthy is R. Joshua's comment on Judges xx. to the effect that the oracle spoke truly all three times, but that the people did not ask the first and second times whether they would be victorious against Benjamin, and that this was not promised to them (*ib.*).

W. B. J. Z. L.

SHECHEM (שכם = "shoulder" or "ridge"): **1.** City of central Palestine; called **Sichem** in Gen. xii. 6, A. V.; **Shalem,** according to some commentators, *ib.* xxxiii. 18; **Sychem** in Acts vii. 16; and **Sychar** in John iv. 5. Its situation is indicated as in Mount Ephraim in Josh. xx. 7 and I Kings xii.

25; but from Judges ix. 7 it seems to have been immediately below Mount Gerizim, and it is therefore placed by Josephus ("Ant." iv. 8, § 48) between Gerizim and Ebal. Shechem is elsewhere stated to have been in the neighborhood of Dothan (Gen. xxxvii. 12 *et seq.*), north of Shiloh (Judges xxi. 19).

Earliest Mention.

The first mention of the place occurs in connection with Abraham, who, on his first migration to the land of Canaan, built an altar under the oak of Moreh on the site where later Shechem was built (Gen. xii. 6). At the time of Abraham the place, which could scarcely have been a city, was occupied by the Canaanites.

Shechem first appears as a city in the time of Jacob, who, after his meeting with Esau, encamped in front of it in the field which he bought for 100 pieces of money from Hamor, the prince of the country (*ib.* xxxiii. 18-19). It was then inhabited by the Hivvites (*ib.*). Jacob's arrival at Shechem marked a very important period in its history; for the defilement of Dinah, which took place there, resulted in the pillage of the city and the massacre of all the male inhabitants by Jacob's sons (*ib.* xxxiv. 2-29). This narrative shows also that Shechem was at that time a commercial center, and rich in sheep, oxen, and asses. The oak-tree under which Abraham had built an altar still existed in the time of Jacob, who hid under it the images and the earrings of the Shechemites (*ib.* xxxv. 4). The surrounding territory afforded good pasturage; and therefore during Jacob's stay at Hebron his sons drove their flocks to Shechem (*ib.* xxxvii. 12 *et seq.*). Jacob had previously promised the city to Joseph (*ib.* xlviii. 22, Hebr.); and it was allotted by Joshua to Ephraim, and Joseph's remains were buried there. Afterward it was assigned to the Levites, becoming also a city of refuge (Josh. xx. 7, xxi. 20-21, xxiv. 32).

Religious Center.

After the conquest of Canaan, Shechem became an important religious center. The two mountains, Gerizim and Ebal, between which the city was situated, had been previously designated as the places where the Levites should recite their blessings; and under Joshua this arrangement was carried into effect (Deut. xxvii. 11; Josh. viii. 32-35). It was at Shechem that Joshua drew up the statutes of the Mosaic religion and set up a stone as a monument in the temple of Yhwh under the oak-tree (Josh. xxiv. 1-28). Shortly before his death Joshua assembled at Shechem the elders and judges of Israel, giving them his last recommendations and exhorting them to adhere to the cult of Yhwh.

After Gideon's death the inhabitants of Shechem, separating themselves from the commonwealth, elected Abimelech as king, and solemnly inaugurated him in the temple under the oak-tree (Judges ix. 1-6). At the end of three years, however, they revolted and were all slain, the city being destroyed and sown with salt (*ib.* verses 23-45). It was restored later and regained its former importance; for after Solomon's death all the tribes of Israel assembled there to crown Rehoboam. It was there that the ten tribes, whose demands were spurned by Rehoboam, renounced their allegiance to him and elected Jeroboam as king (I Kings xii. 1-20). The latter fortified Shechem and made it for a time his capital (*ib.* verse 25). From that time no mention is made of the place. It was most probably included in "the cities of Samaria" which were conquered by the Assyrian kings, and whose inhabitants, carried away into captivity, were replaced by colonists from other countries (comp. II Kings xvii. 5-6, 24; xviii. 9 *et seq.*).

Capital of Jeroboam.

People of Shechem, probably proselytes, are mentioned as having been slain by Ishmael, the son of Nethaniah (Jer. xli. 5), while on their way to the Temple at Jerusalem, to which they were carrying gifts, not knowing that it had been destroyed. After the Exile, Shechem became the religious capital of the Samaritans, whose temple was on Mount Gerizim (comp. Joshua, Son of Sirach, i. 26). Thus Shechem was to the Samaritans what Jerusalem was to the Jews; and its religious prominence was maintained for nearly 200 years, when it was captured by John Hyrcanus (129 B.C.), who destroyed the temple (Josephus, "Ant." xiii. 9, § 1; *idem*, "B. J." i. 2, § 6). Later, Alexander Jannæus met with a crushing defeat near Shechem ("Ant." xiii. 14, §§ 1-2; "B. J." i. 4, §§ 4-5).

Destroyed Under Vespasian.

The place seems to have been completely destroyed during the Jewish wars, and on its site another city was built by Vespasian (72 C.E.), to which he gave the name "Neapolis" ("B. J." iv. 8, § 1; Pliny, "Historia Naturalis," v. 13, § 69); this was afterward changed by the Arabs to "Nablus." The identification of Shechem with Neapolis by Josephus and Pliny is supported by Num. R. xxiii. 14, which renders "Shechem" by "Neapolis" (נפולין). Eusebius ("Onomasticon," *s.v.* "Sichem"), however, places Neapolis in the vicinity of the site of Shechem. On coins from Neapolis that city is called "Flavia Neapolis" (Eckhel, "Doctrina Nummorum Veterum," iii. 433 *et passim*). Both Josephus and Pliny declare that Shechem or Neapolis was called by the natives "Mabortha" (*Μαβορθά*) or "Mamortha." This name is evidently a corruption of the Aramean "Mabarakta," or "the blessed city," so called by the Samaritans in opposition to Jerusalem, as they similarly term Mount Gerizim "the blessed mountain" in opposition to Mount Moriah, which they designate "the accursed mountain" (Gen. R. lxxxi. 3). Great hostility to the Jews was manifested by the Samaritan inhabitants of Neapolis. R. Ishmael ben Jose, who once passed Neapolis (ניפולים) in order to go to Jerusalem to pray, relates that he was the object of their derision (Yer. 'Ab. Zarah v. 4).

Under the Roman emperors Neapolis became one of the most important cities of Palestine. Septimius Severus once deprived it of the "jus civitatis," but he restored it later (Spartianus, "Vita Severi," ch. ix.). Under Zeno (474) riots occurred in Neapolis between the Samaritans and the Christians. In 1184 the city was captured by the troops of Saladin. It has been remarked above that the name "Neapolis" was corrupted into "Nablus" by the Arabs; and the city has been generally known under the latter name since the Middle Ages. Its history is closely connected with that of the Samaritans. It may be added that the tomb of Joseph (comp. Josh. xxiv. 32) has always been the chief object of attraction for visitors to Nablus. **Tomb of Joseph.** This fact is first mentioned by Benjamin of Tudela ("Itinerary," ed. Asher, pp. 32-33)—who, by the way, relates that in his time there were no Jews at Nablus—and after him by the French traveler R. Jacob, who was at Nablus in 1258 (Carmoly, "Itinéraires," p. 186). Isaac Ḥelo (14th cent.) says (*ib.* p. 251) that people came from afar to Nablus to visit the tomb of Joseph and Jacob's well, and that there were in the place few Jews, but many Samaritans. The author of the "Yiḥus ha-Ẓaddiḳim" (*ib.* p. 386) is more precise in placing Joseph's tomb in the village of Al-Balaṭah, near Nablus, adding that visitors recite over the tomb Ps. lxxvii., lxxx., and lxxxi. Finally, the author of "Yiḥus ha-Abot" (*ib.* p. 445) says that the village Al-Balaṭah, which contains Joseph's tomb, is a Sabbath-day's journey (2,000 cubits) north of Nablus. Samuel b. Samson (*ib.* p. 150), however, places Joseph's tomb at Shiloh. Nablus at present has a population of about 24,000, including 170 Samaritans and 150 Jews.

Bibliography: Besides the sources mentioned in the article, Guérin, *Samarie*, i. 372 *et seq.*; Neubauer, *G. T.* pp. 168 *et seq.*; Robinson, *Researches*, iii. 96 *et seq.*, 113 *et seq.*; idem, *Later Researches*, p. 131; Schürer, *Gesch.* 3d ed., i. 50-51; Stanley, *Sinai and Palestine*, pp. 233 *et seq.*

2. Son of Hamor, Prince of Shechem; he probably derived his name from that town. He is particularly known for his defilement of Dinah, Jacob's daughter, which misdeed led to the destruction of his family and the massacre of all the male inhabitants of Shechem (Gen. xxxiv. 1-26). See Dinah; Hamor.

3. Son of Gilead and grandson of Manasseh, and head of the family of Shechemites, according to Num. xxvi. 31 and Josh. xvii. 2. In I Chron. vii. 19, however, he is said to have been the son of Shemida and, consequently, the grandson of Gilead.

E. G. H. M. Sel.

SHEDIM. See Demonology.

SHE'EH NE'ESAR (שעה נאסר): The pizmon or responsory hymn in the Seliḥot of the fast of the Seventeenth of Tammuz, the "fast of the fourth month" in Zech. viii. 19. It is signed with the acrostic Shelomoh (Ibn Gabirol; comp. Zunz, "Literaturgesch." p. 412), and deals with the four disasters of which the fast is traditionally the anniversary; viz.: (1) the breaking of the two tablets of the Law by Moses; (2) the cessation of the Temple daily offering; (3) the storming of the outer defenses of Jerusalem; and (4) the burning of the scroll of the Law by Apostomus. For the traditional melody see Jew. Encyc. ix. 133, *s.v.* Music, Synagogal.

A. F. L. C.

SHE'ELOT U-TESHUBOT ("questions and answers," or "interpellations and decisions"): The Hebrew designation for the "responsa prudentium," connoting the written decisions and rulings given by eminent rabbis, teachers, or heads of academies to questions addressed to them in writing. These responsa constitute a special class of Talmudic and rabbinical literature, which in form differs both from the commentaries and from the codifications of rabbinical Judaism, yet in content is similar to both. While the commentaries are devoted solely to the exegesis and hermeneutics of the Bible, the Mishnah, the Talmud, and the older codes, and while the codes themselves and the writings of the casuists contain the rules and regulations for all ordinary incidents of life, the responsa include both these types of literature. Many of the questions were theoretical in character, since they requested information concerning all departments of knowledge. The responsa accordingly contain rulings on the philosophy of religion, astronomy, mathematics, chronology, and geography, as well as interpretations of difficult passages in the Bible, the Mishnah, and the Talmud. The older responsa in particular are important for readings and emendations of the Mishnah and the Talmud, affording valuable material for textual criticism. The questions were for the most part, however, practical in nature, since they were concerned with specific new contingencies for which no provision had been made in the codes, and the responsa thus supplement the literature of codification.

While early Jewish literature can show but few historical works, many important notes on the history of Judaism have been introduced into the responsa undesignedly, and for this reason they bear the marks of truth. The responsa likewise contain invaluable material for general history, as many events are cursorily mentioned in them which are either noted obscurely or totally ignored by contemporary historians, yet which illustrate and explain the conditions of the times. The responsa thus contribute much to a knowledge of the cultural circumstances of the Jews and of the people among whom they have lived. From these questions based on the problems of daily life falls much light on the moral and social relations of the times, on occupations and on undertakings, on the household, on customs and on usages, on expressions of joy and of sorrow, on recreations and on games. The responsal literature covers a period of 1,700 years, but the responsa of the first five centuries are not contained in special works, being scattered through the transactions and expositions of both the Talmudim. Works devoted especially to responsa first appear in the post-Talmudic period. Many responsa have been lost, but those which are extant number hundreds of thousands, the collections thereof being nearly a thousand. The most important of these works are listed in Ersch and Gruber, "Encyc." xxvii. 453.

The history of responsal literature may be divided into six periods, which resemble one another in so far as all are characterized by the same spirit of search for truth and knowledge of the Law, and in them all are expressed the same religiosity, the same rigid impartiality, the same unswerving sense of right, and the same conscientiousness which gives a decision only after most thorough consideration. **Six Periods.** On the other hand, external circumstances, the spirit of the times, and the more or less strict methods of investigation give the responsa of various periods a peculiar degree of individuality.

Neither responsa nor letters concerning specific legal questions are known before the conclusion of the Mishnah; indeed, it is doubtful whether any were written even at that period. The reason for this lies in the custom which then prevailed that no halakah should be reduced to writing; and it may readily be seen from the following story that this prohibition or reluctance was extended to communications of a legalistic nature. In the first half of the fourth century R. Dimi went to Palestine, where he heard a new interpretation of the Mishnah. Desiring to communicate this exegesis to R. Joseph, the head of the Academy of Pumbedita, he said: "If I could find any one to send the letters to Babylonia, I would include this interpretation in my message." This remark of R. Dimi's was the occasion of a debate in the academy, and the question was raised how it would be possible to communicate exegetic decisions by means of letters, since it was forbidden to reduce halakot to writing. The academy finally justified R. Dimi by laying stress on the fact that in this instance it might have been a matter of a new and hitherto unknown interpretation, and in such a case it was allowable to commit even a legal subject to writing (Tem. 14a, b). It thus becomes evident that even when the prohibition or the reluctance against writing halakot became partially obsolete, letters of a legal content might be written only in cases where halakot might likewise be reduced to writing. While the rule prevailed, therefore, that no halakot should be written, no communications of legalistic content were made by means of letters. Questions were always communicated orally, or proposed to the academy by a teacher, who transmitted the answer and the decision by word of mouth. The rarity of letters on legal problems in the tannaitic period may readily be seen from a passage in the Tosefta (Ter. ii. 13) which states that R. Gamaliel secretly despatched a messenger with an answer to a question; for if he desired to keep his decision secret, he would probably have sent a letter had such replies been customary at that time.

Correspondence Between Babylonia and Palestine.

In the tannaitic period statements, publications, contributions concerning the calendar, and notifications were the only documents regularly committed to writing. On the other hand, it can not positively be asserted that no halakic ruling whatsoever had been given in writing before the completion of the Mishnah: certain exceptions were doubtless made, exactly as halakic notes were written in isolated instances (comp. Hor. 13b), although these sporadic decisions are no longer extant. Immediately after the completion of the Mishnah, however, when the prohibition or reluctance against writing halakot had in great part disappeared, the learned question and the elucidative responsum began to appear, traces being preserved in the Talmud. With the beginning of the third century these scholarly inquiries frequently appear in letters from Babylonia to Palestine. Thus Rab (Abba Arika) wrote a letter to R. Judah ha-Nasi I. concerning a certain legal regulation (Ket. 69a; Yer. Giṭ. v. 3), receiving an answer which seems likewise to have been in epistolary form. Rabbi Johanan of Palestine carried on an active correspondence with Rab and Samuel, addressing the former in the words, "To our teacher and master in Babylonia," but terming the latter simply "Our colleague." From Samuel, moreover, he received thirty scrolls with questions and erudite discussions on dubious pathological symptoms in animals (Ḥul. 75b; comp. Tos. *ad loc.* s.v. "Tresar"). At a later period, likewise, the authorities in control of the Palestinian academies issued their rulings in the form of letters which were used as baraitot, being made the subject of citation and exegesis (Yer. Ned. v. 5). In this learned correspondence both in Babylonia and in Palestine the form usually employed was that of familiar verses of Scripture. Thus Mar 'Uḳban, who asked R. Eleazar whether he might lodge information against certain adversaries that punishment might be meted out to them, was answered in the words of Ps. xxxix. 1 and xxxvii. 7 (Giṭ. 7a), while another responsum to a question consisted of Hosea ix. 1 (*ib.*; comp. Yer. Meg. iii. 2). This method may have been chosen to avoid, so far as possible, any direct violation of the prejudice against committing halakot to writing, since this reluctance had not yet been entirely outgrown. By the end of the third century the correspondence between Palestine and Babylonia had become more active, and the responsa sent in letters from the one to the other had become far more numerous. These rulings and responsa from Palestine seem to have been regarded as authoritative and demanding obedience; and the threat was made to R. Judah ben Ezekiel, head of the Academy of Pumbedita, that a letter would be brought from Palestine to annul his decision (B. B. 41b). Another teacher likewise protested against R. Judah's ruling, and warned him that he also would produce a letter from Palestine to refute him (Shebu. 48b), the same experience befalling Mar 'Ukba (Sanh. 29a). In like manner, the frequent use in the Talmud of the phrase "shalḥu mi-tam" (they sent from yonder, *i.e.*, from Palestine), presupposes letters containing such responsa, and proves that they were regarded as authoritative, since passages introduced by "Shalḥu mi-tam" are generally employed in refuting rulings. Abin, who went from Babylonia to Palestine and instituted inquiries everywhere regarding doctrines and opinions, wrote repeated epistles to Babylonia containing the results of his investigations (Ket. 49b; B. B. 139a; B. M. 114a; Niddah 68a), these letters beginning with the formula, "I asked my teachers concerning these matters, and they answered me in the name of their teachers." Many other rulings are found in the Talmud which are designated as sent by Abin, the method of transit apparently being by letter, although no direct statement on the subject is made. Further details on the form of the responsa and on the manner in which they were communicated may be gathered from the following examples: Tanḥum b. Papa sent R. Jose a request for information on two distinct problems concerning the purity of blood of two families in Alexandria. One case was decided unfavorably by R. Jose, who wrote as his reply the Biblical verse on incest (Deut. xxiii. 3), while he declared the purity of the second family to be unchanged. He then directed his pupil R. Mani to sign the responsum with him, which was done. R. Berechiah, on the other hand, whom he likewise requested to attach his name to his ruling, refused, but, changing his mind in the course of the day, he went to R. Jose to sign the responsum, which, however, had already been despatched (Yer. Ḳid. iii. 12). This story shows that often questions were settled by a single letter, as was later the case with the Geonim, who exchanged a series of responsa. The halakic replies and the decisions, moreover, were signed by pupils and colleagues, so that, strictly speaking, the responsa were issued by a board.

Other statements likewise exist in the Talmud regarding halakic matters which were discussed in written responsa, if the opening words may be taken as a criterion. In these responsa occurs the introductory phrase "Hawu yod‘in" (take cognizance of; R. H. 20a; Yer. Ḳid. ii. 5) or the honorific greeting, "Health and peace to thee, dear colleague" (Ket. 69a). In sending his query, one scholar modestly wrote: "I am not worthy that you should lay your doubts before me. . . . but the opinion of your pupil inclines thus . . ." (B. B. 165b). These formulas were probably used also in giving verbal decisions. The question itself, when communicated in writing, was introduced by the words: "May our teacher instruct us in this" (Giṭ. 66b). The responsa of the Talmudic period may be compared with the responsa of the Roman jurists and the epistles of the Christian patriarchs, while they are characterized by pregnant brevity and rigid restriction to their subject-matter. It is impossible to trace in all its phases the development from these jejune Talmudic responsa to those of the geonic type, with their literary form and their discursiveness, for no responsum has been preserved either of the saboraic or of the later amoraic period. From the second half of the fourth century all information regarding a learned correspondence is lacking; but the maturity of style and of epistolary form which characterizes the responsa of even the earliest geonim in the middle of the eighth century, and which differentiates them so widely from the brief decisions of the Talmudic age, justifies the inference that between the former and the latter there had been many forms of transition, and that there had been a learned correspondence between teachers and pupils in the period extending from the end of the fourth to the beginning of the eighth century, although these letters have been lost.

Responsa of the Geonim.

In the geonic period the elucidative letter and the scholarly responsum are characterized, as already noted, by a more developed and rounded literary style, conditioned and fostered by the revolution which had taken place in Jewish literature. The Talmud had been definitively completed and was recognized as authoritative, and, being committed to writing, it was accessible to scholars, even though they lived far from the academies, the seats of Talmudic learning. With an accurate knowledge of the Talmud and a correct interpretation of it, scholars might deduce for themselves rulings for any of the specific cases which might present themselves. Even in instances in which the questioner was not versed in the Talmud and the responsum was required to give only a brief decision on the case under consideration, the ruling was not a mere "yes" or "no," "permitted" or "forbidden," "right" or "wrong," but in the shortest responsa themselves it was generally the custom for the scholars who prepared them to cite a passage from the Talmud in support or proof of their decisions, or to controvert any possible opposition on the basis of some other Talmudic passage by a refutation of it and a correct exegesis of the section of the Talmud in question. In most instances, however, the questioner himself knew the Talmudic passage from which he might draw the ruling for any specific case, the problem being whether he was able to apply this passage correctly. There were cases, on the other hand, in which he was either altogether ignorant of the application, or made it falsely, thus reaching an erroneous conclusion. In such instances the respondent was required to give an explanation of the Talmudic passage in question and its correct application to the specific case, often proving the correctness of his decision by a comparison with another passage, and adding a refutation of any other possible interpretation. He was frequently obliged, moreover, to take into consideration any consequences which might result from his decision or exegesis, and was constrained many times to explain points which, strictly speaking, had not been asked specifically, although they were more or less closely related to the subject under discussion. Many of these questions have no practical contingencies for their basis, but are concerned with the correct comprehension and explanation of certain passages of the Talmud, and the corresponding responsa are therefore restricted to detailed elucidations and fundamental interpretations. In the main, therefore, the geonic responsa are scholarly treatises, although this does not characterize them all to an equal degree, since in the course of the four centuries of the geonic period the responsum developed in form and character, and was subjected to many changes.

In the days of the earliest geonim the majority of the questions asked them were sent only from Babylonia and the neighboring lands, where the inhabitants were more or less acquainted with the Talmud and could, in case considerable portions of it were unintelligible to them, visit the academies in the Kallah months to hear Talmudic interpretations and explanations. The questions which were submitted in writing were accordingly limited to one or more specific cases, while the responsum to such a query gave in brief form the required ruling and a concise reason for it, together with a citation of an analogous Talmudic instance (Judah Gaon, in "Sha‘are Ẓedeḳ," iv. 4, 69, p. 71), and a refutation of any possible objection (*ib.* iv. 5, 27, p. 76b). More discursive were the responsa of the later geonim after the first half of the ninth century, when questions began to be sent from more distant regions, where the inhabitants were less familiar with the Talmud, even if they possessed it, and were less able to visit the Babylonian academies, the only seats of Talmudic learning. Talmudic difficulties were often the subject of these inquiries. Although a gaon (Sar Shalom, in "Teshubot Geonim Ḳadmonim," No. 46, p. 9) declared it difficult to write elucidations of perplexing problems in many Talmudic passages, he sought nevertheless, to give such interpretations for entire treatises and themes in the Talmud. In like manner, even those responsa which were not sent to distant lands assumed a discursive and prolix form, for though the questioner sought information only for a specific case and requested a Talmudic basis for it, the responsum was not restricted to the mere decision which might be deduced from the Talmudic passage under consideration, but included the entire context as well. It thus frequently contained more than a simple basis and foundation for the ruling drawn from the Talmud, and discussed the subject under consideration in fullest detail and in all its import, even though this had not been requested. More than this, other subjects which had but a slight bearing on the problem in question received their quota of discussion ("Ḥemdah Genuzah," No. 70, p. 14b; "Sha'are Ẓedeḳ," p. 22b); and the respondent added also the ruling which would have been given had the point at issue been slightly different from that on which information was requested (*ib.* p. 46a).

Mode of Reply.

The later geonim did not restrict themselves to the Mishnah and Talmud, but used the decisions and responsa of their predecessors, the elder geonim, whose sayings and traditions were generally regarded as authoritative, although there were occasional exceptions, such as the assertion of Hai Gaon that the ruling of R. Naṭronai was incorrect ("Toratan shel Rishonim," ii. 51, No. 3). These responsa of the later geonim were, strictly speaking, disquisitions on Talmudic themes, and since a single letter often answered many questions, it frequently attained the compass of an entire book. The letters of the Geonim, which, for the most part, contained replies to many problems, assumed a definite and official form. They began with the statement that the questions had been correctly received, read, and considered, and that the corresponding answers had been given in the presence of the gaon and with his approval. The introductory formula, used in the letters of the Geonim, may be illustrated by the following example: "Amram ben Sheshna, head of the academy of the city of Meḥasya [Sura], to all scholars and their disciples and to those of our brethren of the house of Israel who dwell in Barcelona, and who are dear, beloved, and revered unto us, may their prosperity increase and wax great! Receive ye greeting from us and from R. Ẓemaḥ, the president of the court, from the heads of the Kallah ["reshe Kallah"], from the authorized teacher, and from all other scholars and disciples of the academy, all of whom ever pray for your health, that God in His great mercy may have compassion on you. The questions which ye have laid before us we have caused to be read unto us, while the president of the court and the allufim and the other sages and disciples sat before us. We have studied them, and weighed all that is written in them, and with divine help have given to them the following answers" ("Teshubot ha-Geonim," ed. Lyck, No. 56, p. 21). In other introductions are found the concluding words, "We commanded and directed that the answers to your questions be written you as we have perceived them with the help of God" (Harkavy, "Teshubot ha-Geonim," pp. 32, 76). This citation shows that there were regular secretaries who prepared the letters, and it is likewise clear that the judicial board and its president formulated the replies and then presented them to the gaon, who approved and signed them if they were found correct (comp. Harkavy, *l.c.* No. 198, p. 88). After this general introduction the various questions and their answers were given in regular order in the letter. Each question was introduced by the phrase "she-sha'altem" (="as to what ye have asked"), and was then repeated, either word for word or in content. The answer to each question then followed, either without any introductory phrase, or with the words, "thus is it," "the answer to this question is," "if the matter is as your letter of inquiry states, it seems to us as follows," "we regard it thus," "thus the sages say," "thus have we learned from earlier sages," "know ye," or "thus hath Heaven revealed unto us," which, however, is simply equivalent to the phrase "with divine help we have found." The answer was frequently concluded with the formulas, "thus is the final decision" ("halakah"), "thus is the correct practise," "thus is the usage in the academies," or "such cases come daily before the academies, and in them all we decide thus." After all questions and their answers had been given, the formal conclusion of the letter came. Occasionally this was the brief phrase, "may God grant us to decide according to the Law, and to teach according to valid decision" (Harkavy, *l.c.* No. 350, p. 179), but more frequently, especially when the letter was sent to foreign lands, it concluded with a blessing on him who had asked the question, such as, "may God reveal unto thee, oh, friend and colleague, and unto all the scholars and disciples of thy city, the Torah of wisdom and of understanding, and clothe you with a mantle of glory" (Harkavy, *l.c.* No. 264, p. 135; comp. also No. 369, p. 185, and No. 344, p. 172).

Geonic responsa are written in three languages, Hebrew, Aramaic, and Arabic. In the earliest period Aramaic, the language of the Gemara, prevailed exclusively, but in the middle of the ninth century Hebrew began to appear in the responsa side by side with it. This innovation was doubtless due, on the one hand, to the study and knowledge of Hebrew which spread through rabbinical circles as a result of the Karaite movement, and, on the other, to the fact that the rulings of the Geonim were thenceforth sent to distant lands, where the inhabitants were unfamiliar with Aramaic, so that it became necessary to write to them in Hebrew, the dialect of the Mishnah. When Arabic became the prevailing language of the Jews in the dominions of the califs, questions were frequently addressed to the Geonim in that tongue, whereupon the scholars of the academies used the same language in reply, thus accounting for the mass of Arabic responsa.

Collections of Geonic Responsa.

Some of the responsa that have survived are unmutilated and in their original form, while others are extant only in extracts. The first collection appeared, together with brief geonic rulings, at Constantinople in 1516 under the title "Halakot Pesuḳot min ha-Geonim" (Brief Rulings of the Geonim), and in 1575 another corpus, entitled "She'elot u-Teshubot me ha-Geonim," was published in the same city. At Salonica in 1792 Nissim ben Ḥayyim edited a collection of geonic responsa under the title "Sha‘are Ẓedeḳ" (Gates of Justice), which contains 533 responsa arranged according to subject, and an index by the editor. For the majority of these responsa the name of the author is cited, and many of them are reproduced in their original form with their Talmudic proofs and disquisitions. In 1858 another collection was published at Leipsic with the title "Sha‘are Teshubah," ten years after David Cassel had issued his corpus, which was entitled "Teshubot Geonim Ḳadmonim" (Responsa of the Earliest Geonim). A collection of responsa was published at Jerusalem in 1863 with the title "Ḥemdah Genuzah," and in the following year Jacob Mussafia edited his "Teshubot ha-Geonim" at Lyck, this being succeeded seven years later by Naḥman Nathan Coronel's "Teshubot ha-Geonim" (Vienna, 1871). In 1882 Ḥayyim M. Horowitz published at Frankfort-on-the-Main a number of geonic responsa under the title "Toratan shel Rishonim" (Responsa of the Earlier Authorities). The most important corpus of responsa, however, is that contained in a manuscript of the Royal Library of St. Petersburg and edited by Harkavy under the title "Teshubot ha-Geonim" (Berlin, 1885), which includes many Arabic decisions, while numbers of the rulings still preserve the name of the questioner and the date of his inquiry. Yet another corpus of geonic responsa has been edited by Joel Müller in his "Teshubot Geone Mizraḥ u-Ma‘arab" (Responsa of the Geonim of the East and West), Berlin, 1885. In addition to these collections, a number of geonic responsa have been published in other works, as in the "Ṭa‘am Zeḳenim" of Eliezer Ashkenazi (Frankfort-on-the-Main, 1856) and the "Ḳebuẓat Ḥakamim" of H. Warnheim (Vienna, 1867), as well as in the halakic works of older authorities, such as the "Halakot" of Asheri, the responsa of Solomon b. Adret, and the responsa of Meïr of Rothenburg. The most recent collection is that edited by L. Ginzberg on the basis of genizah fragments and entitled "Genizah Studies" (1905).

As stated above, the responsa of the Geonim were by no means restricted to problems of legalism or ritualism, but in addition referred to all departments of human life and knowledge, treating of liturgical, theological, philosophical, exegetic, lexicographical, archeological, and historical questions; and they likewise contain abundant material for a study of the conditions of the times in which they were written, and for the culture-history and the commercial relations of the Jews, as well as for a knowledge of the manners and customs then prevailing in Judaism. A few examples of brief geonic responsa may be cited as characteristic of the views and customs of the times: "As to what ye have asked: 'How is it with regard to the theft of non-Jewish property in cases where it has not already been forbidden as a desecration of the divine name?' thus is our ruling: The prohibition of theft has naught to do with desecration of the divine name, but is a clearly established law which forbids any theft whatever from a non-Jew. Desecration of the divine name is mentioned only in association with objects which have been lost. According to R. Phinehas b. Jair, 'Whensoever it leads to a desecration of the divine name, one is forbidden to appropriate anything which a non-Jew has lost.' The vine said to have been abstracted from the garden of a Gentile by R. Ashi was evidently taken in return for compensation," etc. ("Sha‘are Ẓedeḳ," iv. 1, 6). "And as to what ye have asked: 'After the burial of a corpse many wipe their hands on the ground,' no such custom prevails among us. And as to what ye have heard: 'While returning from the cemetery many are wont to wash their hands before reaching the house and to sit down on the way; what is the reason for this?' thus is our opinion: The washing of the hands is not obligatory, but where it is the custom one should wash them. The bidding of the sages that one must sit down seven times while returning from a corpse is intended to apply solely to the case in which one goes to the place of burial and returns from it, and solely for the kinsmen, and solely for the first day, and, above all, solely for those places where the usage is customary. The sevenfold repetition of sitting down is on account of the evil spirits which follow the returning mourners, that a demon may disappear each time the bereaved sit down" (*ib.* iii. 4, 19–20). It is noteworthy, furthermore, that the famous Letter of Sherira Gaon, which is the chief legal source for the Talmudic and geonic periods, was a responsum of this character, sent in reply to the questions of an African community.

Rise of Local Responsa.

During the entire geonic period the Babylonian schools were the chief centers of Jewish learning, and the Geonim, the heads of these schools, were recognized as the highest authorities in Talmudic matters. Even in the most distant lands the Jews looked upon these academies and their heads as once their ancestors had regarded the high court of the "Bet Din ha-Gadol," which had been reverenced as the one place whence came valid instruction and whence rulings might be drawn. Despite the tremendous difficulties which hampered the irregular communications of the period, the Jews who lived even in most distant countries sent their inquiries concerning religion and law to these high officials in Babylonia. In the latter centuries of the geonic period, from the middle of the tenth to the middle of the eleventh, their supremacy suffered in proportion as the study of the Talmud received fostering care in other lands. The inhabitants of these regions gradually began to submit their doubts to the teachers and heads of the schools of their own countries, and soon, in view of the attendant expense and difficulty, entirely ceased despatching their questions to the seat of the Geonim, so that during this period responsa of eminent rabbis of other lands appeared side by side with geonic rulings. To this class belong, for example, the responsa of R. Kalonymus of Lucca, contained in the collection "Teshubot Geonim Ḳadmonim," Berlin, 1848, Nos. 106–118, and of his son R. Meshullam (*ib.* Nos. 119–151; comp. Rapoport, Pref.), and the responsa of R. Gershom b. Judah of Mayence appeared in the works of later authorities, especially in the collection of R. Meïr of Rothenburg (Nos. 5

572, 847, 850, 862, 865, 928, 929) and in the "Sefer ha-Yashar" of R. Tam (Nos. 366, 399). Of the responsa of R. Moses b. Enoch of Cordova only two have been preserved, in the collection "Sha'are Ẓedeḳ" (iii. 2, 21; iv. 1, 21), while his son R. Enoch cited another one by him (*ib.* iv. 5, 9), the same collection including also the rulings of R. Joseph b. Isaac ibn Abitur, the contemporary and opponent of Rabbi Enoch of Cordova (ii. 28; iii. 1, 27; iv. 4, 5, 6, 8, 21, 23, 42). A single responsum of R. Samuel ha-Nagid of Cordova is contained at the end of the collection entitled "Pe'er ha-Dor," while a number of responsa of Hananeel b. Ḥushiel of Kairwan have likewise been preserved. These responsa of non-geonic authorities from the latter part of the epoch of the Geonim form the transition from the geonic to the first rabbinical period, and they resemble the rulings of the Geonim both in form and in the introductory phrases, "as to what ye have asked," "we have meditated on this question," or "the answer to this question is, if the matter is as your letter of inquiry states," while the conclusion of the answer is followed by a brief greeting, "may your health be great," or simply "and health unto you," after which the letter is signed. The non-geonic responsa, however, were not dominated by the official style and the self-conscious tone which characterized the geonic rulings. Decisions of this type are written in Hebrew, and contain many theoretical interpretations of Talmudic passages in addition to the rulings governing practical cases. The responsa of this period of transition may be represented by the following ruling of R. Hananeel of Kairwan, cited from a manuscript by Berliner in his "Migdal Ḥananel" (Leipsic, 1876, p. xix.): "As to what ye have asked, whether the Talmudic saying that it is better to let the children of Israel transgress laws unconsciously which they would transgress consciously were they fully instructed, be not contradictory to many passages of Scripture, such as Lev. xix. 17, 'Thou shalt in any wise rebuke thy neighbor'; Ezek. xxxiii. 9, 'If thou warn the wicked of his way,' etc.; and Prov. xxiv. 5, 'But to them that rebuke him shall be delight,' this is the answer: It is true that the children of Israel are commanded to rebuke one another and thus it is written in the prophets and in the sages, whether one man or a community be guilty of a transgression. If the violation of the words of the Torah is conscious, the transgressor must be warned, and, if necessary, he may be punished, while, on the other hand, all efforts must be made to win him back to righteousness. If, however, all this is without avail, then 'thou hast delivered thy soul' (Ezek. xxxiii. 9). In case the transgression is unconscious and there is reason to suppose that the children of Israel would obey if they were instructed, they must be warned and enlightened concerning the teachings of the Law and the way of righteousness. It is otherwise, however, when what is forbidden is regarded as permitted, and when a prohibition is regularly taken with little seriousness on account of the assumption of the presence of due precaution against violation of the Law. Thus, on the eve of the Day of Atonement folk sit at meat in broad daylight, but their meal lasts until evening draws near. Those who eat intend to finish the meal in due time and wish to fix the proper moment arbitrarily. They say 'It is still time,' while darkness is approaching; and though we should warn them they would not listen. In such cases it is better for us to remain silent, and not to cause them to become guilty of conscious sin. This case is to be differentiated from one in which we see another transgress a law consciously, for then we are in duty bound to lift up our voices against him on the chance that he may harken to us."

First Rabbinic Epoch.

The third period, or the first rabbinic epoch, comprises responsa of the teachers of the earlier Spanish and French schools in the eleventh and twelfth centuries. With the decline of the gaonate in the first half of the eleventh century, the Jews of various countries lost the central spiritual authorities who had hitherto given their decisions in doubtful problems. Thenceforth the appeal in religious and legal questions was to be made to the rabbinical authorities of one's own or a neighboring country, so that inquiries sent during this period to Babylonia were rare and exceptional. The responsa of the epoch came from various countries, and from schools having different tendencies, thus showing the position and the type of spiritual life in general and of Talmudic learning in particular, since all these factors prevailed in the different countries at the time. Especially noteworthy is the divergence between the French and the Spanish school in the twelfth century, the second half of this period. The questions were by no means restricted to practical problems, but many of them, in case the interpretation of a halakic or haggadic passage in the Talmud was the subject of inquiry, were theoretical in nature. In their discussion of theoretical problems the responsa of the Spanish scholars are noteworthy for the untrammeled scientific spirit which permeates them far more than is the case with those of the French school. Even in those responsa which are practical in bearing a distinction may be drawn between the two schools.

For the most part the rulings of this period receive their basis or their confirmation from a passage in the Talmud, and in this motivation the difference between the French and the Spanish exegesis of the Talmud is clearly shown. The Spanish school was the more logical, and strove for brevity and lucidity in the deduction of its rulings from the Talmud, while the French school was more dialectic, and frequently gave full play to casuistry at the expense of clearness. The chief representative of the French school in the eleventh century was Solomon ben Isaac (Rashi), and many of his responsa have been preserved in the "Pardes" and in the Vitry Maḥzor. His decisions are written in Hebrew, without formulas either of introduction or of conclusion, although an interesting phrase which is peculiar to him and was apparently invented by him occurs once, running as follows: "I, the undersigned, was asked whether . . . thus have I heard from my teachers, and thus is my own opinion likewise inclined, . . . " the ruling being followed by the signature "Solomon b. Isaac," without any concluding formula (Vitry Maḥzor, pp. 434-435). The leader of the Spanish school in the same century was Isaac Alfasi, who left many responsa, an entire collection being printed at Leghorn in 1780, under the title "She'elot u-Teshubot ha-RIF" (= "Isaac Alfasi"). These decisions were written in Arabic, and were translated into Hebrew at an early date, being extant only in this version. In his introduction Isaac Alfasi employed the same formulas as had been used by the Geonim, such as "know ye," "I have meditated on this question, and the answer seems to me thus," or "thus our opinion is inclined." At the conclusion some brief greeting, such as "health to you, Isaac b. Jacob," was employed before the signature, which was frequently introduced by the formula, "I sign my name Isaac b. Jacob." Such a responsum was apparently written by his secretary, and the author was required simply to affix his own signature. Numerous other rulings have the concluding phrase, "by me, Isaac b. Jacob," a phrase which he was apparently the first to use. Many of the responsa of Alfasi are devoted to the interpretation of haggadic passages of the Talmud, and manifest the broad and lucid spirit of the Spanish school. Here two brief examples only can be cited. In responsum No. 13 he declares that the strange story told of R. Bannaah in the Talmud (B. B. 58a) was not a real occurrence, but merely a dream. The story of Rabbah bar bar Ḥana (*ib.* 74a) that he had wandered into the desert and had found the place where heaven and earth touch was interpreted by Alfasi (responsum No. 314) as follows: According to a tradition a king of Alexandria had erected an observatory in the desert, and had placed there a globe of the heavens and of the earth near each other, thus affording a basis for the anecdote.

The French School.

The chief representatives of the French school of the twelfth century were Jacob Tam, Abraham b. David of Posquières, and Eliezer b. Nathan of Mayence. The responsa of Rabbi Tam are contained in his "Sefer ha-Yashar" as well as in the works of other authorities, such as R. Meïr of Rothenburg and Mordecai. Tam's style was refined and poetic, and he often prefixed a versified introduction in praise of his questioner; in like manner his concluding formulas were flowing and sentimental, such as "My love for thee is firm and fast founded in my heart; peace and health be on thee and on all of thine." The responsa of Eliezer b. Nathan, contained in his "Eben ha-'Ezer," are partly exegetic in character and partly devoted to practical decisions. Especially interesting are his interpretations of Biblical passages, as that of Prov. xxx. 1-5 in responsum No. 119, where he explains "ha-massa" as "hamasite," and regards Agur as the descendant of the Massa mentioned in Gen. xxv. 14. In his rulings he often employed a form of introduction which laid stress on his own slight importance and on the great dignity of his questioner, such as. "but what do I know that thou knowest not?" "I know that thou needest me not," or "although I am not worthy, yet will I answer according to my scanty knowledge," his concluding formula being: "May God illumine mine eyes with His wisdom." The responsa of Abraham b. David are included in the collection entitled "Tummat Yesharim" or "Temim De'im" (Venice, 1622). Particularly noteworthy is his injunction to submit to the governance of the laws of the land, basing his argument on the Talmudic saying: "The law of the land is valid" (*ib.* responsum No. 50).

The chief representatives of the Spanish school in the twelfth century were Joseph ibn Migas and Maimonides. The responsa of the former include both practical decisions and theoretical elucidations and explanations of difficult passages in the Mishnah and the Talmud, the first group being written in Arabic and later translated into Hebrew, while the greater portion of the second category was composed by the author himself in the Talmudic Hebrew idiom. These rulings are contained in a collection entitled "She'elot u-Teshubot, . . . Yosef ha-Levi ibn Migas," which was printed with the novellæ of Naḥmanides at Salonica in 1791, besides a number of responsa in the "Shiṭṭah Meḳubbeẓet" of Bezalel Ashkenazi. In responsum No. 204 he explains the various forms of synagogal poetry, such as the "piyyuṭ," "pizmon," and "kuklon." Especially striking is the remarkable circumstance mentioned by him in responsum No. 120 that the Jews of Andalusia buried their dead in their houses (probably gardens). The responsa of Maimonides, which were written in great part in Arabic, are contained in the collections entitled "Pe'er ha-Dor" (Lemberg, 1859) and "Ḳobeẓ Teshubot ha-RaMBaM" (Leipsic, 1859); the decisions in the former collection were translated by Mordecai Tamma from Arabic into Hebrew in 1761, and published at Amsterdam. These rulings contained brief decisions of problems of a ritual or legal content, as well as replies to inquiries concerning difficult passages in the author's monumental "Yad" and elucidations of astronomical and chronological questions ("Pe'er ha-Dor," Nos. 43-44; "Ḳobeẓ Teshubot ha-RaMBaM," No. 172). Among the responsa of Maimonides is one of special interest ("Ḳobeẓ Teshubot ha-RaMBaM," No. 160) concerning a Mohammedan proselyte to Judaism, in which it was declared that Mohammedans were not to be regarded as heathens, since actual idolatry had vanished from among them, and although they still retained many idolatrous customs, they interpreted them differently, and believed in the unity of God. Noteworthy likewise is the responsum addressed to the scholars of Marseilles (*ib.* ii. 24-26), in which Maimonides demonstrated the futility of astrology and astrological reckonings. Yet another responsum is his "Iggeret Teman," which he addressed to Yemen in reply to a question of the South-Arabian scholar Jacob Al-Fayumi regarding a fanatic who had proclaimed himself the Messiah. In his responsa Maimonides is extremely brief, and frequently dispenses altogether with formulas of introduction, although when he does employ them they are the same as those adopted by his predecessors and contemporaries, with the additional phrase "by me, Moses b. Maimon." The concluding formulas likewise are the same as those of his predecessors, although before his signature the phrase "we-katab" (and this hath he written) frequently occurs.

The fourth period, or the second rabbinic epoch, includes responsa from the teachers of the later Spanish and French schools during the thirteenth and fourteenth centuries. In this period the dif-

Second Rabbinic Epoch.

ference between the Spanish and the Franco-German schools vanished so far as the responsa were concerned; for, on the one hand, the scientific spirit of the Spanish school partially entered the academies of southern France, and, on the other hand, the dialecticism of the French rabbis steadily increased in influence in Spain, so that here as well as in France and Germany the same system was adopted for deciding questions and proving these rulings by the help of the Talmud. The chief representatives of the Spanish responsa in the thirteenth century were Naḥmanides, R. Solomon b. Adret, and R. Nissim b. Reuben. Very few responsa by Naḥmanides have been preserved; those which are extant are contained in a work entitled "She'elot u-Teshubot" (Venice, 1523; Zolkiev, 1798), in which are included in great part the responsa of Solomon b. Adret. The rulings of this scholar mark the climax in the development of responsal literature. To him came questions from the most distant communities, and he answered them all with marvelous lucidity and scholarship. His responsa number about three thousand, and in content are partly practical and partly devoted to exegesis, ethics, and religious philosophy. The exegetic rulings interpreted difficult passages of the Bible, the Talmud, and the works of older authors, while the practical responsa comprised decisions as to the ritual, civil and marital law, communal relations, and the contemporary political affairs of the Jews. The responsa of Solomon b. Adret fall into five parts. The first part (Bologna, 1539; frequently reprinted) contains 1,255 responsa; part two, entitled "Sefer Toledot 'Olam" (Leghorn, 1654), contains 405; part three (*ib.* 1778) contains 445; part four (Salonica, 1803) contains 330; and part five (Leghorn, 1805) contains 298. Other responsa by him are included in the "She'elot u-Teshubot." A few examples of his decisions may be given. When asked concerning many discrepancies between the books of Chronicles and the other books of the Bible, he replied as follows (i., No. 12): "A change in phraseology without an alteration of meaning is not surprising. Even in the Pentateuch apparent discrepancies of this kind are found, so that one of the sons of Simeon is called Zohar in Gen. xlvi. 10 and Ex. vi. 15, and Zerah in Num. xxvi. 13, but since both names signify 'magnificent,' the double nomenclature is explained." In responsum No. 395 he describes his abolition of several superstitious customs, one of which was to kill an old cock, and to hang its head at the door on the occasion of the birth of a boy. Particularly noteworthy is responsum No. 548, in which he gives a decision regarding a marvelous child at Avila, who had originally been idiotic, but later frequently fell into trances during which he composed works whose contents he declared had been communicated to him by an angel.

The German School.

The chief representative of the German school in the thirteenth century was R. Meïr b. Baruch of Rothenburg. Like Solomon b. Adret, questions were addressed to him from all sides, and his replies were characterized by accuracy and directness. A large number of his responsa have been preserved, the oldest collection being the "She'elot u-Teshubot" (Cremona, 1557) with 315 responsa, while another corpus, which contained 1,022 responsa, appeared under the same title at Prague in 1608. A collection of unedited responsa was issued at Lemberg in 1860, and in 1891 Moses Bloch published at Berlin a new corpus of unedited responsa of Meïr of Rothenburg under the title "Sefer Sha'are Teshubot Maharam." The special interest of Meïr's responsa is the picture which they give of the wretched condition of the German Jews of his time, and of their sufferings from the caprice of princes and from heavy taxation. His style is the stereotyped diction of the responsum of the period, each one being introduced by a greeting in praise of the questioner, and concluding with a greeting and with benedictions. The collections of the responsa of Meïr of Rothenburg contain also the rulings of other older and contemporary rabbis of the Franco-German school.

The principal representatives of the fourteenth century were Asher b. Jehiel and Isaac b. Sheshet Barfat. The responsa of the former, which are remarkable for their clearness, first appeared at Constantinople in 1517 under the title "She'elot u-Teshubot," while an enlarged edition was published at Venice in 1607 and again at Zolkiev in 1803. This collection of responsa is arranged according to 108 subjects, each of which has a special chapter, called "kelal," while at the head of every rubric stands a résumé of its contents and a numerical list of the responsa treating of each subject. This arrangement, however, was scarcely the work of R. Asher himself, but was made probably by one of his pupils, possibly by his son R. Judah, who made certain additions. From the responsa of R. Asher may be gleaned many curious customs of the Spanish communities. To a question addressed to him from Burgos, Asher responded (No. 68, 10) that according to Talmudic law no arrests could be made for debt, even in cases where the debtor had pledged his own person, although, on the other hand, he noted that it was the custom of the communities in Spain to imprison one who had failed to pay his quota of the royal tax until he should discharge his debt.

The 518 responsa of Isaac b. Sheshet were published at Constantinople in 1546–47 as "She'elot u-Teshubot," while a new corpus has recently been prepared by David Frenkl at Munkacs under the title "She'elot u-Teshubot ha-Ribash ha-Ḥadashot." These responsa contain many interesting disquisitions illustrative of the conditions of the times, including rulings on marriage and marital relations in the case of Jews who had been forcibly baptized, as well as other decisions relating to those who had been compelled to accept Christianity (*e.g.*, Nos. 1, 4, 6, 11, 12, 43). Especially interesting are the responsa which describe the prevailing customs and regulations of the communities of the period, as in No. 158, which contains a noteworthy account of the usages observed in many places with regard to the seven days of mourning after the death of a kinsman.

The fifth period, or the third rabbinic epoch, extends from the fifteenth to the eighteenth century, and includes responsa of Italian, Turkish, German, and Polish rabbis. These rulings are totally differ-

Third Rabbinic Epoch.

ent from those of the previous periods in the nature of the problems presented, in the method of treatment, and in the arrangement of subject-matter. In former times the questions had been devoted to many departments of knowledge, both sacred and profane, being concerned with halakic and exegetic themes as well as with ethical and philosophical problems, so that there was scarcely a subject of human activity or thought on which the responsa might not expatiate. In this fifth period, on the other hand, the responsa were restricted almost entirely to legal regulations, and since the pronouncement of judgment was regarded as a religious duty, and since in most countries the Jews were unwilling to submit to a non-Jewish court, legal questions formed a large part of the responsa. While the decisions of the earlier epochs had been so clear and lucid that the reader, if at all acquainted with the subject, could easily follow them and readily gain an accurate survey of the course of the argument and its result, the responsa of this period had changed completely, for the pilpulistic methods which had been in vogue since the middle of the fifteenth century in the study of the Talmud and the halakic works forced their way into responsal literature as well. The responsa are remarkable for the hair-splitting dialectics which characterizes them and often robs them of lucidity, and awakens in the reader suspicion as to the correctness of their decisions. In originality, moreover, the responsa of this period were inferior to their predecessors, for the most characteristic ones were evoked by the persecutions and the wretched political status which resulted in bringing so much misery upon the Jews.

These evils, however, were not entirely new, for even in the previous periods the same circumstances and distressing conditions had existed in greater or less degree—conversion to Mohammedanism or Christianity, the distribution of the heavy burdens laid on the Jews by princes, the extortion of large sums of money to avert threatening dangers, and the feeling of uncertainty produced by expulsions from home—all these had existed in times long past, so that the ancient responsa contained decisions for the most varied circumstances. With little difficulty an analogue might be found, and the determination of a point of contact with the older responsa was no hard task. On the other hand, the responsa of this period are noteworthy for their erudition. Since the respondents now belonged to the "aḥaronim" and no longer enjoyed the independence of the "rishonim," they sought to base their rulings and decisions on the older authorities. The field had already been thoroughly worked, and the respondent was consequently obliged to have studied it in all its aspects, and to have made a careful search for the question propounded to him or one analogous to it, while, in case one was found, it was necessary for him to search through the entire Talmudic and rabbinical literature to see whether his ruling was unimpeachable in the eyes of the older scholars. The lack of originality in the responsa of this period, therefore, finds its compensation in depth of learning and accuracy of reproduction. In external arrangement, moreover, the decisions of this epoch are superior to their predecessors. In the older rulings systematic sequence was almost entirely lacking, but the responsa of the new period had as models the "Arba' Ṭurim" of Jacob b. Asher and, after the sixteenth century, the "Shulḥan 'Aruk" of Joseph Caro, so that many of the responsa were arranged according to these two works, while among the later scholars this practise became the rule.

Israel Isserlein.

This period is likewise the richest in responsal literature, and it would be impossible to enumerate all the collections made within it, so that it must suffice to mention the chief representatives of each century and country. The most important German respondents of the fifteenth century were Israel Isserlein and Israel Bruna. The collection of the responsa of the former is entitled "Terumat ha-Deshen," and comprises 354 decisions, which are important as describing many characteristic features of the time. Several of them (Nos. 341-346) discuss the apportionment of the taxes and the assessments, while others are concerned with the attitude to be observed toward a repentant apostate (No. 198). Particularly interesting is the responsum (No. 197) devoted to the problem whether Jews might so disguise themselves as to escape recognition in countries where they were absolutely forbidden to reside. The responsa of Israel Bruna, entitled "She'elot u-Teshubot" (Stettin, 1860), likewise contain many interesting allusions to contemporary conditions, as in the case of No. 71, which discusses the problem whether the Jews might attend races. In Italy the chief representatives of the fifteenth century were Joseph Colon and Judah Minz. Especially important in the responsal literature of this century were the Turkish rabbis, among whom the chief were Jacob Berab, Levi b. Ḥabib, Elijah Mizraḥi, and Moses Alashkar. The most interesting of the responsa of Levi b. Ḥabib (printed at Venice in 1560) are Nos. 8 (p. 16a), treating of the belief in the transmigration of souls ("gilgul"), and 144 (pp. 249 *et seq.*), on the chronological determination of the Sabbatical year and the year of jubilee. Among the responsa of Elijah Mizraḥi special stress may be laid on the decisions (Nos. 13-15, 53) governing the authorization of communal institutions and ordinances, as well as those determining the validity of the regulations of the congregation, while those responsa are also important which define the attitude of the Rabbinite Jews toward the Karaites (Nos. 57-58). The most noteworthy responsa of Moses Alashkar (printed at Sabbionetta in 1554) are those which discuss the problem whether a converted Jew may be compelled by means of the provincial court to give his Jewish wife a bill of divorce according to Jewish procedure (No. 75, pp. 136b-137a), and the question of the covering of the head and the concealment of the hair in the case of a married woman (No. 35, pp. 94 *et seq.*). In the fifteenth century but one Polish rabbi, Shalom Shekna, of the latter part of this period, is known to have left responsa, while in the following century, on the other hand, responsal literature is represented almost exclusively by the Polish and the Turkish rabbis, Germany having practically no respondent of prominence and Italy only a few. The chief Polish representatives of the sixteenth century were Moses Isserles, Solomon Luria, and Meïr Lublin; the responsa of these scholars throw a flood of light on the condition of the Jews of the period, who evidently took high rank in Poland and were not unfamiliar with military arts, since they offered their services to the duke or to the prince on the outbreak of a war (comp. responsum, No. 43 of Meïr Lublin). The chief Turkish respondents of this period were Joseph Caro, Joseph ibn Leb, Samuel of Modena, and David abi Zimra. Of the responsa of the last-named, which are contained in several collections and which are characterized by lucidity and strict logic, one (iv. 92) may be noted as especially interesting in that it discusses the problem whether a Jew is permitted to abjure his religion and accept Islam when threatened with death. Abi Zimra considers the question in detail, and determines the cases in which a Jew may thus save his life and the contingencies in which he should rather choose death. The only important Italian respondent of the sixteenth century was Menahem Azariah da Fano, whose responsa were edited at Dyhernfurth in 1788.

In the seventeenth century rabbis of various countries prepared responsa, but the Polish scholars were in the great majority. The chief German representative of responsal literature was Jair Ḥayyim Bacharach, the author of a collection of responsa entitled "Ḥawwot Ya'ir." Among the Italian respondents the most important was Samuel Aboab, whose decisions appeared at Venice in 1702 under the title "Debar Shemu'el," while of the Turkish authorities the most prominent were Joseph b. Moses di Trani (MaHaRIT) and Jacob Alfandari, whose responsa, entitled "Muẓẓal me-Esh," were published at Constantinople in 1718. The principal Polish rabbis of the seventeenth century who wrote responsa were Aaron Samuel Kaidanover and Menahem Mendel Krochmal. The decisions of the former, which were published at Frankfort-on-the-Main in 1683 under the title "Emunat Shemu'el," afford a glimpse of the wretched plight of the German Jews of the time, and tell of the oppression and persecution which were their lot. The responsa of Menahem Mendel Krochmal appeared posthumously; they were edited by his son under the title "Ẓemaḥ Ẓedeḳ" (Amsterdam, 1775). The most noteworthy of his rulings is one (No. 2) in which he decided in favor of universal suffrage in the community, making no distinction between rich and poor, taxed and untaxed, learned and ignorant, but giving all an equal share in the choice of the rabbi, the dayyan, and the president.

The Polish School.

In the eighteenth century, in like manner, the rabbis of various countries contributed to responsal literature, but the most important were still the Polish scholars. The chief representative of Germany was Jacob Emden, whose responsa form the collection entitled "She'elot Ya'beẓ" (2 parts, Lemberg, 1884), the most interesting being one (i., No. 46) which discusses the problem whether a Roman or an Italian convert to Judaism might marry a Jewess, since the Romans were regarded as Edomites, and Edomitic proselytes were forbidden by Deut. xxiii. 8-9 to form family ties with the Jews before the third generation of the former. The principal Italian respondent of the eighteenth century was Samson Morpurgo, whose posthumous decisions were edited by his son Moses Ḥayyim Shabbethai under the title "Shemesh Ẓedaḳah" (Venice, 1743). The most important Turkish rabbi in this field was Jonah Nabon, whose responsa were published at Constantinople in 1748, as the "Neḥpah ba-Kesef." Among the Polish scholars who prepared responsa may be mentioned Meïr Eisenstadt and Ezekiel Landau. Particularly interesting in the collection of the former, which is entitled "Panim Me'irot," is one (ii., No. 152) in which he stigmatizes as presumptuous arrogance the practise of ostentatiously wearing white garments in the fashion of the cabalists, while the general custom was to wear black clothing. The collection of responsa by Ezekiel Landau, known as "Noda' bi-Yehudah," was highly esteemed by rabbis and Talmudic scholars, being distinguished both for its strictly logical discussion and for its independence with regard to the rulings of later authorities as contrasted with its adherence to the writings of earlier scholars ("ḳadmonim").

In their formulas of introduction and conclusion the responsa of this period show little deviation from those of previous centuries. They generally begin with an apostrophe which eulogizes the fame and the glory of the questioner, this portion being frequently written in verse, and the responsum often concludes with the phrase, "what my scanty wisdom hath given me I have written thee," or, "what hath seemed right according to my scanty wisdom, I have written thee," the decision then ending with a greeting. In some responsa the date is written at the beginning and in others at the close.

Fourth Rabbinic Epoch.

The sixth period, or the fourth rabbinic epoch, comprises the responsa issued in various countries from the beginning of the nineteenth century to the present. As regards the "teshubot," or responsa proper, this period is identical with the preceding, both in external form and in the method of discussion, but the great factor which differentiates this century from those before it lies in the questions which evoked the responsa. In foregoing centuries the decisions, in so far as they were intended to be practical, were based on questions taken from real life. The responsa of the nineteenth century, however, and especially those of the latter half of it, were evoked for the most part by problems which were merely hypothetical. Impelled by a desire for notoriety, the questioner evolved a problem which could occur seldom or never in real life, and which consequently found no solution in the older responsa or codes, so that a question was asked which was apparently new and thitherto undecided. Yet in this period as in the others many responsa deal with problems taken from actual experience. This is especially true of decisions evoked by many great inventions which have wrought sweeping changes in the relations of life in general, or by changes in the conditions of the Jews in different countries, or by movements within Judaism itself; *e.g.*, those of Reformed and national Judaism and Zionism. Only a few examples can be cited here. In a responsum ("Ḥatam Sofer, Oraḥ Ḥayyim," No. 28) Moses Sofer discussed the problem whether the "bimah" (almemar) might be removed from the center and placed near the Ark, as is now the case in all Reform and even in many Orthodox synagogues, but which was then interdicted as an innovation. In another responsum (*ib.* "Yoreh De'ah," No. 128) he debated whether a Jewish sculptor was permitted by his religion to carve human figures. The movements for the reform of Judaism evoked many responsa in reply to questions concerning the location of the bimah, organ accompaniments, the covering of the head in the synagogue, the seating of men and women together, and prayers in the vernacular. Among the collections of such responsa written in opposition to Reform may be mentioned the "Eleh Dibre ha-Berit" (Amsterdam, 1819), by Moses Sofer, Akiba Eger, and others, protesting against prayers in the vernacular and against the use of the organ on the Sabbath; the "Ẓeror ha-Ḥayyim" of Abraham b. Aryeh Löb, rabbi at Emden (*ib.* 1820); the "Torat ha-Ḳena'ot" (*ib.* 1845), a collection of letters and responsa controverting the resolutions of the rabbinical conference at Brunswick; and the "Meḥolat ha-Maḥanayim," by Israel David Margolies-Schlesinger-Jaffe (Presburg, 1859).

In a responsum Joseph Saul Nathanson discussed the problem of the transfer of a corpse from one place of burial to another ("Sho'el u-Meshib," i., No. 231). In another responsum (*ib.* iii., No. 373) he replied in the affirmative to a question sent him from New York asking whether a Protestant church might be changed into a synagogue. Isaac Schmelkes passed judgment ("Bet-Yiẓḥaḳ," i., Przemysl, 1901, No. 29) on the question of civil marriage, which is permitted by the laws of Hungary between Jews and non-Jews, and he debated also (*ib.* ii., Przemysl, 1895, No. 31) whether electric lights may be used for Ḥanukkah, and (*ib.* No. 58) whether the telephone or the phonograph may be used on the Sabbath. The Jewish colonization of Palestine in recent times has been the occasion of many responsa on questions connected with agriculture and horticulture in the Holy Land, including the problems of the cessation of all labor in the fields during the Sabbatical year and the use of etrogs from the Jewish colony of Palestine.

In addition to the collections of responsa already mentioned, the following may be noted as the most important examples of responsal literature in the nineteenth century: the "Ḥesed le-Abraham" of Abraham Te'omim (Lemberg, 1898), the "Ketab Sofer" of Abraham Samuel Benjamin Sofer (Presburg, 1873–84), and the "Be'er Yiẓḥaḳ" of Isaac Elhanan Spektor (Königsberg, n.d.).

Bibliography: Responsal literature as a whole has as yet found no literary historian; single periods have been discussed while others have been entirely neglected, the works on these separate epochs including: Joel Müller, *Briefe und Responsen aus der Vorgaonäischen Jüdischen Literatur*, Berlin, 1886; idem, *Einleitung in die Responsen der Babylonischen Geonen*, ib. 1891; Zacharias Frankel, *Entwurf einer Geschichte der Literatur der Nachtalmudischen Responsen*, Breslau, 1865. The responsa by European and American rabbis to problems arising in America are summarized by J. D. Eisenstein, *The Development of Jewish Casuistic Literature in America*, Baltimore, 1905.

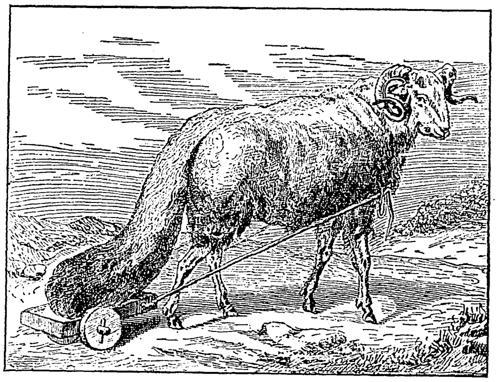
W. B. J. Z. L.

SHEEP.—Biblical Data: The most usual terms for the sheep are "seh" and "kebes" ("keseb"); "kar" (Deut. xxxii. 14; Isa. lviii. 7) denotes the young lamb in pasture; "ṭeleh" (Isa. xl. 11 *et al.*), the suckling lamb; "ayil," the ram; "raḥel," the ewe. In the Aramaic portions of the Old Testament the term "emer" occurs (Ezra vii. 17), which term is found also in the cognate languages. The word "ẓon" is used collectively for small cattle, including sheep and goats.

Uses of the Sheep.

The important place held by the sheep in the husbandry of Palestine is shown by the hundreds of Biblical references to it. It is the first animal distinguished by name (Gen. iv. 4). In patriarchal times sheep formed the chief part of the flocks and herds and the principal source of wealth (comp. Gen. xii. 16, xxiv. 35 *et al.*; Ex. ii. 16). The existence of large numbers of sheep is referred to throughout the Biblical narrative (comp. Num. xxxi. 32; Josh. vi. 21; I Sam. xiv. 32, xv. 3, xxvii. 9; Job i. 3; I Chron. v. 21). Even kings did not disdain to be breeders of sheep (II Kings iii. 4; I Chron. xxvii. 31; II Chron. xxvi. 10, xxxii. 29; comp. Eccl. ii. 7).

The uses of the sheep were manifold. Its flesh, especially that of lambs, was a favorite dish (I Sam. xxv. 18; I Kings iv. 23; Isa. xxii. 13; Amos vi. 4); the ewe's milk also was consumed (Deut. xxxii. 14). The shofar was made of the horn of the ram (Josh. vi. 4), which was used also as a receptacle for oil, etc. (I Sam. xvi. 1). The skin served as covering for tents (Ex. xxvi. 14), and probably as clothing (Heb. xi. 37). But it was chiefly for its wool that the sheep was valued (Deut. xviii. 4; Prov. xxvii. 23, 26; xxxi. 13; Job xxxi. 19), and sheep-shearing was the occasion of a festival (Gen. xxxviii. 12; I Sam. xxv. 2; II Sam. xiii. 23). The white wool of Damascus is especially mentioned (Ezek. xxvii. 18).



Palestinian Sheep, with Cart Supporting Tail.

The sheep was preeminently the animal for sacrifice (Gen. iv. 4; Lev. i. 10 *et passim*; I Kings viii. 5; II Chron. xv. 11). The morning and evening offering in the Sanctuary consisted of a yearling lamb (Ex. xxix. 38; Num. xxviii. 1).

The plain east of the Jordan, and Ammon, Moab, Gilead, Bashan, Carmel, and Sharon were particularly devoted to sheep pasture (Num. xxxii. 4; Isa. lxv. 10; Micah vii. 14; II Kings iii. 4). Arabia also was rich in sheep (Isa. lx. 7; Ezek. xxvii. 21; II Chron. xvii. 11).

The sheep now most common in Palestine is the broad-tailed variety, characterized by a deposit of fat in the tail ("alyah"; comp. Ex. xxix. 22; Lev. iii. 9 *et al.*). In northern Palestine a horned variety similar to the merino is found. Sheep are still abundant east of the Jordan.

Flock and shepherd are often used figuratively in reference to the people and their leaders (Num. xxvii. 17; I Kings xxii. 17; Ezek. xxxiv. 17, xxxix. 18; Zech. xi. 7; Ps. xlix. 15, cxix. 176). The ram is also the emblem of one of the great monarchies (Dan. viii. 3). The patience and meekness of the lamb are alluded to in Isa. liii. 7, Jer. xi. 19, and Ps. xliv. 12, 23 (A. V. 11, 22).

Palestinian Sheep and Shepherd.
(From a photograph by the American colony at Jerusalem.)

——In Rabbinical Literature: A number of additional terms for the sheep are used in the Talmud; *e.g.*, אימרא (Ker. 28b *et al.*), יובלא (R. H. 26a). In the first month of the second year the sheep is called פלגא, נוקד, פרכריגמא (Parah i. 3). The ram is called also זכר של רחלים ("the male of the ewes"; Yeb. 121b), and in the plural דיכרי (Ḥul. 39b); while to the great ram the term ברחא is applied (Shab. 18b). עתודים (properly, "he-goats") occurs sometimes for sheep in general (Ḥul. 84a). The wild ram is איל הבר ("ram of the field"; Ḥul. 80a). Sheep carrying their heavy tails on little wagons are mentioned (Shab. 54b).

The high estimation in which sheep are held in the Talmud is illustrated by the advice: "Sell thy field to buy sheep, but do not sell thy sheep to buy a field" (Ḥul. 84a, b). The most valuable part of the sheep is its wool, and great pains were taken in the care of it (Shab. 6b; Ḥul. 137a). Sheep bearing fine wool were protected by covers to keep the wool clean (Shab. 54a). Shorn sheep wore on the forehead a sponge or a piece of woolen cloth saturated in oil as a protection against cold (*ib.*). Of the ram, the horns were made into wind-instruments, the hollow thigh-bones into flutes, the large intestine into lute-strings, and the small intestine into harp-strings; while from its wool were made the pomegranates in the garment of the high priest, against which the striking of small golden bells produced a tinkling sound (comp. Ex. xxviii. 33–35). Hence the adage: "The ram alive produces only one sound; dead, seven sounds" (Ḳin. 25a). The sheep conceives, as a rule, when it is two years old, and its period of gestation is five months. It copulates with the goat (Bek. 19b). In parturition the young comes forth with the lips first, not with the ears, as does the goat (Bek. 35a). To aid the sheep in parturition pieces of cloth dipped in oil and warmed were bound on its forehead and belly (Shab. 54b). To fatten female sheep their udders were bound up so as to prevent the formation of milk (Shab. 54a). The best sheep were those of Hebron (Soṭah 34b).

SHEEPFOLD. See Shepherd.

SHEFAR'AM (שפרעם; called by the Arabic geographers **Shefa'ram;** modern name, **Shefa 'Amr**): Place in Palestine, three hours distant from Haifa, governed by a mudir. In the second century it served as a refuge for the Sanhedrin (see Usha). Nothing is known of the early history of its Jewish community, which was probably dispersed by the many conquerors that from time to time invaded Palestine. Shefar'am is not mentioned by any traveler, either Jewish or Gentile, since it is not on the highway to Haifa, nor on that from Acre to Tiberias or Safed.

About 1741 or 1742 a large number of Palestinian Jews settled at Shefar'am, encouraged by Rabbi Ḥayyim Abulafia of Smyrna, who established a community at Tiberias also. The Jews of Shefar'am were at first employed in agriculture, but as the government oppressed them with taxes, they left their farms and engaged in commerce. The local authorities gave the lands to the Druses, but when these refused to pay the taxes the lands were taken away from them and restored to the Jews. The latter, though engaged in business also, cultivate some acres of land and raise olives.

In a total population of 1,345 inhabitants there were in Shefar'am in 1901 seven Jewish families aggregating forty-five individuals. Among them are three haberdashers and dealers in dry-goods, one greengrocer, one oculist, one druggist, and an official who combines the functions of ḥazzan, shoḥet, mohel, and teacher. Shefar'am possesses a school subsidized by the Alliance Israélite Universelle, a small synagogue, a bath for women ("miḳweh"), and an abandoned synagogue, several centuries old, which contains ancient scrolls of the Law.

SHEFELAH. See Palestine.

SHEFTALL (SHEFTAIL): American family, well known in Georgia, members of which are at present living in Savannah.

Benjamin Sheftall: American merchant; born in England at the beginning of the eighteenth century; died at Savannah. He was one of forty immigrants who arrived at Savannah in July, 1733. He left two sons, Levi and Mordecai. Benjamin commenced the well-known "Sheftall manuscript," completed by his son Mordecai, in which the immigration of the Jews to Georgia in 1733 is described. He was known for his antislavery views, and was one of the founders of the Union Society of Savannah. His eldest son, Levi, was a merchant in Savannah, and held, like his father, a leading place in the affairs of the Jewish congregation.

A. F. T. H.

Mordecai Sheftall: American soldier, and patriot in the Revolutionary war; born at Savannah, Ga., 1735; died there 1797. He was one of the first white children born in the colony, being a son of Benjamin Sheftall, who arrived in Savannah shortly after Oglethorpe, and whose name is mentioned in the first deed of Georgia. Mordecai received a fair education, and, on attaining manhood, became a prominent merchant. Long before the Revolution he was a member of the well-known Union Society. For several years the only Jewish place of worship in Savannah was a room fitted up by him in his own house, where services were held until about 1774. In 1773 he deeded a piece of land to his coreligionists for the purpose of erecting a synagogue; but the project was abandoned owing to the excitement preceding the troubles with Great Britain.

Imprisonment.

From the very outbreak of the Revolution Sheftall was prominently identified with the American cause. He became chairman of "the Parochial Committee," organized to regulate the internal affairs of Savannah, and composed of patriots opposed to the royal government. As chairman of this rebel committee he was subsequently denounced and persecuted by the British. In 1777 Sheftall was appointed commissary-general to the troops of Georgia and to the Continental troops also; in October of the following year he became "Deputy Commissary of Issues in South Carolina and Georgia"; and he figured as a staff-officer in the Continental line of the Georgia brigade during the war. When the British attacked Savannah in 1778, Sheftall not only took an active part in its defense, but he also advanced considerable sums of money for the American cause. After the city had been taken he was captured, but he resisted all inducements to give up the cause of liberty; as a result he suffered severely from persecution on the part of the British, and was placed on board a prison-ship. It was probably during this captivity, part of which was spent in the West Indies, that he wrote the details of his imprisonment in a journal, which seems to have been subsequently published under the title "Capture of Mordecai Sheftall, Deputy Commissary-General of Issues," etc. Excerpts from this work are given in White's "Historical Collections of Georgia," in which Sheftall's captivity is graphically described. The British appear to have spoken of Sheftall as "a very great rebel." Georgia historians point with pride to his successful efforts during this dark period in preserving the Union Society, which is still one of Savannah's representative organizations. With the aid of three fellow prisoners who were among the leading patriots of the colony, the meetings of the society were regularly held and its anniversaries celebrated, Sheftall being chosen president. When, in 1825, Lafayette laid the corner-stone of the Pulaski monument at Savannah, there was deposited therein, among other precious relics, "a piece of the oak-tree from Sunbury, Liberty county, Georgia, under which in 1779 the charter of the Union Society was preserved; and Mr. Mordecai Sheftall, then a prisoner of war, was elected president."

In 1780 Sheftall figured as a witness at the court martial of Major-General Howe, who, in the course of his successful defense, remarked: "Mr. Sheftall is an honest man, and from the testimony of such I know that I have nothing to fear." Sheftall's name appears near the head of the list in the "Disqualifying Act" passed by the British in 1780, in which it is associated with those of the foremost patriots of Georgia, he being described as "Chairman of Rebel

Parochial Committee." In 1782 he appears at Philadelphia, which was then the haven for patriot refugees, as one of the founders of the Mickvé Israel congregation. In the following year he, in common with other officers, received a grant of land in what was called "The Georgia Continental Establishment," in token of his services during the war. He subsequently figures as one of the incorporators of the Union Society (1786); and his name is also closely associated with the early history of freemasonry in the United States.

After the Revolution Sheftall was one of the foremost reorganizers of the Savannah congregation; and he was largely instrumental in securing the first enclosed Jewish burial-ground in that city. The records of Congress show that Sheftall subsequently made efforts to recover some of the money he had advanced to the American cause. The documents connected with this case are quite numerous; but, though the claim was favorably reported, the money has not been paid to the heirs.

A. L. Hü.

Moses Sheftall: Son of Mordecai Sheftall; born in Savannah Oct. 12, 1796. He practised as a physician in his native town and was elected twice to the state legislature. He was also a judge of the county court.

Sheftall Sheftall: Son of Mordecai Sheftall; captured by the British while acting as deputy commissioner in the Revolutionary war and sent as prisoner to the West Indies.

SHEḤIṬAH: The ritual slaughtering of animals. While the practise that prevailed among the nations of antiquity other than the Hebrews, of cutting off a limb from a living animal and eating it, is condemned in several passages in the Bible (see Cruelty to Animals; Dietary Laws), no definite mode of slaughter is prescribed. In connection with the preparation of an animal for sacrifice the term "shaḥaṭ" is used (Lev. i. 5, 11; iii. 2, 8, 13); but this denotes merely that the animal is to be killed, and not how it is to be slaughtered. There can be but little doubt, however, that in slaughtering the sacrificial animals the priests followed some uniform mode akin to that which was later adopted by all Israel and which is known as "sheḥiṭah" (see Sifre to Deut. xii. 21). Speculating on the etymology of the words "shaḥaṭ" and "zabaḥ," the Rabbis endeavored thereby to establish on a Scriptural basis the law that an animal should be slaughtered by cutting the throat (Ḥul. 27a). The current opinion, however, was that all the laws of sheḥiṭah were given orally to Moses by God (*ib.* 28a, based on Deut. xii. 21). One opinion is to the effect that Moses was commanded concerning the sheḥiṭah of mammals only, and not concerning that of birds, the latter, therefore, being merely a rabbinic institution (*ib.* 27b, 28a).

Origin Traditional.

The laws of sheḥiṭah apply only to mammals and birds, not to fishes and locusts (*ib.* 27b, based on Num. xi. 22). The latter, however, should not be eaten alive (Shulḥan 'Aruk, Yoreh De'ah, 13, 1, Isserles' gloss). The young found in an animal which has been duly slaughtered may be eaten without the carrying out of the usual form of sheḥiṭah, provided it did not "step on the ground," *i.e.*, if it is used for food soon after being found in its mother's womb (Ḥul. 74a).

Qualifications of Shoḥaṭim.

The slaughtering of animals is entrusted only to persons versed in the Law and skilled in their work. Sheḥiṭah may not be performed by the following: a deaf-mute, idiot, or minor (*ib.* 2a); one who is intoxicated (Yoreh De'ah, 1, 8, and Isserles' gloss); an old man whose hands tremble, it being apprehended that he may press the knife against the throat of the animal instead of gently moving it forward and backward (comp. "Be'er Heṭeb" and "Pitḥe Teshubah," on Yoreh De'ah, 1, 5); a non-Jew, even though not an idolater (Ḥul. 13a, b); a Jew who spitefully transgresses the laws of Judaism ("mumar le-hak'is"; Yoreh De'ah, 2, 5; see Heresy). Some authorities considered women incompetent to perform sheḥiṭah (Tos. to Ḥul. 2a, *s.v.* "Ha-kol"; Yoreh De'ah, 1, 1, Isserles' gloss), an opinion that came to be generally accepted.

At the present time the custom is to allow no one to slaughter unless he has passed a rigid examination before a competent authority in all the laws of sheḥiṭah and of Ṭerefah, especially those pertaining to the examination of the lungs, and has received a written certificate ("ḳabbalah") of his knowledge of such laws, of his expertness in examining the knife, and of his skill in slaughtering. Even after he has received such a certificate and has been permitted to slaughter animals, the shoḥeṭ is enjoined to review the laws of sheḥiṭah occasionally (at least every thirty days), so that he may remain well versed in them (*ib.* 1, 1, Isserles' gloss).

The Knife.

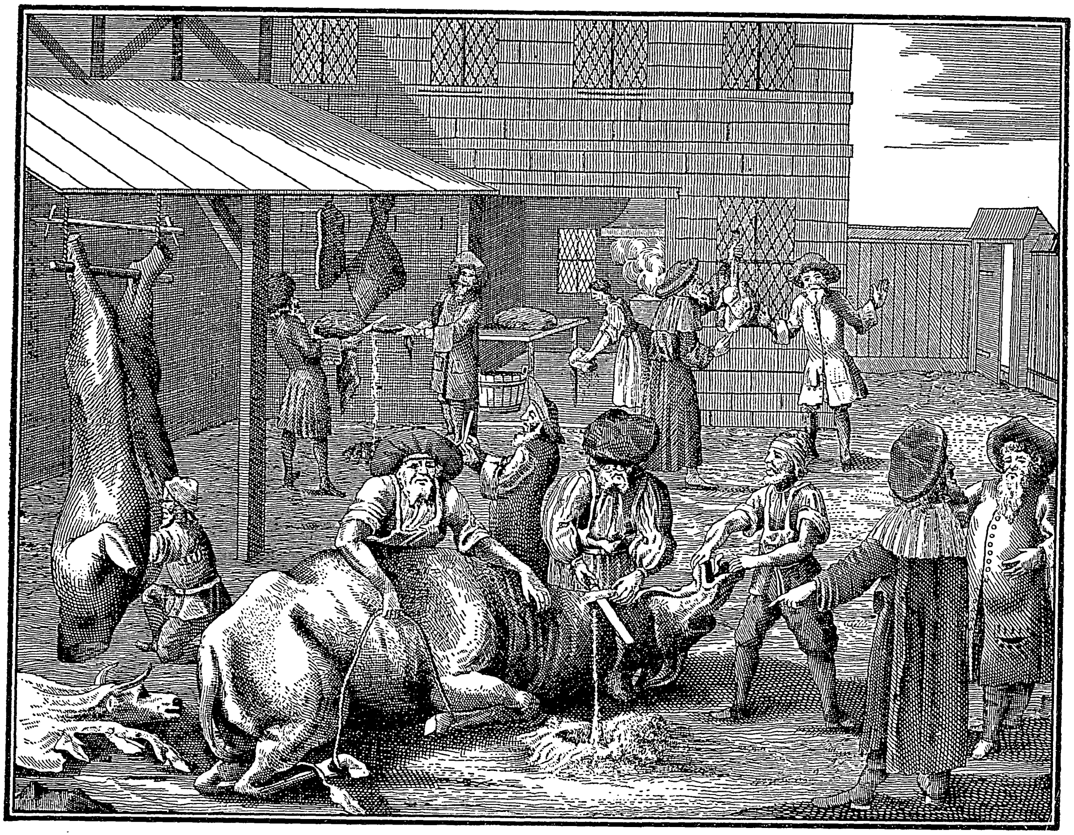
The length of the knife ("ḥallaf") with which sheḥiṭah is performed must be twice the width of the throat of the animal about to be slaughtered, the maximum length being fourteen fingerbreadths (*ib.* 8, Isserles' gloss). The knife must be sharp, smooth, and without any perceptible notch; and it must be thoroughly examined before the slaughtering, by passing first the finger and then the finger-nail over its edge and both sides (Ḥul. 17b). It should be similarly examined after the slaughtering; and if a notch in it should then be found the animal becomes ritually unfit for food (*ib.* 10a). It is customary for the shoḥeṭ to occasionally submit his knife to the rabbi for examination (*ib.* 18a). In Yoreh De'ah, 18, 17, the opinion is expressed that this examination is no longer necessary, since only pious and learned men are now appointed as shoḥaṭim. The custom, however, still prevails. Before slaughtering, the following blessing is pronounced: "Blessed art Thou . . . who sanctified us with His commandments and commanded us concerning slaughtering." In case many animals are to be slaughtered at the same time one blessing is sufficient. After the blessing has been pronounced no irrelevant conversation is permitted (Ḥul. 86b; Yoreh De'ah, 19).

The Process.

The act of slaughtering proper consists in cutting through the windpipe and the gullet in mammals, or either of these in birds. If the greater part of both these organs is cut through (or, in birds, the greater part of either), the animal is considered ritually slaughtered (Ḥul. 27a). The veins along both sides of the neck of a bird must be pierced at the time of slaughtering (*ib.*; Yoreh De'ah, 21, 22). The many details of sheḥiṭah were summarized by the Rabbis under the following five laws, which were supposed by them to have been delivered by God to Moses (Ḥul. 9b):

(1) "Shehiyah" (delay). There should be no delay or interruption while the slaughtering is being performed. The knife should be kept in continuous motion, forward and backward, until the organs are cut through. A delay of even one moment makes the animal unfit for food ("nebelah"; Yoreh De'ah, 23).

(2) "Derasah" (pressing). The knife must be drawn gently across the throat, without any undue exertion on the part of the shoḥeṭ. It is therefore forbidden to lay one's finger on the blade while slaughtering, as the least pressure renders the animal unfit for food (*ib.* 24, 1-6).



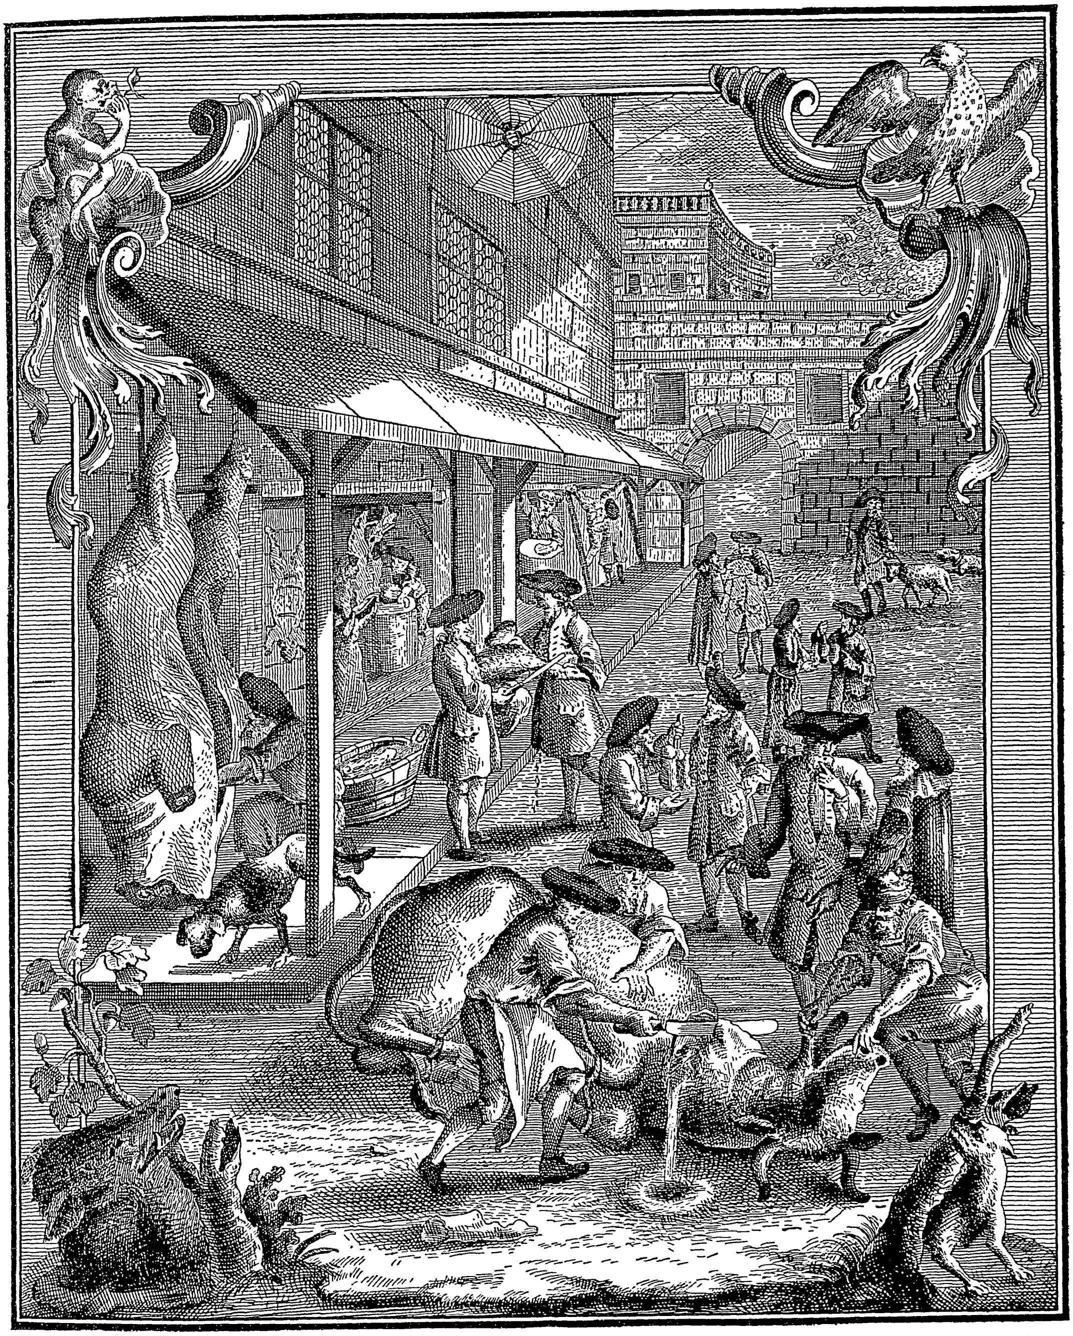
GERMAN JEWISH SLAUGHTERING-YARD OF THE EARLY EIGHTEENTH CENTURY.
(From Kirchner, "Jüdisches Ceremoniel," 1726.)

(3) "Ḥaladah" (digging). The knife must be drawn over the throat. If it is placed between the windpipe and the gullet, or under the skin, or under a cloth hung over the neck of the animal, so that any part of the knife is not visible while sheḥiṭah is being performed, although the slaughtering is otherwise correctly executed, the animal is unfit for food (*ib.* 24, 7-11).

(4) "Hagramah" (slipping). The limits within which the knife may be inserted are from the large ring in the windpipe to the top of the upper lobe of the lungs when inflated, and the corresponding length of the pharynx (*ib.* 20). Slaughtering by the insertion of the knife in any part above or below these limits is called "hagramah," and renders the animal unfit for food (*ib.* 24, 12-14).

(5) "'Iḳḳur" (tearing). If either the windpipe or the gullet is torn out or removed from its regular position during the slaughtering, the animal becomes unfit for food. If this has happened while the animal was yet alive, the latter is not regarded as "nebelah," and its eggs or milk may be used for food; but the animal itself can not become ritually fit for food through slaughtering (*ib.* 24, 15-20).

Soon after sheḥiṭah the shoḥeṭ must examine the throat of the animal and ascertain whether the windpipe and the gullet are cut through according to the



GERMAN JEWISH SLAUGHTERING-YARD OF THE EIGHTEENTH CENTURY.

(From Bodenschatz, "Kirchliche Verfassung," 1748.)

requirements of the Law (Ḥul. 9a; Yoreh De'ah, 25). In the case of birds and of permitted wild beasts, some of the blood shed in the course of sheḥiṭah must be covered with earth or ashes (Lev. xvii. 13), the following benediction being first pronounced: "Blessed art Thou . . . who sanctified us with His commandments and commanded us to cover blood with earth" (Ḥul. vi; Yoreh De'ah, 28). For the prohibition against slaughtering an animal and its young on the same day, see CRUELTY TO ANIMALS.

SLAUGHTERING-KNIVES.
(In the possession of Maurice Herrmann, New York.)

SHEIN, PAVEL VASILYEVICH: Russian ethnographer; born in 1826; died at Riga Aug. 14, 1900. He studied at the University of Moscow, and after conversion to Protestantism he became in the fifties a teacher of Russian in the district school of Tula and later in the school of Yasnaya Polyana, established by Count Leo Tolstoi. Deeply interested in the language and customs of his country, he devoted himself to the study of Russian folk-lore, and notwithstanding the fact that he was crippled he visited numerous villages and hamlets in various parts of the country, collecting songs and stories from the peasants.

Shein's most important work was "Bytovaya i Semeinaya Zhizn Byelo-Russi v Obryadakh i Pyesnyakh" (St. Petersburg, 1890), which was published under the auspices of the St. Petersburg Academy of Sciences. He was the author also of "Velikorus v Svoikh Pyesnyakh, Obryadakh, i Pr.," which was one of his last works.

SHEITEL. See WIG.

SHEḲALIM: Treatise of the Mishnah, the Tosefta, and the Jerusalem Talmud, dealing with the half-shekel tax which was imposed for defraying the expenses of the Temple service (comp. Ex. xxx. 12 *et seq.*; Neh. x. 33); also with the other institutions of the Temple at Jerusalem. In most of the Mishnah editions the treatise is the fourth in the order Mo'ed, and is divided into eight chapters, containing fifty-one sections in all.

Contents: Ch. i.-iii.

Ch. i.: Concerning the method of calling for payment of the tax on the first day of the twelfth month, Adar; public works undertaken on the fifteenth of Adar; on that day the money-changers set up their tables in Jerusalem for the purpose of exchanging foreign moneys for the coin in which the tax was payable; on the twenty-fifth of Adar the changers set up their tables in the Temple itself; on the last-mentioned date also they began to take pledges from those persons who had not paid the tax, no pledges being exacted from the priests, although they were obliged to pay the tax, and committed a sin in refusing to do so; women, slaves, and minors were not required to pay the tax, though their money was accepted if they offered it; the tax was not accepted from pagans and Samaritans, even if they wished to pay it; cases in which a small sum was paid in addition to the half-shekel.

Ch. ii.: Concerning the changing of the sheḳalim into gold coin, in order to transport the money more easily to Jerusalem; the boxes placed in the Temple and throughout the province, into which every person dropped his half-shekel; cases in which the money was lost or stolen en route to Jerusalem; cases in which a person paid his tax with consecrated money; the different kinds of coin in which the tax was paid at different times during the Second Temple; ways of using money collected for certain purposes.

Ch. iii.: Concerning the three days of the year on which the gold coin handed in was taken from the treasury and placed in three baskets, from which it was subsequently taken for the purchase of the sacrifices; manner of removing this money from the treasury so that the persons engaged in the work might in no wise be suspected of theft; manner of marking, either with Hebrew or with Greek letters, the three baskets in which the money was placed.

Ch. iv.-viii.

Ch. iv.: Relating to the things purchased with the money taken from the treasury, and what was done with the money remaining there; regulations for disposing of the remnants of other dedicated objects (§§ 1-5); manner of disposing of objects suitable for sacrifices, which were included in property that a person had left to the Temple (§§ 6-8); manner of determining once in thirty days the price of the wine, oil, and meal needed in the Sanctuary (§ 9).

Ch. v.: Enumeration of the fifteen offices connected with the Sanctuary, and the names of the heads of these offices; the four checks or counters representing the measures used in the different sacrifices; the sacrificer requiring wine, oil, and meal for his sacrifice went to the keeper of these checks, and received one on payment of the requisite sum; with this check he went to the keeper in charge of the ingredients of the sacrifice, who gave him what he needed for his offering; subsequent treatment of the checks; the two apartments in the Temple in which gifts were placed; one of them was called "secret chamber," because the names of the donors as well as those of the poor who received relief from such gifts were kept secret.

Ch. vi.: Occurrence of the number thirteen in connection with the Sanctuary; the thirteen jars, thirteen tables, and thirteen obeisances made in thirteen different places therein; where the Ark of the Covenant was concealed; once a priest in doing some work noticed that a certain part of the floor was different from the rest; when he mentioned the fact to his colleagues, he was immediately stricken dead, whereupon they perceived that the Ark was concealed below that portion.

Ch. vii.: Regulations regarding the disposal of money, meat, or cattle found in the Sanctuary at Jerusalem or in the vicinity of that city; seven regulations issued by the court ("bet din") in reference to sacrifices and to dedicated objects.

Ch. viii.: Regulations regarding the cleanness or uncleanness of saliva, and of vessels and slaughtering-knives found in Jerusalem; purification of the curtain of the Temple when defiled in any way; value of the curtain before the Sanctuary; the half-shekel tax and the offering of the firstlings of the fruit ceased with the destruction of the Temple.

Tosefta and Gemara.

The Tosefta on this treatise is divided into three chapters, and contains many interesting additions and supplements to the Mishnah. Noteworthy is the discussion of the question whether the Ark of the Covenant was taken to Babylon or whether it was concealed in the ground below the spot where it had stood in the Sanctuary (ii. 18); regulation regarding the time of apprenticeship which the Levites were required to serve in order to become qualified to enter into the Temple service (iii. 26).

The Babylonian Talmud having no Gemara to this treatise, the Palestinian Gemara is printed in the editions. The latter contains, besides comments on the Mishnah, many sentences and haggadic interpretations, as well as legends and myths. Some of the sentences may be quoted here: "The pious and the sages need no monuments; for their wise sayings and noble deeds commemorate them forever in the minds of men" (ii. 7). "If the sentence of a dead sage is repeated, his lips move in the grave" (*i.e.*, he speaks though no longer living; *ib.*). "When David was about to build the Temple, God asked him, 'For what is the Temple intended? For the purpose of bringing sacrifices to Me there? I prefer the exercise of right and justice to all sacrifices'" (Prov. xxi. 3) (*ib.*). "R. Meïr said: 'Whoever lives in Palestine, speaks Hebrew, observes the laws of purification, and reads the "Shema'" every morning and evening is sure of participating in the future life'" (iii. 5, end). There is also an interesting criticism of persons who spend large sums in erecting buildings for academies, though this money might be employed to better advantage in aiding the students (v. 15, end).

W. B. J. Z. L.

SHEKANZIB (שכנציב): Small town near Nehardea, in Persia, perhaps identical with Al-Zib on the Tigris, and possibly with זיפתא ('Er. 64a, MS. reading). According to M. Ḳ. 28b, its women were noted for the beautiful songs of mourning which they sang at burials. Rabbi Judah ha-Nasi refused to allow his children to live there because it was a town of mockers (Pes. 112b); but Rab Naḥman married a woman of Shekanẓib (Yeb. 37b). Sherira Gaon states in his letter (in Neubauer, "M. J. C." i. 29) that Rabba bar Abuha fled to that town when Papa ben Naẓar captured Nehardea.

J. S. O.

SHEKEL (שקל): Name of (1) a weight and of (2) a silver coin in use among the Hebrews.

1. Weight: It has long been admitted that the Israelites derived their system of weights and coins from the Babylonians, and both peoples divided the talent (ככר) into 60 minas (מנה), each mina consisting of 60 shekels, so that the talent contained 3,600 shekels. This division into 3,600 shekels is generally supposed to be implied in Ezek. xlv. 12 (comp. Riehm, "Handwörterbuch," p. 509), but the inference is incorrect, for the passage is almost certainly corrupt (comp. Smend, Cornill, and Krätzschmar, *ad loc.*). In fact, it actually states that the mina contained 50 shekels, which would make the talent equal to 3,000 shekels, so that a mina equals 818.6 grams, and a talent equals 49.11 kilograms. A similar talent is found among other peoples, for the Greeks and Persians likewise divided the mina into 50 shekels, while the division of the talent into 60 minas was universal. This division into 50 is evidently a consequence of the conflict of the decimal and the sexagesimal system, the Egyptian influence making itself felt side by side with the Babylonian.

It may possibly be inferred from Ezek. xlv. 12 that in the exilic period and the time which immediately preceded it the division of the mina into 50 shekels became customary among the Jews, and that this was simultaneous with the division of the shekel into 20 gerahs (גרה), since this coin is mentioned only in Ezekiel and in the Pentateuch (Ex. xxx. 13; Lev. xxvii. 25; Num. iii. 47). In the pre-exilic period half-shekels (בקע) and quarter-shekels are mentioned, while in the Pentateuch the Temple tax was determined according to the "shekel of the sanctuary," which was equal to 20 gerahs. The meaning of the phrase "shekel of the sanctuary" is uncertain, but at all events there is no justification for the rabbinical assumption that in addition to it there was also a common shekel of one-half its value, for there are no references whatever to the latter. It is possible, however, that the "shekel of the sanctuary" may be contrasted with the smaller silver shekel, and that it may have received its name from the fact that the standard weight was kept in the Temple.

2. Coin: The shekel was the unit of coinage as well as of weight, and the pieces of metal which served for currency were either fractions or multiples of the standard shekel. As already noted, the struggle of the Egyptian decimal and the Babylonian sexagesimal system for supremacy was especially evident in the gold and silver weights, and the fact that the mina of 50 shekels became the standard was probably due to Phenician influence. The gold shekel was originally $\frac{1}{60}$ of the weight of the mina, and the silver shekel, which was intended to correspond in value to the gold one, should consequently have been $\frac{40}{3} \times \frac{1}{60} = \frac{2}{9}$ of the weight of the mina, since the ratio between gold and silver had gradually become as 40 to 3. Since this shekel could not have been commonly used as currency, however, a demand arose for a smaller coin of practical size, which might be made either by dividing the silver equivalent of the gold shekel into ten parts, thus giving a silver shekel of $\frac{2}{90} = \frac{1}{45}$ of the weight of the mina, or by dividing the silver equivalent into fifteen parts, giving a silver shekel of $\frac{2}{9 \times 15} = \frac{2}{135}$ of the weight of the mina. When the decimal system had become established the gold and the silver mina each were reckoned at 50 of these shekels. Hence there were (1) the Babylonian silver mina, equal to $\frac{50 \times 1}{45} = \frac{10}{9}$ of the weight of the mina, and (2) the Phenician silver mina, equal to $\frac{50 \times 2}{135} = \frac{100}{135} = \frac{20}{27}$ of the weight of the mina.

In the original Babylonian silver currency the silver shekel was divided into thirds, sixths, and twelfths, while in the Phenician currency it was divided into halves, fourths, and eighths. These Phenician silver shekels were current among the Jews also, as is shown by the fact that the same division is found among them, a quarter of a shekel being mentioned in I Sam. ix. 8, while a half-shekel is mentioned as the Temple tax in the Pentateuch. The extant shekels of the Maccabean period vary between 14.50 and 14.65 grams, and are thus equivalent to $\frac{2}{135}$ of the great "common" Babylonian mina —14.55 grams. The mina was equivalent, therefore, to 725.5 grams, and the talent to 43.659 kilograms. The Babylonian shekel, which was equal to $\frac{10}{9}$ of the weight of the mina, was introduced in the Persian time, for Nehemiah fixed the Temple tax at a third of a shekel. This Persian monetary system was based on the small mina, its unit being the siglos, which was equal to one-half of the Babylonian shekel, its ratio to the Jewish shekel being 3 to 8. It was considered the hundredth instead of the fiftieth part of the mina, and weighed between 5.61 and 5.73 grams, while the mina weighed between 565 and 573 grams, and the talent between 33,660 and 34,380 kilograms.

In the Maccabean period the Phenician silver shekel was again current, the Temple tax once more being a half-shekel (Matt. xvii. 24-27, R. V.). See NUMISMATICS.

E. G. H. W. N.

SHEKINAH (שכינה; lit. "the dwelling"): The majestic presence or manifestation of God which has descended to "dwell" among men. Like MEMRA (= "word"; "logos") and "Yeḳara" (*i.e.*, "Kabod" = "glory"), the term was used by the Rabbis in place of "God" where the anthropomorphic expressions of the Bible were no longer regarded as proper (see ANTHROPOMORPHISM). The word itself is taken from such passages as speak of God dwelling either in the Tabernacle or among the people of Israel (see Ex. xxv. 8, xxix. 45-46; Num. v. 3, xxxv. 34; I Kings vi. 13; Ezek. xliii. 9; Zech. ii. 14 [A. V. 10]). Occasionally the name of God is spoken of as descending (Deut. xii. 11; xiv. 23; xvi. 6, 11; xxvi. 2; Neh. i. 9). It is especially said that God dwells in Jerusalem (Zech. viii. 3; Ps. cxxxv. 21; I Chron. xxiii. 25), on Mount Zion (Isa. viii. 18; Joel iv. [A. V. iii.] 17, 21; Ps. xv. 1, lxxiv. 2), and in the Temple itself (Ezek. xliii. 7). Allusion is made also to "him that dwelt in the bush" (Deut. xxxiii. 16, שכני סנה); and it is said that "the glory of the Lord abode upon Mount Sinai" (Ex. xxiv. 16). The term "Shekinah," which is Hebrew, whereas "Memra" and "Yeḳara" are Aramaic, took the place of the latter two in Talmud

In the Targumim.

and Midrash, and thus absorbed the meaning which they have in the Targum, where they almost exclusively occur. Nevertheless the word "Shekinah" occurs most frequently in the Aramaic versions, since they were intended for the people and were actually read to them, and since precautions had therefore to be taken against possible misunderstandings in regard to the conception of God. The word "dwell" in the Hebrew text is accordingly rendered in the Targumim by the phrase "let the Shekinah rest" (*e.g.*, Ex. xxv. 8; xxix. 45, 46; Num. v. 3, xxxv. 34; Deut. xxxii. 10 [R. V. "he compassed him about"]; Ps. lxxiv. 2). Onḳelos translates "Elohim" in Gen. ix. 27 by "Shekinah"; and wherever the person, the dwelling, or the remoteness of God is mentioned, he paraphrases by the same word (Num. xiv. 14, 42; xvi. 3; xxxv. 34; Deut. i. 42, iii. 24, iv. 39, vi. 15, vii. 21, xxiii. 16, xxxi. 17); so too, wherever the Name occurs, he substitutes for it the term "Shekinah" (Deut. xii. 5, 11, 21), and "presence" or "face" is translated the same way (Ex. xxxiii. 14–15; Num. vi. 25; Deut. xxxi. 17–18; see Maybaum, "Anthropomorphien," etc., pp. 52–54). Targ. pseudo-Jonathan and Yerushalmi adopt a like system, as in Ps. xvi. 8, lxxxix. 47, Lam. ii. 19, and Cant. vi. 1 (*ib.* pp. 64 *et seq.*). Where the text states that God dwells in the Temple above the cherubim (as in Hab. ii. 20; I Sam. iv. 4; II Sam. vi. 2; I Kings viii. 12, 13; xiv. 21; Ps. lxxiv. 2), or that God has been seen (Isa. vi. 6 *et seq.*; Ex. iii. 6; Ezek. i. 1; Lev. ix. 4), the Yerushalmi has "Shekinah"; and even where it describes God as abiding in heaven, the same word is used (Isa. xxxiii. 5; Deut. iii. 24, iv. 39). This statement holds true also of allusions to His remoteness or to the hiding of His face (Hos. v. 6; Isa. viii. 17, xlv. 15; Hastings, "Dict. Bible," iv. 488b). The Temple is called the "house of the Shekinah" (Targ. Onḳ. to Deut. xii. 5; Ps. xlix. 15, cviii. 8); and the term likewise occurs in connection with "glory" ("yeḳara"; Ruth ii. 12; Cant. iii. 6, iv. 6, v. 6; Ps. xliv. 25, lxviii. 19, cxv. 16; Jer. xix. 18) and with "holiness" (Cant. i. 10, ii. 2, iii. 2, vi. 1; Ps. lxxiv. 12, lxxxvi. 3).

In the Apocrypha and New Testament.

Since the Shekinah is light, those passages of the Apocrypha and New Testament which mention radiance, and in which the Greek text reads *δόξα*, refer to the Shekinah, there being no other Greek equivalent for the word. Thus, according to Luke ii. 9, "the glory of the Lord [*δόξα Κυρίου*] shone round about them" (comp. II Peter i. 17; Eph. i. 6; II Cor. iv. 6); and it is supposed that in John i. 14 and Rev. xxi. 3 the words *σκηνοῦν* and *σκηνή* were expressly selected as implying the Shekinah. The idea that God dwells in man and that man is His temple (*e.g.*, Col. ii. 9; II Cor. vi. 16; John xiv. 23) is merely a more realistic conception of the resting of the Shekinah on man.

Nature of the Shekinah.

Maimonides ("Moreh," i. 28 [Munk's translation, "Guide des Egarés," i. 58, 73, 88, 286, 288; iii. 43, 93]; Maybaum, *l.c.* pp. 5, 34) regarded the Shekinah, like the Memra, the Yeḳara, and the Logos, as a distinct entity, and as a light created to be an intermediary between God and the world; while Naḥmanides (Maybaum, *l.c.*), on the other hand, considered it the essence of God as manifested in a distinct form. So in more modern times Gfrörer saw in "Shekinah," "Memra," and "Yeḳara" independent entities which, in that they were mediators, were the origin of the Logos idea; while Maybaum, who was followed by Hamburger, regarded the Shekinah merely as an expression for the various relations of God to the world, and as intended to represent: (1) the dwelling of God in the midst of Israel; (2) His omnipresence; (3) His personal presence, etc. (Maybaum, *l.c.* pp. 51–54). That the Shekinah was not an intermediary is shown by the Targum to Ex. xxxiii. 15, xxxiv. 9 (Maybaum, *l.c.* pp. 5, 34), where the term "Shekinah" is used instead of "God." The word often occurs, however, in connections where it can not be identical with "God," *e.g.*, in passages which declare that "the Shekinah rests," or, more explicitly, that "God allows His Shekinah to rest," on such a one. In short: in the great majority of cases "Shekinah" designates "God"; but the frequent use of the word has caused other ideas to be associated with it, which can best be understood from citations. In this connection the statements of the Talmud and Midrash are more characteristic than those of the Targumim, because they were spontaneous and were not made with reference to the text of the Bible. The Shekinah is frequently mentioned, even in the very oldest portions; and it is wholly unjustifiable to differentiate the Talmudic conception thereof from the Targumic, as has been attempted by Weber, although absolute consistency is observed neither in Targum, nor in Talmud and Midrash, since different persons have expressed their views therein.

Appearances of the Shekinah.

Jose (*c.* 150) says: "The Shekinah never came down to earth, nor did Moses and Elijah ever ascend to heaven, since it is said. Ps. cxv. 16: 'The heaven, even the heavens, are the Lord's: but the earth hath he given to the children of men'" (Suk. 5a, above). The Shekinah is here identical with YHWH. This view was, however, challenged even in the Talmud. Ab. R. N. xxxviii. says: "The Shekinah descended to earth, or will have descended, ten times (as to the tenth see Schechter's note, Recension A, *ad loc.*): to the garden of Eden (Gen. iii. 8); when the Tower of Babel was built (*ib.* xi. 5); to Sodom (*ib.* xxi.); to Egypt (Ex. iii. 8); to the Red Sea (II Sam. xxii. 10); upon Sinai (Ex. xix. 10); in the pillar of cloud (Num. xi. 25); to the Sanctuary (Ezek. xliv. 2); and it will again descend at the time of Gog and Magog (Zech. xiv. 4). The Shekinah appeared also in the burning bush (Ex. R. ii.), and it was everywhere (B. B. 25a). Two arks came up out of Egypt with Israel: one containing the Shekinah, and the other the body of Joseph (Soṭah 13a). Canaan was the only land worthy of the Shekinah, which rested in the territory of Benjamin (Mek., ed. Friedmann, p. 31a; Zeb. 54b); the country beyond the Jordan was not worthy thereof (Num. R. vii.). Although the Shekinah was enthroned in heaven, it observed and scrutinized mankind (Ex. R. ii.). The Tabernacle was erected in order that the Shekinah might dwell on earth (Num. R. xii.); and it actually entered the Holy of Holies (Sanh. 103b). Wheresoever the Israelites went in exile the Shekinah accompanied them; and when they were redeemed it likewise was released (Meg. 29a; see also R. H. 3a; B. Ḳ. 25a; Zeb. 118b; Soṭah 5a; Shab. 67a).

Those on Whom the Shekinah Rested.

The Shekinah was one of the five things lacking in the Second Temple (Targ. to Hag. i. 8; Yer. Ta'an. 65a, and parallel passages). Shunning the Gentiles, it rested solely among the Israelites (Shab. 22b), and even there only when they numbered at least 2,002 myriads (Ber. 7a; Yeb. 64a; B. B. 15b; comp. Sanh. 105b), confining itself solely to those of this multitude who were of pure and therefore aristocratic lineage (Ḳid. 70b) and who were wise, brave, wealthy, and tall (Shab. 92a; comp. Ned. 38a); but even for such it would not descend into an atmosphere of sadness (Shab. 30b and parallel passages), since there can be no sorrow in the presence of God (Ḥag. 5b); nor should one pray in a sorrowful frame of mind (Ber. 31a).

The polemic attitude which the conception of the Shekinah betrays toward the founder and the ideal of Christianity is unmistakable. The Shekinah rested upon the priests even if they were unclean (Yoma 56b); and if it was lacking, none approached them for an oracle (*ib.* 75b). Prominent doctors of the Law were considered worthy of the Shekinah, but both their generation (*i.e.*, their contemporaries) and their place of residence (*i.e.*, in a foreign land) deprived them of its presence (Suk. 28a; B. B. 60a; Soṭah 48b; M. Ḳ. 25a). In all these statements the Shekinah is identical with the Holy Spirit. It was received by thirty-six pious persons (Suk. 45b), a number which recalls the thirty-six nomes of Egypt and their gods. The Shekinah was also believed to be a protection, as is still the case in the night prayer: "on my four sides four angels, and above my head the Shekinah of God" (comp. Ḳid. 31a). The Shekinah is found at the head of the sick (Shab. 12b) and at the right hand of man (Targ. to Ps. xvi. 8). Pharaoh's daughter saw it at the side of Moses (Soṭah 11a; comp. Targ. to Judges vi. 13), and it spoke with the prophet Jonah twice (Zeb. 98a), with Adam, with the serpent (Bek. 8a; Shab. 87a; Pes. 87b *et passim*), and with others.

To Whom Does the Shekinah Appear?

Unsullied thoughts and pious deeds render one worthy of the Shekinah, which is present when two are engaged with the Torah (Ab. iii. 3), when ten pray (Ber. 6a; Ab. 3, 9), and when the mysticism of the MERKABAH is explained (Ḥag. 14b); and it is likewise attracted by the study of the Law at night (Tamid 32b); the reading of the "Shema'" (Shab. 57a); prayer (B. B. 22a); hospitality (Shab. 127a; Sanh. 103b); benevolence (B. B. 10a); chastity (Derek Ereẓ i.); peace and faithfulness in married life (Soṭah 17a); and similar deeds and qualities (Ket. 111a; Ber. 67a; Men. 43b; Sanh. 42b; Yer. Ḥag. i. *et passim*). Sins, on the other hand, cause the Shekinah to depart (Targ. to Isa. lvii. 7; Jer. xxxiii. 5 *et passim*). It inspires correct judgment in upright judges (Sanh. 7a), while unrighteous magistrates cause it to depart (Shab. 139a). It appeared on the day on which the Tabernacle was first erected (Num. R. xiii.). Before the Israelites sinned the Shekinah rested on every one; but when they did evil it disappeared (Soṭah 3b). In like manner it departed from David when he became leprous (Sanh. 107a). Among the transgressions which have this result are the shedding of blood (Yoma 84b) and idolatry (Meg. 15b; others are cited in Soṭah 42a; Kallah, end; Ber. 5b, 27b; Shab. 33a; and Sanh. 106a). Whosoever sins in secret or walks with a proud and haughty bearing "crowds out the feet of the Shekinah" (Ḥag. 16a; Ber. 43b; comp. *ib.* 59a).

The Shekinah as Light.

The Hellenists, both Jews and Gentiles, characterized the god of the Jews as unseen, and translated the TETRAGRAMMATON by "invisible" (ἀόρατος). In like manner Ḥag. 5b declares that "God sees, but is not seen," although כבוד was rendered by δόξα ("glory"), even in the Septuagint (Deissmann, "Hellenisirung des Semitischen Monotheismus," p. 5). According to this view, the Shekinah appeared as physical light; so that Targ. to Num. vi. 2 says, "YHWH shall cause His Shekinah to shine for thee." A Gentile asked the patriarch Gamaliel (*c.* 100): "Thou sayest that wherever ten are gathered together the Shekinah appears; how many are there?" Gamaliel answered: "As the sun, which is but one of the countless servants of God, giveth light to all the world, so in a much greater degree doth the Shekinah" (Sanh. 39a). The emperor (Hadrian) said to Rabbi Joshua b. Hananiah, "I desire greatly to see thy God." Joshua requested him to stand facing the brilliant summer sun, and said, "Gaze upon it." The emperor said, "I can not." "Then," said Joshua, "if thou art not able to look upon a servant of God, how much less mayest thou gaze upon the Shekinah?" (Ḥul. 60a). Rab Sheshet (*c.* 300) was blind, and could not perceive when the Shekinah appeared in the Shaf we-Yatib synagogue of Nehardea, where it rested when it was not in the synagogue at Huzal. In the former synagogue Samuel and Levi heard the sound of its approach and fled (Meg. 29a). The Shekinah tinkled like a bell (Soṭah 9b), while the Holy Spirit also manifested itself to human senses in light and sound. The Holy Spirit had the form of a dove, and the Shekinah had wings. Thus he who acknowledged God took refuge under the wings of the Shekinah (Shab. 31a; Sanh. 96a); and Moses when dead lay in its pinions (Sifre, Deut. 355; Soṭah 13b; Targumic passages in Maybaum, *l.c.* p. 65). The saints enjoy the light of the Shekinah in heaven (Ber. 17a, 64a; Shab. 30a; B. B. 10a).

K. L. B.

SHELA: Babylonian teacher of the latter part of the tannaitic and the beginning of the amoraic period; head of the school ("sidra") at Nehardea (Yoma 20a; Letter of Sherira Gaon, in Neubauer, "M. J. C." i. 28). When Abba Arika (Rab) visited Babylon, he once officiated as an expounder (amora) for R. Shela at his public lectures (Yoma *l.c.*). The school at Nehardea was named in honor of Shela; and its scholars were accordingly known as "Debe R. Shela."

With the exception of a mishnaic interpretation (Yoma 20a), none of Shela's teachings is known, although some of the sayings of his pupils, the Debe R. Shela, are mentioned in the Talmud (Pes. 39b; R. H. 23b; Giṭ. 52b; Ḳid. 43a).

SHELAH: Youngest son of Judah by the daughter of the Canaanite Shuah; born in Chezib in the shephelah of Judah. His extreme youth at the time of the death of his brother Onan was the ostensible excuse alleged by his father for the refusal to permit him to marry his sister-in-law Tamar (Gen. xxxviii. 5-12). Shelah became the ancestor of many families (I Chron. iv. 21-23), as had been betokened, according to rabbinical interpretation, by his name (Gen. R. lxxxv. 5).

W. B. J. Z. L.

SHELIAḤ ẒIBBUR: Congregational messenger or deputy or agent. During the time of the Second Temple it was the priest who represented the congregation in offering the sacrifice, and who, before the close of the service, pronounced the priestly benediction. Similarly the high priest on the Day of Atonement, after having confessed his own sins and those of his house, offered the confession of sins and the prayer of atonement for the whole people. When the Synagogue substituted prayers for the sacrifices, the function of the priest was assumed by the sheliaḥ ẓibbur. He offered the prayers for all while the congregation listened in silence; and its participation in the service consisted in responding "Amen" after every benediction (Rashi on Suk. 38b). For this reason he was called "ḳaroba," *i.e.*, "he who offers" (Yer. Ber. i. 3c; Lev. R. xx.; Comp. Yer. Ber. iv. 8b). The function of the sheliaḥ ẓibbur was regarded as a most honorable one, and it was delegated only to the worthiest men of the congregation. In Talmudic times such distinguished men as R. Akiba, R. Eliezer, R. Alexander, and R. Eleazar b. Simeon acted in this capacity.

The term Ḥazzan was not used for the sheliaḥ ẓibbur until the sixth century, when the reading of prayers before the congregation became a profession to which a salary was attached. Since that time more attention has been often paid to the sweetness or pleasantness of the reader's voice than to his superior character, dignity, and scholarship.

SHEM.—Biblical Data: The eldest of Noah's sons, according to the position and sequence of the names wherever all three are mentioned together; *e.g.*, "and Noah begat Shem, Ham, and Japheth" (Gen. v. 32). In the table of nations in Gen. x., however, Shem and his posterity are placed last, probably because the compiler of that record expected to trace his descendants far down into history, while those of the other two sons were confined to early ages. Shem's prominence among the peoples of pre-Christian times may be partially suggested by the ethno-geographical table of Gen. x. For descendants see Semites.

E. G. H. I. M. P.

——**In Rabbinical Literature:** Although Shem is unanimously declared by the Rabbis to have been the youngest son of Noah (comp. Japheth in Rabbinical Literature), yet he is always named first, being the most important of the three brothers. Indeed, he was born circumcised; he was the ancestor of Abraham, Isaac, and Jacob; he was priest and prophet; and he was one of the eight righteous who are mentioned twice in Gen. xi. 10 and who were allotted a portion both in this world and in the world to come (Sanh. 69b; Tan., Yelammedenu, Noaḥ; Midr. ha-Gadol on Gen. ix. 18, xi. 10, ed. Schechter, cols. 142, 186). Shem is styled "the great one" ("Shem rabba"; Sanh. 108b). According to Gen. R. xxx. 6, it was Shem who offered the sacrifices on the altar after Noah came out of the ark (comp. Gen. viii. 20), as the latter, having been crippled by the lion (see Noah in Rabbinical Literature), was unfit for the priestly office. Noah gave to Shem the priestly garments which he had inherited from Adam (Num. R. iv. 6). Shem is extolled by the Rabbis for his filial devotion in covering his father's nakedness (Gen. ix. 23). Although his brother Japheth assisted in this praiseworthy act, it was Shem who suggested and began it, his brother not arriving on the scene until Shem was already on his way with the garment. Therefore Noah, in blessing these two sons (*ib.* verse 27), declared, so the Rabbis think, that the Shekinah was to dwell only in the tents of Shem (Yoma 10a; Tan., Noaḥ, 21; Gen. R. xxxvii. 9; comp. Jubilees, vii. 9, where it is said that the garment was Shem's). Shem's reward for this deed is seen in the fact that the Jews, his descendants, cover themselves with the ṭallit and phylacteries, and remained untouched when the Assyrians, who also were descendants of Shem, were destroyed by an angel in the time of Hezekiah (Tan., Yelammedenu, *l.c.*; Ex. R. xviii. 5).

The Most Important Son of Noah.

The Rabbis identify Shem with Melchizedek, King of Salem, who is termed "a priest of the Most High," and who came to meet Abraham after the latter had defeated the four kings led by Chedorlaomer (Gen. xiv. 18-20). According to this account, Shem, as a priest, came to Jerusalem (with which Salem is identified by the Rabbis), of which city he became king, it being the proper place for the establishment of the cult of Yhwh. He went to meet Abraham to show him that he was not angry with him for having killed the Elamites, his descendants (Midr. Agadah on Gen. *l.c.*). Shem, however, forfeited the priesthood by mentioning in his blessing Abraham's name before that of God, so that God took his office from him and gave it to Abraham (Ned. 32b; Pirḳe R. El. xxvii.). According to the Midrash Agadah (*l.c.*), Shem himself asked God to give the priesthood to Abraham, as he, in his prophetic capacity, knew that he (Shem) would have no children eligible for the sacerdotal office. Contrary to the Pirḳe R. El. and Gen. R. (xliii. 10), the Midrash Agadah explains that it was Shem who gave tithes to Abraham, showing that he recognized him as priest (see Gen. R. xliii. 7). The Rabbis point out that in certain cases Shem ranked as the equal of Abraham; so that the latter was afraid lest Shem might be angry at him for having slain the Elamites and might curse him (Gen. R. xliv. 8; Tan., Lek Leka, 19). In another instance God made a compromise between Shem and Abraham, namely, with regard to the name of the Holy City, the place of the Temple, which Abraham had called "Jireh" (Gen. xxii. 14; see Jehovah-jireh) and which Shem had called "Salem." God united both names; and thus arose the name "Jerusalem" (Gen. R. lvi. 16).

Legends.

Shem is supposed by the Rabbis to have established a school ("bet ha-midrash") in which the Torah was studied, and among the pupils of which was Jacob. Later, Shem was joined by Eber; and the school was called after both of them. Besides, the school was the seat of a regular bet din which promulgated the laws current in those times. Thus Esau was afraid to kill Jacob, lest he should be condemned by the bet din of Shem and Eber. The bet din of Shem proclaimed the prohibition of and the punishment for adultery; and according to this law Judah condemned Tamar to be burned ('Ab. Zarah 36b; Gen. R. lxiii. 7, lxvii. 8). Shem's bet din was one of the three in which the presence of the Shekinah was manifested (Mak. 23b). At Abraham's death Shem and Eber marched before his bier; and they indicated the place that was suitable for his burial (Gen. R. lxii. 6, according to the emendation of the text in Yalḳ., Gen. 110). At the division of the earth among the three sons of Noah, Shem's lot consisted of twenty-six countries, thirty-three islands, twenty-six out of seventy-two languages, and six out of sixteen scripts. Thus Shem took one script more than either of his two brothers; and this was the Hebrew script, in which the Torah was written. The other five were Egyptian, Libyan, Assyrian, Chaldean, and Guṭazaki (Guzarati ?) (Midr. ha-Gadol on Gen. x. 32, col. 182).

W. B. M. Sel.

——**Critical View:** Shem is not an individual, in the sense that one person by that name came forth with his father and brothers from the ark, and had a share in the scene described in Gen. ix. 18-27. Neither does the name in itself suggest geographical or racial entities. It recalls more probably some ethnic deity that had become the "heros eponymus" of his worshipers. As it now occurs, the name has no theophorous character; but it has been suggested that "Shem" must be considered a corruption or abbreviation of a name similar to Shemu'el (see Samuel), the element "Shem" meaning "son" in the combination. This suggestion—though none of the critics seems to have noticed it—receives a strong degree of probability from the blessing spoken over Shem (*ib.* verse 26). There is no doubt that the pointing of the text is incorrect. Budde proposes to omit the אלהי (which Grätz would read "ohole" = "tents"), and then vocalize: "Beruk Yhwh Shem" = "Shem is blessed of Yhwh." This would at once place this "blessing" in the category, so numerously represented in Genesis, of name oracles. From the oracle the name is readily reconstructed as "Shemaiah" or "Shemu'el," the "Elohe Shem" in the text indicating the latter possibility.

These oracles are always the primary elements from which the legend in which they are found embedded is a development. That Japheth also originally had a theophorous form is indicated in the oracle spoken concerning him (Gen. ix. 27; comp. the name פתואל). It is plain that Canaan should not appear in this group. Ham is the brother of Shem; and it was he who committed the unseemly deed. The substitution of Canaan for Ham is secondary. The curse upon him (Canaan) displays the temper of the centuries when Yhwh and Baal were struggling for the ascendency (see Elijah). As Shem represents Yhwh, he is proclaimed the master, while Canaan is doomed to servitude. As Israel is the people of Yhwh, Shem(yahu), *i.e.*, "the *son* [of Yhwh]," naturally must be Israel's progenitor. In substance this is also the explanation of those scholars who reject the suggestion that "Shem" is a name like "Shemu'el." They read into "Shem" the signification of "prominence," "mastership." The people descended from Shem is thus the master people destined to "lord it" over Canaan, the slave people committing such dire atrocities as are hidden in the legend of Noah's exposure. According to Budde, Japheth—which name means "beauty"—represents the Phenicians, while Canaan, signifying "lowness," "vulgarity," represents the aboriginal population of Palestine. Thus this triad would result: lordship (Shem), beauty (Japheth), and meanness (Canaan).

In the table given in Gen. x. 1-xi. 9 Shem is recorded as the father of five sons, among whom are named some that are not Semites. This catalogue, however, is geographical and not ethnic. In this list of Shem's descendants (*ib.* x.) verses 22 and 23 are assigned to P, verse 24 to R, and verses 25-30 to J. In the last-mentioned passage the tendency to connect Shem and Eber is patent. See Semites.

E. G. H.

SHEM HA-MEFORASH (Hebrew, שם המפורש): Ancient tannaitic name of the Tetragrammaton. The exact meaning of the term is somewhat obscure; but since the Tetragrammaton is called also "Shem ha-Meyuḥad" (שם המיוחד), it may be assumed that "meyuḥad" is used elsewhere in the terminology of the tannaitic schools as a synonym for "meforash," both words designating something which is distinguished by a characteristic sign from other objects of its kind (see Bacher, "Die Aelteste Terminologie der Jüdischen Schriftauslegung," p. 71). In connection with "shem" (= "the name [of God]"), both terms mean also "preeminent." "Shem ha-Meforash," therefore, denotes the name of God which differs from all the other names applied to Him, and is, consequently, the excellent name, the Tetragrammaton. In the old exegesis of Num. vi. 27 ("my name") one version (Sifre *ad loc.*) has "Shem ha-Meforash"; the other (Soṭah 38a), "Shem ha-Meyuḥad." Further explanations of the term are given by the authorities cited in the bibli-

Meaning of Term.

ography of this article. In the tannaitic halakah, in the first place, this designation of the Tetragrammaton is found, as already stated, in the note on Num. vi. 27, while the Mishnah (Soṭah vii. 6; Tamid vii. 2) says, in conformity with this interpretation: "In the Sanctuary the name of God [in the three blessings, Num. vi. 24-26] is to be pronounced in the Priestly Benediction as it is written [יהוה]; but outside the Sanctuary it must be given the paraphrastic pronunciation [אדני]." The high priest spoke the name of God on the Day of Atonement in his recitation of Lev. xvi. 30 during the confession of sins; and when the priests and the people in the great hall heard him utter the "Shem ha-Meforash," they prostrated themselves and glorified God, saying: "Praised be the glorious name of His kingdom for ever and ever" (Yoma vi. 2). When a very young priest, the well-known tanna Ṭarfon witnessed this ceremony; and he declares that the high priest uttered the holy name of God so that his voice was merged in the song of the priests (Yer. Yoma 40d, below; Ḳid. 71a; Eccl. R. iii. 11), although it was believed that when, at this point in the ritual, the priest pronounced the name of God he was heard as far as Jericho (Tamid iii. 7; comp. Yoma 39b). Ṭarfon's account, that the voice of the high priest was drowned by the song of the other priests, also confirms the synchronous statement (Yer. Yoma 40b) that in former times the high priest uttered the Name with a loud voice, but that subsequently, when immorality had become more and more prevalent, he lowered his voice lest the Name should be heard by those unworthy to hear it.

Mode of Utterance.

The mishnah (Berakot, end) mentions also an utterance of the Tetragrammaton outside the Sanctuary which was permitted and even commanded, saying that "it was ordained that the name of God should be used in the ordinary forms of greeting, which were the same as those exchanged between Boaz and the reapers [Ruth ii. 2], or the salutation of the angel to Gideon [Judges vi. 12]." According to Grätz ("Gesch." 2d ed., iv. 458), this injunction was given at the time of the Bar Kokba war, and the greeting, which contained the Tetragrammaton instead of the word "Adonai" (= "Lord"), was the shibboleth which distinguished the Jews from the Judæo-Christians, who regarded Jesus also as Lord. A haggadist of the third century, Abba bar Kahana, states (Midr. Teh. on Ps. xxxvi., end) that "two generations used the Shem ha-Meforash, the men of the Great Synagogue and those of the period of the 'shemad' [the Hadrianic persecution]." According to Sanh. vii. 5, actual blasphemy is committed only when the blasphemer really pronounces the Tetragrammaton ("Shem ha-Meyuḥad": comp. Sifra, Emor, xix. [ed. Weiss, p. 104d]).

These details indicate that the long-sanctioned dread of uttering the Shem ha-Meforash was by no means without exceptions, and that the correct pronunciation was not unknown. Abba Saul (2d cent.) condemned the profanation of the Tetragrammaton by classing those "that speak the Name according to its letters" (יהוה) with those who have no part in the future world (Sanh. x. 1); and according to 'Ab. Zarah 17b, one of the martyrs of Hadrian's time, Hananiah b. Teradion, was burned at the stake because he so uttered the Name. A Palestinian amora of the third century (Mana the Elder) exemplified the apothegm of Abba Saul (Yer. Sanh. 28b, above) by the statement, "as, for instance, the Samaritans who swear"; he meant thereby that in their oaths the Samaritans pronounce the Tetragrammaton exactly as it is written. According to Theodoret, the Greek Church father, who flourished in the fifth century, they gave it the sound of Ἰαβέ (see Löw, "Gesammelte Schriften," i. 193).

The Shem ha-Meforash as an object of the esoteric knowledge of scholars appears in the statement of Johanan (Ḳid. 71a): "Once each week the sages give their pupils the Four-Lettered Name." A tannaitic passage in Yer. Yoma 40d, however, says: "In former times the Name was taught to all; but when immorality increased it was reserved for the pious," although this statement refers, according to the baraita in Ḳid. 71a, to teaching the Twelve-Lettered Name to the priests. It is related that in the fourth century the well-known haggadist Phinehas b. Ḥama refused the offer of a physician (or of a man by the name of Assi) of Sepphoris to "teach him the Name" (Yer. Yoma 40d), while another scholar of the same century offered to "transmit the Name" to the amora R. Ḥanina of Sepphoris, although this was not done (*ib.*). The curious anecdote is also told (*ib.*) that Samuel (a Babylonian amora of the third century) heard a Persian curse his son by using the Tetragrammaton (according to Eccl. R. iii. 11, however, it was a Persian woman who cursed her son). This story assumes that the Gentile had managed to obtain a knowledge of the Shem ha-Meforash, which was used like a magic formula (see Blau, "Das Altjüdische Zauberwesen," p. 129).

Objections to Pronouncing the Tetragrammaton.

The earliest instance of the dread of pronouncing the Tetragrammaton, and of the use of the paraphrasis "Adonai" instead, is found in the Septuagint rendering of Κύριος = "Lord." The Samaritans read the Four-Lettered Name as "Shema," the Aramaic equivalent of השם ("the Name"), which, even without the qualifying word, connotes the Shem ha-Meforash in the language of the Tannaim, as in the maxim of Abba Saul cited above. According to Josephus' paraphrase of Ex. iii., "God declared to him [Moses] His holy name, which had never been discovered to man before; concerning which it is not lawful for me to say any more" ("Ant." ii. 12, § 4). When Aquila made his Bible translation, which, in the spirit of Akiba's Biblical exegesis, adheres to the text with extreme rigidity, he could not follow the Septuagint, Κύριος being only a free paraphrase of the name of God. Since, therefore, he could not give an exact rendering he introduced the word bodily into his translation, writing it ΠΙΠΙ, a form which is found in the Hexaplar manuscripts of the Septuagint and is the representation in the Greek alphabet of the letters of יהוה read from left to right (see Swete, "Introduction to the Old Testament in Greek," p. 30; Nestle, in "Z. D. M. G." xxxii. 468, 500, 506).

The prohibition against pronouncing the Tetra-

Not Read as Written.

grammaton as written was based on Ex. iii. 15 by Abina, a Babylonian amora, who paraphrased the last words of that passage as follows: "'I am not read,' says God, 'as I am written; I am written with "yod," "he" [יהוה], and pronounced with "alef," "dalet" [אדני]'" (see Ḳid. 71a; Pes. 50a). This seems to be an old tannaitic midrash on Ex. iv. 15, to which Jacob bar Aḥa alludes in Yer. Sanh. 28b, above. In like manner the words לעלם (Ex. *l.c.*) and העלם (Eccl. iii. 11) were explained as referring to the non-utterance of the Tetragrammaton. In his interpretation of the latter passage, Ahabah b. Ze'era (4th cent.) says as follows: "Men slay one another—so saith God—even by pronouncing the paraphrasis of the Divine Name; what would they do if I should teach them the Shem ha-Meforash?" The miraculous power of this word, which was sometimes fatal in its might (see Zunz, "S. P." p. 145), is mentioned as early as the tannaitic haggadah. Thus, R. Nehemiah says that Moses killed the Egyptian (Ex. ii. 14) by pronouncing "the Name" over him (Lev. R. xxxii.; Ex. R. ii.); and he also answered the question to Ps. cxiv. 2 [A. V. 3], "What did the sea behold?" with the words, "It beheld the Shem ha-Meforash graven on Aaron's staff, and fled" (Pesiḳ. 140a; Midr. Hallel, in Jellinek, "B. H." v. 95). In a haggadic passage which occurs in several places, Simeon ben Yoḥai, another pupil of Akiba, mentions an ornament given to the Israelites at Mt. Sinai on which the Shem ha-Meforash was engraved (Cant. R. i. 4 *et passim*; see Bacher, "Ag. Tan." ii. 118), while a chain and a ring on which were inscribed the Name are mentioned in the legend of Solomon and Asmodeus (Giṭ. 68b). The "weapons of war" mentioned in Jer. xxi. 4 are the Tetragrammaton (Midr. Teh. on Ps. xxxvi., end); and Pirḳe R. El. xxxviii., end, states that Ezra, Zerubbabel, and Joshua pronounced the great ban on the Samaritans by means of the "mystery of the Shem ha-Meforash." According to Midr. Shemu'el xv. the scholars explained the words in Ex. iv. 28 as meaning that Moses revealed the Four-Lettered Name to Aaron. Phinehas b. Jair, one of the last tannaim, asked the question: "Why are the prayers of Israel not heard?" and answered it, according to Joshua b. Levi, thus: "Because they know not the mysteries of the Shem ha-Meforash" (Pesiḳ. R. 14.); but, according to Eleazar b. Pedat, the expression "halleluyah" (Ps. cxiii. 1 and frequently elsewhere) implies that God will be praised by His full name not in this world, but in the world to come (Midr. Teh. on Ps. cxiii.; comp. 'Er. 18b). In interpreting "and his name one" (Zech. xiv. 9), Naḥman b. Isaac, a Babylonian amora of the fourth century, said (Pes. 50a): "The future world is not like this world. Here the name of God is written יהוה and read אדני; there it is also read יהוה." The view that prayer is more effectual if the name of God is pronounced in it as it is written caused the scholars of Kairwan to address a question in the eleventh century to Hai Gaon with reference to the pronunciation of the Shem ha-Meforash, to which he answered that it might not be uttered at all outside the Holy Land (Hai Gaon, "Ṭa'am Zeḳenim," p. 55; see Löw, "Gesammelte Schriften," i. 204).

In the Cabala.

From the earliest times the Tetragrammaton has been an extremely important element in Jewish mysticism. According to the "Sefer Ḥanok" (in Jellinek, "B. H." ii. 117), it was Hillel who transmitted the name of God to the generations after Ezra, while Abbahu and Ze'era (3d and 4th cents.) and the "men of faith" ("anshe emunah") are mentioned as possessing this knowledge after Hillel. There are several other names, in addition to the Tetragrammaton, which are designated according to the number of their letters, as the Twelve-Lettered and the Forty-two Lettered Name (see Ḳid. 71a; Bacher, "Ag. Bab. Amor." pp. 17 *et seq.*), and the Seventy-two Lettered Name (see Lev. R. xxiii.; Gen. R. xliv.). The view became current that the high priest uttered on the Day of Atonement the Forty-two Lettered Name (Hai Gaon, *l.c.*), and it appears from two remarks of Rashi (on Sanh. 60a and on 'Er. 18b) that there was a general belief that the Forty-two Lettered Name was represented by the Shem ha-Meforash. Maimonides opposed this idea with the express statement that יהוה was the Shem ha-Meforash ("Yad," Yesode ha-Torah, vi. 2; *ib.* Tefillah, xiv. 10; *idem*, "Moreh," i. 62).

Among the earlier examples of the belief in the supernatural power of the Name may be mentioned the Chronicle of Ahimaaz ("Sefer Yuḥasin," ed. Neubauer, in "M. J. C." ii. 111 *et seq.*; comp. "R. E. J." xxxii. 147 *et seq.*), and the story related by Benjamin of Tudela that David Alroi completed a journey of twenty-one days in a single day by means of the Shem ha-Meforash ("Massa'ot," etc., ed. Grünhut, p. 74).

The Jewish philosophers of religion who discuss the Tetragrammaton include Judah ha-Levi ("Cuzari," iv. 1-3; see Kaufmann, "Gesch. der Attributenlehre," pp. 165 *et seq.*; Bacher, "Die Bibelexegese der Jüdischen Religionsphilosophen," p. 122), Abraham ibn Ezra (excursus in his commentary on Ex. iii. 15 *et passim*; see D. Rosin in "Monatsschrift," 1898, xlii. 156 *et seq.*), and Maimonides ("Moreh," i. 61; see Kaufmann, *l.c.* pp. 467 *et seq.*; Bacher, "Die Bibelexegese Moses Maimûni's," pp. 62 *et seq.*). See also BA'AL SHEM; NAMES OF GOD; TETRAGRAMMATON.

W. B.

SHEM-ṬOB BEN ABRAHAM IBN GAON: Spanish Talmudist and cabalist; born at Soria, Spain, 1283; died, probably in Palestine, after 1330. From his genealogy given in the preface to his "Keter Shem-Ṭob," Azulai ("Shem ha-Gedolim," ii., *s.v.* "Keter Shem-Ṭob") concluded that "Gaon" must have been the proper name of one of Shem-Ṭob's ancestors. Zunz (in his "Zeitschrift für die

Wissenschaft des Judenthums," p. 137) and Geiger ("Jüd. Zeit." v. 397), however, suppose "Gaon" to be the Hebrew transliteration of "Jaen," indicating that Shem-Ṭob's family originally came from that Spanish city. After he had studied Talmud under Solomon b. Adret and Cabala under Isaac b. Todros (RIBaṬ, which is the abbreviation, Conforte declares in his "Ḳore ha-Dorot," p. 24b, of "R. Joseph b. Tobiah"), Shem-Ṭob betook himself to Palestine in the hope of finding in the Holy Land a more suitable place for cabalistic meditation. He sojourned for some time in Jerusalem, and then settled at Safed.

Settles in Safed.

At Safed Shem-Ṭob wrote the following works, of which only the first two have been published: (1) "Migdal 'Oz," a commentary on Maimonides' "Yad"; in this he defends Maimonides against the strictures of Abraham b. David. The part covering the first volume of the "Yad" was printed with the text at Constantinople in 1509; and parts of other volumes, also with the text, at Venice in 1524. Certain rabbis, Gedaliah ibn Yaḥya ("Shalshelet ha-Ḳabbalah," p. 45b, Amsterdam, 1697) among them, ascribe the "Migdal 'Oz" to Yom-Ṭob b. Abraham (RITBA). (2) "Keter Shem-Ṭob" (Leghorn, 1839). (3) "Badde ha-Aron u-Migdal Ḥanan'el," a cabalistic work in five parts, finished in the month of Iyyar, 1325, and named by Shem-Ṭob after his traveling companion, Hananeel b. Azkara, who died before reaching his destination. (4) Supercommentary on Abulafia's "Ginnat Bitan," a cabalistic commentary on Genesis. (5) Commentary on Saadia Bekor Shor's cabalistic poem, which he quotes in his "Badde ha-Aron." (6) "Sefer ha-Pe'er," cabalistic treatise on phylacteries. De Rossi (Parma MS. No. 68, 8) declares the author's name to be doubtful, since the manuscript is anonymous; but Assemani ("Catalogue of Hebrew MSS. in the Vatican Library," No. 235) concludes that its author was Shem-Ṭob of Soria. (7) "Zibḥe Ẓedeḳ" and (8) "Rosh ha-Shalishim," mentioned in the "Badde ha-Aron," while in his "Keter Shem-Ṭob" (section "Yesode ha-Torah," ch. i.) Shem-Ṭob speaks in general terms of his "other works."

His "Keter Shem-Ṭob."

The "Keter Shem-Ṭob" is a supercommentary on and continuation of Naḥmanides' commentary (particularly on the cabalistic part) on the Pentateuch, from whose interpretations those of Shem-Ṭob differ in many places. Shem-Ṭob says in his preface that at first he had entitled his work "Sitre Setarim," and that he then revised it and gave it the title "Keter Shem-Ṭob," the work having been completed at Safed in 1315. Isaac b. Samuel of Acre, in his "Me'irat 'Enayim," violently attacks the "Keter Shem-Ṭob," saying that most of the author's theories are not those of the older cabalists, but are simply his own inventions. This work is printed at the end of Judah Koriat's "Ma'or wa-Shemesh" (Leghorn, 1839), where it is entitled "Perush Sodot ha-Torah"; and the preface has been published in Jehiel Ashkenazi's "Hekal Adonai" (Venice, n.d.) under the title "Perush Liḳḳuṭim."

In a manuscript containing piyyuṭim of various liturgists there is one written by a Shem-Ṭob b. Abraham, whom L. Dukes ("Orient, Lit." vi. 147 *et seq.*) supposes to be identical with the subject of this article. But Dukes seems to have distinguished between Shem-Ṭob b. Abraham and Shem-Ṭob of Soria, the author of the "Sefer ha-Pe'er." On the other hand, Conforte (*l.c.*), confusing Shem-Ṭob b. Abraham with Shem-Ṭob Ardotial, wrongly ascribes to the former the "widdui" (confession) recited on Yom Kippur in the Musaf prayer.

The following works are erroneously attributed to Shem-Ṭob b. Abraham ibn Gaon by Wolf ("Bibl. Hebr." iii., No. 2152) and by other bibliographers: "Keter Shem-Ṭob" (Venice, 1601), a collection of sermons, and "Ma'amar Mordekai" (Constantinople, 1585), a commentary on Esther, the author of both works being Shem-Ṭob Melammed; also a cabalistic treatise by an unknown author on the crowns ("taggin") of the letters.

SHEM-ṬOB DE CARRION. See SANTOB (SHEM-ṬOB) DE CARRION.

SHEM-ṬOB BEN ISAAC OF TORTOSA (known also as **Babi ha-Ṭorṭosi**): Spanish scholar and physician of the thirteenth century; born at Tortosa 1196. He engaged in commerce, and his business necessitated his traveling much both by sea and by land. Being once at Acre, he was reminded by its rabbi of his insufficient knowledge of the Jewish religion; and he left the city (1226), resolving to abandon commerce and to devote himself exclusively to rabbinical and scientific studies. He first studied at Barcelona under Isaac b. Meshullam; then he devoted himself to medicine; and after twenty years' study he became, as will be seen below, a skilful physician. He lived afterward in Montpellier, France, but chiefly at Marseilles, where he practised his profession.

Abandons Commerce for Rabbinics.

Shem-Ṭob's first work was his Hebrew translation, under the title of "Bi'ur Sefer ha-Nefesh," of Averroes' middle commentary on Aristotle's "De Anima." In the month of Elul, 1254, at the age of fifty-eight, he began the translation into Hebrew of Al-Zahrawi's "Kitab al-Taṣrif," a medical work in thirty books. He finished it at Marseilles in the month of Nisan, 1258, entitling it "Sefer ha-Shimmush." This translation is preceded by a long introduction, which forms a treatise in itself, and in which he deals with man as composed of four elements, and with the relation between diseases and the four seasons of the year. According to the superstitions of his time, he believed in the influence of the planets on man; and accordingly an entire treatise deals with astrology. His translation was undertaken with the view of spreading medical science among the Jews, so that they might not be dependent on Christian physicians (comp. 'Ab. Zarah ii. 2). The translation is not literal; and in this Shem-Ṭob departed from the method of the earlier translators. As to the various

Translates "Kitab al-Taṣrif."

names of diseases and medicaments, Shem-Ṭob employs all that he could find in the Bible and in Talmudic literature. Others he explains in a glossary. He also gives directions to physicians on the treatment of patients and the preparation of medicaments.

In 1264 Shem-Ṭob translated into Hebrew Al-Razi's "Al-Manṣuri," a work in ten treatises which that author had dedicated to Al-Manṣur. Shem-Ṭob states that he also transliterated many Arabic medical works in Hebrew characters in order that Jews might be able to read them. According to De Castro ("Biblioteca Española," i. 231), Shem-Ṭob of Tortosa was the author also of the "Pardes Rimmonim," which is generally attributed to Shem-Ṭob b. Isaac ibn Shaprut. De Castro concludes this from the date 1267, which is given in the Escorial manuscript of the work in question and which is a century earlier than the time of Shem-Ṭob ibn Shaprut.

SHEM-ṬOB (BEN JOSEPH) IBN SHEM-ṬOB. See Ibn Shem-Ṭob, Shem-Ṭob (ben Joseph ?).

SHEM-ṬOB IBN PALQUERA. See Falaquera (Palquera), Shem-Ṭob ben Joseph.

SHEMA': Initial word of the verse, or chapter, recited as the confession of the Jewish faith. Originally, the "Shema'" consisted only of the one verse, Deut. vi. 4 (see Suk. 42a; Ber. 13b); the regular "Shema'" in the liturgy, however, consists of three portions: Deut. vi. 4–9, xi. 13–21, and Num. xv. 37–41. The first verse, "Hear, O Israel: the Lord our God is one Lord," has ever been regarded as the confession of belief in the One God. The first of the three portions of the "Shema'" contains the command to love God with heart, soul, and might; to remember all commandments and instruct the children therein; to recite the words of God when retiring or rising; to bind those words on the arm and the head, and to inscribe them on the doorposts and on the city gates. The second portion contains the promise of reward for the fulfilment of the laws, and the threat of punishment for their transgression, with a repetition of the contents of the first portion. The third portion contains the law concerning the ẓiẓit, as a reminder that all the laws of God are to be obeyed, as a warning against following the evil inclinations of the heart, and, finally, in remembrance of the exodus from Egypt. The commandment to read the "Shema'" twice daily is ascribed by Josephus to Moses ("Ant." iv. 8), and it has always been regarded as a divine commandment (see, however, Sifre, Deut. 31 [ed. Friedmann, p. 72b, note 17]).

"Shema'" Ritual.

The reading of the "Shema'" morning and evening is spoken of in the Mishnah (Ber. i. 1–2) as a matter of course, and rests upon the interpretation of בשכבך ובקומך ("when thou liest down, and when thou risest up"; Deut. vi. 7). The school of Shammai takes it literally, saying that the evening "Shema'" shall be read in a reclining or resting posture, and that the morning "Shema'" shall be read standing; the school of Hillel asserts that it refers not to the posture, but to the times of reclining and rising. The time for reading the evening "Shema'" begins with twilight and ends four hours after, according to R. Eliezer, or at midnight, according to the "ḥakamim" (the majority of rabbis); or it lasts till the rise of the morning star, according to R. Gamaliel (Ber. i. 1–3). This difference of opinion rests on the interpretation of "lying down," as to whether it means the regular or the latest hour of retiring, or the whole time during which people usually sleep—that is, all night. Similarly, the time of reading the morning "Shema'" is fixed by the ḥakamim to begin at daybreak, when there is sufficient light to distinguish between purple and white, or to recognize a person, after a short acquaintance, at a distance of four ells, and to last until the sun's rays are seen. R. Joshua, however, extends the time until three hours of daylight have passed, because princes and men of leisure do not rise till then (*ib.*). Queen Helen of Adiabene fixed a gold candelabrum in front of the Temple, which reflected the first rays of the sun and thus indicated the time of reciting the "Shema'" (Yoma 37b).

The benedictions preceding and following the "Shema'" (Ber. i. 4) are credited to the members of the Great Assembly. They are of Essene origin (see Rapoport in his biography of Ḳalir), and were first instituted in the Temple liturgy (comp. Tamid v. 1).

Accompanying Benedictions.

The composition of the "Shema'" itself developed gradually. R. Judah b. Zabida, in explaining why the portion regarding ẓiẓit was incorporated, says that the Rabbis had proposed to add the chapter of Balak (referring especially to Num. xxiii. 18–24), but that they finally decided not to do so, because they thought the "Shema'" already sufficiently long, and they did not care to overburden the congregation (Ber. 12b).

According to the Talmud, the reading of the "Shema'" morning and evening fulfils the commandment "Thou shalt meditate therein day and night" (Josh. i. 8; Men. 99b). As soon as a child begins to speak his father is directed to teach him the verse "Moses commanded us a law, even the inheritance of the congregation of Jacob" (Deut. xxxiii. 4), and teach him to read the "Shema'" (Suk. 42a). The reciting of the first verse of the "Shema'" is called the "acceptance of the yoke of the kingship of God" (Ber. ii. 5). Judah ha-Nasi, being preoccupied with his studies, put his hand over his eyes and repeated the first verse in silence (Ber. 13a).

The response "Baruk Shem" ("Praised be the name of His glorified kingdom forever and ever") is ascribed to the patriarch Jacob by R. Joshua b. Levi, who says: "Jacob, just before he died, was about to reveal the 'end of days' to his children, when the Shekinah suddenly turned away from him. Jacob feared that perhaps some one of his children was unworthy. But they all exclaimed, 'Hear, O Israel: the Lord our God, the Lord is One,' by which they meant, 'In God we are all one'; whereupon Jacob responded, 'Baruk Shem'" (Pes. 56a; comp. Gen. R. xcviii.).

Cabalistic Views.

The first verse of the "Shema'" is recited aloud, first by the ḥazzan and then by the congregation, which responds with "Baruk Shem" in silence. Only on Yom Kippur is this response said aloud (comp. Zohar, Terumah, p. 133b). The remainder of the "Shema'" is read in silence. This custom was approved by R. Hai Gaon and R. Solomon b. Adret (Moses b. Isaac Alashkar, Responsa, No. 10, Sabbionetta, 1553); it is the Ashkenazic custom; but the Sephardim recite aloud the whole of the "Shema'" except the "Baruk Shem." Pronouncing the evening "Shema'," however, is not obligatory, though it is meritorious. The evening "Shema'" is based on the verse "Commune with your own heart upon your bed" (Ps. iv. 4). R. Isaac said: "Whoever reads the 'Shema'' on his couch is as one that defends himself with a two-edged sword." "Let them sing aloud upon their beds . . . a two-edged sword in their hand" (Ps. cxlix. 5-6). Rabina said: "Though one that is affrighted [in the night-time] sees nothing himself, his star [guardian angel] sees the apparition; his recourse is to read the 'Shema''" (Meg. 3a).

The Zohar, with reference to Num. xxviii. 24, says, "One shall, before lying down, sanctify the High Name with the 'Shema' Yisrael'" (Zohar, Balaḳ, p. 211a). R. Simeon b. Yoḥai said the "Shema'" preserves Israel from a foe. It was the battle-cry of the priest in calling Israel to arms against an enemy (Deut. xx. 3; Soṭah 42a). It is the last word of the dying in his confession of faith. It was on the lips of those who suffered and were tortured for the sake of the Law. R. Akiba patiently endured while his flesh was being torn with iron combs, and died reciting the "Shema'." He pronounced the last word of the sentence, "Eḥad" (one) with his last breath (Ber. 61b). During every persecution and massacre, from the time of the Inquisition to the slaughter of Kishinef, "Shema' Yisrael" have been the last words on the lips of the dying. "Shema' Yisrael" is the password by which one Jew recognizes another in every part of the world. Eldad the Danite, in describing the wars which his tribe had waged with its Gentile neighbors, said that on the flag of the tribe was inscribed the words "Shema' Yisrael" (Jellinek, "B. H." iii. 9; A. Epstein, "Eldad ha-Dani," pp. 26, 27, Presburg, 1891). See Prayer.

SHEMA' ḲOLI ("Hear my voice"): Opening hymn of the services on the eve of Atonement in the Sephardic ritual, preceding Kol Nidre. It consists of twenty-nine distichs based on the penitential formula of the Mishnah (Ta'an. ii. 1), "May He who answered the Patriarchs . . . answer us." It is the most ancient complete rimed piyyuṭ, and is attributed to Hai ben Sherira (Landshuth, "'Ammude ha-'Abodah," p. 62; Zunz, "Literaturgesch." p. 187).

It is chanted to a tune of almost equal age, in

the scale "nawa" (from G to G in the modern scale of B♭ major) of the Perso-Arab musical system (comp. Land, "La Gamme Arabe," p. 38, note 3). To the same melody also are sung the introductory piyyuṭim "Elohe al tedineni" (by Isaac ben Levi ben Saul of Lucena of the eleventh century) and "Adonai negdeka" (by Judah ha-Levi) before "Nishmat" on the mornings of New-Year and Atonement respectively. After the fashion of the old Peninsular melodies, the short strain is melismatically introduced by the ḥazzan, and then repeated for every distich, with scant consideration for the phrasing of the text, as many times as may be necessary (comp. ADONAI BEḲOL SHOFAR), until the chant closes with a calando passage.

A. F. L. C.

SHEMAIAH: Prophet in the reign of Rehoboam. He was commissioned to dissuade the king from waging war against the Northern Kingdom after its revolt, because it was the will of God that Israel should form an independent state (I Kings xii. 22-24; II Chron. xi. 2). His second and last appearance in the prophetic rôle was on the occasion of the invasion of Judah and the siege of Jerusalem by Shishak, King of Egypt. His message was that as the princes of Israel had humbled themselves the wrath of God for their idolatry should not be poured out upon Jerusalem by the hand of Shishak (II Chron. xiii. 7).

E. G. H. I. BR.

SHEMAIAH (SAMAIAS, SAMEAS): Leader of the Pharisees in the first century B.C.; president of the Sanhedrin before and during the reign of Herod. He and his colleague ABTALION are termed in Pes. 66a the "gedole ha-dor" (the great men of the age), and *ib.* 70a "darshanim" (exegetes). Grätz has shown ("Gesch." iii. 171) that neither Shemaiah nor Abtalion was of Gentile descent, although both were Alexandrians. Of the political life of Shemaiah only one incident is reported. When Herod on his own responsibility had put to death the leader of the national party in Galilee, Hyrcanus permitted the Sanhedrin to cite him before the tribunal. Herod appeared, but in royal purple robes, whereat the members of the Sanhedrin lost courage. Only Shemaiah was brave enough to say: "He who is summoned here on a capital charge appears like one who would order us to execution straightway if we should pronounce him guilty. Yet I can blame him less than you and the king, since ye permit such a travesty of justice. Know then that he before whom ye now tremble will some day deliver you to the executioner." This tradition is found twice, in Josephus, "Ant." xiv. 9, § 4, and Sanh. 19, where the name is altered (comp. Grätz, "Gesch." iii. 711).

Of the private life of Shemaiah almost nothing is known, except that he was a pupil of Judah ben Ṭabbai. According to Ab. i. 10, his favorite maxim was, "Love handicraft, shun power, and make for thyself no friends of worldly might." This apothegm, like those of his colleague Abtalion, is significant of the misery of the entire period.

J. S. O.

SHEMAIAH B. SIMEON ẒEBI (called also **Segal**): Scholar of the seventeenth century, of whose life no other details are known than that he was the author of "Maẓref la-Ḥokmah" (Amsterdam, 1765), a list of the 613 commandments, each being described in eight words beginning with the initials מ'ש'ל'י' or י'ל'ש'ם', which are probably an abbreviation of "Morenu Shemaiah Levi Yiḥye" (Amsterdam, 1765).

W. B. S. O.

SHEMAIAH OF SOISSONS (called also **Shemaiah ha-Shoshani**): Scholar of the twelfth century; a pupil of Rashi. He was the author of the following works: (1) "Sodot" or "Midrash," notes on the construction of the Tabernacle as described in Ex. xxv.-xxvi. It was edited on the basis of the Munich manuscript by Berliner in "Monatsschrift," 1864, pp. 224 *et seq.* (2) An exegesis of Deut. xiii., in manuscript. (3) Commentary on the Maḥzor, also in manuscript. (4) Glosses on the Pentateuch. (5) Commentary on the Song of Solomon. He is often erroneously identified with Shemaiah of Troyes.

G.* p. 76; idem, *Ritus*, p. 201; Dukes, in *Literaturblatt*, v. 232; Geiger, *Parschandatha*, p. 20, note; Gross, *Gallia Judaica*, p. 648.

W. B. S. O.

SHEMAIAH OF TROYES: Tosafist of the early part of the twelfth century; a pupil of Rashi; probably the father-in-law of Samuel b. Meïr. He appears as a tosafist in Ber. 13a, 25b; Pes. 114a; Ket. 61a; Ḳid. 26b, and is mentioned as a casuist by Judah Sir Leon on Ber. 11b. In "Haggahot Maimoniyyot," to "Tefillah" (ch. vii.), "Simeon" is apparently a copyist's error for "Shemaiah," the true reading. Shemaiah was probably the author of a "Sefer ha-Liḳḳuṭim," while the "Sefer ha-Pardes" of Rashi as it exists to-day seems likewise to be a compilation made by Shemaiah from the original "Sefer ha-Pardes" and "Sefer ha-Orah." His "Perush," a commentary on the treatise Middot, was printed in the Talmud of 1522.

E. C. S. O.

SHEMANA (SEMANA): Scholarly and prominent family of Tunis.

Samuel b. Joseph Shemana: Rabbi of Tunis, whose family subsequently settled at Susa. He wrote "Ḳeren Ẓebi" (Leghorn, 1835), a commentary on the "Sefer Ḳarnayim" of Aaron of Cardena.

Solomon Shemana: Father of the alcaide **Nissim Shemana;** died at Tunis in the beginning of the nineteenth century. He wrote "Shoresh Yishai," consisting of a commentary on the treatises Bekorot and Ḳiddushin, and notes to various treatises of the Talmud, to the Yad ha-Ḥazaḳah, and to the "Moreh

Nebukim," as well as a discussion of the treatise ‘Erubin, written in collaboration with Moses Berda. The book was printed posthumously at the expense of Solomon's brother Isaac Hai Shemana (2 parts, Leghorn, 1809).

Solomon Shemana: Son of Samuel Shemana, and father of **Joseph Shemana.** He was the author of "Bigde Shesh," which treated of the first three ritual codices, especially Yoreh De‘ah and Eben ha-‘Ezer, published by his grandson at Leghorn in 1866. His other works—"‘Ammude Shesh," on treatises of the Talmud; "Bet ha-Melek," on the Yad ha-Ḥazaḳah; and "Ketonet Shesh," notes to the Talmud—still remain in manuscript.

Solomon Shemana: Patron of Jewish learning; died at Tunis in 1882; cousin of the above-mentioned Nissim Shemana, and, like him, alcaide and tax-collector. He published: "Sefer Shoresh Yishai" (Leghorn, 1809), notes to passages of the Bible and the Talmud, together with some Hebrew poems; and "Mo‘ade Adonai" (*ib.* 1878), relating to the calendar and the festivals.

S. M. K.

SHEMARIAH BEN ELHANAN: Head of the yeshibah of Cairo, Egypt, about the end of the tenth century. Abraham b. David ("Sefer ha-Ḳabbalah," in Neubauer, "M. J. C." i. 68) relates that Ibn Rumaḥis (or Ibn Demahin), an Arab admiral, had captured four scholars who were voyaging from Bari to Sebaste to collect money for the maintenance of the great school in Babylonia ("haknasat kallah"), and that one of the four was called Shemariah b. Elhanan. Shemariah was sold by his captor at Alexandria, where he was afterward ransomed by rich Jews.

Shemariah then went to Cairo, where he founded a flourishing school. As to the native place of the captured scholars, the general opinion, more particularly with regard to Shemariah, is that the four were Babylonians, I. H. Weiss ("Dor," iv. 265, note 2) being the only authority who assigns them to Italy. David Kaufmann (in Berliner's "Magazin," v. 70–75) thinks they came from Pumbedita. This opinion, at least with regard to Shemariah b. Elhanan, is confirmed by a fragment of a responsum (published by Neubauer in "J. Q. R." vi. 222–223) apparently addressed by Sherira Gaon to Jacob b. Nissim at Kairwan (see Halberstam, *ib.* p. 596), in which Shemariah is spoken of as the head of the yeshibah of Nehardea and as a high authority in rabbinics. Later, also, when Shemariah was the head of the yeshibah of Cairo, he was consulted by many rabbis from distant countries; and Schechter has published (in "J. Q. R." x. 644–648) a long letter addressed to Shemariah by Ḥushiel of Kairwan, who, according to Abraham b. David (*l.c.*), was captured with Shemariah, and another letter, by an unknown rabbi, also addressed to Shemariah ("J. Q. R." xiv. 492–497).

W. B. M. SEL.

SHEMARIAH B. MORDECAI (called also **Shemariah of Speyer**): German tosafist of the first half of the twelfth century; pupil of the tosafist Isaac b. Asher. He was considered an especially eminent authority on religious rites ("ba‘al ma‘asim"), and seems to have written "posḳim" (decisions); no less a person than Jacob b. Meïr Tam consulted him on a difficult question ("Or Zarua‘" on B. B. 199).

Those of Shemariah's pupils most deserving mention are Judah b. Kalonymus b. Meïr, author of "Yiḥuse Tannaim wa-Amoraim," and Judah b. Kalonymus, father of Eleazar of Worms. The former usually calls him "mori ha-yashish" (my aged teacher), which seems to indicate that Shemariah died at an advanced age. It is, however, not true that Eleazar of Worms also was his pupil, as has been asserted by some.

SHEMARIAH OF NEGROPONT. See IḲRIṬI, SHEMARIAH.

SHEMINI ‘AẒERET: Eighth day of Sukkot, "‘aẓeret" being the name given to it in Lev. xxiii. 36; Num. xxix. 35; Neh. viii. 18; II Chron. vii. 9. The eighth day of Sukkot is not mentioned in Deut. xvi., and is found only in those parts of the Bible known as the Priestly Code. Like "‘aẓarah" (Amos v. 21; Isa. i. 13; Joel i. 14), "‘aẓeret" denotes "day of assembly," from "‘aẓar" = "to hold back" or "keep in"; hence also the name "‘aẓeret" given to the seventh day of Pesaḥ (Deut. xvi. 8). Owing, however, to the fact that both the eighth day of Sukkot and the seventh day of Pesaḥ are called "‘aẓeret," the name was taken to mean "the closing festival."

During the time of the Second Temple, Shebu‘ot received the specific name of "‘Aẓarta" (Josephus, "Ant." iii. 10, § 6; Pes. 42b, 68b), said to signify "the closing feast" of Passover (see Pesiḳ. 193a). Commenting upon this fact, the Rabbis say (*ib.*): "The closing feast of Sukkot ought rightly to have been, like that of Pesaḥ, on the fiftieth day; but, in order not to force the people to make another journey to Jerusalem in the rainy season, God fixed it as early as the eighth day." Another comment upon the name "‘aẓeret" is as follows (*ib.*): "Whenever the people of Israel assemble in the houses of worship and instruction, God ‘keeps in’ His Shekinah with them." For the meaning of "‘aẓar" Judges xiii. 15 is referred to. This is further illustrated by the following similitude (*ib.*): "A king gives to a large circle of friends a banquet which lasts seven days. When these have expired he says to his son: ‘During these days of feasting we have had little opportunity of enjoying each other's company. Tarry ["be kept back" = "he‘aẓer"] a day longer, that we may rejoice while holding a simple feast together.’ So God speaks to Israel thus: ‘During the seven days the Sukkot feast with its seventy bullocks for sacrifice was meant for the seventy nations [see NATIONS AND LANGUAGES] of the world. Let this eighth day be a simple feast with one bullock and one ram as a sacrifice to express thy unique relation to Me’" (comp. Num. xxix. 35–37).

K.

The peculiarities of Shemini 'Aẓeret in the liturgy are the following:

1. It bears the name given above, with the word "ḥag" (feast) either inserted between its parts or added at the end. It is thus distinguished from Sukkot.

2. In the "Ḳiddush" at the evening meal thanks are given for having reached this season ("zeman"). This is not done on the seventh day of the Passover.

3. Hallel is read unabridged. Many persons eat in the "sukkah" or booth, but no one recites the benediction over the command to sit therein (Suk. 47a).

4. The Book of Ecclesiastes is deemed the proper reading for the day, professedly on account of the words (xi. 2) "give a share to seven, even to eight" therein contained. In the German liturgy phrases from this book are worked into the "piyyuṭim" for the day.

5. The reading from the Pentateuch (first scroll) embraces the list of festivals given in Deuteronomy, closing with xvi. 17, though this day is not mentioned therein. It begins at xiv. 22—in some congregations only on the Sabbath, in which case it begins on week-days at xv. 19. In Palestine, where since the influx of the exiles from Spain are observed the one-year cycle and single feast-days, the closing lesson of the Pentateuch is read, followed by Gen. i. 1-ii. 3; that is, the lessons which during exile belong to Simḥat Torah. From the second scroll Num. xxix. 35-37 is read; the prophetic lesson is I Kings viii. 54-66.

6. In the German ritual a memorial service for the dead is added (see Hazkarat Neshamot).

7. The winter, or, in Mishnah phrase, the "rainy" season, begins with the additional prayer of this day (see Geshem).

K. L. N. D.

SHEMIṬṬAH. See Sabbatical Year and Jubilee.

SHEMONEH 'ESREH: Collection of benedictions forming the second—the Shema' being the first—important section of the daily prayers at the morning ("Shaḥarit"), afternoon ("Minḥah"), and evening ("'Arbit") services, as well as of the additional (Musaf) service on Sabbaths and holy days. Literally, the name means "eighteen"; and its wide use shows that at the time it came into vogue the benedictions ("berakot") comprised in the prayer must have numbered eighteen, though in reality as fixed in the versions recited in the synagogues they number nineteen. As the prayer par excellence, it is designated as the "Tefillah" (prayer), while among the Sephardic Jews it is known as the "'Amidah," *i.e.*, the prayer which the worshiper is commanded to recite standing (see also Zohar, i. 105). The eighteen—now nineteen—benedictions, according to their content and character, are readily grouped as follows: (1) three blessings of praise ("Shebaḥim," Nos. i., ii., iii.); (2) twelve (now thirteen) petitions ("Baḳḳashot," Nos. iv.-xv. [xvi.]), and (3) three concluding ones of thanks ("Hoda'ot," Nos. xvi. [xvii.], xviii., and xix.). The first three and the last three constitute, so to speak, the permanent stock, used at every service; while the middle group varies on Sabbath, New Moons, and holy days from the formula for week-days. The construction of the "Shemoneh 'Esreh" complies with the rabbinical injunction that in every prayer the praises of God must precede private petitions ('Ab. Zarah 6), as the following comment shows: "In the first three [ראשונות] man is like a slave chanting the praise of his master; in the middle sections [אמצעיות] he is a servant petitioning for his compensation from his employer; in the last three [אחרונות] he is the servant who, having received his wages, takes leave of his master" (Ber. 34a).

The Three Groups.

No. i. of the first group is designated (R. H. iv. 5) as "Abot" = "patriarchs," because the Patriarchs are mentioned, and the love of (or for) them is expressly emphasized therein. Translated, it reads as follows:

> "Blessed be Thou, O Lord, our God and God of our fathers, God of Abraham, God of Isaac, and God of Jacob, the great, the mighty, and the fearful God—God Most High—who bestowest goodly kindnesses, and art the Creator ["Ḳoneh," which signifies primarily "Creator" and then "Owner"] of all, and rememberest the love of [or for] the Fathers and bringest a redeemer for their children's children for the sake of [His] Thy name in love. King, Helper, Savior, and Shield; blessed be Thou, Shield of Abraham" (see Dembitz, "Jewish Services in the Synagogue and Home," pp. 112 *et seq.*).

No. ii. has the name "Geburot" (R. H. iv. 5) = "powers," because it addresses God as the "Ba'al Geburot" and recites His powers, *i.e.*, the resurrection of the dead and the sustentation of the living (comp. Gen. R. xiii.). It is called also "Teḥiyyat ha-Metim" = "the resurrection of the dead." Rain is considered as great a manifestation of power as the resurrection of the dead (Ta'an. 2a); hence in winter a line referring to the descent of rain (Ber. 33a) is inserted in this benediction. The eulogy runs as follows:

> "Thou art mighty forever, O Lord ["Adonai," not the Tetragrammaton]: Thou resurrectest the dead; art great to save. Sustaining the living in loving-kindness, resurrecting the dead in abundant mercies, Thou supportest the falling, and healest the sick, and settest free the captives, and keepest [fulfillest] Thy [His] faith to them that sleep in the dust. Who is like Thee, master of mighty deeds [= owner of the powers over life and death], and who may be compared unto Thee? King sending death and reviving again and causing salvation to sprout forth, Thou art surely believed to resurrect the dead. Blessed be Thou, O Lord, who revivest the dead."

No. iii. is known as "Ḳedushshat ha-Shem" = "the sanctification of the Name." It is very short, though the variants are numerous (see below). It reads as follows:

> "Thou art holy and Thy name is holy, and the holy ones praise Thee every day. Selah. Blessed be Thou, O Lord, the holy God."

At public worship, when the precentor, or, as he is known in Hebrew, the Sheliaḥ Ẓibbur (messenger or deputy of the congregation), repeats the prayer aloud, the preceding benediction (No. iii.), with the exception of the concluding sentence, "Blessed be Thou," etc., is replaced by the Ḳedushshah.

The Intermediate Blessings.

In work-day services the Shemoneh 'Esreh continues with Group 2 ("Baḳḳashot"), supplications referring to the needs of Israel (Sifre, Wezot ha-Berakah, ed. Friedmann, p. 142b).

No. iv., known, from its opening words, as "Attah Ḥonen," or, with reference to its content—a petition for understanding—as "Binah" (Meg. 17b), sometimes also as "Birkat

Ḥokmah" (on account of the word "ḥokmah," now omitted, which occurred in the first phrase) and as "Birkat ha-Ḥol" = "work-day benediction" (Ber. 33a), reads as follows:

> "Thou graciously vouchsafest knowledge to man and teachest mortals understanding: vouchsafe unto us from Thee knowledge, understanding, and intelligence. Blessed be Thou, O Lord, who vouchsafest knowledge."

No. v. is known as "Teshubah" = "return" (Meg. 17b):

> "Lead us back, our Father, to Thy Torah; bring us near, our King, to Thy service, and cause us to return in perfect repentance before Thee. Blessed be Thou, O Lord, who acceptest repentance."

No. vi. is the "Seliḥah," the prayer for forgiveness (Meg. 17b):

> "Forgive us, our Father, for we have sinned; pardon us, our King, for we have transgressed: for Thou pardonest and forgivest. Blessed be Thou, O Gracious One, who multipliest forgiveness."

No. vii. is styled "Birkat ha-Ge'ullah," the benediction ending with "Go'el" = "Redeemer" (Meg. 17b):

> "Look but upon our affliction and fight our fight and redeem us speedily for the sake of Thy name: for Thou art a strong redeemer. Blessed art Thou, O Lord, the Redeemer of Israel."

No. viii. is the "Birkat ha-Ḥolim" ('Ab. Zarah 8a), or "Refu'ah" (Meg. 17b), the prayer for the sick or for recovery:

> "Heal us and we shall be healed; help us and we shall be helped: for Thou art our joy. Cause Thou to rise up full healings for all our wounds: for Thou, God King, art a true and merciful physician: blessed be Thou, O Lord, who healest the sick of His people Israel."

No. ix. is the "Birkat ha-Shanim" (Meg. 17b), the petition that the year may be fruitful:

> "Bless for us, O Lord our God, this year and all kinds of its yield for [our] good; and shower down [in winter, "dew and rain for"] a blessing upon the face of the earth: fulfil us of Thy bounty and bless this our year that it be as the good years. Blessed be Thou, O Lord, who blessest the years."

No. x. is the benediction in regard to the "Ḳibbuẓ Galuyot," the gathering of the Jews of the Diaspora (Meg. 17b):

> "Blow the great trumpet [see SHOFAR] for our liberation, and lift a banner to gather our exiles, and gather us into one body from the four corners of the earth: blessed be Thou, O Lord, who gatherest the dispersed of Thy [His] people Israel."

No. xi. is the "Birkat ha-Din," the petition for justice (Meg. 17b):

> "Restore our judges as of yore, and our counselors as in the beginning, and remove from us grief and sighing. Reign Thou over us, O Lord, alone in loving-kindness and mercy, and establish our innocence by the judgment. Blessed be Thou, O Lord the King, who lovest righteousness and justice."

The Birkat ha-Minim.

No. xii. is the "Birkat ha-Minim" or "ha-Ẓadduḳim" (Ber. 28b; Meg. 17b; Yer. Ber. iv.), the prayer against heretics and Sadducees (and traducers, informers, and traitors):

> "May no hope be left to the slanderers; but may wickedness perish as in a moment; may all Thine enemies be soon cut off, and do Thou speedily uproot the haughty and shatter and humble them speedily in our days. Blessed be Thou, O Lord, who strikest down enemies and humblest the haughty" (Dembitz, *l.c.* p. 132).

No. xiii. is a prayer in behalf of the "Ẓaddiḳim" = "pious" (Meg. 17b):

> "May Thy mercies, O Lord our God, be stirred over the righteous and over the pious and over the elders of Thy people, the House of Israel, and over the remnant of their scribes, and over the righteous proselytes, and over us, and bestow a goodly reward upon them who truly confide in Thy name; and assign us our portion with them forever; and may we not come to shame for that we have trusted in Thee. Blessed be Thou, O Lord, support and reliance for the righteous."

No. xiv. is a prayer in behalf of Jerusalem:

> "To Jerusalem Thy city return Thou in mercy and dwell in her midst as Thou hast spoken, and build her speedily in our days as an everlasting structure and soon establish there the throne of David. Blessed be Thou, O Lord, the builder of Jerusalem."

No. xv. begins with "Et Ẓemaḥ Dawid" (Meg. 18a), and is so entitled. It is a prayer for the rise of David's sprout, *i.e.*, the Messianic king. At one time it must have formed part of the preceding benediction (see below). It reads:

> "The sprout of David Thy servant speedily cause Thou to sprout up; and his horn do Thou uplift through Thy victorious salvation; for Thy salvation we are hoping every day. Blessed be Thou, O Lord, who causest the horn of salvation to sprout forth."

No. xvi. is denominated simply "Tefillah" = "prayer" (Meg. 18a). It is a supplication that the preceding prayers may be answered:

> "Hear our voice, O Lord our God, spare and have mercy on us, and accept in mercy and favor our prayer. For a God that heareth prayers and supplications art Thou. From before Thee, O our King, do not turn us away empty-handed. For Thou hearest the prayer of Thy people Israel in mercy. Blessed be Thou, O Lord, who hearest prayer."

No. xvii. is termed the "'Abodah" = "sacrificial service" (Ber. 29b; Shab. 24a; R. H. 12a; Meg. 18a; Soṭah 38b; Tamid 32b):

> "Be pleased, O Lord our God, with Thy people Israel and their prayer, and return [*i.e.*, reestablish] the sacrificial service to the altar of Thy House, and the fire-offerings of Israel and their prayer [offered] in love accept Thou with favor, and may the sacrificial service of Israel Thy people be ever acceptable to Thee. And may our eyes behold Thy merciful return to Zion. Blessed be Thou who restorest Thy [His] Shekinah to Zion."

No. xviii. is the "Hoda'ah" = a "confession" or "thanksgiving" (Meg. 18a; Ber. 29a, 34a; Shab. 24a; Soṭah 68b; see also ARTICLES OF FAITH):

Concluding Benedictions.

> "We acknowledge to Thee, O Lord, that Thou art our God as Thou wast the God of our fathers, forever and ever. Rock of our life, Shield of our help, Thou art immutable from age to age. We thank Thee and utter Thy praise, for our lives that are [delivered over] into Thy hands and for our souls that are entrusted to Thee; and for Thy miracles that are [wrought] with us every day and for Thy marvelously [marvels and] kind deeds that are of every time; evening and morning and noontide. Thou art [the] good, for Thy mercies are endless: Thou art [the] merciful, for Thy kindnesses never are complete: from everlasting we have hoped in Thee. And for all these things may Thy name be blessed and exalted always and forevermore. And all the living will give thanks unto Thee and praise Thy great name in truth, God, our salvation and help. Selah. Blessed be Thou, O Lord, Thy name is good, and to Thee it is meet to give thanks."

After this at public prayer in the morning the priestly blessing is added.

No. xix., however, is a résumé of this blessing. The benediction exists in various forms, the fuller one being used (in the German ritual) in the morning service alone (Meg. 18a), as follows:

> "Bestow peace, happiness, and blessing, grace, loving-kindness, and mercy upon us and upon all Israel Thy people: bless us, our Father, even all of us, by the light of Thy countenance, for by this light of Thy countenance Thou gavest us, O Lord our God, the law of life, loving-kindness, and righteousness,

and blessing and mercy, life and peace. May it be good in Thine eyes to bless Thy people Israel in every time and at every hour with Thy peace. Blessed be Thou, O Lord, who blessest Thy [His] people Israel with peace."

The shorter form reads thus:

> "Mayest Thou bestow much peace upon Thy people Israel forever. For Thou art the immutable King, the Master unto all peace. May it be good in Thine eyes to bless" (and so forth as in the preceding form).

For the Sabbath, the middle supplications are replaced by one, so that the Sabbath "Tefillah" is composed of seven benedictions. This one speaks of the sanctity of the day (Ber. 29a; Yer. Ber. iv. 3). It consists of an introductory portion, which on Sabbath has four different forms for the four services, and another short portion, which is constant:

> "Our God and God of our fathers! be pleased with our rest; sanctify us by Thy commandments, give us a share in Thy law, satiate us of Thy bounty, and gladden us in Thy salvation; and cleanse our hearts to serve Thee in truth: let us inherit, O Lord our God, in love and favor, Thy holy Sabbath, and may Israel, who hallows [loves] Thy name, rest thereon. Blessed be Thou, O Lord, who sanctifiest the Sabbath."

On Sabbath-eve after the congregation has read the "Tefillah" silently, the reader repeats aloud the so-called "Me-'En Sheba'," or summary (Ber. 29, 57b; Pes. 104a) of the seven blessings (Shab. 24b; Rashi *ad loc.*). The reason given for this is the fear lest by tarrying too long or alone in the synagogue on the eve of the Sabbath the worshiper may come to harm at the hands of evil spirits. This abstract opens like No. i., using, however, the words "Creator [Owner] of heaven and earth" where No. i. has "Creator of all," and omitting those immediately preceding "bestowest goodly kindnesses." The congregation then continues:

> "Shield of the fathers by His word, reviving the dead by His command, the holy God to whom none is like; who causeth His people to rest on His holy Sabbath-day, for in them He took delight to cause them to rest. Before Him we shall worship in reverence and fear. We shall render thanks to His name on every day constantly in the manner of the benedictions. God of the 'acknowledgments,' Lord of 'Peace,' who sanctifieth the Sabbath and blesseth the seventh [day] and causeth the people who are filled with Sabbath delight to rest as a memorial of the work in the beginning [Creation]."

Then the reader concludes with the "Reẓeh," the middle Sabbath eulogy.

On festivals (even when coincident with the Sabbath) this "Sanctification of the Day" is made up of several sections, the first of which is constant and reads as follows:

> "Thou hast chosen us from all the nations, hast loved us and wast pleased with us; Thou hast lifted us above all tongues, and hast hallowed us by Thy commandments, and hast brought us, O our King, to Thy service, and hast pronounced over us Thy great and holy name."

Then follows a paragraph naming the special festival and its special character, and, if the Sabbath coincides therewith, it is mentioned before the feast. For Passover the wording is as follows:

Variations on Festivals.

> "And Thou hast given us, O Lord our God, in love [Sabbaths for rest,] set times and seasons for joy, [this Sabbath-day, the day of our rest, and] *this day of the Feast of Unleavened Bread, the season of our deliverance*, a holy convocation, a memorial of the exodus from Egypt."

For the other festivals the respective changes in the phrase printed above in italics are the following:

> "this day of the Feast of Weeks—the day when our Torah was given"; "this day of the Feast of Booths—the day of our gladness"; "this eighth day, the concluding day of the feast—the day of our gladness"; "this Day of Memorial, a day of alarm-sound [shofar-blowing; *i.e.*, on Rosh ha-Shanah]"; "this Day of Atonement for forgiveness and atonement, and to pardon thereon all our iniquities."

On New Moons and on the middle days of Pesaḥ or Sukkot, as well as on the holy days, the "Ya'aleh we-yabo" (= "Rise and come") is inserted in the "'Abodah," the name of the day appearing in each case in its proper place. The Sabbath is never referred to in this prayer, and it forms part of every service save the additional or Musaf:

> "Our God and God of our fathers! may the remembrance of ourselves and our fathers, and of Thy anointed servant the son of David, and of Thy holy city Jerusalem, and of all Israel Thy people, *rise and come* [hence the name of the prayer], be seen, heard, etc., before Thee on this day . . . for deliverance, happiness, life, and peace; remember us thereon, O Lord our God, for happiness, visit us for blessings, save us unto life, and with words of help and mercy spare and favor us, show us mercy! Save us, for to Thee our eyes are turned. Thou art the gracious and merciful God and King."

In the final part of the benediction appears an introductory petition on the three joyous festivals:

> "Let us receive, O Lord our God, the blessings of Thy appointed times for life and peace, for gladness and joy, wherewith Thou in Thy favor hast promised to bless us." (Then follows the "Reẓeh" [see above], with such variations from the Sabbath formula as: "in gladness and joy" for "in love and favor"; "rejoice" for "rest"; and "Israel and Thy" or "the holy seasons" for "the Sabbath.")

Insertions.

On Rosh ha-Shanah a prayer for the coming of the kingdom of heaven is added at the close of this benediction (for its text see the prayer-books and Dembitz, *l.c.* p. 145). On the Day of Atonement the petition solicits pardon for sins (Dembitz, *l.c.* p. 146). A Habdalah is inserted on Saturday night in the "Sanctification of the Day" when a festival—and this can never happen with the Day of Atonement—falls on a Sunday. The form in use is somewhat longer than that given in the Talmud, where it is called "a pearl" on account of its sentiment (Ber. 33b; Beẓah 17a). Insertions are made in the six constant benedictions on certain occasions, as follows: During the ten days of Teshubah, *i.e.*, the first ten days of Tishri, in No. i., after "in love" is inserted "Remember us for life, O King who delightest in life, and inscribe us into the book of life; for Thy sake, O God of life"; in No. ii., after "salvation to sprout forth," "Who is like Thee, Father of mercies, who rememberest His [Thy] creatures unto life in mercy?"; in No. iii., "holy King," in place of "holy God" at the close; in No. xviii., before the concluding paragraph, "O inscribe for a happy life all the sons of Thy covenant"; in No. xix., before the end, "May we be remembered and inscribed in the book of life, of blessing, of peace, and of good sustenance, we and all Thy people, the whole house of Israel, yea, for happy life and for peace"; and the close (in the German ritual) is changed to "Blessed be Thou, O Lord, who makest peace." In the "Ne'ilah" (concluding) service for the Day of Atonement, "inscribe" is changed to "seal." On the two "solemn days" ("Yamim Nora'im") a petition for the kingdom of heaven is inserted in No. iii. (see the translation in Dembitz, *l.c.* p. 122), and the concluding phrase of this eulogy also is changed: "Thou art holy, and Thy name is fearful, and there is no God besides Thee, as it is written [Isa. v. 16], ‘The Lord God is exalted in judgment, and the Holy God is sanctified in righteousness.’ Blessed be Thou, O Lord, the Holy King." In fall and winter, in No. ii., after the words "Thou resurrectest the dead and art great to save" is inserted the words: "Thou causest the wind to blow and the rain to descend." On New Moons and middle days, except in the Musaf, the "Ya‘aleh we-yabo" (see above) is inserted in the "‘Abodah" before "bring back." On Ḥanukkah and Purim special thanks are inserted in No. xviii. after the words "from everlasting we have hoped in Thee." These narrate the wonderful occurrences which the day recalls. On fast-days, after No. vi. a special supplication is recited, beginning with "Answer us, O Lord, answer us"; and in No. vii., the prayer for the sick, one desirous of remembering a sick person interpolates a brief "Yehi Raẓon" (= "May it be Thy will") to that effect. On the Ninth of Ab in the Minḥah service a supplication is introduced into No. xv. for the consolation of those that mourn for Zion. In No. xvi., as well as in the Minḥah and the silent prayer, the fast-day appeal might be inserted.

The "Hoda‘ah" (No. xviii.) has a second version, styled the "Modim de-Rabbanan" and reading as follows:

> "We confess this before Thee that Thou art immutable, God our God and the God of our fathers, the God of all flesh. Our Creator, the Creator of all in the beginning: [we offer] benedictions and thanksgivings unto Thy name, the great and holy One, because Thou hast kept us alive and preserved us. Even so do Thou keep us alive and preserve us, and gather together our exiles to Thy holy courts to keep thy statutes and to do Thy will and to serve Thee with a fully devoted heart, for which we render thanks unto Thee. Blessed be the God of the thanksgivings."

As the title suggests, this is an anthology of various thanksgiving prayers composed by the Rabbis (Soṭah 9a). The close is not found in the Talmudical passage cited, nor does it appear in the "Siddur" of Rab Amram or in the formula given by Maimonides and others; but it is taken from Yer. Ber. i. 7. A somewhat different opening, "We confess and bow down and kneel," is preserved in the Roman Maḥzor.

Before the priestly blessing (originally in the morning service, but now in the additional service, and in the Minḥah service on the Ninth of Ab or on any other public fast-day), whenever "the priests" ("kohanim") are expected to recite the priestly blessing (see DUKAN), the leader reads in the "‘Abodah":

> "May our supplication be pleasing in Thy sight like burnt offering and sacrifice. O Thou Merciful Being, in Thy great mercy restore Thy Shekinah to Zion and the order of service to Jerusalem. May our eyes behold Thy return to Zion in mercy, and there we shall serve Thee in awe, as in the days of old and in former years" (comp. Mal. ii. 2).

He then ends the benediction as usual and reads the "Modim" as well as the introduction to the priestly blessing (see BLESSING, PRIESTLY):

> "Our God and God of our fathers, bless us with the blessing which, tripartite in the Torah, was written by the hands of Moses, Thy servant, and was spoken by Aaron and his sons the priests, Thy holy people, as follows [at this point the priests say aloud]: "Blessed be Thou, O Eternal our God, King of the universe, who hast sanctified us with the sacredness of Aaron and hast commanded us in love to bless Thy (His) people Israel."

Thereupon they intone the blessing after the leader, word for word:

> "‘May the Eternal bless thee and keep thee.
> ‘May the Eternal let His countenance shine upon thee and be gracious unto thee.
> ‘May the Eternal lift up His countenance toward thee and give thee peace.’"

After each section the people usually answer, "Ken yehi raẓon!" (= "May such be [Thy] will!"); but when the kohanim perform this function (on the holy days) those present answer, "Amen." On the morning of the Ninth of Ab the kohanim may not pronounce the blessing, nor may the precentor read it.

Mode of Prayer.

The "Shemoneh ‘Esreh" is first prayed silently by the congregation and then repeated by the reader aloud. In attitude of body and in the holding of the hands devotion is to be expressed (see Shulḥan ‘Aruk, Oraḥ Ḥayyim, 95 *et seq.*). Interruptions are to be strictly avoided (*ib.* 104). In places and situations where there is grave danger of interruptions, a shorter form is permissible comprising the first three and the last three benedictions and between them only the "Attah Ḥonen," the petition for understanding (No. iv.; Oraḥ Ḥayyim, 110).

The "Shemoneh ‘Esreh" is prefaced by the verse "O Eternal, open my lips, and my mouth shall proclaim Thy praise" (Ps. li. 17; see Ber. 4b). At one time two other Biblical passages (Ps. lxv. 3 and Deut. xxxii. 3) were recited, one before and the other after the verse now retained. But this was considered to break the connection between the "Ge'ullah" (the preceding eulogy, the last in the "Shema‘" ending with "Ga'al Yisrael") and the "Tefillah"; and such an interruption was deemed inadmissible, as even an "Amen" was not to be spoken before the words "O Eternal, open my lips," in order that this verse might be considered to belong to the preceding "Ge'ullah" and to form with it a "long Ge'ullah" (גאולה אריכתא; Oraḥ Ḥayyim, 111; and the Ṭur, *l.c.*). A discussion arose among the later "Posekim" whether this injunction was applicable to Sabbaths and holy days or only to work-days. In the additional and Minḥah services more verses might be spoken after the "Shema‘" and before and after the "Tefillah." The custom has gradually developed of reciting at the conclusion of the latter the supplication with which Mar, the son of Rabina, used to conclude his prayer (Ber. 17a):

> "My God, keep my tongue and my lips from speaking deceit, and to them that curse me let me [Hebr. "my soul"] be silent, and me [my soul] be like dust to all. Open my heart in Thy Torah, and after [in] Thy commandments let me [my soul] pursue. As for those that think evil of [against] me speedily thwart their counsel and destroy their plots. Do [this] for Thy name's sake, do this for Thy right hand's sake, do this for the sake of Thy holiness, do this for the sake of Thy Torah. That Thy beloved ones may rejoice, let Thy right hand bring on help [salvation] and answer me. [For the formula here given beginning with "Do this," another one was used expressive of the wish that the Temple might be rebuilt, that the Messiah might come, that God's people might be ransomed, and that His congregation might be gladdened. The angels also were invoked; and the appeal was summed up: "Do it for Thy sake, if not for

> ours."] May the words of my mouth and the meditations of my heart be acceptable in Thy sight, O Eternal, my rock and my redeemer."

At these words, three steps backward were taken (see Oraḥ Ḥayyim, *l.c.* 123), and then this was recited:

> "He who maketh peace in the heights, He will establish peace upon us and upon all Israel, and thereupon say ye 'Amen.'"

The Concluding Section.

Then followed a final phrase praying for the rebuilding of the Temple so that Israel might sacrifice again, to the sweet gratification of God as of yore. The worshiper was bidden to remain at the place whither his three backward steps had brought him for the space of time which would be required for traversing a space of four ells, or, if at public prayer-service, until the precentor, in the loud repetition, intoned the "Ḳedushshah."

In the "Tefillah" for the additional service the constant parts are always retained. On Rosh ha-Shanah there are three middle benedictions (according to R. H. iv. 5; comp. Ta'an. ii. 3 for fast-days): (1) "Fathers"; (2) "Powers"; (3) "Holiness of the Name" with addition of the "Kingdoms"; (4) "Sanctifications of the Day," the shofar being blown; (5) "Remembrances" (with shofar); (6) "Shofarot" (the shofar is blown); (7) "'Abodah"; (8) "Hoda'ot"; (9) Blessings of the kohanim. According to R. Akiba, "Kingdoms," *i.e.*, verses recognizing God as king, must always go with "Blowings"; therefore he rearranges the benedictions as follows: (1), (2), (3) "Holiness"; (4) "Sanctifications" and "Kingdoms" (with blasts of the shofar); (5) "Remembrances," *i.e.*, verses in which God is shown to be mindful of mankind and of Israel (with blasts); (6) "Shofarot," *i.e.*, verses in which the shofar is named literally or figuratively; (7), (8), and (9). On Sabbaths and holy days there is only one middle benediction, an enlarged "Sanctification of the Day." The last part is modified on New Moon. If New Moon falls on a week-day, there is, of course, no "Sanctification of the Day"; but there is a special benediction, the introduction consisting of regrets for the cessation of the sacrifices, and the principal part of it being a petition for the blessing of the New Moon:

> "Our God and God of our fathers, renew for us this month for happiness and blessing [Amen], for joy and gladness [Amen], for salvation and comfort [Amen], for provision and sustenance [Amen], for life and peace [Amen], for pardon of sin and forgiveness of transgression [Amen]."

According to the German ritual, when Sabbath and New Moon coincide, the "Sanctification of the Day" is omitted; but a somewhat more impressive prayer is recited, referring to God's creation of the world, His completion thereof on the seventh day, His choice of Israel, and His appointment of Sabbaths for rest and New Moons for atonement; declaring that exile is the punishment for sins of the fathers; and supplicating for the restoration of Israel.

On an ordinary Sabbath the middle benediction, in a labored acrostic composition in the inverted order of the alphabet, recalls the sacrifices ordained for the Sabbath, and petitions for restoration in order that Israel may once more offer the sacrifices as prescribed, the prayer concluding with an exaltation of the Sabbath. In the festival liturgy the request for the restoring of the sacrificial service emphasizes still more the idea that the Exile was caused by "our sins" ("umi-pene ḥaṭa'enu"):

> "On account of our sins have we been exiled from our country and removed from our land, and we are no longer able [to go up and appear and] to worship and perform our duty before Thee in the House of Thy choice," etc.

On the three pilgrim festivals another supplication for the rebuilding of the Temple is added to the foregoing, with quotation of the Pentateuchal injunction (Deut. xvi. 16, 17) regarding appearance before God on those days.

The additional for the middle days (the workdays) of Pesaḥ and Sukkot is the same as that for the feasts proper, and is read even on the Sabbath.

Variants in the Rituals.

The following are some of the more important variants in the different rituals:

In No. v. ("Lead us back, our Father," etc.) Saadia, Maimonides, and the Italian Maḥzor read "Lead us back, our Father, to Thy Torah, *through our clinging to Thy commandments*, and bring us near," etc.

The Sephardim shorten the last benediction in the evening and morning services of the Ninth of Ab to this brief phrasing:

> "Thou who makest peace, bless Thy people Israel with much strength and peace, for Thou art the Lord of peace. Blessed be Thou, O Eternal, maker of peace."

In No. ix. (the benediction for the year) the words "dew and rain" are inserted during the term from the sixtieth day after the autumnal equinox to Passover. The Sephardic ritual has two distinct versions: one for the season when dew is asked for, and the other when rain is expected. The former has this form:

> "Bless us, O our Father, in all the work of our hands, and bless our year with gracious, blessed, and kindly dews: be its outcome life, plenty, and peace as in the good years, for Thou, O Eternal, art good and doest good and blessest the years. Blessed be Thou, O Eternal, who blessest the years."

In the rainy season (in winter) the phraseology is changed to read:

> "Bless upon us, O Eternal our God, this year and all kinds of its produce for goodness, and bestow dew and rain for blessing on all the face of the earth; and make abundant the face of the world and fulfil the whole of Thy goodness. Fill our hands with Thy blessings and the richness of the gifts of Thy hands. Preserve and save this year from all evil and from all kinds of destroyers and from all sorts of punishments: and establish for it good hope and as its outcome peace. Spare it and have mercy upon it and all of its harvest and its fruits, and bless it with rains of favor, blessing, and generosity; and let its issue be life, plenty, and peace as in the blessed good years; for Thou, O Eternal" (etc., as in the form given above for the season of the dew).

In No. xiii. the Sephardic ritual introduces before "the elders" the phrase "and on the remnant of Thy people, the house of Israel," while in some editions these words are entirely omitted, and before the conclusion this sentence is inserted: "on Thy great loving-kindness in truth do we rely for support."

No. xiv. among the Sephardim reads:

> "[Thou wilt] dwell in the midst of Jerusalem, Thy city, as Thou hast spoken [promised], and the throne of David Thy servant speedily in its midst [Thou wilt] establish, and build it an everlasting building soon in our days. Blessed be Thou, O Eternal, who buildest Jerusalem."

This reading is that of Maimonides, while the Ashkenazim adopted that of Rab Amram.

In No. xvi. God is addressed as "Ab ha-Raḥman" = "the Merciful Father." Before the conclusion is inserted "Be gracious unto us and answer us and hear our prayer, for Thou hearest the prayer of every mouth" (the "'Aruk," under עין, gives this reading: "Full of mercy art Thou. Blessed be Thou who hearest prayer"). In the "Reẓeh" (No. xvii.) the text differs somewhat: "Be pleased . . . with Thy people Israel [as in the German ritual] and to their prayer give heed"—a reading presented by Maimonides also. Furthermore, the word "meherah" (= "speedily") is introduced as qualifying the expected answer to the prayer and the offerings. Amram has this adverb; but MaHaRIL objects to its insertion.

Verbal changes, not materially affecting the meaning, occur also in the "Ya'aleh we-Yabo" (for New Moons, etc.). But before "May our eyes behold" the Sephardim insert "and Thou in Thy great mercy ["wilt" or "dost"] take delight in us and show us favor," while Saadia Gaon adds before the conclusion ("Blessed be," etc.): "and Thou wilt take delight in us as of yore."

Slight verbal modifications are found also in the Sephardic "Hoda'ah"; *e.g.*, "and they [the living] shall praise and bless Thy great name in truth forever; for good [is] the God, our help and our aid, Selah, the God, the Good." Abudarham quotes, "and Thy name be exalted constantly and forever and aye"; while Saadia's version reads: "on account of all, be Thou blessed and exalted; for Thou art the Only One in the universe, and there is none besides Thee." The Roman Maḥzor inserts before "and for all these" the following: "Thou hast not put us to shame, O Eternal our God, and Thou hast not hidden Thy face from us." And so in the final benediction—for which the Sephardim always use the formula beginning with "Sim shalom," never that with "Shalom rab"—among the blessings asked for is included that for "much strength," one not found in the German ritual. Maimonides and Amram likewise do not use the formula beginning with the words "Shalom rab." Following Amram, Saadia, and Maimonides, the Sephardim read: "Torah and life, love and kindness" where the German ritual presents the construct case: "Torah of life and love of kindness."

In the Intermediate Blessings.

Moreover, in the Sephardic ritual a number of individual petitions are admitted in various benedictions, which is not the case in the Ashkenazic. In the introduction to the "Sanctification of the Day" (benediction No. iv.) for the Sabbath the Sephardim add on Friday evening lines which the Ashkenazim include only in the additional service (see Dembitz, *l.c.* p. 141). For the middle benediction of the Musaf the Sephardim have a simpler form (*ib.* p. 149). While the Germans quote in the prayer the language of the Pentateuch in reference to the sacrifices, the Sephardim omit it. In praying for the new month the Portuguese ritual adds: "May this month be the last of all our troubles, a beginning of our redemption." (For differences in the Musaf for Sabbath and New Moon see Dembitz, *l.c.* p. 153.)

In the Vitry Maḥzor's reading the conjunction "waw" is frequently dropped, much to the improvement of the diction. In benediction No. ii. God is addressed as "Maẓmiaḥ Lanu Yeshu'ah," "causing salvation to sprout forth 'for us'"; while in No. iii. the prefixing of the definite article to the adjective gives the context a new significance, viz., not "Thy name is holy," but "Thy name is 'the Holy One.'" In No. iv. the word "ḥokmah" is presented in addition to "binah" and "de'ah," *i.e.*, "understanding, knowledge, wisdom, and reason." In No. vi. the Vitry Maḥzor has "a God good and forgiving art Thou" instead of "pardoning and forgiving," thus conforming with the readings of Amram, Maimonides, and the Roman Maḥzor.

In No. viii. after "our wounds" follows "our sicknesses." In No. x. for "Blow the great shofar" this version reads "Gather us from the four corners of *all* the earth into *our land*," which is found also in the Sephardic ritual and in Amram and Maimonides.

No. xv. is presented as in the Sephardic form (see above), but with the addition:

> "And may our prayers be sweet before Thee like the burnt offering and like the sacrifice. O be merciful, in Thy great mercies bring back Thy Shekinah to Zion and rearrange the sacrificial service for Jerusalem, and do Thou in mercy have yearnings for us and be pleased with us. And may our eyes behold Thy return to Zion in mercy as of yore."

So, also, Saadia: "and Thou wilt be pleased with us as of yore." The "Modim" is given in an abbreviated form; and in the last benediction the words "on every day" are inserted before "at all times."

A great variety of readings is preserved in the case of benediction No. iii. In the Roman Maḥzor the phraseology is: "From generation to generation we shall proclaim God King, for He alone is exalted and holy; and Thy praise, O our God, shall not depart from our mouth forever and aye, for a God great and holy art Thou. Blessed be Thou, O Eternal, the holy God." This is also Amram's language; but in Saadia's ritual is presented: "Thou art holy and Thy name is holy, and Thy memorial ["zeker"] is holy, and Thy throne is holy, and the holy ones every day will praise Thee, Selah. Blessed be Thou, God, the Holy One." Maimonides confirms this version, though he omits the words "Thy memorial is holy . . . and Thy throne is holy." In Sifre, Deut. 343 this benediction is quoted as "Holy art Thou and awe-inspiring Thy name," which is the Ashkenazic reading for Rosh ha-Shanah and the Day of Atonement.

No. vii., "Tefillat Ta'anit," the prayer for fast-days (Ta'an. 11b, 13b), has come down in various recensions. In the "'Aruk," under קבל, the reading is as follows:

> "Answer us, our Father, answer us in this time and distress of ours, for we are in great trouble. O do not hide Thyself from our supplication, for Thou answerest in time of trouble and tribulation, as it is written, 'and they cried unto YHWH in their need and from their tribulations did He save them.' Blessed be Thou, O Eternal, who answerest in time of trouble."

The formula given by Maimonides differs from this, as it does from those in vogue among the Ashkenazim and the Sephardim respectively, which in turn disagree with each other. Maimonides has this reading:

> "Answer us, O our Father, answer us on the fast-day of our affliction, for we are in great distress. Do not hide Thy face

from us, and do not shut Thine ear from hearing our petition, and be near unto our cry. Before we call, do Thou answer; we speak, do Thou hear like the word in which it is spoken: 'and it shall be before they will call I shall answer; while still they are speaking I shall hear.' For Thou dost hear the prayer of every mouth. Blessed be Thou, O Eternal, who hearest prayer."

When, however, the reader repeated the prayer aloud, between vii. and viii., on reaching "for Thou dost hear," etc., he substituted "Thou art a God answering in time of trouble, ransoming and saving in all time of trouble and tribulation. Blessed be Thou, O Eternal, who answerest in time of trouble." The Sephardic recension has the following:

> "Answer us, O our Father, answer us on this fast-day of affliction; for we are in great distress. Do not turn to our wickedness, and do not hide, O our King, from our supplication. Be, O be, near to our cry before we call unto Thee. Thou, yea Thou, wilt answer; we shall speak, Thou, yea Thou, wilt hear, according to the word which was spoken: 'It shall be before they will call I shall answer; while still they are speaking I shall hear.' For Thou art a God ransoming and helping and answering and showing mercy in all time of trouble and distress."

The German ritual adds: "do not hide Thy face from us"; and again: "May Thy loving-kindness be [shown] to console us."

The petition for healing (No. viii.) appears with altered expressions in the Sephardic ritual, the words for "healing" being the unusual "arukah" and "marpe." Again, "our sicknesses" takes the place of "our sores or wounds." So, also, in Maimonides' ritual, which moreover after the added "and all our pains" has "for a God [omitting "King"] healing, merciful, and trustworthy art Thou."

On the whole the language of the eighteen (nineteen) benedictions is Biblical, and in phraseology is more especially similar to that of the Psalms. The following analysis may indicate the Biblical passages underlying the "Tefillah":

Biblical Sources.

Benediction No. i.: "Blessed be Thou, our God and the God of our fathers, the God of Abraham, Isaac, and Jacob" recalls Ex. iii. 15 (comp. Mek., Bo, 16). "The high God," Gen. xiv. 19. God "great, mighty, and awe-inspiring," Deut. x. 17 (comp. Ber. 33b; Soṭah 69b). "Creator of all," Gen. xiv. 19. "Bringing a redeemer," Isa. lix. 20. "Shield of Abraham," Ps. vii. 11; xviii. 3, 36; lxxxiv. 10; Gen. xv. 1.

No. ii.: "Supportest the falling," Ps. cxlv. 14. "Healest the sick," Ex. xv. 26. "Settest free the captives," Ps. cxlvi. 7. "Keepest his faith" = "keepeth truth forever," *ib.* cxlvi. 6 (comp. Dan. xii. 2). "Killing and reviving," I Sam. ii. 6.

No. iii.: "Thou art holy," Ps. xxii. 4. "The holy ones," *ib.* xvi. 3. "[They shall] praise Thee" = sing the "Hallel" phrase, which is a technical Psalm term and hence followed by SELAH.

No. iv.: "Thou graciously vouchsafest" is a typical Psalm idiom, the corresponding verb occurring perhaps more than 100 times in the psalter. "Understanding," Isa. xxix. 23; Jer. iii. 15; Ps. xciv. 10.

No. v.: "Repentance," Isa. vi. 10, 13; lv. 7.

No. vi.: "Pardon," *ib.* lv. 7.

No. vii.: "Behold our distress," Ps. ix. 14, xxv. 18, cix. 153. "Fight our fight," *ib.* xxxv. 1, xliii. 1, lxxiv. 22. "And redeem us," *ib.* cix. 154 (comp. Lam. iii. 58).

No. viii.: "Heal," Jer. xvii. 14 (comp. *ib.* xxx. 17). Maimonides' reading, "all of our sicknesses," is based on Ps. ciii. 3.

No. ix.: Compare *ib.* lxv. 5, 12; ciii. 5; Jer. xxxi. 14.

No. x.: "Gather our exiles," Isa. xi. 12, xxvii. 13, xliii. 5, xlv. 20, lx. 9; Jer. li. 27; Deut. xxx. 4; Mic. iv. 6; Ps. cxlvii. 2.

No. xi.: "Reestablish our judges," Isa. i. 26. "In loving-kindness and mercy," Hos. ii. 21. "King who lovest righteousness and justice," Ps. xxxiii. 5, xcix. 4; Isa. lxi. 8 (comp. also Isa. xxxv. 10, li. 11; Ps. cxlvi. 10).

No. xii.: The expression "zedim" is a very familiar one of almost technical significance in the "Psalms of the poor" (for other expressions compare Ps. lxxxi. 15; Isa. xxv. 5).

No. xiii.: For some of the words of this benediction compare Jer. xxxi. 20; Isa. lxiii. 15; Ps. xxii. 6, xxv. 2, lxxi. 5, cxliii. 8; Eccl. vi. 9.

No. xiv.: Zech. viii. 3; Ps. cxlvii. 2, lxxxix. 36–37, cxxii. 5.

No. xv.: Hos. iii. 5; Isa. lvi. 7; Ps. l. 23, cxii. 9; Gen. xlix. 18; Ps. lxxxix. 4, 18, 21, 26; xxv. 5; Ezek. xxix. 21, xxxiv. 23; Ps. cxxxii. 17; Jer. xxiii. 5, xxxiii. 15; Ps. cxxxii. 10.

No. xvi.: Ps. lxv. 3.

No. xvii.: Mic. iv. 11.

No. xviii.: I Chron. xxix. 13; II Sam. xxii. 36; Ps. lxxix. 13; Lam. iii. 22; Ps. xxxviii. 6 (on the strength of which was printed the emendation "Ha-Mufḳadot" for the "Ha-Peḳudot"); Jer. x. 6.

No. xix.: Ps. xxix. 10; Num. vi. 27; Mic. vi. 8; Ps. cix. 165, cxxv. 5.

Mishnaic Phraseology.

While in the main the language is Biblical, yet some use is made of mishnaic words; for example, "teshubah," as denoting "repentance," and the hif'il "hasheb" have a synonym, "we-haḥazir" (in No. v.), in which sense the root is not found in Biblical Hebrew. The expression "meḥal" (vocalized "meḥol") is altogether mishnaic (Yoma vii. 1; Ket. 17a; Ber. 28a; Shab. 30a; Ta'an. 20b; Sanh. 107a). "Nissim," for "wonders," "miracles," has a significance which the Biblical word "nes" does not possess (Ab. v.; Ber. ix. 1; Niddah 31a). So also the term "sha'ah," an adaptation from the Aramaic, occurs as the equivalent of the Hebrew "rega'" = "moment" (secondarily, "hour"). "Peleṭat soferim" is a rabbinical designation (Meg. Ta'an. xii.; Yer. Ta'an. 66a), while "ḥerut" = "freedom" is another late Hebrew term. "Gere ha-ẓedeḳ" is the late technical term for PROSELYTES.

The language of the "Tefillah" would thus point to the mishnaic period, both before and after the destruction of the Temple, as the probable time of its composition and compilation. That the Mishnah fails to record the text or to give other definite and coherent directions concerning the prayer except sporadically, indicates that when the Mishnah was finally compiled the benedictions were so well known that it was unnecessary to prescribe their text and content (Maimonides on Men. iv.1b, quoted by Elbogen, "Gesch. des Achtzehngebetes"), although the aversion to making prayer a matter of rigor and fixed formula may perhaps have had a part in the neglect of the Mishnah. That this aversion continued keen down to a comparatively late period is evidenced by the protests of R. Eliezer (Ber. 28a) and R. Simeon ben Yoḥai (Ab. ii. 13). R. Jose held that one should include something new in one's prayer every day (Yer. Ber. 8b), a principle said to have been carried into practise by R. Eleazar and R. Abbahu (*ib.*). Prayer was not to be read as one would read a letter (*ib.*).

While the Mishnah seems to have known the general content and sequence of the benedictions, much latitude prevailed as regards personal deviations in phraseology, at all events; so that men's learning or the reverse could be judged by the manner in which they worded the benedictions (Tos. to Ber. i. 7).

Preserved by Memory.

Prayers were not reduced to writing (Shab. 115b; Yer. Shab. 15c). Not until the times of the Masseket Soferim were written prayer-manuals in existence (see Zunz, "Ritus," p. 11). Hence the necessity of resorting to mnemonic verses in order to prevent too much variety—a method employed even by very late authorities. For instance, the "Ṭur" gives the verse Isa. vi. 3, containing fourteen words, as a reminder that benediction No. iii. contains the same number of words. For No. iv., Ex. xxviii. 3 is the reminder that only seventeen words (excluding "ḥokmah") are admissible. The number of words in No. v., namely, fifteen, is recalled by the similar number of words in Isa. lv. 7 or *ib.* vi. 13, which proves the correctness of the German text.

The "Kol Bo" states that No. vii. has eighteen words, as has the verse Ex. xvi. 25; and this would justify the insertion of the word "Na" (נא), which appears in some versions. The "Roḳeaḥ," however, reports only seventeen words, as in the German version. No. viii. has twenty-seven words, corresponding to the same number in Ex. xvi. 26 or in the verse concerning circumcision (Gen. xvii.), or to the twenty-seven letters of Prov. iv. 22 or Ps. ciii. 3. This list of correspondences in the number of words or letters, invoked by the very late authorities to settle disputed readings, might be extended, as such analogy is assigned to almost every benediction (see Baer's commentary in his "Seder 'Abodat Israel," pp. 89 *et seq.*).

Choice of the Number Eighteen.

The earlier Talmudic teachers resorted to similar aids in order to fix the number of the benedictions contained in the "Tefillah." The choice of eighteen is certainly a mere accident; for at one time the collection contained less, and at another more, than that number. The fact that such mnemonic verses came into vogue suggests that originally the number of the benedictions was not definitely fixed; while the popularity of the verses fixing the number as eighteen is probably caused by the continued designation of the prayer as the "Shemoneh 'Esreh," though it now has nineteen benedictions (according to "J. Q. R." xiv. 585, the Yemen "Siddur" has the superscription "Nineteen Benedictions"). Eighteen corresponds to the eighteen times God's name is mentioned in Ps. xxix. (Yer. Ber. 8a, above; Lev. R. i.), which psalm, nevertheless, seems to indicate the number of benedictions as nineteen (see Elbogen, *l.c.*; "Monatsschrift," 1902, p. 353). Another mnemonic reference, based upon the number of times the names of the three Patriarchs occur together in the Pentateuch (Gen. R. lxix.), is resorted to, and points to the fact that at one time seventeen benedictions only were counted.

Other bases of computations of the number eighteen are: (1) the eighteen times God's name is referred to in the "Shema'"; (2) the eighteen great hollows in the spinal column (Ber. 28b); (3) the eighteen psalms at the beginning of the Book of Psalms (i.-ii. being really only i.; Yer. Ber. iv.); (4) the eighteen "commands" which are in the pericope "Peḳude" (Ex. xxxviii. 21 *et seq.*); (5) the eighteen names of Yhwh in Miriam's song by the sea (Ex. xv.). These mnemonic references suggest the fact that originally the number was not eighteen; otherwise the pains taken to associate this number with other eighteens would be inexplicable.

History of the Prayer.

The Talmud names Simeon ha-Paḳoli as the editor of the collection in the academy of R. Gamaliel II. at Jabneh (Ber. 28b). But this can not mean that the benedictions were unknown before that date; for in other passages the "Shemoneh 'Esreh" is traced to the "first wise men" (חכמים הראשונים; Sifre, Deut. 343), and again to "120 elders and among these a number of prophets" (Meg. 17b). This latter opinion harmonizes with the usual assumption that the "men of the Great Synagogue" arranged and instituted the prayer services (Ber. 33a). In order to remove the discrepancies between the latter and the former assignment of editorship, the Talmud takes refuge in the explanation that the prayers had fallen into disuse, and that Gamaliel reinstituted them (Meg. 18a).

The historical kernel in these conflicting reports seems to be the indubitable fact that the benedictions date from the earliest days of the Pharisaic Synagogue. They were at first spontaneous outgrowths of the efforts to establish the Pharisaic Synagogue in opposition to, or at least in correspondence with, the Sadducean Temple service. This is apparent from the haggadic endeavor to connect the stated times of prayer with the sacrificial routine of the Temple, the morning and the afternoon "Tefillah" recalling the constant offerings (Ber. 26b; Gen. R. lxviii.), while for the evening "Tefillah" recourse was had to artificial comparison with the sacrificial portions consumed on the altar during the night. In certain other homilies the fixation of the day's periods for the three "Tefillot" is represented as being in harmony with the daily course of the sun (Gen. R. lxviii.: R. Samuel bar Naḥman, in Yer. Ber. iv.). Again, the Patriarchs are credited with having devised this tripartite scheme (Ber. 26b; Abraham = morning; Isaac = afternoon; Jacob = evening). Dan. vi. 11 is the proof that this system of praying three times a day was recognized in the Maccabean era. Gradually both the hours for the "Tefillah" and the formulas thereof acquired

Edited by Gamaliel II.

greater regularity, though much uncertainty as to content, sequence, and phraseology continued to prevail. R. Gamaliel II. undertook finally both to fix definitely the public service and to regulate private devotion. He directed Simeon ha-Pakoli to edit the benedictions—probably in the order they had already acquired—and made it a duty, incumbent on every one, to recite the prayer three times daily. Under Gamaliel, also, another paragraph, directed against the traitors in the household of Israel, was added, thus making the number eighteen (Ber. iv. 3; see Grätz, "Gesch." 3d ed., iv. 30 *et seq.*).

Old material is thus preserved in the eighteen benedictions as arranged and edited by the school of Gamaliel II. The primitive form of most of them was undoubtedly much simpler. J. Derenbourg (in "R. E. J." xiv. 26 *et seq.*) makes two facts appear plausible:

(1) While recited in the Temple, the original conclusion of benedictions was "Blessed be Thou, O Eternal, God of Israel from eternity to eternity" (Ber. ix. 5; Geiger, in "Kerem Ḥemed," v. 102; *idem*, "Lehr- und Lesebuch zur Sprache der Mischnah," ii. 2; "He-Ḥaluẓ," vii. 88), emphasizing the "other eternity or world" denied by heretics. From this is derived the usual designation of God as "King of the world," not found, strange to say, in the eighteen benedictions—a circumstance that attracted the attention of the Rabbis (Ber. 29a). This omission might indicate that the bulk of the benedictions received something like their present form under the supremacy of the Romans, who did not tolerate the declaration "God is king." More likely is the explanation that the omission was for the purpose of avoiding the misconstruction that God ruled only over this world. In the Rosh ha-Shanah prayer the thought of God's rulership is all the more strongly emphasized; and this fact suggests that the Rosh ha-Shanah interpolations are posterior to the controversies with the Jewish heretics and the Romans, but not to the time when Christianity's Messianic theology had to be answered by affirmations of the Jewish teaching that God alone is king. The word מלך, wherever found in the text, is a later insertion. So also is the phrase באהבה = "in love," which also carries an anti-Pauline point (see Epistle of Paul to the Romans).

(2) In the middle, non-constant benedictions (Nos. iv.-xvi.) there is a uniform structure; namely, they contain two parallel stichoi and a third preceding the "Blessed be" of the "sealing" (as the Rabbis call it) of the benediction; for example, in No. iv. are: (1) "Thou graciously vouchsafest knowledge to man" = (2) "and teachest mortals understanding"; and (3) "Vouchsafe unto us from Thee knowledge, understanding, and intelligence." By this test the later enlargements are easily separated from the original stock.

In the "sealing" formula, too, later amplifications are found. It was always composed of two words and no more, as in Nos. vii., ix., xiv., and xvi. of the present text; so No. vi. originally read המרבה לסלוח; No. viii., רופא הולים; and the others similarly.

The Abstracts.

The abstracts of the benedictions (Ber. 29a) which R. Joshua (*ib.* 28b) recommended, and Rab and Samuel explained, so that the last-named has come to be considered as the author of a résumé of this kind (*ib.* 29a), indicate that primarily the longer eulogies were at least not popular. Abaye (4th cent.) found the fondness for these abstracts so strong that he pronounced a curse upon those who should use them (*ib.*). In the time of R. Akiba the knowledge of the eighteen benedictions was not yet universal; for he advised that one who was familiar with the prayer should recite it, and that one who was not might discharge his duty by reciting a résumé (*ib.* 28b). In dangerous places a very brief formula was, according to R. Joshua, substituted: "Help, O Eternal, Thy people, the remnant of Israel. May their needs at all the partings of the roads be before Thee. Blessed be Thou, O Lord, who hearest prayer" (Ber. iv. 3). The following brief prayer, attributed to R. Eliezer, is for use in places where wild animals and robbers may be prowling about: "Thy will be done in heaven above, and bestow ease of mind upon them that fear Thee [on earth] below, and what is good in Thine eyes execute. Blessed be Thou, O Eternal, who hearest prayer" (*ib.* 29b). R. Joshua recommended this formula: "Hear the cry of Thy people Israel, and do speedily according to their petition. Blessed be Thou, O Eternal, who hearest prayer." R. Eliezer, the son of R. Zadok, virtually repeated the preceding, with merely the substitution of a synonym for "cry." Others used this form: "The needs of Thy people Israel are many, and their knowledge is scarce [limited]. May it be a pleasure from before Thee, O Eternal, our God, to vouchsafe unto each sufficiency of sustenance and to each and every one enough to satisfy his wants. Blessed be Thou, O Eternal, who hearest prayer" (*ib.*). This last form came to be officially favored (*ib.*).

That, even after the "Tefillah" had been fixed as containing eighteen (nineteen) benedictions, the tendency to enlarge and embellish their content remained strong, may be inferred from the admonition not to exaggerate further God's praises (Meg. 18a); or, as R. Johanan has it: "Whoever exaggerates the laudations of the Holy One—praised be He!—will be uprooted from the world" (*ib.*). R. Ḥanina took occasion to reprove very severely a reader who added attribute to attribute while addressing the Deity. If the "men of the Great Synagogue" had not inserted the qualifications "great, mighty, and awe-inspiring," none would dare repeat them (Meg. 25a; Ber. 33b; see AGNOSTICISM). Provisions were made to silence readers who should indulge their fancy by introducing innovations (Ber. 33b), especially such as were regarded with suspicion as evincing heretical leanings.

The abstracts, however, throw light on what may have been the number of the benedictions before Gamaliel fixed it at eighteen by addition of the petition for the punishment of traitors ("wela-malshinim"). The Babylonian Talmud has preserved one version; Yerushalmi, another (or two: a longer and a briefer form, of which the fragments have been combined; see J. Derenbourg in "R. E. J." xiv. 32).

These abstracts, known as the "Habinenu" from their first word, were intended to replace benedictions Nos. iv.–xvi. The Babylonian text reads as follows:

> "Give us understanding, O Eternal, our God, to know Thy ways, and circumcise our hearts to fear Thee; and do Thou pardon us that we may be redeemed. And remove from us bodily pain; and fatten us with the fertility of Thy land; and our dispersed ones from the four corners of the earth do Thou gather together; and they that go astray against the knowledge of Thee shall be judged; and upon the evil-doers do Thou lift up Thy hand; but may the righteous rejoice in the building of Thy city, and in the refounding of Thy Temple, and in the sprouting up of a horn unto David Thy servant, and in the preparing of a light for Jesse's son, Thy Messiah. Before we call Thou wilt answer. Blessed be Thou, O Eternal, who hearest prayer" (Ber. 29a).

An examination of the phraseology establishes the concordance of this abstract and the "Shemoneh 'Esreh" as in the prayer-books.

The Fifteenth Benediction.

The Palestinian text (Yer. Ber. iv.) reveals the contraction of two blessings into one. "Give us understanding, O Eternal, our God [= No. iv.], and be pleased with our repentance [= v.]; pardon us, O our Redeemer [vi.–vii.], and heal our sick [= viii.], bless our years with dews of blessing [ix.]; for the dispersed Thou wilt gather [x.], they who err against Thee to be [will be] judged [xi.]; but upon the evil-doers thou wilt lay Thy hand [xii.], and they who trust in Thee will rejoice [xiii.] in the rebuilding of Thy city and in the restoration of Thy sanctuary [xiv.]. Before we call Thou wilt answer [xvi.]. Blessed be Thou, O Eternal, who answerest prayer." From this it appears that No. xv. ("the sprout of David") is omitted; it was not regarded as an independent benediction, but formed part of the one preceding. According to this, seventeen was the number of benedictions without the "Birkat ha-Ẓadduḳim." That this was the case originally is evidenced by other facts. In Yer. Ber. iv. 5, R. H. iv. 6, Midr. Teh. to Ps. xxix. (ed. Buber, p. 232), and Midr. Shemu'el R. xxvi. the "sealing" of benediction No. xiv. is quoted as "Blessed be Thou, O Eternal, the God of David, and the builder of Jerusalem," indicating that Nos. xiv. and xv. formed only one benediction. In support of this is the notation of what now is No. xvi. as No. xv. (Yer. Ber. ii. 4; Gen. R. xlix.). Again: (1) In Yer. Ber. ii. 4, iv. 3, and Ta'an. ii. 2, the Tosef., Ber. iii. 25 is quoted as reporting the inclusion of the "David" benediction in that concerning the rebuilding of Jerusalem. (2) In the account by Yer. Ber. 4d of the order in which the benedictions follow each other, the benediction concerning David is not mentioned. (3) In many of Ḳalir's compositions—still used in the Italian ritual—for Purim, Hosha'na Rabbah, the Seventeenth of Tammuz, and the Tenth of Ṭebet, in which he follows the sequence of the "Tefillah," this No. xv. is not found (Rapoport, in "Bikkure ha-'Ittim," x., notes 28, 33). Additional indications that Nos. xiv. and xv. were originally one are found in "Halakot Gedolot" (Ber. vi.), "Sefer ha-Eshkol" ("Tefillah," etc., ed. Auerbach, p. 20), and Midr. Leḳaḥ Ṭob on Deut. iii. 23.

But in Babylon this contraction was deemed improper. The question, put into the mouth of David (Sanh. 107a), why God is called the God of Abraham but not the God of David, suggests the elimination of "Elohe Dawid" from benediction No. xiv. In Babylon Nos. xiv. and xv. were counted as two distinct blessings. But this division seems to have been later than the introduction of the prayer against the traitors by Gamaliel (see Pes. 107a, 117b; Tan., Wayera [ed. Buber, p. 42]: "in Babel they recite nineteen"), though Rapoport ("'Erek Millin," p. 228b), Müller ("Ḥillufim," p. 47), and others hold, to the contrary, that the contraction (in Palestine) of Nos. xiv. and xv. was a contrivance to retain the traditional number eighteen, which had been enlarged by the addition of one under Gamaliel II. Which of the two views is the more plausible it is difficult to decide.

Haggadic Explanation of Sequence.

At all events, the sequence in the existing arrangement is logical. The midrashic explanation connects it with events in the lives of the Patriarchs. When Abraham was saved the angels recited the "Blessed be Thou . . . shield of Abraham" (No. i.; Pirḳe R. El. xxvii.); when Isaac was saved by the substitution of the ram they chanted ". . . reviving the dead" (No. ii.; Pirḳe R. El. xxxi.); when Jacob touched the gate of heaven they intoned ". . . the holy God" (No. iii.; Pirḳe R. El. xxxv.); and when Pharaoh raised Joseph to the dignity of viceroy and Gabriel came to teach him the seventy languages, the angels recited ". . . vouchsafing knowledge" (No. iv.; comp. Pirḳe R. El. ix., where Moses calls forth the benediction by receiving the knowledge of God's ineffable name). No. v. was spoken over Reuben and Bilhah (or when Manasseh the king repented; *ib.* xliii.). No. vi. refers to Judah and Tamar; No. vii. to Israel's deliverance from Egypt; No. viii. was first sung at Abraham's recovery, through Raphael's treatment, from the pain of circumcision; No. ix. refers to Isaac's planting and plowing; No. x. to Jacob's reunion with his family in Egypt; No. xi. to Israel's receiving the Law ("Mishpaṭim"); No. xii. to Egypt's undoing in the Red Sea; No. xiii. to Joseph's tender closing of Jacob's eyes; No. xiv. to Solomon's building of the Temple; No. xv. to Israel's salvation at the Red Sea; No. xvi. to Israel's distress and ever-present help; No. xvii. to the establishment of the Tabernacle ("Shekinah"); No. xviii. to Solomon's bringing the Ark into the inner sanctuary; No. xix. to the Israelites' conquest of the land after which they had peace.

Why No. iv. follows upon No. iii. is explained in Meg. 17b by a reference to Isa. xxix. 23; why the "Teshubah" immediately succeeds the "Binah," by a reference to Isa. vi. 10. Again, upon the "Teshubah," repentance, follows the "Seliḥah," pardon, in keeping with Isa. lv. 7. The "Ge'ullah," redemption, should be the seventh benediction (Meg. 17b) because redemption will take place on the seventh day, or rather, as stated by the "Cuzari" and the "Ṭur," because the result of forgiveness is redemption. No. viii. treats of healing because the eighth day is for circumcision (Meg. 17b). No. x. follows No. ix. so as to harmonize with Ezek. xxxvi. 8 (Meg. 17b). As soon as the dispersed (No. x.) are gathered, judgment (No. xi.) will be visited on the evil-doers as stated in Isa. i. 26 (Meg. 17b); and when this has taken place all treason (No. xii.) will cease (Ber. 28b; Meg. 17b; Yer. Ber. iv.). As the traitors are mentioned, the righteous (No. xiii.) naturally are suggested: and their triumph is assured by the downfall of the wicked (Ps. lxx. 11; Meg. *l.c.*). The immediate outcome of this triumph is the resurrection of Jerusalem (No. xiv.; Ps. cxxii. 6; Meg. *l.c.*) and the reenthronement of David's house (No. xv.; Hos. iii. 5; Isa. lvi. 7; Ps. l. 23; Meg. 18a). The connection between the last benediction and the priestly blessing is established (Meg. 18a) by Num. vi. 27 and Ps. xxix. 11.

The Age of the Concluding Benedictions.

The last three benedictions seem to be the oldest of the collection. The names of Nos. xvii. and xviii. ("'Abodah" and "Hoda'ah") occur in the liturgy for the high priest for the Day of Atonement as described in the Mishnah (Yoma vii. 1). It goes without saying that parts of the present text of No. xvii. could not have been used before the destruction of the Temple. But in Yer. Yoma 44b is given a concluding formula almost identical with that now used on holy days when the blessing is recited by the kohanim (שאותך נירא ונעבוד; in Yer. Soṭah 22a, and in the commentary of R. Hananeel on Yoma *l.c.*, the reading is: שאותך לבדך ביראה נעבוד), while in the "Hoda'ah" the ending is almost as now, הטוב לך להודות = "Thou, the one to whom it is good to give thanks." The last three and the first three blessings were included in the daily prayer of the priests (Tamid iv., v. 1; see Grätz, *l.c.* 2d ed., ii. 187, note 4). Zunz ("G. V." 2d ed., p. 380) would assign these to the days of the high priest Simeon. These six are also mentioned by name in an old mishnah (R. H. iv. 5). This would support the assumption that the motive of the early Synagogue was anti-sacerdotal. The very prayers used in the Temple service by the high priest in the most solemn function were taken over into the Synagogue with the implication that this "'Abodah" was as effective as was the sacerdotal ritual. The function of blessing the people the Pharisees would not and could not arrogate unto themselves. Instead they adopted or composed the "Sim Shalom," known as the "Birkat Kohanim" (priestly blessing), and therefore equivalent to the "lifting up of the priest's hands" (for these terms see Maimonides and RaBaD on Tamid v. 1; and Ta'an. iv. 1; Tamid vii. 2; Ber. v. 4).

The "Psalms of the Poor."

The affinity, noticed by Loeb (in "R. E. J." xix. 17), of the "Shemoneh 'Esreh" with the "psalms of the poor" is in keeping with the Pharisaic-Ḥasidic emphasis of the benedictions. The "pious and poor" of the Psalms were the ideal types which the Pharisees sought to imitate. The palpable emphasis of No. ii. on the resurrection (hence one of its names, "Teḥiyyat ha-Metim"; Ber. v. 2; Ta'an. 2a) confirms this theory. The expressions used in this blessing are Biblical (see Loeb in "R. E. J." xix.). The doctrine of the resurrection is intimately connected with Pharisaic nationalism. The anti-Sadducean protest in this benediction is evident.

Of the middle benedictions, No. ix., the blessing for the year, discloses a situation such as prevailed before the disruption of the state, when agriculture was the chief occupation of the Jews. It must for this reason be credited with being one of the oldest parts of the "Tefillah." Nos. iv. and xvi. are not specific in content. The latter is a good summary of the petitions (comp. that of the high priest in Yoma 70a and Yer. Yoma 44b), while No. iv., more than any other, is characteristic of a religion in which understanding is considered essential to piety. The importance of this petition was recognized at an early date. R. Judah ha-Nasi desired to have it used on the Sabbath as well as on week-days (Yer. Ber. v. 2: "if no understanding, whence prayer?"). This passion for knowledge also was characteristic of Pharisaism. The prayer for the sick may perhaps likewise be assigned among the older portions (see Elbogen, *l.c.* p. 341).

In its earlier composition, then, the "Tefillah" seems to have comprised Nos. i., ii., iii., iv., viii., xiv., xvii., xviii., and xix. The other benedictions are altogether of a national content. None of them may be assigned to a date before the Maccabean era, while for many a later one is suggested by the content. But the prayer found in Ecclus. (Sirach) xxxvi. should be kept in mind, as it proves that prayers for Jerusalem, and even for the Temple, were not unusual while both were still standing. The original meaning of the prayer against enemies is perhaps also apparent in this chapter:

Verse 1. "Save us, God of all, and lift up Thy fear upon all the nations."

Verse 2. "Swing on high the hand against the strange people and let them behold Thy might."

Verse 3. "As before their eyes Thou wert proved the Holy One in us, so before our eyes be Thou glorified in them."

Verse 4. "And they shall know as we do know that there is no God besides Thee."

Verse 5. "Renew signs and repeat miraculous deeds. Lift up in glory hand and right arm."

Verse 6. "Summon wrath and pour out glowing anger. Hurl back the adversary and humiliate the enemy."

Verse 7. "Gather all the tribes of Jacob and do Thou cause them to inherit as of old."

Verse 8. "Make glad the people called by Thy name, Israel Thou namedst the first-born."

Verse 9. "Have mercy on Thy holy city, Jerusalem, the place of Thy dwelling."

Verse 10. "Fill Zion with Thy splendor and with Thy glory Thy Temple."

Verse 11. "Hear the prayer of Thy servants like the blessing of Aaron upon Thy people."

This has the appearance of being an epitome of the "Tefillah" as known in the days of Ben Sira.

Analogies in Sirach.

Verse 1: "God of all" recalls benediction No. i., while 1b is the key-note of the prayer for Rosh ha-Shanah.

Verse 2 contains the word גבורות = benediction No. ii.

Verse 3 is a summary of the "Ḳedushshah" = benediction No. iii.

Verse 4 explains the knowledge asked for in No. iv.

Verse 6 accounts for the petition against the enemy, No. xii.

Verse 7 is the prayer for the exiles, No. x.

Verse 8 is the content of the prayer in behalf of the pious, No. xiii.

Verse 9 is the prayer for Jerusalem, No. xiv.

Verse 10 recalls No. xvii.

Verse 11 is clearly related to both Nos. xvi. and xix.

Another line begins "Hasten the end-time," which may, by its Messianic implication, suggest benediction No. xv. ("the sprout of David").

If this construction of Ben Sira's prayer is admissible, many of the benedictions must be assigned to the Maccabean era, though most scholars have regarded them as posterior to the destruction of the Temple. The verse marked 5, indeed, seems to be a commentary on benediction No. xi. It begins with the word חדש, and thus suggests the verse: "Lead us back to Thee and we shall return, renew our days as of yore" (Lam. v. 21, Hebr.). Instead of for the "judges," Ben Sira prays for the reestablishment of God's "judgments," in open allusion to the Exodus (Ex. xii. 12; Num. xxxiii. 4; Ezek. xxv. 11, from which verse he borrows the name "Moab" as a designation of the enemy in the prayer). It is probable that the reading of No. xi. as now given is a later reconstruction of a petition with the implications of the Ecclesiasticus paraphrase. This explanation will obviate the many objections raised against the current opinions; *e.g.*, that under Roman or other foreign rule the Jews would hardly have been permitted to cast reflections on the courts of their masters. The Maccabean period seems to furnish adequate background for the national petitions, though the experiences of the Roman war and the subsequent disasters may have heightened the coloring in many details.

Petition Against Enemies.

The history of the petition against enemies may serve to illustrate the development of the several component parts of the "Tefillah" in keeping with provocations and changed conditions. The verses of Ecclesiasticus make it certain that the Syrian oppressors were the first against whom this outcry of the poor, oppressed victims of tyranny was directed. As the Syrians were aided by the apostates, the "zedim," these were also embraced in the imprecatory appeal. The prayer was in fact designated even in later days as ברכה למכניע זדים, a petition to humiliate the arrogant ("zedim"; Yer. Ber. ii. 3, iv. 2). A century later the Sadducees furnished the type, hence it came to be designated as the "Birkat ha-Ẓaddukim" (but "Ẓaddukim" may in this connection be merely a euphemism for "Minim"; Yer. Ber. iv. 3; Ber. 28b). Under Gamaliel II. it was invoked against heretics, traitors, and traducers: the "minim" and the "posh'im," or, as Maimonides reads, the Apiḳoresim (see also his commentary on Sanh. x. 1, and "Yad," Teshubah, iii. 6-8). The latter were the freethinkers; the former, the Judæo-Christians. These had brought much trouble into the camp of faithful Israel; they disputed with the Rabbis; even R. Gamaliel had often to controvert them (see "He-Ḥaluẓ," vii. 81 *et seq.*); they involved the Jews in difficulties with the Roman government (Tosef., Ḥul. ii. 24); they denounced the Jews to the authorities (hence "minim" and המסורות, R. H. 18a; Tos. to Sanh. xiii.; 'Olam R. iii.; comp. Joël, "Blicke in die Religionsgeschichte," i. 33 *et seq.*; Gutmann, in "Monatsschrift," 1898, p. 344).

R. Gamaliel revitalized the prayer originally directed against the Syrians and their sympathizers (so also Loeb, Weiss, and Hoffmann; Elbogen [*l.c.* p. 357] rejects this view in favor of the assumption that the original composition of the prayer was due to Gamaliel), his purpose being to test those suspected of being minim (Tan., Wayiḳra, ed. Buber, p. 2a; Yer. Ber. v. 4). The editorship is ascribed to Samuel the Younger (Ber. 28a), who, however, is reported to have forgotten its form the very next year. According to Yer. Ber. v. 3 he merely omitted some part of the prayer; and, as he was not under suspicion of heresy, the omission was overlooked.

Modifications in "Birkat ha-Minim."

The above account seems to suggest that this "new" (revised) addition to the benedictions was not admitted at once and without some opposition. The prayer has undergone since the days of Gamaliel many textual changes, as the variety of versions extant evidences. "Kol Bo" gives the number of the words contained therein as thirty-two, which agrees with none of the extant recensions. The prayer furnished the traducers of Judaism and the Jews a ready weapon of attack (*e.g.*, Wagenseil; see "Sefer Niẓẓaḥon," p. 348). In the Maḥzor of Salonica it begins with the word "La-meshummadim" (see Oraḥ Ḥayyim, 118), as it does in the Roman Maḥzor (see also "Kesef Mishneh, Tefillah," at the beginning of ii.). "Meshummad" designates a Jew who apostatizes (Ramban on Ex. xii. 43 gives an incorrect identification, as does Parḥon, *s.v.* שנע) or is lax in his religious duties ('Er. 69a; Ḥul. 5a; Sanh. 27a; Hor. 11a; Targ. Onḳ. to Ex. xii. 43; Mek., Bo, 15; Giṭ. 45a, in the uncensored editions; the censored have "Mumar"). The prayer is not inspired, however, by hatred toward non-Jews; nevertheless, in order to obviate hostile misconstructions, the text was modified. Originally the opening words were "La-zedim ula-minim," and the conclusion had "maknia' zedim" (see "Sefer ha-Eshkol" and "Shibbole ha-Leḳeṭ"). The change of the beginning into "La-meshummadim" is old (Zunz, "G. V." 2d ed., p. 380). Another emendation was "We-la-posh'im" (*idem*, "Ritus," p. 39), which readily gave way to the colorless "We-la-malshinim" (in the German ritual among others). For "minim" was substituted the expression "all doers of iniquity"; but the Sephardim retained "minim," while Maimonides has "Epicureans." In the older versions the continuation is: "and all the enemies of Thy people," or, in Amram Gaon's "Siddur," "all our enemies"; but this is modified in the German and Roman into "and they all," while Maimonides omits the clause altogether. Finally, there was mention of the "kingdom of arrogance" ("zadon") = the Roman empire. For this Amram presents "the doers of 'zadon,'" which at last was turned into "zedim," thus reverting to the earliest expression. The conclusion is either "who breakest the enemies" (Midr. Teh.) or "humiliates the arrogant" (Amram); in the former phrase Saadia and Maimonides replace the noun "enemies" by "evil-doers."

According to Zunz, the seventh benediction looks like a duplication and is superfluous: at all events it is misplaced. There is some probability that it originally formed part of the liturgy for the fast-days, when 18 + 6 benedictions constituted the "Tefillah" (Ta'an. ii. 2); for in specifying the additional benedictions the Mishnah enumerates seven, not six (*ib.* ii. 4). The first of the seven enumerated is identical with the one contained in the "Shemoneh 'Esreh" as No. vii. Most likely when Israel's distress became constant this petition for help was gradually made a part of the daily liturgy.

As the prevailing use of the plural shows, the

Method of Recital.

"Shemoneh 'Esreh" was first intended as a prayer in behalf of the congregation, which listened in silence and at certain points bowed with the reader (Tos. to Ber. i. 9). By joining the precentor in reading aloud, one became notorious (*ib.*). At the conclusion of every benediction the congregants, while in the Temple, said "Amen," probably because the Tetragrammaton was pronounced; the response was "Blessed be the name; the glory of His kingdom [endureth] forever and aye" (Tos. to Ber. vii. 22; Ta'an. 16b). Gradually, after R. Gamaliel, it came to be the custom that every man softly read the "Tefillah" for himself, instead of merely listening to the reader's recitation of it; only for one not familiar enough (שאינו בקי) with the prayer was the older practise held permissible. Then, in order to give the reader time to go over the "Tefillah" first for himself, silent praying by all was allowed to precede the audible recitation by the reader (see Soṭah 40a; Yer. Ber. i. 8). In Babylon this became the rule, but in Palestine the "Tefillah" was read aloud by the congregation (Müller, "Hillufim," No. 43; Zunz, "Ritus," p. 83). Formerly the reader would not ascend (or descend to) the rostrum before beginning the loud (second) recital (Elbogen, *l.c.* p. 431). Familiarity with the contents and reverential recital of the benedictions was insisted on in a reader (Bacher, in "J. Q. R." xiv. 586), that those who were ignorant might by listening to him discharge their duty. Maimonides abrogated the repetition of the "Tefillah" (Zunz, *l.c.* p. 55) for the congregation at Cairo, though not in his "Yad" (see "Yad," Tefillin, ix. 2 *et seq.*). In the evening service, attendance at which was by some not regarded as obligatory (Weiss, "Dor," ii. 76; Ber. 27b), the "Tefillah" was not repeated aloud; and as a rule only eighteen Biblical verses, to take the place of the eighteen benedictions, were read (see L. Loew in "Monatsschrift," 1884, pp. 112 *et seq.*; "Shibbole ha-Leḳeṭ," ed. Buber, p. 21; SeMaG, command No. 19).

According to "Shibbole ha-Leḳeṭ" (ed. Buber, p. 9), some prefaced the "Tefillah" by the verse Ps. lxv. 3, while in Constantine "Wehu Raḥum" was recited as an introduction (Zunz, "Ritus," p. 52). At the end, after Mar bar Rabina's "My God keep my tongue" (Ber. 17a), during the Middle Ages was added "do on account of Thy name," etc.; then to this, Ps. xix. 15; and, still later, the phrase "He who established peace," etc. ("Shibbole ha-Leḳeṭ," p. 18). In the Roman ritual the "Elohai Neẓor" (Ber. 17a) is missing (Zunz, *l.c.* p. 79).

In the Reform liturgies, in benediction No. i. "go'el" is changed to "ge'ullah" (redemption). In No. ii. the resurrection is replaced by "sustaining in life the whole" and by "redeeming the soul of His servants from death." The prayers for Jerusalem, for the reestablishment of the sacrifices, and for the coming of the Messiah are omitted, as is also the petition against the enemies of Israel (comp. "Protokolle der Zweiten Rabbinerversammlung," pp. 104 *et seq.*, Frankfort-on-the-Main, 1845).

SHEMOT RABBAH. See Midrash Haggadah.

SHEOL (שאול): Hebrew word of uncertain etymology (see Sheol, Critical View), a synonym of "bor" (pit), "abaddon" and "shaḥat" (pit or destruction), and perhaps also of "tehom" (abyss).—**Biblical Data:** It connotes the place where those that had died were believed to be congregated. Jacob, refusing to be comforted at the supposed death of Joseph, exclaims: "I shall go down to my son a mourner unto Sheol" (Gen. xxxvii. 36, Hebr.; comp. *ib.* xlii. 38; xliv. 29, 31). Sheol is underneath the earth (Isa. vii. 11, lvii. 9; Ezek. xxxi. 14; Ps. lxxxvi. 13; Ecclus. [Sirach] li. 6; comp. Enoch, xvii. 6, "toward the setting of the sun"); hence it is designated as תחתית (Deut. xxxii. 22; Ps. lxxxvi. 13) or תחתיות (Ps. lxxxviii. 7; Lam. iii. 55; Ezek. xxvi. 20, xxxii. 24). It is very deep (Prov. ix. 18; Isa. lvii. 9); and it marks the point at the greatest possible distance from heaven (Job xi. 8; Amos ix. 2; Ps. cxxxix. 8). The dead descend or are made to go down into it; the revived ascend or are brought and lifted up from it (I Sam. ii. 6; Job vii. 9; Ps. xxx. 4; Isa. xiv. 11, 15). Sometimes the living are hurled into Sheol before they would naturally have been claimed by it (Prov. i. 12; Num. xvi. 33; Ps. lv. 16, lxiii. 10), in which cases the earth is described as "opening her mouth" (Num. xvi. 30).

Position and Form.

Sheol is spoken of as a land (Job x. 21, 22); but ordinarily it is a place with gates (*ib.* xvii. 16, xxxviii. 17; Isa. xxxviii. 10; Ps. ix. 14), and seems to have been viewed as divided into compartments (Prov. vii. 27), with "farthest corners" (Isa. xiv. 15; Ezek. xxxii. 23, Hebr.; R. V. "uttermost parts of the pit"), one beneath the other (see Jew. Encyc. v. 217, *s.v.* Eschatology). Here the dead meet (Ezek. xxxii.; Isa. xiv.; Job xxx. 23) without distinction of rank or condition—the rich and the poor, the pious and the wicked, the old and the young, the master and the slave—if the description in Job iii. refers, as most likely it does, to Sheol. The dead continue after a fashion their earthly life. Jacob would mourn there (Gen. xxxvii. 35, xlii. 38); David abides there in peace (I Kings ii. 6); the warriors have their weapons with them (Ezek. xxxii. 27), yet they are mere shadows ("rephaim"; Isa. xiv. 9, xxvi. 14; Ps. lxxxviii. 5, A. V. "a man that hath no strength"). The dead merely exist without knowledge or feeling (Job xiv. 13; Eccl. ix. 5). Silence reigns supreme; and oblivion is the lot of them that enter therein (Ps. lxxxviii. 13, xciv. 17; Eccl. ix. 10). Hence it is known also as "Dumah," the abode of silence (Ps. vi. 6, xxx. 10, xciv. 17, cxv. 17); and there God is not praised (*ib.* cxv. 17; Isa. xxxviii. 15). Still, on certain extraordinary occasions the dwellers in Sheol are credited with the gift of making known their feelings of rejoicing at the downfall of the enemy (Isa. xiv. 9, 10). Sleep is their usual lot (Jer. li. 39; Isa. xxvi. 14; Job xiv. 12). Sheol is a horrible, dreary, dark, disorderly land (Job x. 21, 22); yet it is the appointed house for all the living (*ib.* xxx. 23). Return from Sheol is not expected (II Sam. xii. 23; Job vii. 9, 10; x. 21; xiv. 7 *et seq.*; xvi. 22; Ecclus. [Sirach] xxxviii. 21); it is described as man's eternal house (Eccl. xii. 5). It is "dust" (Ps. xxx. 10; hence in the Shemoneh 'Esreh, in benediction No. ii., the dead are described as "sleepers in the dust"). God's rulership over it is recognized (Amos ix. 2; Hos. xiii. 14; Deut. xxxii. 22; I Sam. ii. 6 [Isa. vii. 11?]; Prov. xv. 11). Hence He has the power to save the pious therefrom (Ps. xvi. 10, xlix. 16, the text of which latter passage, however, is recognized as corrupt). Yet Sheol is never satiated (Prov. xxx. 20); she "makes wide her soul," *i.e.*, increases her desire (Isa. v. 14) and capacity. In these passages Sheol is personified; it is described also as a pasture for sheep with death as the shepherd (Ps. xlix. 15). From Sheol Samuel is cited by the witch of En-dor (I Sam. xxviii. 3 *et seq.*). As a rule Sheol will not give up its own. They are held captive with ropes. This seems to be the original idea underlying the phrase חבלי שאול (II Sam. xxii. 6; Ps. xviii. 6; R. V., verse 5, "the cords of Sheol") and of the other expression, מצרי שאול (Ps. cxvi. 3; R. V. "and the pains of Sheol"); for they certainly imply restraint or capture. Sheol is used as a simile for "jealousy" (Cant. viii. 7). For the post-Biblical development of the ideas involved see Eschatology.

God Its Ruler.

——Critical View: The word "Sheol" was for some time regarded as an Assyro-Babylonian loanword, "Shu'alu," having the assumed meaning "the place whither the dead are cited or bidden," or "the place where the dead are ingathered." Delitzsch, who in his earlier works advanced this view, has now abandoned it; at least in his dictionary the word is not given. The non-existence of "Shu'alu" has been all along maintained by Jensen ("Kosmologie," p. 223), and recently again by Zimmern (in Schrader, "K. A. T." 3d ed., p. 636, note 4) even against Jastrow's explanation (in "Am. Jour. Semit. Lang." xiv. 165-170) that "sha'al" = "to consult an oracle," or "to cite the dead" for this purpose, whence the name of the place where the dead are. The connection between the Hebrew "Sheol" and the Assyro-Babylonian "shillan" (west), which Jensen proposed instead (in "Zeitschrift für Assyriologie," v. 131, xv. 243), does not appear to be acceptable. Zimmern (*l.c.*) suggests "shilu" (= "a sort of chamber") as the proper Assyrian source of the Hebrew word. On the other hand, it is certain that most of the ideas covered by the Hebrew "Sheol" are expressed also in the Assyro-Babylonian descriptions of the state of the dead, found in the myths concerning Ishtar's descent into Hades, concerning Nergal and Ereshkigal (see Jensen in Schrader, "K. B." vi., part 1, pp. 74-79) and in the Gilgamesh epic (tablets ii. and xii; comp. also Craig, "Religious Texts," i. 79; King, "Magic," No. 53).

Etymology.

This realm of the dead is in the earth ("erẓitu" = ארץ; comp. Job x. 21, 22), the gateway being in the west. It is the "land without return." It is a dark place filled with dust (see Sheol, Biblical Data); but it contains a palace for the divine ruler of this shadow-realm (comp. Job xviii. 13, 14). Seven gates guard successively the approach to this land, at the first of which is a watchman. A stream of water flows through Sheol (comp. Enoch, xvii. 6, xxii. 9; Luke xvi. 24; Ps. xviii. 5; II Sam. xxii. 5).

Origin of Biblical Concept.

The question arises whether the Biblical concept is borrowed from the Assyrians or is an independent development from elements common to both and found in many primitive religions. Though most of the passages in which mention is made of Sheol or its synonyms are of exilic or post-exilic times, the latter view, according to which the Biblical concept of Sheol represents an independent evolution, is the more probable. It reverts to primitive animistic conceits. With the body in the grave remains connected the soul (as in dreams): the dead buried in family graves continue to have communion (comp. Jer. xxxi. 15). Sheol is practically a family grave on a large scale. Graves were protected by gates and bolts; therefore Sheol was likewise similarly guarded. The separate compartments are devised for the separate clans, septs, and families, national and blood distinctions continuing in effect after death. That Sheol is described as subterranean is but an application of the custom of hewing out of the rocks passages, leading downward, for burial purposes.

E. G. H.

SHEPHATIAH: Name of several persons mentioned in the Old Testament. **1.** Son of David and Abital; their fifth child. He was born while his father was still reigning at Hebron (II Sam. iii. 4; I Chron. iii. 3). **2.** A Haruphite, and one of the guard of thirty who joined David at Ziklag (*ib.* xii. 5). **3.** Son of Maachah and commander of the fighting men of the tribe of Simeon during the reign of David (*ib.* xxvii. 16). **4.** Son of Reuel, of the tribe of Benjamin; a member of a family long resident at Jerusalem (*ib.* ix. 8). **5.** Ancestor of the 372 persons who returned from the Exile to Jerusalem under Zerubbabel (Ezra ii. 4; Neh. vii. 9). **6.** Probably the youngest son of King Jehoshaphat, and brother of King Jehoram (II Chron. xxi. 2). **7.** Ancestor of Zebadiah, the son of Michael; he, with eighty members of his tribe, accompanied Ezra to Jerusalem (Ezra viii. 8). **8.** One of the servants of Solomon; his descendants returned to Jerusalem with Zerubbabel (Ezra ii. 57; Neh. vii. 59). **9.** Son of Mahalaleel, and descendant of Perez, of the tribe of Judah, whose great-great-grandson was chosen by lot to dwell in Jerusalem when Nehemiah rebuilt the city (Neh. xi. 4). **10.** Son of Mattan and an official of Zedekiah; he induced the king to order Jeremiah imprisoned because of his alleged seditious addresses (Jer. xxxviii. 1).

SHEPHERD: In the early days of settlement in Palestine the chief occupation of the Israelites was that of shepherding. Traces of the importance of this occupation are found through the Old Testament. The shepherd's function was to lead the flocks of sheep to the pasture and the stream (Ps. xxiii. 2), and protect them from wild beasts (I Sam. xii. 24) and robbers (Job i. 14 *et seq.*), in which latter task he was sometimes assisted by a sheep-dog (Job xxx. 1). At night the shepherds kept watch, sometimes in the open air (Nah. iii. 18), and at other times in the shepherd's tent (Isa. xxxviii. 12) or in a special stone tower (Gen. xxxv. 21). At times he would collect the sheep in caves (I Sam. xxiv. 3), or in sheepfolds built of stones (Judges v. 16; Zeph. ii. 6); and a lamb that had fallen sick or become lame he would carry in his bosom (Isa. xl. 11).

The shepherd generally wore a single garment (Jer. xliii. 12), clad in which he walked forth at the head of his flock (John x. 4), carrying his shepherd's bag or wallet; his weapons were a staff and a sling (Gen. xxxii. 10; I Sam. xvii. 40). When agriculture became the prominent industry of the country, the shepherd, instead of being independent, was generally hired by a farmer, who paid him wages in kind (Gen. xxx. 28), or sometimes in money (Zech. xi. 13). The number of sheep returned to the master's fold was checked by being made to pass under the shepherd's staff (Jer. xxxiii. 13; Ezek. xx. 37). As farming increased in importance, the shepherd became less respected, just as in Egypt, where he was regarded "as an abomination" (Gen. xlvi. 34). In Talmudic times it was even declared that a shepherd was incapable of bearing witness, owing to his habit of encroaching upon other persons' pastures (Sanh. 25a).

E. C. J.

SHERIRA B. ḤANINA (usually known as **Sherira Gaon**): Gaon of Pumbedita; born about 900; died about 1000 (Abraham ibn Daud, "Sefer ha-Ḳabbalah," in Neubauer, "M. J. C." i. 66-67). He was the descendant, both on his father's and his mother's side, of prominent families, several members of which had occupied the gaonate. One of his ancestors was Rabbah b. Abuha, who himself belonged to the family of the exilarch. Sherira boasted that his genealogy could be traced back to the pre-Bostanaian branch of that family, which, he claimed, on account of the deterioration of the exilarchate had renounced its claims thereto, preferring instead the scholar's life (Letter of Sherira Gaon, in Neubauer, *l.c.* i. 23, 33). The seal of his family was a lion, which was said to have been the emblem of the Judean kings (Ibn Daud, *l.c.*).

Sherira officiated first as chief judge; subsequently, in the year 968, he was elected gaon of the Academy of Pumbedita, soon after which he appointed his son chief judge in his place (Sherira, *l.c.* i. 41). Sherira's gaonate lasted for thirty years, and he then resigned that office on account of his advanced age, appointing his son Hai as his successor (Ibn Daud, *l.c.*). Being maliciously denounced by enemies to the calif Al-Ḳadir, though the nature of the accusation is unknown, he and his son Hai were imprisoned and deprived of their property, even of the necessaries of life. Sherira in consequence fell ill of grief, dying soon after at the age of 100 years (Ibn Daud, *l.c.*, according to Weiss's emendation in "Dor," v. 174). As director of the academy he sought to reach pupils both near and far, and many of his responsa have been preserved in the geonic collections and in the works containing the earlier decisions. His responsa are similar to the geonic responsa in general, a majority of them dealing with questions of religious practise, though some of them contain expositions and comments on passages of the Talmud and the Mishnah. Indeed, his literary activity was confined to Talmudic and to related subjects. He was not greatly interested in Arabic literature, although he knew enough Arabic to be able to write in that language those of his decisions that were addressed to communities in Mohammedan countries. Generally he preferred to use Hebrew or Aramaic for that purpose. Sherira was noted for the nobility and seriousness of his character. As a judge he endeavored to arrive at the exact facts of a case and to render his decisions in strict conformity with the Law. In deciding practical questions he adopted the more rigorous view, following the letter of the Talmud with the purpose of upholding and emphasizing its authority against the attacks of the Karaites. He frequently formulates in his responsa rules which are highly important for the correct interpretation of the Talmud. For instance, he declares that the term "miẓwah" designates in some passages a command that may not be broken with impunity, but in other passages denotes merely an admonition with which it would be commendable to comply, but which may be disregarded without fear of punishment ("Teshubot Ge'one Mizraḥ u-Ma'arab," No. 141, in "Bet Talmud," iv. 351).

His Responsa.

Sherira was a student of cabalistic mysticism; he believed that the mystical works "Shi'ur Ḳomah" and "Hekalot" represented ancient traditions, originating with R. Ishmael and R. Akiba. He says in a responsum ("Sha'are Teshubah," No. 122) that the passage in "Shi'ur Ḳomah" ascribing human organs to God embodies profound mysteries, but must not be taken literally. Sherira wrote a work on the Talmud, under the title "Megillat Setarim." In this work he seems to have discussed the importance of the Haggadah (Aboab, introduction to "Menorat ha-Ma'or"); but the portion of the work containing his opinions on this subject has been lost.

Sherira has become famous by a letter of his addressed to the community of Kairwan, which letter is the chief source for the history of the Talmudic, post-Talmudic, and geonic periods. Jacob b. Nissim of Kairwan addressed, in the name of his community, a number of questions of historical interest to Sherira, inquiring especially into the origin of the Mishnah and the sequence of the redactions, the origin of the Tosefta, and the sequence of the Talmudic, post-Talmudic, and geonic authorities. Sherira clearly and lucidly answers all these questions,

His Circular Letter.

throwing light upon many obscure passages of Jewish history. This historical responsum, which is composed half in Aramaic and half in Hebrew, reveals Sherira as a true chronicler, with all the dryness and accuracy of such a writer, though his opinions on the princes of the Exile belonging to the branch of Bostanai, as well as on some of his contemporaries, are not entirely unprejudiced. This letter is included in the Ahimaaz Chronicle, but it has also been edited from manuscripts by B. Goldberg, in "Ḥofes Maṭmonim" (Berlin, 1845) and under the title "Iggeret Rab Sherira Gaon" (Mayence, 1873); also by J. Wallerstein, under the title "Sherirae Epistola," with a Latin translation and notes (Breslau, 1861). The best edition of this letter is that by Adolf Neubauer, in "Medieval Jewish Chronicles" (Oxford, 1887). Another letter by Sherira, also addressed to Jacob b. Nissim of Kairwan (included in the "'Aruk," *s.v.* "Abaja"), deals with the various titles given to the Talmudic sages, as "Raban," "Rabbi," "Rab," and "Mar," and explains why some sages are simply mentioned by their names, without the addition of any titles.

W. B. J. Z. L.

SHESHBAZZAR (Assyrian [Winckler], "Shamash-[a] bal-uṣur" or [E. Meyer] "Šin-[?] uṣur"): Prince of Judah, at the head of the first Jews that returned to Jerusalem after the Exile. In 539–538 B.C. Cyrus granted the exiles permission to return. At once a question must have arisen as to the legitimate successor of the last king, Johoiachin. Sheshbazzar must have been entitled to the succession if he was, as Meyer supposes, identical with the Shenazar mentioned in I Chron. iii. 18 as a son of the late monarch.

On arrival at Jerusalem, Sheshbazzar seems to have become involved in controversies with the conservative party. Zimmern concludes from Dan. ix. 25–27 (since no other sources before the time of Ezra are available) that Cambyses on his campaign against Egypt took Jerusalem, but dealt leniently with it, removing Sheshbazzar in some way of which no details are given. Recent scholars have given up the attempt to identify this ruler with Zerubbabel, as was done by Wellhausen.

The following facts in regard to Sheshbazzar may be stated definitely: he is called "prince" in Ezra i. 8; at the command of Cyrus, the Persian official Mithredath delivered to him the sacred vessels of the Temple which Nebuchadnezzar had carried away, all these things being taken back to Jerusalem (*ib.* v. 16); Zerubbabel refers in the reign of Darius to the permission which Cyrus had given Sheshbazzar (*ib.* v. 13–14).

E. G. H. S. O.

Relations to Rab.

SHESHET: Babylonian amora of the third generation; colleague of R. Naḥman bar Jacob, with whom he had frequent arguments concerning questions of religious law. His teacher's name is not definitely known; but Sheshet was an auditor at Huna's lectures (Yeb. 64b; Ket. 69a). It is certain that he was not a pupil of Rab, since sayings of Abba Arika which did not please him were criticized by him with a disrespect which he would not have shown toward his own teacher. Concerning many of Rab's sayings, Sheshet asserted that "he must have spoken thus when he was asleep" (Yeb. 24b and parallels; comp. also Niddah 69a).

Sheshet lived first at Nehardea, where he used to study in the synagogue Shaf we-Yatib (Meg. 29a), going thence to Maḥuza (Ned. 78a, b; B. B. 121a), and later to Shilhe, where he founded an academy (Letter of Sherira Gaon, in Neubauer, "M. J. C." i. 29). He was feeble in body (Pes. 108a), but had, nevertheless, an iron will and great energy (Men. 95b); and although he was blind he was compensated by a very retentive memory, for he knew by heart the entire body of tannaitic tradition, as well as its amoraic interpretations (Shebu. 41b). He hired a scholar ("tanna") acquainted with the Mishnah and the Baraita to read them to him (Sanh. 86a; Hor. 9a).

R. Ḥisda, when he met Sheshet, used to tremble at the wealth of baraitot and maxims which the latter quoted ('Er. 67a). Sheshet also transmitted many sayings of the older tannaim, especially of R. Eleazar b. Azariah (Mak. 23a; Pes. 118a). In his teaching he always took tradition as his basis; and for every question laid before him for decision he sought a mishnah or baraita from which he might deduce the solution of the problem, his extensive knowledge of these branches of literature always enabling him to find the passage he required (Zeb. 96b). His usual answer to a question was: "We have learned it in the Mishnah or in a baraita" (B. M. 90a; Yoma 48b). When he had presented some sentence to the attention of his pupils, he used to ask immediately, "Whence have I this?" and would then add a mishnah or a baraita from which he had derived the decision in question (Ket. 68a; comp. Yeb. 35a, 58a).

Objects to Quibbling.

In addition to his learning and his knowledge of tradition, Sheshet possessed much acuteness, and knew how to deduce conclusions from the teachings of tradition (Men. 95b, according to Rashi's explanation); thus in connection with his application of Eccl. vii. 11, Rami b. Ḥama said of him: "It is good when one possesses a keen understanding in addition to the inheritance of tradition" (Bek. 52b and Rashi *ad loc.*). He was not so subtle, however, as his colleague R. Ḥisda ('Er. 67a); and he appears to have been averse in general to the casuistry in vogue in the Academy of Pumbedita. When he heard any one make a quibbling objection he used to observe sarcastically: "Art thou not from Pumbedita, where they draw an elephant through the eye of a needle?" (B. M. 38b). Sheshet was on friendly terms with R. Ḥisda; and the pair respected each other highly (Ber. 47b; Meg. 28b), traveled in company (Ber. 30a), and were together at the exilarch's (Giṭ. 67b–68a).

His Haggadah.

Sheshet devoted much time to Biblical exegesis; and whenever he recapitulated his studies, as was his custom at the end of every thirty days, he used to say: "Rejoice, my soul! rejoice, my soul! For thy sake have I read the Holy Scriptures; and for thy sake have I studied the Mishnah and the baraitot" (Pes. 68b). He took comparatively little interest, on the other hand, in the Haggadah; and he himself acknowledged his shortcoming in this respect, saying: "I can not dispute with Ḥana on the Haggadah" (Suk. 52b, and Rashi *ad loc.*). Some of his haggadic interpretations of Biblical passages, referring for the most part to studies of the Law, have been preserved. Thus, he interpreted Prov. xi. 25 as implying that whoever teaches in this world will have the good fortune to teach in the world to come also (Sanh. 92a); and in Shab. 63a he explains Prov. iii. 16 as meaning that whosoever studies in the right manner receives as his reward length of days in addition to riches and honor, but that he who studies in a fashion not altogether unimpeachable receives riches and honor without length of days. He frequently elucidated Biblical passages by the application of well-known proverbs (Ber. 32a; Sanh. 105a).

Sheshet, who, as stated above, was blind, once mingled with a crowd waiting to see the entry of the king. A heretic, probably an adherent of Manicheism, against which Sheshet polemized (comp. Bacher, "Ag. Bab. Amor." p. 78, note 12), taunted him with the remark that he certainly would not be able to see the king. Sheshet, however, put the heretic to shame by recognizing, despite his blindness, when the instant of the king's appearance was at hand. When the unbeliever, in his astonishment, asked Sheshet how he knew it, he received the answer: "The earthly kingdom is like unto the heavenly; God's appearance, however, is announced in I Kings xix. 12-13 by a deep silence" (Ber. 58a).

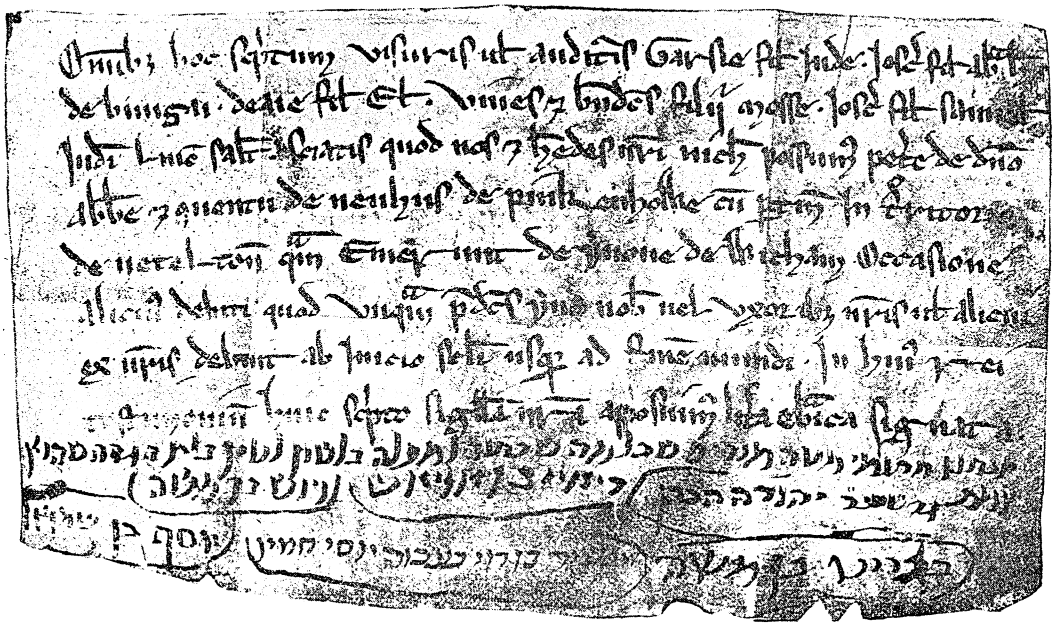
SHESHET BENVENISTE. See BENVENISTE.

SHETADLAN (lit. "persuader"): Representative of the Jewish community in Germany during the Middle Ages, and in Russia almost to the present day. When the government issued a decree against the Jews of any particular locality, the latter would send their shetadlan to the seat of administration to endeavor to have the legislation modified. Thus the Council of Four Lands would send several shetadlanim under these circumstances to Wilna (see JEW. ENCYC. iv. 306, *s.v.* COUNCIL OF FOUR LANDS). The shetadlanim were allowed a certain laxity with regard to the observance of Jewish law, the principle being that those who were "near to the government" might transgress even Biblical prohibitions, because they might save life thereby (M. Jaffe, "Lebush Yoreh De'ah," § 178, 2). In this way the shetadlan corresponded somewhat to the syndic of a municipality, who was in most cases the richest person in the community, and would thus have a personal interest in reducing its taxation as much as possible.

A certificate published in "Ha-Ẓefirah" (1887, p. 881) indicates the kind of work required of a shetadlan. It was granted to Nissim ben Judah of Czekanowski by the Council of Four Lands, sitting at Yaroslav in 1730, and empowered him to attend local councils at Warsaw and Grodno and arrange for the distribution of the government taxes each year till



ENGLISH JEWISH SHEṬAR, DATED 1236.
(In the British Museum.)

the next meeting of the council. As recompense he received his passport and eight Polish gulden per week from the council treasury.

Among shetadlanim may be mentioned N. Ginzburg, appointed provincial shetadlan of Wilna in 1667, and Shabbethai and Isaac, of Lublin in 1707 (Nisenbaum, "Lublin," p. 83). At Posen are found the names of Abraham, 1690, Baruch, 1699, and Jacob, 1736 (Perles, "Juden in Posen"); in Pinsk, Aryeh Leb Meiles acted from 1784 till 1807; while Elijah Moses Meiles was shetadlan of Wilna in the time of the Wilna Gaon. At St. Petersburg Nahum Riwkin acted as shetadlan in 1836. A similar office is found to have been held in Alsace by Lippmann Moyses Bergheim ("Univers Israélite," Feb. 6, 1803), and in Halberstadt by Meyer Grunsman, 1674 (Auerbach, "Gesch. der Juden in Halberstadt," p. 33). See Court Jew; Prague.

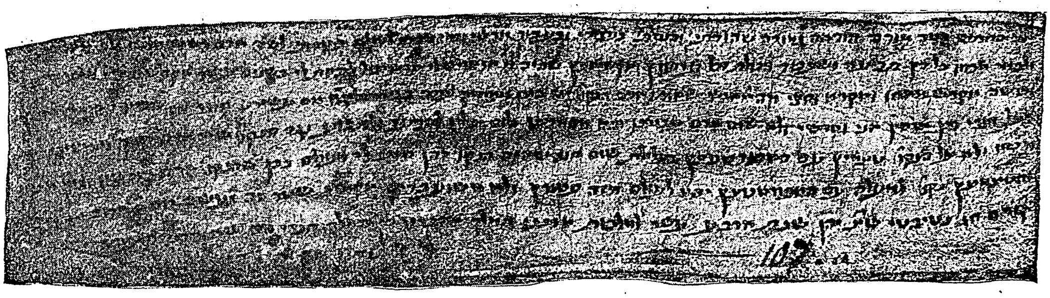
S. J.

SHEṬAR ("deed"; plural, **Sheṭarot**): For the conditions under which these were drawn up in ancient times see Deed. In medieval times the same principles were carried out, but as the deeds with which Jews were concerned were chiefly those determining the indebtedness to them of Christian borrowers, they were mostly accompanied by a Latin translation, which adopted the common forms of the various chancelleries. Both in England and in Germany many of these bilingual deeds existed. The Latin form is generally known as the "starrum," derived from the Hebrew term. It has been conjectured that the Star Chamber at Westminster was so named because it was the repository of the "starra" of the English pre-expulsion Jews.



English Jewish Sheṭar, Dated 1286.
(In the British Museum.)

For the most part in England the deeds acknowledging indebtedness were called in Latin "chartæ," or, later, "chirographs"—a sort of parchment tally. The term "star" was mainly restricted to the receipt rendered by a Jew when he had been paid. The common forms for contracts, or sheṭarot, were collected by Judah ben Barzillai of Barcelona about the beginning of the twelfth century, and were published under the title of "Sefer ha-Sheṭarot" (Berlin, 1898). For specimens of English sheṭarot see Jacobs, "Jews of Angevin England" (pp. 58, 76-77), and Höniger, "Judenschreinsbuch" (Frontispiece). J.

SHIB'AH. See Mourning.

SHIBBOLETH (שבלת): Word occurring in different passages of the Bible, sometimes in the singular form, sometimes in the plural, שבלים, and once in the status constructus, שבלי. It means "flood" (Isa. xxvii. 12; Ps. lxix. 3, 16) or "ear of corn" (Job xxiv. 24; Gen. xli. 5, 6; Isa. xvii. 5; Ruth ii. 2) or "branch" (Zech. iv. 12).

The main interest in this word centers in its use in Judges xii. 6, in which passage any other word beginning with "sh" would have served as well (Ḳimḥi supposes that other words were actually used, "shibboleth" being but a typical instance; see G. F. Moore, "Commentary on Judges," p. 308).

After the Gileadites had defeated the men of Ephraim, the conquerors took possession of the fords of the Jordan, with the view of cutting off the retreat of the fleeing Ephraimites. When a fugitive came to the ford and said, "Let me cross," he was asked, "Art thou an Ephraimite?" If he answered "No," the Gileadites put him to a test. "Say 'Shibboleth,'" they demanded; and if he pronounced the word "Sibboleth," this at once betrayed him as an enemy. It is supposed that different dialects existed among the various tribes of Israel, for which supposition there is a clear indication in the Ephraimitic pronunciation of "sh"; and the rarity of similar examples in the literature is accounted for on the ground that all passed through the hands of Judaic editors. Nevertheless instances are extant of the interchange of letters, such as in Amos vii. 9, where ש is used for צ (see Geiger, "Nachgelassene Schriften," ii. 45). See Samek; Shin.

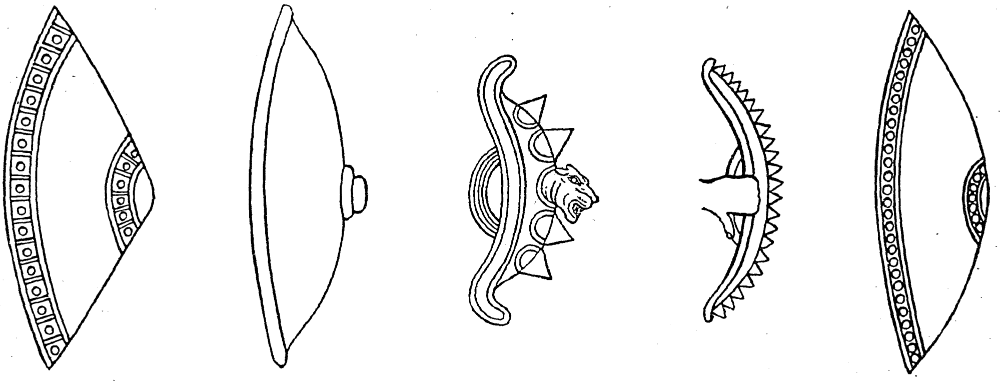
E. G. H. S. H.

SHIELD: Like most peoples of antiquity, the Israelites used two kinds of shields—a large one which covered the whole body and was carried by the heavy-armed infantry, and a small, easily managed one, carried by the light-armed troops. The former was called "ẓinnah"; it served to protect the spearmen (I Chron. xii. 8, 24, 34; II Chron. xiv. 8, xxv. 5). The men of the tribes of Judah and Naphtali were armed with such shields, together with spears. Prominent warriors and leaders had their shields carried before them by special bearers (I Sam. xvii. 7, 41). The ẓinnah served the Psalmist as a figurative expression of the protecting favor of God (Ps. v. 13 *et al.*).

The small shield was called "magen," and was carried by the bowmen and light troops (I Chron. v. 18; II Chron. xiv. 8, xvii. 17), as well as by the king

(Ps. xlvii. 10, lxxxix. 19). That the difference in size between the two kinds of shields was very great is seen from I Kings x. 16 *et seq.* and II Chron. ix. 15 *et seq.*, according to which twice as much gold was required to cover the one as the other.

The Old Testament gives no details as to the forms of the two shields. The Egyptian large shield was nearly as high as a man, rather broad, cut straight at the bottom, and pointed like an arch at the top. The common small shield was also straight at the bottom, but toward the top it was somewhat broader and ended in a curve, the points of which were higher than the center. Among the Assyrians many different forms were in use at different times. Some were in the shape of a somewhat long, arched tetragon; others were rounded at the top; while still others were large, circular, and convex. Whatever the shape, each had on the inner side a handle by which it was held; and frequently it had a boss on the outer side. When not in use it could be carried over the shoulder by means of a strap which passed around the neck.



Shields Depicted on Assyrian Monuments.
(From Ball, "Light from the East.")

Shields were usually made of wood, wickerwork, or leather. The larger kinds demanded a light material, which is spoken of as very inflammable (Ezek. xxxix. 9). The leather was rubbed with oil to keep it pliant (II Sam. i. 21; Isa. xxi. 5). Shields plated with metal were also used. Those used on spectacular and formal occasions were, as mentioned above, plated with gold (I Kings x. 16 *et seq.*).

E. G. H. I. Be.

SHIELD OF DAVID. See Magen Dawid.

SHIGGAYON (שגיון): Term used as the superscription of Ps. vii. 1, and, in the form על שגינות, of Hab. iii. 1, although the Septuagint evidently reads על נגינת (comp. Ps. lxi. 1). Aquila, Symmachus, Theodotion, and Jerome regarded the word as synonymous with שגיאות (Ps. xix. 13), Rashi and the Midrash adopting a similar view in speaking of "David's trespass." This traditional interpretation of the Synagogue can not be correct, however; and "shiggayon" must probably be classed with such superscriptions as "mizmor" and "maskil."

Ewald, Rödiger, Delitzsch, and others, following earlier exegetes, think that the term denotes the rhythm of a form of lyric; and, since "shagah" means "to wander, go astray, reel," "shiggayon" is said to be the term for a dithyrambic poem filled with passionate feeling. This explanation lacks support, however; and it is entirely impossible to explain why this designation should have been applied to Ps. vii., which is by no means unique among the Psalms. Although the meter in verses 2 to 6 and 13 to 18 differs from that of verses 7 to 12, this is due to the fact that the psalm is a combination of two poems which were originally separate compositions (comp. Duhm *ad loc.*). In view of these circumstances it must be admitted that no satisfactory explanation of the term "shiggayon" has yet been found.

E. G. H. W. N.

SHILA OF KEFAR TAMARTA: Palestinian amora of the third century. In Palestinian sources he is called only by his personal name, but in the Babylonian Talmud the name of his home in Judea is always added, in order to distinguish him from an older Babylonian amora who bore the same name.

Shila was accustomed to deliver public haggadic lectures, and he is mentioned only in connection with the Haggadah; yet he seems to have been active in the field of Halakah also (Niddah 26a), although no halakic sayings of his have been preserved. The greater portion of his Biblical exegesis, so far as extant, is taken from these discourses, each of which is prefaced by the formula: "R. Shila has preached" (Meg. 18a, b; Soṭah 35a; Cant. R. viii. 9). Other haggadot of his are found in Midr. Teh. to Ps. lxxx. 7, and Tan., Mishpaṭim, 8 (ed. Buber, p. 43a).

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 347; Bacher, *Ag. Pal. Amor.* iii. 621-623.

W. B. J. Z. L.

SHILOAH (שלח): Locality mentioned in the Old Testament as "the waters of Shiloah" (Isa. viii. 6) and "the pool of Siloah" (Neh. iii. 15). Josephus writes the word *Σιλωά*, *Σιλωᾶς*, and *Σιλωάμ*, while the Arabic name is 'Ain Silwan. The pool was surrounded by the royal gardens on the south, and part of it belonged to the fortress of Jerusalem, while the spring which fed it was at the entrance to the Tyropœon valley dividing the upper from the lower city. Probably as early as the reign of Solomon, water was brought from this spring to a tank in the valley of Kidron, in order to irrigate the royal gardens south of the city, although the site of this reservoir, which Josephus calls "Solomon's pool" ("B. J." v. 4, § 2), is no longer known. A conduit, in which was discovered the Siloam inscription, led to it from the Fountain of the Virgin ('Ain Sitti Maryam), and through the outer part of the Moriah to a pool in the Tyropœon valley; and it was probably to this conduit that Isaiah alluded in speaking of the "waters of Shiloah that go softly." At the present time (1905) the reservoir of Shiloah is 53 feet long, 18 feet wide, and 19 feet deep.

According to the Talmud, the spring of the pool is exactly in the center of the Holy Land (Zabim i. 5); and owing to its peculiar ebb and flow it has always been popularly regarded as an arm of the sea. After the service in the Temple on the eighth day of the Feast of Tabernacles, Solomon and the people descended to the pool, from which water was drawn and poured upon the altar (Suk. v. 1). When, moreover, the priests were obliged to eat large quantities of sacred meat, they drank of the water of Shiloah to aid digestion (Ab. R. N. xxxv.). King Hezekiah had the opening, which was not larger than a coin, enlarged, that the water might flow more freely; but the work had scarcely been done when the stream grew less in volume. He therefore had the orifice made smaller, whereupon the original quantity again appeared (Yalkuṭ Shim'oni, ii. 285, ed. Wilna, 1898).

Before Shiloah was connected with the pool it may have been called "Gihon"; for the Targum of Jonathan renders the "Gihon" of I Kings i. 33, 38 by "Shiloah"; the two places were furthermore identified by Theodoret ("Quæstiones," ii.), as they are also by Burckhardt ("Travels in Syria and the Holy Land," v. 461) and by Isaac Ḥelo (Tobler, "Jerusalem," ii. 62). See Siloam Inscription.

E. G. H. S. O.

SHILOH (שילה or שילו; originally, שילון; comp. שילוני): City of Ephraim, where were placed, after the settlement in Palestine, the Ark and the sanctuary of Yhwh at which the family of Eli officiated (I Sam. i. 3 *et passim*, iii. 1 *et seq.*). As the Ark was not taken back to Shiloh when it was recovered from the Philistines, who had held it for some time, and as the sons of Eli officiated in the sanctuary of Nob in the reign of Saul, it may be assumed that the sanctuary of Shiloh was destroyed during the war with the Philistines (comp. Jer. xvii. 12, 14; xxvi. 6, 9). According to the Priestly Code, the tabernacle was set up at Shiloh (Josh. xviii. 1), which consequently became the religious center for the entire people, where the land was allotted and where the congregation assembled (Josh. xviii. 8 *et seq.*, xxii. 12; Judges xxi. 12). From there the women were carried off by the Benjamites during the autumn festival. Subsequently Shiloh is mentioned only as the home of the prophet Ahijah (I Kings xi. 29 *et al.*). It is described in Judges xxi. 19 as being "on the north side of Beth-el, on the east side of the highway that goeth up from Beth-el to Shechem, and on the south of Lebonah," while according to Eusebius it was 15 kilometers from Shechem. All these descriptions apply to the modern Sailun, 18 kilometers south of Nablus, with ancient rock tombs and a pool in a hollow cut into the rock. In the blessing of Jacob (Gen. xlix. 10) there is a reference to Shiloh, interpreted as promising the kingdom to Judah until the expected Messiah had come. The better rendering (see Kohler, "Der Segen Jacobs") is "as long as [pilgrims] come to Shiloh," that is, while the sanctuary is established there. But see Adolf Posnanski, "Shiloh: Ein Beiträge zur Gesch. der Messiaslehre" (Leipsic, 1904).

E. G. H. I. BE.

SHIMEI (שמעי).—1. **Biblical Data:** Benjamite of Bahurim, son of Gera, "a man of the family of the house of Saul" (II Sam. xvi. 5-14, xix. 16-23; I Kings ii. 8-9, 36-46). He is mentioned as one of David's tormentors during his flight before Absalom, and as imploring and winning David's forgiveness when the latter returned. David, however, in his dying charge to Solomon, bade him avenge the insult (I Kings ii. 1-9). Without sufficient reason, this last passage has been regarded by Wellhausen, Stade, and others as unhistorical.

E. G. H. J. F. McL.

——**In Rabbinical Literature:** When Shimei cursed David (II Sam. xvi. 5 *et seq.*) he used the most insulting names, taunting him, moreover, with his Moabite descent and with his adultery with Bath-sheba (Shab. 105a). He later besought David's forgiveness, however (II Sam. xix. 17-21), and addressed him as follows: "The brothers of Joseph did him injury, but Joseph returned good for evil. Be thou as Joseph, and recompense me with good, though I dealt evilly with thee. It was not I alone but all Israel that entreated thee ill. They now await my fate, and if thou forgivest me, they will come and make peace with thee and surrender themselves to thee" (Yalḳ. ii. 151). Shimei afterward became Solomon's instructor, and restrained him from marrying the daughter of Pharaoh, so that she did not become the wife of the King of Israel until after his teacher's death (Midr. Teh. to Ps. iii. 1; Ber. 8a).

W. B. J. Z. L.

2. Second son of Gershon and grandson of Levi (Ex. vi. 17; Num. iii. 18; I Chron. vi. 17). The family of the Shimeites, as a branch of the tribe of Levi, is mentioned in Num. iii. 18, 21; I Chron. xxiii. 7, 10, 11 ("Shimei" in verse 9 is evidently a scribal error); and in Zech. xii. 13.

3. Name of a number of persons about whom little or nothing is known: *e.g.*, a friend of David (I Kings i. 8); a brother of David, called also **Shammah, Shimeah,** and **Shimea** (I Sam. xvi. 9, xvii. 13; II Sam. xiii. 3, xxi. 21; I Chron. ii. 13, xx. 7); one of Solomon's prefects, over the district of Benjamin (I Kings iv. 18); a grandson of Simeon, who is described as the father of many sons and daughters, and whose clan dwelt in southern Palestine (I Chron. iv. 26, 27); a grandson of Jeconiah and brother of Zerubbabel (I Chron. iii. 19); a Reubenite (I Chron. v. 4); Levites (I Chron. vi. 29, 42; xxv. 17; II Chron. xxix. 14; xxxi. 12, 13); a Benjamite chief (I Chron. viii. 21, R. V.; comp. *ib.* v. 13); "the Ramathite," one of David's officers (I Chron. xxvii. 27); a Levite and other Israelites whom Ezra required to put away their foreign wives (Ezra x. 23, 33, 38); grandfather of Mordecai (Esth. ii. 5).

E. G. H. J. F. McL.

SHIN (ש): Twenty-first letter of the Hebrew alphabet. Its name appears to be connected with "shen" = "tooth" (see ALPHABET). The sign ש represents two sounds: (1) a dental surd sibilant (indicated by a point on the left horn, שׂ, and called "sin"), identical with the English surd "s"; and (2) a labial surd (marked by a point on the right horn, שׁ), identical with the English "sh." The distinction in sound between "sin" and "samek" is not clear. "Shin" interchanges with "sin," and both these (in corresponding Aramaic and Arabic words) with dentals and spirants. "Shin" occurs rarely as a formative element, as in the verb-form "shaf'el." As a numeral (in the later period) it has the value of 300.

T. I. BR.

SHINAR (שנער).—**Biblical Data:** Name for Babylonia occurring eight times in the Old Testament. In Gen. x. 10 the beginning of Nimrod's kingdom is said to have been "Babel, and Erech, and Accad, and Calneh, in the land of Shinar." In Gen. xi. 2, Shinar is the site of the tower of Babel; in Gen. xiv. 1, 9, the home of Amraphel, now generally identified with HAMMURABI; in Dan. i. 1, the home of Nebuchadnezzar. The other passages in which the name is mentioned (Josh. vii. 21; Isa. xi. 11; Zech. v. 11) add no further information.

——**Critical View:** It is clear from Gen. x. 10 (J) that Shinar was the Hebrew name of a land which included both Babylon and Erech, *i.e.*, both northern and southern Babylonia. Gen. xiv. 1, if Amraphel is identical with Hammurabi, also proves that Shinar included northern Babylonia. This fact has made it difficult for scholars to agree upon the origin of the name. (1) Lenormant ("Etudes Accadiennes," 1873, i. 27) equates שנער with "Sumir," the old Babylonian name for southern Babylonia, supposing a more primitive form, "Sungir," which he believes had survived in "Singara" in northern Mesopotamia. Jensen ("Zeit. für Keilschriftforschung," ii. 419) and Hommel (in Hastings, "Dict. Bible," i. 224b) hold to this general view, but suggest varying and difficult etymologies. Since 1873 new material has strengthened this identification. In the inscriptions of Ur-Nina (De Sarzec, "Decouvertes en Chaldée," pl. 4), Girsu, the name of a city that afterward formed part of Shirpurla, is spelled "Su-sir" or "Sun-gir."

While Rogers ("History of Babylonia and Assyria," 1900, i. 205) is content simply to follow Lenormant, Radau ("Early Babylonian History," 1900, pp. 216 *et seq.*) makes a successful linguistic argument for the identity of both Sumir and Shinar with Sungir.

(2) Sayce rejects this derivation of the name ("Proc. Soc. Bibl. Arch." 1896, xviii. 173 *et seq.*; "Patriarchal Palestine," 1895, pp. 67 *et seq.*) because "Sumir" in the cuneiform inscriptions always designates southern Babylonia only. He identifies Shinar with Sanhar of the El-Amarna tablets (comp. Schrader, "K. B." v., Nos. 25, 49), which is the Sangara of the Asiatic conquests of Thothmes III. (comp. W. Max Müller, "Asien und Europa," 1893, p. 279). Sayce does not explain how the use of this name was enlarged to denote southern Mesopotamia. It would seem much more simple to explain how "Sumir," in the common phrase "Sumir and Accad" (by which all Babylonia was designated), was adopted by a foreign people as the name of the whole country.

(3) The view of Cheyne (Cheyne and Black, "Encyc. Bibl."), that "Shinar" is a corruption of "Geshur," is a conjecture in which few scholars can concur.

E. G. H. G. A. B.

SHINNUY HA-SHEM: The custom of changing a person's name, as a tribute to his achievements, or as a sign that his condition will be improved, or particularly as an aid to his recovery from illness. Abram's name was changed to "Abraham" = "the father of many nations" (Gen. xvii. 4), and that of Sarai ("my princess") to "Sarah" (a princess, in general); Jacob's name was changed to "Israel" = "a mighty prince" (*ib.* xxxii. 28); Pharaoh called Joseph "Zaphnath-paaneah" (= "the revealer of secrets"; *ib.* xli. 45); Moses changed the name of Hoshea to "Jehoshua" (= "YHWH saves"; Num. xiii. 16); Solomon was called by Nathan "Jedidiah" (God's beloved) "because of the Lord" (II Sam. xii. 25). Pharaoh-nechoh appointed Eliakim king of Jerusalem and changed his name to "Jehoiakim" (= "the Lord's confirmed"; II Kings xxiii. 34); the King of Babylon made Mattaniah king of Jerusalem and called him "Zedekiah" (= "the Lord's right man"; *ib.* xxiv. 17); and the names of Daniel and his comrades were changed to Chaldaic ones (Dan. i. 7). Isaiah predicted that Jerusalem would be called by a new name, "Hephzi-bah" (= "My delight is in her"; Isa. lxii. 4).

The names of wicked persons were a curse in the community; and the righteous were called "by another name" (*ib.* lxv. 15); *i.e.*, the idea prevailed that the name of a wicked person exerted an influence on the moral character and destiny of any person who adopted it, and consequently that a man might be judged by the name he bore (Ber. 7a). For this reason Rabbenu Tam corrected the text in the Talmud from "Absalom" to "Abishalom," and from "Shebna" (the Jerusalemite) to "Shakna" (שכנא for שבנא), because Shebna was wicked (see Isa. xxii. 15-19; Tos. to Ket. 104a [*s.v.* שני], to Shab. 12a [*s.v.* שבנא], and to Yoma 38b [*s.v.* דלא]).

As a Cure for Illness.

The change of name as a cure for illness is derived from the Talmud: "Four things annul the decree that seals a person's fate; namely, alms, prayer, change of name, and change of deeds" (R. H. 16b). R. Judah he-Ḥasid (13th cent.) says if one is dangerously sick his name shall be changed, which may reverse the decree ("Sefer Ḥasidim," No. 245). R. Perez claims that the change of name for the benefit of a patient is in conformity with a taḳḳanah of the Geonim ("Bet Yosef" on Ṭur Eben ha-'Ezer, § 129; R. Jeroham, "Toledot Adam we-Ḥawah," i., § 28 [ed. Kopys, 1808, p. 182]). The new name for the patient is selected from the Bible, the first name that appears on a given page being adopted. R. Israel Bruna in his responsa (No. 101) protested against the adoption of the name of a wicked person when such was the first found, and ordered it to be passed over for the first righteous one, citing "The memory of the just is blessed: but the name of the wicked shall perish" (Prov. x. 7).

The underlying principle in changing the name of one who is ill is the assumption that the former name, under which the divine decree was issued, becomes non-existent, and that, when a new name is given him, he becomes another person, in regard to whom the decree has no force. In a later period the original name was retained and another added to it, usually one signifying the recovery of the patient. The most popular additional names were "Ḥayyim" (life), "Shalom" (peace), "Raphael" (God heals), "Azriel" (God helps), or some other name, selected from the Bible.

The additional name is usually given in the synagogue when the scroll is taken out of the Ark and unrolled, the first righteous name that is read being selected; the formula of prayer is as follows:

The Formula.

> "When the Righteous Judgment has already decreed death from illness, behold, our saintly rabbis said: Three things annul the decree; and one of them is changing the name of the patient. We therefore, in conformity with their advice, have changed the name of [mention here the former name] to the name of [mention the adopted name], who is now another person. The decree shall not have any force with regard to him. Together with the change in name, so shall His decree be reversed from justice to mercy, from death to life, from illness to perfect health for [mention adopted name]. In the name of all the sacred names mentioned in this Sefer Torah, and in the name of the angels, the messengers of all healing and salvation, O Lord, send speedily a perfect cure to [adopted name], that his days and years may be prolonged in happiness, in goodness, and in peace, for ever and ever. Amen, Selah."

SHIR HA-SHIRIM (CANTICLES) RABBAH: Haggadic midrash on Canticles, quoted by Rashi under the title "Midrash Shir ha-Shirim" (commentary on Cant. iv. 1, viii. 11). It is called also **Agadat Ḥazita**, from its initial word "Ḥazita" (R. Nathan, in the "'Aruk," *s.v.* טפף), or **Midrash Ḥazita** (Naḥmanides, commentary on Ex. iv. 28; Simon Duran, "Tashbaẓ," part iii., No. 37). Simon

Duran, in quoting this midrash, says that it is a Palestinian haggadic collection (*ib.*). This undoubtedly correct view is supported by a number of circumstances. The sources which it uses directly are Palestinian. No direct borrowing from the Babylonian Talmud appears, and, although it contains many interpretations and comments found in this source, most of them vary greatly in form, the agreement being confined to their contents. This agreement, moreover, may be explained on the ground that the comments and interpretations in question are very old, and were included both in the Babylonian Talmud and in the Palestinian sources used by the redactor of the Shir ha-Shirim midrash (see below; comp. also Theodor, "Zur Composition der Agadischen Homilien," in "Monatsschrift," 1879, p. 343).

Composed in Palestine.

The date of composition of this midrash can not be exactly determined. Canticles was interpreted haggadically at a very early time, and certain rules for this haggadic interpretation were formulated, as, for instance, the rule adopted by Judah ben Ila'i (Cant. R. i. 12, ii. 4) and the rule (in Sheb. 35b) for the interpretation of the name for Solomon used in Canticles. Upon these rules are based the interpretations of the verses of Canticles which are contained in the Seder 'Olam, in the Sifra, and, with especial frequency, in the Sifre and the Mekilta, as well as in the Talmud, which has an exegesis for almost every verse of the book. The majority of the interpretations in the last-named work were taken from public lectures on Canticles, or from various haggadah collections (comp. 'Er. 21b). Some scholars (Weiss, "Dor," iii. 263-264; and Jellinek, in a letter to Theodor, reprinted in "Monatsschrift," 1879, pp. 237 *et seq.*), moreover, have assumed a direct connection between such ancient discourses and the present Canticles Rabbah, regarding this midrash as an old collection of these discourses, increased by various later additions.

A Combined Work.

Jellinek thinks (*l.c.*) that there were several haggadic midrashim to Canticles, each of which interpreted the book differently, one referring it to the exodus from Egypt, another to the revelations on Mt. Sinai, and a third to the Tabernacle or the Temple; and that all these midrashim were then combined into one work, which, with various additions, forms the present Shir ha-Shirim Rabbah. This midrash is, according to Jellinek, older than the Pesiḳta de-Rab Kahana, which, he holds, has borrowed entire passages from it. Theodor has shown, however, that it was composed at a later date than the Pesiḳta de-Rab Kahana, from which it has borrowed entire passages. The author of Shir ha-Shirim Rabbah, intending to compile a running midrash on Canticles, took the comments on the several verses from the sources which he had at hand, and the changes and transpositions which he made are similar to those made by the redactor of the Yalḳuṭ; in fact the midrash is similar in many ways to a yalḳuṭ. This method of redaction explains the great difference in the length and the character of the several comments; and it explains also the fact that the same comments are repeated two or three times for the same or similar verses.

The Sources.

Besides the Jerusalem Talmud (which was the chief source) and the Pesiḳta de-Rab Kahana, the direct sources used by the redactor are Genesis Rabbah and Leviticus Rabbah. The material borrowed from these sources constitutes a large part of the midrash; and it throws a light also on the redactor's method. The remainder of the midrash must have originated in midrashic collections which are no longer extant, and from which the redactor borrowed all the comments that are found also in the Seder 'Olam, the Sifra, the Sifre, and the Mekilta, since it is not probable that he borrowed from these earlier midrashim. The midrash is older than Pesiḳta Rabbati, since the latter borrowed passages directly from it. As the Pesiḳta Rabbati was composed about 845 C.E., Shir ha-Shirim Rabbah must have been composed about the end of the eighth century. The midrash has been edited and commented together with the other Rabbot, and has been edited separately and supplied with a commentary, entitled "Kanfe Yonah," by Baruch Etelsohn (Warsaw, 1876).

W. B. J. Z. L.

SHIR HA-SHIRIM (CANTICLES) ZUṬA: Midrash, or, rather, homiletic commentary, on Canticles; referred to in the various Yalḳuṭim and by the ancient Biblical commentators as "Midrash Shir ha-Shirim," or "Agadat Shir ha-Shirim." Recently the De Rossi Manuscript No. 541, at Parma, was discovered by S. Buber to contain, among other things, midrashim on four of the five "megillot": Canticles, Ruth, Lamentations, and Ecclesiastes; these he published (Berlin, 1894) under the title of "Midrash Zuṭa," to distinguish them from the "Midrash Rabbah." At the same time the midrash to Canticles only was published by S. Schechter, under the title "Agadat Shir ha-Shirim" ("J. Q. R." vi.-viii.; reprinted, Cambridge, 1896). Shir ha-Shirim Zuṭa, or Agadat Shir ha-Shirim, does not at all resemble Shir ha-Shirim Rabbah, or Midrash Ḥazita. The former is an uneven homiletic commentary on the whole text, and does not contain any proems; some verses are treated at length, while others are dismissed very briefly, sometimes only one word being discussed.

Characteristics.

Although the two collections contain a few parallels, the Shir ha-Shirim Rabbah does not contain those numerous haggadot which especially distinguish the second collection. In this latter they occur in the first verse of the first chapter, in the fourth verse of the same chapter, in the fifth verse of the same chapter (a long homily on charity), and in verses 2 and 6 of the fifth chapter (Messianic interpretations). The Messianic haggadot may be derived from the Pirḳe Rabbi Eli'ezer; the name of R. Eleazar (or Eliezer) quoted in the part on Cant. v. 2, as well as the ascription of a Messianic apocalypse to Simeon b. Sheṭaḥ, is in support of this supposition. Other passages are found in the Babylonian Talmud, the Pesiḳtot, the Midrash Rabbot, the Mekilta, and the Abot de-Rabbi Natan.

Name. Agadat Shir ha-Shirim is mainly quoted by Simeon Ḳara, in his "Yalḳuṭ Shim'oni," and by Machir b. Abba Mari, in his "Yalḳuṭ ha-Makiri." The former used this midrash as a basis for his Yalḳuṭ on Canticles, but he quotes it also in his Yalḳuṭ on the other Biblical books. The name "Pesiḳta Rabbati" has been applied, in the Yalḳuṭ, to the Shir ha-Shirim Rabbah (called sometimes "Midrash Ḥazita"), while this midrash is always referred to as "Midrash Shir ha-Shirim." Simeon Ḳara may have applied this name to the Shir ha-Shirim Rabbah because the two works were bound together; on the other hand, the occurrence of the name may be due to an error of the copyist. This midrash is quoted in the Yalḳuṭ, as has been said above, in reference to other books (*e.g.*, Lev. 475; Josh. 23; Isa. 288; *et al.*). It was frequently used also by Machir b. Abba Mari, who quotes it nineteen times under the title of "Haggadat Shir ha-Shirim," in his "Yalḳuṭ ha-Makiri," on Isaiah alone (published by I. Spira, Berlin, 1893). It is quoted also by other ancient authorities. Judah b. Barzilai, in his commentary on the "Sefer Yeẓirah" (p. 128, Berlin, 1885), refers to it as "Agadta Shir ha-Shirim," and quotes it in regard to the seventy eulogistic names given by God to Israel. Further, Naḥmanides (in "Torat ha-Adam," p. 102c) cites it as "Midrash Shir ha-Shirim"; so does his pupil Azriel, in the commentary on Canticles generally ascribed to Naḥmanides himself; Abraham, the son of Maimonides (see Neubauer, "Ḳobeẓ 'Al Yad," iv. 63, Berlin, 1888), calls it "Agadat Shir ha-Shirim"; Recanati, in his commentary on the Pentateuch (on Beha'aloteka), cites the same passage quoted by Judah b. Barzilai.

It may be added that passages of this midrash are found in Eleazar b. Tobiah's "Leḳaḥ Ṭob" and Isaac ibn Sahulah's "Mashal ha-Ḳadmoni." Although these do not mention the name of this midrash, Schechter supposes that they probably used ancient homiletic commentaries, among others the Agadat Shir ha-Shirim. Buber supposes that this midrash has been shortened by the copyists, for R. Hillel, in his commentary on Sifre (see Friedmann, notes to Sifre, Num. 139), quotes from a Midrash Shir ha-Shirim a passage which is found neither in the Shir ha-Shirim Rabbah nor in the Shir ha-Shirim Zuṭa. Nor is the passage quoted from the Midrash Shir ha-Shirim by Menahem Zioni ("Ẓiyyuni," p. 57c, Cremona, 1581) found in this midrash. Schechter endeavors to prove that the payyeṭan Solomon b. Judah ha-Babli, of the tenth century, had this midrash before him, and wove several passages from it into his piyyuṭim. Accepting this theory, Schechter thinks that it was composed not later than the middle of the tenth century; he likewise points out resemblances to the various Messianic and eschatological midrashim published by Jellinek ("B. H." vols. i.-vi.), and especially to the "Pereḳ R. Yoshiyahu" ("B. H." vi. 112 *et seq.*), and holds that a date still earlier might be ascribed to this midrash, namely, the first half of the ninth century. But considering that the Pirḳe Rabbi Eli'ezer, which was composed about the middle of the ninth century, is one of the sources of the Agadat Shir ha-Shirim, so early a date must be rejected.

SHIRAH ḤADASHAH ("A new song sang the redeemed"): A passage which illustrates the influence of the Midrash on the development of synagogal music. The Biblical prescription of circumcision as a qualification for partaking of the paschal lamb (Ex. xii. 43, 48) led the ancient expositors (comp. Ex. R. xix.) to point to the rite of the covenant as the initial step of that loyal acknowledgment of divine sovereignty which culminated in the song at the sea (Ex. xvi. 18). In the spirit of the Midrash, Judah ha-Levi's "ge'ullah" hymn "Yom le-Yabbashah" (comp. Zunz, "Literaturgesch." p.

205), for the seventh day of Passover, the anniversary of the passing through the Red Sea, sings of circumcision in connection with the song of Moses. Accordingly, as throughout the Middle Ages and down to recent times circumcision took place in the synagogue (see illustration in Jew. Encyc. v. 129), this hymn was chanted during the morning service preceding the ceremony, particularly on the Sabbath.

During the same service the "mohel," or operator, if present in the synagogue, as a special honor was allowed to lead an antiphonal chant, the alternate verses being recited by the congregation, from the point where the words "And Thou didst make [lit. "cut"] a covenant" (Neh. ix. 8) occur to the end of the passage Ex. xiv. 30-xv. 18, which immediately follows. In these practises originated in the eighteenth century a special jubilant intonation for the ḥazzan, who sang in festal tone the sentences immediately preceding the "'Amidah" (see Shemoneh 'Esreh) from the words "Shirah ḥadashah," where the passage already chanted by the mohel and alluded to in Judah ha-Levi's hymn is again briefly quoted.

The transcription herewith presents the festal melody in the London tradition. The more elaborate version peculiar to Berlin is given in Marksohn and Wolf, "Auswahl Alter Hebräischer Synagogal-Melodieen," No. 26, Leipsic, 1875, without, however, reference to the occasions when it was sung.

A. F. L. C.

SHIRAH, PEREḲ (PIRḲE): Chapter of song and praise to God by heavenly and earthly bodies, and by plants and dumb creatures. It is composed of Scriptural verses, one or two for each creature enumerated; and it is divided, according to subjects, into six parts, one for each of the six week-days, though the whole chapter is repeated every day at the morning prayer, except on Sabbath, when the "Shir ha-Yiḥud" is substituted. The reciting of "Pereḳ Shirah," however, is not obligatory, and is not observed generally, except by very pious Israelites.

"Pereḳ Shirah," as is shown in part by the strange names of the birds mentioned therein, is evidently an ancient baraita, which has been more or less modified in the course of time. There are unmistakable traces of it in the Talmud, though it is not specifically referred to. The Talmud mentions that an egg of an unclean fowl is forbidden by the Mosaic law, and quotes "bat ha-ya'anah" ("the daughter, or issue, of the fowl"; Lev. xi. 16). This interpretation is disputed by counter-quoting, "The beasts in the field shall honor me, the dragons and the owls" ("u-benot ya'anah"; Isa. xliii. 20), and it is argued: "Surely an egg can not be classed among those that may say the 'Shirah'!" (Ḥul. 64b).

Perhaps Referred to in the Talmud.

R. Isaac Nappaḥa asserted that the crushing defeat of Sennacherib's army before Jerusalem was due to the shirah of the beasts of the field, to whose voices the Almighty opened the ears of the Assyrians. "At the noise of the tumult the people fled; at the lifting up of thyself [by the recitation of the "Shirah"] the nations were scattered" (Isa. xxxiii. 3; Sanh. 95b). In I Sam. vi. 12, referring to the kine that drew the cart in which the holy Ark was conveyed from the country of the Philistines, R. Meïr interprets "wa-yishsharnah" (they took the straight way) as "they [the kine] sang the 'Shirah'"; according to one rabbi, it was Psalm xcviii.; while R. Isaac Nappaḥa puts into their mouths verses in classical Hebrew ('Ab. Zarah 24b). R. Eleazar and R. Simeon assert that the ears of grain say their shirah in the month of Nisan: "The valleys also are covered over with corn; they shout for joy, they also sing" (Ps. lxv. 14 [A. V. 13]; R. H. 8a). R. Mana b. Tanḥum could determine the time of day when the waters of the Great Sea (the Mediterranean) rendered praise to their Creator, for they are then sweet (Yer. 'Ab. Zarah ii. 8). In Josh. x. 13 the words "wa-yiddom ha-shemesh" ("And the sun stood still, and the moon stayed") are interpreted, "The sun ceased to say the 'Shirah'" (comp. "wa-yiddom" = "was silent"; Lev. x. 3), for Joshua replaced their shirah by his own ('Ab. Zarah 25a, Rashi).

Early References.

Evidence of the existence of "Pereḳ Shirah" in the geonic period is given by the Karaite Solomon b. Jeruḥam, the contemporary of Saadia Gaon (892–942). Salomon, in his commentary on Ps. cxix. 51, criticizes the Talmudic rabbis for their "invention" in attributing the "Shirah" to the ass, and quotes from I Chron. xxix. 11 (Pinsker, "Liḳḳuṭe Ḳadmoniyyot," Appendix, p. 134). The tosafists quote the geonic responsa, asserting that the Palestinians recite Ḳedushshah only on the Sabbath, to take the place of the shirah of the living creatures in the Merkabah and of the six-winged angels: the latter have one wing for each week-day, but none for the Sabbath; and when the Sabbath arrives the angels plead that they have no wing for that day. But the Almighty assures them that there is another wing, which recites the "Shirah": "From the uttermost part ["kenaf" = "wing"] of the earth have we heard songs" (Isa. xxiv. 16; Tos. Sanh. 37b).

The ascription of the shirah to dumb animals is explained in one of two ways: the first is that their angels (each creature has a special guardian angel, or "mazzal" [constellation], above) speak for them; the second is that the "Shirah" is in the hearts of the creatures, and represents what they would say if they could speak (Tos. 'Ab. Zarah 17a; see commentary on "En Ya'aḳob," *ib.*).

Joseph Albo (1380–1444) highly values "Pereḳ Shirah," and explains why the Rabbis asserted that every one who recited it daily would become "a member of the world to come"; he regarded the sayings as wise and excellent, as tending to elevate man's moral conduct: "Who teacheth us from the beasts of the earth, and maketh us wiser from the fowls of heaven" (Job xxxv. 11, Hebr.). R. Johanan said: "If these things were not prescribed in the Torah, we could learn decency from the cat; the ant would preach against robbery, and the dove against incest" ('Er. 100b). Albo quotes the shirah of the ant: "Who giveth food to all flesh: for his mercy endureth for ever" (Ps. cxxxvi. 25). From this, he says, each may learn to be content with his lot, to be industrious and saving, like the ant. The shirah of the dove teaches that "in the clefts of the rocks" (Cant. ii. 14) one may find examples of true love and virtue ("'Iḳḳarim," iii. 1).

The Preface.

The preface to "Pereḳ Shirah," which declares that every one who recites it daily is sure to be a "ben 'olam ha-ba" (an inhabitant of the world to come), is credited in certain editions to R. Eliezer the Great, and also to Rabbi. In another edition these names are omitted. The preface is probably erroneously copied from R. Joshua b. Levi: "Whosoever recites the 'Shirah' in this world is entitled to recite it in the world to come" (Sanh. 91b; comp. Tan., Ẓaw)—in which "Shirah," however, refers to the shirah of Moses at the Red Sea, and not to "Pereḳ Shirah."

Another preface to "Pereḳ Shirah" consists of the midrash concerning King David and the frog. David, on completing his Book of Psalms, is said to have boasted of his beautiful hymns; whereupon a frog appeared and exclaimed: "Do not be so proud; indeed, I sing more beautifully than thou" (Yalḳ., Ps. 889).

"Pereḳ Shirah" ends with the "Song of the Dogs," to which is appended the following midrash: R. Joshua, a disciple of R. Ḥanina b. Dosa, fasted eighty-five days, imploring a divine explanation of the shirah of the dogs. "Is it possible," he argued, "that the greedy dogs, 'which can never have enough' [Isa. lvi. 11], shall be honored by being permitted to say the 'Shirah'?" An angel then said: "R. Joshua, why this long fasting? This is the decree of the Almighty, the secret of which has been revealed only to Habakkuk, but which I will now reveal to thee, since thou art a disciple of a great man: The dogs are thus privileged for the reason that against the children of Israel in Egypt there did 'not a dog move his tongue' [Ex. xi. 7]. Furthermore, the dog's excrement is used in tanning parchment for the Sefer Torah, phylacteries, and mezuzot. Finally, pay heed to the proverb, 'Whoso keepeth his mouth and his tongue keepeth his soul from troubles'" (Prov. xxi. 23; Yalḳ., Ex. 187).

R. Isaac Luria recognized the worth of "Pereḳ

In the Cabala.

Shirah" from a cabalistic standpoint (Azulai, "Shem ha-Gedolim," ii., No. 147). Moses b. Joseph di Trani, in his "Bet Elohim," credits King David with the authorship of "Pereḳ Shirah." Trani's commentary on it comprises the third part of his "Sha'ar ha-'Iḳḳarim" (Venice, 1576). Other commentaries on it are: "Mesapperim Tehillot," by Hananiah Jaghel of Moncilisi; "Sifte Renanot," by his son Gamaliel of Norzi (Mantua, 1661); "Siaḥ Yiẓḥaḳ" and "Sha'ar Shimeon," by the brothers Isaac and Simeon b. Meïr (Venice, 1664); "Sedeh Bokim," by Joseph Darshan of Posen (Frankfort-on-the-Main, 1679); "Sha'ar ha-Shamayim," by Isaiah Hurwitz (Amsterdam, 1717); "Pi Eliyahu," by Elijah Deutsch, who credits "Pereḳ Shirah" to David and Solomon (Altona, 1735); "'Abodat Miḳdash," by Menahem de Lonzano (Leghorn, 1767); "Liḳḳuṭe Amarim," by Abraham ben Israel of Brody (Zolkiev, 1802); "Kenaf Renanim," by Enoch Zundel Luria (Krotoschin, 1842); "Ṭub Ṭa'am," by S. J. Abramowitsch (Jitomir, 1875).

The various editions of "Pereḳ Shirah" differ a little in the order followed and in the quotations given. The following list is from Baer's siddur, "'Abodat Yisrael" (p. 547, Rödelheim, 1868).

84.	Dog	Ps. xcv. 6.

* Chapters and verses are quoted according to the divisions of the Hebrew Bible.

Every quotation is preceded by the formula: "The . . . says." In a few cases several verses are quoted continuously. The cock's shirah is divided into seven calls, with a curious preface, as follows: "When the Almighty visits the righteous in Gan 'Eden, the trees there drop aromatic spices and sing praises. Then the cock rises also to praise." In the first and second calls he repeats Ps. xxiv. 7, 8, and 9, 10; in the third, "Arise, ye righteous, to study the Law, and win double compensation in the world to come"; in the fourth, Gen. xlix. 18; in the fifth, Prov. vi. 9; in the sixth, Prov. xx. 13; in the seventh, Ps. cxix. 126. In other editions the cock's calls are limited to four. To understand the application of many of the quotations it is necessary to consult the ingenious explanations of the commentaries noted above.

W. B. J. D. E.

SHIRAZ: City of Persia; capital of the province of Fars. It was founded by Mohammed, brother of Al-Ḥajjaj, in the year 74 of the Hegira (= 693 C.E.). According to traditions current in Persia, Jews settled at Shiraz at an early period, but the exact date is not known. In the twelfth century there were, according to Benjamin of Tudela ("Itinerary," ed. Asher, i. 82), 10,000 Jews in the city. Chardin, who visited Shiraz in the second half of the seventeenth century, says ("Voyages en Perse," pp. 446-447) that the Jews there were employed in the manufacture of wine for European companies which had bought the privilege of wine-making. He adds that the Jews, in common with the other non-Islamic inhabitants, enjoyed religious liberty.

Nevertheless, as is shown by the poems of Babai (Hebrew MS. No. 1356, in the Bibliothèque Nationale, Paris), the Jews of Shiraz have always suffered under the same persecutions as the Jewish inhabitants of other Persian towns, particularly in the beginning of the eighteenth century under the first kings of the Afghan dynasty. In the nineteenth century most of the Jews of Shiraz were goldworkers or storekeepers; and their number was estimated in 1807-9 by Dupré ("Voyage en Perse," ii. 9, Paris, 1819) at 400 families. In 1850 Benjamin II. found at Shiraz 500 Jews and nine synagogues, the chief rabbi being Mulley Israel. Twenty years previously (1830), according to the same author, there had been in Shiraz 3,000 Jews, but, on account of terrible persecutions, 2,500 of them embraced Islam.

The Jews at this time were mere toys in the hands of the capricious viziers. A few months before Benjamin's arrival the vizier had imprisoned Mulley Elijah, the chief rabbi of Shiraz, leaving him the alternative of paying a heavy fine or embracing Islam. The amount of the fine being too large for him to pay, Elijah consented to become a Moslem; but he asked for time in which to prepare himself for the new religion. But at the expiration of this period he refused to accept the new faith, whereupon he was thrown into a dungeon and subjected to severe floggings. Fortunately, in the course of the civil war then in progress, the victorious rebels set free all the prisoners; and Elijah escaped to Bagdad. Benjamin states also that almost all of the converted Jews were Moslems by profession only, and that secretly they condemned Islam. This is confirmed by the missionary Henry A. Stern, who visited Shiraz in Jan., 1849. He says that all the silk-merchants in the Wakil bazaar were proselytes, but that, on being pressed by him, they confessed their belief in Moses and their contempt for Islam. Stern describes the condition of the Shiraz Jews as miserable in the extreme. He says, with a touch of partiality peculiar to missionaries: "Their domestic life differs little from that of their neighbors. Early marriages are the chief source of their miserable condition. Their occupations are generally mean and sordid, such as hawking, telling fortunes, writing fictitious amulets, and keeping secret taverns, the latter being their main support."

J. M. SEL.

SHISHAK (SHESHONḲ I.): The first king of the twenty-second dynasty of Egypt. His grandfather, Sheshonḳ, descendant of a Libyan soldier, married a royal princess of Egypt. His father, Namarôti, chief of the Mashaûasha, held in addition several religious offices. He himself, the illustrious Shishak of I Kings (xiv. 25-28) and II Chronicles (xii. 2, 9-11), before he had ascended the throne, was recognized as king and prince of princes, and had conferred on him the command of all the Libyan troops. He was officially in rank next to the sovereign. Through shrewdly arranged domestic alliances for his sons, and other intrigues, he soon succeeded to the throne, as the founder of the Bubastite dynasty (Maspero, "Struggle of the Nations," pp. 769 *et seq.*).

Shishak's acquaintance with Jeroboam, a fugitive from Solomon, and with Hadad of Edom doubtless called his attention to the critical political conditions in the little Palestinian buffer state and its neighbors. As soon as the great Solomon (some think a vassal of Egypt) had passed away, there were signs of disintegration. Hadad had already returned; and Jeroboam, now domestically allied with the royal family of Egypt, made his way to the disaffected subjects in the north. The disruption of the kingdom had violently taken place, and Jeroboam, Egypt's friend, had become sovereign over the seceding tribes of the north. Shishak thereupon invaded Palestine in the fifth year of Rehoboam, King of Judah. Jerusalem seems to have been, according to the Books of Kings, his objective. He sacked the king's palace and the royal buildings, and the Temple. His withdrawal seems to have been permanent. From his own records, inscribed on the walls of Luxor, by the side of those of Rameses II., it appears that in this campaign he took 156 places. Megiddo is the northernmost point reported, and such places as Rabbath, Taanach, Mahanaim, Gibeon, Beth-horon, Aijalon, Migdol, and Shocho are mentioned. This list of names shows that Shishak must have plundered cities situated in both the Southern and Northern Kingdoms, and that probably he made this campaign for plunder, as well as for the prevention of the unification of all Palestinian peoples under one central power, although it has been claimed that he was prompted thereto either at the suggestion or invitation of Jeroboam to conquer his own foe in the south, or simply by the desire to subdue unconquered Canaanitish cities. There is no further hint as to his relation to the Hebrews.

E. G. H. I. M. P.

SHISKES, SAUL B. JUDAH LÖB: Polish rabbinical scholar; died in Wilna, at an advanced age, March 28, 1797. He is chiefly known as the author of "Shebil ha-Yashar," on Alfasi, only the first part of which has been published (Wilna, 1839). Shiskes acknowledges in the preface that he was assisted in his work by Solomon, the younger brother of Ḥayyim of Volozhin, who annotated it and contributed to some extent to it. Saul had a son named Ẓebi, who died in 1771, aged twenty-two.

SHITTAH-TREE. See ACACIA.

SHITTIM: Valley north of the Dead Sea on the left bank of the Jordan, in which the children of Israel, before their entry into the Promised Land, cohabited with the daughters of Moab and Midian. The Arabic name of the valley is Wady Sitti Maryam, or Wady al-Nar. According to the Biblical reports, it was in this valley that the Israelites were detained by a plague which raged until the guilty Israelites had been hanged, and until Zimri, the son of Salu, who had committed immoralities with a Midianitish woman, had been slain by Phinehas, the grandson of Aaron (Num. xxv.). It was from this valley, furthermore, that Joshua, somewhat later, sent out the two spies to Jericho (Josh. ii. 1) and the Israelites went forward to the Jordan (Josh iii. 1). The prophet Micah (vi. 5) depicts the ingratitude of Israel toward YHWH by recalling what happened at Shittim, and Joel (iii. 18) prophesies that the fountain which comes forth from the Temple shall water the valley of Shittim. Driver, in "Bible for Schools and Colleges," explains the place mentioned in II Sam. xv. 23 as being identical with the Kidron, in proof of this assertion quoting Ezek. xlvii. 1-12 and Zech. xiv. 8, in which merely the "naḥal" is mentioned.

According to Yalḳuṭ Shim'oni and Num. R. xxv. 1, the Shittim River is identical with the river whose waters deprave those who drink them and from which the Sodomites had drunk. With reference to the transgression of Israel it is called "Sitṭim" (that which leads to crime) instead of "Shitṭim" (the acacia).

SHITTIM-WOOD. See ACACIA.

SHI'UR ḲOMAH: Esoteric work on the dimensions of the body of God and of His several members. It exists apparently only in fragments, the largest, which often has been taken to be the entire work, being included in the "Sefer Raziel." These measurements are ascribed to R. Ishmael, the Hermes Trismegistus of this and similar mysticism, who received them secretly from METATRON, the angel of the Presence. The following translation of selected passages may serve to give an idea of the work:

Contents.

"What are the measurements of God, who is hidden from all creatures? The soles of His feet fill the entire world, according to Isa. lxvi. 1, and their height is 3 myriad times 1,000 parasangs; the right foot is called 'parsimya atar ratatat,' and the left 'agtamon.' The distance between the sole and the ankle is 1,000 myriads and 500 parasangs." The size of the other members, the knees, thighs, hips, and neck, are equally gigantic, and mystical names are given to them also. Seventy names are enumerated as written on His heart. The description of the trunk is followed by that of the head, beard, face, nose, and tongue, which reaches from one end of the universe to the other. Divine names are inscribed also on His forehead, chiefly in groups of between two and five letters combined from the TETRAGRAMMATON. The eye is described in detail; then the shoulders, arms, fingers, and toes. A second set of measurements of the nose, fingers, and other parts, however, gives the impression that the work is not altogether perfect in its arrangement ("Sefer Raziel," ed. Amsterdam, pp. 37b-38a). R. Ishmael said: "When I came and told these things to R. Akiba, he said to me: 'Whoso knoweth the measurements of this our Creator and the hymn of praise to God, who is hidden from all creatures, may be assured that he will share in the world to come, that the bliss of the future life will make him rejoice even on earth, and that his days will be prolonged, . . . yet only if he repeateth them daily, like a mishnah'" (*ib.*; see also Bloch, "Gesch. der Entwickelung der Kabbala und der Jüdischen Religionsphilosophie," Treves, 1894). The following passage, which conveys the same thought in simpler form, is found in "Raziel" (p. 37a), in "Hekalot Rabbati" (ed. Jerusalem, xi. 1), and in Jellinek ("B. H." iii. 91; the relation between the two recensions is discussed by Gaster in "Monatsschrift," xxxvii. 216): "Above the seat of the throne there are 118 myriads, and below it there are likewise 118 myriads; His [God's] height is 237 myriad times 1,000 parasangs; the distance between His right arm and His left is 77 myriads, and between His right eyeball and His left 30 myriads; the skull upon His head is 3 myriads, and His crowns 60 myriads."

Age and Sources.

In a discussion of the age and the sources of this work a sharp distinction must be drawn between its present form and its previous contents. It was known under the name of "Shi'ur Ḳomah" even before the time of Saadia, since Solomon b. Yeruham (b. 886), Bishop Agobard of Lyons (*c.* 820), and an Anglo-Saxon work of the eighth century ("Monatsschrift," viii. and xxxvii.; Zunz, "Literaturgesch." p. 606) mention it. It was known also in later times, for Sherira Gaon and Maimonides studied it, apparently to their mystification, the latter declaring it to be a forgery. The book, therefore, was redacted in its present form by the eighth century at the latest. It belongs to the mysticism of the MERKABAH, and thus falls in the same category as the Hekalot, the Meṭaṭron-Enoch, and the Alphabet of R. Akiba. Which of these works was the original is a problem that defies solution.

On historical grounds, Zunz, Grätz, Jellinek, and Bloch assign the "Shi'ur Ḳomah" to the geonic period, and in harmony with this Grätz sought to trace it to Mohammedanism, finding its source among the Mushabbiḥites. It may be assumed, however, that the ancient mysticism of the Throne-Chariot, which flourished as early as the first century, did not disappear, but was transmitted from generation to generation, and finally, like other esotericisms, received literary recognition. As a matter of fact, the "Shi'ur Ḳomah" shows traces of ancient Gnosticism, and Gaster is probably correct in assigning it to a time preceding the Geonim, this view being shared by Kohler and Ginzberg (JEW. ENCYC. i. 624, *s.v.* ANTHROPOMORPHISM, and iii. 462, *s.v.* CABALA). Gaster declares of the "Shi'ur Ḳomah," a previously unknown passage of which he published ("Monatsschrift," xxxvii. 224 *et seq.*), that it "derives its origin from the theory of the world expressed both in the system of Valentinus and Marcus and in the mystical apocalypses and pseudepigrapha of the last century before and the first century after the common era." As magic and mysticism are not easily destroyed, it is highly improbable that the tannaitic esotericism perished, and it would therefore seem that it merely suffered some transformation; it may therefore be inferred that in essence the "Shi'ur Ḳomah," like kindred works, originated in antiquity. See GNOSTICISM.

W. B. L. B.

SHKLOV: Town in the government of Moghilef, Russia; situated on the right bank of the Dnieper. Jews settled there at an early period, probably in the beginning of the sixteenth century. Its location on the boundary-line between Russia and Poland often subjected Shklov to the devastations of war, and the Jews, who constituted the greater part of the population, were generally the greatest sufferers. In 1655 the town was destroyed by the Cossacks; in 1708 it was sacked by the Swedes under General Löwenhaupt; and in 1812 it was invaded and pillaged by Napoleon's army.

The Jews of Shklov at the present time (1905) number about 12,000, or nearly 88 per cent of the total population. The city has two synagogues, twenty-seven Jewish prayer-houses, a government school for Jewish children, a Jewish hospital, and a number of other educational and charitable institutions. The Jews carry on an extensive trade in wheat and other merchandise.

SHKLOVSKI, ISAAC VLADIMIROVICH: Russian journalist; born at Yelisavetgrad in 1865. He was educated at the gymnasium of his native town, and at the age of sixteen began to contribute poems and prose articles to South-Russian periodicals. In 1886 he was charged with being a revolutionist, and was banished to Sredne Kolymsk in the province of Yakutsk, where he remained until 1892. There he studied the life of the Yakuts and the languages of some of the native tribes. His ethnographic and belletristic sketches were published in the "Odesskiya Novosti" and in "Russkiya Vyedomosti," a Moscow liberal daily. Shklovski is the author of "Nakrainem Syevero-Vostokye" (St. Petersburg, 1895), a work in Russian on northeastern Siberia, a French translation of which appeared in the following year. Since 1896 he has been the London correspondent of the "Russkiya Vyedomosti."
s. M. R.

SHKUD: Russian town in the government of Kovno, situated at the confluence of the rivers Bortava and Liwba. The earliest written information regarding the Jews in Shkud is found in their "pinḳes," which begins with the year 1725. No mention is made in it of the various persecutions which the Jews of that place had endured, but some references are made to the martyrs of the community. Thus, under the above date, among the elders is mentioned a certain Solomon, son of the "martyr" Joshua; and under 1753, another Solomon, son of the "martyr" Shebaḥ. From time to time the town was visited by the representatives of the central ḳahal, who looked into the affairs of the town, and even granted assistance if necessary. In one instance the chief of the Shkud ḳahal, Rabbi Mikel, was arrested because the community could not pay the 1,000 guilders it owed; the representatives of the central ḳahal, however, immediately ransomed him. The Jews of Shkud have always taken a keen interest in external Jewish affairs. In 1739 an appeal was made in behalf of the Jews residing in Palestine, to which the community of Shkud generously responded.

Among the many prominent rabbis of Shkud was Joseph Katzenellenbogen, who came from Brest-Litovsk. Shkud has a population of over 3,000, the majority of whom are Jews.

Shneor Zalman.

SHNEOR ZALMAN BEN BARUCH (known also as **Zalman Ladier**): Leader of the rational Ḥasidim called "ḤaBaD" (acrostic formed from "Ḥokmah," "Binah," "De'ah" = "Wisdom," "Understanding," "Knowledge"); born at Liozna, government of Moghilef, in 1747; died at Pyen, near Kursk, and interred at Gadiyoch, government of Poltava, Dec. 28, 1812. Little is known of that part of Shneor Zalman's life which preceded his conversion to Ḥasidism. Distinguishing himself as a Talmudist while still a youth, he, although his parents were very poor, wedded the daughter of a wealthy resident of Vitebsk, the marriage enabling him to devote himself entirely to study. Besides Talmudic and rabbinical lore, he acquired a fair knowledge of mathematics, astronomy, philosophy, and Cabala. Being of a dreamy and speculative nature, he became an adept in Luria's system of Cabala, and as such conceived a fervent admiration for Baer of Meseritz, at that time the representative of the system. For twelve years he lived in Baer's house, and took an active part in the propagation of Ḥasidism.

Convert to Ḥasidism.

In 1772 the struggle between rabbinical Orthodoxy and the adherents of the new sect began, in which conflict Shneor Zalman became prominent. Together with Mendel of Vitebsk he was sent by Baer to Wilna to allay the anger of Elijah Gaon, who had launched a ban against the Ḥasidim. Unfortunately Shneor Zalman and his colleague failed to obtain a hearing from the gaon; and the struggle between the contending parties, from which the future leader of the "ḤaBaD" was to suffer so cruelly, became more bitter. On the death of Baer the Ḥasidim of White Russia and Lithuania looked upon Shneor Zalman as their leader; but from motives of modesty he kept in the background until the departure of Mendel of Vitebsk to Jerusalem. He then returned to his native place, Liozna, and assumed the leadership. More learned than Baer, he endeavored to place Ḥasidism on a scientific basis, and advocated both in his works and in his sermons an intelligent and not a blind faith, requiring from his followers a certain mental preparation. In his system the "ẓaddiḳ" appeared as a mere teacher and not as a miracle-worker. Being himself an eminent Talmudist, Shneor Zalman did not deprecate the study of the Talmud as was then the tendency of the leaders of Ḥasidism in the south, and his followers, who assumed the name "ḤaBaD," always stood on a higher plane of intellectual development than did the followers of the latter. However, fearing lest in the course of time his followers might assimilate with the rabbinical Orthodox, he devised new means of withdrawing them from the authority of the rabbis. For example, he composed a new Shulḥan 'Aruk, introduced a new ritual, recommended special prayer-houses, and made other innovations. This exasperated the Orthodox, and Shneor Zalman was included among the twenty-two representatives of Ḥasidism who were denounced to the government as being dangerous agitators and teachers of heresy.

Denounced to the Government.

In consequence of this denunciation Shneor Zalman was arrested at Liozna about the end of 1797 and conveyed in chains to St. Petersburg. For three months he remained imprisoned in a fortress and was then subjected to an examination by a secret commission. Ultimately he was released by order of Paul I.

As was to have been expected, his imprisonment won for him the halo of a martyr; and on his release his position was considerably strengthened. Two years later he was again transported to St. Petersburg, upon the further denunciation of his antagonists, particularly of Abigdor, formerly rabbi of Pinsk. Immediately after the accession to the throne of Alexander I., however, Shneor Zalman was released, and was given full liberty to proclaim his religious teachings, which the government considered to be utterly harmless. In 1812, in consequence of the French invasion, he fled from the government of Moghilef, intending to go to that of Poltava, but died on the way in a small village near Kursk. His descendants, who assumed the family name of Shneorssohn, are still the spiritual leaders of the Ḥasidim of White Russia known as those of Lyubavich.

Shneor Zalman was a prolific writer; but only a few of his works have been published. These are:

His Works.

"Tanya," or "Liḳḳuṭe Amarim," in two parts, the first containing a scientific exposition of Ḥasidism, the second, also entitled "Sha'ar ha-Yiḥud weha-Emunah," giving a mystical explanation of the "Shema'" (Slavuta, 1796; Zolkiev, 1799; with a pastoral letter entitled "Iggeret ha-Ḳodesh," Zolkiev, 1805); "Shulḥan 'Aruk" (5 vols., Shklov), a religious code based on the "Ṭurim" and other posḳim; "Seder Tefillot" (2 vols., Kopust, 1816; Shklov, n.d.), a prayer-book with a cabalistic commentary; "Torah Or" (Kopust, 1837), homilies on Genesis and Exodus; "Liḳḳuṭe Torah" (Jitomir, 1848), homilies on the three other books of the Pentateuch and on Lamentations, Esther, and Canticles, with sermons for New-Year, the Day of Atonement, and the eighth day of the Feast of Tabernacles; "Hilkot Talmud Torah" (Lemberg, n.d.), on the study of the Law.

E. C. I. Br.

SHOBACH (שׁובך; written **Shophach** [שׁופך] in I Chron. xix. 16–18): Captain of the army of Hadarezer, King of Aram, who was defeated and slain by David at Helam (II Sam. x. 16–18). According to Soṭah viii., Shobach was as famous for his strength as Goliath, and the Ammonites, as allies of Aram, expected through him to be led to victory; but his defeat brought defeat also on them. The Talmudic Haggadah likewise dwells on the fame of Shobach. The two forms of his name are explained by Rab and Samuel: one says that his real name was Shophach, and that he was called Shobach because he had the figure of a dove-cot ("shobak"); the other, that his real name was Shobach, and that he was called Shophach (= "the melter") because he looked so fierce and terrible that those who saw him "melted" away from mere fright.

Shobach is made the special subject of popular legend in the Samaritan Book of Joshua (ch. xxvi.–xxxvii.). He appears there as the son of Haman, King of the Persians, whom Joshua, the son of Nun, had slain together with various other kings. Being very powerful and wealthy, Shobach concluded friendships with many kings of the surrounding countries, inciting them to join him in a war against Joshua to avenge his father's death. He made alliances with the Canaanites, the Armenians (Arameans ?), the kings of Sidon and Kaimun (Yokneam) near Mount Carmel, and with the son of Japheth the Giant, who possessed miraculous weapons inherited from his grandfather Noah. Before they went to war these allied monarchs sent a letter to Joshua informing him that they numbered thirty-six kings, each with 60,000 horsemen and countless foot soldiers, ready to make war on him, and that Ben Japheth, the giant who was able to kill 1,000 men with one stroke of his thunderbolt of steel, was with them.

In the Samaritan Book of Joshua.

The messenger, who returned with an answer from Joshua in which the latter recounted all the victories he had achieved, related all the miraculous things he had seen at Joshua's royal residence, and made the king and people tremble with fear. The mother of Shobach, who was a great magician, then resorted to witchcraft and, with the aid of her host of sorcerers, built seven walls of iron around Joshua and his army as soon as they had encamped for battle.

In his perplexity Joshua, by means of a dove, sent a letter to his cousin Nabiḥ (נבח = "the shouter"; comp. Num. xxxii. 42, "Nobah"), king of the two and one-half tribes on the east of the Jordan, asking him to come to his assistance. Nabiḥ forthwith gave utterance to a shout that was heard throughout the lands and to the end of the heavens; and immediately there appeared an innumerable host of horsemen and other soldiers, with whom he went to the assistance of Joshua. Shobach's mother saw a star which forebode no good for her son and warned him; but in his rage he killed her, and then, putting on his armor and taking his bow and arrows, went forth to engage Nabiḥ in single combat. "What is the matter with thee, Nabiḥ, that thou barkest?" he asked derisively. Whereupon Nabiḥ replied: "I am the son of Gilead, the son of Makir, the son of Manasseh, the son of Joseph, the descendant of Abraham, who slew the kings of Babylonia; and so shall I kill thee." Shobach then said: "I am the son of Haman, the son of Put, the son of Ham, the son of Noah. Stand before me and I shall shoot first." To this Nabiḥ replied: "Do so." Thereupon Shobach shot three arrows in succession; but, although he had never missed his mark before, he failed to hit Nabiḥ. When Shobach turned to flee, Nabiḥ shot an arrow, which, first rising heavenward, fell upon the head of Shobach, then pierced his belly and that of his horse, and finally plunged into the earth to a depth of twelve cubits. Immediately thereafter a fountain gushed forth, which is called "The Fountain of the Arrow" to this day. When the Israelites saw this miracle, they shouted, "There is no power besides God"; and the walls encircling Joshua and his army fell at the sound of trumpets blown by the priests (comp. the extract from the Samaritan Chronicle printed by Samuel Shullam in his edition of the "Sefer Yuḥasin" by Abraham Zacuto, who refers to a Jewish midrash, "Liber Yuḥasin" [ed. Filipowski, 1857, ii. 60-61]; also Kirchheim, "Karme Shomeron," 1851, p. 55).

SHOE: For the greater part, among the ancient Hebrews, the shoe consisted merely of a sole of leather or, less often, of wood, supported around the ankles by leather bands (see Sandals); but it is probable that Jewesses, even at an early date, wore more elaborate footgear, covering the entire foot (see Judith xvi. 11; Cant. vii. 1; Ezek. xvi. 10). It was part of the duty of a bridegroom to supply three pairs of these during the year (Ket. 64a *et al.*), one for each of the three chief festivals. There is evidence that shoes were of somewhat recent introduction; hence in solemn moments they were discarded, as in the theophany of Ex. iii. 5, while priests in general performed their offices without shoes. Similarly, in mourning, the bereaved removed their shoes (II Sam. xv. 30; Ezek. xxiv. 17, 23; Isa. xx. 2); this custom has continued to the present day. On the other hand, at the Passover meal the Israelites were commanded to have their shoes on in readiness for starting (Ex. xii. 11). For the ceremony of ḥaliẓah a peculiar form of shoe is still used (see Ḥaliẓah, illustrations). Some of the Talmudic rabbis were shoemakers, or rather sandalmakers, among them Johanan ha-Sandalar. A shoemaker was permitted to take a shoe off the last during Ḥol ha-Mo'ed (the middle days of the festivals), but not to put it back again (Yeb. 2a). As articles of necessity, shoes were regarded as more important than the beams of a house, but not than food (Shab. 129a). In modern times it is customary to remove, or go without, leather shoes on the Day of Atonement, and to wear slippers instead; the custom is mentioned in Yoma (viii. 1).

J.

SHOFAR (שופר).—Biblical Data: The ancient ritual horn of Israel, representing, next to the 'Ugab or reeds, the oldest surviving form of wind-instrument. As a rule "shofar" is incorrectly translated "trumpet" or "cornet"; its etymology shows it to signify either "tuba" (comp. Jastrow, "Dict.") or, more accurately, "clarion" (comp. Gesenius, "Dict." ed. Oxford). It is mentioned frequently in the Bible, from Exodus to Zechariah, and throughout the Talmud and later Hebrew literature. It was the voice of a shofar, "exceeding loud," issuing from the thick cloud on Sinai that made all in the camp tremble (Ex. xix. 16, xx. 18); and for this reason, while other musical instruments were in each age constructed according to the most advanced contemporary practise (comp. 'Ar. 10b), the trumpet family itself being represented by the long, straight silver "ḥaẓoẓerah," the shofar has never varied in structure from its prehistoric simplicity and crudity.

Use and Pattern.

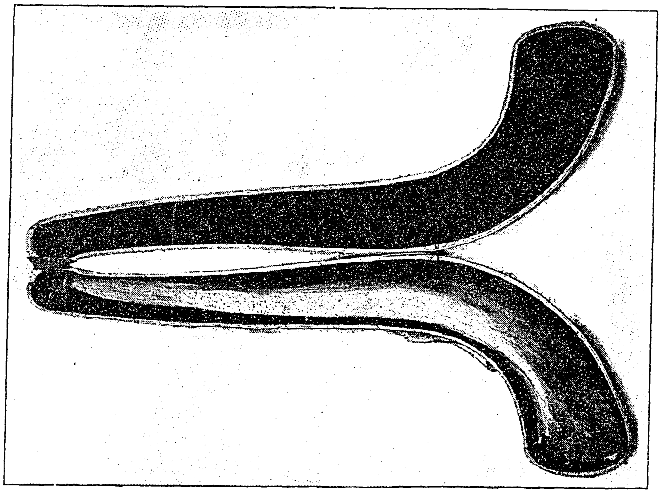
In the Pentateuch the use of the shofar is prescribed for the announcement of the New Moon and solemn feasts (Num. x. 10; Ps. lxxxi. 4), as also for proclaiming the year of release (Lev. xxv. 9). The first day of the seventh month (Tishri) is especially termed "a memorial of blowing" (Lev. xxiii. 24), or "a day of blowing" (Num. xxix. 1), the shofar; and the modern use of the instrument survives especially in this connection. In earlier days it was employed also in other religious ceremonials, as processions (II Sam. v. 15; I Chron. xv. 28), or in the orchestra as an accompaniment to the song of praise (Ps. xcviii. 6; comp. *ib.* xlvii. 5). More frequently it was used as the signal-horn of war, like the silver trumpets mentioned in Num. x. 9 (see Josh. vi. 4; Judges iii. 27; vii. 16, 20; I Sam. xiii. 3).

A. F. L. C.

——In Post-Biblical Times: The Mosaic law providing for the first day of the seventh month (1st of Tishri = Rosh ha-Shanah) a "zikron teru'ah" (memorial of blowing; Lev. xxiii. 24) and a "yom teru'ah" (day of blowing; Num. xxix. 1) is traditionally interpreted by the Rabbis as referring to the ceremony of sounding the shofar. The shofar in the Temple was generally associated with the trumpet; and both instruments were used together on various occasions. On New-Year's Day the principal ceremony was conducted with the shofar, which instrument was placed in the center with a trumpet on either side; it was the horn of a wild goat and straight in shape, being ornamented with gold at the mouthpiece. On fast-days the principal ceremony was conducted with the trumpets in the center and with a shofar on either side. On those occasions the shofarot were rams' horns curved in shape and ornamented with silver at the mouthpieces. On Yom Kippur of the jubilee year the ceremony was performed with the shofar as on New-Year's Day. R. Judah, however, declares that the shofar of Rosh ha-Shanah was of ram's horn (and curved); that of the jubilee, of the horn of the wild goat (R. H. iii. 3); while R. Levi thought it proper that the shofar of ram's horn of a curved shape should be used for Rosh ha-Shanah and Yom Kippur (jubilee year), and that the straight-shaped shofar of the horn of the wild goat should be used on other occasions. The curved shofar is symbolic of the contrite heart repenting on the most solemn days of Rosh ha-Shanah and Yom Kippur (comp. *ib.* 26b; Yer. *ib.*). R. Abbahu thought that a shofar of ram's horn was used on Rosh ha-Shanah in order to call to mind the 'Akedah incident connected with the ram (Gen. xxii. 13; R. H. 16a). The shofar,

In the Temple.

however, may be the horn of any other clean animal, except that of a cow or calf, which would be a reminder of the golden calf incident (*ib.* 26a). A rent or hole in the shofar affecting the sound renders it unfit for ceremonial use. A shofar may not be painted in colors, but it may be carved with artistic designs (Shulḥan 'Aruk, Oraḥ Ḥayyim, 586, 17, note). Women and minors are exempt from the command to hear the shofar-blowing, but they nevertheless usually attend the ceremony.



Shofar and Case.

(In the Great Synagogue, Aldgate, London.)

The Sounds.

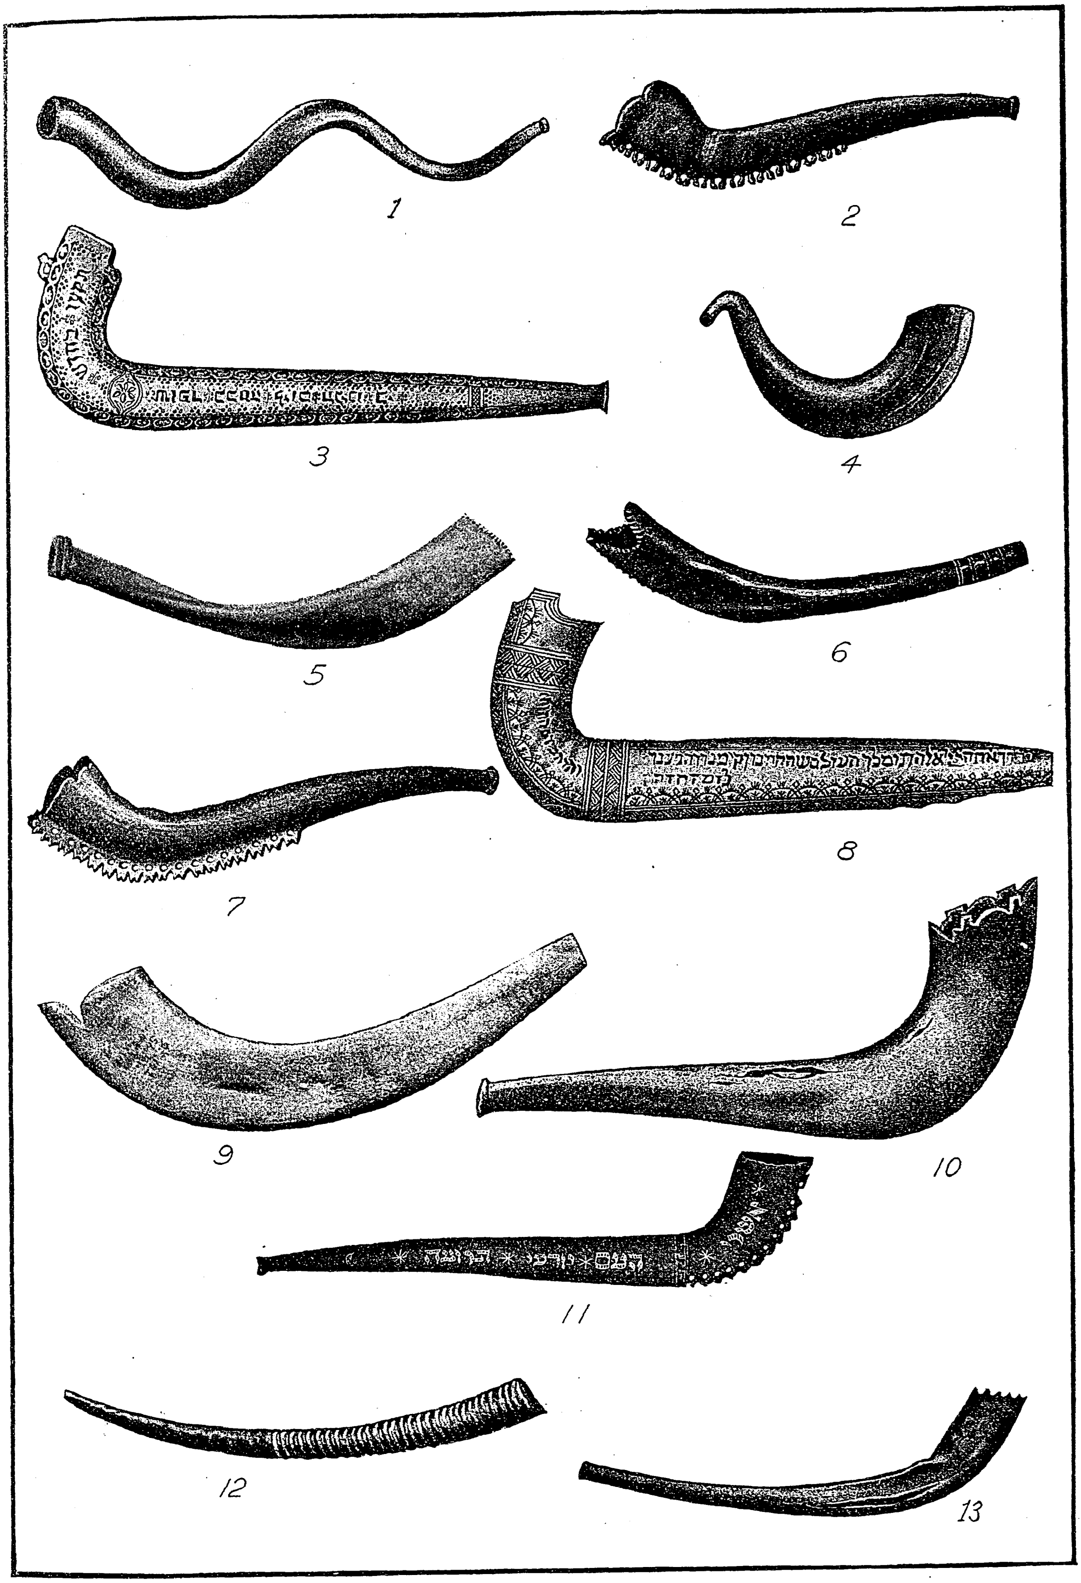
The "teḳi'ah" and "teru'ah" mentioned in the Bible were respectively bass and treble. The teḳi'ah was a plain deep sound ending abruptly; the teru'ah, a trill between two teḳi'ahs. These three sounds, constituting a bar of music, were rendered three times: first in honor of theocracy, or "malkiyot" (kingdom); then to recall the 'Aḳedah and to cause the congregation to be remembered before God, or "zikronot" (remembrances); a third time to comply with the precept regarding the shofar. Ten appropriate verses from the Bible were recited at each repetition, which ended with a benediction (R. H. 16a). Doubt, however, arose as to the sound of the teru'ah. Onḳelos translates "teru'ah" as "yabbaba"; but the Talmud is uncertain whether it means an outcry ("yelalah") or a moaning ("geniḥah") sound. The former was supposed to be composed of three connected short sounds; the latter, of nine very short notes divided into three disconnected or broken sounds ("shebarim"). The duration of the teru'ah is equal to that of the shebarim; and the teḳi'ah is half the length of either (R. H. iv. 9). This doubt as to the nature of the real teru'ah, whether it was simply an outcry or a moan, or both, necessitated two repetitions to make sure of securing the correct sound, the following formula, consisting of ten sounds, resulting: teḳi'ah, shebarim-teru'ah, teḳi'ah; teḳi'ah, shebarim, teḳi'ah; teḳi'ah, teru'ah, teḳi'ah. This formula was repeated twice, making thirty sounds for the series. The last teḳi'ah was prolonged and was called "teḳi'ah gedolah" = the "long teḳi'ah." This series of thirty sounds was repeated twice, making ninety sounds in all. The trebling of the series was based on the mention of teru'ah three times in connection with the seventh month (Lev. xxiii. 24, xxv. 9; Num. xxix. 1), and also on the above-mentioned division into malkiyot, zikronot, and shofarot. In addition a single formula of ten sounds is rendered at the close of the service, making a total of 100 sounds. Thus the original three sounds, constituting a musical bar, were increased to 100 at the New-Year's Day ceremony.

The general term for the sounds is "teḳi'ot." The first series of teḳi'ot is rendered after the hafṭarah, and is known as "teḳi'ot di-meyushshab" (sitting series) in contradistinction to the "teḳi'ot de-me-'ummad" (standing series) rendered at the "'Amidah" (standing prayer). There are many variations in the division of the series and placing them in the "'Amidah." R. Amram Gaon in his "Siddur" (p. 45b) gives the first line, T. S.-Tr. T. (= teḳi'ah, shebarim-teru'ah, teḳi'ah), three times for malkiyot; the second line, T. S. T., three times for zikronot; and the third line, T. Tr. T., three times for shofarot. Rabbenu Tam introduced the custom of giving the first line, T. S.-Tr. T., three times for either malkiyot, zikronot, or shofarot (Tos. to R. H. 33b, *s.v.* שיעור). In the Sephardic and west-German rituals the notes are rendered according to the scheme of Amram Gaon, while in east-European countries the minhag of Rabbenu Tam is followed. Other congregations render the first, second, and third lines in consecutive order for the three divisions of the "'Amidah."

The expert who blows the teḳi'ot is named "ba'al toḳea'" (the sounder of the shofar), and the prompter who calls off the sounds is termed "maḳri'." The following is the order of teḳi'ot for Rosh ha-Shanah:

In the Liturgy.

The ba'al toḳea' prepares himself for his task of blowing the shofar for the congregation and says: "I am prepared to fulfil God's command to blow the shofar, as is prescribed in the Torah, 'a day of blowing unto you.'" Then he recites the benediction: "Praised be the Lord our God, the King of the Universe, who sanctified us with His precepts and commanded us to hear the sound of the shofar," and adds the SHE-HEḤEYANU. The congregation answers "Amen." Then follow the thirty teḳi'ot, after which the ḥazzan recites the verse: "Blessed is the people that know the joyful sound; they walk, O Lord, in the light of thy countenance" (Ps. lxxxix. 16, R. V.). The congregation repeats this and says "ASHRE." In the MUSAF "'Amidah" by the ḥazzan the series of thirty teḳi'ot is rendered as described above. After Musaf or, in some congregations, after 'ALENU, the thirty teḳi'ot are



SHOFARS.

1. Used by Beni-Israel of Bombay. 2, 3, 7. In the Great Synagogue, Aldgate, London. 4. From Bagdad, eighteenth century. 5, 6, 9. In the United States National Museum, Washington. 8. With carved Hebrew inscription (after Wetzstein). 10. Alleged to belong to the pre-expulsion period (1290) of English Jews. 11. In the possession of Mrs. E. F. Aaron, New York. 12. In the possession of the late A. L. Cohen, London. 13. In the possession of F. L. Cohen, Sydney, N. S. W.

repeated. After Adon ‘Olam the formula of ten teḳi‘ot closes the service.

This order is repeated on the second day of Rosh ha-Shanah. If the first day falls on Sabbath (the second day never falls on that day), the shofar-blowing is dispensed with, and the words "day of blowing" throughout the liturgy are changed to "memorial of blowing." The reason given for the omission of the shofar ceremony on Sabbath is the apprehension lest the ba‘al toḳe‘a might carry his shofar in public premises to an expert for instruction, the carrying of articles from private into public premises being forbidden on the Sabbath though permitted on a holy day. However, where there was an ordained bet din, such as the Sanhedrin in Jerusalem in the Temple period, when strict discipline prevailed, the shofar-blowing continued on the Sabbath-day. Even after the second day of Rosh ha-Shanah was introduced, R. Johanan b. Zakkai, under whom there was a regular bet din at Jabneh, permitted the blowing of the shofar on Sabbath (R. H. iv. 1, 2). Later, however, the practise was discontinued; but it appears that Alfasi, in the twelfth century, still permitted it under his bet din (Abudarham, ed. Venice, 1566, p. 100a).

The addition, originally a substitution, of the three flourishes sounded in the additional service was due to R. Simeon ben Gamaliel II., who in the middle of the second century prescribed the sounding of a flourish at the close of each section of that service. It seems that the sounds were taken by the Roman authorities in Palestine for military signals (they may have resembled the calls of the imperial forces); for troops were sent to the synagogues in the early morning to prevent any martial exercises; and many Jews were put to the sword before an explanation could be given. In succeeding years the flourishes were delayed until the congregations had been for some time assembled and were obviously occupied in religious exercises only (R. H. 32b). The sounding was eventually restored to its proper place in the morning service (the "sitting series"), but the additional flourishes (the "standing series") were also retained.

In the Cabala.

Many reasons are assigned for the ceremony of shofar-blowing. Saadia Gaon (892–942) gives ten. The Cabala emphasizes the significance of the shofar and the teḳi‘ot. Thus a certain midrash, citing "Blessed is the people that know the joyful sound" (= "teru‘ah"; Ps. lxxxix. 15), asks: "Do other peoples not know the joyful sound? Have they not many kinds of coronets, buccina, and salpidin [= σαλπιδες]?" and then answers: "But the Israelites know how to serenade their Creator with the teru‘ah" (Pesiḳ., ed. Buber, p. 152a). The Zohar dwells on the word "know" as signifying in this midrash passage a secret knowledge and mysticism. The shofar represents the windpipe or the spiritual part of the body alongside the gullet, through which the food or the earthly part passes. The sound of the shofar awakens the Higher Mercy = "Raḥamim" (Zohar, Emor, p. 99b, and Pineḥas, p. 232a). The object of the second and third series of teḳi‘ot is to bewilder and stagger Satan (R. H. 16b), who, at first imagining that the Jews are merely complying with the Law, is surprised by the second blowing, thinking perhaps that the Messiah is coming, and finally is dumfounded, expecting the Resurrection, with which his power will finally cease.

It is the custom to blow one teḳi‘ah every day during the month of Elul except on the day preceding Rosh ha-Shanah (Oraḥ Ḥayyim, 581). This is a later innovation. The author of "Shibbole ha-Leḳeṭ" (13th cent.) quotes (§ 282; ed. Buber, p. 132b) a midrash and Pirḳe R. El. to the effect that on New Moon of the month of Elul, Moses ascended Mount Sinai to obtain the tablets of the Law for the second time, and that the shofar proclaimed this fact in order that the Israelites might not be again misled. Thenceforth the shofar was sounded annually on the eve of New Moon Day in Elul to commemorate the event, showing that originally the shofar was blown only on the first night of Elul (Vitry Maḥzor, p. 361).

At End of Yom Kippur and Other Uses.

The Ne‘ilah service on Yom Kippur is ended with a single teḳi‘ah. The Sephardim blow four calls: teḳi‘ah, shebarim, teru‘ah, teḳi‘ah. This is not obligatory, but is a reminiscence of the shofar-blowing in the year of jubilee in the pre-exilic period (*ib.* p. 395).

The shofar was used also to arouse the people to repentance on fast-days (Ta‘an. i. 6), which custom is still observed in Jerusalem in times of drought. The shofar has been from the most remote time the instrument by which an excommunication has been proclaimed. It is claimed that Barak used 400 shofars to excommunicate Meroz (Judges v. 23; M. Ḳ. 16a). The shofar was used at the announcement of a prohibition or a permission by the Rabbis (Niddah 40a). Among the paraphernalia of the bet din of R. Huna were: a rod to keep order; a strap for "malḳot"; a sandal for "ḥaliẓah"; and a shofar for excommunication (Sanh. 7b; see Rashi *ad loc.*). The shofar was sounded at funerals (M. Ḳ. 27b); and it was blown also when the ordained bet din announced the appearance of the new moon (Niddah 38a; see Rashi *ad loc.*).

On Friday afternoon six shofarot were blown at short intervals. At the first teḳi‘ah the laborers in the field ceased work; at the second the stores closed and city labor ceased; and the third teḳi‘ah was a signal to light the Sabbath candles. Then after a short pause the shofar sounded teḳi‘ah, teru‘ah, teḳi‘ah, and Sabbath set in (Shab. 35b).

Forms of Modern Shofar.

In regard to the form of the modern shofar, the particular kind of curve which it presents is regarded as immaterial. It may be gradual, as in Fig. 12 in the accompanying illustration, although this shape is rarely met with. Among the Sephardim the shape preferred is the natural spiral of the ovine horn (generally favored by Orientals), as in Fig. 4, an example of the eighteenth century from Bagdad. The instrument from Aden (Fig. 1) is made from the horn of an African koodoo (*Strepsiceros kudu*), retaining its natural curve. The

Ashkenazim prefer the simpler lituus shape (well known to the Romans, and used for their cavalry trumpet, being made of bronze), with the natural flatness of the horn accentuated by paring. Two shofarot found in England and believed to be ancient—one unearthed under the foundations of an old house in Leadenhall street, London (see "Cat. Anglo-Jew. Hist. Exh." No. 2); the other recovered from the Thames, off Vauxhall, together with a straight trumpet of ox-horn, at a spot which has yielded Celtic and Roman relics also (see "Jew. Chron." Feb. 6, 1903)—differ in no way from an average modern shofar of the lituus shape, save in having been less pared down, and so possessing greater thickness and weight.

The inferior limit of length is about six inches (comp. Shulḥan 'Aruk, Oraḥ Ḥayyim, 586, 10); but the instrument varies from eight to thirty inches in length (the horn of the koodoo is four feet long), the majority of examples averaging fourteen or fifteen inches, like the two middle horns of the illustration.

There were those who sounded the shofar for its music (R. H. 33b); but the Rabbis found it necessary to make provision for one who could not finish the series of calls (Oraḥ Ḥayyim, 585, 3), and for incomplete sounds, since the manipulation of the horn is of a very rough and empiric character. The embouchure, or mouthpiece, in particular, follows no standard in shape or size; and there exist horns which even the most skilful executant can sound only in certain positions, and then only with particular tensions of the lips. After the tip of the horn has been removed a roughly cylindrical bore of very narrow section is gouged down to the natural hollow. The exterior is then made smooth by scraping; and the horn, after being softened by soaking in hot water, is gradually brought to the desired shape. The interior having been trimmed and smoothed, the broad end is cut level, and usually carved along the edges in a rough coronet. The exterior is sometimes ornamented with carving, either geometric or including an inscription (comp. Fig. 3 in the illustration). The mouthpiece is formed by forcibly expanding the heated cut edge of the tip, or narrow end, considerable skill being necessary to overcome the tendency of the softened horn to split and so to spoil the shofar. A conoid of more or less oval base outline is arrived at; and, the edges having been rubbed smooth, the instrument is complete.

The traditional preference for the lituus or ↩ shape is due to the type of bore of the shofar classing it as a member of the trumpet, rather than the bugle, family. Its shrill and incisive tones similarly define its character. The notes producible on any wind-instrument vary according to the division of the contained column of air into aliquot lengths, dependent on the particular tension of the player's vibrating lips. Modern brass instruments consist of a tube of considerable length, perfectly smooth and symmetrical, and are sounded through a regular mouthpiece of constant proportions. The shofar is a short tube, always somewhat rough and irregular internally, and it is sounded through a mouthpiece of indefinite shape. Hence no two shofarot necessarily produce notes of the same pitch, or same position in the harmonic series. Indeed, shofarot usually produce only two, or possibly three—very rarely four—sounds of their series, as against the five obtainable with the bugle or the ten with the trumpet. Of eleven shofarot examined together by the writer, the varying pitch covered six different keys. Five sounded the interval of the fifth (d : s); four, that of the octave (d : d'); one, that of the fourth (s : d'); and one —the clearest in tone and easiest to manipulate—that of the sixth (s : m'). Of three which happened to be pitched alike, in the key of A, one sounded E : E' (third and sixth partials of the harmonic range), another A : E' (fourth and sixth partials), and the last E : A (third and fourth partials).

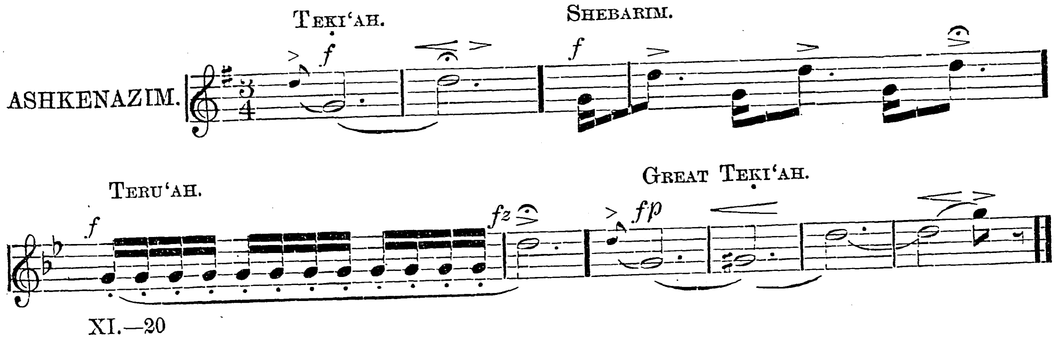
Variability of the Sounds.

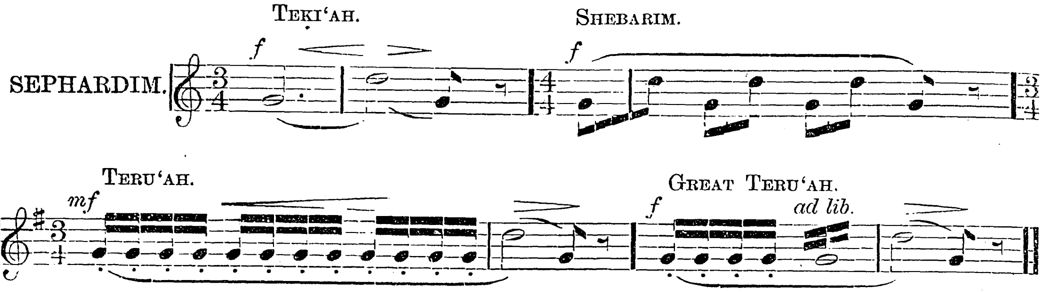
But while the two notes may thus differ, two forms of sounding them in succession have been recognized from time immemorial. When, however, the shofar and the silver trumpets were sounded together in the Temple they were not necessarily tuned in unison; but the ancient ear listened for the rhythm and figure of the sounding rather than for its actual notes, a distinction now to be noticed in some military calls differing in tune according as set for the trumpet or for the bugle. Hence the confused tradition, mentioned above, concerning the middle "call" of the three which together constitute a "flourish."

Notes and Signals.

On a shofar sounding the interval of the fifth and pitched in the key of G the shofar-calls would be as follows:

SHOFAR-CALLS





Attempts at noting the traditional calls aim, like the early notations alike of the church plain-song and of the synagogue CANTILLATION, at representing their duration and outline only, by means of strokes of particular length and shape. Such neumes are to be found in the "Siddur" of R. AMRAM (ed. Warsaw, 1865, p. 45b), in a late fourteenth-century manuscript (Codex Shem, No. 74, in the Parma Library), and in Juan de Gara's small Maḥzor (p. 190, Venice, 1587). The Parma notation, entitled in the manuscript in question "Simani Noti," is reproduced in Sulzer, "Shir Ẓiyyon," ii. 153, as follows:

SHOFAR, THE. See PERIODICALS.

SHOFEṬ. See JUDGE.

SHOFEṬ KOL HA-AREẒ ("Judge of all the earth"): Important PIZMON of six verses, each ending with a phrase from Num. xxviii. 23. Being signed with the acrostic "Shelomoh," it is often ascribed to Solomon ibn Gabirol; but by Zunz ("Literaturgesch." p. 312) it is attributed to Solomon bar Abun, the younger. The hymn and its traditional tune are alike given places of honor in both the northern and southern rituals. With the Ashkenazim, who utilize only the first five verses, the hymn is the chief poem in the SELIḤOT for the day preceding New-Year, and again in those of the morning service for the Day of Atonement. On both occasions it is differentiated from all other seliḥot by the special declamation, to the solemn penitential melody (see ASHRE HA-'AM), of the applicable Scriptural texts which immediately precede it. In the German order of seliḥot, when another hymn is substituted on Sabbath morning, such hymn is still sung to the tune of "Shofeṭ." With the Sephardim it precedes the "Nishmat" in the morning service for New-Year.

Its melody is chanted in the Spanish rituals, to different passages of solemn importance in the penitential services—chiefly such as are recited by the ḥazzan alone—almost as often as the frequently-repeated melody of "Le-ma'anka" (for which see ADONAI BEḲOL SHOFAR) is sung to the congregational hymns. It is thus used for the special reshut "Ohilah," which ushers in the Atonement additional service, and in some lines of tradition for the 'ABODAH as well. On New-Year it is similarly used to precede the additional service; and, in Italy, for 'ALENU as well as universally for the first utterance of the thrice-repeated prayer ("Ha-Yom Harat 'Olam") which follows the sounding of the SHOFAR.

Thus, alike by Ashkenazim and by Sephardim, the ancient melody for this hymn is regarded as one of the most important associated with the Ten Days of Repentance. It exists in several variants—an evidence merely of its age. The Ashkenazic and Sephardic forms differ very considerably in detail, betraying respectively a distinct German or Arab influence, with a corresponding modification of structure. Each usage, again, differs within itself according to local tradition. The variants of Amsterdam (De Sola, "Sacred Melodies," No. 27, London, 1857) and of Leghorn (Consolo, "Libro dei Canti d'Israele," No. 308, Florence, 1892) are by no means in agreement in detail. Four forms, two Polish and two German, are presented by Baer ("Ba'al Tefillah," No. 1426, Frankfort-on-the-Main, 1883). The link is supplied by the Italian tradition, which utilizes the characteristic Sephardic form for the initial verse, and approximates closely to the Ashkenazic in those that follow. Benedetto MARCELLO in his "Parafrasi Sopra li Salmi," published between 1724 and 1727, uses as a theme for Ps. xxi. (Vulgate numbering = Ps. xx. in the Hebrew) another variant, which, however, is close to one of the German forms of the melody. Four of the most characteristic variants—Spanish-Dutch (probably the original), Italian, German (that used by Marcello), and Polish—are given in the accompanying transcription.

ity. The Baraita, however, restricts the office to one who is "mumḥeh," *i.e.*, skilled in the proper handling of the knife and recognized as proficient in the laws governing his office.

The Talmudic regulations for slaughtering remained unchanged until the sixteenth century. Then, however, Joseph Caro in the Shulḥan ‘Aruk (Yoreh De‘ah, 1, 1) forbade women to act as slaughterers, perhaps because they might faint while performing the duty. In his opinion, furthermore, this ruling was in accordance with a "minhag" (custom); and in Israel minhagim frequently abrogated traditional legal rights. Moses Isserles confines the right of acting as shoḥeṭ to those who have already slaughtered at least three times in the presence of a rabbi; and he further states it to have been a minhag that, to be entitled to office, the slaughterer must possess a "cabala." Even such a man, according to Jacob Weil (who bases his statement on the authority of Shalom Klausner), must frequently repeat the laws governing his function, that he may not forget them.

The shoḥeṭ is not required, however, to know every detail of the rules, provided he can distinguish between clean and unclean animals (Ṭur, Yoreh De‘ah, 1, 1), although Moses Isserles expressly requires him to be a Talmudic scholar, as is almost universally the case in the East. The shoḥeṭ is bound by the following prohibitions: he must not be addicted to the use of liquor (Shulḥan ‘Aruk, Yoreh De‘ah, 1, 8); he must never have been accused of having discharged his duties indifferently (*ib.* 1, 14); he must not be a wanton transgressor of the Law ("mumar lehak‘is"); and he must never have openly desecrated the Sabbath (*ib.* 1, 5).

In the smaller cities the restrictions are still more severe; but it is frequently the case, especially in modern Occidental communities, that the shoḥeṭ discharges other functions besides his own, such as those of ḥazzan and reader. The government of Hanover formerly prohibited the shoḥeṭ from acting as a teacher ("Allg. Zeit. des Jud." 1844, p. 155); but this rule has been abolished. In Poland, according to Hirsch Heller ("Bet Hillel," p. 116, Munkacs, 1893), the shoḥeṭ appointed by the administrating rabbi must be confirmed by the "Wunderrabbi" before he is entitled to act in his official capacity. Among the most authoritative modern manuals for shoḥeṭim are Fränkel's "Zibḥe Raẓon," Rybuck, 1861; and J. H. Caro's "Das Jüdische Rituale beim Schlachten," Leipsic, 1867.

SHOMER ẒIYYON HA-NE'EMAN. See PERIODICALS.

SHOMRON ḲOL TITTEN: Dramatic elegy by Solomon ibn Gabirol, sung at the conclusion of the order of KINOT according to the Polish ritual, at both the evening and morning services of the Fast of Ab, and appended as a private meditation to the order of the Sephardim for the Fast of Ṭebet. The first verse is a quatrain, while the others are extended to thrice that length. Samaria and Jerusalem are presented as two faithless sisters (Ezek. xxiii. 4) now overwhelmed with contrition; and in the second and third verses they in turn bewail their lapses and the punishment visited upon them. In the fourth verse the poet supplicates pity for them, and prays for the return of their Lord to them in forgiveness (for an English paraphrase of the whole of the elegy see "Israel," iii. 80, London, 1899).

The poem is sung in the Polish, North-German, and English liturgy to an expressive traditional melody, the closing strain of which is based on the lament to which the ḳinot are intoned on the Fast of Ab among the Ashkenazim. But it bears a striking similarity also to the Sephardic melodies brought from Spain before 1492 (comp. MIZMOR SHIR LE-YOM HA-SHABBAT), in the structure and tonality of this closing strain, in the outline of the initial

Composition and Presentation.

SHOWBREAD (לחם הפנים).—**Biblical Data:** Twelve cakes, with two-tenths of an ephah in each, and baked of fine flour, which were ranged in two rows (or piles) on the "pure" table that stood before Yhwh and remained exposed to view for a week. A better term than "showbread" is the marginal reading of the Revised Version —"presence-bread" (Ex. xxv. 30), for this offering was required to be constantly before or in the presence of Yhwh. Each Sabbath fresh cakes replaced the old, which then belonged to the priests, who were required to eat them in a holy place, since the bread was holy. Upon the rows of cakes cups of frankincense were placed; this frankincense constituted the "azkarah," or memorial, and was offered upon the altar to Yhwh (Lev. xxiv. 4-9). According to I Chron. ix. 32, the sons of the Kohathites had charge of the baking and setting in order of the "bread of the row," as the Hebrew describes it. It would thus seem that the preparing of these cakes involved certain information which was kept as a secret by this priestly set. Mention is made of the showbread in the story of David's adventure at Nob. Ahimelek, the priest, at David's request, gave him the "holy" bread, that is, the stale loaves that had been taken away and replaced by "hot" ones (I Sam. xxi. 4-6; comp. Matt. xii. 4; Luke vi. 4). In Solomon's Temple provision was made for the proper exhibition of the loaves (I Kings vii. 48; comp. II Chron. iv. 19, xiii. 11). Though not explicitly stated to be so, these cakes were most probably unleavened. It is true they were not offered upon the altar, from which leaven was scrupulously excluded (Lev. ii. 11); but, as most holy, they were carried into and exposed in the inner sanctuary, and therefore the supposition that the use of leaven in them was prohibited carries a high degree of probability.

In Josephus.

The foregoing rather scanty data from the Biblical sources are confirmed and complemented by information vouchsafed by Josephus. The cakes were provided out of the common charge; they were without leaven, and contained twenty-four tenths of a "deal" of flour. Two heaps were baked the day before the Sabbath, and on the morning of the Sabbath were brought into the holy place, where they were set upon the holy table, six in a heap, one loaf leaning against another. On the top of each heap two golden cups of frankincense were placed; they remained there till the next Sabbath, when the fresh loaves were brought and the old loaves were given to the priests for their own consumption. The frankincense was burned in the sacred fire, and a new supply was placed upon the fresh loaves ("Ant." iii. 10, § 7).

——**In Rabbinical Literature:** Rabbinical tradition has preserved specific details concerning the preparation of the showbread. The cakes were kneaded separately (Men. xi. 1), but they were baked two at a time. To give them the required shape different forms—according to Maimonides, of gold—were used: one form for the cakes while they were still dough, another while they were in the oven, and a third after they were baked, in order to prevent their being broken or spoiled (*ib.*; see Sifra to Lev. xxiv. 5-9; Maimonides, "Yad," Tamid, v. 8). According to some authorities, the kneading and heaping were done outside, the baking inside, the Sanctuary—a distinction for which the commentaries fail to assign a reason (*ib.* v. 7; Men. xi. 2; see Bertinoro and Lipmann Heller)—and, the Sabbath prohibition not being suspended on account of the showbread, the baking took place, as Josephus reports, on Friday (see "Yad," *l.c.* v. 10), but according to others, all preparations were carried on in the Temple court; according to others, in the house of Pagi, a suburb where the priests who knew the secret of the preparation may have lived. Maimonides' explanation is that this district, while not in, was very near, the courtyard.

Rabbinical Traditions.

According to the Mishnah (Men. xi. 4; "Yad," *l.c.* v. 9), the cakes had the following dimensions: ten fingers (Maimonides gives "palms") in length, five in breadth, and rims, or upturned "horns," of seven fingers in length. The incense was put into two cups, a handful into each (*ib.* v. 2). These cups were called "bezikin," and had flat bottoms, or rims, so that they could be placed on the table (Tosef., Men. xi.). The new bread was carried in by four priests, while two bore the two cups of incense. They were preceded by four other priests, two to remove the old loaves and two to take up the two cups containing the incense. Those that carried the new bread went to the north end of the table, facing toward the south; those that had preceded them went to the south end, facing the north. While the latter were removing the old bread, the former were depositing the new, so that the showbread was, in fact, always before the Lord ("Yad," *l.c.* v. 4; Men. 99b). The cakes that had been removed were placed on a golden table in the hall; then the incense in the cups was burned, after which the cakes were divided. When Yom Kippur happened to fall on the Sabbath, this division was delayed until evening ("Yad," *l.c.* v. 5). The cakes, molded in squares, were piled one above the other; hollow golden tubes conducted air between them, and each pile was supported by two golden, fork-shaped supports attached to the table (Men. 94b, 96a; "Yad," *l.c.* v. 2).

The Table.

The Biblical descriptions of the table of the showbread make no mention of such provisions to admit the air or hold the bread in position. The table was placed in the northern part of the Sanctuary, opposite the candlestick (Ex. xxvi. 35), with the altar of incense between them. The Septuagint states that this table was of massive gold, but the Hebrew (Ex. xxv., xxxvii.) that it was of acacia wood, two ells long, one ell broad, and one and one-half ells high, covered with pure gold, and with a border of gold around the top. The feet seem to have been enclosed, and to this ring-like enclosure were fastened four gold rings, through which the rods (made of acacia-wood and covered with gold) were passed when the table was carried. When on the march the table was covered with a purplish-blue cloth, upon which were placed the loaves and the vessels; over the whole was spread a scarlet cloth, and on top of this the skin of a seal (Num. iv. 7, 8). Only one table was found in the various sanctuaries, though II Chron. iv. 8 reports that ten tables were in the Hekal. The table of the showbread was taken from the Second Temple by Antiochus Epiphanes (I Macc. i. 23), but it was replaced by another under Judas Maccabeus (I Macc. iv. 49).

Among the vessels enumerated as belonging to the table of the showbread are "ḳe'arot" (dishes, or, probably, the "forms" in which the cakes were baked) and "kappot" (hand-like bowls). These were the "bezikin" for the incense, "ḳesawot" (*σπόνδεια*) for the wine-libations, and "menaḳḳiyyot" (probably dippers). But according to the Jerusalem and Samaritan Targumim, the ḳesawot were intended to cover the loaves.

The dimensions given in the Mishnah for the table are the same as those given for the loaves—ten handbreadths long and five wide, the loaves being laid across the table. R. Akiba, however, disagreed with these figures. According to him, the table had a length of twelve handbreadths and a width of six, an interval remaining between the two piles, in which, according to Abba Saul, the cups of incense were placed. These dimensions are difficult to reconcile with the Biblical assumption that the loaves rested without support on the table (Men. xi. 5). The Mishnah gives the number of ventilating-tubes mentioned above as twenty-eight, fourteen for each heap. According to the statement that they were like the half of a hollow pipe, they must have been open on top. The Gemara (Men. 97) constructs from these data the following description of the table:

The four fork-like supports were let into the floor, two at each end of the table. They extended above the table, and between them, above the table, fourteen tubes, closed at one end, were fastened, forming a grate-like receptacle for the loaves. The lowest cake of each heap rested on the table; each of the next four rested on three tubes; the two upper cakes on two tubes. On the Arch of Titus the table of the showbread shows no such attachment (comp. Josephus, "B. J." v. 5, § 5; "Ant." iii. 6, § 6).

——**Critical View:** The Pentateuchal passages in which reference is made to the showbread belong, without exception, to the Priestly Code. It would be unwarranted, however, on this score to hold the offering to have been a late innovation, due to Babylonian influences. The episode in David's visit to the old sanctuary at Nob proves the antiquity of the practise (I Sam. xxi. 1 *et seq.*). Ahimelek's scruples lest the men had not kept aloof from women and the assurance of David that they were in a state of sexual purity suggest the original meaning of the rite as a sacrificial meal, partaken of by the deity in common with his devotees, who, in order to make tryst with their god, must be in such a state of purity (comp. Ex. xix. 10–11, 15). Hence the bread is not burned, but the incense is, which also is an indication that the rite has descended from remote antiquity (Stade, "Biblische Theologie des Alten Testaments," 1905, i. 168). Stade connects it with the ancient cult of the Ark (*ib.*), the food of the deity being placed before him, ready for consumption whenever he chose to make his appearance.

The Hebrew custom has developed probably independently of a similar custom in Babylon, both starting, however, from the same root idea, which is found among other races and in other religions (comp. Isa. lxv. 11; Jer. vii. 18, xliv. 17 *et seq.*; Baruch vi. 26; comp. the instance of the Roman lectisternium). The Babylonians offered to the gods various kinds of cakes or bread ("akalu"), which they laid before them on tables, generally in sets of twelve or multiples of twelve. These cakes were required to be sweet (*i.e.*, unleavened), and were baked from wheaten flour. Even the Hebrew name "leḥem ha-panim" has its exact counterpart in the Assyrian "akal pânu" (Zimmern, in Schrader's "K. A. T." ii. 600). The number "twelve," which is so prominent in the showbread rite, has always borne mysterious religious significance (see Zimmern, *l.c.* p. 629).

J. E. G. H.

SHRIMSKI, SAMUEL EDWARD: New Zealand politician; born at Posen, Prussia, 1828; died at Auckland, New Zealand, June 25, 1902. In 1847 he went to London, where he became a merchant; in 1859 he emigrated to Melbourne, Victoria; and in 1861 he went to New Zealand, in which colony he was one of the early settlers. At Oamaru he was appointed government land-auctioneer.

Engaging in local and general politics, Shrimski was elected mayor of Oamaru on successive occasions, and was also a prominent member of educational and philanthropic institutions. In 1875 he was elected to the House of Representatives as member for Oamaru; he was reelected three times; and in 1885 he was appointed life member of the Legislative Council, or Upper House of Parliament. He held the offices of chairman of the educational board of North Otago, treasurer of the hospital board, and vice-president of the Otago branch of the Anglo-Jewish Association.

J. G. L.

SHROUD (תכריכין): Robe in which the dead are arrayed for burial. The shroud is made of white linen cloth ("sadin," the *σινδών* of the New Testament; see Matt. xxvii. 59), which is cut and sewed together with large stitches; the ends of the thread are left unknotted, the garment being intended to last only until the body has decayed. As a general rule, however, several garments are used instead of a single shroud; in the case of a man these are a cap (in the form of a miter), breeches, shirt, an over-garment somewhat similar to a surplice, and a girdle. For a woman, an apron with strings replaces the breeches and the girdle, and the cap is flat. To a prominent man's attire is added the ṭallit he wore at prayers, but with the fringes removed or cut. The shroud, as being a garment for the dead and not for the living, is not subject to the law concerning mixed material (= "sha'aṭnez"; Kil. ix. 4).

Prior to the destruction of the Second Temple, the Jews were buried in the garments they were wont to wear during life. When the woman of En-dor saw the prophet Samuel rise from the grave he was covered with a mantle (I Sam. xxviii. 14), the same he had worn when living (Lev. R. xxvi. 7). The poor, however, were probably swathed like the Egyptian dead, as the term "takrikin" seems to indicate. Later the attire of the corpse became more elaborate. The rich grew very extravagant in this respect, securing fanciful and costly garments, and establishing a custom which became a burden upon mourners of the middle and poorer classes, who could ill endure the expense and yet desired to show the highest respect for their dead. This caused R. Gamaliel, about fifty years after the destruction of the Temple, to inaugurate the custom of using a simple linen shroud for rich and poor alike (M. Ḳ. 27b).

One who dies as a result of an act of violence, or in consequence of loss of blood, or a woman who dies in confinement, must be buried in the bloody garments worn at the time of death, and not in a shroud. This custom is based on the view that the last drops of blood, the loss of which is the immediate cause of death, are part of the body, and as such require burial; and since they can not be removed from the garments, these must go into the grave. But one who is killed by drowning or hanging, without loss of blood, is buried in the usual way, as is also one who is injured, loses blood, but partially recovers, though he dies later as a result of the injury (Shulḥan 'Aruk, Yoreh De'ah, 364). Even where the corpse is buried with the garments it is covered with a white sheet (*ib.*).

The shroud is figuratively termed "zewada" (provision for a journey; Ket. 67b); and by many it was prepared during their own lifetime, before ill health and age had overtaken them (Men. 41a; see Rashi). Several reasons are advanced for this ("Shelah," p. 145a, Amsterdam, 1698). See also BURIAL; SARGENES.

A. J. D. E.

SHULAMITE (R. V. **Shulammite**; Greek, Σουναμῖτις): Principal character in the Song of Songs (A. V. Song of Solomon), although mentioned there in one passage only (vii. 1 [A. V. vi. 13]). According to the opinion of some modern critics, the Shulamite was the bride of a shepherd; but her beauty kindled in Solomon a violent passion, and he endeavored to win her for his harem. As to the etymology of the name, it would seem that it means "a native of Shulem," which place, according to Eusebius ("Onomasticon," *s.v.*), is identical with SHUNEM. This view is supported by the Greek version (see above), which evidently was made from a Hebrew text having שונמית instead of שולמית. On the theory that the term "Shulamite" is equivalent to "Shunammite," some critics have gone so far as to identify the Shulamite with ABISHAG, who after David's death became prominent in the court of Jerusalem (see SONG OF SONGS).

J. M. SEL.

SHULḤAN 'ARUK. See CARO, JOSEPH.

SHULLAM, SAMUEL: Jewish physician and historian; flourished in the second half of the sixteenth century. He was of Spanish descent, and after an adventurous life went to Constantinople, where he was supported by KIERA (Esther), who stood high in favor at the court of the sultan. At her expense he published, but with many omissions, Zacuto's "Yuḥasin" (Constantinople, 1566), to which he added the Arabic chronology of the dynasties by the Syriac historian GREGORY BAR HEBRÆUS, supplemented by a Turkish history, his own work. He published also: a Hebrew translation of Josephus' "Contra Apionem"; the Letter of Sherira Gaon; and the account of Nathan the Babylonian of the last geonim. Shullam omitted Zacuto's report upon the expulsion of the Jews from Spain, because he himself intended to write a full history of the persecutions, a task that was accomplished by his contemporary Joseph ha-Kohen in his "'Emeḳ ha-Baka."

D. S. MAN.

SHULMAN, NAPHTALI HERZ: Russian Hebrew author; born at Stary Bychow; died at Amsterdam about 1830. He edited Mussafia's "Zeker Rab" (Shklov, 1797), with an index of the words to be found in the Bible, a translation of them into Judæo-German, and grammatical notes; and "Shir we-Hallel" (in Hebrew, Russian, and German; Wilna, 1806), hymn sung by the Jews of Wilna on the birthday of the grand duchess Elizabeth Alexandrowna, Nov. 19, 1806.

BIBLIOGRAPHY: Zeitlin, *Bibl. Post-Mendels.* p. 355.

H. R. A. S. W.

SHUMAN, ABRAHAM: American merchant and philanthropist; born in Prussia May 31, 1839. While still a child he accompanied his parents to the United States. The family settled in Newburgh, N. Y., where young Shuman, when not at school, worked on a farm until he was thirteen years old, at which age he entered the clothing business. In 1859 he went to Boston and began business for himself at the corner of Washington and Vernon streets, Roxbury; and a few years afterward he entered into partnership with John Phillips, under the firm name of Phillips & Shuman (later A. Shuman & Co.). It was the pioneer firm in the United States in the manufacture and wholesaling of children's clothing.

Shuman is connected with many of the leading institutions of Boston. He is the first vice-president of the Boston Merchants' Association, a member of the boards of directors of the Colonial National Bank and the United States Trust Company, president of the board of directors of the Boston City Hospital (which has attained its present magnitude and reputation under his administration), a trustee of the Benjamin Franklin Fund, a member of the Ancient and Honorable Artillery Company and of many social clubs, and one of the founders of the United Hebrew Benevolent Association of Boston, of which for sixteen years he was a director. He is likewise one of the founders and presidents of the Elysium Club.

A. G. Mo.

SHUMLA: City of Bulgaria. According to local tradition there was not a Jew at Shumla until about 1780; but in that year a pasha of Adrianople, having been appointed military governor of the city, brought with his regiment a Jewish physician of Adrianople, known as Kiamal or Hakim-Bashi, but whose real name was Ḥayyim Aaron Ashkenazi. This man, being a pious Jew, asked the pasha to permit him to send for a shoḥeṭ and for some Jewish families from Adrianople. He received the desired permission, and later on other Jews from Pravady, Rasgrad, and Viddin joined the first immigrants. With the authorization of the pasha this group of families lived in some buildings standing in the middle of a large court, which thus formed a ghetto, the doors of which were closed every evening. A small synagogue was soon built within the enclosure. According to a tombstone in the cemetery, which tradition has made sacred, the first rabbi of the community was a certain Hay Fayo of Bosnia. Kiamal enjoyed many privileges and exercised great influence over the pasha. His descendants are still living at Shumla, and some of them practise medicine there.

The local synagogue was reconstructed in 1858. As Shumla was spared by the victors during the Turco-Russian war of 1876-78, the Jews there offered shelter to their coreligionists of other cities.

Some of the given names of the Shumla Jews are curious, *e.g.*: "Bitousche" for Shabbethai; "Mercousch" for Mercado; "Bischko" for Preciado; "Boucco" for Behor; "Hacco" for Isaac; "Mendousch" for Miriam; "Istrug" for Astruc; and "Moreno" (the brown). Some of the family names seem inexplicable, as "Yulzari," "Bahsi," etc.

The most prominent families of the city are those of Judah Behar Israel and Ishak Behar Aron. The chief rabbis of Shumla in the nineteenth century were the following: Raphael Joseph Galimidi (1831-36); Shabbethai Farḥi (1836-58); Mattithiah Sarmani (1858-72); Ḥayyim Franco of Rhodes (1872-73); Jacob Estrumsa (1873-84). Since the last-named, Shumla has had no spiritual chief, the ḥazzan of the synagogue filling at the same time the offices of chief rabbi and judge. The management of the affairs of the community is in the hands of a synagogal committee whose election must be approved by the minister of public worship.

Shumla possesses the following philanthropic societies: 'Ozer Dallim, founded in 1875, for the supply of fuel in winter to the poor; Esperanza, a ladies' society for the relief of public misery in cases of catastrophe; and Biḳḳur Ḥolim, for the provision of medical aid, medicine, and burial for the poor; likewise Aguddat Yeladim, a reading society; and La Fourmi or Anemala, a mutual-aid society for Jewish working men. There are, besides the synagogue, two schools of the Alliance Israélite Universelle (120 boys and 110 girls).

The Jews of Shumla at present (1905) number 200 families in a total population of about 22,000 (11,000 Mohammedans and 10,000 Orthodox Bulgarians).

In common with all the Jews of Bulgaria, those of Shumla perform military service. During the Bulgaro-Servian war the Jews of Shumla served in the ranks of the local militia, and several of them were decorated with the military medal. Of the two Jewish officers in the Bulgarian army, the sublieutenant Moreno Grassiani is a native of Shumla.

S. M. Fr.

SHURRABI, SHELOMO SALEM: Ḥakam of the Beni-Israel community of Bombay; born at Cochin at the end of the eighteenth century; died at Bombay April 17, 1856. While on a voyage from Cochin to Bombay with his maternal grandfather, Meyer Serfadi, about 1836, he was wrecked and found by Jacob Aaron Sanker, a Beni-Israel soldier, who secured for him employment as a bookbinder. Shurrabi showed considerable knowledge of Jewish lore, and, being able to cantillate the service attractively, was appointed reader of the new synagogue at a salary of 100 rupees ($50) per annum; and as such he instructed the Beni-Israel in the traditions of their faith. He obtained great influence with the Beni-Israel; and through his efforts new synagogues were founded in Bombay, Alibag, Revdanda, and Panwell. To Shurrabi, with David Rahabi and Samuel Divekar, may be ascribed the chief influence in keeping the Beni-Israel true to their faith.

SHUSHAN (Susa; Hebrew, "Shushan," or "Shushan ha-Birah" [Shushan the Palace]; Assyrian, "Sushan"; Elamitic, "Shushin," "Shushun"; Greek, Σουσάν, Σοῦσα): Ancient capital of Susiana or Elam, and the winter residence of the kings of Persia; situated between the Choaspes (modern Ab-i Kerkhah) and the Eulæus (the "Ulai" of Dan. viii. 2; modern Shaur), fifteen miles southeast of Dizful. The city was a very ancient one, and is mentioned under the name of Sis or Sisa in Babylonian inscriptions as early as 2400 B.C. In 640, during the reign of Assurbanipal Shushan came under Babylonian control; but it was captured by the Persians under Cyrus the Great, who made it the seat of government. The rise of Babylon under Alexander the Great and his successors reduced the importance of Susa. It was razed after a revolt, but was rebuilt by Sapor II. (309-379 C.E.) under the name of Iranshahr Shapur; and it was still able to offer a stubborn resistance to the Arab invasion in 645.

The circumference of Shushan during its prime seems to have been about six or seven miles, and on the right bank of the Ulai stood a temple or observatory, whose remains are now called Tell-i Sulaiman ("Hill of Solomon"), and other structures. The ruins of the Persian palace, excavated by Williams and Loftus, and, more recently, by Dieulafoy and his wife, cover about 300 acres on three platforms. To the southwest are the remains of a semicircular citadel, and across a ravine to the north is a platform containing the ruins of the "Hall of Audience" or "Throne Room," while a long terrace to the east was the site of the palace and the harem.

In the Bible, Susa or Shushan is mentioned once in Nehemiah (i. 1), and once in Daniel (viii. 2), while the scene of the Book of Esther is laid in the city (Esth. i. 2, 5; ii. 5, 8; iii. 15; iv. 8, 16; viii. 14; ix. 6, 11-15, 18; Apocr. Esth. i. 2, although all these references are too vague to determine whether the "palace" [R. V. alternative reading, "castle"] bore any resemblance to the royal structure as it actually existed). The association of Daniel with "Shushan the palace" has an added interest on account of the single occurrence of the word אפדנו ("palace") in Dan. xi. 45, which, like its Syriac equivalent "afadana," is almost certainly a loan-word from the Old Persian "apadana." The tradition of Daniel's residence at Shushan has caused a structure of the Mohammedan period at the foot of the citadel to be called the tomb of Daniel (see Daniel, Tomb of).

The Book of Jubilees (viii. 1) reconstructs an eponymous ancestry for Shushan, which it terms "the daughter of Elam." According to the Pahlavi "Shatroiha-i Eran," Shushan was founded by Shoshan-dukht or Gasyan-dukht, the Jewish queen of Yezdegerd I., a statement which may mean that she established a Jewish colony there (see Jew. Encyc. ix. 465a, *s.v.* Pahlavi Literature).

E. G. H. L. H. G.

According to the Talmud, on the eastern gate of the Temple at Jerusalem was a representation of Shushan the palace (Mid. i. 3; comp. Kelim xvii. 9), variously explained by two Babylonian amoraim in the third century (Men. 98a) as an emblem of servitude to the Persian kings and as a token of gratitude. This gate is believed by Grätz ("Gesch." ii. 103) to be identical with the "king's gate" mentioned in I Chron. ix. 18. The Babylonian schools of the amoraic period cite the two cities of Shush and Shushtri among the places to which the ten tribes were exiled (Sanh. 94a). Curiously enough, both these names are given to Susa in modern Persian, although it is uncertain whether they were applied to the city as early as the third and fourth centuries, or whether the Talmud refers to two separate localities at or near the ancient Susa.

The province of which Susa was the capital is mentioned especially as "Be-Ḥuza" (Khuzistan); and some of the amoraim are surnamed "Ḥuza'ah" (Giṭ. 7a; Ta'an. 22a; Pes. 9a; comp. Shab. 51b; Ta'an. 21b; Ket. 85a). Saadia, following an Arabic chronicle of the geonic period (possibly written by the gaon himself; Neubauer, "M. J. C." ii. 92; comp. "R. E. J." xxxii. 143), identifies Elam (Gen. x. 22) with Khuzistan. Benjamin of Tudela in the twelfth century describes Khuzistan as a large province, although one not densely populated; and among its ruins were the remains of Shushan the palace. Pethahiah of Regensburg found only two Jews in Susa, and at present (1905) there are but 7,000 in the entire province; they have fourteen synagogues, one behind the tomb of Daniel.

W. B.

SHUSHAN (SUSA) PURIM: Name given to the day which follows Purim—*i.e.*, to the 15th of Adar, on which day, according to the Book of Esther (ix. 18), the Purim festival is held in Shushan. As a matter of fact, the 15th of Adar is Purim day not only at Shushan, but at all large, walled cities (see Meg. 2a, b concerning the time when it became necessary to surround cities with walls), as is clearly indicated in Esth. ix. 19, 21; but as Shushan is directly referred to, while the cities surrounded with walls are only vaguely indicated, the day is called "Shushan Purim." It would seem also from the same passage and from verses 27 and 28 that both the 14th and 15th of Adar were observed as festival days in Shushan and in all other walled cities; but the Rabbis explain (Meg. *l.c.*) that on one day the festival was observed in unwalled cities and on the other in Shushan and other walled places. Although, in fact, the 14th of Adar is not celebrated by the Jews of Shushan nor the 15th by the Jews of unwalled cities, yet the observance of certain rabbinic regulations reminds Jews living in unwalled places of the Shushan Purim. Thus on the 15th one must not mourn over the dead nor fast; that part of the morning prayer called "Taḥanun" must be omitted; and the meal must be more elaborate than on ordinary days (Shulḥan 'Aruk, Oraḥ Ḥayyim, 696, 3).

SHYLOCK: Character in Shakespeare's play "The Merchant of Venice." *Shylock* is represented as making a wager with *Antonio*, a merchant of Venice, setting the return of a loan of 3,000 ducats against a pound of flesh to be forfeited by *Antonio* if he fails to return the money from his own resources by a certain date. *Antonio* fails to meet his bond, and *Shylock*, who in the meantime had lost his daughter *Jessica* by her elopement with a Christian, insists on the forfeit; thereupon *Portia*, the affianced wife of a friend of *Jessica's* lover, intervenes in the guise of a lawyer, and declares the bond forfeited because it would be impossible to extract a pound of flesh without drawing blood, which is not mentioned in the contract, and also because the intention of the contract was equivalent to design upon a Venetian citizen's life. This latter crime being, in Venice, punishable by death, the doge remits the punishment only on condition of *Shylock* becoming a Christian and surrendering half his fortune to *Antonio*.

Earlier Forms of the Story.

Shakespeare appears to have taken the plot from a ballad entitled "Ser Gernutus the Jew," or from an English version of Giovanni Fiorentino's "Il Pecorone," written about 1378. The story appeared in earlier forms than either of these, however, the earliest in which the creditor is a Jew being the English "Cursor Mundi," written about the end of the thirteenth century. In this version it is connected with the finding of the cross by Queen Helena, who forgives the Jew for his cruelty on condition of his pointing out the true site of the crucifixion. With a non-Jew as principal character the story appears even earlier, namely, in the Sindbad series; here it occurs as the tale of the fourth wise master in the "Seven Wise Masters of Rome," in which the servant of a knight lends the latter 100 marks in order that he may once more try his fortune with his lady-love, on condition that if he does not repay the sum the servant shall receive the right to remove a certain amount of flesh from his master's body. He is foiled by the decision of the king that he must not remove more or less than the specified quantity. In the early English version of the "Gesta Romanorum" the condition by which the forfeit is evaded is that the cruel creditor shall not take a drop of blood. So in the German and Latin versions, though in none of these is the cruel creditor a Jew; and so, too, in similar stories which are told in Persia (F. Godwin, "The Persian Moonshee," p. 8). In one form of the story the cruel creditor is a Christian, *Paolo Mari Sechi*, and the debtor a Jew, *Sansone Geneda*, the latter of whom bet a pound of flesh that Drake had not taken the city of Santo Domingo, in Haiti, in 1585. The Jew lost, and, *Sechi* demanding the forfeit, the matter was put before Sixtus V., who condemned both persons to the galleys, which they could escape only by each paying 2,000 scudi. This story was told by Leti ("Vita de Sixto Quinto," Venice, 1587) eight years later than the first appearance of a play on the subject called "The Jew," and it is generally considered that the story is simply a fable introduced by Leti into the second edition of his work.

Historical Basis.

In Nov., 1879, Frederick Hawkins, in an article in "The Theater," suggested that "The Merchant of Venice" was connected with the state trial of Dr. Rodrigo Lopez; and Sidney Lee, in Feb., 1880, in "The Gentleman's Magazine," pointed out the similarity of the play with the incidents of the plot. The chief enemy of Lopez, like *Shylock's*, was named Antonio. Henslow recorded that he had brought out in August, three months after the execution of Lopez, a "Venesyon comedey" which is probably identical with "The Merchant of Venice"; and in the autumn of 1584 there were many repetitions of a play called "The Jew," as well as of Marlowe's "Rich Jew of Malta" (see Barabas). It has been conjectured that the public interest taken in the trial induced Shakespeare to revise and rewrite the play referred to by Gosson in 1579 as relating to a cruel and usurious Jew, which was itself derived from a story in the ballad referred to above and in "Il Pecorone." Some of the traits in *Shylock* may be due to the influence of Marlowe, but *Shylock* was much more human than *Barabas*, since he was influenced by grief at the action of his daughter as well as at the loss of a prized ring which he had once given to his wife, and was made still more resentful by the business competition of *Antonio*.

In the early traditions of the English stage *Shylock* was played as a comic character, but Edmund Kean made it a serious one, and he has been followed in this reading by Sir Henry Irving. It has been played with some force in Yiddish by Jacob Adler.

J.

SI'A (סיעא), LEON JUDAH ARYEH (NASR AL DIN): Physician in Constantinople, and a friend of Jewish science; lived before 1633. He translated Judah ha-Levi's "Cuzari" and Baḥya's "Ḥobot ha-Lebabot" from Arabic into Latin, which his friend Jacob Roman intended to print together with the Hebrew translation and the Arabic text. He was on friendly terms with Anton Leger, chaplain of the Dutch embassy in Constantinople, through whom he recommended his friend Roman (in a letter written in Latin and dated Dec., 1633) to Johannes Buxtorf, Junior, of Basel. He had corresponded with Buxtorf at an earlier date. When Rakoczy I., Prince of Transylvania, in 1639 appointed Si'a to be his court physician, the latter left Constantinople, discarding Judaism at the same time, as Buxtorf wrote to Professor Hottinger at Zurich (Aug. 11, 1641).

SIBBECHAI: Captain under David who came from the town of Shushan, near Ephrath-Bethlehem. He distinguished himself by overcoming a Philistine giant (II Sam. xxi. 18; I Chron. xx. 4). He is mentioned also in I Chron. xi. 29, xxvii. 11, as one of the thirty valiant followers of David. He may be the Mebunnai of II Sam. xxiii. 27.

E. G. H. E. I. N.

SIBERIA: Russian territory in northern Asia, extending from the Ural Mountains to the Pacific Ocean, and from the Arctic Sea to the Chinese frontier, with a total population (1902) of 6,276,226, including 31.380 Jews. As a place of banishment for Russian prisoners Siberia acquired its first Jewish settlers in the seventeenth century in those banished thither as criminals, among whom there were many whose only crime consisted in their being Jews. When steps were taken in 1829 to diminish the number of Jews in Courland and Livonia, it was proposed among other measures to deport to Siberia those Jews who failed to register in some community by a specified time (see Courland). The Jews thus deported were followed by their families and friends, and the authorities did not apparently object to the latter's establishing themselves in Siberia. In the course of time, however, the Jewish question was brought forward there also. In the early thirties of the nineteenth century a question was raised in the Senate, in the case of Berkowitz and Kamener, for the purpose of ascertaining whether Jews deported to Siberia, and their children who accompanied them, were entitled to avail themselves of the gild privileges. The committee of ministers to whom the case was referred resolved that it was legal for Berkowitz and Kamener to register in the merchant gild; but "in order to prevent too great an increase of Jewish merchants to the injury of the natives," it was resolved that the case of every Jew wishing to secure a trade license be presented to the minister of finance for decision at his discretion. This resolution was approved by the czar, March 3, 1834 ("Vtoroye Polnoye Sobraniye Zakonov," ix., No. 6875).

Ukase of Jan. 5, 1837.

On the other hand, Nicholas I. intended to establish Jewish agricultural colonies in Siberia; and he even issued an order calling for the assignment of land for this purpose in the governments of Tobolsk and Omsk (1836). The Jews, especially those from Courland, were quite eager to settle in Siberia, but the plan was suddenly abandoned, and by a ukase dated Jan. 5, 1837, the czar ordered that the settlement of Jews there should be discontinued. The issuing of this ukase was largely due to the influence of the adjutant-general, Count Benkendorf, and of the minister of the interior, Count Bludov; the latter, though he had officially advocated the establishment of Jews in Siberia, had privately opposed the measure. Nicholas I. came to the conclusion that the settlement of a large number of Jews in Siberia would result in economic injury to the native population, and he suggested, as the most effective remedy, "the enrolment among the military cantonists of all the children of Jews deported for settlement in Siberia." Inquiries made at that time showed that in the governments of Tobolsk, Tomsk, and Yeniseisk there were eighteen Jewish merchants and 659 Jewish artisans, while there were thirteen Jewish settlers in the territory of Omsk. The regulations finally adopted by Bludov specified, among other provisions, that the transfer of Jewish settlers to Siberia should be positively and permanently prohibited; that the lands assigned for new Jewish colonies in the government of Tobolsk and in the territory of Omsk should be used for other purposes; that prospective Jewish settlers already on their way to Siberia should be sent elsewhere; that Jews liable to banishment to Siberia were, if under thirty-five, to be pressed into military service, if between thirty-five and forty to be sent to the workhouse, and if over forty to be deported to special settlements in the remote regions of Siberia, namely, in the territories of Yakutsk and Transbaikalia. The Jews sentenced to hard labor in the mines were to be settled in the same regions at the expiration of their terms. Jews who had come to Siberia in order to join their relatives were to be given the alternative of returning to their former homes or of joining their coreligionists in the new Russian colonies. On their refusal to accept either, they were to be deported to the remote parts of Siberia. Male children under eighteen of Jewish settlers were to be registered among the military Cantonists ("Vtoroye Polnoye Sobraniye Zakonov," xii., No. 10,242).

Status of Siberian Jews.

Meanwhile thirty-six Jewish settlers from the governments of Moghilef and Byelostok arrived in the territory of Omsk, and their status became the subject of much official correspondence. Bludov reported the matter to Nicholas I., who decided that it would be "unjust to transfer these Jews again," and ordered that they be given the choice of removal to the government of Kherson or of remaining in Siberia under the regulations adopted for the Jews already established there. From a document of subsequent date it appears that thirty-two of these Jews preferred to remain in Siberia, while four asked to be sent back to their old homes. After this, and until the death of Nicholas I., the government endeavored in various ways to discourage the settlement of Jews in the territory.

During the reign of Alexander II. several Jews, not convicts, were given permission to settle in Siberia, but notwithstanding this permission those who established themselves there were subjected to much oppression by the local administrators, who interpreted the law according to their own desires. Thus Jewish artisans, to whom the law of the empire permitted unrestricted residence while they were actively engaged in the pursuit of their trades, were frequently compelled to remain in the Siberian settlements where they happened to be registered, and were not allowed to leave even when unable to earn a livelihood there (see "Khronika Voskhoda," 1889, No. 9).

Anomalous Position.

"A general review of the government enactments concerning the Jews naturally leads to the question," says Mysh in 1889, "why the honest Jew who is not a member of the privileged classes is forbidden to breathe the air of Siberia, while various criminals and their descendants, although Jews, may not only live in Siberia while serving their terms, but may settle there permanently, and enjoy full civic rights, even though forbidden to engage in the liquor trade. At the same time, thanks to the laws concerning the Pale of Settlement, any Jew within the Pale who, on account of overcrowding and the fierce competition of his coreligionists, suffers from poverty, and who wishes to escape from his unfortunate position, and to remove with his family beyond the Pale, will find only one way open to him, namely, to commit some crime. It will then become possible for him to remove with his family to Siberia at the government's expense, and become there a full-fledged member of the local population."

Under Alexander III. and Nicholas II. official discrimination against the Jews of Siberia became more pronounced. Thus the council of the government of Tobolsk decided that the domicil of a Jew registered in a Siberian community is not Siberia at large, but only the place of his registration, and hence such a Jew, if not a registered artisan, has not the right to move from one Siberian government to another, nor even to transfer his residence from one settlement to another in the same government. The Siberian administrations were supported in this ruling by the imperial Senate, and thereby many Siberian Jews have been placed in the position of serfs practically attached to the locality where they happen to reside; in many instances they have been deprived of the means of gaining a livelihood.

Regulations of a similar nature were adopted in 1899 by the governor-general of Transbaikalia. According to these, "all Jews are forbidden to reside in the boundary-zone adjoining the Chinese frontier. Only those Jews who lived there prior to the ukase of June 12, 1860, are permitted to remain in the place of their registration. The banished Jews and their descendants have no right to move freely from place to place in Siberia, but may apply to the governor-general for permission to do so" ("Khronika Voskhoda," 1900, No. 2, p. 10). These regulations are everywhere enforced with great severity and arbitrariness by the local administrations, much suffering being inflicted upon the Jewish residents of Siberia (*ib.* Nos. 42, 70; "Die Welt," 1902, No. 48).

According to the census of 1897, the Jews in Siberia numbered 34,477 (18,483 males, and 15,994 females), distributed as follows:

Districts.	Number of Jews.	Percentage of Jews to Total Population.	Districts.	Number of Jews.	Percentage of Jews to Total Population.
Amur	394	0.33	Tobolsk	2,453	0.17
Yeniseisk	5,730	1.00	Tomsk	7,696	0.40
Transbaikalia	7,550	1.18	Yakutsk	697	0.26
Irkutsk	8,239	1.60			
Primorskaya	1,591	0.72	Totals	34,477	0.68
Sakhalin	127	0.45

J. J. G. L.

SIBLONOT: Talmudic term for gifts presented to a bride by the bridegroom or by the parents. According to some authorities, the word is derived from the Greek σύμβολον, which means "gift or payment made in token of something" (Kohut, "Aruch Completum," *s.v.*), while, according to others, it is the plural form of "sebel" (= "load"), the synonym of which, "massah" (load), also assumes in the plural ("massot") the meaning of "presents" (Jastrow, "Dict." *s.v.* סבלון). Doubt was expressed by some Talmudic authorities as to whether the term "siblonot" employed in the Mishnah and in the Gemara designated all gifts to a bride or only the first gift ("Leḳeṭ ha-Ḳemaḥ" on Eben ha-'Ezer, p. 129).

The rabbinical legislation made provisions with regard to siblonot in case of death or divorce after betrothal and before marriage. Siblonot consisting of garments or other things used by the bride while still in her father's house, and which might be worn out before the marriage, need not be returned; those of jewelry or ornaments must be returned; while those of food or drink must be returned only if the bridegroom has not partaken of a meal to the value of one dinar in the house of his father-in-law. In the case of a divorce occasioned by the woman's refusal to marry, even the smallest article must be returned (B. B. ix. 6; Shulḥan 'Aruk, Eben ha-'Ezer, 50).

Siblonot were considered as "nikse melug" (the property of plucking); and the husband was entitled to all the fruits and profits thereof, although he was not held responsible for their loss or deterioration (Isaac ben Sheshet, "She'elot u-Teshubot," § 101; Solomon ben Adret, "Teshubot ha-Rashba," § 900). David ibn Abi Zimra discusses the question whether siblonot given by the bridegroom's father and returned after the death of the latter, on the dissolution of the marriage belong to the bridegroom alone or to him and his brothers jointly ("Teshubot ha-Radbaz," § 151).

E. C. I. Br.

SIBYL: Woman who prophesied, while in a state of frenzy, under the supposed inspiration of a deity. In the Jewish sense of persons who felt themselves spiritually impelled to speak to the people in the name of God, prophets were unknown to the ancient Greeks and Romans, among whom prophecy was limited to the deliverances of the sibyls (*σίβυλλαι*). The ancient sources differ as to the number and nativity of these sibyls. Plato speaks of only one sibyl, while Aristotle and Aristophanes mention several, and Varro (in Lactantius, "Divinarum Institutionem," i. 6) enumerates ten, including a number from the East. **Number.** The most interesting list from the Jewish point of view, however, is that of Pausanias, who enumerates the following four sibyls (x. 12): the Libyan sibyl; Herophile, the sibyl of Marpessus or Erythræ (said to have prophesied both in Asia Minor and at Delphi, and therefore frequently mentioned under various other names); Demo of Cumæ, the chief sibyl of Roman history; and the Hebrew sibyl, Sabbe of Palestine (known also as the Babylonian or Egyptian sibyl). A late source, the "Chronicon Paschale," which was composed in the sixth century of the common era, enumerates twelve sibyls (ed. Bonn, 108, p. 201), and expressly terms one of them the "Hebrew" sibyl, the same designation being used by Suidas and other late authors.

The scanty references in these ancient sources clearly imply that the sibyls were native to the East; and this is confirmed by their common designation. Although Varro gives a Greek etymology for the word (*σιός* = *θεός* + *βούλλα*, whence *σίβυλλα* = *θεοβούλη*, "the counsel of god"), and modern philologists derive it from an ancient Italian dialect (see "Rheinisches Museum," i. 110 *et seq.*), the arguments are not convincing. Since Lactantius expressly says (*l.c.*) that the sibyl is a native of Babylon, the name is probably Semitic in origin. The word may be resolved into the two components "sib" + "il," thus denoting "the ancient of god" (Krauss, in "Byzantinische Zeit." xi. 122), especially as great age is one of the sibylline characteristics. The Hebrew sibyl is identical, moreover, according to Pausanias and Suidas (*s.v.* *Σίβυλλα*), with the sibyl of Babylon, and the name "Sabbe" consequently represents the Aramaic "saba" (= "old"), inasmuch as the sibyl is the personification of old age. Suidas gives the form "Sambethe" instead of "Sabbe"; this is to be explained by the fact that the Hebrew sibyl was supposed in the Byzantine period to be mentioned in the Biblical list of nations, and that hence "Seba" and "Sabtechah" (Gen. x. 7 and I Chron. i. 9) came to be, in slightly Hellenized forms, two equivalent designations for the Hebrew sibyl (Krauss, *l.c.*).

The connection of the sibyl with Biblical personages appears also in a statement found in the extant collection of the Sibylline Books to the effect that she asserted herself to belong to the sixth generation of man and to be descended from Noah (i. 298), while in another passage she termed herself a virgin of the blood of Noah (iii. 827). On account of these statements the Erythræan pagan sibyl was likewise said to be descended from the sixth generation after the Flood (Eusebius, "Constantini Oratio ad S. Coetum," xviii.). The Hebrew sibyl was alleged also to have been the wife of one of Noah's sons, and consequently to have been saved in the ark (Plato's "Phædrus," p. 244b, note). It was generally said, however, and with greater show of right, that she belonged to the race of the blessed Noah (prologue to the Sibyllines), which statement agrees with her names Saba and Sambethe. Epiphanius regarded her as the daughter of Noah himself, or even of Eve ("Adversus Hæreses," vi., xxvi. 1). The Jewish sibyl, however, deliberately falsified her genealogy, for it was an accepted tradition that the old pagan sibyl was a native of Babylon, while the Jewish sibyl was held to be the daughter of the ancient Chaldean historian Berosus (pseudo-Justin, "Cohort. ad Græcos," xxxvii.; comp. Pausanias, x. 12; Moses of Chorene, i. 6). The Jewish sibyl, then, was regarded as a very ancient personage who perpetuated the wisdom of the past, and the traditions concerning her may consequently be compared with the Jewish legends of Enoch and of Asher's daughter Serah.

Connection with Biblical Personages.

All these legends arose after the ascription of Jewish prophecies to the sibyl. The Hellenistic Jews, especially those of Alexandria, were in conformity with the spirit of their time when they clothed their sayings in Gentile garb, for only thus could they hope to gain an audience. For the sibylline prophecies were intended primarily for the pagans, although the intention was rather to convict them of sin and to glorify Judaism by contrast with them than to convert them. The medium of verse was chosen, moreover, as being the commonly accepted vehicle of prophecy at Delphi, as well as in the oracles of Orpheus and Cassandra, in the magic papyri, and especially of the pagan sibyl. But the clumsy hexameters and the awkward sentences did not satisfy the refined tastes of the Greco-Roman world, and Heraclitus, the sage of Ephesus, himself declared that the sibyl uttered unrimed and uncouth words with raving mouth, even though her broken speech was regarded as the stammering of ecstasy, since she was merely the frail vessel of the divine spirit. In the extant collection of the Jewish oracles the sibyl often complains that she is exhausted by the mighty spirit of the Lord, but that she is compelled by His command to continue her utterances. She is, however, fully conscious of her divine mission, which is to be "the light of the heathen," "preparing the path for man." She circulates the divine code of ethics, and explains the ancient history of the Jews to the Gentiles, whom she familiarizes with monotheism, retaining some of the concepts of Greek mythology merely to lend some degree of familiarity to her instruction. She lashes the wickedness of the heathen, describes the impending divine judgment and the coming Messianic period, and dwells on the sublime mission of the Jewish people, for whom is reserved a future of splendor and sanctity, despite the shame which has been its lot. Special stress is laid on the most attractive ethical laws of Judaism, since these alone could be used for a successful propaganda among the Gentiles.

Hebraic Tendencies in Hellenic Garb.

Yet the sibylline poems are far from being such cosmopolitan compositions as is the work of the PSEUDO-PHOCYLIDES. They are, on the contrary, essentially national and nomistic in so far as they are Jewish. Even the Messianic time is inconceivable without the Temple, sacrificial worship, and the Law. Despite this the pagan Greeks are nowhere urged to observe the Law; they are asked merely to lead moral lives and to recognize the one God. Although the sibyl addresses all peoples, the Syrians, Britons, Gauls, and the nations of the Isles, she especially exhorts the people of Hellas, knowing that it will be well with all the human race if this people with its grand culture will combine its own virtues with the pure religion of Judaism.

> "Of centuries fifteen have passed away
> Since o'er the Greeks those haughty tyrants ruled
> Who first taught evil unto mortal man,
> And made false gods for them that now are dead,
> Whereby ye learned to think but vanity" (iii. 551-555).

These lines deserve special attention, for they indicate the philosophical point of view of the author. According to the sibyl, whose attitude was subsequently shared by the Christian apologists, paganism originated when mankind revolted from God and undertook to build the Tower of Babel, abandoning the worship of the true God for idolatry and renouncing God and His law, which, "in a certain sense," had existed even before Moses. The princes of Greece had been the chief agents in the introduction and dissemination of idolatry, and the conversion of the heathen meant, therefore, simply a return to the God of Israel and to His law, which had been wickedly abandoned in ages past (Friedländer, "Apologetik," p. 44). A Hungarian philologist has correctly summarized this view in the single phrase: "The Jewish sibyl states the case euhemeristically" (G. Némethy, "Philologiai Közlöny," xxi. 1-5; comp. *idem*, "Euhemeri Reliquiæ," Budapest, 1889). Judaism could, indeed, be successfully defended by recourse to the euhemeristic theory of the Greek pantheon.

Christian Sibyls.

Nascent Christianity could find no better aid for its apologetics than the sibylline poems, and it is due to this fact that the utterances of the Jewish sibyl have been preserved in considerable fragments, while the words of the pagan sibyl have been almost entirely lost, although it must be admitted that the fragments of the latter which have escaped destruction are more pithy, poetic, and valuable than the Jewish portion. Christianity has not only preserved these poems, but has added to them, so that the sibylline utterances in their present form are a mixture of Jewish and Christian elements, imposing upon criticism the task of separating them. The difficulty of the problem is increased by the fact that the text of the fragments is very imperfect, uncertain, and full of errors.

The evidence thus far accessible shows that a sibylline poem of considerable extent was first put in circulation by Alexandrian Jews in the second century B.C., and that compositions of this nature continued to be published until late in the imperial period. These productions always availed themselves of the latest events, the frequent convulsions in the Roman empire furnishing rich material for new visions, which deeply affected Judaism and renewed its hopes for the future. The Christian compositions of this type covered a much longer period of time, stray poems being written even in the Middle Ages. The Christian sibylline verses may easily be recognized when they contain prophecies referring to Jesus or when they are couched in decided antinomistic and occasionally anti-Jewish language. Some of them, however, bear none of these marks of a Christian origin, and have been so completely incorporated with the Jewish portion that the two elements can not readily be separated.

When the prologue to the Sibyllines was written, in the fifth or sixth century, by a Byzantine author, they had been cast into almost their final form, although they were then somewhat shorter. They were little read at Byzantium in the Middle Ages, since the Byzantines had their own sibylline oracles, both in verse and in prose, while the West produced a different kind of oracle, written in Latin, and modeled on the sayings of the sibyl of Erythræ.

History.

In the period of the Renaissance the ancient poetic oracles were again read eagerly, although they were not printed until a late date. The first edition was issued by Xystus Betuleius (Sixtus Birken) of Augsburg, in eight books (Basel, 1545), and created a sensation in the world of scholarship; Castalio of Basel published a Latin versed translation of the Sibyllines in 1546. Better manuscripts were used by Johannes Osopœus (Johannes Koch), whose edition appeared at Paris in 1596. The next edition was that in Gallandi's "Bibliotheca Veterum Patrum" (Venice, 1765, 1788), but it was not until the nineteenth century that editions of scholarly accuracy appeared. In 1817 a fourteenth book was edited, from a manuscript at Milan (Codex Ambrosianus), by Angelo Mai, who, eleven years later, published books xi.–xiv., from a Vatican manuscript. Better texts also became available for the parts previously published. The two editions published by the French scholar Charles Alexandre in 1841–56 and 1869 are masterly from a historical, critical, and exegetical point of view. Other noteworthy editions are those by Alois Rzach (Vienna, 1891) and Johann Geffken (Leipsic, 1902), both of whom have elucidated the Sibyllines in numerous other studies. Without going into textual details, a brief résumé may here be given of the results of the literary criticism of these poems, since the Christian and the Jewish elements must be distinguished from each other. Although definite results are impossible, there is a certain consensus in scholarly opinion, which may be epitomized as follows, on the authority of Schürer and Harnack:

Analysis.

The origin of books i. and ii. is doubtful. Dechent and Friedlieb have designated passages of considerable length in both as Jewish in origin, although, according to Schürer, most scholars regard them as Christian. Harnack more reasonably considers them as based on a Jewish original influenced by Christian revision. In harmony with this theory, i. 1–323, which constitutes the nucleus of the book, contains no Christian elements, while i. 324–400, immediately following, is not only distinctly Christian, but is even openly anti-Jewish. In book ii. the Jewish part of book i. is continued, but the sibyl, passing by former ages, deals directly with the last generation; only verses 34–55 are Christian. Verses 56–148 are a didactic poem taken from pseudo-Phocylides, and the passage beginning with verse 154 is, on the whole, a Jewish eschatology mingled with Stoic conceptions, though it may contain some Christian elements.

Book iii. is undoubtedly the most valuable of the entire collection. According to Bleek, it is, at least in its main portion (verses 97–807), the work of an Alexandrian Jew, who may have flourished in the Maccabean period (170–160 B.C.). Other critics assign it to the year 140 or 124 B.C., though, with the exception of Alexandre, who ascribes verses 295–488 to a Christian author, they agree in regarding it as an ancient Jewish poem. The poem, which is by no means uniform, may be divided into three parts: (1) verses 97–294; (2) verses 295–488; (3) verses 499–807.

The Third Sibylline.

(1) Verses 97–294 describe the building of the Tower of Babel and the dispersion of the peoples; this event is ascribed to the quarrel among the three kings Kronos, Titan, and Japetus, Biblical material and Greek mythology being indiscriminately mingled. The poet surveys the successive rules of the Egyptians, Persians, Medes, Ethiopians, Assyrians, Babylonians, Macedonians, Ptolemies, and Romans, the last-named being still a republic, for it is designated as "many-headed" (πολύκρανος). All these governments are succeeded by the peaceful rule of the people of God, who once before had been great and mighty under Solomon. After the seventh Hellenic king, Ptolemy VII. (Physcon) of Egypt, the people of God will again be in the ascendent, and will rule mankind. This passage is followed by an account of the history and the characteristics of Israel.

(2) Verses 295–488 comprise denunciations and warnings regarding Babylon, Egypt, Gog and Magog, Libya, Syria (under the Seleucids), Phrygia, Troy (with a noteworthy polemic against Homer), Lycia, Cyprus, and Italy. This portion was evidently written in the second century, although some details do not agree with actual history. In the description of the Syrian kings, Antiochus Epiphanes, his son Eupator, the latter's assassin, Demetrius I., and the succeeding rulers down to Trypho, are clearly recognizable.

(3) Verses 499–807 also contain denunciations of the Gentiles, which contrast sharply with the promises for Israel and the announcement of the last judgment; this section, too, includes an allusion to the seventh Ptolemy. The Christian elements which some critics have sought to find in this passage may

be interpreted differently. Verse 785, "Be glad, O virgin [κόρη], and rejoice," refers to Jerusalem, in which God shall dwell, according to Zech. ii. 10. The sibyl again refers to Jerusalem in verses 260 *et seq.* which may be compared with viii. 324, "Be glad, thou holy daughter of Zion." This purely Biblical phraseology has not always been correctly interpreted by the editors; thus Geffken emended the received text in iii. 355 and viii. 75 because he did not perceive that the phrases "daughter of Rome" and "native of Rome" refer to the city of Rome itself. In verse 776 the reading should be, as was recognized by Alexandre, *ναὸν Θεοῖο* ("temple of God"), in allusion to Isa. lvi. 7, instead of *υἱὸν Θεοῖο* ("son of God").

This internal evidence is supported by external evidence, for the sibyl's version of the story of the building of the Tower of Babel and the battle of the sons of Kronos with the Titans was quoted also by Alexander Polyhistor in the name of the sibyl, and Josephus likewise knew it ("Ant." i. 4, § 3). The majority of the quotations from the Sibylline Books found in patristic literature are taken from the third book.

The two fragments, containing eighty-four verses, found in Theophilus ("Ad Autolycum," ii. 36) have been separated from the Sibylline Books in their present form, although, according to Lactantius, they seem originally to have formed the prologue. They are evidently a genuine product of Jewish sibylline literature, and glorify in inspired speech the monotheism of Judaism, while denouncing the folly and the abominations of pagan idolatry. Verses 36-92, now placed at the beginning of book iii., may be dated with some degree of certainty. The words "When Rome shall rule also over Egypt" (verse 46) indicate Rome's assumption of rulership over Egypt as very recent; there are also allusions to the triumvirs and to Cleopatra. Under this queen the Jewish author hoped for the advent of the Messianic kingdom; he therefore must have composed his work between 40 and 31 B.C. The reference to the "Sebastenians" in verse 63 is frequently regarded as an allusion to the Samaritans, and the poem is accordingly assigned an earlier date, or the lines in question are explained as interpolations. The name may refer, however, to the Romans, who were so known in Palestine (see SEBASTUS).

The third book concludes with an epilogue (808-828), in which the sibyl explains her nature. The Greeks erroneously suppose her to be the Erythræan prophetess, but she is in reality a native of Babylon and a daughter of Noah. These verses may be interpolations, although there is a possibility that they are genuine.

Book iv. is far more unified. In the name of the true God the sibyl predicts the events that will take place from the first to the tenth generation of man. This division of history into ten periods (comp. ii. 15) is very important, for it served as a model for the medieval chroniclers, such as pseudo-Methodius; Hebrew analogues also exist. All nations, great and small, pass in review before the poet, who follows the example of the Bible in finding omens in the names of cities and countries according to their etymology. Thus, Samos shall be covered by sand (ἄμμος), he declares, and Delos shall disappear (ἄδηλος; comp. Micah i. 10 and Zeph. ii. 4). He even alludes to the destruction of Jerusalem by the Romans (115-127), declaring that the eruption of Vesuvius in 79 B.C. was a punishment for it (130-136); and he shares the view of his contemporaries in regard to Nero's flight across the Euphrates and his speedy return (117-124 and 137-139). These data show that the author lived about 80 C.E. The entire poem is Jewish in spirit, and there is no reason to regard it as a Christian product. The attacks upon animal sacrifices were directed only against the Gentiles, and have nothing to do with Essenism. The baptism which the pagans are invited to accept (165) is the Jewish baptism of proselytes; the passage is modeled, moreover, on Isa. i. 16.

The Fifth Sibylline.

Book v., one of the best of the entire collection, consists of several Jewish passages and brief Christian additions. The number of peoples and countries enumerated by the author exceeds those in the other poems. The lamentations and hopes he utters clearly show that the historic background in each is a different one, as Zahn correctly states. The poet wrote shortly after the destruction of Jerusalem by Titus, and, influenced by this catastrophe, he predicted the downfall also of the temple of Onias in Egypt. Then follow the Messianic prediction and the description of the last judgment. This portion seems to include verses 111-178, 200-205, 228-246, 361-433, and 484-531. About 120 C.E., in the beginning of the reign of Hadrian, who is designated, like the other rulers, merely by the initials of his name, another Judæo-Egyptian poet prophesied, eulogizing the emperor as the best and most excellent of men, and apparently expecting that he would rebuild the Temple. The poet mourns over the Egyptians and other nations, all of whom deserve punishment because they worship animals and are idolaters (52-110). In another passage (179-213) he laments again over Egypt, and over the African districts of Barka, Syene, Cyrene, and Ethiopia, following this section with the judgment of Corinth (214-227). He anticipates, with great felicity, the liberation of the Jews from the Hellenic dominion and the conversion of the Gentiles (247-360; a Christian passage, 256-259, in praise of Jesus, is interpolated). Verses 434-483 render the judgment of Babylon.

About 150 C.E. a Christian redactor seems to have combined all these passages, adding Christian matter. Harnack ascribes the remarkable eulogy of Hadrian, whom no Jew could extol, to a Christian; but in general the Christian elements here can not be definitely distinguished from the Jewish.

Books vi., vii., and viii. are usually regarded as Christian in origin. Book vi. is a short hymn to Jesus, with denunciations of Israel, which is called a country like Sodom (21). In book vii. also Jesus is glorified; the author of this poem lived in the Christian era, after the establishment of the Parthian empire. Book viii. is still more openly Christian, and includes the famous poem in acrostics to "Jesus Christ, the Redeemer, the crucified Son."

The recently discovered books xi.-xiv. (ix. and x. are missing) are, on the whole, Christian in charac-

Recently Discovered Sibyllines.

ter, as is clear from historical analysis rather than from positive statements. Book xi., however, is probably Jewish in origin. Although the Church Fathers do not quote these books, this does not imply that they were composed at a late date; they remain uncited because the religious thought they express is unimportant, and their Messianic-apocalyptic elements are entirely conventional.

Book xi. narrates the history of the world from the Flood, and alludes to the founding of Rome, the siege of Troy (the sibyl here asserts that Homer borrowed from her), Alexander the Great, and the Diadochi, tracing the course of history up to the time of Cleopatra and Julius Cæsar. The religious element, especially of the Messianic type, is unimportant. The author seems to have been an Alexandrian. The book contains no Christian elements whatever.

Book xii. continues the Roman history, giving the numerical values of the initials in the names of the emperors down to Alexander Severus; that the immediate successors of Septimius Severus are omitted may possibly be due to a lacuna in the text. A religious element appears in the statement that the divine Logos appeared on earth during the reign of the first Roman emperor (30 and 232)—evidently a Christian statement. Vespasian, however, is termed, in the Jewish sense, the "destroyer of the pious," while Hadrian, on the contrary, is eulogized.

Book xiii., which has no religious elements, continues the history of the Roman emperors from Maximinus to Aurelian, who will subdue the monsters, the thirty tyrants. There are references also to Philippus, to the Persian wars, and to Alexandria as the granary of Rome.

Book xiv. differs from the preceding books in that the allusions to the emperors are too obscure to admit of identification, while alleged historical events do not correspond with the authenticated data. The poet apparently followed his own imagination. He seems to have been chiefly interested in Asia Minor, from which it may be inferred that he was a Jew or a Christian from that region. The book contains no religious elements whatever, although the author gives his work a Messianic conclusion, proclaiming that during the last generation of the Latins, Rome will enjoy a period of felicity under the government of God Himself, while in the countries of the East, including Egypt, a holy people will live in peace, after all wrongs have been righted.

No allusion to the sibyl, and no traces of her influence, are found in medieval Jewish literature, beyond the cursory mention by Abraham Zacuto, in the sixteenth century, of the legendary Roman sibyl who went with her books to Tarquin ("Yuhasin," ed. London, p. 239a); this legend is referred to by Jehiel Heilprin ("Seder ha-Dorot," i. 110b, Warsaw, 1891) and David Gans ("Ẓemaḥ Dawid," ii. 8b, Offenbach, 1768). The Byzantine historians Georgius Monachus, Cedrenus, and Glycas turned the Biblical Queen of Sheba into a sibyl (Krauss, in "Byzantinische Zeit." xi. 120), and Zacuto alludes to her (*l.c.* p. 237a) under the name of Nicaulis or Nicaula. In medieval Christian art this sibyl Nicaula is a conventional figure, and is regarded as hostile to the Synagogue. Christian theology employed the sibylline oracles in polemics against Judaism, the well-known formula for this being "Teste David cum Sibylla." New texts were continually produced by medieval prophecy, such as the sayings of the Tiburtine sibyl (edited by E. Sacker, Halle-on-the-Saale, 1898), who predicted death and destruction for many peoples, and gave forewarning of the persecution of the Jews under Heraclius, in the manner of the ancient sibyls (Krauss, *l.c.* ix. 202–203). The sibylline literature, then, merges into apocalyptic literature. Similar in nature are the pseudo-Methodius, the Judæo-Persian and Coptic apocalypses of Daniel, and the Ethiopian sibyl (R. Basset, "Les Apocryphes Ethiopiens," x. 19, Paris, 1900).

G. S. Kr.

SICARII (Greek, *σικάριοι* = "assassins," "daggermen"): Term applied, in the decades immediately preceding the destruction of Jerusalem, to the Jewish Zealots who attempted to expel the Romans and their partizans from the country, even resorting to murder to attain their object. Under their cloaks they concealed "sicæ," or small daggers, whence they received their name; and at popular assemblies, especially during the pilgrimage to the Temple mount, they stabbed their enemies, or, in other words, those who were friendly to the Romans, lamenting ostentatiously after the deed, and thus escaping detection (Josephus, "Ant." xx. 8, § 10;

idem, "B. J." ii. 13, § 3). Although Felix had cleared the country of the so-called "robbers," their place was taken by the Sicarii, who were not so easily to be suppressed. The high priest Jonathan was assassinated by them at the instigation of Felix, who did not hesitate to make use of the Sicarii in this way. During the procuratorship of Cumanus they killed an imperial servant on the open highway near Beth-horon, an act which resulted in lamentable consequences.

Festus himself had to contend with the Sicarii; but Albinus, in return for money and other presents, left them in peace, and even convicted Sicarii were released on promising to spare their opponents. On one occasion they kidnaped the secretary of Eleazar, governor of the Temple, but liberated him in exchange for ten of their comrades ("Ant." xx. 9, § 3). At the beginning of the war against the Romans, the Sicarii, with the help of other Zealots, gained secret access to Jerusalem, where they committed atrocious acts. Their leaders, including Menahem b. Jair, Eleazar b. Jair, and Bar Giora, were among the important figures of this war; and they held possession of the fortress of Masada until it was taken by the Romans.

In Latin "sicarius" is a common term for an assassin, as in the title of the law promulgated by Sulla, the "Lex Cornelia de Sicariis"; and the word סיקריקין has the same general meaning in the Mishnah (Bik. i. 2, ii. 3; Giṭ. v. 6; Maksh. i. 6). The Mishnah mentions a "sikarikon" law enacting that title to a piece of property held by a "robber" may be taken in case it has been first purchased from the owner and then from the "robber" (such being the meaning of the word in this passage), but not vice versa.

Bibliography: Grätz, *Gesch.* 4th ed., iii. 432; Schürer, *Gesch.* 3d ed., i. 574. On the "sikarikon" law: Grätz, in *Jahresbericht*, Breslau, 1892; Rosenthal, in *Monatsschrift*, 1893; Krauss, in *Byzantinische Zeitschrift*, ii. 511; idem, *Lehnwörter*, ii. 392.

G. S. Kr.

SICHEL, JULES: French oculist; born at Frankfort-on-the-Main 1802; died at Paris Nov. 14, 1868. He studied medicine at Berlin (M.D. 1825), and took a postgraduate course at Paris. In 1836 he established in the latter city an ophthalmic clinic for free consultations, and he became one of the most popular of Parisian oculists.

Of Sichel's works the following (all published in Paris) may be mentioned: "Propositions Générales sur l'Ophthalmologie" (1833); "Mémoires et Observations sur la Choroïdite" (1836); "Traité de l'Ophthalmie, la Cataracte, et l'Amaurose" (1837); "Iconographie Ophthalmologique" (1852-56); and "Nouveau Recueil de Pierres Sigillaires d'Oculistes Romains" (1867).

Bibliography: Vapereau, *Dictionnaire des Contemporains*.

S. J. Ka.

SICHEL, NATHANEEL: German painter; born at Mayence Jan. 8, 1843. He studied in Munich at the Royal Academy of Art (1859-62) under Julius Schrader. In 1863 his picture entitled "Joseph Explains the Dreams of Pharaoh" won him a scholarship which enabled him to visit Italy and to remain in Rome for two years. Before proceeding thither he passed a year in Paris, where he painted a portrait of the Countess of Ernaudes, which was exhibited in the Salon of 1865. During his sojourn in Rome (1866-68) he painted the historical pictures "Leave-Taking of Maria Stuart," from Melville's "Francesca di Rimini and Paulo Malatesta"; and "Don Carlos Taken Prisoner by Philip II." In 1869 Sichel returned to Germany, where he devoted himself to portrait-painting. Of his more important works may be mentioned: "The Beggar of the Pont des Arts"; "The Theban Woman"; "The Girl from Afar"; "Oriental Dancing Girl"; "La Favorita"; "Fatme"; and "Ghismonda."

Bibliography: *Das Geistige Berlin*, 1897, pp. 500-501.

S.

SICILY: Large island in the Mediterranean Sea, southwest of Italy, to which it belongs and from which it is separated by the Strait of Messina. The earliest trace of Jews in Sicily dates from the end of the sixth century, when, at the request of the Sicilian Jews, the Roman community complained to the pope of the cruelty of the Christians toward the Jews of the island. Thereupon Gregory the Great ordered the restitution of stolen property or its full monetary value, and strictly prohibited baptism by force. Nothing further is heard of Sicilian Jews until the eleventh century, with the exception of a story of Jewish fanatics corrupting the morals of women in Catania. Jews of Naro are mentioned in a patent of King Roger I., dating from the year 1094. Frederick II. endeavored to save the Jews in Sicily from persecution during the Crusades by the decrees of 1210 and 1224, in which he placed the Jews under ecclesiastical jurisdiction and ordered that no difference be made between their treatment and that of others.

Council of Piazza.

The council held at Piazza on Oct. 20, 1296, was of great importance for the Jews. Among other enactments it decreed that a Christian might not be treated by a Jewish physician, and that any breach of this order would entail severe punishment for both. On May 22, 1327, ecclesiastical government was abolished in certain cities, including Mazzara. The old custom of compelling Jews to clean both public and private stables on certain days of the year was abolished by Louis in a patent of protection dated Nov. 23, 1347. The external decoration of synagogues was prohibited by Frederick III. on Oct. 12, 1366; in consequence of this law old synagogues that had already been decorated were pulled down. The wearing of a special badge was ordered by the same monarch on Dec. 25, 1369. The badge consisted of a piece of red material, not smaller than the largest royal seal; men were required to wear it under the chin, and women on the breast. The communities of Marsala and Syracuse, however, obtained certain concessions. The former, on April 18, 1375, received permission to build a new synagogue; the latter was freed from ecclesiastical jurisdiction and received the right to appeal to the royal tribunal in difficult legal cases.

Under Martin V., of Aragon, who showed favor to the Jews in several instances, conditions underwent little change. The monk Julian, as royal com-

Persecutions of 1392.

missioner, was ordered in 1392 to confine the Jews to ghettos. In the summer of the same year severe persecutions broke out in San Giuliano, Catania, and Syracuse; many Jews fell victims, and every Sunday especially the Jews in those cities were in deadly fear of fresh cruelties. Martin finally was induced to issue a decree, July 11, 1392, ordering the punishment of those who had taken part in the disturbances. In the following year strict decrees were directed against private ceremonies. Thus, on May 12, 1393, the Jews were forbidden to use any decorations in connection with funerals; except in unusual cases, when silk was permitted, the coffin might be covered with a woolen pall only. In Marsala the Jews were compelled to take part in the festival services at Christmas and on St. Stephen's Day, and were then followed home by the mob and stoned on the way. At the beginning of the fifteenth century oppression had increased to such an extent that in 1402 the Jews of Marsala presented an appeal to the king, in which they asked for: (1) exemption from compulsory menial services; (2) the reduction of their taxes to one-eleventh of the total taxation, since the Jews were only one-eleventh of the population; (3) the hearing of their civil suits by the royal chief judge, and of their religious cases by the inquisitor; (4) the delivery of flags only to the superintendent of the royal castle, not to others; (5) the reopening of the women's bath, which had been closed under Andrea Chiaramonte. This appeal was granted on Dec. 6 following.

In comparison with other Jewish communities of Europe, the Sicilians were happily situated. They even owned a considerable amount of property, since thirteen of their communities were able, in 1413, to lend the infante Don Juan 437 ounces of gold. This was repaid on Dec. 24, 1415; in the same year, however, the Jewish community of Vizzini was expelled by Queen Blanca, and it was never permitted to return.

Under Alfonso V.

Under Alfonso V. (1416-56) the Jews remained comparatively unmolested. The first event recorded as seriously affecting them in this reign was a decree of Feb. 5, 1428, ordering the Jewish communities throughout Sicily to attend conversionist sermons. A large deputation, however, bearing a large sum of money, appeared before the king at Naples, with the result that, on Jan. 1, 1430, the decree was repealed. The rise to influence of Capistrano, the Sicilian monk, occurred in the reign of Alfonso V. The result of his inflammatory sermons in Sicily was that a certain Giacomo Sciarci was appointed to investigate the charges of usury and other wickednesses made against the Jews. In spite of the negative result of this investigation the Jews were made to pay a fine of 2,000 ounces of gold. One of the last decrees of Alfonso was that prohibiting emigration to the Holy Land. Some Jews from Africa who were bold enough to attempt it were made to pay a fine of 1,000 ounces of gold.

The end of the fifteenth century was distinguished in Sicily, as elsewhere, by persecutions of the Jews resulting from accusations of desecrating the host and of murdering boys. Especially severe were those in Modica (1474), Noto and Caltagirone (1475), and Syracuse (1487). The tide of misfortune continued to rise. During the prayer-week before the Christmas of 1491 a procession was passing through the streets of Castiglione; an arm of the crucifix was broken by a stone, thrown, it was said, by the rabbi Biton from the open window of his dwelling; the rabbi was at once killed by the two brothers Crise, who then betook themselves to Spain for protection. They were highly praised by Ferdinand the Catholic, and, when asked what reward they desired for their deed, they requested the expulsion of the Jews from the whole of Sicily.

Decree of Expulsion.

When the decree of banishment, dated March 31, 1492, reached Sicily, there were over 100,000 Jews living in the island, in the fifty-two different places named in the following table:

Town.	Jews First Mentioned.	Town.	Jews First Mentioned.
Aderno	14th cent.	Milazzo	14th cent.
Agosta	1428	Militello	1486

Ferdinand's decree was proclaimed in each town with a blare of trumpets; the Jews were ordered to pay all their debts, both to the towns and to private citizens, before their departure. Three months' grace, to which forty days were added, was given them to prepare for their exile; after that time any Jew found in the island was to be liable to the penalty of death. On June 9 they were forbidden to depart secretly, sell their possessions, or conceal any property; on June 18 the carrying of weapons was prohibited; their valuables were appraised by royal officials on behalf of the state, packed in boxes, and given into the care of wealthy Christians. On Aug. 13 came the order to be ready to depart; the following articles might be taken: one dress, a mattress, a blanket of wool or serge, a pair of used sheets, a few provisions, besides three taros as traveling money. After numerous appeals, the date of departure was postponed to Dec. 18, and later, after a payment of 5,000 gulden, to Jan. 12, 1493. The departure actually occurred on Dec. 31, 1492.

The exiles sought refuge in Apulia, Calabria, and Naples. When Charles VIII. conquered Naples in

1494, a serious disease, known as "French fly," broke out in that region. The responsibility for this being fixed upon the Jews, they were accordingly driven out of Naples. They then sought refuge in Turkish territory, and settled chiefly in Constantinople, Damascus, Salonica, and Cairo. In a proclamation of Feb. 3, 1740, containing thirty-seven paragraphs, the Jews were formally invited to return; a few came, but, feeling their lives insecure, they soon went back to Turkey.

Taxation.

In spite of many adverse royal decrees, and of frequent popular persecutions, in no other state did the Jews of the Middle Ages enjoy such freedom and independence as in Sicily. It was the policy of the rulers to allow the heterogeneous nationalities thrown together upon the island an autonomous government, in which, however, the Jews did not share. Besides general state taxes, the Jews were required to pay an annual capitation-tax of a quarter of an ounce of gold, called "agostale" (those who failed in this payment were placed under ban by the community itself, according to a decree of Sept. 4, 1004); and one Roman paolo or one forty-eighth of an ounce of gold per head every year (after 1224) to the inquisitor for his traveling expenses. They were required furthermore to supply flags for the royal castles and standards for the galleys (only Syracuse was exempt from the levy) and to clean the royal castles and palaces. The capitation-tax of the Sicilian Jews in the fifteenth century amounted on an average to 123⅔ ounces of gold per year. The Jews of Syracuse were obliged in addition to contribute an ounce of gold daily toward the expenses of the royal table. The community of Mazzara paid the bishop from 2½ to 5 pounds of pepper annually.

Map of Sicily Showing Places Where Jews Resided

Among the civil disabilities of the Jews it should be mentioned that they might not testify against a Christian before a court, though neither might a Christian testify against a Jew; and Jews might not have Christian slaves, though they were permitted to own real estate.

Communal Organization.

The internal administration of the communities in the larger cities was conducted by a number of officials. There were twelve presidents ("proti"), three of whom administered affairs for three months, and were then succeeded by the next three. The six "auditori di conti" had charge of the treasury of the community. A board of twelve members, the "dodici," or "dodici nomini probi," reviewed the decisions of the "proti." The "conservatori degli atti" was composed of several scholars, and had charge of the archives. The nine "sogetti" apportioned the taxes among the individual members of the community. Besides these there were a "percettori" (tax-collector), the "sindachi" (public syndics and charity administrators), and a "balio," or "guvernadore," an executive officer. The religious administration was vested in the following officers: the "dienchelele" (דיין כולל), chief judge, or chief district rabbi (this office was in existence from 1405 to 1425, the appointment being in the hands of the king); the "manigliore," or "sacristano," who was the guardian of the synagogue and was appointed by the "proti"; the "idubi," public communal scribes, who drew up documents of marriage and divorce; the "limosinieri," special officers for distributing alms; the "giudici spirituali," consisting of the "proti" and the rabbi, who watched over religious observances in general. The prayer-leaders and ritual slaughterers were called "presbyters"; the synagogue itself, "meskita" (Arabic).

The personal names adopted by the Jews were often local in origin, or were Latinized Jewish names, as Angelo, Donato, Benedictus (= Baruch). Gauden (= Simḥah). The intimacy between the Jews and some of their Christian fellow citizens is shown, for instance, by the fact that in Castrogiovanni a Christian acted as godfather at the circumcision of a Jewish boy.

Occupations.

The Jews were the chief representatives of commerce and industry. They were very active in financial transactions, and excelled also in agriculture; the grove of date-palms near Favara was planted by them, while their farming near Gerbi was very successful. That they applied themselves also to all kinds of manual labor may be gathered from the protest raised by the Sicilians at the departure of the Jews. At the time of their expulsion many Sicilians stood on the roofs and galleries of their houses to bid them farewell.

SICK, VISITING THE (Hebrew, "biḳḳur ḥolim"): To visit the sick in order to show them sympathy, cheer them, and aid and relieve them in their suffering is declared by the Rabbis to be a duty incumbent upon every Jew, even if the sick one is a Gentile (Giṭ. 61a). While there exists no special command in the written law concerning this act of benevolence, the Rabbis found allusions to it in several passages of the Pentateuch. Thus, "Ye shall walk after the Lord your God" (Deut. xiii. 4) means, say the Rabbis, "Imitate God: as He visits the sick—*e.g.*, in the case of Abraham (Gen. xviii. 1, so interpreted by the Rabbis)—so do thou also visit the sick" (Soṭah 14a; Gen. R. viii., end); when it is said, "Show them the way wherein they must walk" (Ex. xviii. 20), the duty of visiting the sick is referred to (B. M. 30b; comp. Targ. Yer. *ad loc.*); and likewise when it is said (Gen. xviii. 29), "He [Abraham] will command his children and his household after him, and they shall keep the way of the Lord, to do righteousness" ([Hebr.]; Gen. R. xlix. 7). The ḥaberim, or Ḥasidic associations, made the performance of this duty a special obligation; and therefore the visiting of the sick is enumerated in Matt. xxv. 36 among the various forms of charity. In the Shulḥan 'Aruk, Yoreh De'ah, a whole chapter is devoted to the command concerning such visitations; and in many Jewish communities there existed, and still exist, Biḳḳur Ḥolim societies, whose particular object is to visit and care for the sick. See CHARITY.

K.

SID, SIDI (Arabic, "lord," "noble"): Common family name among Eastern Jews, borne by several rabbinical authors.

Abraham Moses Sid: Servian rabbinical author; born at Nish 1842; died there 1876. He wrote many works, of which the only ones printed are the following: "Tasheb Enosh" (Salonica, 1869), a work on ethics in thirty chapters; "Ḥippazon Pesaḥ" (*ib.* 1870), on the Passover laws; "Ḳeẓir Ḥiṭṭim" (*ib.* 1870), commentary on the Book of Ruth.

The library of the synagogue of Nish contains four manuscript works by Sid: "Yosheb Tehillot," "Ereẓ Dagan," "Ḳab ha-Ḳemaḥ," and "'Abodat Abraham."

Judah Sid: Bulgarian rabbinical author of the latter part of the eighteenth century; born at Dubnicza; died at Philippopolis, where he was president of the tribunal and chief rabbi during the Ottoman rule. He was the author of "Ot Emet" (Salonica, 1799), on the rules which are to be observed in the reading of the weekly lessons of the Law, and of "Ner Miẓwah" (*ib.* 1810), a commentary on the Pentateuch.

BIBLIOGRAPHY: Hazan, *Ha-Ma'alot li-Shelomoh*, pp. 7, 47, 73.

Samuel ben Sid (called also **Sidillo**): Rabbinical author, who emigrated from Spain to Cairo in 1492. His eloquence and presence of mind once saved the Jewish community from a general massacre with which it was threatened by the governor, AHMED-PASHA; and in commemoration of this event he instituted on Adar 28, 1524, the Cairo Purim (see PURIMS, SPECIAL). He was the author of the "Kelale Shemu'el," inserted in the collection "Tummat Yesharim" (Venice, 1622).

BIBLIOGRAPHY: Azulai, *Shem ha-Gedolim*, p. 124.

D. M. FR.

SIDDIM, VALE OF: The etymology of "Siddim" is uncertain (see G. A. Smith, "Historical Geog. of the Holy Land," p. 503), though Targ. Onḳ. renders it "vale of fields." It is mentioned in Gen. xiv. 3, 8, 10, verse 3 identifying it with the Dead Sea —a geological impossibility, inasmuch as the Dead Sea was in existence long before Abraham's time ("Z. D. P. V." 1896, pp. 1-59; 1898, pp. 65-83); hence this verse is generally rejected as a late gloss. Hommel ("Die Altisraelitische Ueberlieferung," p. 164) describes the place as a region rich in asphalt, and which, as a result of some natural convulsion, was flooded by the waters of the Dead Sea. It is famed as the meeting-place of the confederation against Chedorlaomer.

SIDDUR. See PRAYER-BOOKS.

SIDON. See ẒIDON.

SIDON, SIMON: Hungarian rabbi and author; born at Nadas Jan. 23, 1815; died at Tyrnau Dec. 18, 1891. His father came from Kanitz in Moravia, wherefore he signed himself "Simeon קוניץ," in which the latter name was misread by Steinschneider ("Cat. Bodl." col. 2612) as "Konitz," and by Löw ("Lebensalter," p. 92) as "Kunitz." He studied at the yeshibah of Moses Sofer, and on settling in his native city opened a yeshibah there. In 1845 he was elected rabbi of Cziffer, Hungary, and in 1856 of Tyrnau, which latter position he held until his death. Strictly conservative, he was tolerant of modern ideas, and in 1860 he sent his son to the seminary of Breslau, although he encountered considerable opposition for doing so.

Sidon wrote "Ot Berit" (Presburg, 1850), on the laws governing circumcision, proselytes, and the redemption of the first-born; and "Shebeṭ Shim'on" (Vienna, 1884-88), a work in three parts, the first part containing notes on Yoreh De'ah and Eben ha-'Ezer; the second, sermons delivered on special occasions; and the third, novellæ on various treatises of the Talmud. He also edited MANOAH BEN JACOB's ritual work "Sefer ha-Manoaḥ," to which he wrote a commentary entitled "Bet Menuḥah." After his death appeared his commentary on the Pesaḥ Haggadah (Munkacs, 1901), edited by M. Stein under the title "Shebeṭ Shim'on."

One of Sidon's sons, **Adolf Sidon** (born at Nadas Jan. 5, 1843), received his early instruction in his father's yeshibah, and in that of Judah Aszód at Szerdahely. In 1860 he went to Breslau, where he was graduated eight years later as rabbi and Ph.D. He was a member of the Jewish Congress of 1868-69 (see JEW. ENCYC. vi. 502b, *s.v.* HUNGARY); in 1870 he was elected rabbi of Simand, county of Arad; and in 1873 he was called to the rabbinate of Versecz, which position he still (1905) holds. He is also a member of the board of examiners of the rabbinical seminary at Budapest, and a frequent contributor to Jewish periodicals.

Another son, **Ignatz Sidon**, is a lawyer in Budapest.

D.

SIDRA: Term, the original meaning of which is "order" or "arrangement," frequently used in both Talmuds to denote a section of the Bible read either in the synagogue or in the school. In the statement "Rab read a sidra before Rabbi" (Yoma 87a), Rashi explains "sidra" as meaning a section of the Prophets or the Hagiographa. That the term was applied to the part of the Bible read in the synagogue in the prayer-service is indicated in Yer. Ta'an. i. 64c. But there no special division of the Bible is indicated, while in Shab. 116b it is said that in Nehardea the people used to read a sidra of the Hagiographa in the Minḥah service of the Sabbath. Later the term entered into the usage of the Ashkenazim to denote the weekly lesson of the Pentateuch, just as "parashah" is used by the Sephardim. It may be added that in both Talmuds "sidra" often carries the meaning of "school," particularly a school in which sections of the Bible are read and interpreted (Yer. Ber. iii. 6b; Yer. Beẓah i. 60c *et passim*).

A. M. SEL.

The following is a list of the sidrot (according to the Sephardim, parashiyyot), arranged according to the annual and the triennial cycle. In the former, which is nowadays universally followed, the sidrot have special names, and are here numbered with Roman numerals; each of them includes a group of the smaller sidrot of the triennial cycle, which are numbered in the table with Arabic figures. The group of the triennial cycle and the corresponding sidra of the one-year cycle are not always exactly conterminous, however; in such instances attention is called to the difference by means of an asterisk. The list of the triennial sidrot is given from a Yemen manuscript, as indicated in Ginsburg's Masoretic Bible. According to the Masorah, these should number 154, or, according to the Masseket Soferim, 175; as a matter of fact they amount to 167. Rapoport ("Halikot Ḳedem," p. 11) suggests that the 175 readings covered three and one-half years, so that the Law was read through twice in a Sabbath of years.

J. I. G. D.

SIEBENBERGER, ISAAC BEN DAVID: Russian Hebraist; died at Warsaw April 2, 1879. He occupied himself especially with apocryphal literature, his translations into Hebrew and Judæo-German including the following: "Ḥayye Ṭobiyah" (Warsaw, 1839), a translation of the Book of Tobit; "Megillat Yehudit" (*ib.* 1840), the Book of Judith and other narratives; "Sefer Baruk" (*ib.* 1841), the Book of Baruch and the prayers of Manasseh and of Daniel's three companions; and "Sifre Makkabi" (*ib.* 1843), the Books of the Maccabees. To all these translations he added Hebrew commentaries and introductions.

Siebenberger further published "Ma'gal Yashar" (*ib.* 1843), an elementary course in Hebrew, with Hebrew and Judæo-German texts, and containing an outline of Hebrew grammar, as well as narratives and fables; and "Oẓar ha-Shorashim ha-Kelali" (*ib.* 1846-62), a Hebrew-German dictionary with a vocabulary containing all the words of the Bible and the Mishnah.

SIEGEL, HENRY: American merchant; born at Eubigheim, Germany, March 17, 1852. At the age of fifteen he emigrated to the United States and entered on a commercial career, being employed as a clerk by various firms in Washington, D. C., Parkersburg, W. Va., and Lawrenceburg, Pa. In 1876 he founded the firm of Siegel, Hartsfield & Co., and ten years later the great department store of the Siegel Cooper Company, both in Chicago. A branch of the latter company was established in New York in 1896. In 1902 Siegel bought the Simpson Crawford Company in New York, and the Schlesinger and Mayer Company in Chicago; in the same year he took up his residence in New York city. Siegel is also president of the 14th Street Store in New York city.

SIEGFRIED, KARL: German Protestant theologian; born at Magdeburg Jan. 22, 1830; died at Jena Jan. 9, 1903. In 1875 he became professor of theology at the University of Jena, and in 1892 received the title of "Geheimer-Kirchenrat."

Of Siegfried's works the following are of special interest to the Jewish world: "Spinoza als Kritiker und Ausleger des Alten Testaments" (Berlin, 1867); "Philo von Alexandria" (Jena, 1875), one of the standard works on the subject, dealing also with the influence of the Haggadah on Philo; "Lehrbuch der Neuhebräischen Sprache und Litteratur" (Carlsruhe, 1884), in collaboration with Strack, Siegfried contributing the grammatical part; "Die Historische und Theologische Betrachtung des Alten Testaments" (Frankfort-on-the-Main, 1890); "Hebräisches Wörterbuch zum Alten Testament" (Leipsic, 1893), in collaboration with Stade; "The Book of Job" (*ib.* 1893), in Haupt's Polychrome Bible. To Nowack's "Handkommentar zum Alten Testament" Siegfried contributed the commentaries on Ecclesiastes, the Song of Solomon, Ezra, Nehemiah, and Esther.

SIESBY, GOTTLIEB: Danish poet and editor; born in Copenhagen May 4, 1803; died there Nov. 28, 1884; brother of Oskar Siesby. His first publication was a collection of poems entitled "Lyriske Forsóg," which appeared in Copenhagen in 1826.

Later he published "Poetisk-Politisk Nytaarsgave" and "Anekdot-Almanak," two humorous poetical works, and in 1834 an opera entitled "Robinson," which was produced at the Royal Theater.

In 1847 Siesby became coeditor of Edward Meyer's periodical "Flyveposten," which he later purchased. He was not successful in this venture; and in 1870 the "Flyveposten" ceased to appear.

S. F. C.

SIESBY, OSKAR: Danish philologist; born in Ebeltoft, Jutland, July 19, 1833; brother of Gottlieb Siesby. He graduated from the University of Copenhagen (B.A. 1850), and then took up the study of philology, passing in 1856 the historico-philological examination for teachers. In 1853 he was appointed teacher of Latin and Greek at the Von Westenske Institut in Copenhagen, where he remained till 1893.

In 1871 Siesby was appointed lecturer in classical philology at his alma mater, which office he held until 1876, when he refused reappointment. In 1882 he was appointed privat-docent in philology at the same university.

Siesby's literary activity has been neither varied nor extensive. He has written some grammatical and semasiological treatises which have appeared in "Filologisk Tidsskrift," in "Dania," and in "Opuscula Philologica ad Madvigium Missa."

S. F. C.

SIFRA: Halakic midrash to Leviticus. It is frequently quoted in the Talmud, and the study of it followed that of the Mishnah, as appears from Tanḥuma, quoted in "Or Zarua‘," i. 7b. Like Leviticus itself, the midrash is occasionally called "Torat Kohanim" (Ḳid. 33a; Sanh. 103b; Cant. R. vi. 8), and in two passages also "Sifra debe Rab" (Ber. 11b, 18b). According to Leḳaḥ Ṭob (section צו), this latter title was applied originally to the third book of the Pentateuch because Leviticus was the first book studied in the elementary school, and it was subsequently extended to the midrash; but this explanation is contradicted by analogous expressions such as "Sifre debe Rab" and, in a broader sense, "ketubot debe Rab" (Yer. Ket. 26c) and "teḳi‘ata debe Rab" (Yer. ‘Ab. Zarah 39c). It is true, Maimonides, in the introduction to his "Yad ha-Ḥazaḳah," and others, quoted by Friedmann, in the introduction to his edition of the Mekilta (p. xxvi., Vienna, 1870), have declared that the title "Sifra debe Rab" indicates Rab as the author of the Sifra; and this opinion Weiss, in the introduction to his Sifra edition (p. iv.), attempts to support. His proofs are not conclusive, however; neither, it must be confessed, are the opposing arguments of Friedmann (*l.c.* pp. xvi. *et seq.*), who tries to show that the expression "Sifra debe Rab" does not refer to the midrash under discussion. The question as to authorship has been correctly answered by Malbim, who proves in the introduction to his Sifra edition that R. Ḥiyya was the redactor of the Sifra. There are no less than thirty-nine passages in Yerushalmi and the midrashim in which expositions found also in the Sifra are quoted in the name of R. Ḥiyya (comp. the list in Hoffmann, "Zur Einleitung die Halachischen Midraschim," p. 22, to which Yer. Shab. 2d and Ket. 28d must be added, according to Levy in "Ein Wort," etc., p. 1, note 1); and the fact that no tannaim subsequent to Rabbi are mentioned in the Sifra supports the view that the book was composed during the time of that scholar. The omission from the Sifra of some interpretations of Leviticus which are elsewhere quoted in the name of R. Ḥiyya can not be taken as proving the contrary (comp. the list in Hoffmann, *l.c.* p. 24, and Yoma 4a; Ḥul. 141b; Levy, *l.c.*); nor does the fact that Ḥiyya himself is mentioned in the Sifra offer any difficulty. Indeed, as Hoffmann shows (*l.c.* p. 25), in the three passages in which it can with certainty be said that the reference is to R. Ḥiyya, namely, Wayiḳra, Nedabah, v. 5, vi. 3, and Meẓora‘, ii. 10, Ḥiyya himself, in referring to preceding interpretations, indicates that he is the editor. It is perhaps doubtful whether Hoffmann is correct in comparing the above-mentioned passages, or the final remark of R. Joshua in Ḳinnim, with Mid. ii. 5. But even if Hoffmann's view does not seem acceptable, it is not necessary to infer that Rab was the editor of the Sifra; for he may merely have added the passages in question, just as he seems to have made an addition to Sifra xii. 2, following Niddah 24b (comp. Weiss in Sifra *ad loc.*; also Epstein ["Mi-Ḳadmoniyyot ha-Yehudim," p. 53, note 1], who holds that in some passages Rab is meant by "aḥerim" and "we-yesh omerim"). Nor is Ḥiyya's authorship controverted by various contradictions presented by individual passages in the Sifra as compared with the Tosefta, which latter also is ascribed to him; *e.g.*, Sifra, Ḳedoshim, vi. 8, compared with Tosef., Mak. iv. 14 (see below).

Authorship.

If it be assumed that Ḥiyya is the author, the title "Sifra debe Rab" is to be explained as indicating that Sifra was among the midrashim which were accepted by Rab's school and which thereby came into general use. The name is differently explained by Hoffmann (*l.c.* pp. 12 *et seq.*), who, on the basis of Ḥul. 66a and in conformity with Rashi *ad loc.*, takes "be Rab" to mean "school" in general, and who accordingly differentiates between "Tanna debe Rab" and "Tanna debe R. Ishmael," *i.e.*, between the midrashim of R. Akiba's school, which, being decisive for the Halakah, were generally studied, and those of R. Ishmael's school, which were not intended for general use, though they were studied by some and were consulted occasionally, as was the case with other midrash collections which are quoted only rarely. Hoffmann himself admits, however, that the expression "de-bet Rab" in Yerushalmi certainly indicates Rab's school; so that it is in any case doubtful whether a different usage is to be assumed in the case of Babli.

As regards the sources of Sifra, it is said in the well-known passage Sanh. 86a (which must be compared with ‘Er. 96b and the parallel passages mentioned there), "Setam Sifra R. Yehudah." That the Sifra belongs to R. Akiba's school, as the above-mentioned passage in Sanhedrin indicates, is shown by the principles of exposition contained in the Sifra; *e.g.*, that where the same expression occurs in two different laws the phrase need not be "mufneh" (pleonastic) in one of them in order to permit of its being used for "gezerah shawah" (argument from analogy); the double use of the expression being explained in accordance with the principles of "ribbui u-mi'uṭ" and "kelal u-peraṭ." Certain peculiarities of phraseology are likewise noteworthy: יכול replaces שומע אני or אקרא, the phrases usually found in the Mekilta (once, in Sanh. 4b, a passage beginning אקרא אני is cited as coming from the Sifra, while as a matter of fact the Sifra [Tazria', ii. 2] has יכול); comp. further הא כיצד, וכי איזה מדה מרובה, ואם נפשך לומר, וכי מאין יצאת מכלל שנאמר,, וכי מאין באת; and for further details see Hoffmann, *l.c.* p. 31.

Traces of R. Judah's influence are less evident. The fact that the views expressed in some "seṭamot" may be proved to agree with R. Judah's views has little significance; *e.g.*, Sifra, Aḥare, 5, beginning, compared with Men. 27b; *ib.* Ḳedoshim, viii. 1, with Yeb. 46a (where R. Simeon furthermore seems to have read ר"י in the Sifre) and Ḳedoshim, vii. 3, with Tosef., Ḳid. i. 4. Such seṭamot may be opposed by others that contradict R. Judah's views; *e.g.*, Sifra, Neg. ii. 1, compared with R. Judah in Neg. ii. 1; Sifra, Neg. x. 8, compared with R. Judah, Neg. x. 10; comp. also Tos. Niddah 28b, *s.v.* הא מזכר. All this, however, is no reason for attacking the above-mentioned assumption that the Sifra in its principal parts is a midrash of R. Judah's. Hoffmann remarks (*l.c.* p. 26) not incorrectly that Sifra, Nedabah, iv. 12 agrees with the views of R. Eliezer (Men. 26a), whose decision R. Judah frequently accepts as handed down by his own father, R. Ila'i, a pupil of R. Eliezer (comp. Men. 18a and Yoma 39a *et passim*). Similarly, Sifra, Emor, xvii. 4 *et seq.* agrees with R. Eliezer's view (Suk. 43a). Aside from R. Judah's midrash, R. Ḥiyya may have used also R. Simeon's midrash (comp. Hoffmannh, *l.c.* p. 27), although some of the passages mentioned there (as, *e.g.*, the comparison of Sifra, Nedabah, vi. 9 with Sifre, Deut. 78; Sifra, Nega'im, i. 9-10 with Sifre, Deut. 218; Sifra, Beḥuḳḳotai, viii. 2 with Sifre, Deut. 124) seem to prove little. More doubtful is the relation to R. Ishmael's midrash; and in this connection must be considered the question whether the citation of certain explanations of Leviticus introduced by the formula תנא דבי ר"י and actually found in Sifra is not in part due to confusion (comp. Hoffmann, *l.c.*; Levy, *l.c.* p. 28, note 2, and the interesting remark from Azulai quoted there).

Sources.

But to R. Ishmael's school undoubtedly belong the later additions to "'Arayot," which, according to Ḥag. i. 1 and Yer. 1b, were not publicly taught in R. Akiba's school; *i.e.*, Aḥare, xiii. 3-15; Ḳedoshim, ix. 1-7, xi. 14 (ed. Weiss), and finally, of course, the so-called "Baraita de-Rabbi Yishma'el" (beginning). The so-called "Mekilta de-Millu'im" or "Aggadat Millu'im" to Lev. viii. 1-10 is similarly to be distinguished from the remainder of the Sifra. It exists in two recensions, of which the second, covering mishnayot 14-16 and 29-end, is cited by Rashi as "Baraita ha-Nosefet 'al Torat Kohanim she-Lanu." The tannaim quoted most frequently in Sifra are R. Akiba and his pupils, also R. Eliezer, R. Ishmael, R. Jose ha-Gelili, Rabbi, and less often R. Jose bar Judah, R. Eleazar bar R. Simeon, and R. Simeon b. Eleazar.

Additions by R. Ishmael's School.

The Sifra was divided, according to an old arrangement, into nine "dibburim" and eighty "parashiyyot" or smaller sections ("Halakot Gedolot," end; Num. R. xviii.; Ḳid. 33a can not be cited in proof, because R. Simeon b. Rabbi can hardly have taught Ḥiyya's Sifra). As it exists to-day it is divided into fourteen larger sections and again into smaller peraḳim, parashiyyot, and mishnayot. As the commentators point out, it varies frequently from the Sifra which the Talmudic authors knew (comp. Sifra, Emor, xiii. 1 and Men. 77b; Sifra, Ḳedoshim, ii. 5 and Ḥul. 137a; Sifra, Ḥobah, xiii. 6 and B. Ḳ. 104b); furthermore, entire passages known to the authors of Babli, as, *e.g.*, Yoma 41a, are missing in the present Sifra, and, on the other hand, there are probably passages in the present Sifra which were not known to Babli (comp. Hoffmann, *l.c.* pp. 33, 35). The Sifra frequently agrees with the Palestinian rather than with the Babylonian tradition; *e.g.*, Sifra, Nedabah, xii. 2 (comp. Men. 57b); *ib.* xiv. 6 (comp. Ḥul. 49b); Sifra, Emor, ix. 8 (comp. Ḥul. 101b); and Tosef., Sheḳ. i. 7 likewise agrees with the Sifra. In the few cases where the agreement is with Babli (Sifra, Emor, vii. 2 as compared with Men. 73b; similarly Tosef., Ker. ii. 16) it must not be assumed that the text of the Sifra was emended in agreement with Babli, but that it represents the original version; *e.g.*, in Sifra, Ḳedoshim, viii. 1 מאתכם is not a later emendation for מאתן according to Yeb. 47a, as Weiss (*ad loc.*) assumes, but represents rather the original reading. Babli, as compared with Yerushalmi, cites Sifra less accurately, sometimes abbreviating and sometimes amplifying it; *e.g.*, Ḳid. 57b, which is the amplification of Sifra, Nedabah, xvii. 8; Sheb. 26b, which is a shortened (and therefore unintelligible) version of Sifra, Ḥobah, ix. 2; and Zeb. 93b, which is to be compared with Sifra, Ẓaw, vi. 6. Babli occasionally makes use, in reference to the Sifra, of the rule "mi she-shanah zu lo shanah zu" (*i.e.*, the assigning of different parts of one halakah to different authorities), as in Sheb. 13a, Soṭah 16a, but unnecessarily, since it is possible to harmonize the apparently conflicting sentences and thereby show that they may be assigned to the same authority.

The Present Text.

Many errors have crept into the text through the practise of repeating one and the same midrash in similar passages; *e.g.*, Sifra to v. 3 and xxii. 5 (comp. Weiss, "Einleitung," etc., p. v., note 1, though the passage quoted by Weiss does not belong here; comp. Giṭ. 49b); לשנא אחרינא is found in Sifra, Nega'im, ii. 10.

The editions of the Sifra are as follows: Venice, 1545; with commentary by RABaD, Constantinople, 1552; with "Ḳorban Aharon," Venice, 1609; with the same commentary, Dessau, 1742; with commentary by Rapoport, Wilna, 1845; with commentary by Judah Jehiel, Lemberg, 1848; with commentary by Malbim, Bucharest, 1860; with commentary by RABaD and "Massoret ha-Talmud" by I. H. Weiss, Vienna, 1862; with commentary by Samson of Sens and notes by MaHRID, Warsaw, 1866. A Latin translation is given in Ugolini, "Thesaurus," xiv.

W. B. C. M. H.

SIFRE (known also as **Sifre debe Rab**): Midrash to Numbers and Deuteronomy (for the title "Sifre debe Rab" see R. Hananeel on Sheb. 37b, Alfasi on Pes. x., and Rashi on Hos. ii. 1; it occurs likewise in Mak. 9b, where, as Berliner says in his edition of Rashi, p. 372, בספרא is an error for בספרי; comp. "'Aruk," *s.v.* ארבע). In regard to the reference in Sanh. 86a concerning the Sifre of R. Simeon see Mekilta de-Rabbi Shim'on; the question has likewise been raised whether, in view of the well-known close relation that existed between the school of R. Simeon and that of R. Ishmael (Yoma 59a; Zeb. 53b, 119b; Ḥul. 69b), the words וכלהו אליבא דר"ע apply to R. Simeon's Sifre in the same degree as to the other works mentioned in this Talmudic passage (Levy, "Ueber Einige Fragmente aus der Mischnah des Abba Saul," p. 11, note 15). Such questions, however, are unimportant in reference to the Sifre now extant; for this work is certainly not identical with the Talmudic Sifre; and, on closer investigation, it is found to be not a uniform work, but one composed of parts which did not originally belong together. Frankel in his "Darke ha-Mishnah" (p. 319) drew attention to the difference between that portion of the Sifre which refers to Numbers and that which refers to Deuteronomy, though, curiously enough, he misunderstood this difference and consequently arrived at false conclusions. Hoffmann has correctly defined the relation between the two in his "Zur Einleitung in die Halachischen Midraschim," pp. 52 *et seq.* The Sifre to Numbers is evidently a midrash which originated in R. Simeon's school, and which has all the peculiarities and characteristics of such a work. It follows the same principles of exposition as does the Mekilta; the same group of tannaim appears; and the same technical terms are employed (see Mekilta; to the examples there given may be added מפני מה טעמו של דבר מגיד, Num. viii., for which the Sifra to Lev. xxi. 12 uses the expression להגיד מה גרם). There are also many material points of similarity with the Mekilta: thus Sifre 2 agrees literally with Mek., Mishpaṭim, 6; Sifre 65 with Mek., Bo, 5; Sifre 71 with *ib.* 15; Sifre 142 with *ib.* 5. The haggadic portions likewise contain many parallel passages (comp. the collation in Hoffmann, *l.c.* p. 54, though Sifre 64 and Mek., Beshallaḥ, 1 should not be included, since these two passages disagree on one point).

A Composite Work.

It is an especially noteworthy fact that the explanation in Sifre, Num. 7 of the law regarding a woman charged with adultery corresponds with a view expressed by R. Ishmael, and also with the prescribed halakah, according to which, one witness being sufficient to convict, the water-test is not necessary. The explanation given in the Sifre to Numbers thus contradicts the explanation in Soṭah 31a and in Sifre, Deut. 188. The view expressed in Babli is curious: it cites (Soṭah 2a and 31b) the explanation of the Sifre to Numbers, and adds thereto: ואמר רחמנא תרי לית בה אלא חד והיא לא נתפשה אסורה, whereas the deduction should read to the contrary, תרי לית בה אלא חד היתה שותה. Babli, which evidently does not know R. Ishmael's view, tries to interpret the baraita in the sense of the prescribed halakah. But the baraita must in fact be interpreted in the opposite sense, namely, as following the view of R. Ishmael, who, because עד always implies "two," as appears from Yer. Soṭah 20d, demands also in the case of a woman charged with adultery two witnesses of the alleged crime. The passage introduced by the phrase סתם ספרי (Sifre 161) likewise echoes R. Ishmael's views; and the same is true of Sifre 21 as compared with Sifre 7. The beginning of Sifre 7 appears to be, strangely enough, an anonymous halakah expressing the opposite opinion (comp. Yer. Soṭah 16b), though this also may at need be harmonized with R. Ishmael's view. Sifre 39 likewise follows R. Ishmael's view, according to Ḥul. 49a. These and other less cogent reasons seem to indicate that the Sifre to Numbers originated in R. Ishmael's school, though this does not exclude the assumption that the editor in addition borrowed much from R. Simeon's midrash (comp. Hoffmann, *l.c.* p. 54) and other less-known midrashim.

Authorities Quoted.

Among the tannaim appearing in the Sifre to Numbers are: R. Ishmael and his pupils R. Josiah and R. Jonathan; R. Nathan; Abba Hanan (citing R. Eliezer); R. Eliezer; R. Akiba and his pupils R. Simeon and R. Judah; and, less frequently, R. Meïr and R. Jose. Rabbi also is often mentioned here, as in other midrashic works, and finally R. Judah b. Bathyra (Betera), who, as Hoffmann says, is more frequently mentioned in midrashic works from R. Ishmael's school than in any others. A sentence of the amora Samuel b. Naḥmani is quoted once (No. 73).

Interpolations.

The Sifre to Deuteronomy is of an entirely different nature. The main portion (Nos. 53-303), halakic in character, is preceded and followed by haggadic parts; and it has all the characteristics of a midrash from the school of R. Akiba. The principles underlying the exposition are the same as those in Sifra. The term "mufneh" in the application of the principle "gezerah shawah" occurs only once, and is to be regarded as a later addition. The technical terms are largely the same in both midrashim, different terms being found only here and there in the Sifre. Moreover, the group of tannaim is different from that of the Mekilta. Those frequently mentioned in the latter, namely, R. Josiah, R. Jonathan, R. Nathan, and R. Isaac, are mentioned rarely in the Sifre; and even then their names are evidently later additions. Many passages quoted as being anonymous correspond with R. Akiba's views: *e.g.*, Deut. 270 with Yeb. 52b; *ib.* 95 with Sanh. 45b; *ib.* 269 with Yer. Giṭ. 49b; *ib.* 280 with Yer. Sanh. 21c. Similarly, some halakic differences between the Sifre and the Mekilta may be pointed out: Sifre, Deut.

123 differs from Mek., Mishpaṭim, 1; *ib.* 122 from Mek., Mishpaṭim, 2, which latter reproduces R. Ishmael's view (comp. Hoffmann, *l.c.* pp. 68, 69). All these points indicate that the Sifre to Deuteronomy originated in R. Akiba's school; and, as several anonymous passages may be cited to express the views of R. Simeon, this midrash may with a fair degree of certainty be ascribed to him. Such anonymous passages are found in Sifre 72–74, several sections of which Mak. 17a identifies as R. Simeon's interpretations. The same appears to be the case in Sifre 94, compared with Sanh. 112a; *ib.* 103 with Ḳid. 57a; *ib.* 121 with Sanh. 46b. Sifre 166, and perhaps also 165, likewise correspond with R. Simeon's views (comp. Ḥul. 136b; Tosef., Ḥul. ix. 2, x. 1); while in Sifre 303 the explanation of לא בערתי ממנו בטמא, and the omission of בכורים, also imply an agreement therewith (comp. Yeb. 73b and Bik. ii. 2).

There are, however, some exceptions to the rule; *e.g.*, Sifre 110 compared with *ib.* 281 and B. M. 115a; *ib.* 219 with Sanh. 45b (the last-cited passage, however, may also be so interpreted as to harmonize with R. Simeon's opinion). Sifre 230 likewise contradicts R. Simeon's view, according to Kil. vii. 7. But, since it has not been claimed that the Sifre to Deuteronomy represents R. Simeon's midrash in its original form, these few exceptions prove nothing. The editor certainly drew upon other midrashic works besides R. Simeon's midrash, especially upon that of R. Ishmael, as appears from a comparison with Mekilta to Deuteronomy (see Hoffmann in "Hildesheimer-Jubelschrift," p. 91), as well as from the fact that several passages introduced by תנא ר"י [דבי] occur in the Sifre (*e.g.*, 71 and 75 compared with Yeb. 73; *ib.* 229 with Shab. 32a; *ib.* 237 with Yer. Ket. 28c). Sifre 107, however, by no means corresponds with the passage תני ר"י in Yer. 'Er. 20c (Hoffmann, "Zur Einleitung," etc., p. 67), but expresses just the opposite view. Sifre, Deut. 171, *s.v.* תנא ר"א, corresponds perhaps with Meg. 25a, *s.v.* תנא דבי ר"י; and Sifre 104 with the view of R. Ishmael in Mek., Mishpaṭim, 201, according to the correct reading of Yalḳuṭ, which has ר"י instead of ר"ש. It thus appears that the editor introduces the midrashim from R. Ishmael's midrash with the phrase ר"א. Hoffmann (*l.c.* p. 70) concludes from Pes. 68a and 71a that the editors of the Babylonian Talmud possessed the Sifre in another edition than the present one, which he takes to be a Palestinian edition. But the former passage indicates merely that the Amoraim occasionally had not memorized the baraitot perfectly, an instance of inaccuracy with regard to the Sifre being evident in Ḥul. 74a (comp. Tos. *ad loc.*, *s.v.* להאי).

Used in the Talmud.

It may be said in general of the Sifre to Numbers and also of that to Deuteronomy that they are defective in many passages, and that the Amoraim probably possessed more trustworthy copies (comp. Hoffmann, *l.c.* pp. 53, 68). Even Rashi and the Leḳaḥ Ṭob quote from the Sifre passages which are no longer extant (comp. "Grätz Jubelschrift," p. 4, notes 5, 7–10). While the middle, halakic portion of the Sifre to Deutronomy belongs to Akiba's school, the haggadic portions preceding and following it seem to come from works of R. Ishmael's school. This appears clearly in the first part, which shows many formal and material similarities with the Mekilta. In regard to the latter portion, it may be said that Sifre, Deut. 344 reproduces R. Ishmael's view on the question at issue (comp. B. Ḳ. 113a). As for the halakic midrash, it may be said that, in contradistinction to the haggadic part, the collector used, aside from R. Ishmael's midrash, that of R. Simeon (comp. Sifre 28 with Lev. R. i.; *ib.* 37 with Gen. R. lxxxv.; *ib.* 40 with Lev. R. xxxv.; *ib.* 47 with Gen. R. xii.; *ib.* 336 with Gen. R. lxxxii.: *ib.* 313 with Tan., ed. Buber, p. 72).

The final redaction of the Sifre must have been undertaken in the time of the Amoraim, since some of them, *e.g.*, R. Bannai and R. Jose b. Ḥanina, are mentioned therein. Both the Sifre to Numbers and that to Deuteronomy are divided into sections. The earliest extant edition of the Sifre is that of Venice, 1545. Other editions are: Hamburg, 1789; Sulzbach, 1802; with commentary by David Pardo, Salonica, 1804; with commentary by Abraham Lichtenstein (זרע אברהם), part i., Dyhernfurth, 1811; part ii., Radwill, 1820; ed. Friedmann, Vienna, 1864. A translation of the Sifre is found in Ugolini, "Thesaurus," vol. xv.

W. B. C. M. H.

SIFRE ZUṬA ("The Small Sifre"): A peculiar midrash to Numbers, of especial interest for the study of the Halakah. Its authenticity is wrongly questioned by Weiss ("Zur Gesch. der Jüdischen Tradition," ii. 238). Medieval authors mention it under the titles "Sifre shel Panim Aḥerim" and "Wi-Yeshalleḥu Ẓuta"; and to distinguish from it the well-known Sifre, "Or Zarua'" (ii. 22) calls the latter "Sifre Rabbati." The Sifre Zuṭa has not been preserved; and, as appears from a remark of Abraham Bakrat, it was no longer extant at the time in which he wrote his supercommentary on Rashi (comp. Brüll, "Der Kleine Sifre," in "Grätz Jubelschrift," p. 184). Earlier authors, however, knew and occasionally quoted it, as, *e.g.*, R. Samson of Sens in his commentary on the mishnaic orders Zera'im and Ṭohorot. Numerous fragments are found in Yalḳuṭ Shim'oni to Numbers, which Brüll (*l.c.*) has collated (corrections and additions by Hoffmann, "Zur Einleitung in die Halachischen Midraschim," p. 60). Quotations are found also in Num. R. to Naso, as Epstein ("Mi-Ḳadmoniyyot ha-Yehudim," p. 71) has pointed out. The "Mekilta to Numbers" frequently quoted by Maimonides in his "Sefer ha-Miẓwot" is nothing else than the Sifre Zuṭa; for all his quotations may be identified among the fragments of the Sifre contained in the Yalḳuṭ Shim'oni, with the exception of a passage in Shoresh 11 referring to a Biblical section, for which, as Hoffmann shows (*l.c.* p. 59) by a comparison with the "'Aruk," Yalḳuṭ Shim'oni has not quoted the Sifre.

Quoted in the "Sefer ha-Miẓwot."

Maimonides frequently drew upon the Sifre Zuṭa in his "Yad ha-Ḥazaḳah" also; and other medieval authors who occasionally quoted it are mentioned by Brüll (*l.c.* pp. 180 *et seq.*). The Midrash ha-Gadol to Numbers quotes the larger part of the Sifre Zuṭa, and has recently become a source of information concerning the latter. Königsberger has begun to edit the Sifre Zuṭa on the basis of the extracts in the Midrash ha-Gadol and Yalḳuṭ Shim'oni, though he has not as yet proceeded further than the first sections. A small fragment of the Sifre has been published by Schechter in "J. Q. R." vi. 656-663.

From the School of R. Akiba.

The Sifre Zuṭa belongs to R. Akiba's school, as is indicated by the method of exposition; *e.g.*, that of the double expressions in Num. xxxv. 21; of the partitive מן, *ib.* xv. 19; and of the ו, *ib.* v. 2; the phrase זאת תורת is explained as in Sifra, Ẓaw, ii. 1, and the term לאמר as in Sifra, Emor, vii. 8 (*i.e.* = לא תעשה). There are also other points of similarity with the Sifra (Hoffmann, *l.c.* p. 69); *e.g.*, the terminology in part, as אחר שרבה הכתוב מעט, והלא דין הוא, להגיד מה גרם; although there are some unusual expressions, as ובצד השני (= דבר אחר), מכל צד (= מכל מקום), אמרת (= ת״ל).

Furthermore, some of the views expressed in the Sifre Zuṭa correspond with views known to be R. Akiba's, as in v. 14, with which comp. Soṭah 3a; and in v. 15, with which comp. Sifre, Num. 8. The midrash may be assigned to R. Simeon rather than to R. Judah, as is done in the case of the Sifra, although perhaps some of the anonymous halakot, as v. 15 (comp. Ned. 35b) and xv. 4 (comp. Men. 104b), express the views of the latter. R. Simeon's authorship is indicated by the fact that he is mentioned least often in the midrash, and that of the later tannaim R. Eleazar b. Simeon is mentioned a few times.

There are still other indications pointing to Simeon's authorship, as, for example, the enumeration of the positive and negative commandments, which is said to be a characteristic of the Sifre to Deuteronomy, this midrash also being ascribed to Simeon. Further evidence is presented by the correspondence of various halakot with R. Simeon's views. Aside from the passages quoted by Hoffmann (*l.c.* p. 65), some of which represent Simeon's views more exactly than others—the parallel between v. 7 and Mek., Mishpaṭim, 15 is doubtful, on account of the different readings in the Mekilta—still others must be taken into account; *e.g.*, Sifre Zuṭa v. 21 compared with Tosef., Sheb. iii. 7; vi. 20, with Nazir 46a (comp. Königsberger, "Der Kleine Sifre," p. 14b, note 63, and p. 24, note 128); and, what is especially characteristic, the reason for the law under consideration (טעמא דקרא) is inquired into, as in v. 15 and xix. 16 (comp. Tosef., Sheb. i. 7; Yer. Nazir 56b). The well-known reference of the Talmud, סתם ספרי ר״ש (Sanh. 86a), may therefore apply to Sifre Zuṭa, in which, furthermore, there are several exegetical notes on passages of Numbers mentioned in the Talmud, but which are not found in the larger Sifre (comp. Hoffmann, *l.c.* pp. 56 *et seq.*). The fact that the Sifre Zuṭa to v. 27 contradicts R. Simeon's view in Soṭah 19a shows merely that the editor drew also upon other midrashim, including, perhaps, that of R. Eliezer b. Jacob and that of R. Ishmael (comp. Sifre Zuṭa to Num. xxxv. 21 with Yer. Mak. 31d). Noteworthy are the terms ת״ל = אמרת and אין במשמע אלא, which are known to have been used by Eliezer b. Jacob (Zeb. 91b, according to the correct reading; Sifre, Deut. 195; comp. Hoffmann, *l.c.* p. 65, note 1; Königsberger, *l.c.* p. 5, note 7). The fact that Rabbi is not mentioned leads Hoffmann to the conclusion that the Sifre Zuṭa was not edited by a pupil of Rabbi. Some tannaim are mentioned therein whose names are not found elsewhere; *e.g.*, Simeon ben Neḥunyon and Papyas of Ono.

The Sifre Zuṭa has not yet been thoroughly studied.

SIFRONI B. ISRAEL. See Sforno.

SIFTE YESHENIM. See Bass, Shabbethai.

SIGMARINGEN. See Hohenzollern.

SIGN. See Miracle.

SIGNATURE: Usually a writer inscribes his name at the end of a writing as a certification of authorship or as an indication that he accepts the sponsorship of the writing; but it does not appear that this was the custom of the ancient Hebrews. In the case of literary productions the author's name appeared at the beginning: "The Proverbs of Solomon the son of David"; "The vision of Isaiah the son of Amoz"; etc. Generally the full name, including that of the father, is given; sometimes the single name. The end of the Second Book of Psalms reads, "The prayers of David the son of Jesse are ended" (lxxii. 20); but this seems to be the statement of a compiler, for in the separate psalms ascribed to David his name appears at the head. "The words of Job are ended," at the close of his last and longest speech (xxxi. 40), is not his signature; for Job, in the book bearing his name, is not treated as its author.

Edicts and Letters.

In the edicts of kings and other great civil authorities, in Babylonia and Persia, for example, the name and titles likewise appear at the beginning, not at the end, as is seen in many well-preserved inscriptions. Ezra i. 2 begins the decree of King Cyrus, "Thus saith Cyrus king of Persia." Later in the same book rescripts of this king are given only in substance, without superscription or subscription.

The Book of Ezra gives also the contents of letters written by some Samaritans to the Persian king, but without showing where the names of the writers were placed. Similarly, only the substance is given of the letter that was sent by the hand of Uriah to Joab (II Sam. xi. 15), and of the Syrian king's letter about Naaman (II Kings v. 6). Of the still existing El-Amarna letters that were written in Palestine before its conquest by the Israelites, those addressed to the King of Egypt begin, "To my Lord the King says now . . . thy servant." Other letters begin with the writer's name followed by "saith," and contain no signature at the end. This is true likewise of the epistles of the New Testament, written in a much later age.

Contracts among the ancient Hebrews appear to have been authenticated by a seal. The word "ḥotam" (seal) appears in Gen. xxxviii. 18; the patriarch Judah seems to have carried a seal suspended as though from a watch-guard. The use of seals points to written contracts, but it shows also that the inability to write was common among the well-to-do classes. The word appears elsewhere in the Bible, and the use and purpose of the seal must have been well known. The word for seal-ring ("ṭabba'at") is found only in connection with the edicts of foreign kings. But the Bible, in referring to written contracts (*e.g.*, to the deed for land in Jer. xxxii.), never speaks of the signature or the seal of the grantor or obligor, though it speaks of the attesting witnesses.

The Babylonian contract tablets throw much light on the subject. Many of them bear the impress of a seal, and the verb "to seal" is in some of them used in the sense of "conveying" or "assuring." Simple acknowledgments of debt are in some cases signed at the end; but nearly all the tablets are attested by two or more witnesses, and this attestation seems to have given force to the contract contained in the body of the tablet. The Talmudic view is that the privileged contract known as the "sheṭar" (see Deed) draws all its force from its attestation by two witnesses, which is called "sealing" (Giṭ. i. 1). A signature by the party to be bound is not needed; and there is no hint in regard to wax or any other seal. An unsealed written contract ("ketab yad") may be proved against the maker by its handwriting or otherwise; but his name sometimes appears at the beginning or in the middle. Long after Talmudic times it became the custom (at least in Christian countries) for the obligor (especially in a Ketubah) to sign his name before the attestation of the witnesses; but this was not deemed essential.

SIḤIN: Large and populous city in the territory of the tribe of Zebulon, near Sepphoris. After the destruction of Jerusalem it lost its importance, and was thenceforth called merely Kefar Siḥin. Josephus refers once ("B. J." ii. 20, § 6) to Sogane, near Sepphoris, and in another passage to the plain of Asoḥis, likewise near Sepphoris (*ib.* i. 4, § 2), both of which may be identical with the Talmudic Siḥin. In the Talmud the city is mentioned under different names. In Shab. 120b the vessels made at Kefar Siḥin are said to be equal to metal vessels in durability, and Shab. 121a mentions a conflagration in the house of Joseph b. Simai at Siḥin. At the end of the treatise Yebamot mention is made of Johanan b. Jonah of Kefar Siḥya. "Kefar Siḥon" occurs in Gen. R. xii.

J. S. O.

SIHON.—Biblical Data: Amoritic king of the east-Jordan country, whose kingdom extended from the Arnon in the south to the Jabbok in the north, and from the Jordan in the west to the desert in the east (Num. xxi. 24; Judges xi. 22). According to Josh. xii. 3 and xiii. 27, the Desert of Arabah, between the Jabbok and the Sea of Galilee, was included in Sihon's territory. His capital was Heshbon, which he had captured from the King of Moab (Num. xxi. 26). He was also the suzerain of Midian, the five Midianitish kings, finally slain by the Israelites (Num. xxxi. 8), being his vassals (Josh. xiii. 21). When the Israelites asked Sihon for permission to pass through his territory, he refused them, and collected an army at Jahaz, where he was defeated and slain by the invaders (Num. xxi. 21–25; Josh. xiii. 21; Judges xi. 19–22), who took possession of his kingdom. Sihon, like Og, King of Bashan, was considered a great and mighty monarch (Ps. cxxxvi. 17–19).

E. G. H. J. Z. L.

——**In Rabbinical Literature:** Sihon was the brother of Og, and both were grandsons of the fallen angel Shamḥazai (Niddah 61a). He resembled Og in stature and bravery (Midr. Agadah, Ḥuḳḳat, ed. Buber, p. 130a), and was identical with Arad the Canaanite (Num. xxi. 1), being called "Sihon" because he was like the foals in the desert for swiftness. He was termed also "the Canaanite" after his realm (R. H. 3a, where כנען should be read כנעני on the basis of Num. xxi. 1), which included all Canaan; as he was monarch of the land he had vassal kings who paid him tribute. When the Israelites asked permission to pass through his territory to enter Canaan, he said it was only to resist their attacks upon the Canaanite kings that he was in the land (Tan., Ḥuḳḳat, 52 [ed. Buber, p. 65a]).

If Sihon had retained his troops in the various cities of his realm, the Israelites would have been able to take them only with difficulty; but God caused the king to collect his whole army in his capital, and thus enabled the Israelites to conquer (*ib.*), although the city was so well fortified that Sihon had not been able to capture it from the King of Moab until he had called upon Balaam to curse the beleaguered army (Midr. Agadah, *l.c.*). Sihon could be vanquished only after God had subjugated his guardian angel to Moses (Yelammedenu, quoted in Yalḳ., Num. 764).

W. B. J. Z. L.

SILAS: 1. A Jew who made himself tyrant of Lysias, a district of the Lebanon. Pompey subjugated him, together with other petty rulers, on his march to Palestine in 63 B.C. (Josephus, "Ant." xiv. 3, § 2).

2. Friend of Agrippa I., whose early years of misery he shared, and who showed his gratitude by appointing his old comrade general of his troops when he became king (Josephus, "Ant." xviii. 6, § 7; xix. 6, § 3). Silas then took many liberties, however, continually reminding the king of his past sufferings that he might emphasize his own loyalty, so that Agrippa was obliged to send him to his own country as a prisoner (*ib.* xix. 7, § 1). In honor of his birthday the king once more received Silas into favor, and invited him to be his guest; but as Silas continued to insult the king he was again imprisoned (*ib.*). He was later murdered, as if at the king's command, by Helkias, who was apparently Silas' successor in office (*ib.* 8, § 3).

Bibliography: Grätz, *Gesch.* 4th ed., iii. 349; Schürer, *Gesch.* 3d ed., i. 555.

3. Babylonian soldier in the army of Agrippa II., but who deserted to the Jews on the outbreak of the war. He fought side by side with the kinsmen of the princely house of Adiabene, with Monobaz and Cenedeus and with Niger, and, like them, distinguished himself by his bravery in the battles with Cestius Gallus (Josephus, "B. J." ii. 19, § 2). He seems to have risen quickly from the ranks; for he was one of the leaders of the Jews in the disastrous attack upon Ashkelon, which was badly planned and rashly executed, and in which he himself met his death (*ib.* iii. 2, § 2).

4. Confidant of Josephus, by whom he was appointed commander of Tiberias. John of Giscala, the avowed enemy of the historian, was about to incite the citizens of Tiberias to revolt against Josephus, when the latter was informed of the plot by a messenger from Silas, and he immediately hurried to the city (Josephus, "Vita," § 17; in this passage Josephus speaks as if he had previously mentioned Silas, but no further information is given, even in "B. J." ii. 21, § 6).

G. S. Kr.

SILBERMAN, ELIEZER LIPMAN: German rabbi and Hebrew journalist; born in Königsberg, Prussia, Sept. 7, 1819; died in Lyck, Prussia, March 15, 1882. His parents were Russians who settled in Königsberg when Jews were admitted to that city during the Napoleonic wars. Upon the death of his father (1823) Eliezer was brought up by his mother's family in Crottingen, government of Kovno, Russia, but upon attaining his majority he returned to Prussia and settled as shoḥet and rabbi in Lyck, where in 1856 he founded "Ha-Maggid," the first weekly newspaper in the Hebrew language. He was instrumental also in organizing (1864) and conducting the society known as Meḳiẓe Nirdamim. In the editing of "Ha-Maggid" as well as in the management of the affairs of the Meḳiẓe Nirdamim, Silberman was ably assisted by his associate David Gordon, who at Silberman's death succeeded to the editorship.

Silberman, who was the actual founder of Hebrew journalism, received the honorary degree of Ph.D. from the University of Leipsic as a reward for his activity in the field of Hebrew letters. Besides his contributions to "Ha-Maggid," which include a series of autobiographical sketches, he published "Ḳadmut ha-Yehudim Neged Appion" (Lyck, 1858), which contains Samuel Shullam's translation of Josephus' "Contra Apionem," with notes by Israel Böhmer and E. L. Silberman; and Solomon ibn Gabirol's "Goren Nakon" (*ib.* 1859), to which, also, he added editorial notes.

Bibliography: *Ha-Maggid*, v. 19, Nos. 1 *et seq.* (autobiography); Fuenn, *Keneset Yisrael*, p. 123, Warsaw, 1886; Zeitlin, *Bibl. Post-Mendels.* p. 362.

S. P. Wi.

SILBERSTEIN (ÖTVÖS), ADOLF: Hungarian art critic and writer; born at Budapest July 1, 1845; died there Jan. 12, 1899. After graduating from the gymnasium of his native city he studied philosophy and medicine at the University of Leipsic, comparative philology at Berlin, and history and political economy at Heidelberg (Ph.D. Leipsic, 1866). He then devoted himself to journalism, and contributed to the "Leipziger Tagblatt," the "Deutsche Allgemeine Zeitung," and the "Fremdenblatt," also editing the weekly "Dramaturgische Blätter" in collaboration with Strakosch and Taube. Returning to Hungary in 1870, he became editor of the "Temesvarer Zeitung"; seven years later he went to Budapest, where he contributed to the "Pester Lloyd" and to the "Neue Pester Journal."

Silberstein's philosophical work "Die Bibel der Natur" (1877), which was translated into English by Bradlaugh, created a sensation, and was suppressed in Russia. His other works include: "Katharsis des Aristoteles," "Philosophische Briefe an eine Frau," "Dichtkunst des Aristoteles," and "Strategie der Liebe" (in verse). In addition he translated from the Hungarian many works by Jókai, Mikszáth, Bartók, and Beniczky-Bajza; and also wrote a novel entitled "Egy Pesti Don Juan" (1878). His collected works appeared (1894–96) in six volumes: four in German, and two in Hungarian.

Bibliography: *Pallas Lex.*

S. L. V.

SILBERSTEIN, MICHAEL: German rabbi; born at Witzenhausen, Hesse-Nassau, Nov. 21, 1834; educated in his native town, in Hanover, at the Jewish Theological Seminary of Breslau (rabbi, 1859), and at the University of Berlin (Ph.D. 1860). He was successively rabbi at Lyck, East Prussia (1860–68); Buttenhausen, Württemberg (1868–74); and Mühringen (1874–84); since 1884 he has officiated at Wiesbaden. He was a member of the Württemberg assembly of delegates which met in 1869 for the purpose of drafting a new law for the Jewish communities of that kingdom. In 1882 he officiated at the funeral of the poet Berthold Auerbach (see "Worte am Grabe Berthold Auerbach's," Breslau, 1882).

Of Silberstein's works the following may be mentioned: "Gelegenheitspredigten" (Breslau, 1870); "Moses Mendelssohn" (Esslingen, 1872); "Die Sociale Frage und die Mosaische Gesetzgebung" (*ib.* 1873); "Unsere Aliancen" (*ib.* 1883); "Gabriel Riesser" (Wiesbaden, 1886); "Leitfaden für den Israelitischen Religionsunterricht" (*ib.* 1889); "Einleitende Ideen zur Geschichte der Juden und des Judentums" (*ib.* 1891); "Die Israelitische Religionsschule in Ihrer Geschichtlichen Entwickelung" (*ib.* 1891); and "Wolf Breidenbach und die Aufhebung des Leibzolls in Deutschland" (*ib.* 1891). He has written also several articles for the Jewish as well as for the general press.

S. F. T. H.

SILBERSTEIN, SOLOMON: American philosophical writer; born at Kovno, Russia, March 10, 1845. Educated privately, he received the rabbinical diploma in 1864, and officiated from 1867 to 1868 as rabbi at Dershunisok, in the government of Kovno. Later he emigrated to the United States and settled in New York city.

Silberstein is the author of the following works: "Gelui 'Enayim," 1881; "Ha-Dat weha-Torah," 1887; "The Universe and Its Evolution," 1891; "Meẓi'ut Yehowah weha-'Olam," 1893; "General Laws of Nature," 1894; "The Disclosures of the

Universal Mysteries," 1896; "The Jewish Problem and Theology in General," 1904.

SILESIA: Province of Prussia, formerly of Austria. Unreliable accounts date the first settlement of Jews in Silesia as early as the eleventh century, when, it is said, a synagogue in Altendorf, near Ratibor, was transformed into a church (1060). Untrustworthy also are the reports of Jewish persecutions in Leobschütz and Glatz in 1163, and of contributions by the Jews of Bunzlau in 1190 toward the erection of the city walls, although the date of the establishment of the first Jewish community in this province must be placed some time in the twelfth century. The principal Jewish settlements during this and the next century were at Breslau, Löwenburg, Bunzlau, Schweidnitz, Beuthen, Glogau, Troppau, Münsterburg, and Nimptsch. Many of the first Jewish settlers were very poor; the Slavonic language was used by them, and the offices of rabbi, teacher, and prayer-leader were held by one man. They were either fugitives from the Crusaders, or immigrants from Bohemia and Poland. Their occupations were chiefly peddling and agriculture; some among them, however, owned estates, and the villages of Tynice and Sokolrice were at that time owned by Jews.

Early Enactments.

The Jews of Silesia suffered much during the reign of Duke Henry I., who undertook a crusade against the Prussians. About the same time (latter part of the 12th cent.) a conflagration destroyed part of Breslau; the Jews were charged with originating it, and were again made to suffer. Their condition became still worse when Bishop Lorenz imposed upon them not only the LEIBZOLL, but also tithes (1226). The general spread of German civilization brought prosperity to the country, and when this caused an increased demand for money, the Jews monopolized the business of money-lending. The growth of the communities of Silesia consequent upon the constant influx of German Jews aroused the displeasure of the ecclesiastical authorities. A provincial synod held in Breslau Feb. 9, 1267, accordingly issued strict enactments against the Jews, of which the following are especially noteworthy: (1) Jews and Christians were forbidden to associate at the dance-halls, in the inns, or at the baths; (2) Jews were enjoined to wear a special cap when appearing in public; (3) a ditch or a fence was to separate the dwelling of a Jew from that of his Christian neighbor; (4) Christian nurses or day-laborers were forbidden to stay at night with their Jewish employers; (5) Jews were prohibited from dealing in provisions, especially in meat, "in order that they might not poison their Christian customers"; (6) Jews were ordered to keep their doors and windows closed on the occasion of every Christian procession; (7) only one Jewish house of worship was allowed in each town.

The Privilege of 1270.

These laws, however, were not long to remain valid, for when Duke Henry IV. succeeded to the rulership, he issued (1270) an order regulating the status of the Jews which closely followed one issued for Poland by Ladislaus—itself copied from the Austrian privilege of 1244—and which contained the following chief clauses: (1) in legal matters the Jews shall be under the sole jurisdiction of the duke; (2) their vocations shall include only the trade in money, and the lending of money on pledges, notes, deeds, and live stock; (3) they shall be assured of safety for their persons, and their movable property shall be secure to them; (4) they shall be accorded the same treatment as other subjects; (5) they shall not be accused of using human blood. These regulations were later confirmed by Duke Bolko I. of Schweidnitz (1295), and by Duke Henry III. of Glogau (1299).

Synagogues of Breslau.

Upon the division of Silesia into ten dukedoms these privileges were not revoked; but the different cities and churches began to issue independent enactments controlling the Jews. Thus, in 1285, Glogau was granted the right to pass judgment upon Jews taken in the act of committing crimes. In 1315 the several cities laid claim to the Jewish poll- and land-taxes, and their claims were granted. The beginning of the fourteenth century was marked by many acts of persecution against the Jews of Silesia; and in 1315 autos da fé were held in Breslau, Schweidnitz, and Neisse. In spite of the hatred borne toward them, however, Jews in all the larger towns acquired houses and real estate; and as their property was generally situated in the same quarter, ghettos were naturally formed, centering about the chief synagogue, which in most cities served as a school also. In Breslau there were three synagogues, located in different parts of the city; the oldest existing synagogue dates back to the fourteenth century, and is situated in the present Ursalinerstrasse; another was located in the Röhrgasse, and was mentioned as early as 1349, when it was known as the Neue Judenschul. In 1351 the third synagogue is mentioned as being located in the Gerbergasse. The rabbi was known as the "bishop of the Jews," and his salary consisted of voluntary contributions; the first rabbi in Silesia probably was R. Isaac, who held also the title of "Morenu" (Zunz, "Z. G." p. 205). Cemeteries existed only in Breslau, Glatz, Glogau, Görlitz, Liegnitz, Neisse, Schweidnitz, and Troppau; the one in Breslau was in existence as early as 1246. During the thirteenth century the Jews were allowed to charge interest at the rate of from 10 to 12½ per cent for loans on real estate; during the fourteenth century the rate was from 14⅓ to 18 per cent.

When John of Bohemia took over the government of Silesia (1327) he confirmed the old privileges of the Jews. On account of the enormous debts owed by him and his son Charles IV., however, these rulers found themselves compelled to sell to the cities the right of bailiwick, whereby the Jews came entirely under the power of the municipal governments. There were eighteen Jewish communities over which the cities exercised this right. By the sacrifice of large sums of money these communities succeeded in purchasing from the king their liberty, and likewise exemption from all taxation, with the exception of a poll-tax, for a period of ten years. After the lapse of one year, however, the cities were empowered to levy new taxes on the Jews. In 1345 the king permitted the Jewish cemeteries to be violated in order that the tombstones might be used for building purposes. A year before the appearance of the Black Death (1347), which, however, spared Silesia, Charles IV. placed the Jewish communities under the jurisdiction of the municipal councils again; in the same year the Flagellant movement caused Jewish persecutions in Görlitz, Glatz, and Ober-Glogau.

Breslau Fires of 1349 and 1360.

The Breslau community suffered severely when a conflagration which took place on May 28, 1349, was laid at the door of the Jews. Sixty heads of families were murdered, and their property was divided between the city and the king, the former securing the real estate and the two synagogues, the latter the cemetery and all outstanding claims. The king issued an order on Feb. 21, 1350, with regard to the punishment of the murderers; but it was left to the option of the city officials how they were to proceed against them. In the same year the cities were given the right of granting or refusing admission to the Jews within their limits. This introduced an era of unrest for the Silesian Jews, although incidentally it was the cause of the growth of the communities in the larger cities, especially in Breslau, where 100 families were admitted. The only business which they were allowed to follow was that of money-lending. On July 25, 1360, Breslau was again the scene of a conflagration, the result of which was that some of the Jews were slain and the remainder expelled. Two years later persecutions took place in Brieg, Guhrau, Löwenberg, and Neisse. Most of the fugitives from these places sought refuge in Schweidnitz, where Bolko II. was duke. This ruler renewed the old privileges, and the community prospered, although the fact that the Jews were excluded from the gilds here also restricted them to money-lending.

The chief representatives of the Jews during the reigns of Bolko II. and his widow Agnes were the Jews' "bishop," Oser, his father-in-law Lazar, and David Falken. The duchess later appointed a committee of four members, called "Die Viere," who acted as the representatives of all the Jews in the duchy. About this time Duke John of Upper Lusitania, which also belonged to Silesia, expelled the Jews from Görlitz, and the synagogue of that town was transformed into the Chapel of the Holy Body. Besides the places already mentioned, Jewish communities were established during the fourteenth century in the following towns: Goldberg, Haynau, Namslau, Neumarkt, Strehlen, Hirschberg, Trebnitz, Striegau, Potschkau, Grollkau, Ohlau, Jauer, Ratibor, Reichenbach, Kosel, Preisketscham, and Oppeln.

The Jews' Oath.

The beginning of the fifteenth century again saw the Jews overtaken by misfortune. In 1401 they were accused of desecrating the host, and were expelled from Brieg, Glogau, and Striegau. During the Hussite war, and the factional strifes which followed, they could free themselves from danger only by sacrificing large sums of money. In Breslau the Jews had been readmitted by the end of the fourteenth century, and in Ratibor they had succeeded in freeing themselves from the ceremony of taking an oath while standing in bare feet on a pig's hide. The Breslau Jews had also received the following privileges: (1) exemption from all taxation with the exception of the yearly tax; (2) religious liberty; (3) security for person and property; (4) protection at religious ceremonies; (5) exemption from fire-duty, with the exception of the payment of one mark in cases where the fire had been caused by them. When, however, King Sigismund went to Breslau, in 1420, preaching a crusade against Hussites and heretics, a great number of Jews were robbed and murdered.

Liegnitz was at that time the only duchy in which the Jews were permitted to engage in other occupations than money-lending, and even there the duchess Elizabeth soon issued an order (1447) restricting them to the latter calling. The Jews of Breslau had in the meantime prospered; they were granted anew the use of the Ohlau cemetery, and they had reorganized their community after the pattern of that of Schweidnitz. Then, in the year 1453, came Capistrano, whose inflammatory speeches brought much misfortune upon the Silesian communities. In Breslau he incited the mob to such an extent that there was brought against the Jews a charge of having purchased nine hosts from a peasant and having pierced them until blood flowed. In addition to this, a converted Jewess accused her former coreligionists of having thrown consecrated wafers into the fire. The town council referred the case to King Ladislaus, who ordered the guilty ones to be burned at the stake (June, 1453), all children over seven to be baptized, and the remainder of the Jews to be expelled. On Aug. 13 of the same year seventeen Jews were burned at the stake in Schweidnitz also. In 1455 a second expulsion from Breslau took place, at the command of Ladislaus; and two years later the king granted Schweidnitz the right to exclude Jews; the city exercised this prerogative until recently. Similar rights were given to Glogau in 1480, Glatz in 1492, and Oels in 1505. Glogau received the right because Duke John, by the sale of the property of the Jews, hoped to raise an amount of money which he needed.

In the Sixteenth Century.

Of new settlements during the sixteenth century may be mentioned those of Kanth, Frankenstein, Kreuzburg, Pitschen, Oels, Beuthen, Krossen, and Polish Wartenberg. The number of the Jews hereafter decreased so greatly that during the whole of the following century the taxes paid by all the communities throughout Silesia amounted to only 100 gulden, although every native Jew over ten years of age and under twenty paid one gulden, and over twenty, two gulden, while every foreign Jew paid one gulden. Several persecutions took place in the sixteenth century. The Jews were expelled from Frankenstein in 1508, their synagogue being destroyed; in 1530 this town received the right of excluding Jews. In Leobschütz the Jews were accused, in 1543, of the murder of a Christian child, and, although not convicted, they were expelled. In 1563 all Jews were banished from Oppeln. In 1582 Rudolph II. issued an order entirely expelling from Silesia the few Jews that were left. They were ordered to leave with their wives and children, but were permitted to dispose first of their landed property, and to take with them all their movable goods. The Jews evaded this edict by leaving the cities and seeking refuge in the country, placing themselves under the protection of the cloisters.

Concentration in Breslau.

The general financial troubles caused by the Thirty Years' war proved favorable to the Silesian Jews, and in 1630 the authorities of Breslau even requested Jews to settle in that city, after a similar request had been made in the preceding year in Glogau. Through their intercourse with the Jewish merchants of Poland, the Silesian Jews soon monopolized the entire Eastern trade, and in 1689 the imperial treasurer found himself compelled to request the magistrate of Breslau to expel the Jews, against which request, however, the city protested. In 1701 a Jew of Breslau was requested to report as to whether the Jews at any time had had a public synagogue in the city, and as to whether their prayers contained any blasphemy against Jesus. The answer was that the Jews read from the books of Moses, that they held their divine services in private rooms, and that there were ten such rooms in the city, with a total of 140 worshipers. In the course of the eighteenth century the Jewish taxes were farmed to a Jew, which resulted in so great an influx of Jews into Breslau that the city requested the emperor to expel them. The emperor granted the request on July 23, 1738, and on Dec. 9, following, they left the city. During the first occupation of Silesia by Frederick the Great (1744) Jews were again officially readmitted. Frederick, however, issued, on May 6, 1746, a law banishing all Jews from Silesia, excepting twelve families which were granted permission to stay in Breslau. When, in 1749, thirty-six Jews were killed by the explosion of a gunpowder tower, it was necessary to take their corpses to Dyhernfurth, Krotoschin, Lissa, and Zülz, because the cemetery at Breslau had not yet been opened. The law of Frederick the Great was evaded in many ways. First the Jews received permission to stay longer than three days in Glogau, Auras, and Dyhernfurth; and afterward they were admitted to Hundsfeld and Festenberg on payment of twelve thalers each. Their permanent stay in any one city was permitted under the terms "Tolerirte über das Reglement," "Fixentristen," and "Tagesgroschen Entrichtender."

Growth of Breslau.

Especially remarkable was the growth of the Breslau community. The twelve families originally allowed there were augmented by steady immigration, and the community grew from 300 to 3,000; the Zülz, Lissa, Krotoschin, and Glogau schools flourished anew in the city. The Mendelssohnian movement found adherents there, while it was condemned in other parts. Thus in Krotoschin the writings of Mendelssohn were put under the ban on New-Year's day, 1787, by R. Löbusch ben Mordecai. After the visit to Breslau of Frederick William II. (1786) the chief representatives of the community planned to reorganize the internal as well as the external affairs of the Silesian Jews. Among the more prominent men who took part in this work were Simon Hirsch, Lippman Meier, and Zimmermann, royal controller and assessor of the Jewish community of Breslau, who, in 1791, published in Breslau a "Geschichte und Verfassung der Juden in Herzogthum Schlesien." Zimmermann, together with the prorector of the Elisabeth Gymnasium, likewise founded the Jewish Wilhelmschule, which was opened on March 15, 1791, and was not closed until 1848. Special mention should be made of Jonas Fränkel, who left, among other philanthropic legacies, one for the founding of the rabbinical seminary.

The following is a list of Silesian "Landesrabbiner": Naphtali ha-Kohen (1712–16); Samuel ben Naphtali (1716–22); Ḥayyim Jonah Te'omim (1722–1727); Baruch b. Reuben Gomperz (1733–54); Joseph Jonas Fränkel (1754–93); Jeremiah Löw Berliner (1793–99); Lewin Saul Fränkel (1800–7); Aaron Karfunkel (1807–16); Abraham ben Gedaliah Tiktin (1816–20).

The Prussian province of Silesia numbers (1905) 47,593 Jews in a total population of 4,668,405. It is divided into two districts, those of Breslau (with Liegnitz) and Oppeln. The former has thirty-six Jewish communities, of which the following are the most important: **Breslau**—18,440 Jews, 11 synagogues, 37 educational societies, and 23 charitable societies. **Glogau**—780 Jews, 12 charitable societies, and 23 institutions. **Görlitz**—650 Jews and 7 benevolent societies. **Liegnitz**—1,085 Jews and 3 societies.

The district of Oppeln has twenty-five communities, including: **Beuthen**—3,260 Jews, a Jewish primary school supported by the city, a religious school, 13 charitable societies, and 4 institutions. **Gleiwitz**—2,106 Jews and 10 societies. **Kattowitz**—2,500 Jews and 6 societies. **Myslowitz**—1,050 Jews, 7 societies, and 66 legacies. **Ratibor**—1,150 Jews and 7 societies. **Zabrze**—1,200 Jews and 4 societies.

J. S. O.

SILOAM INSCRIPTION: The inscription on the Siloam conduit: the earliest long ancient Hebrew inscription that has been found at Jerusalem—one may even say in Palestine—and so far the only really important one. It commemorates the digging of the waterway, which was an event in the history of Jerusalem and is mentioned more than once in the Bible. The city of Jerusalem is almost entirely surrounded by two deep valleys which unite to the southeast of the city, namely, the valley of Jehoshaphat on the east, and that generally identified with Ge-hinnom, or the valley of the sons of Hinnom, on the west and the south. Between these two valleys is the Tyropœon, a depression now almost filled in, which begins in the center of Jerusalem, and extends to the point where the two valleys join, separating the upper city from the hill on which the Temple stood. The space between the Tyropœon and the valley of Jehoshaphat is called "Ophel," and is in the form of a spur projecting toward the south, and bounded on the north by the wall of Ḥaram al-Sharif. At the foot of the Ḥaram is the spring now called "The Virgin's Spring," the water from which traverses the whole length of the hill of Ophel from north to south in a subterranean channel and empties into the Pool of Siloam, whence it is drawn to irrigate the gardens on the slopes of Jerusalem. On the right wall of this conduit, about five or six meters from the Pool of Siloam, the inscription in question was found, the base of the letters being on a level with the water. Sayce, who has done more than any one else to bring this inscription to light, gives the curious story of its discovery in "Records of the Past" (New Series, i. 168–175, London, 1888; see also Ph. Berger in "Journal des Débats," April 16, 1882). The inscription was broken in an attempt made to steal it; but the fragments are now in the museum at Constantinople; and from casts that have been taken, copies of which are in Paris, London, and Berlin, it has been possible to gain an exact idea of its arrangement and to decipher it almost entirely.

THE SILOAM INSCRIPTION, WITH TRANSCRIPTION.
(From Benzinger, "Hebräische Archäologie.")

Description.

The inscription occupies the lower part of a sunken, rectangular cartouche 50 cm. high and 66 cm. broad, the upper portion of which, 27 cm. high, is left blank. It consists of six lines of remarkably distinct lettering, the words being separated from each other by points. The script is similar to that found in the Moabite and various Phenician inscriptions; particular resemblance to the former is noted in the case of the letters ג, י, ב, ל, ק, ת; to the latter, in the case of ר; the most marked differences from both occur in the letters ו, ח, מ, נ. While the tops of the letters are angular, the tails are long and curved, thus presenting a characteristically more cursive appearance; this style of script is that of a people which had written much for generations.

The language of the inscription is pure Hebrew, and its general sense is clear; indeed, if the first line had not been mutilated there would be hardly a single doubtful word. The translation, resulting from the combined efforts of various scholars, is as follows:

Line 1. . . . the piercing. . . . And this is the history of the digging. When . . .

2. the pickaxes one against the other. And when there were only three cubits more to cut through, the men were heard

3. calling from one side to the other; [for] there was zedah in the rock, on the right and on the left. And on the day of the

4. piercing the workmen struck each to meet the other, pickax against pickax. And there flowed

5. the waters from the spring to the pool for a space of 200 cubits. And [100]

6. cubits was the height over the head of the workmen.

For a detailed account of the work of decipherment see the references in Lidzbarski, "Handbuch der Nordsemitischen Epigraphik," p. 439.

The noteworthy point in the narrative supplied by the inscription is that the work was carried on from both ends. An account of a similar work has been preserved in a Latin inscription of Lambèze ("C. I. L." 2728). At Lambèze, however, the two gangs of men did not meet; it was suddenly discovered that more than the breadth of the mountain had been cut through; and the engineer who had prepared the plans had to step in and bring the work to a conclusion. The workmen at Jerusalem were more successful in meeting each other, although they made many trials in groping toward the meeting-place, as the work on the waterway still shows. Robinson, who guessed at the manner in which the work was carried on, remarks: "Since then the state-

The Work Described.

ments of Captain Conder have shown that toward the center of the waterway two blind alleys may be seen, which correspond to the place where the two gangs met." These facts agree very well with the text of the inscription. This, as interpreted by Joseph Halévy, seems to distinguish three stages in the construction: the first corresponds to the matter related in line 1; at the second the workmen talk with one another; and at the last stage their pickaxes meet and the last of the rock is removed. The only obscure point that remains is the meaning of the word "zedah" in line 3. This word does not occur in the vocabulary of the Bible. It has been compared with the Arabic "zada" (= "to aim correctly," "to enter a hole"); and in any case it seems to refer not to a peculiarity of the rock, but to the work accomplished by the men.

Clermont-Ganneau has brought forward an ingenious hypothesis in regard to the blank upper part of the cartouche; he concluded that it had been reserved for the date, or rather for a symbolical picture, which for some reason or other was not supplied. However, in all known inscriptions the writers began at the beginning, and the introductory formula was carved first and not afterward; and as regards the symbolical picture, representations in this style occur so seldom in Palestine, and are so little in conformity with Jewish custom, that its existence must not be assumed arbitrarily.

It is not easy to explain the choice of place for the inscription. One might have expected to find it either at the entrance of the waterway or at the point where the two gangs of men met; but instead it was engraved in an obscure position five or six meters from the end. It might be assumed, in explanation, that the tunnel was originally longer, and that the inscription was in fact at the point of junction. But this hypothesis involves such topographical difficulties that it is best to set it aside. The first word of the inscription might have furnished a clue; but as it has been obliterated, one can only guess at the reason for its obscure position.

Date of the Work.

The digging of a subterranean way more than 500 meters long was in every respect a great undertaking. As to the epoch and for what reason it was undertaken the inscription leaves one entirely in the dark: commemorating a great work of public utility, it mentions neither the originators nor the date. Fortunately the Bible gives more information on the subject than the inscription. II Kings xx. 20, commemorating the acts of Hezekiah, relates how that king "made a pool ["berekah"] and a conduit, and brought water into the city"; and this work is referred to in II Chron. xxxii. 30 also. It seems, however, that the aqueduct of Siloam existed before the time of Hezekiah. A prophecy of Isaiah, pronounced in the days of King Ahaz, is especially characteristic in this connection. The prophet (Isa. viii. 6), reproaching the people for their infidelity, compares the paternal government of the kings of Judah to a brook of softly flowing water, in contrast to the mailed hand of the Assyrian conquerors: "Forasmuch as this people refuseth the waters of Shiloah that go softly . . . the Euphrates . . . shall pass through Judah." "Shiloah" as a common noun corresponds exactly to the word "emissary"; and "the waters" of which Isaiah speaks are none other than those of the conduit in question. Robinson, indeed, remarked on the slow and almost imperceptible course of the water in the tunnel. The word used by the prophet for designating the water's flow (הלך) is the same as that found in the inscription. When taken in this sense the words of the prophet acquire a special meaning, and indicate the approximate date of the digging of the channel. The conduit and the inscription of Siloam belong doubtless to the period of Ahaz and Hezekiah, which was marked everywhere by great works, especially as regards the water-supply of Jerusalem, a matter of extreme importance in case of siege. And for this reason, doubtless, a subterranean way was constructed under the hill of Ophel, instead of an open one encircling the city on the east.

There are still other opinions regarding the date and the inscription. As no mention whatever is made of the existence of the kingdom, it has been assumed that the date of the digging lies within the period of the Maccabees. But as the inscriptions on earlier stones conform in their lettering to that of the Siloam inscription, the conclusions advanced above seem to be confirmed. It is therefore probable that here is a specimen of the style of writing employed by Isaiah and the Greater Prophets; and the importance of this discovery must be evident to all scholars.

E. G. H. P. BE.

SILVA, ANTONIO JOSÉ DA: Portuguese poet; born in Rio de Janeiro, Brazil, May 8, 1705; died at the stake in Lisbon Oct. 19, 1739; son of João Mendes da SILVA. He was educated at the universities of Lisbon and Coimbra (B.D. 1726). On Aug. 8, 1726, he was arraigned before the tribunal of the Inquisition for writing satirical poems and for observing the Mosaic laws; an inquiry was instituted; and he was tortured so cruelly that he was unable to sign his name. At an auto da fé held Oct. 13, 1726, he was pronounced penitent. He continued, however, to practise his old religion in secret; and his enemies, envious of his growing fame as a poet, accused him of relapsing and of irreverence toward the Holy Office. On Oct. 5, 1737, he and his wife were imprisoned, his property was attached, and a number of spies, disguised as prisoners, were engaged to watch him. His wife was released on Feb. 28, 1738, but was arraigned anew on March 15, and sentenced to do penance for relapsing. She died Oct. 10, 1739, at the age of twenty-seven (according to some authorities she survived her husband several months). At a secret session, held March 11 of that year, Da Silva was denounced as a heretic, and his goods were confiscated. Repeated efforts were made to save him by distinguished statesmen and poets, even King John V. interceding for him; but all proved fruitless, and, as stated above, on Oct. 19, 1739, he was publicly burned, his family being compelled to attend the auto. The same evening one of his popular operettas was produced at the theater in Lisbon.

Da Silva, who has been frequently styled "the Portuguese Plautus," was a very prolific and versatile poet; and his comedies were popularly called "operas do Judeu." They were performed at the Bairro Alto between 1733 and 1738, and met with marked success. Ferdinand Wolf has given a careful analysis of Da Silva's activity; and, though the literature bearing upon him is quite extensive, this still remains the best attempt at an appreciation of his literary importance. Until the end of the eighteenth century all of his compositions were published anonymously for fear of the Inquisition; and it was long before he was credited with the authorship of his many poems, dramas, and comedies. Many of his dramas give his name acrostically, after the fashion of the Jewish liturgical poets; but Varnhagen ("Florilegio da Poesia Brazileira," i. 201-236, Lisbon, 1850) has pointed out that numerous spurious compositions also are attributed to him.

Among Da Silva's most noted works are the following: "Vida de D. Quijote de la Mancha"; "Esopaida, ou Vida de Esopo"; "Os Encantos de Medea"; "Amphitryão, ou Jupiter e Alcmena"; "Labyrintho de Creta"; "As Guerras do Alecrim e Mangerona"; "Variedades de Protheo"; "Precipicio de Faetonte"; and "O Diabinho á Mão Furada." Numerous unpublished pieces are mentioned by Varnhagen; and one or two have recently been discovered and printed. Ferdinand Denis in his "Chefs d'Œuvre du Théâtre Portugais" (pp. 365-496, Paris, 1823) gives liberal extracts, with a French translation, from the "Vida de D. Quijote"; and Wolf likewise gives selections from Da Silva's various compositions. His collected works appeared in 1744, 1747, 1753, 1759, 1787, and 1792. Da Silva is the subject also of several laudatory epic poems and dramas, one or two of which were composed by Brazilian compatriots.

SILVA, FRANCISCO MALDONADO DE: Peruvian physician, controversial writer, and martyr; born in San Miguel, province of Tucuman, Peru, about 1592; burned at the stake in Lima Jan. 23, 1639. His father, Diego Nuñez de Silva, and his brother, Diego de Silva, were Neo-Christians, and had been "reconciled" by the Inquisition March 13, 1605. According to his own testimony, his mother, Doña Alaonsa Maldonado, and all her ancestors were Christians.

Francisco was christened and baptized in San Miguel; he attended mass up to his eighteenth year; and otherwise he was a devout Catholic, until, on a visit to his father at Callao, he chanced to read the "Scrutinium Scripturarum" of Paul Burgos (Mantua, 1474 *et seq.*). His father, who was a "licentiate," then encouraged him to study the Bible, and confessed his secret adherence to the Mosaic faith. Thereupon Francisco, too, became a believing Jew, though outwardly observing all the ceremonies of the Catholic Church. So zealous had he in a short time become that he used every endeavor to convert to Judaism his sister, Doña Isabel de Maldonado, a fervent Christian. She confided the secret of her brother's real professions to her spinster sister, Doña Felipa de Maldonado, who, appearing one day "in the robes of the Society of Jesus" before the Inquisition, denounced Francisco as a Judaizing heretic. On the strength of this evidence his arrest was ordered on Dec. 12, 1626; but he was not apprehended until April 29, 1627. From the moment of his imprisonment a monk was detailed to reason with him, and to try to reclaim him. Together they searched Scripture; but the attempt to win him back failed.

Converted from Catholicism to Judaism.

Francisco was then transferred to another prison, and a second church dignitary, "learned in the law," was charged with the same task, but he argued in vain. Francisco remained obdurate, and declared he was a believing Jew: "I care not if the whole world knows it. Let them come and burn me. They do not die who die thus, for God the Eternal keeps them ever alive; and I will proclaim this cheerfully at the stake." He refused to eat bacon, fasted forty days at a time in the expectation of the Messiah's advent, rigidly observed the Sabbath, and studied the Bible and commentaries on it in Hebrew and Latin. Secreted about his person he had a Jewish prayer-book; and he quoted lengthy passages in the original at the numerous hearings before the tribunal. Further testimony showed that, in the absence of Doña Isabel Otanez, his wife, he had circumcised himself in his lodgings in Santiago de Chile with a pair of scissors, and that, being a skilled surgeon by profession, he had healed himself with the white of eggs and with ointments. He imposed all manner of penance upon himself, and faithfully kept the Jewish feasts and fasts. Eager to convert his sister, he wrote for her use a commentary on the Bible, which he translated into Spanish; and in reply to her threatening taunts he exclaimed: "And if I had a thousand lives, I would gladly lose them in the service of the living God."

Attempts to Reclaim Him.

A number of theologians, professors of the university, and high churchmen, "the most learned in the kingdom," were ordered by the judges to argue with Francisco concerning the foundations of belief and the "fallacies" of Judaism; but after a long series of disputations (fifteen in all), extending over a period of nearly twelve years (1627-38), "instituted," so reads the official charge, "more for the reason of making an arrogant exhibition of his genius and sophistry than because of a desire to embrace the holy Catholic faith," the attempt to reclaim him was abandoned. During all these years he diligently "itemized his score against the religion of Christ," by composing treatises and commentaries, "in duodecimo and quarto," in Spanish and Latin, "written in very small, beautiful characters, and sewn together with such dexterity that they looked like pamphlets from a bookstore, having been written with ink made of coals and with the crooked leg of a hen." One of these tracts consisted of 100 and the other of more than 103 sheets; the title of a third being on translation, "The Star of the Jews, by His Other Name Silva, Undeserving of the God of Israel." All these writings were duly confiscated by the tribunal, though, at several hearings, Francisco begged piteously that they be restored to him. On Jan. 26, 1633, he was sentenced to be surrendered to the secular arm.

At this juncture a dramatic incident occurred. Though enfeebled by a fast of eighty days and consumed by religious zeal, Francisco contrived to swing himself through an opening in his cell by means of a rope made of maize-stalks, which had served him for bread. He did not attempt to escape, but boldly entered two other cells, where several wealthy and influential citizens of Lima, charged with Judaizing, were confined pending trial. He converted two Catholics to Judaism, and supplied them with letters of recommendation to the synagogue-wardens in Rome. His work must have been very effective; for the judges particularly lamented "the proselytizing heresy in the dungeons of the holy and blessed Tribunal," caused by Francisco's attempt. As one of its results, on Aug. 11, 1635, a wholesale seizure of Lima's foremost Portuguese merchants took place, most of whom were imprisoned for Judaizing. At the auto, celebrated on Jan. 23, 1639, the most costly and resplendent in the annals of Peru, eleven "judaizantes" marched to the funeral pyre. All, clad in sanbenitos, carried green crosses, except the obstinate Francisco, who, "a mere bundle of bones," pale and emaciated, with the long hair and beard of a Nazarite, and with his controversial tracts bound around his neck, exclaimed as he perished in the flames: "This is the will of the Lord. I shall see the God of Israel face to face."

SILVA, HEZEKIAH: Jewish author; born at Leghorn in 1659; died at Jerusalem in 1698; son-in-law of the dayyan Mordecai Befael Malachi. About 1679 he left his native city for Jerusalem, where he attended the yeshibah of Moses Galante, and ten years later he was sent to Europe to collect funds for Jerusalem. In 1691 he was in Amsterdam and began the printing of his work "Peri Ḥadash," a commentary on the Yoreh De'ah. He remained in that city for a year. Five years later he was again at Jerusalem, his movements in the interim being unknown. He took a decided interest in the controversy of Moses Hagiz against Vega, but his death cut short his activity in behalf of the former.

The freedom with which Silva discussed halakic problems brought the ban of the rabbis of Cairo upon his "Peri Ḥadash," but it was afterward removed by Abraham Levi, although the two men, spiritually akin, were personally unacquainted. This work of Silva's was supplemented by a second and a third part, both edited by his son David, and bearing the approbation of the chief authorities of the time (Amsterdam, 1706-30). Silva was likewise the author of the "Mayim Ḥayyim," containing a collection of notes on Talmudic treatises, together with responsa and a portion of the "Yad" of Maimonides. Silva expressly states that he was a teacher at Jerusalem, not a rabbi, but despite this statement Luncz claims that he was chief rabbi of Jerusalem and that he died in 1740.

SILVA, JOÃO MENDES DA: Brazilian poet and attorney; born in Rio de Janeiro 1656; died at Lisbon Jan. 9, 1736. He took his degree in law at the University of Coimbra, and, upon his return to Brazil, married Lourença Coutinho, who was several times arraigned by the Inquisition in Portugal for relapsing into Judaism. She was "reconciled" at an auto celebrated July 9, 1713, and condemned to "carcere a arbitrio" at another auto, held Oct. 18, 1739, one day before the martyrdom of her youngest son, Antonio José da Silva. She is said to have died three months after his execution. João Mendes, after the arrest of his wife by the spies of the Holy Office, followed her to Portugal, where he resumed work in his profession, practising law conjointly with his son Antonio, until the latter was seized and imprisoned on Aug. 8, 1726.

Da Silva was the author of the following poetical works, now lost (the titles being preserved by Machado): "Officio da Cruz" (translation in verse); "Fabula de Leandro e Ero" (in octaves); "Poema Lyrico: Christiaos"; and translation of a hymn inscribed to St. Barbara. It is said by the critic Ferdinand Wolf that João chose these themes either effectually to hide his Jewish antecedents, or to give evidence of loyalty to the new faith. Because of his zeal as a professing Christian (though he was really a Marano), he was the only member of his family who was spared by the Inquisition. He had three sons.

SILVA, SAMUEL DA: Physician of Portuguese birth who lived in Amsterdam in the beginning of the seventeenth century. He is known especially through his energetic proceedings against Uriel da Costa. Before the latter's "Examination of the Pharisaic Tradition" had appeared in print, Silva, who had had an opportunity to read part of it in manuscript, issued a booklet in Portuguese against its author (Amsterdam, 1623). This pamphlet, copies of which are now very rare, was written at the direction of the foremost members of the young community of Spanish-Portuguese Jews in

Amsterdam; and it appeared under the title "Tratado da Immortalidade da Alma . . . em Que Tambem se Mostra a Ignorancia de Certo Contrariador de Nosso Tempo, Que Entre Outros Muytos Erros Deu Neste Delirio de Ter Para si e Publicar Que a Alma do Homem Acaba Juntamente com o Corpo." It is an able treatise on the subject discussed, and alludes to Da Costa only by his first name: "I now come to thee, thou blind and incapable Uriel." Ten years previous to the publication of this pamphlet Samuel da Silva made a Spanish translation of Moses Maimonides' tract on repentance, which appeared under the title "Tratado de la Tesuvah o Contricion, Traduz. Palabra por Palabra de Lengua Hebrayca en Español" (Amsterdam, 1613).

SILVER. See Metals.

SILVERMAN, JOSEPH: American rabbi; born at Cincinnati, Ohio, Aug. 25, 1860. Educated at the high school, the university (A.B. 1883), and the Hebrew Union College (rabbi, 1884) of his native town, he became rabbi successively at Dallas, Texas (1884), and Galveston, Texas (1885); since 1888 he has been rabbi at the Temple Emanu-El in New York city, until 1899 as assistant to Gustav Gottheil.

Silverman was president of the Central Conference of American Rabbis from 1900 to 1903; and since the latter year he has been vice-president of the New York Board of Jewish Ministers. He is also a member of the board of governors of the Hebrew Union College of Cincinnati, and the organizer of the Emanu-El Brotherhood. In 1892, and again in 1904, he delivered the opening prayer in the House of Representatives at Washington.

Silverman is the author of a "Catechism" (Galveston, Texas, 1885); and he has contributed articles to the Jewish periodicals.

Bibliography: *American Jewish Year Book*, 1904.

SILVEYRA (SILVEIRA), ABRAHAM (DIEGO) GOMES: Poet and preacher; long resident in various French and Dutch towns, finally settling at Amsterdam. He was a member of the Academy of Poets founded by D. Manuel de Belmonte in 1676, and was the author of a collection of "Sermones" containing six homilies on various texts of the Bible and a funeral oration on Rachel de Pinto. His "Entretenimientos Gustosos o Dialogos Burlescos Entre un Judio, Turco, Reformado y Catolico" and his "Dissertaciones Sobre el Mesias," which he translated from the French, are extant in manuscript.

S. M. K.

SILVEYRA, MIGUEL DE: Spanish poet; born in Celorico, Portugal, in the last third of the sixteenth century; died at Naples in 1638. He studied philosophy at Coimbra, and jurisprudence, medicine, and mathematics at Salamanca; and for twenty years lectured at the Spanish court on different branches of science and on poetry. At an advanced age he went to Naples with his patron, Ramon Philip de Guzman, Duke of Medina de la Torres, and here his great heroic poem "El Macabeo, Poema Heroico en Octavos" appeared (1638; 2d ed. Madrid, 1731). Silveyra, who was a relative of Thomas de Pinedo, has been placed among the Jewish poets by Daniel Levi de Barrios, while Dieze and Ticknor doubt if he was ever a professing Jew. Antonio Enriques Gomez, in the prologue to his "Samson Nazareno," classes Silveyra with such poets as Camöens, while others, on account of his grandiloquent style, value him but little. Silveyra is said to have translated into Spanish Pedro Matheo's version of "Vida de Elio Sedano" (Barcelona, 1621).

SIMA (SAMA): Babylonian amora of the latter half of the fourth and of the beginning of the fifth century; son of Rab Ashi. He is known through halakic questions which he addressed to his father (Ket. 33b, 69a; Zeb. 19b, 24a; Men. 25a; B. Ḳ. 18a). According to Rashi's commentary on Ket. 69a, he died before his father; that is, before 427 (see, however, Heilprin, "Seder ha-Dorot," p. 297a).

W. B. S. O.

SIMCHOWITZ, SAMUEL: Russian rabbinical writer; born in the beginning of the nineteenth century; died at Slutzk March, 1896. He possessed a thorough rabbinical knowledge, and at the same time was well versed in modern literature. Numerous essays from his pen appeared in the "Petersburger Herold." In 1866 he was invited to the Orthodox rabbinate of Vienna, but he refused this call as well as one received two years later to Warsaw. Many of his Talmudic novellæ, as well as responsa bearing on the ritual codices, are extant in manuscript. In 1894 he was a member of the great rabbinical synod held in St. Petersburg.

E. C. S. O.

SIMEON (שמעון).—Biblical Data: Second son of Jacob by Leah, and progenitor of one of the tribes of Israel; born at Padan-aram. In Gen. xxix. 33 the origin of the name is given: "God hath heard that I am hated" (R. V.). Various etymological theories have been advanced, of which those of Fürst and Redslob may be mentioned. The former ("Hebräisches Handwörterbuch") explains the name as meaning "the famous one"; the latter ("Die Alttestamentlichen Namen," p. 93) compares it to an Arabic word meaning "bondmen." Simeon was prominent in two incidents: He was associated with his brother Levi in the massacre of the Shechemites in revenge for the defilement of Dinah, for which act he was rebuked by Jacob (Gen. xxxiv. 25 *et* *seq.*); and he was taken by Joseph as a hostage and imprisoned until his brothers had returned with Benjamin (Gen. xlii. 24 *et seq.*). The reason that Joseph selected Simeon may have been that the latter was the eldest after Reuben, who was spared by Joseph in return for his interference on Joseph's behalf many years before (Gen. xxxvii. 21-22; comp. Simeon in Apocryphal and Rabbinical Literature). Simeon had six sons, all of whom migrated to Egypt (Gen. xlvi. 8, 10).

J. M. Sel.

—**In Apocryphal and Rabbinical Literature:** Simeon was born on the twenty-first day of the tenth month (Ṭebet) of the year 2124 after the Creation (Book of Jubilees xxviii. 13; Midr. Tadshe, in Epstein, "Mi-Ḳadmoniyyot ha-Yehudim," p. xxii.). His name is interpreted as meaning "he who listens to the words of God" (Gen. R. lxxi. 4); or, according to another authority (Midr. ha-Gadol to Gen. xxix. 33), it is composed of שם עון (= "there is sin"), Leah alluding under this name to Zimri, the Simeonite prince who sinned with the Midianite woman (comp. Num. xxv. 6, 14). Referring to the narrative of the destruction of the Shechemites by Simeon and Levi (Gen. xxxiv. 25 *et seq.*), the "Sefer ha-Yashar" brings Simeon into still greater prominence. When Hamor asked Dinah's hand for his son Shechem, Simeon and Levi, to outwit him, replied that some delay was necessary in order to consult their grandfather Isaac about the matter. After Hamor had gone it was Simeon who advised his brothers to require the circumcision of all the men of Shechem, and by this means place them at their mercy ("Sefer ha-Yashar," section "Wayishlaḥ," p. 52a, Leghorn, 1870). However, many of the men escaped circumcision; and Simeon, who was then only thirteen years old (Gen. R. lxxx. 9), had to fight against them as well as against the women of the city. Owing to his extraordinary strength, he and Levi slew all the men and captured eighty-five young women, one of whom, named Bonah, Simeon married ("Sefer ha-Yashar," *l.c.* p. 54a).

His Strength.

Simeon was prominent also in the war against the Canaanites described in the Midrash Wayissa'u and at greater length in the "Sefer ha-Yashar" (see Judah in Rabbinical Literature). He is always represented as having a particularly powerful voice; and it is said that once, in the brunt of a battle, when he shouted, the enemy fled in terror at the sound ("Sefer ha-Yashar," *l.c.* p. 61a).

The Rabbis cite Simeon as the most implacable antagonist of Joseph. In Test. Patr., Simeon, 2, where Simeon is stated to have been very strong and fearless, it is likewise said that he was of a very envious character. He was thus filled with spite against Joseph for the particular love borne to him by Jacob; and he intended to kill him. According to the "Sefer ha-Yashar" ("Wayesheb," p. 67a), it was Simeon who said: "Behold, this dreamer cometh. Come now therefore, and let us slay him" (Gen. xxxvii. 19-20; comp. Targ. pseudo-Jonathan *ad loc.*). The Rabbis hold that it was Simeon, too, who cast Joseph into the pit, and that he afterward ordered that stones be thrown therein (Gen. R. lxxxiv. 15; Tan., Wayesheb, 13). Later, when a dispute concerning Joseph arose between the brothers and the Midianites (see Joseph in Rabbinical Literature), Simeon distinguished himself by his heroism. On this occasion he again made use of his terrible voice, in such a way that the earth began to quake, and the Midianites, frightened and prostrating themselves on the ground, consented to arrange the matter amicably ("Sefer ha-Yashar," *l.c.* p. 68a). In the Testament of the Twelve Patriarchs (*l.c.*), however, it is stated that Simeon was not present at the sale of Joseph, having gone to Shechem. But for five months he was furiously angry with Judah for having sold Joseph to the Midianites, and thus allowed him to remain alive. As a punishment for his inhuman conduct toward Joseph, Simeon's right hand withered for seven days; Simeon then acknowledged his wrong-doing and exhibited penitence, whereupon his hand was healed. According to one authority, after the sale of Joseph, Simeon married his sister Dinah, who at the destruction of the Shechemites would not leave her seducer's house until Simeon had sworn to make her his wife. She bore to Simeon his sixth son, Shaul, who is styled in Gen. xlvi. 10 "the son of a Canaanitish woman" (Gen. R. lxxx. 10). The "Sefer ha-Yashar" (*l.c.* p. 75a) states that Shaul was Simeon's son by Bonah, while by Dinah were born to him the first five sons enumerated in Gen. *l.c.*

Why Joseph's Hostage.

The Rabbis give two reasons why Simeon was chosen by Joseph for a hostage (see Simeon, Biblical Data): (1) Joseph desired to punish Simeon for having thrown him into the pit; and (2) he wished to separate Simeon from Levi, lest they together might destroy Egypt as they had destroyed Shechem (Gen. R. xci. 6). Simeon naturally was not willing to go to prison; and when, at Joseph's call, seventy mighty Egyptians approached to take him by force, he uttered a cry so terrible that they became frightened and ran away. It was Manasseh, Joseph's son, who subdued Simeon and led him to prison ("Sefer ha-Yashar," section "Miḳḳeẓ," p. 86a). The Testament of the Twelve Patriarchs (Simeon, 4), however, conformably to its statement that Simeon repented, declares that he recognized the justice of his punishment, and did not complain, but went willingly to prison. Contrary to the foregoing account of Simeon's extraordinary strength, the Rabbis declare that he was not one of the stronger of Jacob's sons; and they state that he was one of the five brothers brought by Joseph before Pharaoh (Gen. xlvii. 2; Gen. R. xcv. 3).

Simeon died at the age of 120, seventy-five years after Jacob and his children went to Egypt, and hence three years before Reuben's death (Seder 'Olam Zuṭa; Midr. Tadshe *l.c.*; "Sefer ha-Yashar," section "Shemot," p. 103a; Test. Patr., Simeon, 8; but this statement conflicts with Num. R. xiii. 10, which relates that Simeon was the head of the Patriarchs after Reuben's death; see Reuben in Rabbinical and Apocryphal Literature). It is said in Gen. R. c. 12 that the remains of all the Patriarchs were enclosed in coffins and taken to the land of Canaan by the Israelites at the time of the Exodus. But the Testament of the Twelve Patriarchs (*l.c.*) declares that Simeon's remains, which had been put into a coffin of imperishable wood, were secretly brought to Hebron at the time of the Egyptian war.

W. B. M. Sel.

SIMEON, TRIBE OF.—Biblical Data: This tribe traces its descent from Simeon, second son of Jacob by Leah. He was the brother of Levi and Dinah, according to Gen. xxxvi. 25, xlix. 5, but elsewhere (*ib.* xxx. 1–9, xlvi. 8–15) it is stated that he had five full brothers. How many sisters he had is not related (*ib.* xxxvii. 35, xlvi. 7). Simeon and Reuben are mentioned together in Gen. xlviii. 5; and in Judges i. 3 Simeon is styled brother of Judah.

In company with Levi, Simeon attacked Shechem (Gen. xxxiv.), for which act he was cursed by Jacob with dispersion among the tribes (*ib.* xlix. 5–7). In the Dinah story Simeon is connected with the district of Shechem; but in the geographical lists (Josh. xix. 1–9; I Chron. iv. 24–33) he is connected with the southern country and associated with Judah, with whom he made common cause in the conquest of Palestine also (Judges i.). At the first enumeration (Num. i. 23) the tribe counted 59,300 members; at the second (*ib.* xxvi. 14) it numbered only 22,200. The Chronicler in I Chron. xii. 25 mentions the tribe as being large in the time of David; in another passage (*ib.* iv. 27) he acknowledges its feebleness. The lists of the clans of Simeon are given in Gen. xlvi. 10 and Ex. vi. 15. A different list appears in I Chron. iv. 24 *et seq.*, which is practically identical with another in Num. xxvi. 12–14. The towns belonging to Simeon are mentioned in Josh. xix. 2–6 and, with some deviations, in I Chron. iv. 28 *et seq.* In Josh. xv. 26–32, 42 all these places are reckoned as belonging to Judah; and to the same tribe are elsewhere ascribed such cities as Ziklag (I Sam. xvii. 6), Hormah (*ib.* xxx. 30), and Beer-sheba (I Kings xix. 3).

The Chronicler has an account of movements of the tribe, containing several statements the relation of which to one another is not clear. According to I Chron. iv. 38–40, certain Simeonites pushed down to the district of Gedor in search of pasture for their sheep. According to verse 41 of the same chapter (R. V.), these men "came in the days of Hezekiah" and "smote their tents, and the Meunim that were found there, and destroyed them utterly . . ., and dwelt in their stead." According to verses 42 and 43, some of them (500 men with four leaders) went to Mount Seir, smote those who were left of the fugitive Amalekites, and settled there.

E. G. H. C. L.

——**In Rabbinical Literature:** The Dinah story is told in the Book of Jubilees (xxxiv. 2–8) in a different way (comp. Charles *ad loc.* and the literature cited by him). In the Midrash it is said that all the tribes had intermarried in Egypt, except Reuben, Simeon, and Levi, which neither intermarried nor worshiped idols (Num. R. xiii. 8 and parallel passages). With reference to Gen. xlix. 7, the Midrash states that in the affair with Zimri (Num. xxv. 1–9) there fell of the tribe of Simeon 24,000 men, whose widows were scattered among the other tribes. All the beggars and elementary-school teachers were of the tribe of Simeon (Gen. R. xcviii. 5, xcix. 7; Num. R. xxi. 8). The majority of the mixed multitude that had come out of Egypt with Israel intermarried with the tribe of Simeon (comp. Chefetz, "Sefer Midrash Abot," *s.v.* "Simeon"). Eldad ha-Dani relates that the tribe of Simeon and the half-tribe of Manasseh lived in the land of the Chaldeans (another version says in the land of the Chazars), a six-month journey from Jerusalem. They were the largest among the tribes, and took tribute from twenty-five kings, some of whom were Arabians. In an apocryphal midrash (עקטאן דמר יעקב) the following passage occurs: "In the twelfth year of Hezekiah, Sennacherib took Judah and Simeon captive. Having learned of the rebellion of the Ethiopians, he took them with him to Ethiopia, where they remained behind the Dark Mountains. When the Chazars adopted Judaism Simeon joined them. A part of the Falashas are said to claim descent from the tribe of Simeon" ("Ha-Shiloah," ix. 360).

W. B. C. L.

——**Critical View:** To the positive data noted above it must be added that Simeon is nowhere mentioned as a component part of the kingdom of Judah and that his name occurs neither in Judges iv., v., nor in Deut. xxxiii., whence it would appear that Simeon was not always counted as a tribe. In the last-cited chapter, indeed, some manuscripts of the Septuagint insert the name of Simeon in verse 6b (compare the twentieth rule in the Baraita of the thirty-two rules of R. Eliezer b. Jose ha-Gelili). This, however, may be a deliberate correction unsupported by Hebrew manuscripts. Other solutions of the difficulty have been proposed by Kohler ("Der Segen Jacob's," p. 5) and by Grätz ("Gesch." 2d ed., i. 468), and have been accepted with modifications by Heilprin ("The Historical Poetry of the Ancient Hebrews," i. 113; comp. Halévy in "Journal Asiatique," 1897a, pp. 329–331) and Bacon ("Triple Tradition of the Exodus," p 270). Because of the unnatural shortness of the blessing of Judah, and the character of Levi's blessing, which seems too warlike for a non-secular tribe, Kohler conjectures that in the chapter of Deuteronomy cited, verse 7 has fallen out of its place and should follow verse 10; so that verses 7–11 would form the blessing of Judah. Grätz boldly substitutes "Simeon" for "Judah" in verse 7, which is approved by Heilprin and Bacon as far as verse 7a is concerned, while at the same time they change the order of the verses as proposed by Kohler. Later commentators, however, consider such changes unwarranted (comp. Driver *ad loc.*).

Many attempts have been made to connect Simeon with Ishmael and Massa, and with the founders of Mecca, the establishment of Saul's kingdom, etc. All that seems certain, to judge from the foregoing data and from the fact that a prominent subclan is called "Shaul, the son of a Canaanitish woman," is that the tribe of Simeon was of mixed origin and was at an early date fused with Judah.

SIMEON: Tanna of the first generation; brother of Azariah and uncle of Eleazar ben Azariah. He is mentioned only once in the Mishnah, in Zeb. i. 2, where a saying of his has been preserved. He is named after his brother Azariah, who was a merchant, and who paid Simeon's living expenses in order that he might pursue undisturbed the study of the Law.

BIBLIOGRAPHY: Heilprin, *Seder ha-Dorot*, ii. 362.

W. B. J. Z. L.

SIMEON I.: Son of Hillel and father of Gamaliel I. Nothing is known of him except his name and the fact that he was the successor of Hillel as president of the Sanhedrin (Shab. 15a).

W. B. J. Z. L.

SIMEON II. (BEN GAMALIEL I.): President of the Great Sanhedrin at Jerusalem in the last two decades before the destruction of the Temple. Not merely a scholar, but a man of resolution and courage also, he was one of the leaders in the revolt against the Romans. Although he was the chief of the Pharisees during the revolt, he did not hesitate to make common cause with the Sadducean former high priest Anan. Even his adversary Josephus praises him, saying that Simeon was a circumspect and energetic man, who would have carried the revolt to a successful conclusion if his counsel had been consistently followed (Josephus, "Vita," § 38). Simeon b. Gamaliel died before the outbreak was quelled; he is said to have been executed by the Romans (Sem. viii.), though this statement lacks historical support.

Little is known of his activity as a teacher of the Law, though it may be assumed that he followed the liberal interpretations of his grandfather Hillel. He held that no rules and regulations should be imposed upon the people which they were unable to follow (Tosef., Sanh. ii. 13). Once, when poultry was very dear at Jerusalem, so that the women obliged to bring their offering of doves were hardly able to bear the great expense, Simeon issued a decree permitting a woman who ordinarily would be obliged to offer five pairs of doves to offer only one pair; in consequence of this decree the price declined to one-fourth (Ker. i. 7). No other halakot by him have been preserved, although probably many of his halakic sentences are included in those of the "Bet Hillel." His rule of life was: "All my days I have grown up among sages, and I have found that there is nothing better than silence, and that he who talks much gives rise to sin. Not interpretation and study but work is the most virtuous thing" (Abot i. 17).

W. B. J. Z. L.

SIMEON (BEN GAMALIEL II.): Tanna of the third generation, and president of the Great Sanhedrin. Simeon was a youth in Bethar when the Bar Kokba war broke out, but when that fortress was taken by the Romans he managed to escape the massacre (Giṭ. 58a; Soṭah 49b; B. Ḳ. 83a). On the restoration of the college at Usha, Simeon was elected its president, this dignity being bestowed upon him not only because he was a descendant of the house of Hillel, but in recognition of his personal worth and influence. There were many children in his family, one-half of whom were instructed in the Torah, and the other half in Greek philosophy (*ib.*). Simeon himself seems to have been trained in Greek philosophy; this probably accounts for his declaring later that the Scriptures might be written only in the original text and in Greek (Meg. 9b: i. 8; Yer. Meg. 71c). Simeon appears to have studied natural science as well, for some of his sayings betray a scientific knowledge of the nature of plants and animals, while others concern the anatomy of the human body and the means of avoiding or of curing disease (Ber. 25a, 40a; Shab. 78a, 128b; Yeb. 80b; Ket. 59b, 110b). It is not known who were his teachers in the Halakah; he transmits sayings of R. Judah b. Ilai (Tosef., Kelim, B. Ḳ. v. 4), of R. Meïr (Tosef., B. M. iv. 15; Ket. vi. 10), and of R. Jose b. Ḥalafta (Tosef., Dem. iii. 12; Tos. Ṭoh. xi. 16). The last-named was honored as a teacher by Simeon, who addressed questions to him, and put many of his decisions into practise (Suk. 26a; Tosef., Dem. iii. 14).

Wide Knowledge.

During Simeon's patriarchate the Jews were harried by daily persecutions and oppressions. In regard to these Simeon observes: "Our forefathers knew suffering only from a distance, but we have been surrounded by it for so many days, years, and cycles that we are more justified than they in becoming impatient" (Cant. R. iii. 3). "Were we, as of yore, to inscribe upon a memorial scroll our sufferings and our occasional deliverances therefrom, we should not find room for all" (Shab. 13b).

Jewish internal affairs were more firmly organized by Simeon b. Gamaliel, and the patriarchate attained under him a degree of honor previously unknown. While formerly only two persons, the nasi and the ab bet din, presided over the college, Simeon established the additional office of ḥakam, with authority equal to that of the others, appointing R. Meïr to the new office. In order, however, to distinguish between the dignity of the patriarchal office and that attaching to the offices of the ab bet din and the ḥakam, Simeon issued an order to the effect that the honors formerly bestowed alike upon the nasi and the ab bet din were henceforth to be reserved for the patriarch (nasi), while minor honors were to be accorded the ab bet din and the ḥakam. By this ruling Simeon incurred the enmity of R. Meïr, the ḥakam, and of R. Nathan, the ab bet din (Hor. 13b). Simeon had made this arrangement, not from personal motives, but in order to increase the authority of the college over which the nasi presided, and to promote due respect for learning. His personal humility is evidenced by his sayings to his son Judah, as well as by the latter's sayings (B. M. 84b, 85a).

As Halakist.

In halakic matters Simeon inclined toward lenient interpretation of the laws, and he avoided adding to the difficulties attending their observance. In many instances in which an act, in itself not forbidden by Biblical law, had later been prohibited merely out of fear that it might lead to transgressions, Simeon declared it permissible, saying that "fear should not be admitted as a factor in a decision" (Shab. 13a, 40b, 147b; Yoma 77b; B. M. 69b; Bek. 24a; Pes. 10b). Of his halakic opinions about thirty relating to the Sabbath regulations and fifteen referring to the seventh year ("shebi'it") have been preserved, in nearly all of which the liberality of views is evident. He always took into consideration the common usage, and he often maintained that the ultimate decision must follow common tradition (Ket. vi. 4; B. M. vii. 1; B. B. x. 1). The habits of the individual must also be considered (Ta'an. 30a). In his regulations regarding the legal relations of man and wife he made it an invariable rule to protect the rights and the dignity of the latter in preference to those of the former (Ket. v. 5, vii. 9, xiii. 10). He endeavored to protect the slaves and secure to them certain rights (Giṭ. 12b, 37b, 40b). The weal of the community is more important than the interests and rights of the individual, and the latter must be sacrificed to the former (Ket. 52b; Giṭ. 37b). He especially strove to maintain the authority of the magistrates; according to his opinion the decisions of a court of law must be upheld, even though a slight error has been made; otherwise its dignity would suffer (Ket. xi. 5).

Simeon's decisions are mostly founded on sound common sense and an intimate acquaintance with the subjects treated, and, with three exceptions (B. B. 173b; Giṭ. 74b; Sanh. 31a), his views, as set forth in the Mishnah, have been accepted as valid (Giṭ. 75a). He often cites the conditions of the past, which he learned probably from the traditions of his house, and which are highly important for the knowledge of older customs and habits. He speaks of the earlier festive celebrations in Jerusalem on the Fifteenth of Ab and on the Day of Atonement (Ta'an. iv. 8); of the customs followed there at meals when guests were present (Tosef., Ber. iv. 9 *et seq.*); of the work on the pools of Siloah ('Ar. 1b); of the nature of the marriage contract (Tosef., Sanh. vii. 1) and the bill of divorce (Tosef., Giṭ. ix. 13).

As Haggadist.

Several of Simeon's haggadic sayings and decisions also have been preserved. "The moral and social constitution of the world rests on three principles—truth, justice, and peace" (Abot i. 18). "Great is peace, for Aaron the priest became famous only because he sought peace" ("pereḳ ha-shalom"; comp. Mal. ii. 6). "Justice must be accorded to non-Jews as to Jews; the former should have the option of seeking judgment before either a Jewish or a pagan court" (Sifre, Deut. 16 [ed. Friedmann, p. 68b]). Simeon praised the Samaritans for observing more strictly than did the Israelites such commandments of the Torah as they recognized (Ḳid. 76a). The Scripture is in many places to be understood figuratively and not literally (Sifre, Deut. 25 [ed. Friedmann, p. 70a]). "It is unnecessary to erect monuments to the pious; their sayings will preserve their memories" (Yer. Sheḳ. 47a; Gen. R. lxxxii. 11).

W. B. J. Z. L.

SIMEON B. ABBA: Palestinian amora of the third generation; pupil of Ḥanina b. Ḥama, who esteemed him highly, and of Johanan, who would have been glad to ordain him (Sanh. 14a). Simeon's family came originally from Babylonia; Simeon himself lived in Palestine in such great poverty that his teacher Johanan applied to him the saying of Eccl. ix. 11, "Bread is not to the wise" (Hebr.; Yer. Bik. 65d). On the advice of his teacher Ḥanina he married, successively, the two daughters of Mar Samuel, the head of the school of Nehardea, who had been taken to Palestine as prisoners (Ket. 23a). Both of them, however, died a short time after their marriage (Yer. Ket. ii. 26a). When Simeon desired to travel abroad, and requested his teacher Ḥanina to give him a letter of recommendation, the latter dissuaded him from his project, declaring, "To-morrow I shall go to thy father's, where they will reproach me, saying, 'We had a worthy scion in the land of Israel, and thou hast allowed him to go to another country'" (Yer. M. Ḳ. 81c).

After the death of Ḥanina, and while Johanan was still living, Simeon left Palestine and settled in Damascus. But after Johanan's death, Abbahu wrote to Simeon at Damascus and persuaded him to return to Palestine (Yer. Bik. 68d). According to one tradition, Simeon was a grave-digger in Sepphoris. In this occupation, which involved the collecting of bones from old graves, he evolved the peculiar idea that he could tell by the appearance of a bone what the person to whom it had belonged had been accustomed to drink: black bones belonged to persons who had been accustomed to drink cold water, red bones to wine-drinkers, while white bones showed that their owners had drunk warm water (Gen. R. lxxxix. 2).

Simeon transmitted sayings of his teachers Ḥanina and Johanan, also of Joshua b. Levi and Simeon b. Laḳish. Many of his own haggadic sayings have been preserved. One of them runs: "There are two kinds of acts of love, that of participation in a wedding ceremony, and that of participation in a funeral. When two occur together, and thou hast an opportunity to attend one, but not both, and dost not know which to choose, be taught by the words of Solomon, who said, 'It is better to go to the house of mourning than to go to the house of feasting'" (Eccl. vii. 2; Tan., Wayishlaḥ. 23 [ed. Buber, p. 88a]).

BIBLIOGRAPHY: Bacher, *Ag. Pal. Amor.* ii. 201-204.

W. B. J. Z. L.

SIMEON B. ABSALOM: Amora the period of whose activity is not known. Only two haggadic sentences by him have been preserved. One, on Judges iv. 5, declares that Deborah sat under a palm-tree instead of in her house, in order to escape any possible suspicion (Meg. 14a). The other explains why David, when fleeing from Absalom, composed a "mizmor" or psalm (Ps. iii.) and not a "ḳinah" or lament (Ber. 7b).

BIBLIOGRAPHY: Bacher, *Ag. Pal. Amor.* iii. 775.

W. B. J. Z. L.

SIMEON B. 'AKASHYAH: Tanna of the second generation. Only one of his haggadic sentences has been preserved, namely, that explaining Job xii. 12, 20, in which he declares that coarse and uneducated persons lose in intelligence as they grow old, while scholars become more intelligent with advancing years (Ḳin. iii. 6).

SIMEON, AKIBA BAER. See AKIBA BAER.

SIMEON B. BOETHUS: The first high priest of the family of Boethus in the Temple of Jerusalem. He was a native of Alexandria. He owed his appointment as high priest to his daughter Mariamne, who captivated Herod by her beauty, the king advancing her father in office in order to give Mariamne a certain rank when he made her his wife. When Herod subsequently put away this second Mariamne, Simeon was deposed from the high-priesthood.

SIMEON HA-DARSHAN. See ḲAYYARA, SIMEON.

SIMEON B. ELEAZAR: Tanna of the fourth generation; probably a son of R. Eleazar b. Shammua'. He was a pupil of R. Meïr, whose sentences, both halakic and haggadic, he transmitted (Ḥul. 6a; Shab. 134a; 'Er. 29a). The following anecdote, related of him, shows how he strove for perfection, a characteristic which is evidenced in his ethical sentences also: Once, on returning in a very joyful mood from the academy to his native city, he met an exceedingly ugly man who saluted him. Simeon did not return the greeting, and even mocked the man on account of his ugliness. When, however, the man said to him, "Go and tell the Master, who created me, how ugly His handiwork is," Simeon, perceiving that he had sinned, fell on his knees and begged the man's pardon. As the latter would not forgive him, Simeon followed him until they came near to the tanna's native city, when the inhabitants came out to meet him, greeting him respectfully as rabbi. The man thereupon said to them, "If this is a rabbi may there be few like him in Israel," and told them what had occurred; he, however, forgave Simeon when the people begged him to do so. Simeon went the same day to the school and preached a sermon, exhorting all the people to be pliable like a reed and not unbending like a cedar (Ta'an. 20a, b, where the preferable reading has "Simon b. Eleazar"; see Rabbinowitz, "Variæ Lectiones," *ad loc.*; Ab. R. N. xli.).

Simeon, like his teacher R. Meïr, engaged in polemic discussions with the Samaritans, who denied the resurrection, proving to them that it was taught by the Bible, namely, by Num. xv. 31 (Sifre, Num. 112 [ed. Friedmann, p. 33b]). In the Halakah, Simeon appears most frequently as the opponent of R. Judah ha-Nasi I. Simeon formulated an exegetic rule for the interpretation of those passages in the Bible in which points are placed over certain letters or entire words, in conformity with a tradition which was even then sanctioned: If the letters without points exceed in number those punctuated the exposition must be based on the former; but if the reverse be true, the letters with points must be interpreted (Gen. R. xlviii. 17; comp. TALMUDIC HERMENEUTICS).

Many haggadic sentences by Simeon have been preserved, including the following: "He who is prompted by love to perform ethical and religious acts is greater than he who is prompted to them by fear" (Soṭah 31a). "When the old people say, 'Tear down,' and the young people say, 'Build,' listen to the old and not to the young; for the tearing down of the old people is building, and the building of the young people is tearing down, as the story of Rehoboam, the son of Solomon, teaches" (Meg. 31b). "There are two kinds of friends: one that reproves you, and the other that praises you. Love him who reproves you, and hate him who praises you; for the former leads you to the future life, while the latter leads you out of the world" (Ab. R. N. xxix.). "The sentence 'Thou shalt love thy neighbor as thyself: I am the Lord' [Lev. xix. 18] was uttered with a great oath; meaning 'I, the Eternal One, have created him. If thou lovest him, I will surely reward thee for it; and if thou lovest him not, then I am the judge ready to punish" (Ab. R. N. xvi.). "Three things the left hand shall ward off, while the right hand draws them on, namely, desire, a child, and a wife" (Soṭah 47a). "Have you ever seen an animal that is obliged to follow a trade or that must painfully support itself? Yet animals were created for the purpose of serving man, while man was created to serve his Creator. Should not, therefore, man, rather than the animals, be able to support himself without toil? Man, however, has deteriorated in his works, and therefore in his nature, and has been deprived of his nourishment" (Ḳid. iv. 13).

Some fine parables by Simeon have also been preserved (Ab. R. N. i., vi.; Mek., Yitro, Baḥodesh, 5 [ed. Weiss, p. 74a]).

W. B.

SIMEON B. EZRON (חצרון): One of the principals in the war of the Jews against the Romans in the year 66 of the common era, and a partizan of the leader of the Zealots, Eleazar b. Simeon. He was of noble descent (Josephus, "B. J." v. 1, § 2), and may be identical with Simeon b. Arinos, who also is mentioned in connection with Eleazar (*ib.* 6, § 1), and thus with Simeon b. Ari, to whose bravery Josephus alludes (*ib.* vi. 1, § 8; 2, § 6).

S. KR.
G.

SIMEON BAR GIORA. See BAR GIORA, SIMON.

SIMEON B. ḤALAFTA: One of the teachers of the transition period between the Tannaim and the Amoraim. He was a friend of Ḥiyya, and is mentioned several times as differing with him in regard to haggadic sentences (Lam. R. i. 2; Pesiḳ. xi. [ed. Buber, p. 98b], xxv. [p. 164a]). He lived at 'En-Tina, a locality near Sepphoris, and occasionally visited the patriarch R. Judah I. at the latter place. He was a pupil of R. Judah, and lived in such indigence that the patriarch often relieved him (Ruth R. v. 7). His advancing age obliged him to discontinue his visits to Judah; and when the latter inquired into the cause of his absence he gave as a reason his debility (Shab. 152a). He was highly respected. Once when he took leave of Judah the patriarch ordered his son to ask Simeon for a blessing, and Simeon responded with the words: "God grant that you will neither cause shame to others nor be shamed by others." As the patriarch's son took this blessing to be a mere empty phrase, his father reminded him that God had once blessed Israel with these same words (M. Ḳ. 9b, according to the correct reading of Rabbinowitz in "Diḳduḳe Soferim"). The honor in which Simeon b. Ḥalafta was held also appears from Ḥanina's remark that he (Ḥanina) merited a hale old age in view of his visits to the aged Simeon b. Ḥalafta; on his journeys from Tiberias to Sepphoris Ḥanina had been wont to make a detour to 'En-Tina in order to visit Simeon (Yer. Ta'an. 68a).

His Career.

Various legends are connected with the person of Simeon b. Ḥalafta. Once, on returning from Sepphoris to 'En-Tina he met the angel of death, who said to him in the course of conversation that he had no power over persons who were like Simeon, since on account of their good deeds God often prolongs their span of life (Deut. R. ix. 1). On another occasion, when in danger of being torn by lions, Simeon was miraculously saved (Sanh. 59b). Once a precious stone is said to have been sent to him from heaven in a miraculous way (Ruth R. iii. 4; comp. Perles in "Monatsschrift," 1873, pp. 27 *et seq.*). Many stories are told of his observations and experiments in zoology, and he was designated by the epithet "'asḳan" = "the busy one" or "the experimenter." He is said to have saved the life of a hen by attaching a reed to her dislocated hip-bone; and he made new feathers grow on another hen which had lost her feathers (Ḥul. 57b). Still other experiments by him are recounted (*ib.*; Lev. R. xxii.).

His Haggadah.

Simeon b. Ḥalafta is rarely mentioned in the halakic tradition, but very frequently in the Haggadah, in which he is especially noted for the parables which he employed in his Scriptural exegesis. Some of these may be mentioned here. He explains the regulation (Ex. xii. 43 *et seq.*) that circumcision should precede participation in the Feast of Pesaḥ by the following parable: "A king gave a banquet, commanding that only those guests who wore his badge should be admitted. So God instituted a banquet in celebration of the deliverance from Egyptian bondage, commanding that only those should partake of it who bore on their bodies the seal of Abraham" (Ex. R. xix. 6). The following is a parable on the relation between God and Israel: "A king took to wife a matron who brought two precious stones as her marriage portion; and he gave her in addition two other gems. When the woman lost the stones she had brought, he took away those which he had given to her; but when she found her own again, the king gave back those of his gift, and had all the gems made into a crown for her. Similarly Israel brought the precious stones 'justice' and 'right,' which it had received from Abraham [Gen. xviii. 19 (A. V. "justice and judgment")], into the covenant which it made with God. God gave in addition two other precious stones, 'mercy' [Deut. vii. 12] and 'compassion' [Deut. xiii. 18]. When Israel lost justice and right [Amos vi. 12] God took away mercy and compassion [Yer. xvi. 5]. When Israel again produces what it has lost [Isa. i. 27] God will also restore what He has taken away [Isa. liv. 10], the four precious stones together becoming a crown for Israel" (comp. Hos. ii. 21; Deut. R. iii. 1).

Other Scriptural explanations by Simeon are not expressed in parables. For instance, he applies Prov. xviii. 7, "A fool's mouth is his destruction," to the words of the builders of the Tower of Babel (Gen. xi. 4; Gen. R. xxxviii. 11). The ladder which Jacob beheld in his vision (Gen. xxviii. 12), and which stood on earth and reached to heaven, indicated to him those of his descendants who would be engulfed in the earth, namely, Korah and his followers (Num. xvi. 32), and also Moses, who was to ascend to heaven (Ex. xxiv. 1; Tan., Wayyeẓe, ed. Buber, p. 75a). The following sentences by Simeon may be mentioned here: "Since the fist of hypocrisy has become all-powerful, judgment has become perverted; the good deeds of the individual are destroyed; and no man may say to another, 'My merits are greater than thine'" (Soṭah 41b). "All the future bliss, the blessings, and the comfortings which the Prophets have beheld, apply to the penitent, while the sentence [Isa. lxiv. 3, Hebr.] 'neither hath the eye seen, O God, besides thee, what he hath prepared for him that waiteth for him' applies to the person who has never tasted sin" (Eccl. R. i. 8). His sentence in praise of peace was included in the Mishnah ('Uḳẓin iii. 12): "God has found no better vessel than peace to hold the blessing to be given to Israel, as it is written (Ps. xxix. 11): 'The Lord giveth strength unto his people; the Lord will bless his people with peace.'"

W. B. J. Z. L.

SIMEON HE-ḤASID (= "the Pious"): Tanna; period of activity unknown. He is not mentioned in the Mishnah; and only one haggadic sentence of his has been preserved, in a baraita. It refers to Job xxii., and states that the 974 generations which should have been added to the 26 which were created before the revelation of the Law on Mount Sinai were distributed among the generations created subsequently, and that they constitute the insolent who are found in every age (Ḥag. 13b, 14a).

W. B. J. Z. L.

SIMEON B. ISAAC B. ABUN (called also **Simeon the Great**): Prominent expounder of the Law and one of the most important liturgical writers of the tenth and eleventh centuries. He was a native of Mayence and a contemporary of R. Gershom Me'or ha-Golah. He received a written communication from Meshullam b. Kalonymus (Zunz, "Literaturgesch." p. 111). Among his pupils were Eleazar b. Isaac, who was a relative of his, and Yaḳar, the father of R. Jacob b. Yaḳar. He is to be distinguished from R. Simeon, Rashi's maternal uncle, since the latter appears to have been a pupil of R. Gershom (comp. Rashi's commentary on Shab. 85b and on 'Er. 42b). R. Simeon the Great had the reputation of being a miracle-worker; and it is said of him in the Vitry Maḥzor (ed. Horowitz, p. 364, Berlin, 1889) and in the "Shibbole ha-Leḳeṭ" (ed. Buber, p. 26) that he possessed great skill as such. An old tradition relates that in his house he had hanging on the wall three wonderful mirrors, in which he could see the past and the future; also that after his death a spring bubbled up at the head of his grave (Jellinek, "B. H." v. 148). He had a son, Elhanan, who, tradition relates, was torn when a child from his parents, was brought up a Christian, and later became pope under the name ANDREAS.

Simeon was a man of influence and used his power for the benefit of his coreligionists. It was said that he spent his life in behalf of the Jews, and that he succeeded in preventing malicious persecutions from coming upon them and in abolishing laws unfavorable to them; also that his learning was a light to the Jews of the Diaspora (Zunz, *l.c.*). Of his activity as an expounder of the Law but little is known. On the other hand, most of his liturgical poems have been preserved and are widely known.

His works consist of festal compositions and of penitential prayers and Sabbath-day pieces. The first include poems for the New-Year, for Passover, and for the Feast of Weeks, and were recited throughout France and Germany. His penitential prayers were known as far as Poland and Italy. His liturgical pieces for the Sabbath were also widely circulated, among them the table hymn "Baruk Adonai Yom Yom." A few liturgical pieces have been wrongly ascribed to him (Zunz; *l.c.* p. 115).

W. B.

SIMEON B. JAKIM: Palestinian amora of the third generation; pupil of R. Johanan, to whom he often addressed scholarly questions (Yer. 'Orlah i. 60d; Yer. B. B. 16b), and contemporary of R. Eliezer. He was a prominent teacher and was considered an important authority (Yer. Sanh. 21d). Together with R. Eliezer he is mentioned in the Babylonian Talmud also, although under the name Simeon b. Eliakim (Ket. 50b).

BIBLIOGRAPHY: Frankel, *Mebo ha-Yerushalmi*, p. 129a.

J. Z. L.
W. B.

SIMEON B. JEHOZADAK: Palestinian amora of the first generation; probably the teacher of Johanan, who has transmitted several halakic sayings of his (R. H. 34b; Yoma 43b; 'Ab. Zarah 47a; Ned. 45a; Niddah 10b; Ta'an. 28b). Simeon lived to be very old, and when he died Yannai and Johanan followed his remains to the grave (Yer. Naz. 56a). Simeon b. Jehozadak was a haggadist also, and several of his haggadic sayings have been preserved, handed down almost without exception by Johanan. "A scholar who does not avenge insults, but who harbors resentment like Nahash, King of the Ammonites, is no true scholar" (Yoma 22b; comp. Bacher, "Ag. Pal. Amor." i. 121). "One against whose ancestry no reproach can be brought should not be given charge of a congregation, because it is well to be able to say to one entrusted with such a charge, if he becomes proud, 'Look behind thee, and see whence thou comest'" (Yoma *l.c.*). "Better that a letter of the Torah should be put aside than that God's name should be publicly profaned" (Yeb. 79a). A few examples of Simeon's method of halakic exegesis occur in Sukkah (27a) and Baba Meẓi'a (22b).

J. Z. L.
W. B.

SIMEON B. JOSE B. LEḲONYA: Tanna of the fourth generation; contemporary of R. Judah ha-Nasi I. He was the brother-in-law of Eleazar b. Simeon, whose son he educated and instructed in the Torah (B. M. 85a). Only a few of his halakic sentences have been preserved (Bek. 38b; Yer. Pes. 33b). He gave as a reason for the thirty-nine kinds of work forbidden on the Sabbath that the word "melakah" (work) occurs thirty-nine times in the Torah (Shab. 49b); but this enumeration is inexact, since the word occurs oftener—indeed, Simeon seems to have disregarded purposely some passages in making his list. Among his haggadic sentences the following is especially interesting, as indicating the indestructibility of Judaism: "In this world Israel is compared to the rock [Num. xxiii. 9; Isa. li. 1] and to the stones [Gen. xlix. 24; Ps. cxviii. 22], while the nations of the earth are compared to the potsherds [Isa. xxx. 14]. The proverb says: 'If the stone fall upon the pot, wo to the pot; and if the pot falls upon the stone, wo to the pot.' Thus, whoever seeks to trouble Israel will not be allowed to go unpunished" (Esth. R. vii. on iii. 6).

SIMEON BEN JOSEPH OF LUNEL: Talmudist of the thirteenth and fourteenth centuries. His Provençal name was **En Duran.** He was a native of Perpignan, and lived successively at Montpellier, at Lunel, and, after the banishment of the Jews in 1306, at Aix. He is known chiefly for the active part he took in the Abba Mari controversy as a partizan of Abba.

Excepting three letters (Neubauer, "Cat. Bodl. Hebr. MSS." No. 280), no writing of Simeon's is known. The first of these letters, entitled "Ḥoshen ha-Mishpaṭ," was addressed to Me'iri of Perpignan, who was invited by Abba Mari to sign the excommunication launched against the students of philosophy, but declined to do so. Abba Mari, dissatisfied, commissioned his lieutenant Simeon to answer him and expound the grievances of the orthodox against the students of philosophy. This letter was published by D. Kaufmann, with a German translation, in "Zunz Jubelschrift" (Berlin, 1884). The second letter is addressed to Solomon ben Adret, asking him to declare that the excommunication against the students of philosophy does not apply to the "Moreh Nebukim," as his adversaries asserted. The third letter is addressed to one of his relatives at Perpignan. It was written after the banishment of the Jews of France, and Simeon bewails in it the fate of the Jewish communities of Lunel, Béziers, and Narbonne.

SIMEON B. JUDAH: Tanna of the fourth generation; a native of Kefar 'Ikos (comp. on this name H. Hildesheimer, "Beiträge zur Geographie Palästinas," pp. 12, 81, Berlin, 1886). He is mentioned almost exclusively as a transmitter of the sentences of Simeon b. Yoḥai. Two of his own exegetic sentences also have been handed down. To Ex. xiv. 15, "Wherefore criest thou unto me?" he says that the cry of the Israelites for aid had preceded that of Moses (Mek., Beshallaḥ, iii. [ed. Weiss, p. 35b]). In Deut. xxxii. 6 ויכננך is to be derived from כן (= "foundation," "basis," or "means"): "He placed thee upon thy foundation" (Sifre, Deut. 309 [ed. Friedmann, p. 134a]). In another sentence of his that has been preserved mention is made of a certain place in Galilee in which were said to be leprous stones, *i.e.*, stones from a house infected with leprosy (Tosef., Neg. vi. 1).

SIMEON B. JUDAH LÖB PEISER. See Peiser.

SIMEON BEN JUDAH HA-NASI I.: One of the teachers during the transition period between the Tannaim and the Amoraim. He was the younger son of Judah, and although far more learned than his brother Gamaliel, his father had intended that he should become ḥakam only, while Gamaliel was to be Judah's successor as "nasi" (Ket. 103b). Simeon was particularly friendly with R. Ḥiyya, with whom he once undertook a journey (Gen. R. lxxix. 8), and with Bar Ḳappara, who was one of his fellow students (M. Ḳ. 16a; Ber. 13b). He surpassed both of these in halakic as well as in haggadic exegesis. R. Ḥiyya learned from him the exposition of a part of the Psalms; Bar Ḳappara, a part of the halakic midrash to Leviticus. It therefore annoyed Simeon that both refused to do him honor (Ḳid. 33a). His father called him "the light of Israel" ('Ar. 10a; Men. 88b), and he was very kind-hearted (B. B. 8a) and candid (*ib.* 164b). He did not approve his grandfather's and his father's habit of citing the sayings of R. Meïr without mentioning the latter's name.

Simeon introduced many emendations into the text of the Mishnah, according to readings which he had heard from his father, as, for example, B. M. iii. 1, and 'Ab. Zarah iv. 1, where, in the Mishnah to the Palestinian Talmud, his readings have been preserved (comp. B. M. 44a; 'Ab. Zarah 52b). One of Simeon's sayings, also, has been preserved in the Mishnah (Mak. iii. 15); in it he contends that if man is rewarded for abstaining from the drinking of blood, for which he has no natural craving, his reward ought to be much greater for abstaining from robbery and fornication, to which he has an inborn inclination.

SIMEON THE JUST (שמעון הצדיק): High priest. He is identical either with Simeon I. (310-291 or 300-270 B.C.), son of Onias I., and grandson of Jaddua, or with Simeon II. (219-199 B.C.), son of Onias II. Many statements concerning him are variously ascribed by scholars to four different persons who bore the same surname; *e.g.*, to Simeon I. by Fränkel and Grätz; to Simeon II. by Krochmal and Brüll; to Simon Maccabeus by Löw; and to Simeon the son of Gamaliel by Weiss.

Confusion as to Identity.

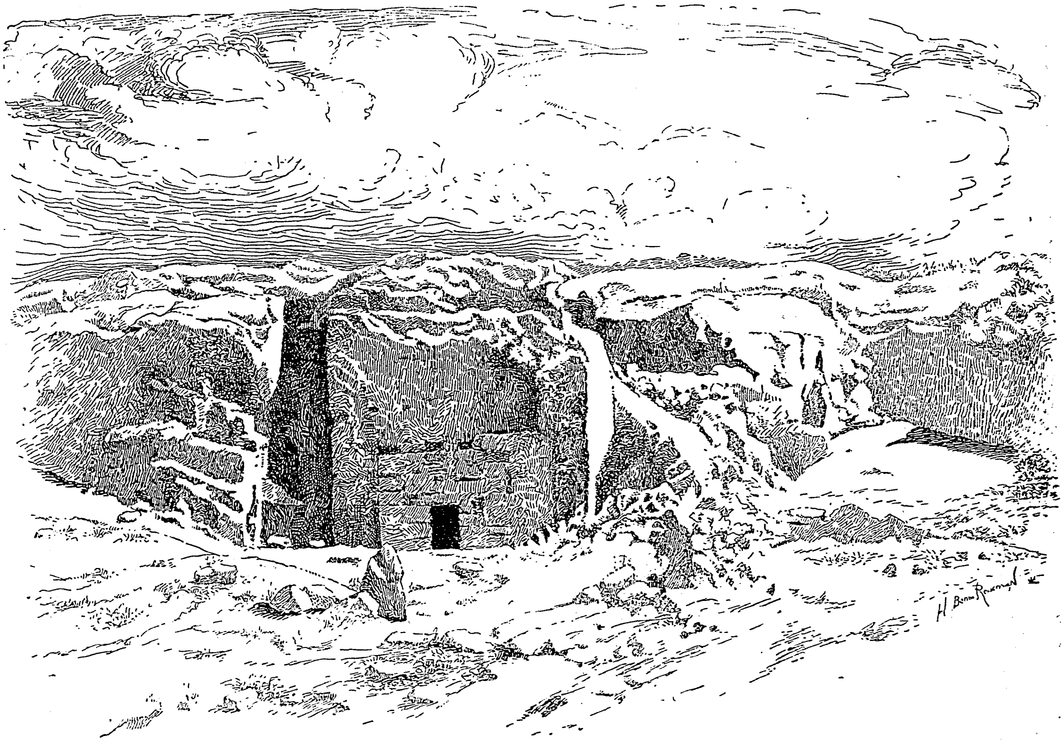
About no other high priest does such a mixture of fact and fiction center, the Talmud, Josephus, and the Second Book of Maccabees all containing accounts of him. He was termed "the Just" either because of the piety of his life and his benevolence toward his compatriots (Josephus, "Ant." xii. 2, § 5), or because he took thought for his people (Ecclus. [Sirach] l. 4). He was deeply interested both in the spiritual and in the material development of the nation. Thus, according to Ecclus. (Sirach) l. 1-14, he rebuilt the walls of Jerusalem, which had been torn down by Ptolemy Soter, and repaired the damage done to the Temple, raising the foundation-walls of its court and enlarging the cistern therein so that it was like a pool (that these statements can apply only to Simeon I. is shown by Grätz, and they agree, moreover, with the Talmudic accounts of Simeon's undertakings).

When Alexander the Great marched through Palestine in the year 333, Simeon the Just, according to the legend, dressed in his eight priestly robes went to Kefar Saba (Antipatris) to meet him (Yoma 69a), although Josephus (*l.c.* xi. 8, § 4) states that Alexander himself came to Jerusalem (but see Jew. Encyc. i. 341b, vii. 51b). The legend further declares that as soon as the Macedonian saw the high priest, he descended from his chariot and bowed respectfully before him. When Alexander's courtiers criticized his act, he replied that it had been intentional, since he had had a vision in which he had seen the high priest, who had predicted his victory. Alexander demanded that a statue of himself be placed in the Temple; but the high priest explained to him that this was impossible, promising him instead that all the sons born of priests in that year should be named Alexander and that the Seleucidan era should be introduced (Lev. R. xiii., end; Pesiḳ. R., section "Parah"). This story appears to be identical with III Macc. ii., where Seleucus (Kasgalgas) is mentioned (Soṭah 33a; Yer. Soṭah ix. 3; Cant. R. 38c; Tosef., Soṭah, xiii.). During the administration of Simeon the Just the Red Heifer is said to have been burned twice, and he therefore built two wooden bridges from the Temple mount to the Mount of Olives (Parah iii. 6; Yer. Sheḳ. iv. 2).

Simeon occupied a position intermediate between the Hasmoneans and the Hellenists, while, as he himself boasted, he was an opponent of the Nazarites and ate of the sacrifice offered by one of that sect

His Position.

only on a single occasion. Once a youth with flowing hair came to him and wished to have his head shorn. When asked his motive, the youth replied that he had seen his own face reflected in a spring and it had pleased him so that he feared lest his beauty might become an idol to him. He therefore wished to offer up his hair to God, and Simeon then partook of the sin-offering which he brought (Naz. 4b; Ned. 9b; Yer. Ned. 36d; Tosef., Naz. iv.; Yer. Naz. i. 7).



Traditional Tomb of Simeon the Just.
